PARDA-DĀR (P.), literally "the person who draws the curtain", a term used among the dynasties of the eastern Islamic world from the Saldjūk period onwards as the equivalent of Arabic *ḥādjib*, i.e. for the court official, the chamberlain, who controlled access to the ruler, the latter being normally veiled from public gaze. For this function, see ḤĀDJIB. (Ed.)

PARENDĀ, a small town and fortress, formerly in the native state of Ḥaydarābād, now in the Sholapur District of Mahārashtra State of the Indian Union (lat. 18° 16′ N., long 75° 27′ E.) The fortress is attributed, like many of those in the Deccan, to the Bahmanī minister Maḥmūd Gāwān [*q.v.*], i.e. to the third quarter of the 9th/15th century, but may well be earlier [see BURDJ. III. at vol. I, 1323b]. Parendā was for a short time the capital of the Niẓām Shāhīs [*q.v.*] after the capture of Aḥmadnagar [*q.v.*] by Akbar's forces in 1014/1605, but was conquered by Awrangzīb when he was governor of the Deccan in Shāh Djahān's reign. The fortress and old town subsequently fell early into ruins.

PARGANA, a Hindi word, ultimately from a Sanskrit root "to compute, reckon up", a term in Indo-Muslim administrative usage denoting an aggregate of villages, a subdivision of a district or *sarkār* [see MUGHALS. 3. Administrative and social organisation]. In later Anglo-Indian usage, the term was often rendered as *pergunnah*, see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, 698-9. The first reference to this term in the chronicles of the Sultanate of Dihlī appears to be in the *Taʾrīkh-i Fīrūz Shāhī* of Shams-i Sirādj ʿAfīf (*Bibliotheca Indica*, Calcutta 1891, 99), for it is not used by Ḥasan al-Niẓāmī in his *Tādj al-maʾāthir* or by Minhādj al-Dīn Djūzdjānī in his *Ṭabaḳāt-i Nāṣirī*. Although it first came into prominence in the 8th/14th century, partially superseding the term *ḳaṣba*, it is, in all probability, based on still more ancient divisions in existence before the Muslim conquest. The exact date of its creation is therefore uncertain.

An account of the internal working of a *pargana* occurs in the chronicles of the reign of Shīr Shāh Sūrī (947-52/1540-5), who learned the details of revenue administration in the management of his father's two *parganas* at Sasarām in Bihār. When he became ruler of Hindustān he organised his kingdom into administrative units known as *sarkārs* which were divided into collections of villages termed *parganas*. Each *pargana* was in charge of a *shiḳdār* or military police officer who supported the *amīn* or civil officer. The *amīn* had for his civil subordinates a *fotadār* or treasurer and

two *kārkuns* or clerks, one for Hindi and the other for Persian correspondence. It does not seem correct to hold the view that in this respect he was an administrative innovator, for the provincial officials and institutions which he has been credited with creating were already in existence before he ascended the throne. This remained the administrative system until Akbar organised the Mug͟hal empire into *ṣūbas* (provinces), which were divided into *sarkārs*. The smallest fiscal unit under Akbar was the *pargana* or *maḥall*. Thus, for example, the *ṣūba* of Oudh was divided into five *sarkārs* and thirty-eight *parganas* (*Āʾīn-i Akbarī*, tr. Jarrett, *Bibl. Indica*, Calcutta 1891, ii, 170-7).

Under the Mug͟hal emperors, the chief *pargana* officials were the *ḳānungo*, the *amīn* and the *s͟hiḳdār*, who were responsible for the *pargana* accounts, the rates of assessment, the survey of lands, and the protection of the rights of the cultivators. Similarly, in each village a *patwārī* or village accountant was appointed whose functions in the village resembled those of the *ḳānungo* in the *pargana*. It must not be imagined that the *pargana* was a stable and uniform unit. Not only did it vary in area in different parts of the country, but often a new land settlement was followed by a fresh division and re-distribution of these fiscal units. The co-extensiveness of a *pargana* with the possessions of a clan or family has given rise to the suggestion that it was not only a revenue-paying area but that it was founded on the distribution of property at the time of its creation.

The Twenty-four *Parganas*: these were a district of Bengal lying between 21° 31′ and 22° 57′ N. and 88° 21′ and 89° 6′ E. It derives its name from the number of *parganas* comprised in the *zamīndārī* ceded to the English East India Company in 1757 by Mīr D̲jaʿfar [*q.v.*], the Nawāb Nāẓim of Bengal. This was confirmed by the Mug͟hal emperor ʿĀlamgīr II in 1759 when he granted the Company a perpetual heritable jurisdisdiction over this area. In the same year, Lord Clive, as a reward for services rendered by him to Mīr D̲jaʿfar, was presented with the revenues of this district. This grant, which amounted to £30,000 per annum, made Clive both the servant and the landlord of the Company. The sum continued to be paid to him until his death in 1774, when, by a deed sanctioned by the emperor, the whole proprietary right in the land and revenues reverted to the Company.

PARĪ (p., t. *peri*, borrowed into English as *peri*, French *péri*), a supernatural being of stories and legends, and likewise forming a whole category of popular beliefs. The word stems from Pers. *par* "wing"; and the being is sometimes pictured as being winged. Turkish tradition considers it as a beneficent spirit. However, amongst the Kazaks it is sometimes represented as an evil genie. In the Anatolian tradition, it is conceived as a being belonging to both sexes, and the compound form *peri kızı* "girl peri" is used for peris of the female sex. It was believed that marriage with human beings was possible. Peris form the main characters of the action in a whole category of tales of marvels; they bring aid to good persons but punishment for the evil ones.

(P.N. Boratav)

In Persian.

The Avestan *pairikās*, defined as "a class of female supernatural beings of malicious character, who seek to beguile and harm mankind" (Boyce, 85), gave their name to the New Persian *parī*, but little else of the characteristics ascribed to them by the Zoroastrians. The *parīs* of Islamic times are not unlike the fairies of European folklore (cf. *Enzyklopädie des Märchens*, iv, Berlin-New York 1984, s.vv. *Fairy, Fee*). They are introduced in oral tales and written literature as benevolent spirits appearing in splendid and alluring beauty to human beings. Sexual love and marriage between *parīs* and humans are recurrent motifs. Such unions can only be reached, however, after many obstacles of a magical nature are overcome. The *parīs* have two sexes, though females are much more frequent than males, and they beget children. They live long but are not immortal. In the sphere of mythical beings they form a nation, ruled by a king whose daughter is a leading character in many fairy tales. The land of the fairies lies far away but can be reached by ordinary travel. It is sometimes situated near the mountain Ḳāf [*q.v.*]. In spite of their association with beauty and elegance, they can be fierce fighters. They are able to fly and can change into animals, monsters and demons. Their main enemies are the demons (*dīw* [*q.v.*]), the sorcerers and the witches. One may enchant them in a magic circle, and they are unable to free themselves when they are chained. In spite of their elusive nature, they are generally of good will and keep their promises. Some of them are even believers.

Many of these features are mentioned in the anonymous *Iskandar-nāma*, a mediaeval prose version of the Alexander saga recounting a journey to a country ruled by the fairy queen Arāḳīt, which Iskandar subdues in a long war ending in the dispersal of the *parīs* and the return of the land to its original human inhabitants. The story is strongly influenced by legends about Sulaymān and Bilḳīs [*q.v.*], the queen of Sheba. Both Bilḳīs and Arāḳīt were said to be of mixed human and fairy blood (cf. Southgate, 210-11; B. Carra de Vaux, *EI*[1] s.v. *Bilḳīs*). Features of the *parīs* as they appear in Persian fairy tales have been summarised by Christensen and Marzolph.

To the classical poets, comparisons with the beauty of the *parī* were commonplace. In a single hemistich ʿUnṣurī (d. 431/1039-40) described his beloved as a *parīzāda parīrūʾī parīčihrī parīpaykar* ("a fairy-child with a fairy-face, with the traits of a fairy and shaped like a fairy"; *Dīwān*, ed. Y. Ḳarīb, Tehran 1341 *s͟h*./1962, 100). Ḥāfiẓ put the fairies on a par with the *ḥūr* of the Islamic Paradise (*Dīwān*, ed. P.N. K͟hānlarī, Tehran 1362 *s͟h*./1983, 121, 210, 391, 404, 425). In the epic they were included in the armies of the primeval kings of Iran, together with *dīws*, animals and birds. A trace of the malice of the ancient *pairikās* is still apparent in the figure of the sorceress (*zan-i d̲jādū*) who tried to seduce the heroes Isfandiyār and Rustam in the shape of a beautiful woman (cf. Christensen, *Démonologie*, 64-5). Folkloristic elements are also reflected in romantic and didactic *mat̲h̲nawīs*. In the *Ilāhī-nāma* of Farīd al-Dīn ʿAṭṭār [*q.v.*] the desire of a young prince for the daughter of the king of the fairies is denounced by his father as the "cult of lust" (*s͟hahwatparastī*). The first story of Niẓāmī's *Haft paykar*, told by the Indian

princess in the Black Pavilion, is a typical instance of the delusions experienced in a fairy-land. Another example of the use of folklore in polite literature is *Dāstān-i Djamāl wa Djalāl* by the Tīmūrid poet Muḥammad Āṣafī (d. 923/1517), an allegorical *mathnawī* about the search of prince "Glory" for "Beauty", the latter being personified as the daughter of the king of the *parīs*.

The unique copy of the last-mentioned work, preserved in the Uppsala University Library (Nova 2, dated 1502-5), is also an important source for the iconography of the *parī* in Persian miniature painting. The fairies were depicted like angels, as the latter were commonly represented in Tīmūrid art (see Stchoukine, 116). Other subjects giving occasion for picturing *parīs* were Niẓāmī's story of the Black Pavilion (see e.g. Robinson, *Rylands*, no. 418) and throne scenes of Sulaymān and Bilḳīs (cf. e.g. Titley, 98, Pl. 14).

(J.T.P. de Bruijn)

PARIAS (the word arose from such Latin accountancy terms as *paria facere* "to settle an account" already current in Imperial Latin; Du Cange considered Mediaeval Latin *pariae* as from the Spanish) in the mediaeval Iberian peninsula "tribute paid by one ruler to another in recognition of his superior status".

The term is rarely used except of tribute paid by Muslims to Christians. There was no universally recognised tariff for such payments, nor any set form of contract setting out what was received in exchange for the *parias*, although there clearly was a presumption that payment secured protection from extortion at the hands of other Christians. Du Cange regarded *parias* as a type of feudal due ("*feudalis redditus, honores, homagia*"). Whether that is an accurate characterisation is doubtful; *parias* were paid when Christian rulers were powerful, refused when the Andalusī Muslims themselves or their Muslim protectors from North Africa felt safe to do so. The system appeared at the end of the Umayyad period and in the first Ṭāʾifa period (5th/11th century), apparently *ca.* 1010 with Ramon Berenguer I of Barcelona, and at times led to the transfer of considerable sums to the Christians. The taxes raised to pay the *parias*, quite illegal from the Islamic point of view (Muslim sources could only regard them as an inversion of the relationship of *dhimma* [*q.v.*], and, indeed, they are not infrequently termed *djizya* [*q.v.*]), were a factor in the collapse of the Ṭāʾifa régimes. The *Poema de Mio Cid* and Castilian chronicle narratives have al-Muʿtamid of Seville [*q.v.*] complain to Alfonso VI because the *parias* paid had not brought him safety from Christian freebooters; the Cid was despatched southwards to chastise the trouble-makers and to collect instalments overdue. (That we have to do with historical reality here is unlikely; what is important is that this was how the system was thought to function.) During the period following the Almoravid collapse, and again as Almohad power waned, payments resumed. From the initial agreement between the Castilian crown and Muḥammad I Ibn al-Aḥmar [see NAṢRIDS] in 1246 onwards, *parias* formed an important part of the relationship between Granada and Castile. As seen by Castile, such tribute was a sign of the vassal status of the Naṣrid kingdom; as seen by the Granadans *parias* were a way of buying respite from damaging *talas* ("forays"). Carriazo has shown that the story that the penultimate Naṣrid ruler, Abu 'l-Ḥasan ʿAlī, refused to pay *parias* to Isabel, saying "the kings of Granada who used to give *parias* were dead, and the places in Granada where they used to strike the coins to pay the tribute were being used to forge lance-heads" is apocryphal.

PĀRSĀʾIYYA, a sub-order of the Central Asian Nakshbandiyya [*q.v.*] Ṣūfī *ṭarīḳa* and the most prominent shaykhly family of Balkh from the middle of the 9th/15th century. The eponymous founder of the line was Khwādja Muḥammad b. Maḥmūd (or Muḥammad) al-Ḥāfiẓī al-Bukhārī (d. 822/1419), who adopted the nickname *Pārsā* ("the devout"). His tomb in Medina became a shrine for Central Asian pilgrims and the burial place of at least one Central Asian grand khān, the Tuḳāy-Tīmūrid, Imām Ḳulī (r. 1020-51/1611-41).

Khwādja Muḥammad Pārsā's son, Abū Naṣr, seems to have been the first of the line associated with Balkh. When he died there in 864 or 865 (1459-60 or 1460-1), his patron, the Tīmūrid general Mīr Mazīd Arghūn, erected a "high domed building" (*gunbadh-i ʿālī*) (*ca.* 867/1462-3), which became the centre of the order and survives in much-renovated form to the present. A no-longer extant *madrasa* was also built at the site sometime in the middle of the 10th/16th century.

The Pārsāʾīs remained prominent in Bukhārā well into the first half of the 10th/16th century, but the headquarters of the family and its order shifted to Balkh. The appointment of a great-grandson, ʿAbd al-Hādī b. Abū Naṣr (II) (d. *ca.* 967/1559) as *shaykh al-islām* at Balkh during the reign of the Abu 'l-Khayrid/Shībānid ʿUbayd Allāh (r. 940-6/1533-40) established the family in an official position which it would hold at least until the beginning of the 12th/end of the 17th century. Pārsāʾīs appearing in the literary record after the mid-10th/16th century are almost always from Balkh. Among the most prominent members of the family were ʿAbd al-Walī Pārsā (alias Khwādja Djān Khwādja, d. *ca.* 995/1587), who is portrayed as populist leader, political advisor and mediator; Ḳāsim Khwādja, architect of the royal *madrasa* constructed by Nadhr Muḥammad Khān [*q.v.*] before 1045/1635 as well as *shaykh al-islām*; and Ṣāliḥ Muḥammad (*fl.* 1100s/1690s), who was briefly installed as vice-khān (*ḳaʾlkhān*) at Balkh in 1107/1696. From the early 18th century onward, the

family's fortunes appear to have ebbed along with those of the city, although the survival of the shrine suggest that the family and the order it administered retained at least a local importance for some time.

PĀRSĪS (Pahlavi, *pārsīk*, NP *pārsī*, lit. "inhabitants of Fārs", "Persian"), the name given to those descendants of the Zoroastrians who migrated to India, mostly to Gudjarāt [*q.v.*], from the 4th/10th century onwards [see MADJŪS].

This movement is described in the *Ḳiṣṣa-yi Sandjan*, written in 1600 but using older oral tradition. In detail it is unlikely to be historically reliable but it probably has a valid overall perspective. It reflects the Pārsī conviction that their move to India was divinely-inspired and that they have been treated tolerantly by the Hindu majority.

From the 17th century onwards, when European traders were arriving in western India, Pārsīs emerged from their previous relative obscurity to rise to positions of considerable wealth, significant educational status (both in terms of building schools and colleges and in attending them), from which base they introduced the industrial revolution into India (first in the textile industry, then in steel), developed Indian commerce (notably banking and insurance), were foremost in many of the professions in western India (notably law and medicine) and became leaders in Indian politics, especially before the rise of the militants in the Indian National Congress in 1906. The major figures were Dadabhai Naoroji (1825-1917), popularly known as the "Grand Old Man of India", who was a founder of the Indian National Congress and the only person to be its president three times (1886, 1893, 1906). He was also the first Asian to be elected a Member of the British Parliament (1892-5). (The only other two Asian M.P.s elected prior to the 1980s were also Pārsīs: Bhownagree (elected in 1895) and Saklatvala (elected in 1923).) Two other major Pārsī politicians in India were Sir Pherozeshah Mehta (1845-1915) and Sir Dinshah Wacha (1844-1915). The former was especially important, not only in the Indian National Congress, but also in the government of India's commercial capital, Bombay. A brilliant lawyer and orator, he was mentor to many Indian politicians, especially Muhammad Ali Jinnah, founder of Pākistān [see DJINĀḤ] (Jinnah had several Pārsī connections, notably his wife and his doctor, who nursed him throughout his final illness).

The popular image of 20th century Pārsīs is of a community in decline. Numerically that may be true. In the 1981 census they totalled 71,630 throughout India, a decline of 20% in a decade, and subsequent demographic studies suggest that the rate of decline is likely to increase. The cause is partly emigration, but also a low fertility rate due to late marriages (Pārsī living standard expectations being high, young people commonly delay marriage until the age of 30), and with high levels of female education and career success many do not marry at all. Converts are not accepted, at least in the traditional areas of Gudjarāt and Bombay, though in Delhi the children of mixed marriages may be accepted as Zoroastrians.

However, Pārsīs are typically a high-status social group, mostly professionals (the civil service, law and medicine), leading figures in commerce, with some important political figures. (Mrs Indhira Gandhi was married to an active Pārsī politician, Feroze, so Pārsīs sometimes claim that her sons were Pārsīs; this is especially claimed for Rajiv who is said to have resembled his father.) Since independence, Pārsīs have held the post of head of each branch of India's armed forces. They own India's largest industry, Tatas, and South Asia's largest private company, Godrej Brothers. Recent studies have further established that the general standard of living of the average Pārsī in Bombay is higher than that of the general population of the city and this is almost certainly true for other parts of India, with the possible exception of parts of rural Gudjarāt. Throughout their history in India, Pārsīs have been noted for their charitable activities, not only among their own people but also among the wider community in the subcontinent, back in Iran [see MADJŪS, at V, p. 1115] and indeed on a wider international scale.

From India, Pārsīs have migrated to most continents in pursuit of trade and education. The first Pārsī to visit China was Hirjee Jivanjee Readeymoney in 1756. Their main bases were in Hong Kong (some Pārsī traders were there before the British take-over in 1841), Canton (the Zoroastrian Association was started in 1845) and Shanghai (the Association was founded in 1854). The main Pārsī business was opium, but they diversified into many branches of the import-export trade and into property and banking.

The first Pārsī to visit Britain arrived in 1723, but it was the mid-19th century before Pārsīs came in any numbers. Mostly they came for education, both formal university studies and informal studies of British industry, especially the textile trade and engineering. Others came for business. The first Indian firm in Britain was that of the Pārsī Cama brothers (with Naoroji) which opened in London and Liverpool in 1855. The Zoroastrian Association was formed in 1861, the first Asian religious body in Britain. A burial ground was purchased in 1861 and the first building obtained in 1909. Prior to World War II, there were about 200 Pārsīs in Britain at any one time. More Zoroastrians migrated, along with other South Asians, in the 1960s and after. They came mostly from urban centres, above all Bombay, but also from Pākistān and East Africa. Typically, they are well educated (over 70% have a university education), concentrated in London and are professionals. There are a few Iranian Zoroastrians who settled in the 1970s and 80s.

Also from the 1960s Pārsīs began to migrate to Canada and to America. There are now some 21 Zoroastrian Associations on the continent with buildings in New York (opened in 1977), Toronto (1980), Los Angeles (1982), Chicago (1983), and Vancouver (1987). Following the fall of the Shāh a number of Zoroastrians migrated from Iran and they settled mostly in New York, Vancouver and California. It was an Iranian Zoroastrian, Arbab Rustom Guiv and the charitable foundation he endowed, which provided most, in some cases practically all, of

the funds to open the Zoroastrian buildings. It is typically the very well-educated Pārsīs and Iranian Zoroastrians who have migrated (in America most are scientists). Precise numbers are unknown and estimates vary greatly. They are steadily increasing, mostly through migration, but it is also a young population so that the birth-rate exceeds the death-rate. Current plausible estimates suggest around 10,000.

The latest centre for migration is Australia. The Sydney-based "Australian Zoroastrian Association" was formed in 1971 and its building was opened in 1986. The other main group in Melbourne was founded in 1987. Numbers in Australia are probably little over 1,000, but they are increasing for the same reasons as in America.

The problems facing the younger Pārsīs in the "New World" and Australasia are those experienced by most South Asian migrants: the changing perceptions of successive generations; debates on intermarriage and problems posed by perceived racial prejudice. Typically, these diaspora communities give greater emphasis to religious education than do the communities in the "old country" because the elders are conscious of the dangers of acculturation. The result, over a number of years, could be that the Zoroastrian youth in the diaspora know more about their history and teachings then do those in the "old country". However, what they are taught tends to be those facets of the religion more readily intelligible in the "West" than in South Asia (for example, certain philosophies or ritual interpretations are stressed rather than the purity laws). Consequently, the result of the geographical dispersal could result in a greater religious diversity.

There are also Pārsī communities in Muslim lands (other than Iran). The most important of these is in Pākistān, mostly in Karachi, but with about 100 in Lahore (and until recently Quetta). Pārsīs played a significant role in the development of Karachi. The first Pārsī firm to move to Sind was Jessawalla and Co in (approximately) 1825 and several others soon followed. The burial ground was opened in 1839; the first temple was built in 1849 and the first Pārsī school in 1859. Numbers grew so that a second temple was built in 1869 and another *dakhma* ("Tower of Silence") was opened in 1875. The main trade pursued by the growing number of settlers was as suppliers to the British, especially during the Afghan Wars. Numbers peaked around 1940 with approximately 4,000 Pārsīs. That was also the era of one of the community's great leaders, Jamshed Mehta (1862-1952). He was President of the Municipality for 13 years and the first Lord Mayor of Karachi. He was universally respected as a man of total integrity and deep commitment to his city. When he died Karachi came to a standstill as people of all communities mourned. When Pākistān was declared an independent Muslim state, some Pārsīs feared for their future because of their memories of their fate in Iran. That, as well as the educational and career attractions of the "West", was why many migrated and numbers declined to below 3,000. In fact, however, the community has been secure, especially in Karachi where numbers and wealth are concentrated. Several have achieved significant status, a judge in the Supreme Court, brigadiers and majors in the army, two M.P.s and one Pārsī, Jamsheed Marker, has successively held the post of Pākistān's ambassador to France, America and the United Nations. Various Pārsī firms have been important in the shipping business, hotels, pharmaceuticals and property. Their reputation for charitable work is outstanding, especially in the medical and educational fields. As Islam has become ever more prominent in Pākistān's life, so Pārsīs have been required to provide their own children with a religious education. Numbers attending temple are commonly reported to be increasing. Whereas Pārsīs in the West are seen as prone to secularism, in Pākistān typically they are traditional, distanced but not alienated from the wider society.

There are also long-standing Pārsī communities in East Africa. The pioneer in this development was the family firm of the Cowasji Dinshaws (1824-1900). The father was largely responsible for the development of technology in Aden, above all the dockyard. He also owned a fleet of ships and was agent for several British firms. He, too, was known for his charitable work. Contemporary with the Pārsī move to Aden was their settlement in Zanzibar. The first to arrive was M.A. Mistry in 1845. Others did not follow until the 1870s-1890s. The Zoroastrian Association was formally started in 1875. In 1884 the Cowasji Dinshaws were persuaded to move here from Aden. They became leaders in the community, building a temple and running the Association. After World War II there were 184 Zoroastrians in Zanzibar, but subsequent to the 1964 revolution, numbers declined and now in the 1990s there are only two families left.

Zoroastrian traders probably arrived on the east coast of Africa centuries ago, but the first known to have been on the mainland, Jehangir Bhedwar, came in 1870 and built the dockyard at Mombasa. The architect, Sorabji Mistry, was an important early arrival for he built many of the major municipal buildings. From around 1896 many lawyers, engineers and accountants came in connection with the building of the East African railway. The Zoroastrian Association was started in 1897 and began to acquire land in Nairobi from 1902. The main period of growth was post-World War II when numbers reached about 400 in each city, but with the process of Africanisation in the 1960s most emigrated, some to India and Canada but most to Britain. At present (early 1990s) there are only approximately 40-50 Zoroastrians in the two cities, mostly business men and professionals.

In East Africa, as in Pākistān, Pārsīs have remained within their own tightly-knit communities (though there have been strong internal divisions) and as a result have, on the whole, remained traditional in their religious beliefs and practices. They have not been subject to the same processes of acculturation that those in the West have. Whereas Pārsīs in Bombay have been subject to marked Hindu influences, not only in dress and language but also in customs and concepts (e.g. wedding rites, symbolic decorations around the home, ideas on caste and rebirth, veneration for modern Hindu holy men), the deep reservations which have arisen from Islamic persecution in Iran have in practice meant that most, though not all, Pārsīs in Muslim lands have sought to preserve their distinctiveness. Although many feared for their fate in the 20th century, they have not experienced overt oppression from Muslims. Their situation in Iran is documented elsewhere [see MADJŪS]. The homeland remains the country in which there is the most widespread concern for their future. Many feel vulnerable and oppressed, generally their career prospects are limited (especially in government and the forces) but some stress that there has been no actual persecution and a few Zoroastrian businesses continue to flourish. Government estimates put the number of Zoroastrians in Iran in the 1990s at over 90,000—

which if accurate would mean that there has been a fourfold increase in 30 years. Unfortunately, it is impossible to give an account of the reported 500 Pārsīs working as traders and professionals in the Arab Gulf States because no formal Associations have been established and no records preserved.

Bibliography (in addition to works cited under MADJŪS): there is an overview of the literature in J.R. Hinnells, *The Parsis: a bibliographical survey*, in *Journal of Mithraic Studies* (*JMS*), iii (1980), 100-49, and a compendium of textual materials in M. Boyce, *Sources for the study of Zoroastrianism*, Manchester 1984. On the *Ḳiṣṣa-yi Sandjan* as a historical source, see P. Axelrod, *Myth and identity in the Indian Zoroastrian community*, in *JMS* (1980), 150-65. On the early sources, see R.B. Paymaster, *Early history of the Parsees in India*, Bombay 1954, and for the travellers' accounts see N.K. Firby, *European travellers and their perceptions of Zoroastrians in the 17th and 18th centuries*, Berlin 1988. The history of the Pārsīs in Bombay is outlined in *EIr.*, IV, 339-46; see also Hinnells, *Parsis and the British*, in *Journal of the Cama Oriental Institute* (*JCOI*), Bombay, xlvi (1978), 1-64. Two books which give a helpful account of the Pārsīs in their main 19th century base, Bombay, are C. Dobbin, *Urban leadership in Western India*, Oxford 1972, and G. Tyndall, *City of Gold, the biography of Bombay*, London 1982. The main biography of Naoroji is R.P. Masani, *Dadabhai Naoroji: the Grand Old Man of India*, London 1939; on Mehta, see H. Mody, *Sir Pherozeshah Mehta*, Bombay 1963. Important studies of the Pārsī role in Indian politics include: A. Seal, *The emergence of Indian nationalism*, Cambridge 1968; J. Masselos, *Towards nationalism*, Bombay 1974; and G. Johnson, *Provincial politics and Indian nationalism*, Cambridge 1973. See also D. Mellor, *The parliamentary life of Dadabhai Naoroji*, in *JCOI*, lii (1985), 1-113, and C. Monk, *The Parsis and the emergence of the Indian National Congress*, in *ibid.*, 115-245. The main study of the great Pārsī philanthropist is J.R.P. Mody, *Jamsetjee Jejeebhoy*, Bombay 1959. On the work of Saklatvala, see M. Squires, *Saklatvala: a political biography*, London 1990, and S. Saklatvala, *The fifth commandment*, Salford 1991. The main biography of the leading Pārsī industrialist is F. Harris, *Jamsetji Nusserwanji Tata*, Bombay 1958. There are numerous demographic studies of the community; most are listed in Hinnells' bibliography listed above. Later studies include: M. Karkal, *Survey of Parsi population of Greater Bombay-1982*, Bombay 1984; S. Bose and A. Khullar, *Socio-economic survey of the Parsis of Delhi*, Delhi 1978; S. Taraporewala, *Religiosity in an urban setting: a study of Parsi college students in the city of Bombay*, Ph.D. thesis, Kalina University Bombay 1985 (unpubl.); K. Gould, *Singling out a demographic problem: the never married Parsis*, in *JMS*, iiii (1980), 166-84. At the time of writing there is little published on the Pārsīs outside India. Two works are in preparation: J.R. Hinnells and R. Writer, *The living flame: a study of the Zoroastrians in Britain*, Manchester (this will also include a study of the otherwise neglected Pārsī M.P., M.M. Bhownagree); and Hinnells, *An ancient religion in contemporary exile: the Zoroastrian diaspora*. On Karachi, there is J.F. Punthakey, *The Karachi Zoroastrian Calendar* (Eng. tr. F.H. Punthakey), Karachi 1989 (a historical overview of Pārsīs in the city). On Pārsīs in Hong Kong, there is K.N. Vaid, *The overseas Indian community in Hong Kong*, Hong Kong 1972, ch. 3, and for Kenya, C. Salvadori, *Through open doors: a view of Asian cultures in Kenya*, Nairobi 1983, ch. 1. (J.R. HINNELLS)

PARTAI ISLAM SE MALAYSIA (PAS), an Islamic-oriented political party of Malaysia.

The Partai Islam Se Malaysia (formerly Malaya), or Pan Malaysian (Malayan) Islamic Party (PMIP), was formed in the 1950s. Its ideological origins lie in the Islamic reformist movement in Malaya at the beginning of the 20th century. A party began to take shape in the 1940s as the religious wing (*Hizbul Muslimin*) of the radical but essentially secular Malay Nationalist Party (MNP). In 1948 the Majlis Tertingi Agama (supreme religious council; its acronym, MATA, is the Malay word for "eye") was set up at the religious college at Gunong Semanggol (in the west-coast state of Perak), which remained the centre for Islamic politics for several years. The radical Malay movement collapsed under the Emergency Regulations issued to counter the communist insurrection in 1948, and in 1951, pulling clear of the MNP, religious activists formed the All-Malaya Islamic Association (or Pan-Malayan Islamic Association, Persatuan Islam Sa-Tanah Melayu). At first, the Association co-operated with the United Malays National Organisation (UMNO), which was the strongest Malay political party and appealed more to ethnicity than to Islam, but when UMNO formed the Alliance with the Malayan Chinese Association (later joined by the Malayan Indian Congress), the All-Malaya Islamic Association became alienated from the mainstream of the Malay nationalist movement. Registering as a political party (the Pan-Malayan Islamic Party or Partai Islam Se Malaya), it opposed the Alliance in Malaya's first federal elections of 1955, two years before independence from British rule. Of the 52 electable seats, the Alliance (dominated by UMNO) won 51 seats while PAS was victorious only in the constituency of Krian (Perak).

The party was put on a stronger footing when Dr Burhanuddin Al-Helmy (formerly president of the MNP, 1946-7, and leader of the *Hizbul Muslimin*) became its president in December 1956. Blending a strong appeal to communal chauvinism with an avowed commitment to Islam as the basis for a Malay-dominated Malaya, Burhanuddin attracted support from rural Malays, and PAS came to rely upon Malay teachers in religious schools or *pondoks* [see PESANTREN] in the Malay-majority states of the north-west (Kedah and Perlis) and east coast (Trengganu and Kelantan). At the 1959 elections, PAS secured the government of Trengganu and won a landslide in Kelantan. Although it relinquished the former in the 1964 elections, it maintained control over the latter until late 1977.

During the bitterly contested election campaign of 1969, which polarised politics on communal lines, PAS claimed that UMNO had failed the Malays during the years since independence because it had compromised with infidels and neglected the needs of the rural community. Though the UMNO-dominated Alliance secured a majority in the Dewan Rakyat (federal parliament), it lost the vital two-thirds majority allowing it to amend the constitution. Non-Malay parties, notably the Democratic Action Party and Gerakan, won 25 seats, while PAS gained 12 (and 23.7% of the total vote). These elections and the bloody aftermath of communal violence (the "13 May 1969 incident") represent a watershed in modern Malaysian politics and a spur to economic and social restructuring; the Alliance was refashioned as the Barisan National (BN, national front), of which UMNO was the major component, and the government launched a series of five-year plans in support of the New Economic Policy, whose objectives were to sus-

tain economic growth, project Malays into the modern sector and, ultimately, break down communal compartments. PAS joined the ruling coalition in 1974 and, campaigning as part of the BN, it won 14 of the 154 federal seats in the elections of 1974. Led by Mohamed Asri Haji Muda (acting president 1964-71, president 1971-82), PAS reached the high-point in its electoral fortunes in 1969-74, but in the late 1970s it went into decline. Torn by internal disputes, PAS lost control of Kelantan and was forced out of the Barisan National; at the end of 1977 the federal government established "emergency rule" in Kelantan, and elections the following year (which PAS fought in opposition to the Barisan) not only confirmed the end of PAS rule in Kelantan but also reduced the party's seats in the federal parliament from 14 to 5.

Nonetheless, PAS kept up its attacks upon UMNO and, from the late 1970s onwards, these coincided with the upsurge of fundamentalism elsewhere in the Islamic world, notably the Iranian revolution. After Asri resigned as president following another poor performance in the elections of 1982 (when PAS won five seats), the more militant Yusuf Rawa (president 1982-89) assumed the leadership of PAS. Under the influence of the *ulama* and professing its goal to be the creation of an Islamic state, PAS issued a *fatwa* declaring all supporters of UMNO to be infidels. The phenomenon of one Malay Muslim branding another as infidel—known as the "*kafir-mengkafir* dispute"—became particularly intense in Trengganu, Kelantan and Kedah, where UMNO and PAS vied with each other for support and where Malay kampongs divided in their allegiance to one or other of the parties.

Competition between UMNO and PAS for power and authority has been a major feature of Malay politics while Dr Mahathir has been president of UMNO and Prime Minister of Malaysia (1981 to date). PAS ideas were spread by speakers at *ceramah* (private political meetings) and through the distribution of thousands of audio-visual cassettes. In its attacks both upon UMNO as guardian of Malay nationalism and mainstay of the Malaysian government and upon the Barisan's New Economic Policy, PAS received backing from Islamic universities, many Malays in local higher education institutions and Malay students overseas. It also established links with ABIM (Angkatan Belia Islam Malaysia, the Malaysian Islamic Youth Movement) led by Anwar Ibrahim. Committed though it was to Malay interests, UMNO could not countenance an ideology that rejected secular nationalism and worldly materialism; UMNO leaders rejected the PAS strategy as a recipe for disaster in a country where Malays (i.e. Muslims) amounted to only a little over half of the total population. UMNO took the *dakwah* (Islamic revivalist) challenge seriously, however, with the result that government adopted a more obviously Islamic stand on certain issues (such as banking, higher education and the construction of mosques). Moreover, in 1982 Mahathir co-opted Anwar Ibrahim into the government, thereby diminishing the influence of ABIM. In 1984 a TV debate between UMNO and PAS leaders vying for legitimacy in the eyes of Malaysia's Muslims was cancelled at the last minute on the intervention of the Agong (Malaysia's king). Tension did not fade; on the contrary, confrontation between government and PAS came to a head at Memali (Kedah) in November 1985, when Malay policemen opened fire on Malay farmers, and PAS acquired 14 martyrs for Islam.

UMNO's hold over Malays appeared to be endorsed by the 1986 elections when only one PAS candidate was returned to the federal parliament, whose total membership had been increased to 177. UMNO's success can be put down to its efficiency and control of the media, the five-fold increase in the election deposit required of candidates, and, perhaps most significantly, PAS's overtures to Chinese voters. Its attempt to line up an opposition front in co-operation with non-Malays, though vain, compromised its "Malay-ness"; Malay voters opted for ethnic interests rather than Islamic principles.

Although circumscribed by government restrictions, not least the Internal Security Act, PAS was provided with an opportunity to advance its position by a power struggle that racked UMNO in 1987-90. In 1987 UMNO was split by a vicious leadership battle when Tengku Razaleigh challenged Dr Mahathir for the presidency of UMNO. A new political configuration seemed to be taking shape; the multi-racial coalition of the Barisan, which Mahathir's UMNO continued to dominate, was for the first time challenged by an alternative coalition of racially and ideologically disparate parties. PAS and Semangat '46 ("spirit of '46", a party composed of UMNO dissidents led by Tengku Razaleigh) formed the Angatan Perpaduan Ummah (Muslim solidarity movement), and together they joined the Chinese-dominated Democratic Action Party in the Gagasan Rakyat or People's Front. During the 1990 electoral campaign, PAS tempered its fundamentalism and adopted the slogan "Developing with Islam", but the three disparate parties failed to resolve their differences. The Barisan as a whole and UMNO in particular were returned with formidable majorities; Malays rejected PAS and Semangat '46, except in Kelantan, where APU formed the state government, while in the federal parliament PAS increased its representation from one to seven.

To some extent, the myth of Malay solidarity has been cracked in recent years by the emergence of PAS's challenge to UMNO and by the latter's internal rifts. Both UMNO and PAS have inherited and continue to appeal to the traditions of Malay culture, but, whereas PAS has presented itself as a fundamentalist Islamic movement, UMNO's reputation as guardian of Malay nationalism, its command of government since independence, its capacity to respond to and generate social and economic change, and the breadth and depth of its organisation have all assisted its continuing political dominance.

PARWĀN [see FARWĀN].

PARWĀNA [see MUʿĪN AL-DĪN SULAYMĀN PARWĀNA].

PARWĀNAČĪ, "relater", term used in Persian administration for the official who noted down the instructions for the promulgation of deeds, and who forwarded them to the chancery.

The function is recorded for the first time under Tīmūr, and is then found among the Tīmūrids, the Ḳara Ḳoyunlu, the Aḳ Ḳoyunlu [*q.vv.*] and in the early Ṣafawid period. According to K͟hᵂāndamīr, there were usually two relaters, one in charge of the Council for Army Inspection (*dīwān-i towāčī*), the other of the Council for Finances (*dīwān-i māl*) and of the administration of the *Ṣadr (sarkār-i ṣidārat)* [see ṢADR]. Only occasionally did each of these three departments have its own relater, or did there exist one single relater for the three together. In addition to Persians, there were also Turkish *amīrs* under the relaters. In rank they were above the secretaries of the chancery (*mun͟s͟hīs* [*q.v.*]), but subordinate to the viziers. As a rule, they apparently transmitted the orders for the deeds to the chancery in writing. The related documents were called *parwāna, parwānača* or *risāla*, and they were sealed with the *muhr-i-parwāna* [see MUHR], which usually was in the hands of a keeper of the seal (*muhrdār*) and only exceptionally (see Khᵂāndamīr, *Dastūr al-wuzarāʾ*, Tehran 2535 *s͟hāhāns͟hāhī*, 401) in those of the relater.

(G. HERRMANN)

PARWĪN IʿTIṢĀMĪ, celebrated female poet of Iran, was born on 16 March 1907 in Tabrīz. Her father, Yūsuf Iʿtiṣāmī (d. 2 January 1938), was a respected author known chiefly for his translations of French and Arabic works into Persian. He was also the founder and principal writer of the literary magazine *Bahār*, which appeared from April 1910 till November 1911 and again from April 1921 till December 1922. Parwīn received her early instruction in Persian and Arabic literature from her father. When she was still small, her father moved the family to Tehran. There she attended the American High School for Women. Following her graduation, she was employed for some time to teach at the same institution. It is reported that Riḍā S͟hāh wanted her to act as private tutor to the queen, but she declined. In 1934 she married a cousin of her father, and went to live in Kirmāns͟hāh where her husband was a police officer. The union, however, did not last, and ended in divorce after a few months. In 1936 the Iranian Ministry of Culture gave her a medal ranking third in order of importance. The poetess is said to have turned down the award which, in its poor choice, was clearly an offence to her self-respect. In 1939 Parwīn worked for some months as librarian in Dānis͟h-sarā-yi ʿĀlī, University of Tehran. On 5 April 1941 she died after a brief illness caused by typhoid fever, and was buried at Ḳum in the family tomb next to her father.

According to Malik al-S͟huʿarā Bahār, Parwīn started composing poetry when she was eight years old. In her poetical training during the initial period, the main guiding figure was most probably her father. He would give her his prose translations of French, Arabic and Turkish poems and encouraged her to put them into verse. Already at an early age, Parwīn demonstrated a remarkable artistic maturity. Consequently, some individuals were disposed to take the sceptical view that the poems in her name were actually composed by her father. In the beginning, her poems appeared in her father's journal during its second period. Before her death she is said to have destroyed a portion of her poetical output which did not come up to her expectations. A book containing her collected poems appeared for the first time in 1935, and an enlarged edition was published soon after her death in 1942.

Parwīn Iʿtiṣāmī may be regarded as a poet in the classical mould. Among the literary influences detected in her poems are chiefly those associated with such former poets as Nāṣir-i K͟husraw, Anwarī, ʿAṭṭār, Saʿdī, and Rūmī [*q.vv.*]. Barring a few exceptions, her poems adhere to conventional verse forms, and include *ḳaṣīdas*, *mat͟hnawīs*, *ḳiṭʿas*, and *g͟hazals*. As regards the subject matter of her poetry, it is dominated by moralistic and ethical themes. The poetess is largely indifferent to the real social concerns of her time, and shows only a passing appreciation of the problems pertaining to her own sex. Still, Parwīn's poetry has a charm of its own resulting from a deep feeling of tenderness and compassion. As her favourite device, she uses the form of *munāẓara* (strife poem) [*q.v.*] and dialogue, a technique borrowed from earlier sources but featuring more extensively and devoted to better use in her works.

(MUNIBUR RAHMAN)

PARWĪZ, K͟HUSRAW (II), Sāsānid emperor 591-628, and the last great ruler of this dynasty before the invading Arabs overthrew the Persian empire. The MP name *Parwīz* "victorious" is explained in al-Ṭabarī, i, 995, 1065, as *al-muẓaffar* and *al-manṣūr*; the

name was Arabised as Abarwīz (see Justi, *Iranisches Namenbuch*, 19).

For the main events of his long reign (dominated by the struggles with the Byzantines over the buffer-state Armenia and over control of the Fertile Crescent in general, culminating in the Persian invasion of Egypt in 619, but then the riposte by the Byzantine emperor Heraclius, which brought the Greek armies as far as Mesopotamia in 627-8), see Christensen, *L'Iran sous les Sassanides*², Copenhagen 1944, 445-96, and R.N. Frye, *The political history of Iran under the Sasanians*, in *Camb. hist. of Iran*, iii/1, 165-72. Most relevant for us here are Khusraw Parwīz's relations with the Arabs on the fringes of Mesopotamia and, in particular, with the Lakhmid dynasty of al-Ḥīra [*q.v.*], outlined in LAKHMIDS and chiefly significant for the fact of Khusraw Parwīz's overthrow of the last Lakhmid king al-Nuʿmān III b. al-Mundhir IV in 602 and the establishment of direct Persian rule soon afterwards, ending the power of this Arab dynasty which had acted as a protective force against pressure from the Bedouins of the Arabian interior. The Sāsānids' flank in western Mesopotamia was laid open to attack, and a foretaste of the Muslim Arab invasions of the 630s given in the battle or, more probably, skirmish of Dhū Ḳār [*q.v.*] in central ʿIrāḳ, when the tribe of Bakr b. Wāʾil defeated a coalition of other Arab tribes plus Persian regular troops, demonstrating that the Persian army was not invincible (see further, C.E. Bosworth, *Iran and the Arabs before Islam*, in *Camb. hist. of Iran*, iii/1, 607-9).

In later Islamic literature, such as *adab* works and the Mirrors for Princes [see NAṢĪḤAT AL-MULŪK], Khusraw Parwīz became renowned for the splendour and luxury of his court. He was a devotee of music and poetry, and the famous musician Bārbadh, allegedly the inventor of the rhythmic musical modes known as *dastānāt* (see H.G. Farmer, *A history of Arabian music*, London 1929, 198-9), was one of his courtiers. His famous horse Shabdīz is mentioned, but above all he is linked with his favourite wife, the Christian Shīrīn, as part of the very popular theme in Persian literature of Shīrīn and her humble lover Farhād, dealt with by *inter alios* Niẓāmī and Amīr Khusraw Dihlawī [*q.vv.*; see FARHĀD WA-SHĪRĪN]. See further on Parwīz's image in later literature, Niẓām al-Mulk, *Siyāsat-nāma*, index, and al-Ghazālī, *Naṣīḥat al-mulūk*, Eng. tr. F.R.C. Bagley, *Ghazālī's Book of counsel for kings*, London 1964, 192, 194 and the references there.

(C.E. BOSWORTH)

PASANTREN [see PESANTREN].

PASAROFČA, the Ottoman Turkish form of the Yugoslavian town of Požarevac, better known in European history under its Germanic form Passarowitz. Požarevac is now a prosperous commercial town, situated in lat. 44°37′ N. and long. 21°12′ E. some 60 km/40 miles to the southeast of Belgrade in the fertile plain of Serbia between Morava and Mlava, and only a short distance from the Danube port of Dubravica.

The town, whose name is popularly connected with the Serbo-Croat word *požar* ("fire") (M.D. Milićević, *Kneževina Srbija*, Belgrade 1876, 172, 1058), is first mentioned towards the end of the 9th/15th century. It must, however, have been previously in existence and have become Turkish like the surrounding country in 1459. According to the Turkish treasury registers of Hungary of 1565 (A. Velics, *Magyarországi török kincstári defterek*, ii, Budapest 1890, 734), Pasarofča belonged to the Turkish *sandjaḳ* of Semendre (Semendria, Smederevo), and in the middle of the 11th/17th century, Ḥādjdjī Khalīfa describes it as the seat of a judge (*ḳāḍīliḳ*) (cf. *Spomenik*, xviii, Belgrade 1892, col. 26). Towards the end of the century, many Serbs migrated from Pasarofča and at the beginning of the 18th century it is sometimes mentioned as a village.

Pasarofča was, however, destined soon to become famous through the peace which ended the Austro-Turkish war of 1716-18. At the end of 1714, the Ottoman sultan Aḥmed III [*q.v.*] had already declared war on Venice on the pretext that the peace of Carlowitz [see ḲARLOFČA] was not being observed and in 1715 occupied the Morea and some of the Ionian Islands. Austria, which at first intervened to negotiate as an ally of Venice, in 1716 entered the war herself and her armies, led by Prince Eugene of Savoy, won three great victories, at Peterwardein, Temesvár and Belgrade, so that England intervened to secure peace. After long preparations (see von Hammer, *GOR*², iv, 159-64), the congress of Passarowitz was convoked. The negotiations at which plenipotentiaries of Turkey, Austria, Venice with England and Holland as mediators took part began on 5 June 1718 and the Treaty of Passarowitz was signed on 21 July.

Peace was concluded on a basis of the territory actually held by the opponents at the time (*uti possidetis*): Austria retained the eastern part of Sirmia, the banate with Temesvár, the whole of northeastern Serbia, with Belgrade, Požarevac, etc., and Little Wallachia; Venice also retained a few places she had taken on the Dalmatian and Albanian coasts, received certain commercial preferences and the island of Cerigo (Kythera), but had to restore to Turkey the whole of the peninsula of the Morea and the southeastern districts of Hercegovina. By a commercial agreement which was also concluded at Passarowitz on 27 July, Austria secured certain trading, consular and other privileges such as preferential tariffs, in the Ottoman Empire. The Imperial Ostend Company was formed to exploit these concessions, and in 1719 commercial activity began from the new "free port" of Trieste. The actual Treaty of Passarowitz in effect proclaimed that the Ottomans were no longer a serious military danger to their European neighbours.

Following the traditional formalities observed after the conclusion of a treaty of peace, the first Turkish plenipotentiary Ibrāhīm Pasha Newshehirli went to Vienna with his retinue and Count Wirmont, the Austrian representative in the negotiations, to Constantinople. A member of the Turkish embassy wrote in 1726 an interesting account which has been published by Fr. van Kraelitz in text and translation (*Bericht über den Zug des Gross-Botschafters Ibrahim Pascha nach Wien im Jahre 1719*, in *SB Ak. Wien*, clviii [1908]; in *TOEM*, vii [1332/1916], 211-27, the Turkish text of this edition was reprinted by A. Refīḳ).

During the Austrian occupation (1718-39), Pasarofča was the most important place in this territory. In the Serbian war of independence against Turkey, it was besieged for a long period, but had finally to surrender to the Serbs (1804). In 1813, the town again fell into Turkish hands but became Serbian again in 1815.

In the years of peace that followed (1815-1915), Požarevac developed. Prince Miloš in 1825 made it his second residence and had two *konaḳs* (palaces) built there. Shortly afterwards, a Prussian officer visited the town and left interesting notes on the conditions there (Otto von Pirch, *Reise in Serbien im Spätherbst 1829*, Berlin 1830, part i, 119-71). In the second half of the 19th century, the population increased steadily,

but otherwise the town offered "little of interest" (F. Kanitz, *Serbien*, Leipzig 1868, 13).

At the beginning of the 20th century Požarevac was one of the most important towns in Serbia. In the First World War, it was occupied by the Germans in 1915 and by the Bulgarians (from October 1916), but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia now (1993) coming within the Serbia-Montenegro rump of the Yugoslavian Republic.

(F. Bajraktarević*)

PASÈ, the name of a district on the north coast of Atjeh [*q.v.*] in Sumatra, which according to the prevalent local view stretches from the Djambō-Ajé river in the east to the other side of the Pasè river in the west. The whole area is divided up into a number of little states each with an *uleïbalang* or chief.

Pasè at one time was a kingdom known throughout eastern Asia. The north coast of Atjeh was in the middle ages on the trade route by sea from Hindustān to China. Islam followed this route and firmly established itself from India on this coast, the first point in the East Indian archipelago which it reached. In the 7th/13th century we know there were already Muslim rulers here. One of these was Malik al-Ṣāliḥ (d. 1297), according to native tradition founder of the state and the man to make the country Muslim; his tomb made of stone imported from Cambay in India has been discovered along with several other gravestones on the left bank of the Pasè river, not far from the sea. The capital of the kingdom is said to have been here. A second capital, rather more to the west, was Samudra; it was the royal residence when Ibn Baṭṭūṭa in the middle of the 8th/14th century twice visited the land, on his way to China and on the return journey. The present name of the island of Sumatra, by which it is known in the west, comes from Samudra (in Ibn Baṭṭūṭa: Sumaṭra). Pasè was then a flourishing country on the coast; the ruler was king of the port, who himself sent out trading-ships; a ship belonging to him was seen by Ibn Baṭṭūṭa in the harbour of Ch'ünchou (Fukien) in South China. Life at the court was modelled on that of the Muslim courts of India. The ruler at this time was an ardent Muslim, who took a great interest in learning. He waged a victorious *djihād* on the natives in the hinterland. Leaden coins struck in the country and Chinese crude gold were the means of exchange. The chief food was rice.

Shortly after Ibn Baṭṭūṭa left the country, the king had to recognise the suzerainty of the Javanese Hindu empire of Madjapahit (before 1365). A tomb of a queen or princess found near Lhō' Sukon has an Arabic inscription, dated 791/1389 at the top of the stone, and at the bottom an inscription in much weathered old Javanese script. The Chinese envoy Cheng Ho remarked in 1416 that the land was involved in continual war with Nago (Pidië). He mentions rice, silkworms and pepper as its products. The last-named attracted the Portuguese there. From 1521 they had a fortified settlement in Pasè, but in 1524 they were driven out by the sultan of the rising kingdom of Atjeh (i.e. Great Atjeh). Henceforth, Pasè was a dependency of Atjeh. The tombs of the rulers of the former kingdom were still an object of pilgrimage to the most famous sultan of Atjeh, Iskandar Thānī, as late as 1048/1638-9; but at the present day, even the memory of the old kingdom is extinct. The mouth of the Pasè river is silted up and the place where the capital stood is no longer recognisable.

Pasè exercised through the years a considerable influence in the Malay Archipelago through its Muslim scholars and missionaries. Javanese and Malay tradition have preserved their memory.

(R.A. Kern)

PASHA (T., from the Pers. *pādishāh*, probably influenced by Turkish *baskak*), the highest official title of honour (*ʿunwān* or *lakab*) in use in Turkey until the advent of the Republic and surviving for sometime after that in certain Muslim countries originally part of the Turkish empire (Egypt, ʿIrāḳ, Syria). It was always accompanied by the proper name, like the titles of nobility in Europe, but with this difference from the latter, that it was placed after the name (like the less important titles of *bey* and *efendi*). In addition, being neither hereditary nor giving any rank to wives, nor attached to territorial possessions, it was military rather than feudal in character. It was however not reserved solely for soldiers but was also given to certain high civil (not religious) officials.

The title of *pasha* first appears in the 7th/13th century. It is difficult to define its original use exactly. The word had in any case early assumed and lost the vague meaning of "seigneur" (*dominus*) (cf. *Dīwān-i türkī-i Sulṭān Weled*, 14; text of the year 712/1313, where Allāh himself is invoked in the phrase *Ey Pasha!*). At this same period, the title of *pasha* like that of *sulṭān* was sometimes given to women (cf. Ismāʿīl Ḥakkī, *Kitābeler*, Istanbul 1927, index, s.v. Ḳadem pasha, Selčuk pasha), a practice which recurs only once again, and then exceptionally, in the 19th century in the case of the mother of the Khedive [see WĀLIDE SULṬĀN].

Under the Saldjūḳs of Anatolia, the title of *pasha* (in as much as it was an abbreviation of *pādishāh* and always by analogy with that of *sulṭān*) was given occasionally to certain men of religion, who must also have at the same time been soldiers and whose history is not yet well known. To judge from the genealogy which ʿĀshiḳ-pasha-zāde claims for himself, the title of *pasha* was already in use in the first half of the 7th/13th century. Mukhliṣ al-Dīn Mūsā Baba, alias Shaykh Mukhliṣ or Mukhliṣ Pasha had, according to ʿAlī

Efendi, seized power before the Ḳaramānog̲h̲lu [*q.v.*] and in the same region, after the defeat of the Sald̲j̲ūḳ Sultan G̲h̲iyāt̲h̲ al-Dīn Kayk̲h̲usraw II [*q.v.*] at Köse Dag̲h̲ which took place in 641/1243 (cf. Gibb, *A history of Ottoman poetry*, i, 177).

At the end of the same century, the title of *pas̲h̲a* seems to have been added to the names of certain members (restricted in number) of the petty Turkish and Turkoman dynasties which shared Asia Minor; these are sometimes rulers, sometimes members of their families. It was the same in the principalities of Tekke, Aydîn, Deñizli and Ḳîzîl-Aḥmadlî and probably also in other little kingdoms of Anatolia (cf. for Saruk̲h̲an, ʿAlī Pas̲h̲a, according to S̲h̲ihāb al-Dīn Ibn Faḍl Allāh al-ʿUmarī, *al-Taʿrīf bi 'l-muṣṭalaḥ al-s̲h̲arīf*, quoted by al-Ḳalḳas̲h̲andī, *Ṣubḥ al-aʿs̲h̲ā*, viii, 16, l. 14).

In the family of ʿOt̲h̲mān, two individuals are credited with the title of *pas̲h̲a*: ʿAlāʾ al-Dīn, son of ʿOt̲h̲mān, and Süleymān, son of Ork̲h̲an.

The case of ʿAlāʾ al-Dīn is very obscure. Two different individuals of this name have even been distinguished: the one being ʿAlāʾ al-Dīn Bey, son of ʿOt̲h̲mān, the other ʿAlāʾ al-Dīn Pas̲h̲a, *wazīr* [*q.v.*] of ʿOt̲h̲mān, and the two may have been confounded (cf. Ḥüseyin Ḥüsāmeddīn, *ʿAlāeddīn Bey*, in *TTEM*, years xiv and xv, 4 articles). It may be added that the same individual or one of the two individuals in question may also have been a *beylerbeyi* (cf. Orud̲j̲'s chronicle, ed. Babinger, 15, l. 15). Whatever be the case with this insoluble problem, it seems certain that the title of *pas̲h̲a* was given early to statesmen (cf. a Sinān Pas̲h̲a under Ork̲h̲an).

The title of *pas̲h̲a* in any event very soon became the prerogative of two classes of dignitaries: 1. the *beylerbeyis* of the provinces, and 2. the *wazīrs* of the capital. It was later extended to officials with similar functions.

In the second half of the 8th/14th century (in 760/1359 or 763/1362?), Lala S̲h̲āhīn who, according to the Ottoman historians, was the first (?) *beylerbeyi* of the ʿOt̲h̲mānlîs, was given the title of *pas̲h̲a* at the same time as he received this office. The same title was then given to the *beylerbeyi* of Anatolia (thus keeping up the idea of the two *beylerbeyis*, one of the right and one of the left wing) and later as new posts were created in the growing empire, extended to the other *beylerbeyis* or *wālīs* "governors-general".

It was the same with the *wazīrs*, of whom the first (?) according to the Ottoman historians, was D̲j̲andarlî K̲h̲alīl surnamed K̲h̲ayr al-Dīn Pas̲h̲a (in 770/1368-9) [see D̲J̲ANDARLÎ]. The number of the *wazīrs* who were called *ḳubbe wezīrleri* down to the time of Aḥmed III was raised to three and then to nine and the title of *wazīr*, also given to high officials like the *ḳapudan pas̲h̲a*, the *nis̲h̲ānd̲j̲î* and the *defterdar* [*q.vv.*], became more and more one of honour, carrying with it the title of *pas̲h̲a*; but since at the beginning and for a considerable time in the capital itself there was only one *wazīr*, the title of *pas̲h̲a*, par excellence and without any addition, came to be applied to the prime minister (later *ulu wezīr* or *ṣadr aʿẓam* [*q.v.*]), whence the expression *pas̲h̲a ḳapîsî* which was later replaced by that of *bāb-i ʿālī* "Sublime Porte, the door of the first minister".

The increase in the number of *pas̲h̲as* was not at first very rapid. M. d'Aramon mentions only 4 or 5 *pas̲h̲as* or *wezīr-pas̲h̲as* and at the time he wrote (in 1547), there were only three (Ayaz, Güzeld̲j̲e Ḳāsim and Ibrāhīm, all three of Christian origin). It is true that here he is referring only to the capital.

In the provinces they were, and became, more numerous, and two classes of *pas̲h̲as* were distinguished: 1. the *pas̲h̲as* of 3 horse-tails (*tug̲h̲*) or *wazīr* (a rank which became more and more one of honour and extending to the provinces gradually absorbed that of *beylerbeyi*); 2. the *pas̲h̲as* of 2 horse-tails or *mīr-mīrān* [see MĪR-I MĪRĀN] (rank at first the Persian synonym for the Turkish *beylerbeyi* and the Arabic *amīr al-umarāʾ* but gradually became a lower rank). Besides, the old *sand̲j̲aḳ-beyis* having in principle a right to only one horse-tail were promoted *mīr-mīrān* and thus became *pas̲h̲as* in their turn.

After the *Tanẓīmāt* [*q.v.*], the title of *pas̲h̲a* was given to the four first (out of 9) grades of the civil (1. *wezīr*, 2. *bālā*, 3. *ūlā*, 4. *sāniye ṣînfî ewweli*) or military (1. *müs̲h̲īr*, 2. *birind̲j̲i ferīḳ*, 3. *ferīḳ*, 4. *liwā*) hierarchy and to the notables (3. *rūmeli beylerbeyi*, 4. *mīr-mīrān*, with in practice unjustified extension to the fallen *emīr-ül-ümerāʾ*, in this case to the purely honorary rank of the sixth grade).

The table of ranks having been abolished after the fall of the Ottoman Empire, the Turkish Republic retained the title of *pas̲h̲a* for soldiers only. It was finally abolished by the Grand National Assembly of Ankara (26 November 1934). Instead of *pas̲h̲a*, one now uses *general* and in place of *müs̲h̲ür*, *mares̲h̲al*.

In western usage, the word was at first pronounced *bas̲h̲a* (the pronunciation *pas̲h̲a* does not appear till the 17th century): Ital. *bascia*, Low Latin *bassa*, Fr. *bacha* or *bassa*, Engl. *bashaw*, to say nothing of variant spellings. In Greek on the contrary, the form *pas̲h̲a* is the oldest (14th century) but probably under western influence we also find *bas̲h̲a* (16th century); cf. Ducange, *Glossarium mediae et infimae Graecitatis*, s.v. μπασίας.

The pronunciation as *bas̲h̲a* by Europeans is due either to the influence of Arabic in Egypt or to a confusion with the old Turkish title of *bas̲h̲a* (see the end of the article).

Etymology of the word *pas̲h̲a*: we shall examine the various etymologies that have been proposed.

1. Pers. *pāy-i s̲h̲āh* "foot of the sovereign". This explanation, which was based on the fact that in ancient Persia there were officials called "eyes of the king", is found already in Trévoux's Dictionnaire (s.v. *bacha*) and was revived by J. von Hammer. It is to be rejected.

2. Turk. *bas̲h̲* "head, chief" already suggested by Antoine Geuffroy (*Briesve description de la Court du Grand Turc*, 1542) and by Leunclavius (Löwenklau), *Pandectes historiae turcicae*, suppl. to his *Annales* (1588). Cf. also Trevoux's *Dict.* and Barbier de Meynard, *Suppl.* It is to be rejected; see the following word.

3. Turk. *bas̲h̲-ag̲h̲a* taken (for the purposes of proof) in the meaning of "elder brother". This is the etymology accepted in Turkey until the end of the 19th century (Meḥmed T̲h̲üreyyā, *Sid̲j̲ill-i ʿOt̲h̲mānī*, iv, 738; S̲h̲ams al-Dīn Sāmī, *Ḳāmūs-i türki*, s.v. *pas̲h̲a*) and based on the fact that Süleymān Pas̲h̲a and ʿAlāʾ al-Dīn Pas̲h̲a were the elder brothers of Ork̲h̲an and ʿOt̲h̲mān respectively. ʿĀlī Efendi in his *Künh ül-ak̲h̲bār* written in 1001-7/1593-9 (v. 49, l. 23) and ʿOt̲h̲mān-zāde Aḥmed Ṭāʾib (d. 1136/1724) called attention to this use of the word *pas̲h̲a* among the Turkomans (*Ḥadīḳat al-wüzerāʾ*, Istanbul 1271, 4, l. 16). Heidborn (*Manuel de droit public et administratif ottoman*, Vienna 1908, 186, n. *a*) also says that *pas̲h̲a* means "elder brother" among the Greeks of Karamania, but there seems to be nothing to confirm these isolated statements. Some Turkish lexicographers like Aḥmad Wefīḳ (under باشا) and Ṣalāḥī admitted this etymology, but by two stages: *pas̲h̲a* comes from the Turkish title *bas̲h̲a* which is for *bas̲h̲-ag̲h̲a*. The title of *bas̲h̲a*, to be discussed below,

does really seem to come from *bash-agha* but, contrary to what the present writer at first thought, has nothing to do with *pasha*.

4. Pers. *pādishāh* "sovereign". This etymologically, the only admissible one (with however the possibility of the influence mentioned under 5), was proposed by the Turkish-Russian dictionary of Boudagov (1869) and later revived by the Russian encyclopaedia of Brockhaus and Efron. It had previously been proposed by d'Herbelot (under *pascha*, à propos of the spelling with final *h*). This explanation is based on the use of the words *sulṭān* and *pādishāh*, as the titles most often placed after the names when applied to individuals of high rank in the religious world (dervishes). Cf. F. Giese, in *Türkīyāt Medjmūʿasī*, i (1925), 164. It seems that one can even explain by *pādishāh* the obscure phrase spoken by Orkhan to ʿAlāʾ al-Dīn Pasha in ʿĀshiḳ-pasha-zāde (ed. Giese, 34-5) before the latter asks leave to retire (cf. above). Orkhan says "You will be *pasha* for me." Now a few lines earlier he had asked him to be a *čoban pādishāh*, i.e. a shepherd for his people.

On the other hand, it will be noted that the title of *pasha* is often used not only as an alternative for *pādishāh* but also for *shāh*. Here are a few examples: Shudjāʿ al-Dīn Sulaymān, of the dynasty of Ḳizil Aḥmedli, is called Sulaymān Pādishāh in Ibn Baṭṭūṭa (ii, 343) and Sulaymān Pasha in al-ʿUmarī, *al-Taʿrīf bi 'l-muṣṭalaḥ al-sharīf*, Cairo 1312, 4 (written *basha*, following the Arabic script) and in Munadjdjim Bashi (iii, 30). The son and successor of this ruler, Ibrāhīm, is called *shāh* in al-ʿUmarī and *Pasha* in Münedjdjim Bashi. In the *Düstūr-nāme-i Enwerī* (ed. Mükrimīn Khalīl, 83-4), Süleymān Pasha, son of Orkhan, is called Shāh Sulaymān (with poetical inversion). ʿAlī b. Čičék (Čečék), the Īlkhānid governor of Baghdād (d. 736/1336), is called ʿAlī Pasha by al-ʿUmarī. According to Naẓmī-zāde (*Gülshen-i khulafāʾ*, Istanbul 1143), he is also found in some mss. as ʿAlī Shāh. He is also called ʿAlī Pādishāh (Cl. Huart, *Histoire de Bagdad*, 10). In the eastern Turkish dialects the title of *pādishāh* is given to petty local rulers; there it has taken the form not of *pasha* but of *patsha* (Kirghiz) and *pōtshō* (Özbeg).

5. Turk. *basḳaḳ* (variants *bashkaḳ*?, *bashkan*?) "governor, chief of police" (Pavet de Courteille, *Dictionnaire*, and under *basmaḳ* in that of Boudagov). This word of the "Khʷārazmian language", according to Vullers, came into use in Persia (Īlkhānid period). Among the Mongols, it meant the commissioners and high commissioners sent by them to the conquered provinces (or the West only?), notably in Russia. The accepted etymology is from the verb *basmaḳ* "to press, impress (e.g. of a seal)" (not, however, with the extended meaning of "to oppress, tyrannise over", giving the meaning of "oppressor" for the *basḳaḳ*, an official whose main duty was to collect taxes and tribute, cf. G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, ii, Wiesbaden 1965, 241-3). However extraordinary such an explanation of an official title may appear, it seems to be confirmed by the parallelism with the Mongol equivalent of *basḳaḳ*, which is *darugha* or *darogha* [*q.v.*] and which may be compared with *darukhu*, a Mongol verb synonymous with *basmaḳ* in the sense of "to impress". These may, however, be popular etymologies.

Schefer, in his edition of the *Voyage de M. d'Aramon* (238, n. 3), says "The etymology of the word pacha given by Geuffroy (from the Turkish *bach*) is wrong. Pacha is a softened form of the word *bachqaq* or *pachqaq* which means a military governor."

Carpini calls the Mongol *basḳaḳs baschati* (variants in the ms.: *bascati*, *bastaci*; cf. *The texts and versions of John de Pl. Carpini...*, Hakluyt Soc., London 1903, 67 and 261, notes). In the edition of 1598 (Hakluyt) there is a marginal note "Basha, vox Tartarica qua utuntur Turci". This also implies a confusion between the words *basḳaḳ* and *pasha*.

It is not impossible that there was actually some confusion among the Turks themselves between *pādishāh* (*pasha*) and the title *basḳaḳ*, the synonym of the Mongol *darugha*. It may be noted that the title of *pasha* (which is not found in Persian sources, according to Muḥammad Ḳazwīnī) was applied either to Anatolians, subject in fact or in theory to the Mongols, or to officials of the Mongol Īlkhāns (like the governor of Baghdād mentioned above; cf. also *piser-i ʿAlī Pasha* alluded to in the *Bezm-ü rezm* of ʿAzīz b. Ardashīr Astarābādī (ed. Köprülü, 249, l. 8). The confusion could be explained the more easily as one finds (rarely) the form *bashkaḳ* (Djuwaynī, *Taʾrīkh-i Djahān-gushā* of 658/1260, ed. Muḥammad Ḳazwīnī, ii, 83, n. 9, tr. Boyle, i, 351; in this passage there is a reference to a Khʷārazmian official of 609/1212-13, i.e. before the Mongol conquest).

It may be suggested that, but for the influence of this confusion with the title *bashkaḳ*, that of *pasha* would never have attained such importance.

The Turkish title of *basha*. This title, which is not to be confused with the preceding, nor with the Arabic or old eastern pronunciation of it, was also put after the proper name but was applied only to soldiers and the lower grades of officers (especially Janissaries) and, it seems, also to notables in the provinces (Meninski, *Thesaurus*, i, col. 662 and 294, l. 18; *Onomasticon*, col. 427; d'Herbelot, s.v. *pascha*; Viguier, *Éléments de la langue turque*, 1790, 218, 309, 327; Zenker, 164, col. 2 (probably following Meninski); De La Mottraye, *Voyages*, 1727, i, 180 n. *a*; cf. Ewliyā Čelebi, v, 107[6], 216[18]; Naʿīmā, v, 71[11]; Ismāʿīl Ḥaḳḳī, *Kitābeler*, سفر بشه, 41 and 8). De La Boullaye-Le-Gouz (*Voyages*, 1657, 59, and 552) also distinguishes the title from *bacha* and translates it by "monsieur". Meninski, *loc. cit.*, also notes the pronunciation *bashi* (بشى), which is not to be taken as the word *bash* followed by the possessive suffix of the 3rd pers. *-i*; Meninski knew Turkish too well to make such a mistake. As to the pronunciation *beshe* (given by Chloros, s.v. *pasha*), it comes from the spelling بشه (cf. e.g. Aḥmad Wefīḳ Pasha, *Zoraki Ṭabīb*, act i, sc. 2, ironically applied to a woman) but Meninski pronounces *basha*, even with this spelling.

As the lexicographers have sometimes confused *basha* and *pasha*, some have thought that *basha* also meant "elder brother" (Meḥmed Ṣalāḥī, *Ḳāmūs-i ʿothmānī*, ii, 291 ff., followed by Chloros). It seems that there are two separate problems and that *basha* is really for *bash-agha*, but with the meaning of "*agha* (military title) in chief". The *kawas* (also called Janissaries or *yasaḳči*) were called *bash-agha* (according to Roehrig). On the other meanings of *bash-agha*, and in general for more details on some of the points dealt with here, see Deny, *Sommaire des Archives turques du Caire*, Cairo 1930.

A note on the accentuation: In the word *pasha*, the tonic accent is on the last syllable (*pashà*). In the word *basha*, it is on the first (*bàsha*), as is shown by the weakening of the final vowel in the pronunciation *bàshi*, already mentioned.

(J. Deny*)

PASHA ḲAPUSU, WEZĪR ḲAPUSU, a term of

Ottoman administration denoting the building presented by Sultan Meḥemmed IV in 1064/1654 to the Grand Vizier Derwīsh Meḥmed Pasha and intended to serve both as an official residence and as an office; after the *Tanẓīmāt* [*q.v.*] period it became known as the Bāb-i ʿĀlī [*q.v.*] or Sublime Porte, and soon came to house most of the administrative departments of the *Dīwān-i Hümāyūn* [*q.v.*].

Bibliography: M.Z. Pakalın, *Osmanlı tarih deyimleri ve terimleri sözlüğü*, Istanbul 1946-54, ii, 757.

(Ed.)

PASHALİḲ (t.), means 1. the office or title of a *pasha* [*q.v.*]; 2. the territory under the authority of a *pasha* (in the provinces).

After some of the governors called *sandjak-beyi* (or *mīr-liwā*) had been raised to the dignity of *pasha*, their territories (*sandjak* or *liwā* [*q.vv.*]) also received the name of *pashalik*.

Early in the 19th century, out of 158 *sandjaks* 70 were *pashaliks*. Of these, 25 were *pasha sandjaghi*, i.e. *sandjaks* in which were the capitals of an *eyālet*, the residence of the governor-general or *wālī* of a province. For further details, cf. Mouradgea d'Ohsson, *Tableau général de l'Empire Othoman*, vii, 307.

(J. Deny)

PASHTO [see afghān].

PASHTŪNISTĀN, a name given to a projected political unit based on the North West Frontier province (NWFP) of Pākistān. The project had a dual origin, in the NWFP and in Afghānistān.

Although Pashtūns possessed a strong sense of cultural identity deriving from language, genealogy, law and custom, there is no evidence before the 1920s of any desire for political expression of that identity. A precondition of the formulation of political demands was the creation of a political arena in the form of the NWFP. The origins of the province may be traced to the conquest of the trans-Indus lands of the former Durrānī empire by the Lahore state between 1819 and 1837. In 1849 this region of the Sikhashāhī passed into British hands and in 1901 four trans-Indus districts (Peshāwar, Kōhāt, Bannū and Dēra Ismāʿīl Khān), together with the cis-Indus district of Hazāra, were formed into the NWFP. The tribal regions (to which Afghānistān had been persuaded to relinquish her claims by the 1893 Durand Agreement) on the mountainous western borderland of NWFP did not form part of the province but were grouped into five political agencies. The peculiar problems of the NWFP led to its exclusion from the British Indian constitutional reforms of 1909 and 1919. Resentful Pakhtūns (the alternative forms Pashtūn(istān) and Pakhtūn(istān) reflect the regional differences between the Pashto of the southwestern group of dialects (the so-called "soft" ones) and that of the northeastern ("hard") group, see afghān. (ii) The Pashto language) of the Peshāwar valley formed the *Andjuman-i Islām al-Afāghina* which in 1929 became the *Afghān Djirga* [see djirga in Suppl.] which merged with the Hindu-Sikh dominated provincial branch of the Indian National Congress Party in 1931 to form a party commonly known as the *Khudā-yi Khidmatgār* (KK) after the name of its paramilitary organisation, also called Red Shirts. The aims of the Pakhtūns (notably the brothers ʿAbd al-Ghaffār Khān and Dr Khān Ṣāḥib), who controlled the KK, are uncertain although the evidence of speeches, memoirs and the periodical *Pakhtūn* (founded 1928) suggest a vaguely articulated concept of an ill-defined region referred to as Pakhtūnkhawā which might become a highly autonomous component of an all-India confederation. The KK dominated political life in NWFP under British rule until 1947, when the party began to lose support to the Muslim League, which demanded that the NWFP became part of the projected Pākistān. When it became clear that there was little support for NWFP joining what was perceived as Hindu-dominated India, the KK switched to advocacy of an independent Pakhtūnistān (Pathānistān). This option, however, was not included in the referendum of July 1947, which was boycotted by the KK and yielded an overwhelming majority for Pākistān. Thereafter, the KK accepted the decision and agitated for the greatest degree of provincial autonomy within Pākistān, and this became the main plank of the programme of its successor party, the National ʿAwāmī Party led by ʿAbd al-Wālī Khān, the son of ʿAbd al-Ghaffār. A permanent problem for the Pakhtūn nationalists was the circumstance that Pakhtūns were not a majority within the NWFP, despite their dominant position in the adjacent tribal areas.

Afghānistān's interest in the fate of the frontier Pakhtūns derived from an historic claim (Afghānistān contended that the Durand Agreement, although frequently confirmed by Afghān governments, notably in the 1921 Anglo-Afghān treaty, had been accepted by Afghānistān under duress and had lapsed in 1947), ethnic links, geographical propinquity and political concern about Pakhtūn interference in Afghān politics (as in 1930). On several occasions after 1919, particularly during the Second World War, Afghān governments raised claims to the trans-Indus lands, including the territory of Balūčistān [*q.v.*] and its dependencies, possession of which would have given Afghānistān an outlet to the sea. In 1947 Afghānistān modified its position (following contacts with the KK) and demanded that the Pakhtūns of NWFP should be offered a choice between joining Afghānistān and an independent Pashtūnistān. Afghānistān maintained this demand after 1947 and in 1949 encouraged the emergence of a phantom national assembly of Pashtūnistān with the Faḳīr of Ipi [*q.v.* in Suppl.] as president. During the prime ministership of Muḥammad Dāwūd (1953-63 [*q.v.*]) the dispute between Afghānistān and Pākistān over Pashtūnistān reached its height, especially after the merger of NWFP in West Pākistān's one-unit scheme in 1955. Diplomatic relations were suspended in 1955 and 1961, and during 1960-1 there were armed clashes in Bādjawr. In 1963 the dispute was patched up, but Pashtūn nationalists in Afghānistān maintained the claims. During the period 1973-5 relations deteriorated again (although mainly because of the insurgency in Balūčistān rather than NWFP) and during the 1980s the Afghān government gave encouragement to dissident Pakhtūns in Pākistān. The extent of the territory embraced in the Afghān claim for Pashtūnistān was uncertain. It included not only the NWFP but also the tribal territories, areas outside the NWFP inhabited by Pakhtūns, and, in some versions, Balūčistān as well. The Pashtūns of the Afghān Pashtūn tribal belt were never included, however. Although India and the USSR occasionally issued vaguely sympathetic statements, neither they nor any other state supported Afghān claims.

(M.E. Yapp)

PASIR, a former sultanate in southeastern Borneo, now in the province of Kalimantan Timur of the republic of Indonesia. It comprises the valley of the Pasir or Kendilo river, which, rising in the north on the borders of Kutei runs in a southeasterly direction along the eastern borders of the Beratos range and, turning east, finally reaches the straits of Makassar through a marshy district. The country, about 1,125 km² in area, still contains primitive forest, in so far as the scanty population, which is found mainly in Pasir, the residence of the sultan, and in Tanah Grogot, that of the official administration, has not cleared the trees to make ricefields. Although some gold, petroleum and coal are found in Pasir, Europeans have not exploited them, still less do they practice agriculture. A European administrative official was first stationed in 1901 at Tanah Grogot at the mouth of the Kendilo river. Pasir was therefore a good example of the Borneo coast state which, as regards Islam, developed independently of European influence. The population of the sultanate was in the 1930s estimated roughly at 17,000. It consists of Dayaks who live by growing rice, of immigrant Bandjarese and Buginese from Celebes, who control the trade; they are found chiefly in the flat country at the river mouth. On the coast, the Badjos, a people of fishermen, live in their villages built on piles in the sea. Of the 9,000 Dayaks, about 4,000 had by the 1930s adopted Islam, while 5,000 in the highlands were pagans. The Buginese have a predominating influence in view of their large numbers and their prosperity; the Bandjarese are of less importance. There are very few Europeans and a small number of Chinese and Arabs in Pasir.

Half of the population are therefore foreigners, but like the Dayaks they belong to the Malay race and mix with one another.

Whilst Borneo formed part of the Netherlands East Indies, i.e. until 1949, Pasir was despotically ruled by the sultan and the members of his family; the people had no voice in the government. Alongside of the sultan and his presumed successor was a council of five notables, which the sultan consulted on important occasions; this was also the highest court of the country. These notables and a number of other members of the sultan's family had estates as fiefs. Since 1844 each sultan on his accession concluded a treaty with the Netherlands East Indian authority. In 1908 they declared themselves vassals of that government. In 1900 the right to collect duties on imports and exports and taxes, as well as the monopoly of opium and salt, was ceded to the government in return for compensation. This amounted in the 1930s to 16,800 gulden yearly, of which 11,200 went to the sultan and 5,600 to the notables.

The sultan still collected the following taxes: a poll-tax from adult males; 1/10 of the yields of the ricefields and forest products; 2 coconuts from each fruit-bearing tree; and military service. He also had an income from the administration of justice in the capital.

From the very legendary history of the country, it may be gathered that this despotic government, which is foreign to the Dayaks, was introduced from eastern Java. Under the ruling caste were the chiefs of lower rank, priests and landowners and freemen as a middle class. At the beginning of the 20th century, there were still slaves and debtor-slaves as the lowest class in Pasir, although slavery had long been abolished in other states of the Indies under Dutch influence. As was usual among other Dayak tribes, slaves went about like free men, took part in all festivities and games, might own property and were not even distinguished by dress. If their debt was paid to their master by someone, they went over to the latter. Slaves were not sold.

The following remarks are confined to the pagan Dayaks and their Muslim relatives, the Pasirese.

According to tradition, an Arab (Tuan Said) brought Islam to Pasir. His marriage with the daughter of the reigning chief did much to further the progress of Islam in the country.

As to the Pasirese, their social life was only superficially affected by Islam. In their daily life, a pagan conception of the worship of the deity and of the world of spirits still prevails. The old belief in the important influence of spirits on the fate of man and reliance upon their signs are evidence of this. The fact also is significant that, throughout Pasir, there was in the 1930s only one *missigit* and a few smaller places of worship. The number of Muslim religious leaders and *ḥādjdjīs* was also small, nor was the enthusiasm to make the pilgrimage to Mecca great. On important occasions, appeal is made for assistance to the spirits; this is particularly the case with illness among the Pasirese, who hold the pagan *blian* feasts, which are also celebrated in South Borneo. Amid a great din of gongs and drums which can be heard a long way off, the pagan priest (*balian*) becomes possessed by the spirit which then communicates to him the remedy for the illness. Even in the capital Pasir, exclusively inhabited by Muslims, the advice of the *bàlian* is sought; only during the month of Ramaḍān did the sulṭan forbid this.

How attached the upper classes of Pasir were to animistic views is evident from the legend still current according to which sultan Adam in the middle of the 19th century used to isolate himself for several days in the year on the mountain of the spirits, Gunung Melikat; he had concluded, it was said, a marriage there with a female *djinn* from which a son named Tendang was born. This son, who has the gift of making himself invisible, is said to live on the island of Madura where he married a princess of the *djinn*. He appears from time to time in Pasir, when he is invited by a great sacrificial feast (formerly also human sacrifice). These feasts are still celebrated occasionally, especially in order to free the land from misfortune and sickness. In the village of Busui, a house was built for Tendang with a roof in three parts, which was built on a large pole and thus resembled a dove-cote.

The revenues of the priests consist of what they collect at the end of the month of fasting in *zakāt* and *piṭra*, everyone giving what he can and the chiefs exercise no pressure. A priest also receives a small fee at a marriage or divorce.

The calendar now in general use in the sultanate is the Islamic one. As elsewhere among the Dayaks, the tilling of the fields begins when a particular constellation becomes visible in the heavens.

The family life of the Pasirese has developed to some extent according to Muslim ritual. Among the

followers of Islam, marriage is performed through the intermediary of a religious leader, with the father or another man as *wālī*, but only after an agreement has been come to about the very considerable dowry. This is paid to the parents of the bride; she herself only receives a small part of it. According to Dayak custom, young people are allowed to meet very freely before marriage. A marriage feast is marked by a very considerable consumption of palm-wine. The man remains at least a year in the home of his parents-in-law before he can take a home of his own. Divorce is very frequent because attention is seldom paid to the wishes of the woman in the negotiations between the parents. Man and woman retain their property after marriage; after a divorce, this goes back to the family. Property acquired during marriage is divided into two equal portions between husband and wife. After the death of one or the other, the survivor inherits all. Only a few families follow the Muslim law. The followers of Islam are buried with Muslim rites.

PASISIR (Old Javanese, *pasisi* or *pasir*; Indonesian, *pesisir* "shore, coast") originally an administrative unit of the Central Javanese kingdom of Mataram emcompassing Java's northern littoral from Cirebon in the west to Surabaya in the east. Historically, its importance comes from the establishment during the 15th-16th centuries of small Muslim enclaves within the prevailing religious mix of Hindu, Buddhist, and animistic beliefs. While traditions of the conversion to Islam at the hands of the *wali sanga*, or Nine Saints, differs from place to place, common to them are direct experience of Islam in the Middle East, or transmission by one who had such experience, and an element of Islamic egalitarianism. Under the guidance of the *wali sanga* these enclaves rapidly developed into independent Islamic principalities.

Explanations for Java's conversion to Islam at this time range from those emphasising the "mood of the times," through influences of the Ṣūfī *ṭarīḳas* [*q.v.*] to a race with Christianity. More significant here is the region's response to the changing economic environment. With an increased volume of East-West trade, which tended to be dominated by Muslim merchants, the states of the *pasisir* provided an congenial urban environment for international commerce and Islamic religious centres. The formation of political confederations among *pasisir* states—Demak in the 15th century and Cirebon-Banten in the 16th—led to armed conflict with the inland states, providing a complementary process ultimately furthering Islamic interests in the island.

Culturally, the *pasisir* played a key role in the introduction of important Arabic texts, especially those dealing with the *sharīʿa* [*q.v.*]. Of those cited in the early 19th century *Serat Centini*, only a half-dozen are attributable to the *pasisir* era. These include the *Mukharar* (*al-Muḥarrar* of Abu 'l-Ḳāsim ʿAbd-al-Karīm b. Muḥammad al-Rāfiʿī) [see AL-NAWAWĪ], the *Kitab Nawawī* (*Minhādj al-ṭālibīn* of al-Nawawī), the *Kitab Ibnu Kadjar* or *Kitab Tuhpah* (*Tuḥfat al-muḥtādj li-sharḥ al-Minhādj* of Ibn Ḥadjar al-Haytamī [*q.v.*]), the *Ilah* (*Īḍāḥ fi 'l-fiḳh*), and the *Sujak* (*al-Mukhtaṣar fi 'l fiḳh ʿalā madhhab al-Imām al-Shāfiʿī* of Aḥmad b. al-Hasan b. Aḥmad al-Iṣfahānī). To these can be added an important work on Ṣūfism, the *Hulumodin*, a corrupted title of the *Iḥyāʾ ʿulūm al-dīn* of al-Ghazālī [*q.v.*].

PASSAROWITZ [see PASAROFČA].

PASWAN-OGHLU (written *Pāsbān-oghlī*, as if from Pers. *pāsbān* "guard, shepherd", cf. *Ḳāmūs al-Aʿlām*, ii, 1467) or *Pāzwānd-oghlī* (as in ʿAbd al-Raḥmān Sheref, *Taʾrīkh*, ii, 280) or, according to modern Turkish orthography, Pazvantoğlu (Hamit and Muhsin, *Türkiye tarihi*, 423), but on his own seal "Pāzwānd-zāde ʿOthmān" (in Orěškov, see *Bibl.*), the rebel Pasha of Vidin (1758-1807). His family originated in Tuzla in Bosnia, but his grandfather, Paswan Agha, for his services in the Austrian wars was granted two villages near Vidin [*q.v.*] in Bulgaria in *ca.* 1739. ʿOthmān's father ʿÖmer Agha Paswan-oghlu not only inherited these villages but as *bayraḳdār*, etc., was also a rich and prominent man (*aʿyān*); on account of his defiant attitude, however, he was put to death by the local governor.

ʿOthmān himself only escaped death by escaping into Albania, but after taking part in the war of 1787-9 as a volunteer, he returned to his native town. Very soon he was in the field again and fought with distinction, returning to Vidin in 1791. From there he organised with his men raiding expeditions into Wallachia and Serbia. When the sultan wanted to punish him for this, he cast off his allegiance in 1793, took to the mountains and at the end of 1794 captured Vidin with his robber band and became the real ruler in the *pashalïḳ* there. Vidin, which he fortified again, thus became a meeting-place for robbers and discontented Janissaries who were driven out of Serbia in 1792, and he himself became the popular leader of all those who opposed the reforms of Selīm III.

In 1795 Paswan-oghlu even attacked the governor of Belgrade, Ḥādjdjī Muṣṭafā Pasha, a supporter of the reformers, who had been given the task of disposing of him; strong bodies of troops were sent by the Porte but without success. In consequence, negotiations were begun at the end of 1795 but Paswan-oghlu remained practically independent in the whole of Upper Bulgaria.

But since the Porte did not also formally recognise him, Paswan-oghlu drove the official governor out of Vidin and in 1797 attacked the adjoining *pashalïḳs*; in the east his forces occupied or threatened a number of places in Bulgaria (but they were defeated at Varna), and in the south they attacked Nish [*q.v.*] without success; in the west they advanced up to Belgrade, occupied the town, but were driven back from its fortress by the resistance of the Turks and Serbs whom Ḥādjdjī Muṣṭafā had armed. As a result of this and because of Paswan-oghlu's negotiations with France and Russia, the Porte in 1798 sent an army of 100,000 men against him under Admiral Küčük Ḥuseyn Pasha. He besieged Vidin in vain until October, and had to withdraw with heavy losses. This defeat and Bonaparte's invasion of Egypt induced Turkey to come to terms, nominally at least, with Paswan-oghlu and to give him the rank of Pasha of three tails (1799).

Nevertheless, he declared himself against the reforms, against the central government and even

against Selīm III; he also sent several expeditions to plunder Wallachia (1800 and 1801) and incited the Janissaries, who had in the meanwhile returned to Belgrade, to occupy the fortress (in the summer of 1801) and to murder Ḥādjdjī Muṣṭafā Pasha (at the end of the year).

At this time, he repeatedly asked the Tsar to number him among his faithful subjects and also offered his services to France. The Porte, which shortly before had forgiven Paswan-oghlu everything, from 1803 declared war on him again, but the Serbian rising of 1804 diverted their attention. Paswan-oghlu himself had to fight in the western part of his territory against Pintzo's rising (1805). The appearance of the Russians on the left bank of the Danube (1806) induced him to offer his services to the Porte, but the latter instead gave the supreme command to the commander of Rusčuk [*q.v.*]. This embittered him so much that he resolved to defend only his own territory against the allied Russians and Serbians, but he died soon afterwards on 27 January 1807.

That Paswan-oghlu was able to hold out so long was due to the state of the Ottoman empire at the time, to his personal ability and foresight (he never abandoned Vidin), but for the most part to luck. Within his area he collected customs and taxes, ruled strictly and despotically, although not entirely without mildness and justice. In Vidin, he was active in public works, building a mosque, *madrasa* and library (see F. Kanitz, *Donau-Bulgarien und der Balkan*, Leipzig 1882, 4, 8). Although his health was rather poor as a result of too great mental strain, ambition led him to aim at independence, as evidence of which we have the coins struck by him and known as *Pazvančeta*.

Bibliography: Various notes on Paswan-oghlu are already found in the contemporary travels of G.A. Olivier (1801) and L. Pouqueville (1805), but it is not till the *Notes sur Passvan-Oglou 1758-1807 par l'adjudant-commandant Mériage*, of the French agent in Vidin (1807-8), that we have a complete picture of him which is still the best account of his career; these *Notes* were edited by Grgur Jakšić in *La Revue Slave* (i [Paris 1906], 261-79, 418-29; ii [1906], 139-44, 436-48; iii [1907], 138-44, 278-88) and tr. in the *Glasnik zemaljskog muzeja* (xvii [Sarajevo 1906], 173-216) into Serbo-croat. PĀTAN, one of the oldest and most renowned towns of Gudjarāt [*q.v.*] in the Aḥmādabād district of Bombay. It was founded in 746 by the Čavadas of Gudjarāt. Originally known as Anhilwāra, the Arab geographers refer to it as Nahrwāla [see nahrawāl]. Later, it became known as Pātan. According to the *Mir'āt-i Aḥmadī*, the Hindus used the word *Pātan* for a big or capital town. The poet Farrukhī [*q.v.*] says that on its possession "Bhīm prided himself over the princes of India" (Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 217). Sultan Maḥmūd of Ghazna attacked and conquered it but did not annex it. In 573/1178 the Ghūrid Shihāb al-Dīn attacked it but did not succeed in defeating the *rādjā*. However, in 591/1195 Ḳuṭb al-Dīn Aybak defeated its ruler and collected enormous booty. After many ups and downs, Muslim power was established there under ʿAlā' al-Dīn Khaldjī, who retained Pātan as the capital. Pātan continued as the capital of Muslim power in Gudjarāt till the time of Aḥmad Shāh I, who shifted it to Aḥmadābād after his accession in 813/1410.

Pātan was a great centre of Muslim culture, with imposing mosques, splendid *madrasas*, *khānaḳahs zāwiyas* and *dā'iras*. Shaykh Niẓām al-Dīn Awliyā' [*q.v.*] sent his disciple Shaykh Ḥusām al-Dīn to implant the Čishtī order there. Due to the very large member of graves of saints, it came to be called *Pīrān Pātan*. Muẓaffar I and Muḥammad Shāh Tatār Khān were also buried there. It was perhaps in view of this background that Muḥammad b. Tughluḳ deputed there a grandson of Shaykh Farīd al-Dīn Gandj-i Shakar [*q.v.*] to deal with the recalcitrant elements. A highway—with hundreds of thousands of trees on both sides—connected Pātan with Barōda [*q.v.*]. The entire region was prosperous and fertile. Its trade potential attracted the Ismāʿīlī Bohrā [*q.v.*] community to it. During the time of Akbar, the region was in the grip of Mahdawī [see mahdawīs] and anti-Mahdawī activities.

The earliest mosque was constructed in Pātan in 655/1257. Its *madrasas* enjoyed a wide academic reputation and had big libraries attached to them. A *madrasa* known as *Fayḍ-i Ṣafā'*, founded during the reign of Awrangzīb, had hostels, a mosque and baths attached to it. Shaykh Matā's *madrasa* produced eminent scholars like Shaykh Djamāl al-Dīn Muḥammad b. Ṭāhir, author of the *Madjmaʿ biḥār al-anwār*.

PATANI (Thai: Pattani), a region of Southeast Asia, formerly a Malay Sultanate but now included in Thailand (as a result of the Treaty of Bangkok, 1909, between Great Britain and Siam), and at present comprised of the four southern provinces of Pattani, Narathiwat, Yala (Jala) and Satun. The population of these four provinces is approximately 1,500,000, 80% of whom are Malay Muslims.

From the 14th to 18th centuries, Patani was a leading entrepôt for trade between China and Southeast Asia. The conversion of the royal court to Islam, reportedly in the mid-15th century, enabled it to profit from the economic and political advantages which affiliation with the Muslim community offered. Because of the relatively early date (in the local context) of official identification with Islam, Patani is regarded as one of the cradles of Islam in Southeast Asia.

For the history of Islam, Patani is chiefly famous for two reasons. The first is a lengthy and continuing tradition of *kitab* literature, that is, works on *fiḳh*, *kalām*, and *taṣawwuf* written in Jawi (Malay using the Arabic script). The founder of this tradition and its most prolific author was Dāwūd b. ʿAbd Allāh b. Idrīs al-Faṭānī [*q.v.*]. He has been followed by a line of in-

fluential and versatile scholars, the most prominent of whom was Aḥmad b. Muḥammad Zayn (1856-1906), who supervised the Malay printing press in Mecca and attracted many pupils from the Malay-speaking world, among them Tok Kenali (1868-1933), a famous teacher and influential figure for the practice of Islam in Northeast Malaya. Aḥmad b. Muḥammad Zayn is remembered chiefly for *al-Fatāwā al-Faṭaniyya*, which is a substantial collection of his rulings. They are technically excellent, show a secure command of Arabic sources and illustrate the adaptation of Islam to the realities of Malay life in the late 19th century. The tradition of *kitab* writing is maintained to this day and is influential in the northern Malaysian states of Kelantan, Kedah and Perak, as well as Patani itself.

Second, and related to the first reason, Patani was, and to some extent remains, famous as the home of a distinct tradition of Islamic education and learning as conducted in the *pondok* (literally "hut") schools [see PESANTREN]. These are privately-run traditional Islamic institutions, headed by a *Tok Guru* (religious teacher), often with Middle Eastern education, where young Muslim men and women are instructed in a wide range of Islamic subjects. Traditionally, many *pondok* graduates went on to study in Mecca, Medina and Cairo (al-Azhar), and, more recently, also in the Philippines, Malaysia and Indonesia. The *pondok* is regarded by Patani Muslims as a guardian of their religion, language and culture and for that reason has been an object of considerable concern to the Thai government throughout this century.

This brings us to the final point. Patani, and the present northern Malaysian states, came under Siamese (now Thai) domination during the 19th century. The relationship between Thais and Muslims was, and remains, strained, Thais still referring to Malays as *khaek* (aliens, visitors). In the modern state of Thailand the Muslims of the south are a tiny minority (3% of Thailand's 50 million largely Buddhist population). The history of Patani Muslims has been one of prolonged struggle to remain independent in religion, language and culture. The traditional past is kept alive by a vigorous tradition of oral and written histories which emphasise the pre-19th century period, when Patani was outside the sphere of Siamese control. The policy of the Bangkok government towards the southern Muslims has oscillated between a grudging tolerance on the one hand, and an aggressive policy of Thaiicisation on the other. The latter was especially prominent in the 1940s and 1950s, giving rise to strong local reaction and bloody clashes between the government and the Malay Muslims. Imprisonment of religious leaders resulted in an even greater determination by their followers to sustain their traditional Islamic way of life.

From the 1960s to the present, Bangkok's attitude tends to be one of assimilation, as expressed in policies such as grants to religious schools providing that they teach secular subjects as well as Islam; attempts to set up councils of religious leaders to advise (but as yet there are no *s̲h̲arīʿa* courts); the publication of Thai language translations of the Ḳurʾān, and some concessions to the wearing of Muslim dress. These policies are viewed by Muslims, rightly, as attempts to diminish the practice of their religion. In fact, throughout this century, the Muslim response to efforts at assimilation has been to strengthen their devotion to Islam.

The economic condition of Muslims in the four southern provinces has been deteriorating since the 1950s and 1960s. In the 1970s, Bangkok recognised that the subsistence-level living standard of the Malays was a factor in the increasing political unrest, banditry and separatist activities which were occurring in the area. Efforts to improve the economic conditions of the region have so far met with little long-lasting success, the reasons being complex, but including a reluctance to invest capital in an area whose history has been so troubled.

There are a number of separatist movements among the Malays, which since the late 1940s have struggled for either independence or irredentism with Malaysia. Since the displacement of their traditional rulers by the Thais, the people have turned to religious teachers for leadership, and the four existing national fronts have leaders from this group. These movements have been dealt with severely by the Thais and are currently in a period of quiescence. The occasional separatist violence is followed by rapid suppression, but the determination of the separatists, and their continued support by Muslims outside Thailand, indicates that the "problem" will be an ever-present one for the Bangkok government.

Bibliography: There is as yet no standard reference work on Patani. The following Bibliography has been divided into subject headings for ease of reference.

1. *Traditional histories*. A. Teeuw and D.K. Wyatt, *Hikayat Patani: The Story of Patani*, 2 vols., The Hague 1970.

PATE, a small town on an island of that name in East Africa. It lies in lat. 2°05′ S., and long. 41°05′ E., off the Kenya coast in the Lamu [*q.v.*] archipelago. The use by Arab sailors of the *Mkanda*, the channel between it and Lamu, is mentioned in the *Periplus of the Erythraean Sea*, written *ca.* A.D. 50. Aḥmad b. Mād̲j̲id al-Nad̲j̲dī identifies it as *Batā*, and several epitaphs spell the adjective *Batāwī*. H.N. Chittick excavated the periphery of the site in the 1960s, and claimed that it was not occupied before the 14th century. An excavation by Athman Lali, Curator of the Lamu Museum, and T.R. Wilson, as yet un-

published, disclosed Sāsānid-Islamic pottery in levels of *ca. ante* 750, below a 15th-century mosque with two *miḥrābs*, one incorrectly orientated. The former large town is much depopulated, leaving a large ruin field, in which numerous Arabic epitaphs, none of them recorded, protrude from cemeteries which are overgrown by tobacco crops. The growing of tobacco for snuff is the principal industry.

At least twelve versions are extant of the *Habari za Pate*, the traditional Swahili history. They record the Nabhānī dynasty, claiming that it was founded *ca.* A.D. 1200. It is not claimed that the rulers were descended from the Nabhānī *maliks* of ʿUmān [see NABHĀN], but rather from collaterals of the same tribe. Widely-held Swahili traditions report that it and other Swahili towns were founded under the Umayyad caliph ʿAbd al-Malik b. Marwān. In spite of their 19th-century date, recent archaeological evidence here and in the vicinity at some twenty-six sites suggests that there is some nucleus of truth: they may be a plausible reminiscence of the increase in demand for mangrove roofing timbers consequent upon the extensive building operations of that reign.

This dynastic history records thirty-five rulers, and is remarkable in repeating a complete *isnād* for each of the first twenty-five. It appears to be a composite work, the account of the first twenty-five rulers having been composed *ca.* 1810, with additions in distinct styles *ca.* 1888 and 1911. A highly glossed version was published in English by C.H. Stigand, with some dislocations of the dynastic order. The best version, in Swahili in Arabic script, Document 157 in the University Library, Dar es Salaam, has never been published.

The Portuguese had a customs post on the island from *ca.* 1510 until 1698, and an Augustinian mission from 1596. The most important trade was in mangrove poles and ivory, and later in tobacco. The island came under ʿUmānī suzerainty in 1698, intermittently paying customs dues to Zanzibar. Following a revolt, the island was garrisoned from Zanzibar in 1861, when the Nabhānī *sulṭān*, with his family, slaves and followers, migrated to Witu on the mainland.

A surviving item of the regalia of Pate, an intricately carved ivory horn, with an Arabic inscription, is exhibited in the Lamu Museum.

PAṬHĀN [see AFGHĀN].

PAṬNĀ, a city in Bihār Province of the Indian Union, situated on the right bank of the Ganges (lat. 25° 37′ N., long. 85° 8′ E.) and with a population (1971 census) of 474,000. In the years 1912-36, it was the capital of the province of Bihar and Orissa of British India, and subsequently, of Bihar alone.

From 1116/1704 onwards, it is known in Muslim chronicles as ʿAẓīmābād, after Awrangzīb's grandson ʿAẓīm al-Shaʾn who made his court here. Paṭnā, however, had already been selected as the Muslim provincial capital of Bihār [*q.v.*] by the Afghān ruler Shīr Shāh in 948/1541. At that time it was the seat of the local government, but as yet an insignificant town. Shīr Shāh built a great fort, and we subsequently see Paṭnā become one of the largest cities of the province of Bihār. It remained a governor's seat during the Mughal period. Djahāngīr's reign is especially noted for the mosques constructed in Paṭnā. On account of its commercial importance, Paṭnā also attracted European merchants as early as 1620. Peter Mundy, who came to Paṭnā in 1632, does not fail to mention the *madrasa* of Paṭnā, which was famous throughout the Muslim world. Bānkīpūr, the western suburb of the city, is well known for its collection of Arabic and Persian manuscripts in the Khudā Bakhsh Library [see BĀNKĪPŪR].

Bibliography: Numerous chronicles, such as the *Taʾrīkh-i Shīr Shāhī*, the *Taʾrīkh-i Dāwūdī* and the *Ṭabaḳāt-i Akbarī*, mention Paṭnā *passim*; useful information can also be found in N. Kumar, *Bihar District Gazetteer: Patna*, Patna 1970, and *Imperial gazetteer of India*², xx, 54-70. (A. WINK)

PATRAS [see BALIABADRA].

PAṬRĪK, patriarch, the form found in Ottoman Turkish (see Redhouse, *Turkish and English lexicon*, s.v.) for the Patriarchs of the Greek Orthodox and Eastern Christian Churches in the empire, of whom by the 19th century there were seven. It stems from the Arabic form *biṭrīk/baṭrīk* [*q.v.*] "patricius", confused with *baṭriyark/baṭrak* "patriarch", also not infrequently found in mediaeval Arabic usage as *faṭrak*. See G. Graf, *Verzeichnis arabischer kirchliche Termini*², Louvain 1954, 84; C.E. Bosworth, *Christian and Jewish religious dignitaries in Mamlûk Egypt and Syria...*, in *IJMES*, iii (1972), 68-70. (ED.)

PATRONA KHALĪL, Ottoman rebel (d. 14 Djumādā I 1143/25 November 1730). Of Albanian origin, he belonged to the protégés of the *Ḳapudān-Pasha* Muṣṭafā and ʿAbdī Pasha (*ca.* 1680-5 and later). He was born at Khurpishte (Khroupista, now Argos Orestikon, to the south of Kastoria, Greece). He served as a Lewend [*q.v.*] on board the flagship of the Ottoman vice-admiral, the Patrona (for this term, see RIYALA) whence probably his name. Transferred from naval service, he was able to join the Seventeenth *Orta* of the Janissary Corps in which he served till the peace settlement of 1718. While on garrison duty in Vidin [*q.v.*] he became involved in a rebellion, managed to escape to Istanbul where he lived thereafter as an unskilled labourer, travelling salesman and *ḥammām* attendant. During the successive stages of his career he seems always to have enjoyed protection in high places, since he always escaped the punishments which he incurred because of his repeated misbehaviour and criminal acts.

Together with Muslu Beshe, a greengrocer and former Janissary, Emīr ʿAlī, a coffeemaker, and others, Patrona Khalīl started the rebellion on Thursday, 15 Rabīʿ I 1143/28 September 1730 which led to the abdication of Sultan Aḥmed III [*q.v.*]. The cause of this revolt may have been a conservative reaction against the westernising tendencies of the so-called "*Lāle Dewri*" [*q.v.*]. The rebels claimed that their aim was the restoration of the rule of Islamic law. The movement was instigated by a group of disaffected, high-ranking *ʿulemāʾ*, hostile to the powerful faction of the grand vizier Dāmād Newshehirli Ibrāhīm Pasha [see IBRĀHĪM PASHA, NEVSHEHIRLI]. There are data pointing to an element of ethnic solidarity: all the leading rebels were of Albanian origin. The moment was well chosen: the losses in the war with Ṣafawid

Persia worsened the effects of the socio-economic problems of the day. The *Dīwān* was not in session that day; the sultan and grand vizier were absent from Istanbul and the *ḳāʾim-maḳām* [*q.v.*] was at his private residence in Čengel Köy on the Bosphorus. The government was not able to organise any effective resistance. The rebellious *ʿulamāʾ*, led by Arnawud Zulālī Ḥasan Efendi, a former *ḳāḍī* of Istanbul dismissed in 1140/1728, successfully pressed the sultan to appoint a new government. Before this the Grand Vizier Newshehirli Ibrāhīm Pasha and other prominent members of the government were murdered (18 Rabīʿ I 1143/1 October 1730). The new sultan Maḥmūd I [*q.v.*], who acceded to the throne on 6 October, was urged to grant a general amnesty to the rebels following a *hüddjet* issued by the new *Sheykh ül-Islām* (14 Djumādā I 1143/11 November 1730). Patrona Khalīl, instead of seeking high office, aimed at securing a lasting influence on affairs. His domination endured for two weeks only, until the Imperial *Dīwān* decided in secret to make an end to it. The factions of the seraglio, led by the *Ḳîzlar Aghasî* Beshīr Agha and the new Grand Vizier, Silāḥdār Meḥmed Pasha, united forces and created their own power base to effect a counter coup. Ḳabaḳulaḳ Ibrāhīm Agha (notorious for his bloody suppression of the revolt in Egypt), the admiral Djanîm Khodja Meḥmed Pasha, and a former khān of the Crimea, Ḳaplan Girāy, organised it. On 14 Djumādā I 1143/25 November 1730, Patrona Khalīl, accompanied by his fellow-rebel leaders, was invited to attend the meeting of the *Dīwān*, at which the sultan was to appoint him *beglerbegi* of Rumeli. During the meeting in the seraglio, the three leading rebels were set upon and killed. *ʿUlemāʾ* such as Zulālī Efendi were arrested and secretly executed later. In Ramaḍān 1143/March 1731 a riot ensued, purportedly instigated by a group of Albanians in revenge for their fellow-countryman Patrona Khalīl; this was quickly suppressed by the newly appointed grand vizier Ḳabaḳulaḳ Ibrāhīm Pasha.

Paintings of these bloody events were made by the French painter Jean-Baptiste Vanmour (Rijksmuseum Amsterdam, Inv. A 2012 and A 4082 i.a.).

(A.H. de Groot)

PAWLĀ, the name given in the Mughal emperor Akbar's monetary system to the ¼ *dām* (¼ *paysā*).

(J. Allan)

PAYĀS, the Ottoman Turkish form of modern Turkish Payas, a small town at the head of the Gulf of Alexandretta 18 km/12 miles north of Iskandarūn [*q.v.*] (lat. 36° 46′ N., long. 36° 10′ E.). Lying as it does in the very narrow coastal corridor between the sea and the Amanus Mts. or Djabal al-Lukkām [*q.v.*], the modern Turkish Gavur Dağları, Payās has always been a strategically important point on the route from Cilicia to Antioch; the name itself goes back to that of the classical Greek town of Baiae (see *PW*, ii/2, col. 2775 (Ruge)).

In the early Islamic period, Payās was on the road connecting Iskandarūn with the frontier fortress against the Byzantines of al-Maṣṣīṣa [*q.v.*] (Mopsuestis), and the classical Arabic geographers name it as Bayyās, a flourishing small town. Under the Ottomans, with their acquisition of Syria, it became in the 10th/16th century quite a significant port; the vizier Ṣoḳollu Meḥmed Pasha [*q.v.*] built there a large caravanserai, a mosque, *madrasa*, *ʿimāret* and baths. In the next century, Ewliyā Čelebi describes the port as strongly fortified and with batteries of cannon. In the 19th century it came within the *wilāyet* of Adana, and Cuinet numbered its population at 6,325, slightly more than half of whom were Muslims. With the 1921 agreement between France and the Nationalist Turkish government in Ankara, Payās came just within the boundaries of Turkey. After the 1939 incorporation of the Hatay *vilâyet* in Turkey, Payās was included within this last, and is at present the chef-lieu of a *nahiye* in the *ilçe* of Dört-Yol in the Hatay/Antakya *il*. The population in 1950 was 2,653.

(C.E. Bosworth)

PAYGHŪ (t.), a Turkish name found e.g. among the early Saldjūḳs, usually written *P.y.ghū* or *B.y.ghū*. In many sources on the early history of the Saldjūḳs these orthographies seem to reflect the old Turkish title *Yabghu*, which goes back at least to the time of the Orkhon inscriptions (see C.E. Bosworth and Sir Gerard Clauson, in *JRAS* [1965], 9-10), and it was the Yabghu of the western, Oghuz Turks whom the eponymous ancestor of the Saldjūḳs, Duḳāḳ Temir-Yalïgh "Iron-bow" served (see Cl. Cahen, in *Oriens*, ii [1949], 42; Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1964, 219 and n. 46). But the orthography *P.y.ghū*, *B.y.ghu*, is so frequent in the sources that it has been suggested (e.g. by P. Pelliot and O. Pritsak) that we have here a totemistic personal name used by the early Saldjūḳs, stemming from *bīghu/pīghu* "a type of falcon" (see M.Th. Houtsma, *Ein türkish-arabisches Glossar*, Leiden 1894, 28). See the lengthy discussion in J. Marquart, *Über das Volkstum der Komanen*, in W. Bang and Marquart, *Osttürkische Dialektstudien*, in *AGW Göttingen*, N.F. xiii, Berlin 1914, 42-3 n. 5, 44. In support of this, it is true that the name/title Payghū / Bīghū Khān re-appears amongst the Ḳarakhānids [see ilek-khans] in the 6th/12th century (see Pritsak, *Die Karachaniden*, in *Isl.* xxvi [1953-4], 54).

Bibliography: Given in the article.

PAYSĀ, Paisā (Hindi), English form pice, a copper coin of British India = 3 pies or ¼ anna. Under the Mughals, the name *paisā* became applied to the older *dām*, introduced by Shīr Shāh, 40 of which went to the rupee, as the unit of copper currency; the name found on the coins however is usually simply *fulūs* or *rewānī*. *Paisā* is the general name for the exten-

sive copper coinage coined in the 18th and 19th centuries by the numerous native states which arose out of the Mughal empire (see J. Prinsep, *Useful tables*, ed. E. Thomas, London 1858, 62-3). In the currencies of modern India and Pakistan, 100 *paisās* = one rupee, and in that of Bangladesh, one taka.

PEČENEGS, a Turkic tribal confederation of mediaeval central and western Eurasia. Their ethnonym appears in our sources as Tibet. *Be-ča-nag*, Arabo-Persian *Bdjnāk, Bdjānāk, Bdjynh*, Georg. *Pačanik-i*, Arm. *Pacinnak*, Greek Πατζινακῖται, Πατζινάκοι, Rus'. *Pečeneg'*, Lat. *Pizenaci, Bisseni, Bysseni, Bessi, Beseneu*, Pol. *Pieczyngowie* and Hung. *Besenyő* (< *Beshenägh*) = *Bečenäk/Pečenäk*. It has been etymologised, with some uncertainty (cf. Pritsak, *Pečenegs*, 211; Bazin, *À propos du nom des Petchénègues*), as a variant of *badjanak/badjinak* "in-law" (>Old Church Slav. *Pashenog*), i.e. "the in-law clan/tribe."

Their earliest history and origins are unclear. They have been identified with the *Pei-ju* (= Middle Chin. *Pək-ńźiʷok = Pečeneg (?), according to Pelliot, *Quelques noms*, 226, n.1), noted in a 7th century A.D. Chinese source, the *Sui-shu*, a T'ieh-lê tribe, located near the En-ch'ü (Onoghur?) and A-lan (Alans). But, this is far from certain. More reliable is a notice in a Tibetan translation of an 8th century Uyghur source on the "Northern peoples" which tells of *Be-ča-nag* hostilities with the *Hor* (Oghuz), probably in the Syr Darya region (Bacot, *Reconnaissance*, 147; Ligeti, *Rapport*, 170, 172, 175, 176). Oghuz traditions (cf. Jahn, *Geschichte der Oġuzen des Rašīd ad-Dīn*, 24-5; Abu 'l-Ghāzī Bahādur Khān, *Shadjara-yi Tarākima*, ed. Kononov, 41-2) appear to confirm this. The presence in their union of the Kangar/Kenger (Κάγγαρ) subconfederation (Const. Porph., *De admin. imperii*, 170-1) may also point to a tie to this region. Kangar has been connected with the Kengeres people mentioned in the Kül Tegin inscription and the *Kangarāyā* (< *Khangarāyē*) nomads who settled in Transcaucasia. These, in turn, may be related to the Türk toponym Kengü Tarban and the Chinese *K'ang-chü* (a term designating the middle Syr Darya and adjoining lands, see Klyashtorniy, *Drevnetyurkskie pamyatniki*, 156-78) and Old Iran. *Kangha*. Pritsak (*Pečenegs*, 212-14) derives this ethno-toponym from Tokharian *känk "stone" (cf. Turk. Tashkent "Stone City," *Kengeres* < *känk* + Ἄορσοι> *ävrs>ärs>äs* = *Kenger As*) and suggests that they were Tokharian-speaking, mercantile city-oasis (Tashkent) dwellers. The difficulty here is that although *Kang*, etc., may be connected with *känk, As* cannot be derived from Ἄορσ (= Iran. *Aoruša* which produces *Urs/Ors*). Pritsak further conjectures that the Kangars, driven into the steppe by an Oghuz-Karluk-Kimek coalition, became nomads, forming a confederation consisting of Tokharian, Eastern Iranian and Bulgharic Turkic elements. Their connection with Eastern Iranian elements is hinted at in the remark of al-Bīrūnī (*Taḥdīd*, tr. ʿAlī, 19) regarding a people that "are of the race of al-Lān and that of al-Ās and their language is a mixture of the languages of the Khwārazmians and the Badj(a)nāk." This is echoed in the Old Rus' translation of Josephus Flavius (ed. Meshčerskiy, 454) which adds "the Yas, as is known, descended from the Pečeneg clan/tribe." Németh, followed by Ligeti, however, on the basis of their fragmentary linguistic remains, view them as Common Turkic-speakers (most probably, Ḳîpčaḳ, see Németh, *Die Inschriften*, 16, 50-1; Ligeti, *A magyar nyelv*, 362, 506, and Györffy, *A Besenyők nyelve*, 170-91). Anna Comnena (ed. B. Leib, ii, 142) remarks that the Pečenegs (whom she calls "Seythians") speak the same language as the Komans (= Ḳuman-Ḳîpčaḳ). Maḥmūd al-Kāshgharī (tr. Dankoff, i, 84), however, seems to lump them together with the Bulghār and Suwār speaking a "Turkic of a single type with clipped ends." The available linguistic material points rather in the direction of Ḳîpčaḳ. The possibility that they adopted Turkic is not to be excluded.

Islamic geographers (cf. al-Iṣṭakhrī, 10; al-Masʿūdī, *Tanbīh*, 180-1) were aware that the Pečenegs had entered the Western Eurasian steppes in a series of migrations, the source of some confusion regarding the Pečeneg habitat in other Islamic authors. This confusion is furthered by the use of the ethnonym *Basdjirt/Bashdjirt*, etc., to denote both the Bashkirs (Bashkort) and the Hungarians in both their Bashkirian (Magna Hungaria) and Pannonian homelands. Warfare with the Oghuz (who absorbed some of them, cf. the Oghuz *Pečene*), Karluks and Kimäks drove the Pečenegs from Central Asia into the Volga-Ural/Yayîḳ mesopotamia and later, with added Khazar pressure in the late 9th century (Const. Porph., *DAI*, 166-7), into the Pontic steppes. Here, they nomadised from the Don to the Danube. They were, as Kāshgharī notes (tr. Dankoff, i, 92), the closest, of all the Turkic peoples, to Rūm. The Islamic authors, without indicating which of their abodes is meant, note that they were the objects of annual raiding (for slaves and booty) by the Khazars, Burdās/Burṭās and others of their neighbours (Ibn Rusta, 140; Gardīzī/Barthold, 35, 36; *Ḥudūd al-ʿālam*, 101, 142, 160 (commenting that the slaves brought from Khazaria to the Islamic lands "are mostly from here" i.e. the "Khazarian Pečenegs"); al-Bakrī, ed. tr. Kunik and Rozen, 42). Gardīzī/Barthold, 35, however, perhaps using information pertaining to their earlier homeland, describes them as rich in cattle, horses and sheep and possessing "many vessels of gold and silver. They have many weapons. They have silver belts..."

The Byzantines, in Constantine Porphyrogenitus' day (d. 959) were eager to use them to control the steppe approaches to the Empire. According to the *De adm. imp.*, the Pečeneg union was composed of 8 tribal groupings (lit. θέματα "provinces"), headed by "great princes," four on each side of the Dnieper (reflecting Turkic bipartite, left-right organisational principles). These further subdivided into 40 "districts" (μέρη), clan groupings (?). This internal organisation, like other steppe polities, was dynamic. Thus Cedrenos (ii, 581-2) reports 13 tribes in the 11th century. The names of the 8 tribal groupings, consist of two parts, the name proper, usually a horse colour, and with some possible exceptions, the titles of their rulers, e.g. Χαβουξιν-γυλά *Kabukšin-Yula* "the tribe of the Yula with bark-coloured horses," Συρου-κουλπέη *Suru Kül Bey* "the tribe of the Kül Bey with greyish horses." The *De adm. imp.* also notes the names of the "great princes" (hereditary positions, passed from cousin to cousin) at the time they were expelled from their Volga-Ural/Yayîḳ habitat, *ca.* 889 (*DAI*, 166-9; Németh, *Die Inschriften*, 50-1; Ligeti, *A magyar nyelv*, 507-11). None of the contemporary sources (Byzantine, Rus' or Islamic) notes the presence of a supreme executive authority in this tribal confederation. The *Ḥudūd*, 101, merely comments that they were ruled by an "elder" (*mihtar*) and had no towns. The notice in Abū Saʿīd (d. 1286, preserved in Abu 'l-Fidā, d. 1331), reporting that they had a town, Badjanākiyya, and were ruled by a Khāḳān (Abu 'l-Fidā, *Taḳwīm*,

205), should be viewed as a *topos*. The Pečenegs, like most of the nomadic polities in the Western Eurasian steppes, were stateless.

The Bulgarian Tsar Symeon (893-927), used them to defeat the Hungarians, allies of Byzantium during his war with the Empire (894-6). Formal relations with Rus' were established in 915 so that the Pečenegs, now Byzantine allies, could attack Bulgaria. After 920, Pečenegs-Rus' relations were largely hostile. On occasion, Pečenegs served as mercenaries in Rus' campaigns (e.g. Igor's 944 raid on Byzantium, *PSRL*, i, cc. 42, 43, 45). Sometimes, they were brought in as "allies" in Rus' throne struggles. They never undertook the permanent conquest of Rus'. The Byzantines used them during Svyatoslav's Balkan wars, eventually leading to their fatal ambush of the Rus' ruler in 972 (*PSRL*, i, cc. 72, 73). Relations with Rus' worsened under Vladimir I (978-1015), producing several decades of war (988-*ca.* 1006-7). They were decisively defeated by Yaroslav of Kiev in 1036 and thereafter pushed (by Rus', Oghuz and Ḳuman-Ḳïpčaḳ pressure) toward the Byzantine Danubian frontier (*PSRL*, i, cc. 150-1; Diaconu, *Les Petchénègues*, 39-49) which now became their primary area of focus. Military defeat and the loss of pasturages led to internal conflicts which resulted ultimately in their movement into Byzantine lands from which a weakened Empire could not dislodge them. The Rus' defeat of the Western Oghuz (1060) and the entrance of the Ḳuman-Ḳïpčaḳs into the Pontic steppe increased the pressure on the Pečenegs, who retaliated with their own depredations. The Byzantine Emperor Alexius I (1081-1118), aided by the Ḳuman-Ḳïpčaḳs, delivered a mortal blow to Pečeneg military might at Levunion in 1091. Some Pečenegs fell under Ḳuman-Ḳïpčaḳ overlordship, others took service as borderguards with Byzantium, the Hungarian kingdom (where they also settled) or Rus' (where they became part of the *Černii Kloboutsi* ("Black cowls" noted in Rashīd ad-Dīn, ed. Alizade, ii/1, 162-3, as the *ḳawm-i kulāh-i siyāhān*), a Turkic, nomadic force in service to the Kievan rulers.

In their heyday, the Pečenegs had extensive commercial ties with Rus' (where they sold horses, cattle and sheep) and the Islamic world. Al-Masʿūdī notes the presence among them of merchants from Khazaria, the North Caucasus (Bāb al-Abwāb, Alania) and elsewhere (Const. Porph., *DAI*, 48-51; al-Masʿūdī, *Murūdj*, ed. Pellat, i, 237). On occasion, the Pečenegs threatened the "route from the Varangians to the Greeks" (Const. Porph., *DAI*, 56-63), but never seriously affected trade.

We know little of Pečeneg culture and customs. Al-Idrīsī, ed. Bombaci *et al.*, viii, 918, reports that like the Rus' they burnt their dead. "Some of them shave their beards. Some plait it. Their clothing consists of short tunics." A late Rus' source (the *Nikon chronicle*, in *PSRL*, ix, 57, 64) places their introduction to Christianity in the late 10th century (the conversions of Metigay and Küčük by Vladimir, himself newly converted, in 988 and 991). Latin Christianity was propagated by Bruno of Querfort (early 11th century), the consequences of which are unclear. Al-Bakrī (ed. Kunik and Rozen, 43), however, reports that the Pečenegs were *madjūsī*, but in 400/1009-10, under the influence of a captive *faḳīh*, converted to Islam, precipitating internecine strife from which the Muslims emerged victorious. Manichaeanism, along with Orthodox Christianity also came to them from the Balkans (see Vasil'evskiy, *Vizantiya i Pečenegi*, 38-43).

PEČEWĪ, Ibrāhīm (982-*ca.* 1060/1574-*ca.* 1649-50), Ottoman historian.

Pečewī was born in 982/1574 in Pécs in south-western Hungary, whence his epithet Pečewī (or, alternatively, Pečuylu, from the Croatian پچوى). His family had a long tradition of Ottoman military service. Both his great-grandfather Ḳara Dāwūd and his grandfather D̲j̲aʿfer Beg served as *alay begi* in Bosnia; his father (name unknown) took part in campaigns in Bosnia, and in ʿIrāḳ during the 1530s (Pečewī, *Taʾrīk̲h̲*, i, 87, 102-6, 436-7, ii, 433). Pečewī's mother was a member of the Ṣoḳollu [*q.v.*] family. At the age of 14, after the death of his elderly father, he joined the household of his maternal uncle Ferhād Pas̲h̲a, *beglerbegi* [*q.v.*] of Buda, and then that of another Ṣoḳollu relative, Lala Meḥmed Pas̲h̲a [*q.v.*], in whose service he remained for 15 years until the Pas̲h̲a's death while Grand Vizier in 1015/1607 (*Taʾrīk̲h̲*, ii, 323). He participated in many of the campaigns of the Ottoman-Habsburg war of 1593-1606. Thereafter, Pečewī was appointed *taḥrīr* (land census) recorder in the Rumelian *sand̲j̲aḳ*s of Egriboz, Inebak̲h̲tī and Ḳarlī-ili (1015/1606), then *muḳābeled̲j̲i* (clerk) to the Grand Vizier Ḳuyud̲j̲u Murād Pas̲h̲a (*ca.* 1607-11). Following a fire at his home in Pécs, he returned to Hungary for several years, but by 1031/1622 was again in Istanbul, where he witnessed the deposition of ʿOt̲h̲mān II (*Taʾrīk̲h̲*, ii, 380-8). He subsequently resumed an official career, serving as *defterdār* [see daftardār] of Diyār Bakr (*ca.* 1033/1623-4), from where he was sent as *beglerbegi* of Raḳḳa [*q.v.*] with 200 *sekbān* troops to the defence of Mārdīn (1033/1624), and then as *defterdār* of Toḳat (1034/1625) (*Taʾrīk̲h̲*, ii, 391-2, 394-5, 403). His next recorded post was *defterdār* of the Tuna (Danube) province, from which he was dismissed in 1041/1631-2 to be appointed *defterdār* of Anadolu (*Taʾrīk̲h̲*, ii, 421). His next post may have been as governor of Istolni Belgrad (1042-5/1632-5), after which he became *defterdār* of Bosnia (1045/1635-6) and then of Temesvár (1047/1638) (*Taʾrīk̲h̲*, ii, 445, 442). Retiring from official employment in 1051/1641, Pečewī spent his last years in Buda and Pécs writing his history.

Pečewī's *History* as published (2 vols., Istanbul 1261-3/1864-6; repr., 1 vol., with intro. and index, ed. F.Ç. Derin and V. Çabuk, Istanbul 1980) covers the period from the accession of Süleymān in 1520 to the death of Murād IV in 1640, and is one of the principal sources for Ottoman history, particularly for the period *ca.* 1590-1632 when the historian was a close observer of many events. It is a compilation (described repeatedly by Pečewī as a *med̲j̲mūʿa*) drawing upon the histories of D̲j̲elāl-zāde Muṣṭafā [see d̲j̲alālzāde], Ramaḍān-zāde, ʿĀlī, Ḥasan Beg-zāde [*q.v.*], Kātib Meḥmed [see kātib čelebi] *inter alios* (*Taʾrīk̲h̲*, i, 3; on his use of the Hungarian histories of Heltai and Istvánffy, see Karacson Imre, *Pečevi İbrahim'in tercüme-i hali*, in *Türk derneği* [1327], 1/3, 89-96), but also including much unique material gained orally from leading viziers and other Ottoman officials and military men. It is particularly rich for events on the Hungarian and Bosnian frontiers, incorporating details which Pečewī learnt from his family and local acquaintances, and for the critical period of the early 1620s. Though written in relatively simple Ottoman Turkish, the text contains much anecdotal material and some less usual terms (occasionally of Hungarian origin) which render it lively but not without difficulty. There is a strong authorial presence, which contributes to its value as an original source.

Pečewī's *History* was a major source for Kātib Čelebi's *Fed̲h̲leke*, Naʿīmā [*q.vv.*] and D̲j̲ewrī, and was used extensively by von Hammer. No other historical work by him is known.

PECHINA [see bad̲j̲d̲j̲āna].

PÉCS (Ottoman *Pečūy*, German Fünfkirchen, Latin Quinque Ecclesiae), town and centre of a *sand̲j̲aḳ* in Transdanubian Hungary.

Founded on the site of Roman Sopianae and preserving remnants of buildings from the first centuries of Christianity, Pécs became an episcopal see in 1009, housed the first university of the country (established in 1367) and was the most important economic centre south of Lake Balaton throughout the Middle Ages.

The town surrendered without fight to the forces of Ḳāsīm, *sand̲j̲aḳ-begi* of Mohács [*q.v.*], and Murād, *sand̲j̲aḳ-begi* of Pozsega (Pōz̲h̲eg̲h̲a), during Süleymān the Magnificent's sixth Hungarian campaign, on 17 Rabīʿ II 950/20 July 1543. Until 1570, it belonged to the *sand̲j̲aḳ* of Mohács, although the name of this administrative unit alternated between Szekcső (Sekčöy) and—rarely—Pécs. Around the middle of September 1595, the *liwā* of Pécs was attached to the newly-created *wilāyet* of Szigetvár (Sigetwār) (cf. Istanbul, Başbakanlık Osmanlı Arşivi, Kâmil Kepeci Tasnifi 344, p. 362) and remained so until 1597. Then it was transferred to the province of Kanizsa [*q.v.*], established in 1600. There was one serious but unsuccessful attempt by Count Nicholas Zrínyi to retake Pécs in 1664, which caused great damage. Ottoman domination ended on 3 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1097/21 October 1686 when Louis of Baden captured the town.

The 16th century Ottoman surveys present the original population of Pécs as purely Hungarian. Their number shows a markedly decreasing tendency, as in most administrative centres of Hungary. This meant that out of 531 married and 58 unmarried Christian heads of households with their 10 priests in 1546 (Başbakanlık Osmanlı Arşivi, Tapu defteri 441, fols. 5b-9a) there were only 195 heads of families and 2 widows left by 1579 (*ibid.*, Tapu defteri 585, fols.

5b-7a). On the other hand, the number of Ottoman mercenaries getting regular pay diminished from 828 in 1545 to 220 in 1568. Some of them, however, had received *tīmārs*, 237 persons being so listed in 1570. In the same year, there served 22 *zaʿīms* and 98 timariots plus their *djebelüs* in the *sandjak* (Tapu defteri 480). Muslim civilians are not listed in the *defters* at all. The total number of inhabitants can be estimated at 4,500-5,000 in 1546 and at 2,500-3,000 around 1580. Population data from the 17th century are very scarce. The first Habsburg survey in 1687 found 363 houses, mostly within the city walls, which permits us to draw the conclusion that there had been no radical changes in the meantime. The Muslim majority may have become dominant with a not-negligible Slav infiltration.

The Reformation (Unitarian, Calvinist and also Lutheran) strongly affected the town, which was the scene of open disputes among Protestant theologians. In the 17th century, however, the Jesuits restored Catholicism.

Local grain and grape cultivation was modest. In spite of that, the town was a significant centre of viticulture, producing wine from the crops of the neighbouring settlements. In 1687, as many as 3,334 units of vineyards, cultivable in one day, were registered, naming 387 actual and/or former owners, the latter being mostly Muslims. The number of mills was traditionally high, amounting to 40 wheels both in 1546 and 1687, some of which being ruinous at the latter date.

Pécs remained an important emporium in Ottoman times as well. Transit cattle and horses passed through the town both in the directions of Vienna and Venice. Local shops were numerous (46 in 1570), mostly in Muslim, rarely in Christian possession.

The town had remarkable Muslim religious and cultural institutions. Among the *sheykhs* of its *mevlewī-khāne* there were outstanding personalities such as Aḥmed Dede, later head of the *Yeñi-ḳapî mevlewī-khānesi* in Istanbul (cf. Gábor Ágoston, *16-17. asırlarda Macaristan'da tasavvuf ve mevlevîlik*, in *1. Milletlerarası Mevlâna Kongresi. Tebliğler*. Konya 1987, 228-9). Today, two *djāmiʿ*s (those of Ghāzī Ḳāsîm Pasha and Yaḳowalî Ḥasan Pasha) and a *türbe* (that of Idrīs Baba) still survive in their original form.

PEDROCHE [see BIṬRAWSH].

PEHLEWĀN [see PAHLAWĀN].

PELOPONNESUS [see MORA].

PEMBA, an island of East Africa. It appears in Yāḳūt and other authors as al-Djazīra al-Khaḍrāʾ, and lies to the north of Zanzibar [*q.v.*] off the Tanzanian coast. There has been much debate whether the Menouthias mentioned in the *Periplus of the Erythraean Sea* is Pemba or Zanzibar, with the balance in favour of the former. At *ca.* A.D. 50, it attests Egyptian and Arab trade in the area.

Nothing is heard of it until al-Djāḥiẓ (d. 255/868-9), who mentions *Landjūya*, a corruption of al-Ungudja, the Swahili name for Zanzibar, pairing it with an island of forests and valleys which he calls Ḳanbalū. Geographically this is satisfactory, for Pemba is hilly and wooded, as opposed to the flatness of Zanzibar. Al-Masʿūdī travelled thither with ʿUmānī shipowners in 304/916, and gives an account of its trade. Buzurg b. Shahriyār (d. *ca.* 956) speaks of it as a trading station on the way to Sofāla, but in spite of these dates the thirty ancient sites so far identified have yielded no archaeological evidence earlier than the 10th century. At these the principal remains are of mosques, some in actual use, and occasional houses.

Yāḳūt mentions two cities on the island, called *Mtanby* and *Mkanbalū*, recognisable in modern Swahili as Mtambwe and Mkumbuu [see MTAMBWE MKUU]. Each had a *sulṭān*. The first-named had as ruler an Arab who is stated to have emigrated from al-Kūfa. At this place in 1985-6 a hoard of more than 2,000 silver pieces was recovered, naming ten local rulers, accompanied by seven Fāṭimid *dīnārs*. The ten rulers covered three to four generations in a hoard formed *ca.* 1070, which would place the earliest of them in the 10th century. Al-Masʿūdī speaks of kings (*mulūk*) of the Zandj people (*Murūdj*, iii, 6, 29-30 = §§ 848, 871), and it may be suggested that (like the Ayyūbids) these would have reigned in different places at the same time. There is no historical record of their vicissitudes.

Pemba was a vassal of the Portuguese Crown from 1506 until 1695, with a king. After 1698 it fell to the ʿUmānīs. It served Mombasa as a rice-growing area, for which its very rainy climate (76" av. p.a.) made it suitable. Under Sayyid Saʿīd of ʿUmān and Zanzibar (1806-56), clove cultivation was introduced *ca. post*-1822, making it eventually, with Zanzibar, the greatest clove exporter in the world. The clove plantations were almost all in Arab hands, and exploited until 1873 by slave labour. A disastrous hurricane had destroyed many plantations in the preceding year, and the abolition of slavery came as a further disaster.

PENANG (Malay name Pulau Pinang), a state of the Federation of Malaysia consisting of the island of Penang (113 sq. miles) in the Straits of Malacca and a strip of land on the mainland opposite known as Province Wellesley or Seberang Prai (285 sq. miles) linked by a road bridge since 1985. The capital, Georgetown, ranks with Johor Bahru as Malaysia's second most populous urban centre (both a little over

400,000 in 1980) behind the Federal capital Kuala Lumpur.

The sparsely inhabited island was acquired from the Sultan of Kedah in 1786 for the East India Company as an entrepôt for country trade. After initial success, it was overtaken by Singapore, remaining a subsidiary centre until the establishment of plantations in eastern Sumatra stimulated it again early this century. From 1805 it briefly had the status of a presidency under the English East India Company, from 1829 joined with Malacca and Singapore as the Straits Settlements, governed from Singapore after 1836, and in 1867 became a British colony. After the Japanese interregnum from 1942 to 1945, Penang was joined to the rest of Malaya in 1948 as a state of the Federation of Malaya (since 1963, Malaysia [*q.v.*]). It retained the free-port status it had enjoyed under British rule for some time. In 1970 it opened Malaysia's first free trade manufacturing zone, and soon became a significant centre for electronics component manufacturing.

Reflecting the commercial history of the settlement, the population is ethnically mixed. There is a Chinese majority, Penang having the lowest proportion of Malays found in any peninsular Malaysian state (Malays being dominant numerically and politically in the Federation as a whole: see MALAYSIA). Georgetown is a predominantly Chinese city (68% in 1980), with Malays (19%) and Indians (13%) in the minority. Muslims in Penang comprise the whole Malay community and a small proportion of the Indian population, including the so-called Jawi Peranakan or Jawi Pekan, Muslims of South Indian extraction who have to some degree adopted Malay language and customs. The latter, being urbanised, have provided political and intellectual leadership to Penang Muslims. Unlike Singapore, Penang has not had an important Arab community. As elsewhere in Southeast Asia, the Shāfiʿī law school is followed.

In the Malay states, the hereditary Ruler (Sultan) is head of religion, administering and regulating Islamic affairs through the agency of an advisory council of religious notables (Majlis Ugama Islam) and secretariat (see MALAY PENINSULA, 8). Such control was absent in the British colonies, beyond the appointment of a Muslim Advisory Board and a Muslim and Hindu Endowments Board to regulate *wakf*. In 1957 under the independence constitution, Islam became the official religion of the Federation of Malaya, of which Penang was a component state. The head of Islam in Penang was thenceforth the Federal Ruler or Yang Dipertuan Agung (chosen in rotation from the hereditary Rulers of the Malay states) and a religious administration parallel to that of the Malay states was set up under the Administration of Muslim Law Enactment of 1959. This provided for a Majlis Ugama Islam headed by a state Muftī, including among its activities the support of Islamic schools, propagation of Islam, supervision of the *khuṭba*, and administration of *zakāt* and *fiṭra*. A system of *kāḍī* courts (Mahkamah Kadi) to administer *sharīʿa* law was also instituted, though as elsewhere in Malaysia this jurisdiction extends only to Muslims in the areas of family and testamentary law, immorality, false preaching, and failure to fulfil religious obligations.

Given their cosmopolitan urban society, historically higher educational levels, and lack of governmental concern with religious matters, the British Straits Settlements became, in Roff's words, "sniping posts" for critics and reformers. In education, reformist ideals found expression in the foundation of the Madrasa al-Mashhūr in 1916, which used Arabic and English as the media of instruction, while the Jawi Peranakan in general embraced the government English education stream. In the 1920s, thanks in large measure to the scholar-publisher Sayyid Shaykh al-Hādī, a Malacca-born Malay of Ḥaḍramī descent, Penang emerged as the centre of reformist thought and Muslim publishing in Malaysia, promoting the values of the young Turks or *kaum muda*, who stood for informed *idjtihād* rather than blind *taklīd*. Reformist journals like the Malay-language *Al-Ikhwān* (1927-31) circulated from Penang throughout Malaya, southern Thailand and Sumatra. Through the correspondence pages of the related and similarly-titled newspaper *Saudara* ("Brothers", 1928-41), arose Malaya's first national organisation, PASPAM or Persaudaraan Sahabat Pena Malaya ("Malayan Brotherhood of Pen-friends"), which espoused the economic and social progress of the Malay community. During this period, two Muslim presses in Penang were active among publishers of *kitāb* literature (Ḳurʾānic commentaries, manuals of *fikh*, etc.: see INDONESIA, vi. 5), and tracts, including some by Aḥmadiyya [*q.v.*] activists, as well as modern novels adapted from English and contemporary Egyptian works.

Within Malaysia, Penang has retained its nonconformist milieu, as an urban centre removed from the centre of power. From Penang in the 1970s and 80s, Chandra Muzaffar, born in Kedah of Indian background, has been prominent in advocating the need for a liberal Islamic sociology unfettered by ethnicity in a modern plural society.

PENČE (T., from Persian *pandja* "palm of the hand"), a term of Ottoman Turkish diplomatic. It was a mark, somewhat resembling an open hand and extended fingers, affixed (on either of the left- or right-hand margins or at the foot of the scroll) to documents, such as *fermāns* [see FARMĀN] and *buyuruldus* [*q.v.*], issued from the Ottoman chancery by higher officials such as viziers, *beglerbegs* and *sandjak begs*.

Ottoman empire.

(ED.)

PENDJIK (T., from Persian *pandj yak* "fifth"), a term of Ottoman Turkish financial and administrative usage. It denoted the fifth which the sultan drew as the ruler's right (equivalent to the Arabic *khums* [*q.v.* in Suppl.]) from booty captured in the *Dār al-Ḥarb*. This involved, in particular, the collection of young boys from the Christian Balkans and Greece by the process of the *dewshirme* [see DEVSHIRME], and these were then trained for either palace or military service as the *kapï kullarï*; the official in charge of the process of thus extracting the sultan's fifth was termed the *pendjikči bashï*.

PENGHULU (Indonesian and Malay), literally, "headman, chief, director", used in Southeast Asia as a title for secular and religious leaders. In areas where Malay was the common language the word has often been used for chiefs of tribes and clans. In older Malay writings it is also used as an honorific title for the prophet Muḥammad, indicating him as "leader of all the prophets" (*penghulu para nabi*). In more Javanised areas the word indicated the highest religious officials, both at the central courts of the various sultanates and at places where the authority was exercised by a provincial governor (*regent, bupati*). In these places the *penghulu* exercised authority in all religious affairs, with the implementation of Islamic jurisprudence as his first and the administration of the mosque as his second task. The common Javanese and Sundanese term for this functionary was also *pangulu*. Here will be discussed several developments in the role and position of the Islamic judges in Indonesia through history and also the role of judges in areas outside Java even if they had other names such as, *inter alia, hakim, hukum, serambi* (after the place of the religious court: in the *serambi* or front veranda of a mosque), *qadhi, mufti, syarat* or even "priest" and "chief priest" (*hoofd-priester*) by the Dutch colonial government.

In Malay historical writings since the 16th century, religious functionaries under a rich variety of colourful titles took a position at the court of the sultanates. Very often these religious dignitaries also received important tasks in the general administration of the country. S̲h̲ams al-Dīn al-Samatranī (*ca.* 1605-30) as well as a later successor Nūr al-Dīn al-Ranīrī (1637-43) served the Achehnese court not only in religious affairs, but also as a Minister of Foreign Affairs. Collections of Malay law show a clear awareness of the differences between customary law and Islamic law, with priority given in most cases to customary law and only verbal respect to the latter. Only in matters of family law and inheritance was the judgment of the Islamic officials to be taken as the final decision. (Cf. Liaw Yock Fang, *Undang-undang Melaka: the laws of Malakka*, The Hague 1976.)

Classical Islamic Javanese literature since the 17th century depicts the *penghulu* as the court official assigned to execute Islamic regulations, as being often in conflict with mystical wanderers and teachers. In masterpieces of this literature such as the *Serat Jatiswara* and the *Serat Centhini*, the *penghulu* (sometimes together with his following called *kaum*) is depicted as a stubborn official and as being not reliable as a guide for religious matters. Also, in the poetical genre of *suluk* (shorter mystical poems) we find many descriptions of the *penghulu* as a stupid and ridiculous figure, clearly of a lower standard than the mystical teacher, *kyahi* or *guru*, living in his *pondok* or *pertapaan* (hermitage, outside the towns), centres of real spiritual life. At the end of the 19th century Snouck Hurgronje found a cleavage between the *penghulus*, closely related to the realm of politics, and the *kyahis*, religious teachers at *pesantren* [*q.v.*], independent of, neglected or sometimes even opposed by the "administrative" religious leaders. Snouck Hurgronje felt that there was a clear preference for the independent leaders on the part of the Indonesian population. He related a number of cases where the *penghulus* urgently needed the scholarly advice of good leaders of the *pesantren* [*q.v.*] (*Verspr. geschr.*, iv/1, 281; idem, *Adviezen*, 's-Gravenhage 1957, 762-97). Still, at several Javanese courts the *penghulu* held a high position. In many cases he was a member of the family of the ruler. Several *penghulus* are also well known for their literary skills and are also known as authors of *babad*, traditional Javanese history-writing.

The rich variety of Islamic administration in the dozens of Muslim kingdoms in the vast Malay archipelago became more centralised after the tightening of colonial rule in the 19th and early 20th centuries. The Dutch administration in the 19th century recognised the Islamic courts in the traditional fields of family law and inheritance, while a *penghulu* also was nominated as adviser to the higher law-courts. The various editions of the basic colonial legislation (*Regeringsreglement*, 1815, 1830, 1836, 1854) recognised the indigenous rulers (sultans and *regents*) as "head of religion", with the task to supervise and control the "Islamic priests" (i.e. *penghulus*, *hajis* and religious teachers). The *penghulu* then was only nominated by the Governor-General in his function as adviser to general law-courts. In 1882 the first law on religious courts was promulgated. This law made the "priest" (i.e. *penghulu*) the chairman of a judiciary council. After many debates (started between L.W.C. van den Berg, the main author of the 1882 law, and Snouck Hurgronje, who denied the "priesthood" of Muslim judges and the collegial character of Islamic courts), the 1931 regulation on *penghulu* courts corrected this law. An effect of the 1882 law was the diminishing influence of the local native rulers on Islamic courts because the *penghulu* as religious judge became nominated by the Governor-General. This tendency became stronger after C. Snouck Hurgronje was nominated as "Adviser for Native Affairs" (1889-1906). Snouck and his successors were deeply involved in the functioning of the *penghulu*, especially as religious judges. They gave advice for nominations, reprimanded corrupt and ignorant *penghulus* and finally even organised formal examinations of candidates (a number of examples in G. Pijper, *Studiën over de geschiedenis van de Islam in Indonesia, 1900-1950*, Leiden 1977, 63-96). The various activities of this colonial office created a climate of centralised administration in the field of religion, taken over by the Indonesian government and its Ministry of Religion since January 1946.

In 1895 the colonial government issued a Regulation of Marriages (*Huwelijksordonnantie*), which enhanced the position of the Islamic officials, because on the islands of Java and Madura, for which this Regulation was promulgated, the *penghulu* and his local staff now also received an (often indirect) jurisdiction at village level.

In January 1931 a new regulation introduced the term *penghulu* court for the religious courts as a substitute for the former term of *priesterraad* (lit. "council of priests", used in the 1882 regulation). The acknowledgment of the *penghulu* as a sole judge was considered a recognition of Islamic law. For the islands of Java and Madura, however, cases of inheritance were taken out of the religious courts, which meant a loss of importance for the religious administration versus *adat* or customary law. Still, decisions of the *penghulu* courts were bound before and after to an approval of general courts of justice in order to become effective, a regulation that was considered as a subordination of the religious courts to the secular courts. The 1931 Regulation also prescribed the foundation of an Islamic Court of Appeal, which took effect only in 1938 because of the economic crisis of the 1930s. A fixed salary to be paid by the central government, in place of presents from clients

or the fixed allowance of 10% of the amount of money involved in a case of inheritance, was decided upon in 1931, but never took effect during the colonial period. The *penghulu* and his staff gained their income only from a small allowance as advisers to general courts of justice and from free gifts presented to them as heads of mosques and judges in religious courts.

Since the independence of the Indonesian Republic and the creation of a Ministry of Religious Affairs (1946), the title of *penghulu* has been officially abolished. His tasks in the field of religious courts have been taken over by the *Kepala Pengadilan Agama*, head of the religious courts in a district (*kabupaten*), while his tasks as administrator of marriages, divorces and reconciliations are committed to the *Kepala Kantor Urusan Agama*, head of the local branch of the Ministry of Religion on the sub-district level (*kecamatan*) and his staff. The administration of mosques has commonly become a private undertaking, not directly related to the government. Many Muslims, however, are still using the officially abolished term for the *Kepala Kantor Urusan Agama* in his function as administrator of marriages.

In 1974 the parliament of the Republic of Indonesia passed a bill on marriage which strengthened the position of the personnel of the Ministry of Religion, because all cases of divorce now had also to be consented to by this part of the bureaucracy. During the 1980s, the Ministry of Religion carried out an extensive survey concerning the procedures at religious courts, and in 1989 the parliament passed a bill on religious courts, where the subordination of these courts to the general courts was abolished; the former no longer need the approbation of the latter. Also, the differences between Java-Madura and the (outer) islands were abolished by the laws of 1974 and 1989, which meant the ultimate centralisation of the Islamic administration.

PERA [see ISTANBUL].

PERAK, a sultanate on the west coast of the Malay peninsula. It became politically independent in the early 16th century following the fall of its overlord Malacca [*q.v.*] to the Portuguese in 1511. Sometime after 1528, the elder son of the refugee Malacca sultan fled to Perak where the people accepted him as ruler. Perak was already known for its extensive tin deposits, and under this new régime it began to expand economically. But although it inherited many of Malacca's cultural traditions, including adherence to Sunnī Islam and Shāfiʿī law, Perak never developed into a similar Muslim centre because it remained a distribution point for tin and jungle products rather than being fully integrated into the international Islamic trade network.

The 18th century court text, the *Misa Melayu*, nonetheless suggests that by this time a loose Islamic hierarchy was already developing. Like other Malay courts, Perak attracted a number of Ḥaḍramī Sayyid migrants who were accorded great respect and who have been seen as a powerful impetus to the growth of religious orthodoxy. However, the ability of the Perak court to act as a patron of Islam diminished sharply from about 1800 because of a series of succession disputes, invasion by neighbouring states, and a growing Chinese mining population. In 1874, one of the contenders for the throne signed the Pangkor Treaty with the British, which obliged him to accept a Resident whose advice he was to follow in all matters "except custom and religion". But this secular-religious distinction proved impossible to maintain because Islam was so much a part of Malay life. In order to facilitate their own administration, British advisors, through the sultan and the State Council, actively fostered the clarification of Malay Islamic law and the establishment of a statewide religious hierarchy and court system. In the development of Malay Islam during the colonial period, Perak is important because many measures were initially introduced here and later adopted in the other Malay states.

When the Federation of Malaya (later Malaysia [*q.v.*]) gained independence in 1957, each state was given responsibility for administering Islamic law. In Perak, as in the other Malay states, Islam was confirmed as the state religion, headed by the sultan who acts in consultation with the Majlis Agama Islam dan Adat Melayu (Council of Religion and Malay Custom). The Majlis is empowered to issue *fatwa*s and through its executive arm, the Religious Affairs Department, supervises matters such as the collection of *zakat* and *fitrah*, and the teaching of Islamic doctrine. A system of *syariah* (*sharīʿa* [*q.v.*]) law courts is maintained to deal with religious offences committed by Muslims. Like the rest of Malaysia, however, Perak stops short of being a fully Islamic state because of the necessity of accommodating its considerable non-Muslim population.

PERIM [see MAYYŪN].

PERTEW PASHA, the name of two Ottoman statesmen.

I. PERTEW MEḤMED PASHA, Ottoman admiral and *wezīr*, started his career on the staff of the imperial harem, became *ḳapud̲j̲ī bas̲h̲ī* [see ḲAPĪD̲J̲Ī], later Agha of the Janissaries, and in 962/1555 he was advanced to the rank of *wezīr;* in 968/1561 he was appointed third *wezīr*, in 982/1574 second *wezīr* and finally commander (*serdār*) of the imperial fleet under the *ḳapudan pas̲h̲a* Muʾedhdhin-zāde ʿAlī Pasha. He had fought at the Battle of Lepanto [see AYNABAKHTĪ]. He later fell into disgrace and died in Istanbul, where he was buried in his own *türbe* in the cemetery of Eyyūb.

Bibliography: J. von Hammer, *GOR*, iii, 382, 438; Meḥmed Thüreyyā, *Sid̲j̲ill-i ʿothmānī*, ii, 37-8.

II. PERTEW MEḤMED SAʿĪD PASHA, Ottoman dignitary and poet (1785-1837). He was of Tatar descent and was born in the village of Darīdja near Urmiya. In his early youth he came to the capital

Istanbul and entered upon an official career. In Muḥarram 1240/September 1824 he became *beylikdji efendi*, i.e. State referendary, and in Shaʿbān 1242/March 1827 head of the imperial chancery (*reʾīs al-küttāb*). Two years later he lost the post of chancellor and went on a special mission to Egypt. On his return he became in 1246/1830 assistant (*kāhya*) to the Grand Vizier. On 23 Dhu 'l-Ḳaʿda 1251/ 12 March 1836 he was appointed minister for civil affairs (*mülkiyye nāẓiri*) and given the title of marshal (*müshīr*). In the spring of 1836 he was given the title of Pasha but was dismissed by the autumn. In the beginning of September 1836 he was banished by Maḥmūd II to Scutari in Albania. Pertew Pasha set out a few weeks after his banishment to his place of exile but did not reach it. He died in Edirne on 5 Ramaḍān 1253/3 December 1837, three hours after a banquet which the governor there, Muṣṭafā Pasha, gave in his honour (according to Gibb, *HOP*, iv, 333: Emīn Pasha), and was buried there. No-one doubted that his sudden death was due to poison, and public opinion ascribed the crime to Maḥmūd himself. On his family, see *Sidjill-i ʿothmānī*, ii, 38. His son-in-law, who shared his views, was the intrigue-prone private secretary to Maḥmūd II, Waṣṣāf Bey, a highly educated man but lacking in character and accessible to bribery, who lost his office about the same time as Pertew Pasha and was banished to Toḳat in Anatolia; cf. G. Rosen, *Geschichte der Türkei*, i, Leipzig 1866, 255-6. Pertew Pasha's successor was his political opponent ʿĀkif Pasha, cf. Babinger, *GOW*, 357-8. As a statesman Pertew Pasha took up a pronounced anti-Russian attitude and was no less hostile to the Christians, whom he oppressed with long obsolete and forgotten laws. His feeling against the Christians increased with advancing years.

As a poet, Pertew Pasha composed a *Dīwān*, which was esteemed as a model of the poetical art of the period of Maḥmūd II. There are two editions of it: Būlāḳ 1253 (8°, 91 pp.) and Istanbul 1256 (8°, 130 pp.). On other works by Pertew Pasha, see Bursalî Meḥmed Ṭāhir, *ʿOthmānlî müʾellifleri*, ii, 114-15. His valuable library, rich in manuscripts, was in what was formerly the Selīmiyye monastery in Üsküdar, and is now in the Süleymaniye Kütübhanesi.

This Pertew Pasha is not to be confused with the statesman and poet Pertew Edhem Pasha, who died on 7 Dhu 'l-Ḳaʿda 1289/6 January 1873 as governor of Ḳastamuni [*q.v.*], a number of whose poems have been published e.g. a *Shāhnāme* and *Lāhiḳa*, n.p. [Istanbul] n.d., and *Iṭlāḳ al-afkār fī ʿaḳd al-abkār*, Istanbul 1304. On him, see Meḥmed Ṭahir, *op. cit.*, ii, 114-15; *İA*, art. *Pertev Paşa* (Şerâfeddin Turan).

Bibliography: G. Rosen, *Geschichte der Türkei*, i, Leipzig 1866, *passim*, esp. 255-6; Gibb, *HOP*, iv, 332-5, with references to Jouannin and J. van Gaver, *Turquie*, Paris 1843, for an account of the death of Pertew Pasha in Edirne; Meḥmed Thüreyyā, *Sidjill-i ʿothmānī*, ii, 38; Sāmī Bey Frāsherī, *Ḳāmūs al-aʿlām*, 1494-5; Bursalî Meḥmed Ṭāhir, *ʿOthmānli müʾellifleri*, ii, 114.

(F. Babinger)

PERZERIN [see prizren].

PESANTREN, Javanese "*santri*-place", the educational institution of Indonesia where students (*santri*) study classical Islamic subjects and pursue an orthoprax communal life. *Pondok* ("hut, cottage"; cf. Ar. *funduḳ*) is an alternative term, meaning "lodgings" and, by extension, "Islamic religious boarding school". *Pesantren* is used most often in Indonesia (especially Java), whereas *pondok* is the preferred term in Malaysia and the Patani region of southern Thailand. Sometimes the two terms are combined in Indonesia, when the speaker means to make clear that a traditional Islamic boarding school, a "*pondok pesantren*", and not merely a religious day school (such as the more modern *madrasa*), is meant. The Minangkabau [*q.v.*] region of Sumatra has a parallel type of Islamic school, called *surau*. This article treats mostly the Indonesian institution, although some references to peninsular Malaysia are included.

The indigenous origins of the Javanese *pesantren* are thought by some scholars to be in the rural Javanese Hindu-Buddhist *mandala* schools of East and Central Java, where ascetical *gurus* imparted religious doctrine and mystical wisdom to students residing together in a communal setting (Koentjaraningrat, 1985, 55, 321-3; Soebardi and Woodcroft-Lee, 1982, 183-4). With the gradual Islamisation of Java—driven in no small measure by both *ṭarīḳa* and popular Ṣūfism—and the conversion of such *gurus*, the *mandala* evolved into the *pesantren*, in which the traditional charismatic teacher—versed in magical and healing arts—became the *kiai* ("venerable religious teacher, respected old man", cf. *shaykh*) of Islamic times. The traditional Islamic Ḳurʾān school—the *kuttāb*—easily blended with the Javanese prototype, which helped to domesticate and, through a dominant Shāfiʿī *fiḳh*, inform and integrate, if not unify, Islam in Java. There was also considerable Ṣūfī content in the programmes of many *pesantrens*; and although not dominant, Ṣūfism continues to be an important factor in a sector of *pesantren* life in Indonesia (see Madjid, 1983; Nasution *et alii*, 1990). The historical evolution of the *pesantren* is a complex matter, requiring analysis of its premodern existence in a dynamic, triadic relationship with the rulers (*kraton*) and the market (see Abdullah, 1986), before it became more of an independent, somewhat separatist venture in Islamic communal life in late colonial times and even more in the present.

The origins of the Malay *pondok* were probably in Patani [*q.v.*] (southern Thailand) in the 15th-16th century. Patani Muslims are proud of their tradition in Islamic education, their close ties to the Islamic Middle East, their success in resisting assimilation to Thai language and customs (in large part because of the *pondok* system of sustaining an Islamic microcosm), and the many Malay religious books written in Arabic script (*kitab jawi*). To this day, Patani and neighbouring Kelantan in Malaysia have a strong *pondok* tradition, which resembles that of Indonesia in most respects (see Matheson and Hooker, 1988, 43-6; Winzeler, 1975).

The *pesantren* was well established in rural Java by the 17th century and has contributed much to the spiritual, cultural, social and economic character of Islamic village life down to the present (see Geertz, 1956, 144 ff.; Oepen and Karcher, 1988, *passim*). The Javanese *pesantren* was the dominant Islamic educational institution in Indonesia during the colonial period, when it was a bulwark against Dutch penetration into Islamic faith and order in the countryside (see Rahardjo, 1985, 245, on the gradual post-independence shift of *pesantrens* from closed, guarded institutions to more open and cooperative ventures).

Usually, *pesantrens* have been built in undeveloped space near a village or in a separate part of a settled location. Most students have traditionally travelled to attend *pesantrens* outside their native districts. Travelling for study was a hallmark of early Islamic education in Java, and it had both pre-Islamic Javanese as well as classical Islamic precedent. Thus there is often a somewhat alien character attaching to *santris*, because they are not connected with the local kinship

and *adat*. In recent years, *pesantren* students at selected institutions have begun to provide some social and economic services in their rural locations, as part of modern rural development. One "specialised" (*takhassus*) *pesantren*, Darul Fallah, in Bogor, West Java, is sponsored by teachers from the Bogor Agricultural Institute, for the purpose of training students in farming and crafts within a strong Islamic ethos devoted to useful careers in rural development (for an overview, see S. Widodo, in Oepen and Karcher, 1987, 140-5). But East Java's "Pondok Modern" students, for example, are forbidden to have social contact with the townspeople of Gontor and the idea of service to the immediate community is lacking. However, "Pondok Modern" does have a strong sense of being a *wakf* that belongs to the world-wide Muslim community (*Short description*, 26).

In Java (as in Nazareth) it is thought inappropriate for a spiritual leader to have been educated in his own community; the one who has returned, however, after gaining wisdom and power through foreign experience and travel, may find a receptive attitude in his home territory. In addition, the *pesantren* holds up an ideal of affinity based on a common, transcending Islamic faith and discipline, whereas so much of archipelago life centres on local custom and traditional social patterns. On the other hand, *pesantren* life provides for youth a laboratory for self-government and socialisation into that larger community of togetherness and consensus that residents of the Malaysian-Indonesian archipelago also value highly.

Pesantren-educated Muslims have tended to criticise their compatriots for what they perceive to be their less than pure Islamic belief and lax ritual observance. This Islamist attitude has given Indonesia (mostly in the 20th century) its (much analysed) *santri* type of orthoprax Muslim, as contrasted with the vast population of *abangan* people, with their blending of local custom and Islamic belief (Geertz, 1960b, 5-7; see Ricklefs, 1979, 118-125 for a detailed review of the nuances of Javanese socio-religious distinctions).

Although traditionally the vast majority of students in *pesantrens* have been male, there have also been female students for a long time and today they comprise a sizeable proportion of *pesantren* populations. The sexes are always educated and lodged separately in *pesantrens*, and there is never social mixing, but facilities are often on adjoining campuses while sharing the same *kiai* and faculty, which may include teachers of both sexes. Female students are not numerous in Malaysian *pondoks*, where they usually reside in the *guru*'s house under a watchful eye. In Patani, however, females and males attend *pondok* (after puberty) in large numbers.

Although the *pesantren* usually maintains a separate kind of social presence in a rural locale, its central figure—the *kiai* (*guru* in Malaysia and Thailand)—is often a well-known, strong-willed, local personage with charismatic gifts combining Islamic learning with the occult powers of the shaman-like *dukun* (cf. Geertz, 1960a; Rahardjo, 1985). The *pesantren* would not exist without the *kiai*, who is its founder, sustainer, and absolute master. Former students, whether in the Javanese *pesantren* or the Malay *pondok*, have vivid memories of occasional corporal punishment at the hands of their masters, and being required to serve him in the fields and other tasks. Sometimes the *kiai* has been a local person who returned from Islamic study abroad or from the *hadjdj*, whereupon he started providing more-or-less orthodox Islamic teaching or was sought out by the locals for healing and spiritual guidance. *Kiai*s, in the colonial period more than in recent reformist times, often provided Ṣūfī indoctrination, both to the *santri*s and to people in the community.

Of no small consequence is the *kiai*'s personal property—land and buildings—which may be inherited, donated as *wakf*, or acquired by means of his industry. Whatever goes on in the way of teaching an Islamic curriculum—and this has varied greatly in the past, although today standardisation of the curriculum has widely set in—the *kiai* nevertheless bestows on the operation a special blessing and legitimacy. There have been extremely learned *kiai*s (and *gurus*), with advanced training in Mecca or Cairo, and there have been virtually untutored ones, with strong personal charisma and little in the way of formal Islamic education in the Arabic classical curriculum. Although often a *pesantren* perishes when the *kiai* dies, sometimes institutions endure and even flourish in the hands of the *kiai*'s heirs, who may include former students who marry the *kiai*'s daughters and carry on the teaching tradition.

The physical plant of a typical *pesantren* consists of the *kiai*'s house and lodging for assistants, a building for regular prayers and instruction, an open space for community activities and sports, latrines/bath with ablution facilities, student dwellings (the *pondok* proper), and utility buildings such as granaries, and surrounding fields that are worked by the students. There is a great range of physical accommodation found among *pesantrens*, from minimal necessities (the majority) to elaborate campuses, such as the Pondok Modern, in Gontor, East Java, with its Friday mosque, tall minaret, staffed library, bookstore, student laundry, guest quarters, playing fields, ball courts and other facilities.

Earlier accounts remark on the extreme filth of the students' quarters, clothing and persons (e.g. Snouck Hurgronje, 1906, ii/30-1), resulting among other things in chronic skin disease. In the writer's visits to *pesantren*, the range of personal cleanliness and housekeeping among males has appeared to be about what one would find in men's college dormitories in the west, that is, from acceptable to unsanitary. Female lodgings have appeared to be clean and orderly and the women students very well groomed.

The *pesantren* served as the main form of Islamic educational institution in Indonesia until the early 20th century, when modern schools—such as the *madrasa*—began to be established. A distinctive aspect of the *pesantren* is its character as a nearly total institution. Although students freely come and go, and although the curriculum is often largely accessed by means of private study and individual interaction with the *kiai*, or his assistants, the régime of the typical *pesantren* is a 24-hour-a-day way of life, with morning classes and/or tutorials, Ḳurʾān recitation, afternoon study and work in the fields, with the rest of the time spent preparing meals and taking care of personal maintenance tasks, perhaps doing errands for the *kiai* and his staff, and honourable begging (in earlier periods especially). The all-important regular prayers punctuate each day's progress.

The *pesantren* is often a place of little comfort, extreme crowding, and scanty means. Student body sizes range from scores to thousands, with some Javanese establishments drawing students from throughout Indonesia and abroad (see *Direktori Pesantren*: I, *passim*, for specific enrollment figures and curricula of 255 selected institutions from the more than 5,000 in Indonesia). As no or minimal fees are charged, depending on the institution, poor students can benefit from the régime of strict moral and religious

training, socialisation into community self-government, and time for meditation on life from an Islamic perspective. Students generally range in age from around ten to twenty-one, although in some cases children as young as seven attend a *pesantren* (as at the Pesantren Ihyaul Ulum, near Gresik, East Java). In larger *pesantrens*, the older students act as preceptors for the younger ones and self-government is the rule, with the *kiai* standing aloof, his house and his face turned away from the *pondok* part of the campus where the students reside. He is approached for help and intervention only for special and urgent reasons.

The *pesantren* curriculum has always been centred on the Ḳurʾān, both its recitation and interpretation, and Arabic language (or Malay or Javanese in Arabic script) texts on jurisprudence, doctrine, classical Arabic grammar and rhetoric, ethics, mysticism, *ḥadīth* and devotional practices (e.g. collections of prayers, praise, invocations, blessings). (See Matheson and Hooker, 1988; and van Bruinessen, 1990, for genres and titles of Arabic script books used in *pesantrens* and *pondoks* over the past century.) *Pesantren* textbooks are often referred to as *kitab kuning* "yellow books" because of the orange-tinged paper they have often been printed on. Modernist *pesantrens*, such as have been supported by the Muhammadiyah, use textbooks in Romanised Indonesian (as well as Arabic language and script), which are called, by contrast, *buku putih* "white books." The distinction between the two types of Islamic education—traditionalist and progressive—symbolised by the colours, is much less pronounced than a generation ago.

Today, most Indonesian *pesantrens* have augmented their traditional course of studies to provide instruction in modern subjects in a curriculum divided into three levels: *ibtidaiyah* ("primary" with *ca.* 60% general content); *tsanawiyah* ("middle" with *ca.* 40-50%); and *aliyah* ("higher" with only 20%) (Rahardjo, 1985, 241). Some *pesantrens* also have an advanced level, *takhassus*, "specialised", where students study only Islamic subjects, such as Ḳurʾānic studies, *fiḳh*, *taṣawwuf* and others. Many *pesantrens* are still rural and provincial, with a curriculum dominated by Islamic subjects taught by rote. Arabic proficiency varies considerably, but there are *kiais* who are able to raise students' competence to a level sufficient for studying advanced classical texts rather than simpler summaries. Moreover, students are often obliged to study at more than one *pesantren* (whether in Indonesia or the Malay world) if they would cover a sufficient range of the classical Islamic studies curriculum. However, the contents and methods of *pesantren* instruction have undergone considerable modernisation in the more progressive institutions, such as the aforementioned ones at Gontor and Bogor, where modern secular subjects—such as social studies, natural science, mathematics, history and English—are also taught.

Traditional *pesantrens*, based on individualised instruction under the authority of a *kiai*, although still serving a mostly (but not exclusively) poor, rural clientèle, have steadily diminished in numbers and importance since independence, when the more modern *madrasas*, in Islamic education, and the *sekolah* or "secular" school, with a minimum of religious instruction, have come to dominate. The bureaucratically regulated (whether by government or voluntary religious associations) *madrasa* offers modern subjects alongside Islamic studies, but, unlike the *pesantren*, has neither *kiai* nor an all-encompassing social environment of Islamic discipline. The *madrasa* continues to be a major part of Indonesian education, although the *sekolah* is continually gaining ground as universal public education gradually becomes a reality in Indonesia (see Steenbrink, 1986).

The modern type of *pesantren* is far different from the old-style institution. At Gontor, for example, the more than 1,900 students are required to converse socially only in Arabic and English (Indonesian is the instructional medium in general courses, with Arabic the medium in Arabic and Islamic studies and English for teaching that language). Lapses into Indonesian or Javanese in daily life are punished by a short haircut, which is a major humiliation for youth acquainted with rock culture and Jakarta or Surabaya street life (to be "sent to a *pondok pesantren*" is a proverbial parental threat when children become unruly at home). The strict Arabic- and English-only rule testifies to the institution's commitment to training its students to be capable participants in both the global Islamic and economic communities. A number of outstanding Indonesian religious, civic, governmental and educational leaders have graduated from Gontor, which since the later 1960s has also granted the B.A. degree (in *uṣūl al-dīn*). And unlike most old-time *pesantrens*, the "Pondok Modern" has been placed on a secure foundation for continuing development and growth as a rational organisation with a large and capable professional staff and foreign as well as internal funding (e.g. the Saudi government provided the resources for a major academic building on the campus).

The modern *pesantren*, whether in Bogor, Gontor or a number of other places, does not exist in name only, for it continues, like its predecessor, to sustain a closely regulated, full-time Islamic communal ethos set apart from the differing but equally worrisome seductions of syncretistic Javanese culture and modern secular materialism. Java, particularly, is experiencing increasing urban encroachment on its rural areas, so that once isolated *pesantrens* are being surrounded by inexorable development. It is likely that some of the special qualities of *pesantren* education will be preserved, but in new ways. One widespread development in Indonesia is *pesantren kilat* ("express pesantren"), intensive Islamic education for youth during the summer vacation, held on university campuses and in other facilities. As the Indonesian social scientist, Taufik Abdullah, has summarised the situation, "the future of the *pesantren* will be determined by its ability to maintain its identity as an *ulama*-dominated educational system, while at the same time clarifying its role as a complementary feature of national education" (102).

(F.M. Denny)

PESHĀWAR, a city of Muslim India, in the northwestern part of the subcontinent, now in Pakistan (lat. 34° 01′ N., long. 71° 40′ E., altitude 320 m/1,048 ft.). In modern Pākistān, it is also the name of various administrative units centred on the city (see below). The district is bounded on the east by the river Indus, which separates it from the Pandjāb and Hazāra, and on the south-east by the Nīlāb Ghasha range which shuts it off from the district of Kōhāt. Elsewhere it is bounded by tribal territory. To the south lie the territories of the Ḥasan Khēl and Kōhāt Pass Afrīdīs; westwards, the Khaybar Afrīdīs and Mullāgorīs. Farther north, across the Kābul river, the various Mohmand clans stretch to the Swāt river. The northern boundary of the district marches with the territories of the Utmān Khēl, the Yūsufzays of Swāt and Buner, the Khudu Khēl, Gaduns and Utmānzays. Mountain passes famous in frontier history connect it with the surrounding tribal tracts. In the northeast, the Mora, Shākot, and Malakand passes lead into Swāt. The historic gateway of the Khyber (Khaybar [*q.v.*]) connects it with Afghānistān, while, to the south, the Kōhāt Pass runs through a strip of tribal territory, known as the Djowaki peninsula, into the neighbouring district of Kōhāt [*q.v.*].

References to the district occur in early Sanskrit literature and in the writings of Strabo, Arrian, and Ptolemy. It once formed part of the ancient Buddhist kingdom of Gandhāra, for, from the Khyber Pass to the Swāt valley, the country is still studded with crumbling Buddhist stupas. Here, too, have been unearthed some of the best specimens of Graeco-Buddhist sculpture in existence, while one of Aśoka's rock edicts is to be found near the village of Shāhbāzgarha in the Yūsufzay country. Both Fa-hien, in the opening years of the 5th century A.D., and Hiuen Tsang, in the 7th century A.D., found the inhabitants still professing Buddhism. It is also on record that Purushapura was the capital of Kanishka's dominions. Through centuries of almost unbroken silence we arrive at the era of Muslim conquest, when, between the 7th/13th and 10th/16th centuries, numerous Pathān tribes from Afghānistān spread over and conquered the country roughly corresponding to the modern North-West Frontier Province (T.C. Plowden, *Kalīd-i Afghānī*, chs. i-v; Selections from the *Tārīkh-i Muraṣṣaʿ*).

The town of Peshāwar is an ancient one, and as Parashawara or Purushapura was once the capital of Gandhāra; it was also called Begram, appearing as such in early Pashto poetry. The present name of the town is popularly ascribed to the Mughal Emperor Akbar [*q.v.*] and is said to derive from Persian *pēshāwar* "frontier [town]". Islam first appeared there in the time of the Ghaznawids [*q.v.*]. Sebüktigin fought over the surrounding region against its then possessor, the Hindūshāhī [see HINDŪ-SHĀHĪS] ruler Djaypāl in *ca.* 376/986-7, and his son Maḥmūd likewise combatted and defeated there Djaypāl's son Anandpāl in 396/1006. Thereafter, it came firmly within the Ghaznawid dominions, forming an important link in the route down from the Afghān plateau to the Ghaznawid capital in northern India, Lahore (Lāhawr [*q.v.*]). In 575/1179-80 Peshāwar was captured by the Ghūrid Muʿizz al-Dīn Muḥammad b. Sām [*q.v.*], but destroyed by Čingiz Khān some forty odd years later. Although Peshāwar obviously retained its strategic importance, it is somewhat surprising that Peshāwar is so little mentioned in the Indo-Muslim sources.

Towards the end of the 9th/15th century, according to local tradition, two large branches of Pathān tribes, the Khakhay and the Ghōriyya Khēl, migrated from their homes in the hilly country around Kābul to the Djalālābād valley and the slopes of the Safīd Kōh. The most important divisions of the Khakhay were the Yūsufzay, Gugiyanī and Tarklānrī; the Ghōriyya Khēl were divided into five tribes, the Mohmands, Khalīls, Dāwūdzays, Čamkannīs and Zerānīs. The Yūsufzays, advancing into the modern Peshāwar district, expelled the inhabitants, known as Dilazāks, and finally conquered the country north of the Kābul river and west of Hoti Mardān. By the opening years of the 10th/16th centuries, the Ghōriyya Khēl had also reached the Khaybar area. Eventually these powerful tribes dispossessed the original inhabitants, driving some to the Swāt Kōhistān and forcing the Dilazāks across the Indus. Later, the Ghōriyya Khēl attempted to oust the Khakhay branch but were signally defeated by the Yūsufzays.

Since the modern Peshāwar district lay athwart the route of invading armies from the direction of Central Asia, much of its history resembles that of the Pandjāb. The Pathāns of this part of the frontier proved

a thorn in the side of the Muslim rulers of India, and, although nominally incorporated in the Mug͟hal empire, they were never completely subjugated, even Akbar and Awrangzīb contenting themselves with keeping open the road to Kābul. Bābur [*q.v.*] had used Pes͟hāwar as a base for campaigns into Kōhāt, Bannū [*q.v.*] and Bangas͟h, and Awrangzīb's governor of Kābul, Mahābat K͟hān b. ʿAlī Mardān K͟hān (not to be confused with Mahābat K͟hān Zamāna Beg [*q.v.*]), used Pes͟hāwar as his winter capital, building there his great mosque (see below). With the decline of Mug͟hal power, Pes͟hāwar was in the 12th/18th century ceded to the Persian invader Nādir S͟hāh Afs͟hār [*q.v.*] and then subsequently taken over by the Afg͟hān chief Aḥmad S͟hāh Durrānī [*q.v.*] of Ḳandahār; under his son and successor Tīmūr S͟hāh, the Mug͟hal practice was revived of using Kābul as the summer capital and Pes͟hāwar as the winter one.

With the militant expansionism in the Pand͟jāb of the Sikhs in the early 19th century, Pes͟hāwar in 1834 was captured by the Italian commander in Sikh service, General Paolo di Bartolomeo Avitabile, but with the defeat of the Sikhs by British forces in 1849 and the annexation of the Pand͟jāb, the Pes͟hāwar valley came under British control for nearly a century; administratively, it remained part of the Pand͟jāb until the formation of the North-West Frontier Province in 1901. (For British administration and policy with the various Paṭhān tribes of the region, see C. Collin Davies, *The problem of the North-West Frontier 1890-1908*, 2nd ed. London 1975.) In the 1930s, the Pes͟hāwar region was violently disturbed by the agitation of the *K͟hudāʾī K͟hidmatgārs* or "Red Shirts" of ʿAbd al-G͟haffār K͟hān [see K͟HĀN, ʿABD AL-G͟HAFFĀR, in Suppl.], allied with the Indian National Congress; this rather unnatural alliance, against all the trends in other Muslim parts of India, gave a peculiar flavour to NWFP local politics in the run-up to Partition in 1947, although after that date the Muslim League took over from the previous Congress-inclined provincial government (see J.W. Spain, *The Pathan borderland*, The Hague 1963, 165-73, 211 ff.).

Pes͟hāwar city was the capital of the NWFP of Pākistān for eight years, until in 1955 the NWFP was amalgamated, together with the provinces of the Pand͟jāb, Sind and Balūčistān, into the "one-unit" province of what then became West Pakistan. The city (population in 1981, 555,000, since Partition, almost entirely Muslim, the great majority ethnically Paṭhāns) is situated near the left bank of the Bārā river about 21 km/13 miles east of the Khyber Pass. Its importance as a trading centre on the main route between India and Afg͟hānistān increased after the construction of the K͟hyber railway to Landī Kōtal in 1925. It has 16 gates which are closed every night and opened before sunrise. The richest part is the Andars͟hahr where before Partition the wealthier Hindus had taken up their abode. In this quarter, conspicuous on account of its high minarets of white marble, stands the mosque of Mahābat K͟hān. On the north-west the city is dominated by a fort known as the Bālā Ḥiṣār. The S͟hāhī Bāg͟h with its spacious and shady grounds is a favourite resort of the inhabitants in the spring. The fame of the Ḳiṣṣa K͟hʷānī or Storytellers' Bazaar is known throughout the length and breadth of the frontier and beyond.

Two miles to the west of the city are the cantonments, the principal military station in the province. Some three miles to the west of the cantonments is the former Islāmiyya College, since 1950 erected into Peshawar University and now with five constituent and eighteen affiliated colleges.

Pes͟hāwar is also the chef-lieu of a district and of a division (area 38,322 km²/14,798 sq. miles) which comprises the districts of Mardān, Hazāra, Kōhāt and Pes͟hāwar plus tribal agencies.

(C.C. DAVIES-[C.E. BOSWORTH])

PĒS͟HWĀ, a Persian word for "leader" with various connotations (Pahl. *pēs͟hōpay*). As a title, it was used for one of the ministers of the Bahmanī sultans of the Dakhan and, more specifically, the hereditary ministers of the Marāṭhā kings of Satara [see MARĀṬHĀS].

At first, the Pēs͟hwā was only the *mukhya pradhān* or "prime minister" of Śivād͟jī's Council of Eight, and this post was not hereditary up to 1125/1713, the year of the accession of Bālād͟jī Visvanāth, when the Pēs͟hwā began to outstrip the other *pradhāns* and the Pratīnīdhī in importance. When the Pēs͟hwā transferred his capital to Pūna [*q.v.*] (Poona), the Council of Eight fell into disuse. With the promotion of Bālād͟jī Visvanāth to the Pēs͟hwāship by S͟hāhū, a great number of Brahmans from his subcaste of the Citpāvans or Konkanasthas began to migrate from the Konkan to the Dakhan. Brahmans of all subcastes had figured prominently in the early part of S͟hāhū's reign, but by the 1730s the Citpāvans had already gained ascendancy in the Marāthā state. Before the rise of Marāṭhā power, these Brahmans had occupied a rather low position in the Brahman hierarchy. Now, however, they began to derive a sense of caste superiority from their association with the Pēs͟hwā.

Bālād͟jī Visvanāth in 1131/1719 obtained the *farmāns* for *svarād͟jya, čawth and sardeśmukhī* from the Mug͟hal emperor, after which he began to re-organise the revenue administration through the promulgation of an elaborate scheme of quota repartition, both in the Western Dakhan and the newly conquered areas where the Marāṭhās had not yet obtained full control but only levied *čawth* and *sardeśmukhī*. Marāṭhā expansion to the north began to gain momentum under Bālād͟jī Visvanāth's son Bād͟jī Rāo, who succeeded him in the Pēs͟hwāship in 1132/1720. This proved to be of great importance for the consolidation of the Pēs͟hwā's power in opposition to the older Marāṭhā *sardārs*, who were adherents of the Rād͟jā of Satara but jealous of the Pēs͟hwā's supremacy. The Pēs͟hwās later gave out to have received sanction from the Mug͟hal emperor for levying tribute from the *ṣūbas* of Gud͟jarāt and Mālwā. According to the *S͟hāhū caritra*, the Pēs͟hwā's attempts to extend Marāṭhā power in Gud͟jarāt, Mālwā and Hindustān were for some time opposed with success by the Pratīnīdhī, who proposed an expansionist policy into the Konkan and the Karnataka, to complete the conquests begun by Śivād͟jī. But it was the Pēs͟hwā who received the Rād͟jā's sanction to pursue the expansion to the north as the latter's delegate, and from then on the Pēs͟hwā steadily acquired more and more power and wealth. The Rād͟jā of Satara became almost entirely a figurehead already under Bād͟jī Rāo, who promoted his own *sardārs*, Pawār, Holkar and Śīndhīyā, to strategic commands in the north. Bād͟jī Rāo himself was also, up to his death in 1153/1740, incessantly campaigning: in Mālwā, the Dakhan, Gud͟jarāt and in the Konkan.

Bād̲j̲ī Rāo was succeeded by his eldest son, Bālād̲j̲ī Bād̲j̲ī Rāo, in 1153/1740. Now the conquests of Mālwā and Gud̲j̲arāt were completed. And it is to Bālād̲j̲ī's reign that many of the Brahman families who were prominent at the turn of the 18th century date their rise. There now arose two distinct groups of *sardārs*: on the one hand, the relations and adherents of the Rād̲j̲ā of Satara, the Bhōnslē of Nāgpur [*q.v.*] the remainder of the Council of Eight and the Pratīnīd̲h̲ī; on the other, the new men put forward by the Pēs̲h̲wā, most important of which were Śīndhīyā and Holkar. In 1153/1740 Bālād̲j̲ī's claim to Mālwā was recognised by an imperial *farmān* of the *nāʾib-ṣūbadārī* or "deputy governorship" of that province. Between 1153/1740 and 1161/1748 the same Pēs̲h̲wā organised four other expeditions to the north: twice to Rād̲j̲āstān, to Bihār, Bengal and Bundelkhand, and against the Afg̲h̲ān Aḥmad S̲h̲āh Abdālī [*q.v.*] in Hindustān. After the death of the Marāthā king S̲h̲āhū in 1162/1749, Bālād̲j̲ī assumed power in all but name. The new king of Satara, Rāmrād̲j̲ā, was left in almost complete isolation; the Rād̲j̲ā's attempts to regain control were unsuccessful, and in 1164/1751 he, in effect, renounced all sovereign power, agreeing to sanction the Pēs̲h̲wā's policies unconditionally. S̲h̲āhū's widow Tarabai subsequently made a final attempt to subvert "the Brahman government" of the Pēs̲h̲wā, but again without success. The Rād̲j̲ā, however, continued to invest each new Pēs̲h̲wā with the *k̲h̲ilʿat* or robes of honour [see KHILʿA] and similar ceremonial of state. The Pēs̲h̲wā continued to travel, as the Rād̲j̲ā's "prime minister", to Satara every year in order to submit the revenue accounts.

Bālād̲j̲ī did not survive the catastrophic Battle of Pānīpat [*q.v.*] in 1174/1761, in which the Marāthās were defeated by the Afg̲h̲āns. His son Mādhav Rāo then received the investiture from the Rād̲j̲ā, who remained in confinement. Mādhav Rāo reigned for eleven years, a period in which he succeeded in restoring the prestige of the Brahman rād̲j̲. Citpāvan power reached its peak under Nānā Phadnis, the regent in the name of the child of Mādhav Rāo's murdered brother Narāyan Rāo. Still, the Rād̲j̲ā of Satara continued as the *de jure* sovereign. From 1188/1775 to 1209/1795, Nānā Phadnis's power was supreme, although he was constantly fearing the Marāthā leaders rallying around the Rād̲j̲ā. The new threats, however, did not come from the Marāthā royal clique but from the Pēs̲h̲wā's own *sardārs*, Śīndhīyā and Holkar. The Pēs̲h̲wā had to take from Śīndhīyā and assume for himself the title of *wakīl-imuṭlaḳ* of the Mug̲h̲al empire. Śīndhīyā grew more powerful in Hindustān. In 1210/1796 Bād̲j̲ī Rāo II was elevated to the Pēs̲h̲wāship by the military power of Śīndhīyā. The fear of Śīndhīyā and Holkar ultimately, in 1217/1802, induced the Pēs̲h̲wā to conclude the Treaty of Bassein with the British, resulting in the establishment of a subsidiary force in Pūna, for the protection by which the Pēs̲h̲wā sacrificed his independence. This was the first result of the "subsidiary system" devised by Lord Wellesley. The latter appears to have been unaware of the existence of the Rād̲j̲ā of Satara and spoke of the Pēs̲h̲wā as a "sovereign". Under Nānā Phadnis, in fact, the relationship of the Pēs̲h̲wā and the Rād̲j̲ā had, even in its ceremonial aspect, approached one of equality. However, by 1810, the same forms of external respect towards the Rād̲j̲ā were re-introduced as were observed when the Rād̲j̲ā was the effective sovereign and the Pēs̲h̲wā merely his prime minister. Nevertheless, all treaties with the British were concluded by the Pēs̲h̲wā alone. In 1818 an outbreak of hostility led to the Third Anglo-Marāthā War, the expulsion of the Pēs̲h̲wā, and British annexation of the Dakhan.

PEST (Ottoman *Pes̲h̲te*), formerly a separate town, in Ottoman times centre of a *nāḥiye* in the *sand̲j̲aḳ* of Budīn [*q.v.*], today part of the capital of Hungary.

It was an earlier settlement than Buda, with mostly German inhabitants. After the Mongol invasion in A.D. 1241-2, with the creation of the fortification on the Castle Hill of present-day Buda (called new Pest for a period), Pest slowly lost some of its importance and was overshadowed by the capital, to which also the Germans moved. Nevertheless, the population of Pest reached some 7-8,000 souls at the end of the 15th century.

Although surrounded by walls and a channel with morasses, the town was quite vulnerable and fell into Ottoman hands without fight in 1541. One year later, a large Habsburg imperial army, headed by Joachim, Elector of Brandenburg, attempted to reconquer Pest, but failed due mainly to bad organisation and the lack of resoluteness. Another siege on 6 October 1602 brought success, and Pest was in Habsburg hands for almost two years. On 30 June 1684, the forces of Charles of Lorraine marched into the castle abandoned by the Turks. Four months later, however, after the abortive attack against Buda, the Ottomans were able to return. The final retaking by the same Duke's army took place on 17 June 1686.

The 16th century Ottoman surveys show that the indigenous population of Pest was Hungarian. Their number diminished rapidly, as in most administrative centres of Hungary: 122 Christian heads of families were found here in 1546, of which there remained 63 by 1590 (intermediate values: 1559-110, 1562-98, 1580-66 heads of families; cf. Gyula Káldy-Nagy, *A Budai szandzsák 1546-1590. évi összeírásai. Demográfiai és gazdaságtörténeti adatok* ("Registers of the *sand̲j̲aḳ* of Buda in 1546-1590. Data on demography and economy"), Budapest 1985, 490.) As regards Muslims, our knowledge is limited to mercenaries, who were almost 1,000 in 1541, close to 1,500 in 1543, and 734 in 1628. The total number of the population could not have exceded 2,500-3,000 people, although it is difficult to guess at the proportion of possible Muslim civilians.

The role of Pest as a commercial centre was significant both for local and transit trade. Its importance was enhanced by the immense floating bridge erected in 1566 when Ṣoḳollu Muṣṭafā was governor of Buda.

The *nāḥiye* of Pest was the largest within the *liwā* of Buda, with more than 200 settlements and *mezraʿas*.

PETRO VARADIN [see WARADĪN].

PETRUS ALFONSI, Andalusian polemicist and translator (*fl.* A.D. 1106-*ca.* 1130), convert to Christianity in 1106, composed his *Dialogi contra Iudaeos* in 1108 or 1110. Staged as a debate between his former Jewish self (Moses), and his present Christian self (Peter), the *Dialogi* ridicule Talmudic Aggadah, showing that they contradict principles of Graeco-Arabic philosophy and science (in particular astronomy); the *Dialogi* became the most widely-read anti-Jewish text of the Latin Middle Ages.

In the fifth chapter of the *Dialogi* Alfonsi attacks Islam, following—to a large extent—the Arabic text attributed to ʿAbd al-Masīḥ b. Isḥāḳ al-Kindī [*q.v.*]. Alfonsi portrays Muḥammad as a charlatan driven by lust and political ambition, ill-tutored in religious matters by a heretical Christian, Sergius [see BAḤĪRĀ] and two heretical Jews, Abdias (ʿAbd Allāh b. Salām [*q.v.*]) and Chabalahabar (Kaʿb al-Aḥbār [*q.v.*]). He gives a curious description of pre-Islamic cult rituals at Mecca (based, it seems, on Spanish Jewish sources), asserting that current Islamic practice is tainted by these pagan origins. Later Latin writers on Islam used Alfonsi's tract extensively.

Alfonsi taught astronomy in England and France. In 1116, he produced an inept Latin adaptation of the *Zīdj al-Sindhind* of al-Khʷārazmī [*q.v.*]; subsequently, Adelard of Bath (probably with Alfonsi's help) produced a somewhat better version. He later wrote an *Epistola ad Peripateticos*, urging French scholars to study astronomy and arguing for the superiority of Arab texts to those of Latin authors such as Macrobius.

Alfonsi's *Disciplina clericalis* is a collection of proverbs accompanied by short, illustrative fables; it is one of the earliest Latin texts to contain stories of Arabic provenance. The *Disciplina* was extremely popular for centuries (both in Latin and in its many vernacular translations); its fables were used by preachers as *exempla*, incorporated by Boccaccio into the *Decameron*, and resurfaced in the 15th and 16th centuries in printed editions of Aesop.

Bibliography: The best edition of the *Dialogi contra Iudaeos* is that of K.-P. Mieth, diss. Berlin 1982, although the older edition by J.P. Migne, in *Patrologia latina cursus completus*, clvii, 527-672, is more widely available. *Disciplina Clericalis*, A. Hilka and W. Söderhjelm (eds.), in *Acta Societatis Scientiarum Fennicae*, xxxviii/4, Helsinki 1911; E. Hermes (tr.), *Die Kunst, vernünftig zu Leben (Disciplina clericalis)*, Zürich and Stuttgart 1970. The *Epistola ad Peripateticos* is edited by J. Tolan (see below). The translation of the *Zīdj al-Sindhind* is edited by O. Neugebauer, in *The astronomical tables of al-Khʷārizmī*, Copenhagen 1962. On Alfonsi, see B. Septimus, *Petrus Alfonsi on the cult at Mecca*, in *Speculum*, lvi (1981), 517-33; G. Monnot, *Les citations coraniques dans le "Dialogus" de Pierre Alphonse*, in *Cahiers de Fanjeaux*, xviii (1983), 261-77; J. Tolan, *Petrus Alfonsi and his medieval readers*, Gainesville, Fla. 1993.

(J. Tolan)

PHILBY, Harry St. John Bridger (1885-1960), Arabian explorer and traveller, adviser to King ʿAbd al-ʿAzīz b. Suʿūd (Ibn Suʿūd) [see SUʿŪD, ĀL] and British convert to Islam.

Born of parents connected with planting and with official service in the Indian subcontinent, he had a conventional public school and Cambridge University education, and himself entered the Indian Civil Service in 1908. Already he showed a flare for learning Indian languages and for immersing himself in the cultures of India, until the First World War found him in ʿIrāḳ (1915-17), where he first acquired what became a lasting love for the Arab world and made his first trip into the interior of Arabia as part of a government mission in 1917-18 to persuade Ibn Suʿūd (Ibn Saud) to attack Ḥāʾil and its pro-Turkish rulers the Āl Rashīd [*q.vv.*]. After the War, he remained in the Middle East, with Sir Percy Cox in ʿIrāḳ and then in the newly-created kingdom of Transjordan.

But in 1924 he decided to resign from government service, disillusioned with British policy in the Middle East and its failure to recognise the new forces of Arab nationalism. In the ensuing lean years, he became involved, with little success, in business ventures in the Middle East and in pro-Arab, anti-British press polemics. He had often mentioned the potential advantages for his business activities in becoming a Muslim, and in 1930 became one at the hands of Ibn Suʿūd, though most Arabs were subsequently to consider him insincere and most Europeans to regard his Islam as a convenience rather than an act of genuine faith. It did, however, give him the entrée to Ibn Suʿūd's court and the King's companionship. He was now able to make his great cross-Arabian Desert journeys, including of the Rubʿ al-Khālī [*q.v.*] in 1932 (although he had been beaten to this by Bertram Thomas two years previously), and in 1936-7 around the southern fringes of Nadjd [*q.v.*] and the northern fringes of the region to the east of the Aden Protectorate, where his appearance with a Suʿūdī armed party prompted British fears that his mission involved Suʿūdī designs on the South Arabian shaykhdoms; a deliberate intention in various of his journeys of enlarging Suʿūdī borders was in fact almost certainly a motive as well as the pure love of exploration (see J.B. Kelly, Jeux sans frontières: *Philby's travels in southern Arabia*, in C.E. Bosworth *et alii* (eds.), *The Islamic world, from classical to modern times. Essays in honor of Bernard Lewis*, Princeton 1989, 701-32). Philby's journeys were nevertheless heroic ones, during which he took meticulous records of all aspects of natural phenomena (much of this material is deposited with the Royal Geographical Society, London). Further business projects involved him with American oil companies and with the import of Ford cars. He was back in Britain during the Second World War, but returned to Arabia in 1945, and between 1950 and 1953 undertook further journeys of exploration—to Ḳaryat al-Fāw [see AL-FĀʾW], to Midian [see MADYAN SHUʿAYB] and into the south, where he gathered petroglyphs and Thamudic and South Arabian inscriptions. But the new king, ʿAbd al-ʿAzīz's son Suʿūd, was displeased at Philby's denunciations in his writings of the laxity of morals and habits of luxury amongst the ruling élite which newly-found oil wealth had brought; in 1955 he had to leave Saudi Arabia for Beirut; and after returning twice to al-Riyāḍ [*q.v.*], died in Beirut in 1960.

Philby's various public careers were vitiated by his at times immoderate language and hectoring behaviour, for he lacked the qualities of the diplomat and conciliator. His fame rests upon his many books about the peninsula and his acute observation of its geographical and scientific features. He never claimed to be a professional historian, and was careless about checking dates and consulting parallel sources in his books on Suʿūdī history (see G. Rentz, *Philby as a*

historian of Saudi Arabia, in *Studies on the history of Arabia*, i/2, al-Riyāḍ 1399/1979, 25-35). Despite this, his many talents and remarkable experience of Arabia give his writings a permanent value.

(C.E. Bosworth)

PHILIPPINES, a group of islands between 4° and 21° N. lat, and 117° and 127° E. long. (Greenwich) on the western rim of the Pacific Ocean. Although the Philippines comprise 7,107 islands, about 10% are uninhabited and most of the population is on the eleven largest islands, with the two largest, Luzon and Mindanao, accounting for 65% of the country's land area and 60% of its population. Some seventy Austronesian languages are spoken, as well as English, with Tagalog (Pilipino), the language of the people around the capital, Manila, being the national language. Before colonisation by Spain in the 16th century A.D., the population of the Philippines lived mostly in small, self-contained communities (*barangays*), except in the south where Muslim sultanates had been established. In the lowland areas, these small communities quickly came under Spanish influence, with most of the population being converted to Christianity. Today, somewhat less than 10% of the national population of almost 50 million is Muslim. Apart from a growing urban population in Metro Manila, the Muslim communities are concentrated in the south: in the Sulu Archipelago, in western and southern Mindanao and coastal areas of southern Palawan. Thirteen ethno-linguistic groups have been distinguished among them, the three largest—Maranao, Maguindanao and Tausug—accounting for three-quarters of the total Muslim population. Archaeological evidence, however, suggests that the Tausug migrated to Sulu from the northern Philippines no earlier than the 11th century, largely displacing the indigenous Samal (the fourth largest Muslim ethno-linguistic group). As in most of Southeast Asia, Philippine Muslims are predominantly Sunnīs of the S̲h̲āfiʿī school, though as commentators have often observed, in some Muslim communities Islam has blended into earlier folk religions.

1. *Islamisation in the Philippines*

From around the 9th century A.D., Arab and Indian merchants, and subsequently Muslim missionaries, travelled, and probably established settlements, along the trade routes which linked Arabia and China through Southeast Asia. Initially on the periphery of this trade, by the 14th century Jolo, the largest island in the Sulu archipelago, had become a significant entrepôt centre. In a sacred grove outside Jolo there is a Muslim grave dated 710 A.H. (1310 A.D.) which Cesar Majul takes as evidence of a settlement of foreign Muslims on Jolo by the late 13th or early 14th century. Local genealogies (*tarsilas*) record that a Tuan Masha'ika arrived in Sulu around this time, marrying the daughter of a local chief and raising their children as Muslims. They also speak of a Karīm ul-Mak̲h̲dūm (Tuan S̲h̲arīf Awliyā)—possibly a Ṣūfī missionary—who settled on Jolo, at Buansa, in the second half of the 14th century, preaching Islam and building a place of worship. Soon after this a nobleman from the Minangkabao region of Sumatra, Rajah Baguinda, arrived in Sulu with a small army and established himself in authority in Buansa. That he was able to do so, it has been argued, suggests that by the late 14th or early 15th century there was, around Buansa at least, a significant population of sympathetic Muslims. Baguinda married the daughter of a local chief and consolidated the process of Islamisation in the area. Around 1450 another Arab visitor, Sayyid Abu Bakr, joined Baguinda, marrying his daughter, Paramisuli, and on Baguinda's death assuming political control in Buansa. Abu Bakr, known in Sulu as S̲h̲arīf ul-Hās̲h̲im, founded the Sultanate of Sulu. He promoted the spread of Islam, converting the hill people in the interior of Jolo, introduced organised religious study, and established social and political institutions along Islamic lines. At its height, the influence of the Sulu Sultanate spread from Basilan and the coast of southern Zamboanga in the east, to Palawan in the north and Borneo in the west. (Later Philippine claims to the Malaysian state of Sabah refer back to this period.)

The introduction of Islam to the island of Mindanao, however, is believed to have come not from Sulu but from Johore, with the arrival at the mouth of the Pulangi River (the present site of Cotabato) around 1515 of S̲h̲arīf Muḥammad Kabungsuwan and a group of Samal people. (Maguindanao legends also tell of earlier visits by the foreign Muslims S̲h̲arīf Awliyā and S̲h̲arīf Maraja, who married Awliyā's daughter.) Kabungsuwan, the son of an Arab father from Mecca and allegedly descended from the Prophet, and a Malaccan princess, is a powerful figure in Philippine Muslim history. He is generally credited with the spread of Islam in Mindanao, by a combination of proselytising, military conquest and diplomacy, and he provided the foundation for the Maguindanao Sultanate, though it appears to have been his great-great-grandson, the celebrated Kudarat, who first adopted the title of sultan. From the Cotabato area, Islam spread inland to Lanao and other parts of western and central Mindanao, from the north coast to the Gulf of Davao in the south.

In the late 15th to early 16th centuries Islam also spread from Borneo to Mindoro and southern Luzon in the northern islands of the Philippines. Muslim leaders Rajah Sulaymān and Rajah Lakandula, both kin of the Sultan of Brunei, controlled areas around Manila and Muslim influence extended south of Manila into what is now Batangas.

Thus by the 16th century Islam was well established in Sulu and western Mindanao and was spreading eastwards on Mindanao and to the northern islands. In the southern Philippines there were powerful sultanates and, encouraged by visits from foreign missionaries, religious institutions were growing in number and influence. Jolo was an important centre for trade, and intermarriages linked Philippine Muslims with Malay states to the west and south.

2. *Islam in the colonial Philippines*

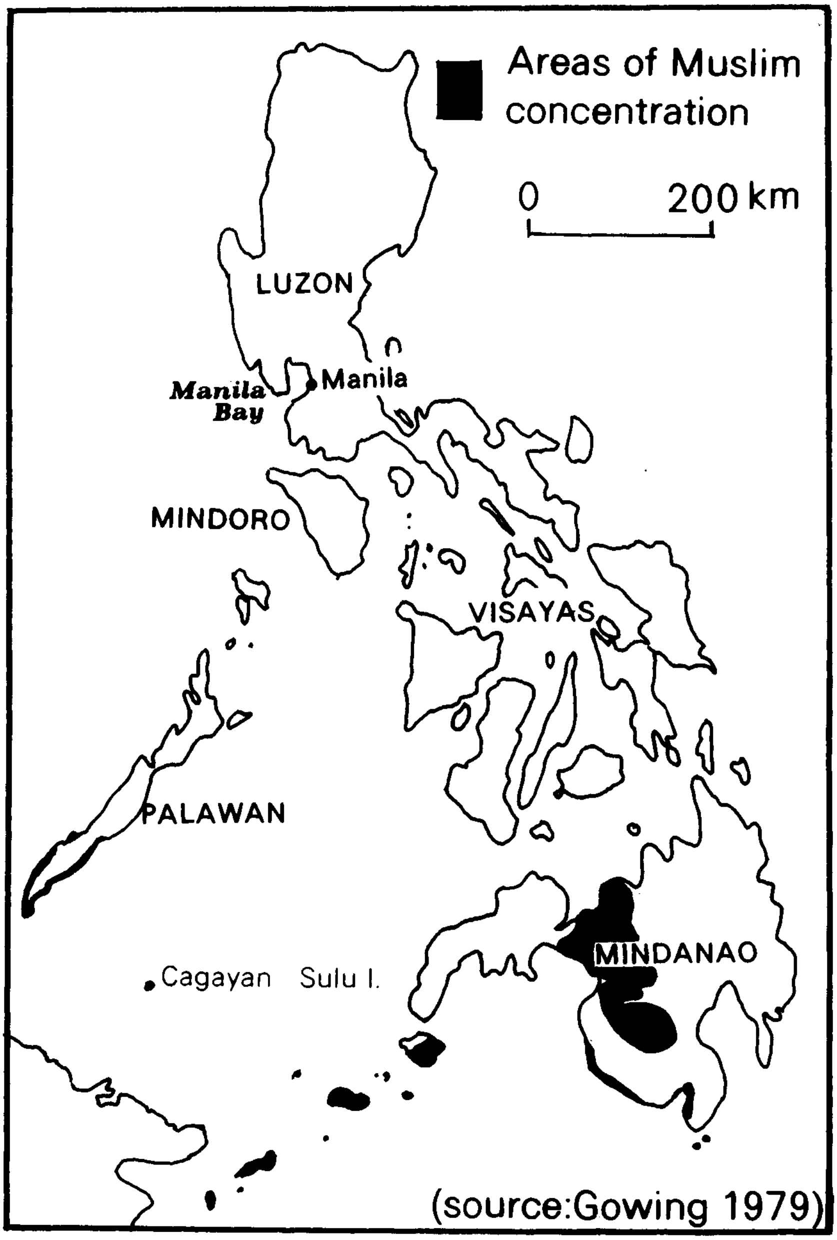
When the Spanish arrived in the Philippines in 1521 they recognised among the local Muslims their old adversaries the "Moro", and in effect resumed the crusades in Southeast Asia. Following their permanent settlement in the islands in 1565, the Spaniards reversed the spread of Islam in the north and embarked upon a series of Moro Wars against the Muslims in Sulu and Mindanao as well as in Borneo. Spanish policy in the Philippines was to Hispanise and Christianise the native population, and the commander of the first military expedition to Mindanao and Sulu was specifically instructed to prevent the teaching of the "doctrine of Mahoma" and to destroy places in which "that accursed doctrine has been preached". The Spaniards partially succeeded in halting the easterly spread of Islam on Mindanao and

established footholds in western Mindanao, notably at Zamboanga. In addition to religious and political objectives, Spain sought to displace Moros in local and regional trade, to stop Moro piracy against Spanish shipping, and to put an end to Moro raids against Spanish and Christianised *indio* settlements in Luzon and the Visayas. These objectives were pursued strongly in the 17th and 18th centuries as Dutch commercial activity in the area increased, as Jolo became a major entrepôt in the European trade with China, and as attacks on Visayan settlements increased along with the growing importance of slavery to the regional economy.

In 1637 Lamitan, the capital of Sultan Kudarat of Maguindanao, fell to Spanish forces; Jolo was captured the following year. Eight years after the fall of Lamitan, however, the Spaniards withdrew, signing a treaty with Kudarat which recognised his sphere of influence from Zamboanga to the Gulf of Davao and eastwards to Maranao territory. Fighting broke out again in 1656 with a *d̲j̲ihād* led by Kudarat and the sultans of Sulu, Ternate and Makassar. In 1663 the Spaniards again withdrew, not returning until 1718, when another round of the Moro Wars began. Finally, with increasing European rivalry in the area, the balance of advantage shifted in favour of Spain with the introduction of steam gunboats in the mid-19th century. In 1860 Spanish authorities set up a "Government of Mindanao", and eighteen years later the Sultan of Sulu acknowledged Spanish sovereignty. When in 1898 the Philippines were ceded by Spain to the USA under the Treaty of Paris, the Muslim areas of Sulu and Mindanao were still not fully under Spanish control, but this did not prevent their being included in the settlement, notwithstanding Muslim protests.

Under an agreement signed with the Sultan of Sulu in 1899 the occupying US army at first adopted a position of "non-interference" in the Muslim areas. This was soon abrogated, however, and replaced by policies designed to "develop, civilise and educate" the Muslims. The American administration made some attempt to accommodate aspects of Muslim social life, particularly in relation to Islamic law and *adat* on domestic matters, but Muslims justifiably feared an undermining of traditional authority and attempts to assimilate them into the larger, Christian, society. Resistance to American rule resulted in a series of military confrontations, culminating in the battle of Bud Bagsak on Jolo in 1913. Two years later the Sultan of Sulu surrendered his temporal authority to the US government. Under a "policy of attraction" health and education services were improved and public works programmes undertaken.

Initially administered by US army officers as the Moro Province, Mindanao and Sulu subsequently came under a separate department headed by a civilian governor and later (until 1935) under the Bureau of Non-Christian Tribes. With increasing Filipinisation of government, however, the special provisions granted to the Muslim areas of Mindanao and Sulu were progressively withdrawn, including, in 1936, recognition of civil titles such as sultan and datu. In response, there were several local uprisings and in a series of petitions in the 1920s and 1930s Moro leaders asked the colonial government either to incorporate Mindanao and Sulu, with special provisions, within the USA or to recognise the separate independence of a Moro Nation.



3. *Islam in the independent Republic*

What came to be referred to as "the Moro Problem" (though Peter Gowing suggested as a more appropriate term, "the Moros' 'Christian Problem' ") was inherited by the independent Philippine Republic in 1946. Moreover, heavy immigration from the northern islands, encouraged by the colonial government earlier in the century but increasing in scale after the Second World War, exacerbated the situation insofar as it created tensions between Muslim communities and immigrant settlers, especially over land ownership, and undermined the political authority of Muslim leaders. In 1954 a special committee of the Philippines Congress was created to investigate "the Moro Problem". As a result of its report a Commission on National Integration was set up to promote "the economic, social, moral, and political advancement of the non-Christian Filipinos", but it achieved little before being abolished in 1975. A subsequent report of a Senate Committee on National Minorities identified immigration and land grabbing as the major sources of Muslim grievances, but provided no solutions to the growing unrest.

As in earlier periods of Moro history, a feeling of grievance among Muslim communities promoted a heightened sense of Islamic identity. In the 1950s and 1960s this growing Islamic consciousness was reinforced by tendencies towards "Islamic reassertion" internationally. Within the Philippines it was reflected in a proliferation of mosques and *madāris*, a burgeoning of Islamic organisations, increasing contacts with overseas Muslims including missionaries, and a growing sense of resentment against the Christian-dominated government in Manila. A significant reflection of this was the formation in 1968 of the Muslim Independence Movement (MIM) under Datu Udtog Matalam. The MIM's stated objective was to create an independent Islamic Republic of Mindanao, Sulu and Palawan. The following year a group of young Muslims, recruited through the MIM, began guerilla training in neighbouring Malaysia. This group became the nucleus of a more radical Muslim separatist group, the Moro National Liberation Front (MNLF). Elections in 1971 proved to be something of a watershed in Muslim-Christian relations in the southern Philippines. With the positions of a number of traditional Muslim politicians under threat from Christian immigrants, and with increasing Christian-Muslim tension, the election campaign in Mindanao was marked by a number of violent incidents. When the following year Philippine President Marcos declared martial law, the conflict in the southern Philippines was listed as a reason for such action.

In 1972 leadership of the Moro movement was assumed by Nur Misuari as chairman of the MNLF. The MNLF received assistance initially from Sabah and subsequently from Libya. Leadership of the MNLF came mostly from the young men of traditional élite families, though Misuari himself was a commoner and had been associated with the Left while at the University of the Philippines. As well as demanding restitution of Muslim lands and recognition of a separate Bangsa Moro Republic, the MNLF also called for social reform within Moro society to reduce the power of the traditional aristocracy. A second prominent Moro organisation, the élite-dominated Bangsa Moro Liberation Organization (BMLO), began with similar ethno-nationalist objectives but decided to co-operate with the Marcos government; in 1974 its leader, Rashid Lucman, was recognised by President Marcos as the "Paramount Sultan of Mindanao and Sulu".

Over the next few years the MNLF maintained a

Map of the Philippines

state of insurgency against the Philippine government, with heavy casualties on both sides and considerable disruption of Muslim communities. Over 100,000 Philippine Muslims took refuge in Sabah. The MNLF's demands were supported by the Organization of Islamic Conference and the Islamic Conference of Foreign Ministers. Following negotiations in 1976, the "Tripoli Agreement" was signed by representatives of the MNLF and the Philippines government. The agreement contained general provision for the granting of autonomy in the Muslim areas of Mindanao and Sulu; by this time, however, as a result of decades of immigration, only five of the twenty-three provinces of Mindanao and Sulu contained Muslim majorities and disputes arose between the MNLF and the Philippines government over the terms of a proposed plebiscite on autonomy. In the event, the MNLF rejected the plebiscite, which was heavily boycotted, and further talks broke down. The government nevertheless went ahead to set up autonomous governments in the two administrative regions with substantial Muslim populations, though these were generally judged to be ineffective. As well, the Marcos government adopted a number of measures to promote Muslim interests. These included commitment to the codification of Muslim laws and the introduction of Sharia courts, establishment of a Muslim Amanah Bank, removal of restrictions on the historic barter trade between the Muslim Philippines and Borneo; creation of an Institute of Muslim Studies within the University of the Philippines, proclamation of Muslim holidays; and several economic development programmes in Mindanao-Sulu. Grants of land, jobs, and scholarships were offered to MNLF surrenderees.

Between 1977 and 1982 there were two major splits in the MNLF, the first with the formation of the Moro Islamic Liberation Front (MILF), a second with the breakaway of a MNLF-Reformist Group. These splits reflected personal, ideological, and ethnic divisions within the movement. There was also during the 1980s some scaling down of the armed conflict.

Following the overthrow of President Marcos in the "People Power Revolution" of 1986, the incoming government of President Aquino secured a cease-fire with the MNLF and reopened negotiations with Misuari, and the new constitution of 1987 made specific provision for autonomy in "Muslim Mindanao". Negotiations again broke down, however, and implementation of the autonomy provisions was marked by acrimonious debate in which Muslim-Christian rivalry was strongly evident. In a subsequent plebiscite, only four of the thirteen provinces and none of the nine cities polled opted for autonomy.

Given the demographic situation of Philippine Muslims, outnumbered in all but a few parts of their traditional homeland, attempts to resolve age-old tensions through the granting of Muslim autonomy on a geographical basis are bound to run into problems. However, while inequalities persist and separatist sentiments remain strong, Philippine governments appear to be showing greater sensitivity to the demands of Philippine Muslims and many Muslims are playing important roles in national social and political affairs.

(R.J. MAY)

PICKTHALL, MOHAMMED MARMADUKE WILLIAM (1875-1936), English traveller, novelist, polemicist and educationist, who became a convert to Islam at a time when British converts to Islam were much rarer than later in the 20th century, and is now best remembered for his Ḳurʾān translation, *The meaning of the Glorious Koran*.

Born in London, the son of an Anglican clergyman and with two step-sisters who were Anglican nuns, his boyhood and formative years were spent in rural Suffolk, from which he acquired a nostalgic view of a countryside way of life which was then passing. He was at school at Harrow as a contemporary of Winston Churchill, and after failing to enter the Army and the Levant Consular Service, lived as a country gentleman in Suffolk, a life interspersed with extensive travels in the Near East, where he became fluent in Arabic (and later, also in Turkish and Urdu). His extended stay in Palestine, Lebanon and Syria of 1894-6, with a return through Ottoman Turkey and the Balkans, inspired him with a romantic view of the Islamic East which was to determine the future course of his life. He subsequently became a fervid partisan of the Ottomans and of the Young Turk reformers [see YEÑI ʿOTHMĀNLÏLAR], thereby ranging himself with such contemporaries as the Conservative MPs and Middle Eastern publicists Aubrey Herbert and Sir Mark Sykes in his dislike for Philhellenes and Gladstonian liberals.

All this time he had been writing novels, and after 1903 was publishing one a year, either with British (mainly Suffolk) settings or Near Eastern ones. The best-known of the latter was *Said the Fisherman* (1903) (reprinted, with an introduction on Pickthall by P. Clark, London 1986), set in Syria and Egypt during the latter half of the 19th century and which went through fourteen editions; another of these novels, *Knights of Araby* (1917), was set in the 11th century Yemen of the Ṣulayḥids and Nadjāḥids [*q.vv.*].

The First World War, with his beloved Turkey

ranged on the side of the Central Powers, gave him a profound emotional shock. He campaigned for a separate peace with Turkey, and in 1917 announced his conversion to Islam, at once becoming a leader among the small band of the indigenous British Muslims and functioning as Acting Imām of the London mosque, then in Notting Hill. His acceptance of Islam came from an empathy which had existed for some two decades between his own naturally conservative temperament and the faith, with its attitudes of dignity and fortitude in the face of suffering and adversity and, as he saw it, its essential justice and tolerance. In 1920 he was invited by Indian Muslim colleagues to the subcontinent, and spent fifteen years there as a Muslim journalist and in Ḥaydarābād, Deccan [*q.v.*], as Principal of a Muslim high school and as an adviser and publicist for the Niẓām [*q.v.*]; he felt that in Ḥaydarābād he was living in a society were the traditions of the old Mughal empire still lived on and where a benevolent, paternalistic ruler over a mass of Hindus exemplified the Islamic ideals of wisdom and tolerance. Retiring to England in 1935, he died there on 19 May 1936.

It was whilst living in Ḥaydarābād that he became editor of the journal *Islamic Culture*, founded under the patronage of the Niẓām, but above all put together his *The meaning of the Glorious Koran*, an explanatory translation (New York 1930, London 1939; cf. J.D. Pearson, *Bibliography of translations of the Qurʾān into European languages*, in A.F.L. Beeston *et alii* (eds.), *Camb. hist. of Arabic lit. Arabic literature to the end of the Umayyad period*, Cambridge 1983, 510). For this work of translation, he spent a period in Egypt with traditional scholars there, but was also familiar with European Ḳurʾān criticism, which he accepted and applied selectively. His book has had a great vogue, and has been itself the basis for further translations, e.g. into Portuguese (in Mozambique) and into Tagalog (for the Moros of the Philippines); it is still (1991) in print.

PĪLKHĀNE [see fīl].

PĪR (p.), literally, "old person, elder" (= Ar. *shaykh*). In Islamic law, these terms were used for people in their fifties or even in their forties (see al-Tahānawī, *Kashshāf iṣṭilāḥāt al-funūn*, Calcutta 1862, 731), whilst those even older are often qualified as *harim, fānī* "decrepit, worn out".

1. In the Persian and Turkish worlds

In general Persian usage, *pīr* is often, as with Arabic *shaykh*, used in compound expressions by metonymy, e.g. *pīr-i dihḳān* "well-matured wine" (see Vullers, *Lexicon persico-latinum*, i, 392a), or in a title, e.g. *pīr-i Sarandīb* = Adam, *pīr-i Kanʿān* = Jacob, *pīr-i Harī* = ʿAbd Allāh al-Anṣārī al-Harawī [*q.v.*].

Its more generalised usage in religious parlance is as a Ṣūfī term, again corresponding to Arabic *shaykh* and Turkish *baba*. Hence the *pīr* is the *murshid* or spiritual director, and may be the founder of a Ṣūfī order or *ṭarīḳa* [*q.v.*]. As a person who has already followed the path (*sulūk*) to God and has acquired spiritual powers (*wilāya*), he is qualified to encourage and direct the aspiring novice (*murīd* [*q.v.*]) on the Ṣūfī path and finally to lay hands on the novice and bestow on him the Ṣūfī cloak or *khirḳa* [*q.v.*], thereby admitting him to the spiritual fellowship of the order. A Turkish Ṣūfī author, Rusūkh al-Dīn Ismāʿīl b. Aḥmad al-Anḳarawī (d. 1042/1632-3, see Brockelmann, II², 590-1, S II, 662), divides *pīrs* into four types: (1) *sālik-i ṣirf*, the *pīr* known for his scholarship but not to be followed, since he is not free from the trammels of self; (2) *madjdhūb-i ṣirf*, who is not to be followed either, since the divine attraction (*djadhba*) has brought him to the state of annihilation of self (*fanāʾ* [*q.v.*]); (3) *sālik-i madjdhūb*, also not to be followed since he has reached a state of ecstasy almost beyond consciousness; and (4) *madjdhūb-i sālik*, who is to be followed, since this person has passed beyond the stages of ecstasy and *fanāʾ* and is fit to instruct seekers and to perfect their discipleship (*Minhādj al-fuḳarāʾ*, Istanbul 1286/1869-70, 28 ff.).

Amongst the Ṣūfīs also, the *čahār pīr* "four *pīrs*" denote al-Ḥasan, al-Ḥusayn, Kumayl b. Ziyād and al-Ḥasan al-Baṣrī, to whom the *khirḳa* was allegedly given by ʿAlī b. Ṭālib (al-Tahānawī, *Kashshāf*, Calcutta 1862, 737).

Brown, *The dervishes, or oriental spiritualism*, Oxford 1927; *IA*, art. *Pir* (Tahsin Yazıcı), from which material for this article has been derived. (C.E. Bosworth)

2. In Indo-Muslim usage

In mystic parlance, this is generally used for a spiritual mentor; in popular usage, it is applied as prefix or suffix with different terms in a variety of senses. (i) To distinguish between different types of spiritual affiliation: *pīr-i-ṣuḥbat*, a saint from whose company one derives spiritual benefit; *pīr-i-ṭarīḳat*, a saint to whom one owes spiritual allegiance. (ii) To describe mystical customs: *pīr kā nayza*, standard carried in procession to the grave of some saint. (iii) To denote religious heads: *pīr-i-ḥaram* and *pīr-i-kalīsa*. The famous Urdu poet Muḥammad Iḳbāl [*q.v.*] has used these terms frequently in his verses to denote leaders of Muslim and non-Muslim religions. Note also *pīr-i Mughān*, literally chief priest of the Magi, but generally used for a tavern keeper. (iv) As part of proper names to emphasise spiritual qualities; e.g. *Pīrān Pīr* (for Shaykh ʿAbd al-Ḳādir Gīlānī [*q.v.*]). (v) To denote spiritual links with some *khānaḳāh*, community, etc.: as Pīr Manki Sharīf, Pīr Taunsa Sharīf, Pīr Pagaro, etc. (vi) To specify certain religious donations or endowments: e.g. *pīr awtār*, daily allowance paid to *faḳīrs* from collective village sources; *pīr pāl*, land endowed for assistance of the *pīr* or for maintenance of some mausoleum; *pīrān*, charity lands bestowed on the poor in honour of a saint. (vii) To indicate spiritual kinship: e.g. *pīr bhāi*, disciple of the same spiritual mentor and therefore brother; *pīr bahn*, woman owing spiritual allegiance to the same spiritual mentor and therefore sister; *pīr zāda*, son of the *pīr*. (viii) In sayings: *pīr djī kī sagāʾī mīr djī kay yahan*, *pīr* has his relations with *mīr*, with people of the same status; *pīr ko na faḳīr ko, pahlay kanay čur ko*, a low status man receiving precedence over *pīr* and *faḳīr*; *pīr-i man khas ast, iʿtiḳād-i man bus ast*, my *pīr* may be (worthless) like straw, but my faith in him is firm; *pīr to ap dar manda hayn, shafāʿat kis ki karain gay*, the *pīr* is himself helpless, how will he help others; *pīr miyan bakrī, murīd miyan banga, a gaʾi bakrī čap gai banga*, the *pīr* is the goat and his disciples the fodder; *barh djāyen to amīr, ghaten to faḳīr, maren to pīr*, if they thrive they are nobles; if they decline they are holy ascetics; when they die they are saints; *pānī pidjyay čāhan kay aur pīr kidjyah djān kay*, drink water after straining, select *pīr* after scrutiny. (ix) In mythology: *Pīr Bhučrī*, *pīr* of the eunuchs; *Pīr Bhučrī ki karhaī*, food distributed while admitting a eunuch to the fold; *Pīr Hatailay*, a mythical figure, like Shaykh Saddo, in whom woman have great faith; *Pīr-i Dīdār*, a legendary saint who arranges intermixture of breeds; *Pīr Dīdār kā kunda*, offering made by women longing for the return of some relative. (x) To indicate

things old and aging: *pīr-i āsmān* or *pīr-i falak*, or *pīr-i dihḳān falak*, for the sky; *pīr-i khazaf*, old man without senses; *pīr duta*, man with a bent back; *pīr-i zal*, an old man with gray hair; *pīr-i Sarandīp*, Adam; *pīr-i Kanʿān*, Jacob; *pīr-i hasht khuld*, Riḍwān; *pīr-i fānī*, an old man about to die; *pīr-i fartūt*, very old; *pīr mard*, old man; *pīr-i nā bāligh*, old man with child-like habits; *pīr-i zan* or *pīr-i zal*, old woman. (xi) In a derogatory sense: a clever and crooked old man; *pīr-i kharābāt*, a *pīr* free from the bonds of *sharīʿat* law; owner of a tavern. (xii) In proverbs: *pīr-i tasma pa*, one difficult to get rid of; *pīr khaylna*, to behave as if under the influence of some evil spirit; *pīr ana*, under the spell of some evil spirit; *pīr-i payghambar manānā*, to pray, to beseech for the fulfilment of some desire; *pīr-i shahīd manānā*, to bless the soul of some saint through offerings. (xiii) To show cultural status: *bay pīr*, without a *pīr* and therefore, uncultured and uncouth (Sir Syed Ahmad, *Sīrat-i farīdiyya*, Agra 1896, 37). Thus in Indo-Muslim usage, the term *pīr* either becomes symbolic of excessive attachment with a spiritual mentor, or else it becomes surrounded by superstitious and mythological concepts or assumes a derogatory connotation and passes into proverbs and sayings.

(K.A. Nizami)

PĪR ṢADR AL-DĪN, Indian Muslim holy man, considered to be the founder of the Khodja [*q.v.*] Nizārī Ismāʿīlī community in India. Most of our biographical information is derived from the *ginān*s (poetical compositions in Indian vernaculars), the largest number of which is ascribed to him, hence we are not on firm ground. He lived probably between the second half of the 8th/14th and the beginning of the 9th/15th centuries. The centre of his activity was around Koṭri and Uččh in Sind, where he converted large numbers of Hindus from the Lohaṇa caste and gave them the title of Khodjas (derived from Persian *khwādja*, honorary title like "sir") because the Lohaṇas were addressed by the honorary title *thākur* in Hindi. He seems to have played a key role in the communal organisation and is credited with the establishment of the first *djamāʿat-khāna* (a congregation hall for the community) in Koṭri. He is also said to have visited the Imām Islām Shāh in Persia to hand over the *dasondh* (tithes) collected from the Indian community. His shrine is located in Djetpur, near Uččh, but the overseers of his shrine consider themselves as Twelver Shīʿīs and call the Pīr Ḥādjdjī Ṣadr Shāh.

Bibliography: For a full description of his works and sources, see I. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Cal. 1977, 301-2; Azim Nanji, *The Nizārī Ismāʿīlī tradition in the Indo-Pakistan subcontinent*, New York 1978, 72-7; F. Daftary, *The Ismāʿīlīs: their history and doctrines*, Cambridge 1990, 479.

(I. Poonawala)

PĪR SHAMS or **SHAMS AL-DĪN**, Indian Muslim holy man, regarded as the second important figure after Nūr Satgur [*q.v.*], whose name is traditionally associated with the commencement of Nizārī [*q.v.*] or Satpanth (i.e. the true path) Ismāʿīlism in Sind. Historically he is an obscure figure surrounded by legends. Most of our information is derived from *ginān*s ascribed to him. The latter, being poetical compositions in Indian vernaculars resembling didactic and mystical poetry, are often anachronistic and legendary in nature. The dates mentioned for his activities, centred in Sind and working within a Hindu-Muslim milieu, cover a long period from the first half of the 6th/12th to the 8th/14th centuries. The overseers of his alleged mausoleum at Multān, however, identify him with Shams-i Tabrīz [*q.v.*], the spiritual guide of Mawlānā Djalāl al-Dīn al-Rūmī [*q.v.*], and a descendant of the Twelver Imām Mūsā al-Kāẓim [*q.v.*]. The Nizārī community of the Shamsīs living in Pandjāb and chiefly in Multān, on the other hand, claim to have been converted by Pīr Shams and have preserved the *ginān*s of the Pīr in Pandjābī dialect.

Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Cal. 1977, 299-300; Azim Nanji, *The Nizārī Ismāʿīlī tradition in the Indo-Pakistan subcontinent*, New York 1978, 53-5, 62-8, 103-5, 121-2; F. Daftary, *The Ismāʿīlīs: their history and doctrines*, Cambridge 1990, 415, 478-9.

(I. Poonawala)

PĪRĪ MEḤMED PASHA (?-939/?1532-3), an Ottoman Grand Vizier, belonged to Amasya and was a descendant of the famous Djalāl al-Dīn of Aḳsarāy and therefore traced his descent from Abū Bakr. He took up a legal career and became successively *ḳāḍī* of Sofia, Siliwri and Galata, administrator of Meḥemmed II's kitchen for the poor (*ʿimāret*) in Istanbul, and at the beginning of the reign of Bāyezīd II attained the rank of a first *defterdār* (*bash defterdār*). In the reign of Selīm I, he distinguished himself by his wise counsel in the Persian campaign (see J. von Hammer, *GOR*, ii, 412, 417 ff.), was sent in advance to Tabrīz to take possession of this town in the name of the sultan, and at the beginning of Shaʿbān 920/end of September 1514 was appointed third *wezīr* in place of Muṣṭafā Pasha, who had been dismissed (see *GOR*, ii, 420). He temporarily held the office of a *ḳāʾim-maḳām* of Istanbul, and after the end of the Egyptian campaign was appointed Grand Vizier in place of Yūnus Pasha, who had been executed on the retreat from Egypt in 923/1517. In this capacity he took part in the conquest of Baghdād in 927/1521. Soon after the occupation of Rhodes, Pīrī Pasha fell from the sultan's favour as a result of the slanders of the envious Aḥmed Pasha, who coveted his office, and was dismissed with a pension of 200,000 aspers on 13 Shaʿbān 929/27 June 1523. His successor was Ibrāhīm Pasha [*q.v.*], a Greek from Parga. Pīrī Meḥmed lived another ten years and died in 939/1532-3 at Siliwri, where he was buried in the mosque founded by him. One of his sons, Meḥmed Beg, had predeceased him in 932/1526 as governor of Ič-il. Pīrī Meḥmed Pasha created a number of charitable endowments, among them a mosque in Istanbul called after him (cf. Ḥāfiẓ Ḥuseyin, *Ḥadīḳat al-djawāmiʿ*, i, 308), a *medrese* and a public kitchen as well as what was known as a *tāb-khāne*. While his *laḳab* was Pīrī, he used Remzī as a *makhlaṣ* for his poems, which are of moderate merit (cf. von Hammer, *Geschichte der osmanischen Dichtkunst*, ii, 327 ff., with the wrong year of death and also i, 187, under *Pīrī* without the identity of the two being recognised, also Laṭīfī, *Tedhkire*, 168 under *Remzī*).

Bibliography: Meḥmed Thüreyyā, *Sidjill-i ʿothmānī*, ii, 43, more fully in ʿOthmānzāde Meḥmed Tāʾib, *Ḥadīḳat al-wuzarāʾ*, Istanbul 1271, 22 ff., and the Ottoman chroniclers of the 10th/16th century; *İA*, art. *Pîrî Mehmed Paşa* (Şerâfeddin

Turan).—Bursalî Meḥmed Ṭāhir, *ʿOthmānlî müʾellifleri*, ii, 111 ff., deals with Pīrī Meḥmed Pasha as a literary man. According to him, he wrote a small collection of poems (*dīwānče*) and an exposition of a part of the *methnewī* and of the *shāhidī* entitled *Tuḥfe-yi mīr*, but both works are described by Meḥmed Ṭāhir as still in mss. (F. BABINGER)

PĪRĪ REʾĪS b. Ḥādjdjī Meḥmed, a Turkish mariner, cartographer and author (b. probably Gallipoli, date of birth unknown; d. Cairo, 961/1553-4). His uncle, Kemāl Reʾīs [*q.v.*], served as a captain in the Ottoman fleet but was especially notorious among Mediterranean Christians for his exploits as a corsair; it was in this earlier profession by his uncle's side that Pīrī Reʾīs first learned the trade of seaman. Generally welcomed by their Arab fellow-Muslims to use the coasts of Tunisia and Algeria as a base, refuge and place for selling their booty, they preyed upon Christian shipping and the coasts of Spain, France, western and southern Italy and the islands of the Western Mediterranean. During these campaigns, which spanned much of the first half of Bāyezīd II's reign (sc. 886-900/1481-95), Pīrī Reʾīs acquired an intimate knowledge of both the Mediterranean and of the "haven-finding art"—various tools aiding navigation and the expertise in using them—as it existed among his fellow-sailors of that sea. Both personal experience and assiduous gathering of sources (primarily Italian and Catalan), combined with an original creative mind, later enabled Pīrī Reʾīs to produce a remarkable body of cartographic and hydrographic work.

The second stage in Pīrī Reʾīs's life began in 900/1495 when the sultan summoned his uncle to serve in the Ottoman fleet. From then on until Kemāl Reʾīs's death (either in 916/1510 or 917/1511; for this date see S. Soucek, *Piri Reis and Turkish map-making after Columbus*, 164), he participated, always by his uncle's side, in various naval assignments such as conveying supplies to Mamlūk Egypt or patrolling the sea-lanes between Istanbul and various points of the Aegean and Eastern Mediterranean, molested by the Hospitallers of Rhodes [see RODOS]; Kemāl Reʾīs especially distinguished himself during the 1499-1502 war with Venice, an event again witnessed by Pīrī Reʾīs, who had by then commanded a ship in his own right; this independence may also have saved his life when his uncle went down with his ship during a storm in the eastern Aegean.

Kemāl Reʾīs's death signalled a third and most productive stage in Pīrī Reʾīs's life, for from then on he spent more time at Gallipoli [see GELIBOLU; until 1518 it was the chief naval base of the Ottoman empire] and devoted himself to the theoretical side of the seaman's profession—marine cartography and science of navigation. His first and most dazzling achievement occurred in 1513, when he made a world map of which only a part—probably one-third—has survived. This map is anchored in a double tradition: that of the Mediterranean portolan chart, and that of the world map of the age of Great Discoveries (see T. Campbell, *Portolan charts from the late thirteenth century to 1500*, in *The history of cartography*, ed. J.B. Harley and D. Woodward, i, 371-458; S. Soucek, *Islamic charting in the Mediterranean*, in *The history of cartography*, ii/1, 269-72; idem, *Piri Reis*, 49-79); a third type of tradition could be added here, that of the "presentation specimen chart": for its lavishly coloured and aesthetically appealing form, as well as several topical legends relating such events as the discovery of America or describing the new continent's memorabilia, revealed a purpose that went beyond serving as a tool for sailors but aimed to impress an important recipient. The extant part (Istanbul, Topkapı Palace library, Revan 1633 mükerrer; dimensions: 90 × 63 cm, parchment), is the western third or half of the original, and includes a colophon which reads: "Composed by the poor Pīr son of Ḥadjdjī Meḥmed, known as paternal nephew of Kemāl Reʾīs, may God pardon them both, in the city of Gallipoli, in the month of Muḥarram the sacred, year nine hundred and nineteen [March-April 1513]." It shows the Atlantic with the adjacent coasts of Europe and Africa, and the New World as far as Pīrī Reʾīs could piece it together from up to five cartographic sources: a map made by Columbus, as well as between one and four Portuguese charts, according to the author's own statements and to internal evidence. The map is torn longitudinally in such a way that what must have been its major part, including the bulk of Europe and Africa and all of Asia, is missing; how and when the mutilation occurred is unknown, but it may have happened in Cairo where Pīrī Reʾīs had sailed with several ships of the Ottoman navy at the conclusion of Selīm I's 1517 conquest of Egypt, for he states in another work, the *Kitāb-i Baḥriyye* (p. 5 in the 1935 facs. ed.; see below), that the sultan had at that point graciously accepted the map. It then lapsed into oblivion until its 1929 discovery in the Topkapı Palace library; the map's identification as a work partly based on an early but no longer extant map made by Columbus had an effect that transcended the bounds of scholarly interest, and it became an international sensation as well as a matter of pride for the young Turkish republic, especially for its founder Kemal Atatürk. Upon instructions from the president, the Turkish Historical Society published in 1935 a facsimile together with, in a separate brochure, a full transcription as well as translation of its legends into modern Turkish, German, French, English and Italian (*Piri Reis haritası*; repr. in 1966; many smaller scale reproductions exist, the best in M. Mollat du Jourdin and Monique de La Roncière, *Sea charts of the early explorers: 13th to 17th century*, New York 1984, pl. 28). The documentary value of the chart, which has sometimes received such inaccurate labels as "the earliest map of America" or "the lost map by Columbus in a Turkish translation" is indeed considerable, and could be even greater if it had survived in its entirety, for Pīrī Reʾīs tells us that he had used both European and Oriental sources in the construction of the map. Put in modern terms, the result must have been a work of unique kind and value. Even in its truncated state, the map is viewed as one of the prime treasures of the Topkapı Palace; the world-wide interest it has stirred has also provoked some eccentric interpretations.

The recent and ongoing interest in Pīrī Reʾīs's world map stands in sharp contrast to the apparent indifference with which it met in the author's lifetime. Another work of his, the *Kitāb-i baḥriyye* ("Book on seafaring"; completed in 1521, and reworked in a second version in 1526; a facsimile of one of its best manuscripts, Aya Sofya 2612, now in the Süleymaniye library, was in 1935 published by the Turkish Historical Society concurrently with the facsimile reproduction of the 1513 world map; our references are to the page numbers of this edition (Piri Reis, *Kitabi Bahriye*)) fared better, however, judging from the many copies produced during the 16th and 17th centuries. It too is anchored in the tradition of portolan texts and portolan charts (but also in that of the closely related genre of *isolarii*). Although both pertain to the universal category of sailing directions

and marine charts, their "portolan" label further specifies a genre created and perfected in the Mediterranean between the 13th and 17th centuries; moreover, it was a primarily Christian (Italian and Catalan) speciality, with only marginal Muslim (Arab and Turkish) participation. The *Kitāb-i baḥriyye* is an up to a point original and remarkable exception, not unlike the author's 1513 world map, for Pīrī Reʾīs again gave free rein to his genius and produced a volume of texts and charts such as none of his Christian models had ever done: a description of the entire Mediterranean subdivided into chapters, each chapter accompanied by a chart of the area described. Moreover, a long versified introduction written for the second version discusses subjects related to navigation, oceanic geography and the ongoing voyages of discovery. The first version consists of 130 chapters and charts, the second of 210. Both have a brief preface in which Pīrī Reʾīs tells why he composed the work: to provide a manual for his Turkish fellow-sailors, and to offer a present to Sultan Süleymān on the occasion of his accession. This preface in prose is then followed by the versified introduction in the second recension (pp. 7-85), and by the main body of the text in prose with charts (86-848); the second version ends in a versified epilogue (849-55), in which the author tells how in 1524 the Grand Vizier Ibrāhīm Pas̲h̲a [*q.v.*] had encouraged him to produce a more polished version of the work and thus worthier of the august recipient. Neither recension's autographs are known to have survived, but copies of both (23 and 10, respectively, plus several adaptations and modifications; a list of the known manuscripts compiled by T. Goodrich can be found in *The history of cartography*, ii/1, 290-1) have survived and mostly carry on either original's structure, form and function. Those of the first version are less polished but meant as manuals for sailors; those of the second are often calligraphied, and their lavishly coloured charts pertain to the art of miniature illustration and were clearly produced not for use at sea but as bibliophile artifacts for wealthy or important customers. Especially striking are elaborate sketches of many port cities, including topographic views of Istanbul, Venice and Cairo (Walters Art Gallery, Baltimore, ms. 658, and its twin ms. Yıldız Türkçe 6605, Istanbul University library, are the best examples). Despite all these additional documentary and artifactual features, however, the second version does not quite supersede the first; in fact, one of the special assets of Pīrī Reʾīs's portolan—personal and topical reminiscences from the Turkish corsairs' main base, eastern Algeria and Tunisia—exists in the second version only in an abridged form. Moreover, this truncation may have been performed not by Pīrī Reʾīs himself but by one Seyyid Murād or Murādī, the editor of K̲h̲ayr al-Dīn Barbarossa's [*q.v.*] *G̲h̲azawāt*, who claims to have ghost-written also the second version of the *Kitāb-i baḥriyye* (see H. Yurdaydın, *Kitab-i bahriryye'nin telifi meselesi*, in *AÜDTCFD* x [1952], 143-6).

In 935/1528-9 Pīrī Reʾīs produced his last known work, another map of the world of which again only a fragment—probably one-sixth—has survived (Topkapı Palace library, Hazine 1824; parchment, 69 × 70 cm; see colour reproduction in *The history of cartography*, ii/1, pl. 21). It covers the north-western part of the Atlantic and the New World from Venezuela to Newfoundland and the southern tip of Greenland. This map, too, is signed by the author, and combines the artifactual qualites of a "presentation copy" with those of a valuable document. The quality of this fragment suggests that in its original state, the map may have been another brilliant example of the subsequently stifled attempt by Muslim cartography to join Renaissance Europe's exploration of the world.

Aside from writing and cartographical work between 1513 and 1529, all we know of Pīrī Reʾīs during this period is that he may have on occasion accompanied K̲h̲ayr al-Dīn Barbarossa to North Africa, and that he must have remained active as a pilot in the Empire's home waters, as his assignment to steer Ibrāhīm Pas̲h̲a's ship to Egypt (1524) suggests. After 1529, however, all trace of him disappears until he re-emerges in 1547 as commander of the Ottoman fleet based at Suez. In this capacity, Pīrī Reʾīs carried out the reconquest of Aden (1549); but his luck turned in 1552-3 when reports of the approach of an enemy relief fleet made him raise the siege of Portuguese-held Hurmuz [*q.v.*] and withdraw to Baṣra; worse still, his subsequent decision to leave the bulk of his ships there and return with three vessels (one of which was lost en route) to Suez led to a death sentence by the government which was carried out at Cairo (Cengiz Orhonlu, *Hint kaptanlığı ve Piri Reis*, in *Belleten*, xxxiv [1970], 234-54). This bizarre end of the great cartographer does not seem to have been questioned by Ottoman observers, but it has puzzled modern historians; some have wondered if two namesakes are not being confused (the age factor for example: by 1553 the cartographer would probably have been an octogenarian). A more likely explanation is the fact that the Ottoman élite, with the exception of Ibrāhīm Pas̲h̲a, failed to grasp the value of his cartographic and hydrographic work, and that, personally, Pīrī Reʾīs never managed to penetrate the otherwise broad spectrum of that élite and thus receive the totally different treatment reserved for its members (as exemplified by the case of K̲h̲ādim Süleymān Pas̲h̲a [*q.v.*], who in 1538 failed before Diu much as Pīrī Reʾīs did before Hurmuz but instead of being executed became Grand Vizier). [See also SELMĀN REʾĪS, SEYYIDĪ ʿALĪ REʾĪS, TAʾRĪK̲H̲-I HIND-I G̲H̲ARBĪ.]

Bibliography: Given in the article, and S. Soucek, *Islamic charting in the Mediterranean*, in *The history of cartography*, Chicago 1992, ii/1, 263-92 (see also this volume's bibliographical index, 521-45); idem, *Piri Reis and Turkish mapmaking after Columbus*, London 1992, 162-75; idem, review article discussing the literature on Pīrī Reʾīs, in *JAOS* (forthcoming). (S. SOUCEK)

PĪRĪ-ZĀDE MEḤMED ṢĀḤIB EFENDI (1085-1162/1674-1749), Ottoman *S̲h̲eyk̲h̲ al-Islām* [*q.v.*] in Istanbul and the pioneer translator into Turkish of Ibn K̲h̲aldūn.

Ibn K̲h̲aldūn's *Muḳaddima* was quite early known in Ottoman Turkey, being cited by e.g. Maḥmūd b. Aḥmed Ḥāfiẓ al-Dīn (d. 937/1550) and by Ḥād̲j̲d̲j̲ī K̲h̲alīfa in his *Kas̲h̲f al-ẓunūn*. But during the years 1138-43/1725-30 Pīrī-zāde translated the *Muḳaddima* from the beginning to the end of the fifth chapter, i.e. about two-thirds of the whole, and this was lithographed at Cairo in 1275/1859, with Aḥmed D̲j̲ewdet Pas̲h̲a [*q.v.*] shortly afterwards translating the final, sixth chapter. Pīrī-zāde's translation circulated in manuscript, and thus helped considerably in making Ibn K̲h̲aldūn a familiar figure in 18th and 19th century Turkey.

Rosenthal, *The Muqaddima, an introduction to history*, New York 1958, i, pp. cvii-cviii; *İA* art. *Ibn Haldun* (Abdülhak Adnan Adıvar), at cols. 740b-741b. (C.E. BOSWORTH)

PIRLEPE, Prilep, a town of more than 40,000 inhabitants situated on the northern edge of the fertile Pelagonian Plain at the foot of the Babuna Mountains in the southern part of the former Yugoslav Macedonia. In the Middle Ages, Prilep was the capital of a Slav principality. In Ottoman times (1395-1912) it was the centre of an extensive *ḳāḍīlīḳ* stretching from the modern Greek border in the south (Nidže and Kajmakčalan Mountains, 2521 m/8,268 ft) and the Solunska Glava (the highest mountain of Macedonia, 2540 m/8,331 ft) in the north, an area which in 1900 contained 141 villages. Especially in late Ottoman times, Prilep was the commercial metropolis of northern Macedonia. It was also an Islamic centre of regional importance.

Prilep is first mentioned in the edicts of the Byzantine emperor Basil the Bulgar-Slayer (1014), but must be much older. From the early 11th century till 1201, Prilep was in Byzantine hands; from 1201 till 1246 it was included in the Second Bulgarian Empire; then Byzantine again till 1334, when the troops of the Serbian king (later Tsar) Dušan conquered it and included it in the short-lived Serbian empire. After Dušan's death, it was included in the principality of Vukašin, who in 1366 declared himself king in Prilep. During the wars of the 14th century, both sides made use of Turkish mercenaries. After the death of King Vukašin in the Battle of the Maritsa (1371) against the Ottomans, his son Marko Kraljević came to rule over Prilep as an Ottoman vassal, serving in the major campaigns of the Sultans until his death in 1395 in the Battle of Rovine. Portraits of Vukašin and Marko are preserved in the fresco decorations of the church of St. Michael in the Archangel's Monastery above the old town of Prilep, which was refurbished by the two rulers. The old Ottoman chroniclers place the conquest of Prilep in the 1380s, which is an evident mistake. The town and its district were annexed without a struggle or great disturbance after Marko's death. A part of his troops went over to direct Ottoman service, to become the Christian *sipahīs* known from the 15th century census registers.

Mediaeval Prilep was situated below a mountain top castle (first mentioned in 1240) from which the town took its name (Prilep = "stuck on a mountain"). The greater part of this mediaeval settlement, with many Byzantino-Slavic churches with wall paintings of high quality, as well as a large monastery, is still preserved, the site being called "Kale Varoš" or "Prilep-Varoš." The town we see today is an Ottoman creation, situated 2 km/1 mile down in the plain. The Arabic inscription on the oldest preserved mosque of the town, the Çarşı Camii, from 881/1476-7, gives an indication of the time at which the new settlement came into being. Throughout history, Prilep-Varoš remained an exclusively Christian settlement, whereas the new town was first entirely Turkish but, especially since the 18th century, became predominantly Christian. For Prilep and its district, a relatively large number of Ottoman *taḥrīr defters* have been preserved and are partly published (Sokoloski, 1971), or have been the basis of demographic research (Stojanovski, 1981). Together with some Poll Tax registers preserved in Sofia, and with the numbers collected by Vasil Kănčev during his solid research shortly before 1900, they give the following picture:

Year of registration	*Christian households*	*Muslim households*	*Total households*	*Approximate total population*	*Percentage of Muslims*
1445	350	10	360	1,500 to 1,600	3%
1455	300	21	321	1,380 to 1,420	6%
1478	386	141	530	2,200 to 2,300	27%
1528	463	210	673	3,000 to 3,200	31%
1544	492	189	681	3,000 to 3,200	28%
1570	326	279	605	2,700 to 2,900	46%
1614	135	(*ca.* 400)	(*ca.* 550)	2,200 to 2,400	72%
1900	3,000	1,400	4,400	24,540	29%

It is clear that during the rule of Meḥemmed the Conqueror, the town of Prilep received an important group of Muslim Turkish settlers, mostly craftsmen, as the registers show (tanners, coppersmiths, tailors, weavers, etc.). The link between the arrival of this group and the construction of a large mosque in 1476-7 is evident. At first, the settlers developed along natural patterns, but after the mid-16th century the Muslim community grew, especially through the conversion and linguistic assimilation of a part of the local Christians. The early *defters* also show that the villages on the plain, which in the late Ottoman period were inhabited by Albanian Muslims (Aldanci, Belušino, Borino, Crnilište, Desovo, Drenovo, Gorno Žitoše, Norovo, Sačevo and Vrboec) were still almost entirely Slavic and completely Christian, only a few incidental Albanian households being registered. The later, entirely Slav Muslim villages (Pomak/Torbeš) of Debrešte, Lažani and Peštalevo, were also entirely Christian. The nine Muslim Turkish villages which the *ḳaḍā*ʾ was to have later did not exist in 1445 and 1455. Ali Obası (Alinci), Dedebalcı and Şeleverci are mentioned as places where a few Yürük families lived, serving in the army in time of war. Dedebal(ci) and the no-longer-existing hamlet of Timur existed already in the time of Murād II. The same *defter* also mentions groups of Christian *es̲h̲künd̲j̲is*, serving in the Ottoman army in time of war and enjoying important tax facilities. The important monasteries of the Archangels of Prilep and that of Treskavac, 10 km/6 miles from the town, a Byzantine imperial foundation, were the property (*mülk*) of the Metropolitan of Prilep, David.

In the second half of the 16th century, almost the entire *nāḥiye* of Moriovo, constituting the mountainous south of the *ḳaḍā*ʾ of Pirlepe, was transformed from *k̲h̲āṣṣ* to *waḳf* property of the Süleymāniye complex in Istanbul. The *waḳfiyye* of this largest of all Ottoman socio-religious foundations, written between 1558 and 1566, does not yet mention these villages among the *waḳf* property of the foundation. They must have been added later, most probably towards the end of the 16th century, when the wave of inflation caused financial difficulties. The *D̲j̲izye Defter* F 16 A, a.e. 60 A, in the Sofia National Library, a newly-made *taḥrīr* from the year 1023/1614, mentions 28 villages and the number of their households, from which *d̲j̲izye* was part of the *waḳf*, together with all other taxes. Four of these villages were situated outside the *nāḥiye* of Moriovo, four others no longer

exist, and 20 of them survive to the present day. The fact that the Moriovo *nāḥiye* was part of this important *wakf* helped them to survive the difficulties and arbitrariness of the 17th and 18th centuries. When many other villages wholly or partly converted to Islam to escape fiscal and other pressures, the entire Moriovo remained Christian and some of its villages grew from a few dozen households into the largest of the entire *ḳaḍā*ʾ. This little-known phenomenon finds parallels in the clusters of *wakf* villages in Central Greece (*wakf* of the Wālide Sulṭān Kösem Māhpeyker) and in Bulgaria (Plevna, *wakf* of Mīkhāloghlu ʿAlī Bey) and elsewhere.

In the first quarter of the 16th century, six more Muslim Turkish villages came into being in the plain south of the town: Budaklar (now called Budjakovo), Büyük Oba (Golemo Kojnari), Elekler (Erekovci), Kanatlarcı, Küçük Oba (Malo Kojnari) and Musa Obası (Musinci). Their names and notes in the *defters* tell us that they were Yürük villages. Their migration to Macedonia must be seen in connection with the persecution of the Ḳizilbash ʿAlewī groups in Anatolia under Selīm I. In the important village of Kanatlarcı there was since a long while back a large Bektāshī *tekke*, which still exists today, being together with the one in Kırçova/Kičevo, the only *tekkes* of this order surviving in Slav Macedonia.

Ewliyā Čelebi, who visited Prilep in 1071/1660-1, describes it as a town of 1,000 houses, divided into over ten *maḥalles*. He mentions the Mosque of the Alay Bey, which was particularly lofty, and that of Arslan Pasha, besides a number of *mesdjids*, 200 shops, a pleasant *ḥammām*, a *khān* and some *medreses*, *mektebs* and *tekkes*. These numbers look reasonable. That of the houses must be too high. Most of the public buildings of Ottoman Prilep were the work of Ḳodja Arslan Pasha, who seems to have been still alive when Ewliyā visited the town. In the course of the 17th century, the administrative subdivisions of Macedonia changed. Previously, Prilep was part of the Pasha Liwāsī. Ḥādjdjī Khalīfa mentions the *ḳaḍā*ʾ as part of the *sandjak* of Üsküb. In the 19th century it was attached to the *wilāyet* of Manastir.

Throughout the 15th, 16th and 17th centuries, numerous churches were either newly-built and painted or else thoroughly reconstructed, beginning with the new church of Bogorodica Prečiste in Prilep-Varoš itself, from 1420, and with the paintings of the Treskavac Monastery from 1430 and the choir of the monastery church of Zrze, shortly after 1400. Some of the newly-built and painted churches, such as in Dolgaec, from 1454-5, explicitly mention "Tsar Mehmet Tsalapi" as ruling Sultan. The paintings in the nave of the monastery church of Treskavac, from 1480-90, belong to the best of the entire Balkans. Highlights of 16th century painting are those in the Monastery of Zrze, the work of the Albanian artist Onufre of Elbasan. Zrze has also good examples of paintings from 1625 and 1636. Other important and well-preserved works of the 17th century are the village churches of Rilevo and Slepče, built and painted in 1617 and 1627. The difficult economic and social conditions of the late 17th and 18th century did not allow Christian art under the Ottomans to flourish.

In 1807 François Pouqueville visited Prilep and describes it as a town of 1,000 to 1,100 houses, illustrating the stagnation of the 18th century. Prilep's great time was to come in the 19th century, when the population almost quintupled, the Macedonian Christians growing at a much faster rate than the Muslims. In this time, Prilep became the commercial metropolis of inland Macedonia. A disastrous fire of 1273/1856-7 could not stop this expansion. In 1861 von Hahn noted a "richly-stored, newly-built bazaar". In these years the entire town centre was rebuilt on a regular chess board plan. A monumental Clock Tower was added and the old mosque from 1476-7 was restored and doubled in size by a huge annex.

At the end of the 19th century, the town had more than 24,000 inhabitants, 16,700 being Macedonian Christians, 6,200 Muslim Turks and the remainder Gypsies. Sāmī Bey in his *Ḳāmūs al-aʿlām*, ii, Istanbul 1316/1898-9, describes Prilep as having ten mosques, three *tekkes*, five *medreses*, two *ḥammāms*, a Rüshdiyye school, an Ibtīdāʾıyye school, seven Muslim primary schools, six Christian primary schools and two churches. He also mentions the famous Prilep Fair in August-September. The greater part of the population was, according to Sāmī Bey (but this is an incorrect source), Muslim. The Muslims spoke Ottoman Turkish and Albanian, the Christians spoke Bulgarian and Rumanian.

For the composition of the population of the district of Prilep in the late Ottoman period, we have the data from the *Nüfūs Defters* of 1884 and 1890, the numbers of the *Sālnāme* of 1305/1888, and Kănčev's detailed and reliable numbers. They are as follows:

The population of the ḳaḍāʾ *of Pirlepe according to various late 19th century sources*

	Nüfūs Defter 1884	*Sālnāme* 1888	*Nüfūs Defter* 1890	*Kănčev* c. 1900
Bulgarians/Macedonian Christians	44,759	29,041	50,916	57,213
Muslims	13,753	30,271	13,342	13,415
Vlachs	753	498	528	745
Gypsies	709	in the above	1,634	1,775
Totals	59,974	59,312	66,420	73,146
Percentage of Muslims	24%	50,2%	22%	20%

It is evident that the numbers of the *Sālnāme*, intended for public use, are gross distortions, of a kind known also from elsewhere [see OKHRĪ]. The real state of affairs is reflected in the numbers of mosques and churches in the 141 villages of the *ḳaḍā*ʾ of Pirlepe as given by Sāmī Bey on the basis of the *Sālnāme*: 34 mosques, in the 18 villages with Muslim inhabitants and the town together, and 101 churches in the 122 Chris-

tian villages. The proportion of Muslims to Christians was 20% to 80%, that of mosques and churches 25% to 75%, or almost the same.

During the First Balkan War, Prilep was taken by the Serbian Army in 1912. Town and district remained part of Serbia, later Yugoslavia, till 1992, although interrupted by harsh Bulgarian occupations during both World Wars. The population of the town changed considerably through the emigration of a large part of the Muslim citizens to Turkey in the 1950s. In the post-war years, the town, which had stagnated in the interwar period because of changes in the trade routes and economic system, was "modernised", in which process most of the Ottoman buildings disappeared. In 1990 the old mosque of 1476 was still standing, together with the Clock Tower from 1280/1863-4 and one wall of the monumental Kurşunlı *khān* of Ḳodjā Arslan Pas̲h̲a from the 17th century.

In the villages of the former *ḳaḍā*ʾ, the changes were less drastic. The greater part of the Pomak [*q.v.*] and Albanian Muslim populations remained where it was, although both communities grew, but slowly, due to emigration. The Turkish population of the former Yürük villages is also still present and saw a slow growth from *ca.* 2,000 to a little below 3,000 souls, living in Budaklar, Elekler, Kanatlarcı and Musa Obası/Musinci. The other originally Turkish villages had by 1970 completely lost their Muslim population, their place being taken by Macedonians.

PĪS̲H̲DĀDIDS, a mythical dynasty of ancient Persia, given a considerable role in the national historical tradition of Persia. This tradition was essentially put together in the *k̲h̲ʷadāy-nāmags* of late Sāsānid times and, like most of our information on Sāsānid history, has to be reconstructed from post-Sāsānid, mainly early Islamic sources. Hence we find information on the Pīs̲h̲dādids in such sources as al-Ṭabarī, al-Masʿūdī, Ḥamza al-Iṣfahānī and al-T̲h̲aʿālibī.

Ḥamza, ed. Beirut n.d. [*ca.* 1961], 13, 16-17, makes the Fīs̲h̲dādiyya the first *ṭabaḳa* of the kings of Persia (the second being the [also legendary] Kayāniyya, the third the As̲h̲g̲h̲āniyya or Arsacids, and the fourth the Sāsāniyya), with nine monarchs whose rule totalled 2,470 years. The Persian national history begins in fact with Kayūmart̲h̲ or Gayōmard, the first world-king, and it is his grandson or great-grandson Hūs̲h̲ang (OP Haošyanha), called *parad̲h̲āta* (NP *pīs̲h̲dād*) "the one who first establishes the law" (see Justi, *Iranisches Namenbuch*, 126), who, as bearer of the "royal glory" (*hvarna, farrah*), is regarded as the founder of the Pīs̲h̲dādids. Subsequent members of the dynasty include such heroic figures as Ṭahmūrat̲h̲, D̲j̲ams̲h̲īd, Farīdūn, Manūčihr and Gars̲h̲āsp, and the national history records their struggles with the tyrant Dahāk and with the leader of Tūrān [*q.v.*] Afrāsiyāb [*q.v.*]. Then after the reigns of Gars̲h̲āsp and Zāb, often described as co-rulers, came an interregnum and the advent of the new dynasty of Kayānids.

PĪS̲H̲KAS̲H̲ (P.) as a general term designates a present, usually from an inferior to a superior. As a technical term it denotes a "regular" tax (*pīs̲h̲kas̲h̲-i mustamarrī*) and an *ad hoc* tax levied by rulers on provincial governors and others, and an *ad hoc* impost laid by governors and officials in positions of power on the population under their control. The offering of presents to rulers and others was known from early times (cf. Abu 'l-Faḍl Bayhaḳī, *Tārīk̲h̲-i Bayhaḳī*, ed. A.A. Fayyāḍ, Mas̲h̲had 1350 *s̲h̲*/1971, 655, 679, 705, 734-5, 789, 815). With the proliferation of dues which took place under the Īlk̲h̲ānate, the giving of gifts to the ruler and his officers was transformed into an *ad hoc* impost known by such terms as *saʾuri* and *tuzg̲h̲ü* rather than *pīs̲h̲kas̲h̲* (see G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, Wiesbaden 1963-75, i, 335). Under the Tīmūrids and the Turkoman dynasties the term *pīs̲h̲kas̲h̲* for such imposts is common. It was levied on the population of a district collectively (*pīs̲h̲kas̲h̲-i d̲j̲amʿī*) and on individuals (*pīs̲h̲kas̲h̲-i g̲h̲ayr-i d̲j̲amʿī*) (see Sayyid Hossein Modarressi Tabataba'i, *Farmānhā-yi Turkamānān-i Ḳarā Ḳoyunlū wa Āḳ Ḳoyunlū*, Ḳum 1352 *s̲h̲*/1973-4, 103, 115, 126). Under the Ṣafawids, *pīs̲h̲kas̲h̲* is attested both as a due or tax paid on a regular basis and as an *ad hoc* levy; it constituted an important source of revenue. An official of the royal secretariat (*daftark̲h̲āna*), known as the *pīs̲h̲kas̲h̲-niwīs* (the registrar of presents), recorded the number and value of *pīs̲h̲kas̲h̲*. This official is found until the second half of the 19th century (cf. W. Ouseley, *Travels in various countries of the East, more particularly Persia, etc.*, London 1819, ii, 172-3). Provincial governors paid *pīs̲h̲kas̲h̲* on appointment and thereafter annually at the Naw Rūz [see nawrūz] (cf. K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 92).

Holders of *tuyuls* and *soyurghals*, unless given immunity, were subject to the payment of *pīshkash*, as also were the leaders of *dhimmī* communities (cf. documents in A.D. Papazyan, *Persidskie dokumentî Matenadarana. 1. Ukazî, vîpusk pervî (XV-XVI vv.)*, Erivan 1956 and idem, *Persidskie dokumentî Matenadarana. 2. Ukazî, vîpusk vtoroy (1601-1650)*, and H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 212-13). As in the case of other taxes and funds, drafts were sometimes drawn on *pīshkash* and collected locally. The *Dastūr al-mulūk* of Mīrzā Rafīʿā (Muḥammad Taḳī Dānish-pazhūh, *Dastūr al-mulūk-i Mīrzā Rafīʿā wa Tadhkirat al-mulūk-i Mīrzā Shafīʿā*, in *Tehran University, Rev. de la faculté des lettres et sciences humaines*, xv/5-6 [1968], xvi/1-6 [1968-9]) and the *Tadhkirat al-mulūk* (Persian text in facsimile, tr. and explained by V. Minorsky, London 1943) record late Ṣafawid practice and also the levy of commissions and fees on *pīshkash* made for various officials. Occasions for the exaction of *ad hoc pīshkash* were numerous. They included conquest of a town or district, the circumcision of princes, royal marriages, royal "progresses" and the progress of governors through their provinces. If the Shāh visited one of his subjects, his host was expected to give him a present in return (R. du Mans, *Estat de la Perse en 1660*, ed. C. Schefer, Paris 1890, 33). The grant of immunity from *pīshkash* is attested in a number of documents (cf. Sayyid Hossein Modarressi Tabataba'i, *op. cit.*, and Papazyan, *op. cit.*) and *farmāns* (cf. a *farmān* of Shāh Ṭahmāsp, dated 932/1526, engraved at the entrance of the Amīr ʿImād al-Dīn mosque in Kāshān (ʿAbd al-Ḥusayn Nawāʾī, *Shāh Ṭahmāsp-i Ṣafawī madjmūʿa-yi asnād wa mukātabāt-i tārīkhī*, Tehran 1350 *sh*/1971-2, 509).

The levy of "regular" *pīshkash* and *ad hoc pīshkash* continued under the Ḳādjārs (cf. United Kingdom, Parliament. Accounts and Papers. Report on Persia, A&P 1867-68, quoted by C. Issawi, *The economic history of Iran 1800-1914*, Chicago 1971, 366, and also the agreement made between the Imām of Muscat and the Persian Government dated 1272/1886 in Djahāngīr Ḳāʾim-Maḳāmī, *Yak ṣad wa pandjāh sanad-i tārīkhī*, Tehran 1348 *sh*/1969-70, 215-16. See also Muḥammad Djaʿfar b. Muḥammad Ḥusayn Nāʾīnī, *Djāmiʿ-i Djaʿfarī*, ed. Īradj Afshār, Tehran 1353 *sh*/1974-5, 592, 593-4; Afḍal al-Mulk, *Afḍal al-tawārīkh*, ed. Manṣūra Ittiḥādiyya (Niẓām Māfī); and Sīrūs Saʿdwandiyān, Tehran 1361 *sh*/1982-3, 391, 435). Its levy pressed heavily on the population (cf. Lady Sheil, *Glimpses of life and manners in Persia*, London 1856, 393). Open criticism of the practice of the levy of *pīshkash* was not to be expected, but voices against it were sometimes heard. One such was that of Muḥammad Shafīʿ Ḳazwīnī, a hatter (*kulāh-furūshī*) of Ḳazwīn, who commented on the evils of *pīshkash* in an essay written between 1264/1848 and 1266/1850, which he sent to the Amīr Kabīr, Nāṣir al-Dīn's first minister (*Ḳānūn-i Ḳazwīnī*, ed. Īradj Afshār, Tehran 1370 *sh*/1991).

Bibliography: Haphazard references to *pīshkash* are to be found in historical texts and documents. See also A.K.S. Lambton, *Pīshkash: present or tribute?*, in *BSOAS*, lvi (1993).

(ANN K.S. LAMBTON)

PISHPEK, a settlement of early and mediaeval Islamic times in the Ču [*q.v.*] valley of the Semirečye in Turkestan, during the Soviet period forming the city of Frunze (lat. 42° 54′ N., long. 74° 36′ E.). The region of Pishpek and nearby Tokmak is known to have been in mediaeval Islamic times a centre of Nestorian Christianity, and inscribed grave stones, the oldest of which date back to the time of the Ḳara Khiṭay [*q.v.*] (6th/12th century), have been found there (see W. Barthold, *Zur Geschichte des Christentums in Mittel-Asien bis zur mongolische Eroberung*, Tübingen and Leipzig 1901, 1-2, 37-8 *et passim*).

In the early 19th century, the Khāns of Khoḳand [*q.v.*] founded a fort at Pishpek, captured in 1862 by the advancing Russians, who then founded in 1878 a town there. When the Kirghiz SSR was created as part of the Soviet Union in 1926, Pishpek became its capital and was re-named Frunze after the Bolshevik commander M.V. Frunze, sent by Lenin in 1919-20 to Central Asia in order to combat the Basmači fighters there for local independence. In 1970 Frunze had a population of 431,000. With the break-up of the former Soviet Union, the city has now been re-named Bishkek, within the Kyrgyzstan Republic.

Bibliography: See also *BSE*², xxviii, cols. 316-19. (C.E. BOSWORTH)

PĪSHṬĀḲ (P.), literally, "the arch in front", hence the portal of an important building, the term being appropriate to the advancing of the structure, at least in its developed form, forward from the plane of the façade: it is formally typified by this projection, and the articulation of receding planes to the entrance within. Though initially used throughout the Middle East and Hindūstān, the portal came to be most typical of Perso-Indian architecture. The Persian concept appears to be connected with the Arabic *dihlīz* as the palace vestibule where the ruler appeared for public audience, as at ʿAmman [*q.v.*]. It draws on the images of pre-Islamic wonders, particularly on the great Sāsānid Ṭāḳ-i Kisrā [*q.v.*] at Ctesiphon (3rd century A.D.), as extolled by, for example, al-Buḥturī [*q.v.*] in the 3rd/9th century (*loc. cit.* in *Bibl.*), and ultimately on Solomon's buildings, with which the Bāb Djayrūn became identified (see Soucek, *op. cit.* in *Bibl.*). As Golombek and Wilber have pointed out, the scale of the portal appears to reflect the status of the founder (*op. cit.* in *Bibl.*, 206-7), height, *irtifāʿ*, being a standard metaphor for exaltation; it often displayed his name conspicuously. It is also suggested (Bloom, *op. cit.* in *Bibl.*, 26) that portals may have symbolised a source from which *baraka* might emanate (cf. *Bāb* in *Encycl. Iranica*), especially in a Shīʿī context; this may have extended to some tombs. In mosques their inscriptions often identify them as entrances to the world of prayer, and ultimately paradise. Hillenbrand has also inferred that in some later tomb towers, as at Basṭām (700/1301), it may have had a cultic significance (*op. cit.* 1982, in *Bibl.*, 249). Mosque entrances remained flush until the Fāṭimids introduced the projection in the early 4th/10th century.

The features characteristic of the developed portal include a rectangular front taller than its width, surrounded by successive architrave friezes of running ornament and inscriptions, some in different planes, or comprising superimposed arched niches, enclosing an archway whose spandrels are set off with bosses, panels, or later with arabesque designs; its recessed rear wall in turn houses a smaller arch, later joined to it by a semivault, either through *muḳarnas* [*q.v.*] or squinch netting, leaving a tympanum over the doorway. Both arches may have round angle shafts. As such the organisation is close to that of the *miḥrāb* [*q.v.*], and appears to have developed in parallel with it. The format also applies, especially in the Perso-Indian context, to the handling of *īwān* fronts [*q.v.*], here used in the arthistorian's sense.

In the pre-Islamic phase, the *īwān* arch at Ctesiphon is flush with the screen wall on either side, to which it relates much as that at the Parthian palace at Assur, itself derived from Roman prototypes, as

was that at Hatra; it formerly had an arcuated archivolt. In niches at the palace at Bis̲h̲āpūr (A.D. 260) the arch is framed by key-pattern friezes within the flanking pilasters. The gateway of the 6th century Sāsānid palace at Dāmg̲h̲ān, now in the Philadelphia Museum of Art, incorporates two concentric arches recessed one well within the other. The roughly contemporary rock-hewn *īwāns* of the Ṭāḳ-i Bustān near Kirmāns̲h̲āh incorporate stucco angels in the spandrels and a garlanded archivolt. A façade shown on the post-Sāsānid Fortress Plate in the Hermitage, which as Pope showed has features in common with the Parthian shrine at Tak̲h̲t-i Sulaymān, already shows the arched door set in a clearly defined rectangular frame, of which the upper panel ends in a cresting different from that on the flanking walls. The pre-Islamic prototypes thus occur in both sacred and palace buildings. This dual use was to continue in Muslim buildings.

Creswell (*op. cit.* in *Bibl.*, 1958, 197) identified the *līwān* arch on the south side of the Court of Honour at al-Uk̲h̲ayḍir (*ca.* 140-60/760-80 [*q.v.*]) as the first example of the *pīs̲h̲ṭāḳ*, but it has fallen, and the reconstruction of a rectangular frame is conjectural; it does, however, show the taller arch as the inevitable expression of a wide central bay in a wall of smaller arcading. The *īwān* of the Tārik K̲h̲āna Mosque at Dāmg̲h̲ān (4th/10th century) was probably comparable, with a frame rising from above the crowns of the lateral arcades, much as in the Masd̲j̲id-i D̲j̲āmiʿ at Nāʾīn (*ca.* 340/950). In the Great Mosque at Sāmarrā (234-7/848-52), the complete format can already be recognised in the *miḥrāb*, with its tall, recessed rectangular frame, two concentric pointed arches supported on paired angle shafts of rose marble on each side, and mosaic spandrels. At Córdoba, the Bāb al-Wuzarāʾ (Puerta de San Estéban) of 241/855-6 has a horseshoe arch recessed close within a rectangular frame (*alfiz*) set above the level of the door lintel, a treatment which persists in the Mag̲h̲rib: there are traces of flanking elements on either side in the flush wall. The full expression of this raised framing, with a cresting of five intersecting arches above, survives in a side door built by al-Ḥakam II in *ca.* 364/965. In the tomb of the Sāmānids at Buk̲h̲ārā (pre-331/943) the portal is still flush, but two concentric arches rest on angle shafts, with a decorated tympanum over the door, geometric panels in the spandrels, and a framing frieze of roundels. The entire front of the mausoleum of ʿArab Atā (367/977-8) at Tīm in Uzbekistan is a *pīs̲h̲ṭāḳ* rising between polygonal shafts at the corners to screen the lower part of the dome, and a deep cavetto moulding within the frame enhances the recession, with a striking row of three blind arches above the entry. In the Būyid D̲j̲urd̲j̲ir portal (4th/10th century) at Iṣfahān, the arch is joined to the entrance wall by two quadrants of a semidome, with a window between. The implications of the dominant façade at Tīm are realised in the three Ḳarak̲h̲ānid [see ILEK K̲H̲ĀNS] tombs at Uzgend in Kyrgyzstan (Ḳîrgîzstan) (*ca.* A.D. 1012-1187), where the diapered terracotta, while derived from the Sāmānid tomb, is now clearly articulated within successive frames reaching the ground, but without the intervention of an arcade; it includes early geometric frets. The Ḳarak̲h̲ānid mausoleum of ʿAlambardār at Āstāna-Bābā (*ca.* 395/1005?) in Türkmenistan has an advanced *pīs̲h̲ṭāḳ* housing one arch recessed within another, and what appears to have been a full architrave frame (its top is missing) as the centre bay of a tripartite arched front (Pugachenkova, *op. cit.* in *Bibl.*, 268-74). A century later, the Sald̲j̲ūḳ mausoleum at Tākistān in western Persia still has, by contrast, a single, full-front façade, with the outer frame uniting repeatedly recessed frames for the three sections, and rows of flat trilobed *muḳarnas* in the top of each (Hillenbrand, *op. cit.* 1972 in *Bibl.*).

The use of superimposed blind niches to flank the main arch derived from Roman practice, as can be seen in the projecting portal of the great mosque at Mahdiyya (308/920-1) [see BĀB, pl. xxv *a*], whence it appears to have been brought to Fāṭimid Egypt, in the Mosque of al-Ḥākim (393/1003) and the Mosque of al-Aḳmar (519/1125) at Cairo: the latter has a semidomed arch with radial ribbing, flanked by similar superimposed niches with angle shafts and, for the first time, square-framed *muḳarnas* hoods over the lower pair. The absence of minarets in these mosques is due to the connection between the portal itself and the call to prayer in Fāṭimid Egypt. The Aḳmar front is angled so as to adjust the line of a pre-existing street to the *ḳibla*-orientated interior. The derivation may have proceeded separately in Persia.

The 18 m outer arch of the Ribāṭ-i Malik on the Buk̲h̲ārā-Samarḳand road (pre-1078), standing 6 m higher than the walls, is framed by a broad architrave of contiguous stars in relief, housing a smaller entry arch within a plain outlined frame for contrast. That of Sand̲j̲ar's Ribāṭ-i S̲h̲araf (508/1114-15 [*q.v.*]) on the Marw-Nīs̲h̲āpūr road is framed by a Kūfic inscription in deep relief contrasted with smooth mouldings, around a similar four-centred archivolt and diapered spandrels; in the comparable inner portal the inscription rises from piers indented with tall arched niches on either side. By the early 6th/12th century the sanctuary *īwān* of the Masd̲j̲id-i D̲j̲āmiʿ at Iṣfahān probably had a *pīs̲h̲ṭāḳ* rising more than twice the height of the two-storied wings on either side, whose original form appears to have incorporated lateral frames of arched panels set one over the other, and a pronounced archivolt; the north entrance was built in 515/1121, and, according to Māfarrūk̲h̲ī, was flanked by paired minarets. The Sald̲j̲ūḳ format of a four-centred arch flanked by superimposed niches is established clearly but simply in the *īwāns* of the Masd̲j̲id-i D̲j̲āmiʿ at Zawāra (530/1135-6) and that at Ardistān (555/1160), concurrently with the appearance of the four-*īwān* plan in D̲j̲ibāl province. The mosque of Imām Ḥasan at Ardistān (late 6th/12th century) has a portal once crowned by two minarets, possibly the earliest of the type to have survived. Records of the portal at the mausoleum of Muʾmina K̲h̲ātūn at Nak̲h̲čiwān (582/1186) (Useynov *et alii*, *op. cit.* in *Bibl.*, 89, 92) show it to have had a tall arch framed between two cylindrical minarets rising from the ground. In G̲h̲ūrid work, as at the S̲h̲āh-i Mas̲h̲had *madrasa* (571/1175-6) in G̲h̲ard̲j̲istān, and the Masd̲j̲id-i D̲j̲āmiʿ (*ca.* 1200) at Harāt [*q.v.*], the emphasis remains on broad, highly ornamented Kūfic frames. The east *īwān* at Zawzan (616/1219) incorporates both epigraphic frieze and elaborate *muḳarnas* vaulting. Subsequent structural and decorative developments were to be variations on this scheme. The classic form is achieved in the Masd̲j̲id-i D̲j̲āmiʿ at Warāmīn (726/1326), with a generous arch, splayed flanks to the projection, and fully integrated faience and terracotta decoration. This splay led later to the Tīmūrid incorporation of *pīs̲h̲ṭaḳ* in the *has̲h̲t bihis̲h̲t* plan type.

A type distinguished by a *muḳarnas* hood spanning from front wall to entry wall emerged in Syria, first in shallow stucco at the Muristān Nūrī at Damascus (549/1154) and then in full depth in stone in the *madrasa* of S̲h̲ādbak̲h̲t (589/1193) or the Ribāṭ Nāṣirī

(635/1237-8) at Aleppo [see BĀB, pl. xxvi]; it results in a triangular profile of successive arcs on the façade. This was subsequently used on mosques. It reached Egypt in the *madrasa* of Baybars (662/1264). Though keel-vaulted entrances were still used for some caravanserais in Anatolia, it was already used there by *ca.* 1200 in the Halifet Gazi mausoleum at Amasya (traditionally dated 540/1145-6) with wriggling torus frames around an arch set on elongated corbels, in the Sitte Melik Kümbeti at Divriği (592-1195-6) with its more sober cranked frame, and in the Mama Hatun Kümbeti (1200-20) at Tercan, where it is flanked by tall angular niches. By 656/1258 it appeared in the mosque of Sahib Ata at Konya flanked by a pair of pleated brick minarets above two diminutive superimposed niches framed by knotted strapwork and mouldings. This type with minarets achieved full expression in the Çifte Minareli Medrese at Erzurum (639/1242?), and the Gök Medrese and Çifte Minareli Medrese, both of 670/1271, in Sivas. A variant with a flat-topped hood appeared in parti-coloured marble in the Büyük Karatay Medrese, Konya, of 649/1251, with cabled angle shafts. Other, highly sculptural Anatolian forms in this wonderfully inventive period are in the İnce Minareli Medresesi, Konya (*ca.* 1258-79), with an inner arch tied by a knotted inscription band through a semidomed outer arch to an arcuated cresting, and the Ulu Cami at Divriği (626/1228-9), where the swarming, heraldic ornament all but obscures the form. The full Egyptian form is to be seen 37 m high in the mosque of Sulṭān Ḥasan in Cairo (760/1359), apparently deriving from the Gök Medrese, with its two minarets: the hood climbs to a cusped semidome at the apex, a Syrian detail already used in the Great Mosque of Baybars (667/1269) in its lateral niches [see BĀB, pl. xxv*b*]. Ottoman portals were to incorporate flattened variants of the triangular Sāldjūk hood [*ibid.* pl. xxix*a*], but their significance was usually reduced by the use of an arcade in front.

The format with double minarets, apparently adopted from Ādharbāydjān, was to be characteristic of 8th/14th century Persia under the Mongols. In the Masdjid-i Djāmiʿ at Ashtardjān (715/1315) they are set back behind the plane of the *pīshṭāḳ* frame to rise on top of the structure. The height of the arch is three times its width, housing a *muḳarnas* semi-dome divided from the entry arch by a horizontal inscription frieze, all flanked by three tall superimposed arched niches; subtle use is made of blue glazed brick. Other examples are the portals of the *khānaḳāh* at Naṭanz (707/1307-8) and the Masdjid-i Niẓāmiyya at Abarḳūh (*ca.* 725/1325), culminating in the *pīshṭāḳ* of the great mosque at Yazd (*ca.* 730/1330, reconstructed in 765/1364), twice its width in height, with four tiers of niches, where extra buttressing is required behind the façade. In that at Kirmān, built under the Muẓaffarids in 750/1349, the format is transformed by an overall reventment of mosaic tile, with arabesques in the spandrels. The use of a cable moulding to frame the main arch may be a reference to Solomon's supposed ability to mould stone, as told of cabled shafts in Jerusalem (see MIḤRĀB, pl. 1, for the *miḥrāb* of Sulaymān in the Ḳubbat al-Ṣakhra). The squinch nets first devised under the Muẓaffarids, though already implicit in the star vaults at Iṣfahān, appear in Tīmūrid work by the end of the century: they are used structurally in the *īwāns* of the Mosque of Fīrūzshāh at Turbat-i Djām (846/1442-3), but were later to be false. By the second half of the 9th/15th century they were widely to replace *muḳarnas* as the means of transition, though they survived longer in portals than elsewhere, sometimes in combination with nets, as in the much-restored *īwān* of ʿAlī Shīr Nawāʾī at Mashhad.

The Great Mosque of ʿAlī Shāh at Tabrīz (*ca.* 710-20/1310-20) incorporates a vast *īwān* (30.15 m span) in deliberate emulation of Ctesiphon (22.86 m). Not only its size, but the marble columns of the courtyard, and the great marble slabs in the entrances, were to be copied by Tīmūr in his Masdjid-i Djāmiʿ at Samarḳand (806/1403-4) (17 m, and 19 m high), after his even larger portal for the Āḳsarāy at Shahr-i Sabz (781-98/1379-96) (22.30 m, *ca.* 50 m high). These may have been influenced by a late 8th/14th century mosque at Sulṭāniyya, no longer extant, since in all three the flanking minarets sprang from the ground (Golombek and Wilber, *op. cit.*, cat. 211). In all, too, the cabled moulding is prominent. This was to be a model for subsequent Tīmūrid, Ṣafawid, and Mughal *pīshṭāḳs*.

Hindūstān. The introduction of arched stone frontal screens [see MASDJID. II. In Muslim India] gave the central bay a new potential. The form and articulation of the Ribāṭ al-Sharaf front was to be emulated in the deeply-carved screen of the Masdjid Ḳuwwat al-Islām (595/1199) at Dihlī [*q.v.*], and more closely in that of the Aṛhāʾī-din-kā Djhōṅpṛā mosque at Adjmēr (607-33/1211-36), with its cusped lateral arches, but this time with two non-functional reeded minarets set on top of the 17 m central bay: the Harātī (?) architect cited the Ḳuṭb Minār in their profile [see MANĀRA. 2. In India], probably as a symbol of dominion, thus giving them a new semantic purpose to be resumed elsewhere. In form, he seems to have anticipated the Anatolian double type. The implication, rather than the form of such treatment was continued in the massive domed entrances and *īwāns* of Tughluḳid mosques. That at Djahānpanāh (Begampur, Dihlī *ca.* 744/1343) incorporates a projecting *čahārṭāḳ* porch with battered walls, enhanced by a wedge of access steps, and a towering *pīshṭāḳ* to the prayer hall between tapering round angle turrets, in which the arch is almost as tall as the parapet, dwarfing the triple entrance within. This tendency was taken still further at Djawnpur, as at the Atāla Masdjid (811/1408), where the sides of the *pīshṭāḳ* frame are expressed as battered rectangular piers, still housing niches, with an architrave bridging the arch at the top; in front of the prayer hall, the structure forms a pylon five stories high, outtopping the dome, 17 m wide at the base and 23 m high; the arch itself houses five tiers of grouped openings. The *guldasta*, a shaft-like pinnacle, is introduced in Tughluḳid work as a prolongation of the angle turret, and is subsequently transformed. Exceptionally, in the Lōdī mosque at Khayrpur, Dihlī (900/1494), a façade directly based on the Mustanṣiriyya at Baghdād (1233) is modified by advancing the central bay. A Tīmūrid form first appears in the Masdjid-i Kuhna at Dihlī (*ca.* 1540), with reeded angle shafts recalling the Ḳuṭb, rising into *guldasta* among merlons at the skyline, black fillets trimming an epigraphic frieze, and the first use of geometric white marble inlay in the flat tympanum. Red sandstone is henceforward the normal matrix, with inlaid work [see PĀRČĪN-KĀRĪ]. By 969/1561-2, the Khayr al-Manāzil, *ca.* 1568-70, incorporates a semidome for the first time. The portal of Akbar's mosque in the Čishtī Dargāh at Adjmēr (977/1570) projects between splayed reveals, with one tall arch recessed within another [see MUGHALS. 7. Architecture, pl. xx, 1]. His Buland Darwāza at Fatḥpur Sīkrī returns in 983/1575-6 to the monumental scale, 39.62 m wide and 40.84 m high, at the top of a vast flight of steps. The projection is hemioctagonal, with shafts at the angles, the great arch of the main face

housing a hemioctagonal recess with a squinch-netted semidome above. Each splayed face and the three internal sides are articulated in three storeys, with a cresting of small open domed kiosks in series on the skyline. The inscriptions carved in cartouches on the architrave celebrate prayer as a gateway to paradise. The *pīshṭāḳ* acquires a new independence in the Nīl Kanth belvedere at Māndū (982/1574-5), where three are grouped to surround a courtyard with a cascade.

In Akbar's tomb at Sikandra, the gateway (1022/1613) has the arched format of Adjmēr, but is flanked by wings each housing two superimposed arches of the same depth. The inlay is the first to include floral motifs. Above each bevelled corner stands a tall marble minaret, still reeded at the base. The rise of the *pīshṭāḳ* inherently tended to obscure the dome of a *maḳṣūra* behind it, as evident at Fatḥpur Sīkrī [see MUGHALS. 7, pl. xx, 2]. A solution to the problem was found in the little Nagīna Masdjid (*ca.* 1630) in the Āgra Fort, where the newly popular Bangālī curve was used to raise the *čhadjdja* line over the centre bay. Other devices were tried in smaller mosques [see MASDJID, vol. VI, at 697-8]. In the major metropolitan mosques at Āgra (1058/1648), Dihlī (1060-6/1650-6), and Lāhawr (1084/1673-4), however, the *pīshṭāḳ* was retained, with a relatively wide arch surrounded by an unpunctuated architrave, framed by angle shafts enlarged to slender, lanterned minarets, and a single entry arch within [see MUGHALS. 7, pls. xxxi-xxxii]. Palace pavilions [see MAHALL] generally had straight, uninterrupted eaves, and the function of the *pīshṭāḳ* at court was restricted to entrance gates, often with a raised gallery for the musicians [see MUGHALS. 7, pls. xxiv, 2 and xxviii, 2].

PIST (P.), a kind of food compounded of the liver of gazelles or almonds, etc. A daily portion of the size of a pistachio (*pista*) is taken by those derwīshes and others who undertake long fasts, e.g. the *čilla* or forty-day fast, and is sufficient to maintain life.

PIYĀLE PASHA, Ottoman Grand Admiral, came according to St. Gerlach, *Tage-Buch* (Frankfurt a/M. 1674, 448), from Tolna in Hungary and is said to have been the son of a shoemaker, probably of Croat origin. Almost all contemporary records mention his Croat blood (cf. the third series of the *Relazioni degli ambasciatori Veneti al Senato*, ed. E. Albèri, Florence 1844-5, and esp. iii/2, 243: *di nazione croato, vicino ai confini d'Ungheria*; 357: *di nazione croato*; iii/3, 294: *di nazione unghero*; 418). Following the custom of the time, his father was later given the name of ʿAbd al-Raḥmān and described as a Muslim (cf. F. Babinger, in *Litteraturdenkmäler aus Ungarns Türkenzeit*, Berlin and Leipzig 1927, 35, n. 1). Piyāle came in early youth as a page into the Serai in Istanbul and left it as *kapudjī bashī* [see KAPĪDJĪ]. The year 961/1554 saw him appointed Grand Admiral (*ḳapudan pasha* [*q.v.*]) with the rank of a *sandjakbey*, and four years later he was given the status of a *beylerbey* (J. von Hammer, *GOR*, iii, 406). He succeeded Sinān Pasha, brother of the Grand Vizier Rüstem Pasha [*q.v.*], in the office which he had held from 955-61/1548-54. When after his capture of Djerba and other heroic achievements at sea he thought he might claim the rank of *wezīr* with three horse-tails, Sultan Süleymān, thinking it too soon for this promotion and regarding it as endangering the prestige of the vizierate (see Ḥādjdjī Khalīfa, *Tuḥfat al-kibār*, first edition, fol. 36, and *GOR*, iii, 406), married him to his grand-daughter Djewher Sulṭān, a daughter of Selīm II (see *GOR*, iii, 392: summer of 1562). It was not till five years later that he received the three horse-tails as a *wezīr* related by marriage (*dāmād*) like Meḥmed Ṣoḳollu Pasha.

Meanwhile, he had carried out several of his great exploits at sea and attained the reputation of one of the greatest of Ottoman admirals. Along with Torghud Reʾīs, at the instigation of the French ambassador d'Aramon, he had harassed the coast around Naples, besieged and taken Reggio and carried off its inhabitants into slavery. In 982/1555 he endeavoured in vain to besiege Elba and Piombino (see *GOR*, iii, 418), and finally took the fortified harbour of Oran in Algeria with 45 galleys. In the following year, with 60 warships he occupied the port of Bizerta (Bent-Zert) and a year later ravaged Majorca with 150 galleys and burned Sorrento near Naples. In 965/1558 he lay inactive with his fleet, 90 in number, before Valona in Albania in order to watch the enemy fleets there which were preparing an enterprise against Djerba and Tripoli. The 31 July 1560 saw his greatest exploit at sea, namely, the capture of Djerba, which had shortly before been taken by the Spaniards; this he did with 120 ships setting out from Modon. On 27 September 1560, he held his triumphal entry into Istanbul, to which he had sent in advance the news of his victory

by a galley (see *GOR*, iii, 421 ff.). The Grand Admiral did not take to sea again till four years later when, in August 1564, he took the little rocky island of Peñón de Vélez de la Gomera from the Spaniards in order to prepare for the conquest of Malta, which the sultan's favourite daughter Mihrimāh [see RÜSTEM PA<u>SH</u>A] was conducting with all her resources. This time, however, fortune no longer favoured him, for the siege of Malta in June-July 1565 failed against the heroic courage of the Christian defenders, who performed miracles of bravery and inflicted heavy losses on the Ottomans. During the Hungarian campaign of Süleymān in the spring of 973/1566, Piyāle Pa<u>sh</u>a was placed in charge of the harbour and arsenal of Istanbul (see *GOR*, iii, 438), after previously undertaking a successful raid on Chios and the Apulian coast (*ibid.*, iii, 506 ff.), in which the island of Chios and its harbour passed into his hands (Easter Sunday 1566).

Under Selīm II, his father-in-law, he was disgraced and deprived of office of Grand Admiral because, it was alleged, he had kept the greater part of the booty of Chios for himself (according to the report of the embassy of Albrecht de Wijs of May 1568, in von Hammer, *GOR*, iii, 782), and replaced by Muʾe<u>dh</u><u>dh</u>inzāde ʿAlī Pa<u>sh</u>a. He at once endeavoured to regain the imperial favour by new exploits at sea. In <u>Dh</u>u 'l-Ḳaʿda 977/April 1570, he set sail with 75 galleys and 30 galleots, landed first of all on the island of Tine which he captured and next took part in the conquest of Cyprus. On 20 January 1578—according to Ottoman sources on 12 <u>Dh</u>u 'l-Ḳaʿda 985/21 January 1578—he died in Istanbul, according to Stephan Gerlach (cf. his *Tage-Buch*, 448). His vast estates passed in part to the imperial treasury and in part to his widow and children. His widow later married the third *wezīr* Meḥmed Pa<u>sh</u>a and his second son became *sand<u>j</u>ak bey* of Klis (Clissa) above Split (Spalato in Dalmatia) in 992/1584 (cf. the Italian record quoted by von Hammer, *GOR*, iv, 104, n. 1: *La Sultana fo moglie di Piale ora di Mohammedbassa terzo vezir, ha ottenuto dal Sign. il Sangiaco di Clissa per il secondo suo figlio con Piale*). Piyāle Pa<u>sh</u>a was buried in Istanbul in the Ḳāsim Pa<u>sh</u>a quarter in the mosque founded by him (cf. Ḥāfiẓ Ḥuseyin Aywansarāyī, *Ḥadīḳat al-d<u>j</u>awāmiʿ*, ii, 25 ff.).

(F. BABINGER)

PLEVEN [see PLEWNA].

PLEWNA (Ottoman Turkish orthography, پلونه), the modern city of Pleven in northern Bulgaria. It is situated at an altitude of 105 m/336 ft in a depression of the Pleven plateau which is formed by the small river Tučenica, a tributary of the river Vit, which passes the city 6 km/3½ miles to its west. The important road and railway from Sofia to Bucarest and the Black Sea port of Varna passes through this town. In Ottoman times (1393-1878) it was a centre of Islamic life, with many mosques and some important *medreses*, and was the centre of a *ḳaḍāʾ* containing 46 villages. Throughout most of the Ottoman period it belonged to the *sand<u>j</u>aḳ* of Nīkbūlī [*q.v.*] (Nigbolu, Nikopol). After the reorganisation of the provincial administration in 1864, it became part of the *sand<u>j</u>aḳ* of Rusčuk [*q.v.*] (Russe) in the *wilāyet* of Ṭūna. The present city is an Ottoman foundation from the last decade of the 9th/15th century, founded around a *külliyye* consisting of a mosque, a large *medrese* (with 30 student cells), an *ʿimāret*, a *zāwiye*, a primary school and a *ḥammām*, founded by the well-known *aḳīn<u>d</u>jī* leader Mī<u>kh</u>āl-o<u>gh</u>lū [*q.v.*] ʿAlī Bey. The town gained international fame during the siege of 1877, which held up the Russian invasion of the Ottoman Balkans for over five months and seriously influenced the outcome of the war (see below).

Plewna is the indirect successor of the Roman town of Storgosia, which was destroyed by the Huns (A.D. 441-8) but which was apparently reconstructed later, as is indicated by archaeological finds from the 6th century. Around 600 A.D., during the invasions of the Slavs and the Avars, this settlement, which was situated at the site of Ḳayalïk above the present town, ceased to exist. In the Bulgaro-Byzantine Middle Ages, a castle and a *suburbium* of some size must have existed, but information on it is very meagre: some coins from the First Bulgarian Empire (10th century), a few dozen Byzantine coins from the Comneni emperors (12th century), a Jewish tombstone with an inscription from A.D. 1266, a few silver coins of Tsar Michael Šišman (1323-30) and Tsar Ivan Alexander (1330-71) and, curiously enough, a bronze Buddha statue of the Pala-Sena period (11th-12th centuries). In the mediaeval written sources, Plewna is mentioned only once, in 1266, during the Bulgarian campaign of the Hungarian King Stephen the Great, when his troops took the "castrum Pleun." From this information, Bulgarian historiography has constructed a thriving military and commercial centre.

The capture of the castle of Plewna by the Ottomans is not recorded in local or early Ottoman sources. Its capture has to be connected with the 790-1/1388-9 campaign of the Grand Vizier <u>D</u>jandarlïzāde ʿAlī Pa<u>sh</u>a, when after the capture of the nearby Nigbolu/Nikopol [see NĪKBŪLĪ], the Ottoman army could have taken it on its way back to Edirne, via Plewna and Lofča (Loveč). Ne<u>sh</u>rī [*q.v.*], who is the only source describing this campaign with any detail, giving lists of important towns and castles of Bulgaria, is silent about Plewna and Lofča. It is possible that, on this occasion, the mediaeval Plewna was destroyed. It is also possible that this happened in 1444 during the Crusade of Varna, when most north Bulgarian towns were put to the torch, but the principal account of that campaign, by Michael Behaim, is silent about it. Yet this source is incomplete. It does not mention the conquest of Lofča by the Crusaders, a fact which we know from an Ottoman source, *<u>Gh</u>azawāt-nāme-yi Sulṭān Murād <u>Kh</u>ān*. What Ewliyā Čelebi reports about the conquest is purely legendary and based on misidentifications of the various members of the Mi<u>kh</u>āl-o<u>gh</u>lu clan, which he associates with it. The castle of Plewna survived into the 10th/16th century, probably serving as a basis for Mi<u>kh</u>āl-o<u>gh</u>lu ʿAlī Bey, the first of this family about whom we can be certain that he resided in or near Plewna since *ca.* 866/1462. The castle is mentioned in the *taḥrīr* of 922/1516, where, at "High Plewna" (Plewne-yi Bālā), "a castle survives from the time of the unbelievers." The settlement of Plewne-yi Bālā itself is first mentioned in a large fragment of the oldest preserved Ottoman *taḥrīr* of the Nigbolu *sand<u>j</u>aḳ*, an *i<u>d</u>jmāl* from 884/1479-80, as having ten Christian and nine civilian Muslim households (ed. N. Todorov and B. Nedkov, *Turski izvori za Bălg. istorija*, ii, Sofia 1966, 244-5). In spite of this small size, it was the administrative centre of a *nāḥiye*. Below it, a settlement called Plewne-yi Zīr existed. This place is mentioned in another fragmentarily preserved *taḥrīr*, from *ca.* 890/1485, as having three households, two widows and two *mü<u>d</u>jerreds*, all Christians (Sofia, National Library Kiril i Metodii, Or. Dep. N.K. a.e. 12/9, fol. 10).

In the 1480s, these two places, and 20 uninhabited sites (*mezraʿa*), were acquired as *mülk* property by Mikhāl-oghlu Ghāzī ʿAlī Bey, who subsequently brought together several hundred Bulgarian Christian and Muslim Turkish settlers, with whom he founded 20 villages and the town of Plewna, built in the depression below the ruined castle, at the site of Plewne-yi Zīr. The new town developed around the socio-religious buildings provided by ʿAlī Bey, among which were many shops. In the *ewāsiṭ* of Radjab 901/end of March 1496, all this was made into a *waḳf*. The *waḳfiyye* is preserved in several copies, in Arabic and in a Turkish translation of the poet-*müderris* Ḍaʿīfī from 962/1554-5, and is partly published by A.S. Levend (*Gazavāt-nāmeleri*, 359-60). The settlers of the town were attracted by freedom from the *ʿawāriḍ* and *tekālīf* taxes. The Christians of the town and the villages paid only half the *djizye*. ʿAlī Bey had also invited Spanish Jews to his new town, who came by way of Selānik and Sofia (1516: 69 families). In 910/1505 an important addition, *dheyl*, was made to the *waḳf*, of which a Bulgarian extract remains (Trifonov, *Grad Pleven*, 40-1). ʿAlī Bey died in 913/1507-8 and was buried in a *türbe* behind his mosque. His life as a warrior of Islam was sung by the poet Sūzī Čelebi of Prizren. His sons and grandsons continued his policy of promoting the town, adding numerous fountains and paving for the streets (*ḳaldïrïm*). In 981/1573-4, Süleyman Bey completed the Ḳurshunlu Djāmiʿ, a monumental, domed mosque in the best classical Ottoman style (good photograph by Trifonov, at 45). Khiḍïr Bey added a second *medrese*, where the poet Ḍaʿīfī worked as *müderris*. Together with the great *medrese* of ʿAlī Bey, this made Plewna an important provincial centre of Islamic learning. Besides these buildings, the 957/1550 *taḥrīr* mentions five smaller mosques. The 987/1579 *taḥrīr* mentions a mosque of Khadīdje Sulṭān, the daughter of ʿAlī Bey's successor Meḥmed, and the new Friday mosque of Süleymān Bey, son of Ḥasan Bey b. ʿAlī, and a number of *mesdjids*. When in 932/1526 the Ottomans took Buda(pest), a part of the Jews of that city was invited to settle in Plewna (according to the 957/1550 *taḥrīr*, T.D. 382, pp. 685-6, 41 families). The same source also mentions 62 households of Jews from Germany, of which seven were headed by widows, and 84 households (15 headed by widows) of Jews from the Latin lands (*Yahūdiyān-i Frenk*). In the 1570s, these Jewish groups rose to over 200 households, making Plewna one of the largest Jewish centres of the Balkans. Throughout the centuries, Plewna remained a predominantly Muslim town, which in the course of time absorbed and turkified a part of the local Bulgarian population (in 1550, 20% of the Plewna Muslims were of convert origin). A survey of its demographic development, based on the Ottoman *taḥrīrs*, a *mufaṣṣal ʿawāriḍ defter*, *djizye defters*, the census results in 1290/1873-4, the *Sālnāme-yi Wilāyet-i Ṭūna* and the first Bulgarian censuses, is given in the following Table:

IN HOUSEHOLDS

	Muslims	*Christians*	*Jews*	*Gypsies*	*Total*	*Percentage of Muslims*
1479	9	10	/	/	19	47%
1516	200	99	69	11	379	54%
1550	472	185	104	36	797	59%
1579	558	180	209	44	991	56%
1751	441	125	n.d.	n.d.		
1845	n.d.	660	20	n.d.		
1873	1,241	1,477	75	65	2,858	43%
1887	450	2,580	81	40	3,151	14%
1926	525	5,915	115	105	6,660	8%
1934	560	6,690	60	115	7,425	7%

In the 11th-12th/17th-18th centuries, the town apparently declined, a process which, in addition to internal reasons, was triggered off by the sack and the destruction of the town by the Rumanians under Michael the Brave in 1064/1596, who also carried off thousands of the inhabitants of the *waḳf* villages and forcibly settled them in Wallachia. After the invasion, the ruins of the mediaeval castle were taken down and the stones used for the construction of a large new *khān* with 70 fireplaces, flanking the *bedesten*.

In 1659 the town was visited by the Bulgarian Catholic archbishop Philipp Stanislavov (ed. Fermandžiev, 1887), who mentions as its inhabitants 500 Orthodox Bulgarians, having two churches, and no less than 5,000 Turks with seven mosques. Three years later, Ewliyā Çelebi visited the town (*Seyāḥat-nāme*, vi, 1898-9 164-5; more detailed in the autograph, Topkapı Sarayı Müzesi, Revan Köşk, no. 1457, fol. 59a), who recalls the Wallachian raid of 1064/1596; but most of his "history" is purely legendary or, at best, full of misidentifications of historical persons. In his time, Plewna consisted of "2,000 houses", which is a gross exaggeration. The *ʿimāret* of Ghāzī ʿAlī Bey, which according to its *waḳfiyye* served everyone twice daily with cooked food, regardless of his religion or origin, was still in full operation. Ewliyā noted that there were seven *mektebs* in the town, six *tekkes* and six *khāns*.

Especially in the prosperous 10th/16th century, the Christian *waḳf* villages around Plewna, and the monasteries of St George near the town and Sadovec outside it, developed an important scribal activity, writing Bibles and church books for the Bulgarian Orthodox churches of northern Bulgaria (survey of preserved copies by Trifonov, 53-6). Of great importance was the literary production of the Plewna Jews, of whom Joseph ben Ephraim Karo, who came from Spain and worked as *Ḥāhām* in the Plewna synagogue, should be mentioned.

At the end of the 11th/17th century, the land around Plewna suffered badly from the passage through northern Bulgaria on their way to the Hungarian front of the army of the Crimean Tatars under their Khān Selīm Giray, "no cattle, woman and girls being left behind", according to a marginal note in a church book dated October 1689. This event is also recorded in some grafitti in grottos near Plewna, where the people had taken shelter. In 1131/1719, the town suffered much damage when a flood swept away the houses and shops of the lower

quarters of the town. According to the *mufaṣṣal ʿawāriḍ defter* of 1164/1751 (BBA, Kepeci, Mevkufat, 2913), the town was considerably smaller than in the late 10th/16th century, having *ca.* 2,500 inhabitants, of whom almost three-quarters were Muslims. The names of the *maḥalles* were largely the same as in 987/1579. After the end of the 12th/18th century, but particularly throughout the entire 13th/19th century, the town again witnessed a rapid expansion, especially of the Christians, who outnumbered the Muslims at the end of the Ottoman period. During the reforms of Maḥmūd II, the Mīkhāl-oghlu family, living as *mütewellīs* of the *wakfs* of their ancestors, succeeded in keeping most of their property. A *fermān* of Maḥmūd II from 1238/1823 (published by Ihčiev) confirmed them in their possessions. Ḥādjdjī ʿÖmer Bey Mütewellī was reported to be the richest man of the entire north-western Bulgaria. The tax revenue of the 18 *wakf* villages was estimated at one million piastres. The *Sālnāme* of the Ṭūna *wilāyet* of 1286/1869-70 noted that Plewna contained 18 mosques, two churches, one synagogue, 925 shops, a *ḥammām* and 30 *khāns*. The *Sālnāme* of 1285/1868-9 adds three *medreses* and five *tekkes*. In the very last years of the Ottoman period, the geographer Felix Kanitz noted 1,627 Muslim houses and 1,474 Christian ones, giving a total population of about 17,000 inhabitants; with the Christians having larger families than the Muslims, the former would have had a slight majority. During the Russo-Turkish War of 1877-8, Plewna became world-famous for its gallant defence of more than five months under the inspired command of (Ghāzī) ʿOthmān Pasha. After crossing the Danube on July 1877, the Russians appeared before Plewna, where they met unexpected resistance. Their attacks from 20 to 30 July were repulsed. The town was not fortified. ʿOthmān Pasha used the excellently defensible position of the surrounding hills, where he had extensive earthworks thrown up. On 11 and 12 September the Russians and the Rumanians, who had been summoned to their assistance, made a third attempt to take Plewna by storm, and again were repulsed with heavy losses. After further failures on 18 September and 19 October, the allies decided upon a regular siege of the town, which was conducted by the Russian general Totleben, the hero of Sebastopol. On 10 November the Russians succeeded in cutting off Plewna from the outside world in an effort to starve the fortress into submission. A month later, on 10 December, ʿOthmān Pasha undertook a last desperate sortie in an attempt to break through the western lines of the besieging army of 120,000 men (including the Tsar in person), which, after an initial success, failed. ʿOthmān Pasha, "the Lion of Plewna", was himself wounded and finally forced to surrender with some 40,000 men. The five months' siege had cost the Russians and their allies over 40,000 men. The fall of Plewna opened the way for the Russians to Edirne and on to San Stefano, where they dictated the peace which was concluded there on 3 March, on the basis of a truce made at Edirne a month before [see also BULGARIA].

The capture of Plewna by the Russians led to a drastic transformation of the town, half-destroyed during the siege. The entire Turkish population fled from fear of the bands of Bulgarian irregulars, and only a third of them returned when, under the new Bulgarian state, ordered life returned. A member of the Mīkhāl-oghlu family even occupied a seat in the Bulgarian Parliament in Sofia. The place left vacant by the departed Turks was immediately filled by Bulgarian newcomers from the villages. With their much bigger families, the number of Bulgarians in the town also grew in a natural way, eroding the percentage of Muslims ever faster. In the decades before World War I, most of the Ottoman buildings of the town were demolished. A huge Russian neo-Byzantine mausoleum came to occupy the site of the mosque, *medrese* and *ʿimāret* of Ghāzī ʿAlī Bey. The mosque of Süleymān Beg was still standing in 1931, but was then replaced by the Military Club. On the site of the great Kerwānserāy, the new building of the provincial administration was erected. Great tree-lined boulevards and squares came to replace the old Turkish quarters. A name like "Tekiiskija Bair" still keeps the memory of the great *zāwiye* of ʿAlī Bey. The bones of the Russian and Rumanian soldiers of "77" were partly placed in the huge mausoleum, partly in large war cemeteries, the Rumanians having their own one, New Grivitsa, where they had fallen in the furious fights around the Grivitsa Redoubt. The village of Grivitsa had been until the end of the Ottoman period one of the major possessions of the *wakf* of Ghāzi ʿAlī Bey. The skeletons of the tens of thousands of Ottoman soldiers, however, were dug up and sold to a British firm to be turned into fertiliser used for English agriculture. A part of the earthworks and trenches of ʿOthmān Pasha was maintained as a memorial and can still be seen. In the 1970s, an enormous memorial building, with a magnificent panorama of the battlefield, was constructed, one more beautiful even than that commemorating the Battle of Borodino (1812) near Moscow.

Ghāzī ʿOthmān Pasha's defences around Plewna left a deep imprint on subsequent Western fortification, the Plewna profile and concept of defence being used in the newer works around Verdun, the principal fortress of France, as well as in the "Position Amsterdam" and in the forts of Chatham (Twydale Redoubt).

After World War II, the city of Pleven, which already before the war had a considerable amount of industry (textiles, canned food, chocolate and metalwork) shot up to become one of the largest industrial centres of northern Bulgaria, with a present population of over 100,000. Until the early 1970s, only one miserable wooden mosque was still standing in Pleven, no longer used by the minuscule Muslim community. Disregarding the earthworks of 1877, not a single Ottoman building remains to testify to the long Islamic past of the town, a situation exemplary for the fate of Islamic culture in south-eastern Europe after the end of Islamic rule.

siklopedija Bălgarija, v, Sofia 1986, art. *Pleven*. The Ottoman sources used here are unpublished, and have not been used previously by those writing about Pleven; hence the picture of the early history of the town as given here differs greatly from that in the works cited above.

The date of construction of the important Ḳurs̲h̲unlu D̲j̲āmiʿ is given as a chronogram, *mesd̲j̲id-i aḳṣā-yî t̲h̲ānī oldî* (Trifonov, 44-5), which Trifonov and those following him took for 927/1521, instead of the correct 981/1573-4. (M. Kiel)

PLOVDIV [see filibe].

POLEY [see bulāy].

POMAKS, the name given to a Bulgarian-speaking group of Muslims in Bulgaria and Thrace, now divided amongst Bulgaria, Greece and the Macedonian Republic of Yugoslavia. This name, which is usually given them by their Christian fellow-countrymen, used also to be given occasionally by Bulgarians to Muslims speaking Serbian in western Macedonia. There, however, the Serbian Muslims are usually called *torbeši* (sing. *torbeš*) by their Christian fellow-citizens, sometimes also *poturi*, more rarely *kurki*, etc. How far these Serbian Muslims were still called Pomaks by some people in the early 20th century depended mainly on the influence of the Bulgarian school and literature, and would only be correctly applied when used of Muslims who had actually migrated from Bulgaria, e.g. in 1877-8 (cf. J.H. Vasiljević, *Južna Stara Srbija*, i, 187-8, 207, 236). In the Rhodopes, the Bulgarian Muslims are also called *achrjani* (*ch* = *k̲h̲*) or *agarjani* (Ischirkoff, ii, 15). In some parts of Southern Serbia and Bulgaria, the name *čitak* (pl. *čitaci*) is occasionally heard, and it used sometimes to be said (e.g. by A. Urošević, in *Glasnik Skopskog naučnog društva*, v [1929], 319-20) that this name was only given to Serbs converted to Islam; the truth seems to be, however, that this name is limited to Turks in the two countries (cf. H. Vasiljević, *Muslimani...*, 34, and Elezović, in *Srpski književni glasnik*, xxviii [1929], 610-14, and in *Rečnik kosovskometohiskog dijalekta*, ii, 449). No more correct is the statement that *apovci* is the name given to Serbian Muslims in Southern Serbia, for this seems to be a name applied to one another only by Albanians who are closely related to one another (brothers and cousins, according to H. Vasiljević, *Muslimani...*, 34).

The origin and the etymology of these names are in part more or less obscure and arbitrary. The usual explanation that the name Pomak comes from the verb *pomoći* "to help" and means helper (*pomagači*), i.e. auxiliary troops of the Turks, was first given by F. Kanitz (*Donau-Bulgarien und der Balkan*, ii, Leipzig 1882, 182), but was soon afterwards (1891) declared by Jireček (see *Bibl.*) to be inadequate. Another equally improbable popular etymology is that which explains Pomak by the Bulgarian word *măk* = "torment, force", and justifies this explanation by saying that the conversion of the Bulgars to Islam on a considerable scale was carried out by force and constraint (Ischirkoff, ii, 15). In 1933, Iv. Lekov (see *Bibl.*) explained the name Pomak from *poturnjak* (lit. "one made a Turk"). Whether the word *čomaḳ*, which in Turkish means "club, cudgel", in Uyg̲h̲ur "Muslim" and in South Russia "pedlar" (cf. Barthold, *Histoire des Turcs d'Asie Centrale*, Paris 1945, 73-4), is in any way connected with Pomak, or has been influenced by the Bulgarian *poturnjak* or confused with it, has still to be investigated.

1. History of the Pomaks from their origin to the Second World War.

The history of the conversion of the "Pomaks" and "Torbeši" is very little known in detail. In any case, the adoption of Islam did not take place everywhere at once but was gradual and at different periods. A beginning was made immediately after the battle of Marica (1371) and after the fall of Trnovo (1393): many Serbs and Bulgars at this time, and especially, as Jireček thought, the nobles and the Bogomils among these, adopted Islam. After these first conversions under Bāyazīd II, considerable numbers of converts were made according to native tradition in the reign of Selīm I (1512-20); for this purpose he is said to have sent his "favourite Sinān Pas̲h̲a" into the territory of the Šar mountains. The highlands of Čepino (in the Rhodopes) were converted, according to local histories, in the beginning of the 17th century; according to Jireček (*Fürstenthum*, 104), however, not till the middle, in the reign of Meḥemmed IV (1648-87); the Grand Vizier Meḥmed Köprülü is said to have taken a leading part in the work. The conversion to Islam of the Danube territory (Loveč, etc.) is put in this period. Towards the end of this century (sc. the 17th), further conversions took place among the Serbs in the Debar region. In some districts Islam only gained a footing on a large scale in the course of the 18th century and sometimes not till the beginning of the 19th (e.g. in Gora, south of Prizren).

Until the early 20th century, one was very often inclined to believe that these conversions to Islam were made under compulsion, even by force of arms, but subsequently the view began to prevail that the authorities never took any direct steps to proselytise their Christian subjects; conversion was on the contrary voluntary and for quite different reasons except in a few exceptional cases (cf. e.g. H. Vasiljević, *Muslimani...*, esp. 53-61).

Towards the end of the 19th century, when the process of conversion had ceased for decades everywhere, the great majority of the Slav Muslims (Bulgar and Serb) were to be found in the Rhodopes and the mountains of eastern Macedonia and in groups of considerable size up and down Macedonia as far as the Albanian frontier, a wide area which stretched in the north from Plovdiv (Philippopolis) to Salonika in the south and in the east from the central course of the Arda over the Vardar and even beyond the Crni Drim, i.e. across the districts of Ohrid, Debar, Gostivar and Prizren to the west. At that time only a small part of this territory, which was interspersed with Christian areas, belonged to the principality of Bulgaria; the greater part was still Turkish, and only after the Balkan War passed to Serbia or after the First World War to the former Yugoslavia. In addition to the main body of Muslim Bulgars in the Rhodopes mountains, there were at the same time also sporadic groups north of the Balkan range in the Danube territory, in the circles of Loveč, Pleven (Plevna) and Orehovo (Rahovo).

Since then, however, the frontiers of the "Pomaks" have receded considerably. During the siege of Plevna almost all the Bulgarian Muslims fled from the Danube districts to Macedonia; although they returned in 1880, they soon afterwards migrated into Turkey. After the union of eastern Rumelia and Bulgaria in 1885, the Rhodopes "Pomaks" also began to emigrate. The frontiers of the "Torbeši" likewise were not unaffected. The Balkan War and the First World War brought about certain changes which resulted in the migration of some bodies of Serbian Muslims out of Southern Serbia.

As regards the distribution of these Muslim Slavs according to countries, the following statistics may be quoted. In what used to be the principality of

Bulgaria Jireček estimated (1891) their number at most 28,000 souls, and before the Balkan War there were within the old frontiers of Bulgaria (according to official statistics of 1910) 21,143 (0.49% of the population). In the lands acquired in the Balkan War in Southern Bulgaria there were, however, many more Pomaks, mainly in the regions of the rivers Arda, Mesta and Struma, so that the official census of 1920 makes their number 88,399 (1.82% of the whole population). A somewhat higher figure was given by the *Annuaire du Monde Musulman* for 1929 (305), namely 16,000 Pomaks in Bulgaria proper and 75,337 in Thrace, i.e. 91,337 in all. The 1926 census gave 102,351 Bulgarian-speaking Muslims in Bulgaria, i.e. 1.87% of the population, while the number of Muslims in Bulgaria without distinguishing their languages was then 789,296 or 14.41% of the population. Of these 102,351 Bulgarian-speaking Muslims only 5,799 lived in the towns and the remaining 96,552 in the villages. Literate Pomaks in the whole of Bulgaria in 1926 numbered only 6,659 in 1926 (of whom 5,534 were men).

The number of Pomaks (in reality of Muslim Slavs) in Macedonia was, according to S. Verkovič (1889; see *Bibl.*) 144,051 men.

As regards the number of Serbian-speaking Muslims in Southern Serbia, they were estimated by H. Vasiljević (*Muslimani...*, 11 ff.), whose calculations were, however, to some extent based on the situation before the Balkan War, at 100,000 souls; in 1935 the figure was put at 60,000 and the number of Serbo-Croat-speaking Muslims in the whole of the former Yugoslavia at about 900,000 (exact figures could not be given because the statistics according to religions had not been published).

For Thrace, the figure of 75,337 Muslim Bulgars has already been given from the *Annuaire*; in Western Thrace there were, according to the inter-Allied census (of March 1920), 11,739 (cf. *La question de la Thrace*, ed. by the Comité suprême des réfugiés de Thrace, Sofia 1927).

On these statistics, the following observations may be made. The Bulgars (e.g. Kănčov) usually included as "Pomaks" all the Macedonian Slavs of Muslim faith, i.e. including Serbs from Southern Serbia. On the other hand, on account of their religion these Muslim Slavs were sometimes carelessly counted with the Turks. Moreover, some statistics were not completely free from chauvinistic and political bias. The European estimates, finally, were based on approximations or were quite arbitrary.

In spite of the fact that the Pomaks and Torbeši are occasionally included among the Turks and in spite of the fact that they sometimes call themselves Turks, they are nevertheless the purest stratum of the old Bulgarian or Serbian population, as the case may be, who have preserved their Slav type and Slav language (especially archaic words) very well, sometimes even better—as a result of their being cut off from the Christians and their isolation in outlying districts—than their Christian kinsmen, who have been constantly exposed to admixture from other ethnic elements. They have a certain feeling of aversion for the Turks, whose language they do not understand. It is only in the towns that we find that in course of time some of these Slavs have adopted the Turkish language. What bound them to the Ottomans was not language, but principally a common religion, with its prescriptions and customs (e.g. the veiling of women), which along with Turkish rule naturally imposed upon them many Arabic and Turkish words. In spite of this, there have survived among them many pre-Islamic customs and reminiscences of Christianity (observation of certain Christian festivals, etc.).

That the Bulgar Muslims in particular occasionally (esp. in 1876-8) fought alongside the Turks against the Christian Bulgars may be ascribed to the fact that, as a result of their low cultural level, they made no clear distinction between nation and religion and that their Christian fellow-countrymen treated them as Turks and not as kinsmen. These mistakes were repeated in the Balkan War, when the victorious Bulgar troops and the Orthodox priests were led so far as to convert the Pomaks in the Rhodopes and other districts to Christianity, mainly by pressure and force of arms. But on the conclusion of peace, they returned to Islam again. This was frankly admitted by the Bulgarian geographer Iširkov (Ischirkoff) and the Bulgarian writer Iv. Karaivanov (in his Bulgar periodical *National Education*, Küstendil 1931, according to Ćamalović [see *Bibl.*]).

A century or so ago, the songs and ballads of the "Pomaks" were the subject of much dispute. A Bosnian ex-cleric, Stefan Verković (1827-93), an antique dealer in Seres, published under the title of *Veda Slavena* (i.e. the "Veda of the Slavs", Belgrade 1874, vol. i) a collection of songs which were alleged to have been collected mainly among Pomaks and which celebrated "pre-Christian and pre-historic" subjects (the immigration into the country, discovery of corn, of wine, of writing and legends of gods with Indian names, of Orpheus, etc.). A. Chodzko, A. Dozon (*Chansons populaires bulgares inédites*, Paris 1875; cf. also *Revue de littérature comparée*, xiv [1934], 155 ff.) and L. Geitler (*Poetické tradice Thráků i Bulharů*, Prague 1878) also strongly supported belief in this "Veda"; it was even assumed that the Pomaks were descended from the ancient Thracians, who had been influenced first by Slav culture and then by Islam.

But of ballads on such subjects neither the Muslim nor the Christian Bulgars knew anything, and Jireček, who investigated the question on the spot, repeatedly described this "Slav Veda" as the fabrication of some Bulgarian teachers (*Fürstenthum*, 107[1]). We now know that Verković's chief collaborator was the Macedonian teacher Iv. Gologanov (cf. Pentscho Slawejkoff, *Bulgarische Volkslieder*, Leipzig 1919, 15).

In view of the fact that the Muslims in question consist mainly of conservative dwellers in the mountains and villages, they were for the most part illiterate and there could be no possibility of any literary activity among them. The only people among them who could write are the *k͟hōd͟jas*, who frequently used the Turkish language and Arabic alphabet when writing. They also frequently used the latter alphabet when writing their mother tongue. (It is interesting to note that, even today (1993), the Pomaks in Greek Western Thrace have new Ottoman Turkish schoolbooks in the Arabic script.) Of earlier generations of Bulgar Muslims, many distinguished themselves in the Turkish army or otherwise in the Turkish service.

Bibliography (in addition to works mentioned in the text): C. Jireček, *Geschichte der Bulgaren*, Prague 1876, 356, 457, 520, 568 and 578; idem, *Das Fürstenthum Bulgarien*, Prague-Vienna-Leipzig 1891, 102-8 (the principal passage), 310, 346, 353, 453-6; S.I. Verkovič, *Topografičesko-ethnografičeskij očerk Makedonij*, St. Petersburg 1889 (gives full tables of the numbers of Pomaks in some districts and even villages); V. Kănčov, *Makedonija etnografija i statistika*, Sofia 1900, 40-53 (where a portion of the older literature is given, esp. p. 42) with an ethnographical map of Bulgaria on which these

"Muslim Bulgar" settlements are specially marked; J. Cvijić, *Osnove za geografiju i geologiju Makedonije i Stare Srbije*, i, Belgrade 1906, 182; Vl. R. Đordević, *U Srednjim Rodopima, putopisne beleške od Plovdiva do Čepelara*, in *Nova iskra*, Year 8 (Belgrade 1906), 172-6, 198-205 (interesting description of a Serbian journey in the year 1905 on the life and customs of the Pomaks); M. Gavrilović, in *Grande Encyclopédie*, s.v.; A. Ischirkoff, *Bulgarien, Land und Leute*, ii, Leipzig 1917, 14-17; J. Hadži Vasiljević, *Muslimani naše krvi u Južnoj Srbiji*[2], Belgrade 1924; idem, *Skoplje i njegova okolina*, Belgrade 1930, 314; J.M. Pavlović, *Maleševo i Maleševci*, Belgrade 1929, 35, 244-5, 251; S. Ćemalović, *Muslimani u Bugarskoj*, in *Gajret*, Year 8 (Sarajevo 1932), 345-5, 364-5, 375-6 (also in *La Nation Arabe* for 1932, nos. 10-12); A. Bonamy, *Les musulmans de Pologne, Roumanie et Bulgarie*, in *REI* (1932) (deals with the Pomaks (p. 88) very superficially); Iv. Lekov, *Kăm văpros za imeto pomak* (On the question of the name "Pomak"), in *Sbornik poluvekovna Bălgarija*, Sofia 1933, 38-100 (cf. *Bibliographie Géographique Internationale*, Paris 1933, 317, which also quotes a short article by G. Ivanov on the history of the Loveč-Pomaks (*Za minaloto na lovčenskite pomaci*), appeared in *Loveč i Lovčensko*, v, Sofia 1933); *Annuaire statistique du royaume de Bulgarie*, Sofia 1934, 23, 25, 28.

(F. Bajraktarević)

The preceding article skilfully brings together what was known of the Pomaks on the eve of the Second World War. One can, however, add to the bibliography for that period certain items not noted there or which have appeared since 1935, such as: L. Miletič, *Lovčanskite Pomaci*, in *Bălgarski Pregled*, v/5 (Sofia 1899), 67-78; St. Šiškov, *Pomacite v trite bălgarski oblasti: Trakija, Makedonija i Mizija*, Plovdiv 1914 (cf. a notice on this work, *Les Bulgares mahometans des Rhodopes et les traces du christianisme dans leur vie*, in *En terre d'Islam*, vi/51 [Nov.-Dec. 1931], 387-8); idem, *Bălgaro-mohamedanite (Pomaci). Istoriko-zemepisen i narodoučen pregled s obrazi*, Plovdiv 1936 (cf. an especially useful review by M.S. Filipović, in *Pregled*, xi/166 [Sarajevo, Oct. 1937], 673-9; Ahmet Cevat Eren, *Pomaklar*, in *İA*, ix, 572-6; idem, *Pomaklara dair*, in *Turk Kültürü*, i/4 (Ankara 1963), 37-41; Ch. Vakarelski, *Altertümliche Elemente in Lebensweise und Kultur der bulgarischen Mohammedaner*, in *Zeitschr. für Balkanologie*, iv (Berlin 1966), 149-72; N. Kaufman, *Pesni na Bălgarite mohamedani ot Rodopite*, in *Rodopski Zbornik*, ii (Sofia 1969), 41-130; B. Lory, *Une communauté musulmane oubliée: les Pomaks de Loveč*, in *Turcica*, xix (1987), 95-116.

In regard to the thorny problem of the Islamisation of the Pomaks, see the viewpoint of St. Dimitrov, *Demografski otnošenija i pronikvaneto na islama v zapadnite Rodopi i dolinata na Mesta prez XV-XVI v.*, in *Rodopski Zbornik*, i (1965), 165-84.

2. The Pomaks during the Second World War.

Being one of the Axis Powers, Fascist-controlled Bulgaria was awarded by Hitler, on the one hand, the southern territories of contemporary Serbia (or Old Serbia, *Stara Srbija* or *Južna Srbija*) and on the other, western Thrace (belonging to Greece), which meant that, from 1941 to 1944, the Pomaks of the Balkans found themselves united within one state. Our knowledge of their situation at that time varies from region to region, but everywhere it was extremely bad: social and economic deprivation, a deplorable health position and continual discrimination on the part of the authorities, religious and cultural oppression, driving the Pomaks towards a "religious fanaticism", according to the expression used by Bulgarian authors themselves.

On the Bulgarian occupation of south Serbia (which in 1944 became part of Yugoslavian Macedonia), see the collective work (from a pro-Macedonian, extremely anti-Bulgarian viewpoint) called *Denacionalizatorska dejnost na bugarskite kulturno-prosvetni institucii vo Makedonija (Skopska i Bitolska okupaciona oblast 1941-1944)*, Skopje 1974.

On the Pomaks of Bulgaria proper, see V. Božinov, *Bălgarite mohamedani prez Vtorata svetovna vojna (1939-9.IX.1944)*, in *Iz minaloto na Bălgarite mohamedani v Rodopite*, Sofia 1958, 137-44; idem, *Bălgarite mohamedani i văorăženata borba sreštu fašizma*, in *ibid.*, 144-51, where some further references can be found. (It should be mentioned in passing that a law is said to have been passed on 8 July 1942 concerning the compulsory Bulgarisation of names borne by the Pomaks, and that 60,000 of them had to change their names at this time.) On the participation of some Pomaks in the anti-Fascist struggle at the side of the "partisans" (i.e. Bulgarian Communists) towards the end of 1944, see *Iz minaloto...*, 148-51; Ju. Memišev, *Učastieto na bălgarskite Turci protiv kapitalizma i fašizma 1919-1944*, Sofia 1977.

As for the Pomaks of Greek Western Thrace (the southern part of the Rhodope Mountains) at this time, we possess a piece of evidence (rapid and incomplete, it is true, but completely first-hand) from the Orthodox Bulgarian Patriarch Kiril, who visited these regions in 1943-4: Kiril, patriarh bălgarski, *Bălgaromohamedanski selišta v Južni Rodopi (Ksantijsko i Gjumjurdžinsko) toponimno, etnografsko i istoričesko izsledvane*, Sofia 1960. This contains much information on the daily life of this people (especially on the ethnographic level), but also on the general atmosphere in these isolated mountain villages. The local Pomaks were often hostile to their visitor; they spoke Bulgarian and knew no Turkish whatsoever; their womenfolk were only very rarely veiled; polygamy was unknown; divorce was very rare; but the villages adjacent to the plain were, more and more, becoming slowly Turkicised. On the religious and cultural level should be noted the survival of certain Christian customs, the fact that the dead were buried in the direction of Mecca and the existence of mosques in the villages (but only one *tekke* is mentioned, in the district of Šahin, whilst the *medreses* were all in ruins).

3. The Pomaks from the end of the Second World War to the present time.

Since 1945, the history of the Pomaks in the Balkans can be followed in two countries only, Bulgaria and Greece, in the light of the fact that, the Communist Yugoslavian authorities having set up a "Socialist Federal Republic of Macedonia", all the Slavonic-speaking Muslims of the region became *ipso facto* the Muslim Macedonians. There are, moreover, relatively few works on this group of Muslims of former Yugoslavia. See e.g. J.F. Trifunoski, *Za torbešite vo porečieto na Markova Reka*, in *Godišen Zbornik (Fil. Fak.)*, iv/1 (Skopje 1951), 3-11; D.Hr. Konstantinov, *Makedonci muslimani*, in *Prilozi, Društvo za nauka i umetnost*, xv (Bitola 1970), 139-46; and above all, N. Limanoski, *Etno-socijalne karakteristike islamizevanih Makedonaca*, Belgrade 1991 (unpubl. thesis); and then, in a much wider perspective, A. Popovic, *L'Islam balkanique. Les musulmans du sud-est européen dans la période post-ottomane*, Berlin-Wiesbaden 1986; idem, *Les musulmans yougoslaves (1945-1989). Médiateurs et métaphores*, Lausanne 1990. One can nevertheless wonder whether the present dissolution of the Com-

munist countries into ethnic and regional groups may not bring about the re-appearance some day of the former entities of this land, such as the Pomaks/Pomaci, the Čitaks/Čitaci, the Torbeš/Torbeši, the Gorans/Corani, etc. We shall know at some future time, but at the present moment, amongst these diverse groups, the Gorani (Slavonic-speaking Muslims of Skopska Crna Gora) alone speak of themselves and seem to display a certain cohesiveness, through the medium of a handful of spokesmen, notably vis-à-vis the Turkish and Albanian Muslims of Macedonia.

The Pomaks of Bulgaria (peasants and shepherds of the Rhodopes and the region of Razlog and a few other places, numbering from 150,000 to 200,000 persons) continued to endure an extremely difficult situation, within a climate of permanent hostility from the Bulgarian Communist authorities. They speak Bulgarian and have no knowledge of Turkish, which excludes them from the very strong Turkish community of the land, three or four times more numerous and much more structured. Being for the most part illiterate until recent times and never having had, in practice, a local "intelligentsia", it would have been logical to conclude until very recently that their assimilation was only a question of time. Meanwhile, they are considered in Bulgaria (and they are still taken into consideration) rather as "lost children" of the nation. Their religiosity (which is, in fact, more like an attachment to a sort of "popular Islam") has had to suffer since 1945 the ravages of time (notably under the continual attacks of Soviet-style "scientific atheism"). Official Bulgarian publications on the local Pomaks (since 1945) are somewhat condescending. They set forth unanimously their very backward cultural state in relationship to the rest of the Orthodox Bulgarian populaltion, but strongly insist that they are indigenous Bulgarians which various forces and "malevolent" tendencies have tried, on many occasions, either to assimilate to the Turks or to separate from their ethnic brothers and homeland. See e.g. P. Marinov, *Iz mirogleda na sredno rodopskite Bălgari-mohamedani*, in *Bălgarski narod*, ii/1, Sofia 1947; N. Vrančev, *Bălgari mohamedani (Pomaci)*, Sofia 1948; V. Božinov, *Bălgarite mohamedani pri narodnata vlast*, in *Iz minaloto...*, 151-6; K. Vasilev, *Rodopskite Bălagari-mohamedani*, Plovdiv 1961; *Narodnostna i bitova obštnost na rodopskite Bălgari*, Sofia 1969; *Bălgarite mohamedani-nerazdelna čast ot bălgarskija narod (preporačitelna bibliografija)*, Blagoevgrad 1971 (with a lengthy bibl.); C. Monov, *Prosvetnoto delo sred Bălgarite s mohamedanska vjara v rodopskija kraj prez godinite na narodnata vlast (1944-1968)*, in *Rodopski Zbornik*, iii (1972), 9-51; A. Promovski, *Bit i kultura na rodopskite Bălgari*, Sofia 1974; P. Petrov, *Razprostranenie na isljama v Rodopite*, in *Rodopite v bălgarska istorija*, Veliko Tărnovo 1974, 62-86; K. Kanev, *Srednorodopski (svadbeni) nravi i običai*, in *Rodopi*, 1974/10, 22-6; idem, *Srednorodopski običai*, in *Rodopi*, 1974/11, 22-4; etc. For a diametrically opposed view, amongst numerous publications of this type, see *Rodoplardaki son Türk katliâmının iç yüzü*, Istanbul 1972.

The attempts at forcible (and all other means) assimilation of the Pomaks by the Bulgarian Communist authorities increased to a brutal pitch after 1979 (see e.g. K. Yanatchkov, *Entre le croissant et le marteau: les musulmanes bulgares*, in *L'Alternative* [Paris, Jan.-Feb. 1980] 22-3), culminating dramatically in the events of February-March 1985. From this date onwards, the Western press began to speak on numerous occasions of several dozen (even, of several hundred) deaths: murders committed in the course of the Bulgarisation of names campaign (first amongst the Pomaks, then amongst the Turks of Bulgaria), an action which involved not only the change of names of living persons but also (by means of the civil government registers and the gravestones in cemeteries) those of parents and ancestors. The fall from power of Communism stopped this barbarous policy, and the governments formed after this time have made numerous acts of appeasement and goodwill towards the local Pomaks, especially since the necessity of a coalition (probably tactical and ephemeral) with the political Party of the Bulgarian Turks.

We are relatively well informed about the life of the Pomaks of Greece (around 25,000 to 30,000 persons, and living in the Rhodopes, along the Bulgarian frontier) during this period. These form an exclusively village society, apart from those settled in the towns and settlements of Western Thrace, where they are undergoing a slow Turkification process because of the presence there of a Turkish community, much better organised and three or four times as numerous. It is very much an introspective community, living in a mountain region to which access (since it is a military zone) was forbidden until very recent times to Greeks and foreigners alike and only to be entered with a special permit, difficult to get. The cultural level of this population seems to have remained fairly modest, and in any case we do not have (as is the case for the Pomaks of Bulgaria) any written eye-witness information. What we know at present of it rests on several works which are mainly of an ethnographical and sociological nature. See e.g. B. Vernier, *Rapports de parenté et rapports de domination ... Représentation mythique du monde et domination masculine chez les Pomaques*, diss. Paris, EHESS 1972 unpubl. (a brief analysis of it in Popovic, *L'Islam balkanique*, 169-70); E. Arvanitou, *Turcs et Pomaks en Grèce du Nord (Thrace Occidentale). Une minorité religieuse ou deux minorités nationales, sous une administration hellénique chrétienne*, diss. Univ. de Paris VII, unpubl.; F. de Jong, *Names, religious denomination and ethnicity of settlements in Western Thrace*, Leiden 1980; E. Sarides, *An ethnic-religious minority between Scylla and Charybdis. The Pomaks in Greece*, in *La transmission du savoir dans le monde musulman périphérique. Lettre d'information*, 5 (April 1986), 17-25; idem, *Ethnische Minderheit und zwischenstaatliches Streitobjekt. Die Pomaken in Nordgriechenland*, Berlin 1987. As for the official attitude of the Greek authorities (and of some local authors), this is disconcerting. It is currently maintained that this is a Greek population (or else the descendants of ancient Thracian tribes) completely separate from the Bulgarian Pomaks, a population which was allegedly first of all Bulgarised, and then Islamised, some time later. See e.g. N. Xirotiris, *Personal remarks on the distribution of the frequencies of blood groups amongst the Pomaks* [in Greek], Salonica 1971; Ph. Triarkhis, *The Rhodope administrative district yesterday and today* [in Greek], Salonica 1974; Pan. Photeas *The Pomaks of Western Thrace (a small contribution to a great subject)* [in Greek], Komotini 1976; and finally, three works, also in Greek, recently have appeared: P. Hidiroglou, *The Greek Pomaks and their relations with Turkey*, Athens 1989; Y. Magriotis, *The Pomaks or Rodopeoi*, Athens 1990; and P. Mylonas, *The Pomaks of Thrace*, Athens 1990, on which one can find a lucid analysis by M. Anastasiadou, *Trois livres sur les Pomaks de Grèce*, in *La transmission du savoir ... Lettre d'information*, xi (March 1991), 64-6, who writes specifically, "The feeling which one gets from reading these three works is that the Greek state is not only resolved to begin a new process of assimilating the Pomaks—until now con-

demned to isolation—but above all wishes to prevent at any price the Pomaks from drawing closer to the Turks of Western Thrace". There is, moreover, no doubt that the fall of the Communist régime in Bulgaria will have as a result the opening-up of this region of Greece and, as a result, the end of the isolation of the local Pomaks.

Bibliography: Given in the article.

(A. Popovic)

PONDOK [see pesantren].

PONTIANAK, the name of a part of the former Dutch residency "Wester-Afdeeling" of Borneo, also of the sultanate in the delta of the river Kapuas and of its capital; these are now in the Kalimaintan [*q.v.* in Suppl.] region of the republic of Indonesia [*q.v.*].

As a Dutch province Pontianak included the districts of Pontianak, Kubu, Landak, Sanggau, Sĕkadau, Tajan and Mĕliau. The administration was in the hands of an assistant-resident whose headquarters were in Pontianak where the Resident of the "Wester-Afdeeling" also lived. The Dutch settlement is on the left bank of the Kapuas, where also is the Chinese commercial quarter. The Malay town lies opposite on the right bank.

The sultanate of Pontianak with its capital of the same name was independent under the suzerainty of the Netherlands and was 4,545 km² in area. In 1930 the population consisted of 100,000 Malays and Dayaks, 562 Europeans, 26,425 Chinese and 2,378 other Orientals. The term Malays includes all native Muslims, among them many descendants of Arabs, Javanese, Buginese, and Dayaks converted to Islām. The Dayaks in the interior are still heathen. Roman Catholic missions are at work among the latter and the Chinese. The very mixed population is explained by the origin and development of Pontianak.

The town was founded in 1772 by the S̲h̲arīf ʿAbd al-Raḥmān, a son of the S̲h̲arīf Ḥusayn b. Aḥmad al-Ḳadrī, an Arab who settled in Matan in 1735 and who in 1771 died in Mampawa as vizier, revered for his piety. In 1742 ʿAbd al-Raḥmān was born, the son of a Dayak concubine, and very early distinguished himself by his spirit of enterprise. He attempted to gain the ruling power, successively in Mampawa, Palembang and Bandjarmasin, from which he had to retire with his band of pirates, although the sultan had been his patron, after he had taken several European and native ships. By this time, he had married a princess of Mampawa and Bandjarmasin and possessed great wealth. On his return to Mampawa, his father had just died. As he met with no success here, he decided to found a town of his own with a number of other fortune-seekers. An uninhabited area at the mouth of the junction of the Landak with the Kapuas, notorious as a dangerous haunt of evil spirits, seemed to him suitable. After the spirits had been driven away by hours of cannon fire, he was the first to spring ashore, had the forest cut down and built rude dwellings there for himself and his followers.

The favourable position of the site and the protection which trade enjoyed there soon attracted Buginese, Malay and Chinese merchants to it so that Pontianak developed rapidly and S̲h̲arīf ʿAbd al-Raḥmān was able by his foresight and energy to hold his own against the neighbouring kingdoms of Matan, Sukadana, Mampawa and Sanggau.

He appointed chiefs over each of the different groups of people and regulated trade by reasonable tariffs. He was able to impress representatives of the Dutch East Indian Co. in Batavia to such an extent that they gave him the kingdoms of Pontianak and Sanggau as fiefs after the company had bought off the claims of Banten to Western Borneo. As early as 1772, the Buginese prince Radja Ḥād̲j̲d̲j̲ī had given him the title of sultan. After his death in 1808, his son S̲h̲arīf Ḳāsim succeeded him. He was the first to change the Arab ceremonial at the court for more modern ways.

According to the treaty concluded with the Dutch Indies government in 1855, the sultan received a fixed income from them while they administered justice and policed the country. The relationship to the Dutch Indies government was defined in a long agreement of 1912, which also settled the administration of justice and the taxes. From the local treasury, then constituted, the sultan received 6,800 guilders a month; he also received 50% of the excise on agriculture and mines.

In keeping with the nature of its origin, Pontianak is predominantly Muslim in character and a relatively large number take part in the pilgrimage to Mecca. For these pilgrims, who are known as D̲j̲āwa Funtiana, the sultan, when he performed the pilgrimage in the 1880s, founded several *waḳf* houses in the holy city.

The main support of the whole population is agriculture and along with it trade in the products of the jungle. The exports are copra, pepper, gambir, sago, rubber and rotan, especially to Singapore and Java. Rice, clothing and other articles required by Europeans and the more prosperous Chinese and Arabs are imported. The import and export trade is mainly in the hands of the Chinese. They live together in the Chinese quarter in the European half of Pontianak on the left bank where also the other foreign Orientals have settled. This is therefore the centre of trade and commerce in the valley of the Kapuas.

In the swampy lands of Pontianak, intercourse with the outer world is amost exclusively by water. Only in the 1920s and 1930s were motor-roads laid over the higher ground from Pontianak to Mampawa and Sambas, to Sungei Kakap and from Mandor to Landak.

POONA [see pūna].

PORPHYRY [see furfūriyūs].

PORT SAʿĪD (a. Būr Saʿīd), a seaport on the Mediterranean coast of Egypt at the northern extremity of the Suez Canal and on its western bank (lat. 31° 16′ N., long. 32° 19′ E.). It is connected with Cairo, 233 km/145 miles away, by a standard-gauge railway constructed in 1904 via Zagāzīg and Ismāʿīliyya, and also with Damietta and Alexandria. After the construction of the Suez Canal, it became the second seaport of Egypt after Alexandria, and is now the chef-lieu of a governorate (*muḥāfaẓa*) of the same name. The population of the governorate (1986 estimate) was 382,000 and of the town itself 374,000.

Port Saʿīd was founded in 1859, as soon as the Suez Canal was decided, during the reign of Saʿīd Pas̲h̲a [*q.v.*], Viceroy of Egypt, and was named after him. Except for the strip of sand which, varying in width between 200 and 300 yards, separates Lake Manzala from the Mediterranean, the site of the present town was under the water. This site was selected by a party of engineers under Laroche and de Lesseps, not on account of being the nearest point across the isthmus to Suez, but because the depth of the water there corresponded most favourably to the requirements of the projected canal. As soon as work was started on the

Canal, five wooden houses were constructed above the water, supported on massive piles and equipped with a bakery and a water-distillery for the use of the pioneers. A year later, dredgers began to deepen the waters of the newly established harbour, and the mud thus raised was immediately utilised for more buildings, besides the workshops, covering 30,000 square metres in all. This, however, did not suffice for the rapid growth of the population as the work on the Canal progressed towards Ismāʿīliya. To meet this emergency, and in the absence of stone quarries within reasonable reach of Port Saʿīd, the manufacture of artificial stones capable of resisting the action of sea-water was begun by Messrs. Dussaud in 1865. Details of this process are given in ʿAlī Pas̲h̲a Mubārak's *K̲h̲iṭaṭ* (x, 38-40). These stones weighed about 22 tons each and were used both for the construction of the two huge breakwaters of the outer harbour and for the creation of further building ground. In the same year, mail boats sailed up the Canal to Ismāʿīliya while others brought imports to Port Saʿīd. In 1868 the breakwaters were finished, and in 1869 the Canal was completed. As a result, the town was thronged by consuls and representatives of many nations, and the population reached 10,000.

By the end of the 19th century, Port Saʿīd was the world's largest coal bunkering station, primarily for the Canal transit trade, and in the early 20th century the point of export for cotton, rice and other agricultural products of the eastern Nile Delta region and also a centre for fish processing. Its many public buildings included the headquarters of the Suez Canal Company, and by 1907 the population numbered 49,884. Its outer harbour, covering an area of 570 acres, its two moles or breakwaters built in such a way as to protect the Canal from the continuous onrush of sea-water and sand-drifts, and its docks numbering originally three on the western bank, all had to be extended. A large floating dock (259 ft. long, 85 ft. wide and 18 ft. deep, with a lifting capacity of 3,500 tons) was constructed; and, further, in the years 1903-9, new docks were established on the eastern bank. To accommodate the workmen on these docks, the new town of Port Fuʾād, named after the then King of Egypt, Fuʾād I [*q.v.*], sprang up on the east side.

To safeguard the ships approaching the Canal by night, the K̲h̲edive Ismāʿīl ordered four lighthouses to be erected at the expense of the Egyptian Government at Rosetta, Burullus, Burd̲j̲ al-ʿIzba near Damietta, and Port Saʿīd. The latter one was 174 ft. high and its beam distinct from those of the other three and visible at a distance of 20 miles. It lay at the base of the western mole which, at its seaward extremity, carried a colossal statue of Ferdinand de Lesseps by E. Fermiet, unveiled in 1899.

In 1956 the Egyptian President Gamāl ʿAbd al-Nāṣir (Nasser) [see ʿABD AL-NĀṢIR, D̲J̲AMĀL in Suppl.] nationalised the Suez Canal. In the ensuing war of Britain, France and Israel against Egypt during late October-early November 1956, Port Saʿīd was severely damaged by air attacks and during the British and French landings, with the statue of de Lesseps, amongst other things, being destroyed. After the war, the damages were repaired and the Canal re-opened, but during the Six Days' War of June 1967 Israeli forces advanced to the eastern bank of the Canal and occupied the territory of western Sinai up to that bank. The Canal remained closed for several years. But after the Camp David Accords of 1978 and the Israel-Egypt Peace Treaty of 1979, the use of the Canal revived and the revenue from transit dues has become a significant part of Egypt's income, with Port Saʿīd returning to something of its former prosperity.

(A.S. ATIYA*)

POSTA (Ital. *posta*), borrowed into Ottoman Turkish and Arabic in the 19th century in the forms *p/bōsta, p/bōsṭa* to designate the new conception of European-style postal services in the Near East. In more recent times, it has been replaced at the formal level by *barīd* [*q.v.*], a revival of the mediaeval Arabic term for the state courier and intelligence services, but *būsta/būsṭa* and *būstad̲j̲ī* "postman" continue in use in the Arab Levant at the informal level, and *posta* remains the standard term in Modern Turkish. In modern Persian also *post*, from the French *poste*, is used. (ED.)

POSTA, postage stamps. Postage stamps (Ar. *ṭābiʿ* [*barīdī*]; Pers. *tambr*; Tk. *pul*) are a Western innovation. The world's first postage stamp—the "penny black" bearing the portrait of young Queen Victoria—was issued by Great Britain in 1840. There exists an evident connection between the spread of the "postage stamp revolution" and European overseas expansion. Besides Great Britian, other European countries, above all France, but also Austria, Germany, Italy and Spain were responsible for the founding of postal services and the diffusion of stamps in North Africa and the Middle East. Foreign post offices of these countries were opened e.g. in Lebanon, Syria, Palestine, Morocco, Libya, and Egypt. They issued the stamps of their countries, and as a result the dispatching point of these stamps is only to be identified by the postal cancellations. Later, overprints were added. Here, as in other cases, the foreign post offices cut into revenues that would otherwise have gone to the national post office. The first Middle Eastern countries which joined the parade of stamp-issuing states were: India (1854 with a portrait of Queen Victoria on the first issued stamp, after using issues of the East India Company for two years); the Ottoman Empire (1863); Egypt (1866); Persia (1868); and Afg̲h̲ānistān (1871). The first three of them opened post offices in their "satellite states" using the same practice as the European countries.

Despite the more than one hundred year-old history of stamps in North Africa and the Middle East, "Islamic philately" has not received much attention until recently. This intensified interest is mainly to be explained by the fact that, since the 1960s and the 1970s, the themes on stamps have been diversified and several Islamic countries have begun to use postage stamps as instruments of propaganda. Philately is considered as an ancillary historical and social science discipline, although its skilled use as such is rarely revealed. Unlike its honoured sister numismatics, philately cannot of course provide information on dark periods where written evidence is scarce or unavailable. But it can be of additional value for the analysis of official viewpoints and of cultural and political history; stamps are excellent primary sources for the symbolic messages which governments seek to convey to their citizens and to the world. The same is true of banknotes, because "both are a monopoly—i.e. a sovereign attribute of the state as

well as an efficient iconographic propaganda vehicle thereof. They can tell us something about the official discourse of the state, the one for which it attempts to ensure ideological hegemony" (Sivan 1987, 21). For modern times, the symbolism of stamps is more useful for the historian than that of coins because stamps are more varied and less conservative.

Which types of historical evidence are to be found on stamps in detail? Stamps can be studied from the "inside" and the "outside". Under the latter we understand the stamp as a "physical and economic object" (cf. Hazard 1959/1980, 200 ff.), made up of paper, ink, glue, etc., marked by inscriptions, overprints and denominations. An enquiry into the quantity and quality of these components (kind of paper, method of printing, perforation, watermark, overprint types and settings, etc.) is not merely of limited interest for the collector or the historian of printing technology and paper manufacturing; an investigation of these aspects can give indications concerning the political and economic situation of the issuing country. A large quantity of new issues has normally two causes: either the state is fully appreciating the propaganda value of stamps (as was the case, for instance, in Iran under the last Shāh, in Libya since the mid-1970s and also in ʿIrāḳ at present under the leadership of Ṣaddām Ḥusayn), or else it is seeking additional revenue. Numerous countries, mostly small and poor, have abandoned their prerogative to represent themselves in favour of financial advantages. They have entrusted Western agencies with the production of stamps on any possible occasion and with their promotion to dealers and collectors. Many of these stamps never touch the shores of the countries that issue them. The stamps display themes which have mostly nothing to do with the heritage of the issuing countries: astronauts, European paintings, famous people of the world (such as J.F. Kennedy, the Prince of Wales and Princess Diana), or international sports events. For the Islamic countries, this practice was used e.g. by Afghānistān under the reign of Ẓāhir Shāh, by North Yemen (since 1962), by Mauritania, Ḳaṭar (since 1961), and the poor Persian Gulf shaykhdoms (ʿAdjmān, with even special issues for its exclave Manāma, Dubayy, Fudjayra, Raʾs al-Khayma, al-Shāriḳa, Umm al-Ḳaywayn) in the 1960s, with the noticeable exception of Abū Ẓaby that possesses 90% of the present-day's United Arab Emirates' oil wealth. The other extreme is found in Lebanon, where no stamps were printed in 1976-7, in 1979, and between 1985 and 1987. Due to the civil war, Lebanon issued not more than 100 stamps over the last 14 years. More direct money-raising methods include the issuance of souvenir sheets (also used as a propaganda instrument), postal tax (also called revenue) stamps (several Arab countries, e.g. Syria, printed such stamps for the wars against Israel and subsequent military needs; the Ottoman Empire issued tax stamps during the Balkan War of 1911-12, and the young Turkish Republic printed a large quantity in 1920, reflecting the disastrous situation of the country during these years), and "semi-postal" stamps with premiums for charitable or public purposes (including relief for refugees from the Druze war—Lebanon and Syria, 1926—and for victims of earthquakes, of volcanic eruptions, etc.). A decline in the quality of printing, paper, and perforation points to economic difficulties. For the printing of the Ḥaydarābād stamp of 1946, commemorating the Second World War Victory, many types of paper were used; this is attributable to the scarcity of paper during and immediately after the War (Nayeem 1980, 198-9). Similar problems are suggested in the case of Iran after the Revolution in 1979. A possible reason why the watermark of the Pahlavī stamps was not altered until 1981 is because of a paper shortage. Libya used Egyptian watermarks until 1960; the stamps were printed in Rome, Naples, Cairo or by Bradbury. This dependence on foreign technology can be explained by the extreme poverty of this North African state until the large-scale production and export of oil in the mid-1960s.

Overprints and surcharges are of great historical interest, since they always arise as a result of an emergency. One of the earliest surcharges became necessary when a Persian Postmaster-General resigned and thereafter considered a huge quantity of stamps as his own property, refusing to return them to the post office (nos. 94 ff./1897-9). After the Ottoman entry into the First World War, the Ottoman Post Office ran out of the stocks of the 1914 pictorial set, the plates of which were inaccessible in London. It had to resort to overprinting old stocks of superseded issues. More often, overprints have been used by occupying (see e.g. ʿIrāḳ, occupied in 1918 by units of the Indian army, where Turkish stamps overprinted "BAGHDAD IN BRITISH OCCUPATION" were used; or Lebanon as occupied territory, where Turkish stamps overprinted "E.E.F.", for "Egyptian Expeditionary Force", were issued; or Syria, where in 1919 French stamps were overprinted "T.E.O.", for "*Territoires ennemis occupés*", later changed to "O.M.F.", for "*Occupation militaire française*"), protecting, mandatary, and colonial powers. The date and type of overprints indicate the severity of foreign rule, the degree of dependence and control. Whereas Egypt had the right to issue special stamps of its own, other Ottoman provinces were less autonomous, as was true for ʿIrāḳ; it had to use Turkish postage stamps until the Ottoman Empire was replaced by the British mandatary power. Algeria, being constitutionally part of metropolitan France, had stamps of its own only after 1924. In that year, French stamps were overprinted "ALGÉRIE". Even the post-war issues have continued to omit Arabic, to stress French culture and interests to the exclusion of Arab ones, and to emphasise French dominance. Similar was the practice of the Italian colonial power in Libya, whereas the French protectorate in Tunisia replaced the monolingual inscription "RÉGENCE DE TUNIS" in 1906 by another one in French and Arabic; Palestine as a British mandate after 1920 even used a trilingual inscription in Arabic, English and Hebrew. The autonomy of the ʿAlawī areas, guaranteed by the French after 1924, can be deduced from French stamps overprinted "ALAOUITES-AL-ʿALAWIYYĪN". In the case of nominally independent shaykhdoms, like al-Kuwayt or al-Baḥrayn, the stamps indicate that they were actually under firm British control. After using Indian stamps with no indication of the issuing state's name, the stamps were overprinted (in 1923-4 and 1933 respectively) "KUWAIT/BAHRAIN". After the Partition of India (1947), the same was done with British stamps. The complex postal history of Morocco under foreign control, and of war-time Libya, becomes clear by observing the diversity of overprints and used stamps.

Pākistān's first stamps illustrate the hasty creation of the nation. The first issue consisted of Indian stamps (portrait of King George VI) overprinted "PAKISTAN" by the Indian Security Press at Nasik. Owing to the events after Partition, grave shortages of stamps occurred in many places. It was

therefore necessary to supplement the Nasik prints by local overprints in Pākistān. Machine-printed, hand-stamped, typewritten and manuscript overprints thus appeared in many places and under varying conditions; they were sanctioned by the central or provincial governments, and sometimes even by minor authorities down to the village postmaster. All these issues were governed by the same conditions, namely, an acute shortage of Pākistān stamps, a surplus stock of unwanted Indian stamps, and the determination to do something in order that the posts could carry on (Martin 1959/1974, VII, 2). A similar situation in independent Algeria caused at the outset the overprinting of former French issues with the initials "E.A." for "*État Algérien*".

Overprints indicating the new state's name, and similar techniques like the obliterating with black bars of the former ruler's portrait, have been employed in other countries following a drastic change in régime in order to use up old stocks of stamps while demonstrating a complete departure from the past (see e.g. Egypt, 1953, or Iran, 1979). Sometimes former sets are overprinted in order to commemorate an important event in the history of a particular country; in Transjordan, for instance, stamps of 1927 were overprinted one year later, in Arabic script, with the word *dustūr* in order to mark the promulgation of the constitution. Frequent changes in denomination may well reveal economic problems and inflation.

We have yet to mention some further conclusions which can be drawn from the mono- or bilingual inscriptions. The exclusive use of the national language in Islamic countries either underlines the continuity with the Islamic past (by confirming the sanctity of the Arabic script and language; see also the using of Islamic/Christian dates) or growing nationalistic feelings. To quote some examples: Ottoman stamps up to 1876 used exclusively the Turkish language and "Turkish"-style numerals. The inscriptions translate "The Ottoman Empire" and "Postage" (the latter being the western-derived *pōsṭa*, however, rather than the Arabic *barīd*). In 1876 a French inscription and a "Western"-style numeral were added to a set of stamps in order to conform to membership of the new-established Universal Postal Union. With the alphabet reform of 1928, the Arabic script gave way to Latin, after a brief transitional use of both scripts for writing Turkish (1926-8). Ḥid̲j̲āzī stamps (1916-25) used only Arabic (compare Yemenī stamps from 1926 till 1930); not until four years after the unification with Nad̲j̲d, in 1929, did the Latin script appear for the recording of the state and value. National feelings in Egypt came through, when, during Ismāʿīl's rule, Arabic replaced Turkish as the usual language of administration. The first Egyptian stamps of 1866 (nos. 1-7) bear Turkish-language inscriptions; one year later, Arabic replaced Turkish on stamps (nos. 8 ff./1867). The change in the language came at the time of Ismāʿīl's hard-won acquisition of the title of Khedive, and a few years later (nos. 14 ff./1872) the stamps proudly displayed the Khedivial title. After the recession of British influence on Egypt in 1922, an overprint exclusively in Arabic announced the formal independence of "The Egyptian Kingdom" in that year (nos. 69-81/1922; notice also nos. 82-93/1923-4). This nationalistically-induced omitting of any Western script except for a numeral of value was obviously soon found impractical, because French reappears from 1925 onwards (nos. 94 ff.).

Multilingual inscriptions on postage stamps can also indicate the use of several national languages or be interpreted as a concession to linguistic minorities. Postage stamp series of Ḥaydarābād from 1871 show a value label in four languages (English, Marāthī, Persian-Urdu and Telugu). The secession of East Pākistān (later Bangladesh) can be observed on Pākistānī stamps by the reduction of the former trilingual inscription (English, Urdu, Bengali) to a bilingual one.

Stamps may be considered as a *prima facie* evidence of the existence of postal services, but not as an evidence of postal sovereignty, as the cases of Manāma and Bahāwalpūr [*q.vv.*] show. Until 1947 Bahāwalpūr was a princely state in British India, afterwards forming part of Pakistan; it issued its own stamps between 1947 and 1949, although the post offices in Bahāwalpūr used stamps of Pakistan. The introduction of airmail and special delivery stamps ordinarily indicates the initiation of such a service in a particular country.

The studying of the stamp's "inside", i.e. of its iconography, can be quite illuminating and will be of central concern here. Several factors predestine stamps to propaganda purposes. First, since the discovery of offset printing, stamps are easy and cheap to produce; second, a worldwide spread is potentially possible; third, visual messages are not difficult to understand, i.e. it is possible to make them accessible to persons who are not reached by other communication means; this is especially true of Third World countries, where the percentage of illiterates is high; in regard to Arabic countries, one has to bear in mind also the problem of diglossia. But, whereas the message which is intended to be transmitted to the observer of the stamps is comparatively easy to discern, it is almost impossible to assess its impact upon its target population.

Subjects often dealt with on stamps can be grouped in the following way: national symbols; local deceased heroes; cultural heritage; significant historical and political events and commemoratives; reforms, national progress, and social, economic or cultural achievements; foreign policy (regional, Arabic or Islamic solidarity, international ties); diverse (expositions and fairs, international congresses, etc.).

Primary visual symbols of the modern state include, beside the national flag, emblems, coats of arms, official seals, the personified state, i.e. the presiding head of state (a hereditary monarch or an elected president). With regard to the head of state's portraits it is interesting to find out when the first portraits appeared, on which occasions they are issued, how often the head of state is portrayed, in which manner he is represented, and how he is dressed. Further, the question arises whether there is any difference between monarchies and republics.

Several Islamic countries followed in the beginning the Islamic proscription of portraits. Instead, they employed—as the Ottoman stamps did until 1913—three specialised motifs: the crescent [see HILĀL], sometimes accompanied by a star; a coat of arms; and the *ṭug̲h̲rā* [*q.v.*], along with more general calligraphical and arabesque designs. The turning-point in Ottoman stamp design came in 1913, when a set of stamps showing the Istanbul post office swept aside the tradition of avoiding pictorial designs (nos. 212-21/1913). In 1914, a further step was made by portraying Sultan Meḥemmed V Res̲h̲ād (no. 245/1914). On the other hand, in Persia, where a vigorous tradition of pictorial painting had long flourished, the S̲h̲āh appeared on stamps as early as 1876 (nos. 19-22). In Egypt, religious inhibitions about portraying living things have been ignored since 1924 (nos. 82-93), and Islamic symbols were replaced by

monarchical watermarks after 1926. King Fayṣal of ʿIrāḳ followed this example in 1927/31. Afghānistān was beginning to portray its monarchs in 1937; afterwards, the rulers of Afghānistān were often depicted, but President Taraki looks like being, until now (1992) the last one in this series. States with a special Islamic legitimation like Saudi Arabia (and its forerunners Ḥidjāz and Nadjd), Yemen (first as a kingdom, later as a republic), and Pākistān, avoided portraits of the rulers until the 1960s. Saudi Arabia and Yemen began with a small portrait of a human figure (1952 and 1948 respectively); the king of Saudi Arabia (Fayṣal) was portrayed for the first time in 1964, in the following period several times, in contrast to North Yemen where the only president ever portrayed until now has been President Ḥamdī in 1978. Ayyūb Khān was the first president to be shown on Pākistānī stamps (nos. 229-30/1966); thereupon also the portraits of the deceased national heroes Muḥammad ʿAlī Djinnāḥ and Muḥammad Iḳbāl could appear on stamps (1966-7); previously, the days of their death were commemorated and their contributions to the establishment of Pākistān were honoured by showing a memorial inscription or their monograms (e.g. nos. 44-6/1949 or nos. 96-8/1958). Republics such as Turkey, Syria, Lebanon, Tunisia and ʿIrāḳ depicted the portraits of their presidents from the beginning. Another practice was followed in Egypt and Libya after the revolutions there. Despite his popularity and the personality cult of him allowed in other media, President ʿAbd al-Nāṣir (Nasser) kept his portrait off Egyptian stamps except on three occasions (1964, 1965, 1967). After his death, however, he was commemorated on Egyptian stamps in 1970-2, and on stamps of several other Arabic countries. Al-Ḳadhdhāfī (Gaddafi) appeared for the first time on a souvenir sheet in 1975; in subsequent years he has become the central figure on the stamps. Remarkable exceptions are Algeria and Iran after 1979. No Algerian president has appeared until now on stamps during his lifetime (H. Boumedienne/Ḥawārī Būmadyan was for the first time portrayed after his death in 1979); on the occasion of the (re-)election of Boumedienne or Shādhlī b. Djadīd, instead of a portrait, inscriptions in Arabic were used which translate "Election of Brother ... as President ...". Whereas in the Shāh's days a profile of the monarch was almost always displayed, the Islamic Republic of Iran has only honoured "martyrs" on stamps (see also banknotes). For this reason, Āyatullāh Khumaynī was depicted for the first time after his death (1989 ff.), although already in his lifetime huge posters of him were plastered on walls of most Iranian towns and were carried in processions. As Chelkowski has pointed out, "This is a clever symbolic manipulation to suggest that Khomeini has not imposed his rule but is the 'chosen' representative of the people who carry his portrait out of love and devotion" (1990, 92-3).

Several monarchs of Islamic countries (Egypt since Fuʾād I, Afghānistān under Ẓāhir Shāh, Iran since the Pahlavīs, Jordan under the reign of Ḥusayn II, and Morocco under the reign of Ḥasan II) have flooded their countries with regular issues bearing their portraits on the occasion of commemorating special royal events: births and birthdays (especially of the male heir), royal birthdays; weddings; deaths and coronations (esp. Iran, nos. 1365-7/1967), etc. Another practice was followed, for instance, in Libya, where King Idrīs I was only once portrayed, directly after independence. Ruling predecessors are honoured, sometimes together with the reigning monarch, to show the continuity of the particular dynasty. The Pahlavīs even tried to base their reign on a fictitious continuity of the Persian monarchy since the time of the Achaemenids. This intention was revealed also in 1935 when Persia was renamed Iran (nos. 149 ff.: "*Postes iraniennes*", instead of "*Postes persanes*"). Regularly, the hereditary heads of state have attempted to enhance their legitimacy, either by combining their rule (in a portrait) directly with symbols of progress (see below), or by stressing the dynasty's role in the fight for independence (e.g., in Morocco under Muḥammad V and his son, and in Jordan). In this respect, differences between monarchies and republics seem to be blurred: republican heads of state are portrayed on similar occasions, as Independence or National Day, Revolution Day, etc.; the personality cult of Ḥabīb Bourguiba (Abū Raḳība) is intertwined with his role of Supreme Mudjāhid, his life history marking the major milestones of the Tunisian fight against the French. Other heroes of that same era appear on stamps only if they are long dead. Bourguiba was often shown together with female figures; this is an allusion to the improvement of the women's status as a result of the revised Personal Status Code in 1956. Sometimes even the birthdays of the presidents (e.g. of Ṣaddām Ḥusayn since 1984) are celebrated on stamps; frequently, they invoke their contributions to the modernisation process. Turkish presidents present themselves as the sons of the "Father of the Turks". A souvenir sheet (no. 25) in 1987 shows the hitherto-existing presidents from Atatürk to Evren in the shape of a family tree; the picture seems to suggest that Turkey is still firmly adhering to the political principles and aims of Atatürk. On another stamp issued in 1939 (no. 1052), the role of Atatürk is compared to that of George Washington for the United States.

Monarchs often appear on stamps in traditional (Bedouin) headgear and robes (see Fayṣal I of ʿIrāḳ in the 1920s, and his brother ʿAbd Allāh in Transjordan, and moreover, the rulers of the U.A.E. and Saudi Arabia), later, they also underlined their links to the army (see Riḍā Shāh Pahlavī) by wearing military uniform, or their support for reforms and westernisation by appearing bare-headed and clothed in Western style. The first presidents (e.g. of Turkey, Syria) were shown as modern townsmen in Western-style coats and ties, thereby expressing their intent to modernise and secularise the country. The fez, once a modern symbol, disappeared gradually and by the 1950s it was finally becoming old-fashioned. Soldier-politicians, as Atatürk or Sādāt, alternated between military uniform and civilian garb; Asad was always depicted in civilian clothes despite his military vocation, thereby underscoring his legitimacy, while Sādāt preferred the military uniform. Al-Ḳadhdhāfī is shown in different garbs; the most favourite one, beside the military uniform, seems to be Bedouin garb; sometimes the "revolutionary leader" is sitting on a horse, surrounded either by fighting people, or jubilating masses, or "Green Books", propagated as his "Third Universal Theory", with a liberating message for the whole world. The described style of illustration is itself a hint at the contents of the "Green Book" (here part 3), where the author is praising the Bedouins for their practising of "national sports" (e.g. mounted games), instead of merely watching sporting events. Like Ṣaddām Ḥusayn (1988), al-Ḳadhdhāfī is represented on stamps as an ideal Muslim on the *ḥadjdj* or during the Muslim worship (1985). This confirmation seemed necessary after al-Ḳadhdhāfī's open shift to "de facto-secularisation" in 1975 and his unorthodox interpretation of Islam since

then (rejection of the Sunna as a source of Islamic law, etc.).

Other important and specific national symbols and emblems which are often seen on stamps should be mentioned. In the case of Persia, the national emblem next to the portrait of the Shāh was the Lion and the Sun, under the Pahlavī crown; for Lebanon it is still the cedar, for Morocco the pentagram. After the Iranian Revolution, the red tulip, symbolising love and sacrifice in Persian poetry, has been made an official emblem. The word *Allāh* in the shape of a red tulip appears on stamps, as on the 100-rial bill and on coins. Turkey used sometimes (1926, 1929, 1931, 1961) the mythical grey wolf (*bozkurt*), an embodiment of the unification of its people. An allegorical figure, the embodiment of the nation, usually represented in the form of a woman, so popular on French stamps, represents Syria in one case (1956), but this particular symbolism seems to have been too foreign to the Islamic tradition to have taken root in Syria.

Another category of symbols of power is that of historical notables or local heroes. Every régime has its own pantheon, and this becomes clear on stamps too. The emphases shift with the change of régimes, although local heroes are generally more often honoured than famous persons who have had an impact on the whole Arab-Islamic world. Whereas monarchies have emphasised the role of their ancestors, especially the founder of a particular dynasty (e.g. monarchical Egypt frequently depicted Muḥammad ʿAlī; Libya the founder of the Sanūsiyya, Sīdī Muḥammad b. ʿAlī al-Sanūsī; Saudi Arabia chose Ibn Saʿūd), republican régimes have issued stamps to commemorate a variety of nationalists (e.g. Turkey memorialised Namīḳ Kemāl and Ḍiyāʾ (Ziya) Gökalp; Egypt ʿUmar Makram, ʿUrābī Pasha and Muṣṭafā Kāmil; ʿIrāḳ honoured Sāṭiʿ al-Ḥuṣrī, progenitor of the various pan-Arab ideological trends; Syria, instead, preferred to honour a native-born theoretician of Pan-Arabism, al-Kawākibī), reformers (al-Ṭahṭāwī, al-Afghānī, ʿAbduh, Ṭāhir Ḥaddād, etc.), freedom fighters (e.g. Pākistān 1979, 1989-90), and cultural leaders (in literature, arts or creative fields). A myth of the peoples' continuous struggle for independence is created in some cases (e.g. on Libyan stamps since 1971-2, esp. since 1980, and on Iranian stamps after 1979). The Islamic Republic of Iran marked the abrupt departure of the past and the changing orientation from Western ideology and apparel of the Shāh's era to the traditional Islamic attitudes by a series of stamps (since 1979) devoted to the "forerunners of the Islamic movement". The role of the clerical opposition is overemphasised; but, besides firm supporters of Khumaynī (like Āyatullāh Bihishtī, died in 1981), or forerunners of an Islamic republic (as Faḍl Allāh Nūrī, died in 1909), other famous persons are represented in this set who would not have supported the "reign of the Āyatullāhs", if they were still living (e.g., Mīrzā Kūčik Khān, Muṣaddiḳ, Āl-i Aḥmad, Sharīʿatī, Ṭāliḳānī). Most of the forerunners are considered as "martyrs" for the "right cause", pointing to the glorified idea of martyrdom which is also one characteristic of Shīʿism. Another Shīʿī feature commemorated on postage stamps is that of the Shīʿī Imāms or works connected with them, such as the *Nahdj al-balāgha* [*q.v.*] (e.g. in 1981). The search for historical heroes to honour on Lebanese stamps is a difficult task. The choice of Druze and Maronite princes is an indication of Christian dominance there till the outbreak of the Civil War and of the neglect of the Islamic heritage.

Harmless illustrations of traditional costumes, national handicraft, festivals and musical instruments, animals and flora, fauna, scenery, as well as antiquities, archaeological excavations, historical monuments (mosques, forts, and palaces etc.) and modern buildings (hotels, banks, museums, etc.) are found on the stamps of nearly every country with the aim of underlining the national heritage and, probably, of convincing the public of a clear-cut national identity. So, even the representation of antiquities and other common motifs can throw light upon the political aims or the ideological orientation of a régime and its self-identification. Despite the post-colonial Pan-Arabic and Pan-Islamic rhetorics of some régimes, they often lay particular stress on the pre-Islamic and pre-Arabic history, a sign of the specific national pride and patriotism. In Egypt, Pharaonic monuments are as prevalent today as they were in 1866 when the first issues bore a pyramid watermark. All stamps issued between 1867 and 1913 featured pyramid-and-sphinx designs, and the Giza pyramids have been a favourite subject ever since, although after 1952, as the interest in other themes increased, the pre-Islamic heritage was less often depicted. ʿIrāḳ places great emphasis on its Babylonian forerunners (cf. already a set from 1963, here together with Islamic monuments; and from 1988, on the occasion of the Babylon Festival), especially since Ṣaddām Ḥusayn shifted from extremist Pan-Arabic policies towards a specifically ʿIrāḳī *waṭaniyya*; a Mesopotamian-inspired culture is seen as a convenient vehicle to introduce and support the change in fundamental ideology (compare the results of A. Baram's study, *Mesopotamian identity in Baʿthi Iraq*, in *MES*, xix [1983], 425-55). Jordanian stamps frequently show the Nabataean city of Petra or the Temple of Djarash (since 1933). This pattern is repeated also in other Arab (Algeria, Tunisia) and Islamic (Pākistān, Afghānistān, etc.) countries.

Depicting antiquities or other signs of national heritage can be seen as a means of advertisement and as evidence for the tourist industry (e.g. Lebanon in the 1960s until 1975; Egypt since the 1950s, with a short interruption as a result of the 1967 events). But, as Sivan has pointed out, the impressive continuity in the patterns of postage stamps produced over the last thirty years shows that touristic considerations have not reigned supreme in this domain. A comparison with the monetary iconography of the same era (issued in Egypt, Syria, and Jordan) shows that the recurrence of certain images on postage stamps has not been a purely aesthetic tendency but the result of conscious political decision. These visual symbols should be mainly interpreted as official attempts to create a common national identity and loyalty to the territory. "Thus, the ancient past is part and parcel of the legitimating genealogy of the modern state" (Sivan 1987, 23). Noteworthy exceptions are the Gulf emirates with no past to speak of, and Saudi Arabia, where the pre-Islamic past of its territory is associated with the paganism of the *Djāhiliyya*. An extraordinary shift has occurred in Iran. Whereas the emphasis in the Shāh's days was almost exclusively on pre-Islamic architecture and art, the revolutionary Islamic régime started to neglect the pre-Islamic era; in this context one has to recall the strong protests of the Islamic religious classes against the Shāh's bombastic celebration of the twenty-five centuries old history of Iran. Lebanon, again, is a special case in the opposite direction, because of the Maronite élite's support of the "Phoenician ideology".

Stamps illustrate most of the period of colonial expansion, as well as its end. After using their own

stamps, with or without overprints, the colonial powers in the Islamic lands under their control passed on to the "colonial-picturesque style", i.e. one foreign from the paper to the design; the favourite subjects on pictorial sets were scenes of monuments and landscapes; local allusions were rare, natives appeared only occasionally on horse or on camel, whereas representatives of European colonialism (as Marshal Lyautey on Moroccan stamps (1935/1948, 1951), General Gordon on Sudanese ones (1931/37, 1935)) were commemorated. While the colonial powers were shown as civilised and modernised, the dependent territories were depicted as backward countries and societies, needing the import of progress through colonialism. After independence, postage stamps rapidly became a means of asserting sovereignty, of seeking for self-definition, and of furthering economic and social development. The pictorials now often employ a semi-abstract style and international iconography: the national flag represents independence; broken chains and rising suns, flames etc. stand for liberation and a very promising future; doves for peace; globes for universal themes; balance scales for justice; the Asclepian serpent and staff for medicine; books and torches for education.

In tracing the evolution of some national holidays and memorial days, we find instances of discontinuity (particularly in revolutionary states) and continuity (mostly in conservative ones). But all these memorial days have a common feature, that they celebrate national events, as e.g. Independence (National) Day; Evacuation Day, to commemorate the departure of foreign forces (e.g. the British evacuation of the Suez Canal Zone, the evacuation of US bases in Libya, the evacuation of French occupation forces in Syria); Revolution Day (8 March 1963 in Syria; 1 September 1969 in Libya), which signalled the change in legitimation; or Army Day (when the army was the vehicle of the revolution, as in ʿIrāḳ). Other major political events and changes in legitimation which may be memorialised philatelically include constitutional, legal or programmatic reforms (e.g. Pākistān 1973, on the occasion of the promulgation of the new constitution; Algeria, 1976 (new constitution, *Charte Nationale*), 1986 (*Charte Nationale*)); overthrows of authoritarian régimes (Sudan, 1986; Tunisia, 1988); the first regular elections after a long period of military/authoritarian rule (Turkey, 1950; Pākistān, 1970); decisive plebiscites (Iran, referendum of 1979, commemorated in 1984, 1991; Pākistān, 1985, "overwhelming mandate by the people" for Ḍiyāʾ al-Ḥaḳḳ and his Islamisation policy in the 1984 referendum); nationalisations (of the Suez Canal in Egypt, 1956, 1961/66, or of the oil industry (Iran, 1953, ʿIrāḳ, 1973)); and the "corrective revolution" or accession day of the present ruler (Asad's Syria or Sādāt's Egypt). Several authoritarian régimes commemorate the single mass party (as in Tunisia, the Destour, later PSD; in South Yemen, the National Liberation Front, later Yemen Socialist Party; in Syria and ʿIrāḳ, the Baʿth; in Egypt, the Arab Socialist Union, and in Algeria, the FLN).

Postage stamps reinforce a myth of popular struggle for independence. Turkish stamps memorialised famous battles during the Liberation War (e.g. that at İnönü). Libya somehow managed to find two dozens of major and minor battles against the Italian occupiers during the period of 1911-43 (stamps issued since 1980). Iranian stamps after the Revolution in 1979 have frequently recalled the heavy toll of lives, also mentioned in the constitution, so that their characterisation as "stamps of blood" is justified. The Iranian stamps reflect the central theme of the revolution, the "Karbalāʾ-martyrdom-paradigm". The uprising of 5 June 1963 is seen as the beginning of the revolutionary movement (1979, 1982, etc.)—an obvious, but typical, misrepresentation of the facts.

After military coups toppled monarchies, "the people" begin to be shown on the stamps (e.g. post-1952 Egypt). For the first time, social groups such as peasants and industrial workers appeared, joining soldiers, whose role as the people's vanguard was stressed (e.g. Libya 1969/nos. 284-9 and 1970/nos. 290-95 with the inscription *djayshunā dirʿunā al-wāḳī* "our army is our protective shield"). The scarcity of pictures of other classes and occupational groups was not accidental at that time. Most of the women are shown in modern dress; whereas in conservative countries, either no females are featured, or they are shown in their traditional role, or in typical female professions, South Yemen and Libya even depicted women as factory workers (South Yemen 1975, 1979-80; in the case of the People's Republic of South Yemen this is to be seen in connection with the labour shortage and the encouragement of working women) and in military uniform (South Yemen 1971/77; Libya 1984). Turkey honoured Halide Edip (1966), Egypt the national pioneer feminists Ḳāsim Amīn (1958) and Hudā Shaʿrāwī (1973). A set of Turkish stamps on the occasion of the Twelfth International Women's Congress was issued in 1935, i.e. one year after the introduction of universal suffrage for women.

Concerning the Islamic Republic of Iran, the changed orientation of the new régime becomes evident in this aspect also; women are rarely depicted, but if they are, they are veiled, marching in a crowd under a banner, portrayed in a militant way (with a rifle over the shoulder), or as the mothers of future martyrs, following the "model women" of Shīʿī Islam, i.e. Fāṭima, the daughter of the prophet and mother of the third Imām Ḥusayn, or Zaynab, the sister of Ḥusayn.

Despite the protests from the side of conservative religious circles, some states propagate their promotion of family planning on stamps, symbolised by a three-, mostly four-headed-family (Pākistān, 1969; Iran, 1972; Egypt and Tunisia, 1973; Algeria, 1986).

Whereas a revolutionary ideology is shown in ʿAbd al-Nāṣir's Egypt in a less explicit way, Libya after 1977 has turned to propagating the contents of the "Green Book", e.g. by quoting central statements in Arabic and English on postage stamps.

Since the 1950s and 1960s, particularly, symbols of national development and progress are standard. A difference between monarchies and republics is not noticeable any more, with the exception of the Islamic Republic of Iran which stresses much less than Muḥammad Riḍā Shāh achievements in the economic and social spheres (compare regular issues commemorating the reforms since the "White Revolution" in 1962). The symbols follow the Western ideals of progress: cogwheels and smokestacks, etc. stand for a modernised industry; tractors or modern irrigation works for the mechanisation of agriculture. Favourite themes on stamps include the improvement of the communication and transportation networks (building of streets, railroads, seaports, airports, bridges, installation of telegraphs), urbanisation (modern buildings and cities), industrialisation (industrial plants, esp. steel and cement works, oil refineries), electrification and irrigation (high dams, irrigation pumps). The importance of the water problem in the Middle East is

shown by the underlining of great irrigation projects, as the Libyan one (*al-nahr al-ṣināʿī* "the artificial river", illustrated as the lifework of the "revolutionary leader"), which has beome one of the main subjects on stamps since 1983; Saudi Arabia and the Gulf states depict plants for the desalination of sea water (e.g. Saudi Arabia 1974, 1989). Scenes from the oil industry are illustrated on stamps from several Arab countries ("petro-philately"), and trace the Middle East's growth as an oil-producing region. A portfolio of Arab countries' stamps portrays almost the entire process of bringing oil from the ground to its various users; some of the most detailed oil industry stamps have been printed for Dubayy and Kuwait. Other main export articles also appear on stamps (cotton on Egyptian and Syrian stamps, jute on Pākistānī ones (before the secession of the Eastern part), coffee on Yemeni stamps). Economic plans promise a prosperous future.

Stamps indicate the interest in providing free educational and medical services; new university and school buildings are illustrated proudly, alphabetisation campaigns are propagated. Occasionally, new themes and technologies (pollution control or solar energy) are advertised philatelically (ʿIrāḳ, 1985; Tunisia, 1988).

Stamps alluding to foreign relations are related to regional as well as international ties. Demonstrations of regional solidarity (e.g. with the R.C.D./Regional Cooperation for Development between Turkey, Iran, and Pākistān, existent till 1979, or the Gulf Cooperation Council) are of minor interest, if compared to the philatelically-delineated regional tensions and border disputes which are pieces of evidence for territorial claims. Since the annexation of a part of the former Spanish Sahara in 1975, Morocco has printed annually a stamp on the occasion of the so-called "Green March", firstly, to underline its legitimate claims on this territory, and secondly, to use this cause as a unifying national factor (compare Mauritania, the occupier of the other part of Spanish Sahara—according to an agreement with Morocco—which has only once (1976) printed a stamp showing the map of North-Africa with the inscription *Mauritanie réunifiée*). On the other hand, Algeria (1976) demonstrates its solidarity with the POLISARIO guerilla movement there. Afg̲h̲ānistān issued several stamps supporting the cause of an independent Pas̲h̲tūnistān [*q.v.*]; the first one in this series (no. 367-8/1951) caused—in contrast to the later stamps (1952 ff.)—political friction with Pākistān and had to be withdrawn. Since the achievement of full sovereignty in 1919, and since the establishment of Pākistān, Afg̲h̲ānistān has demanded the rescinding of the Durand Treaty (1893) which delimited the border between British India and Afg̲h̲ānistān. The conflict over Pas̲h̲tūnistān reached its climax in the early 1960s when Pākistān occupied the "Tribal Areas" and closed the whole frontier to Afg̲h̲ānistān. Asad's dream of a "Greater Syria" is revealed on one stamp (no. 1510/1981). Pākistān's conflicts with India over Kas̲h̲mīr have been depicted three times (1960, 1967, 1973). The stamps of Iran and ʿIrāḳ since 1981 and 1982 respectively concentrate on the Gulf War. The stamps issued until 1992 are an excellent example of the functioning of war propaganda. Both countries have revived episodes from Islamic history (Ḳādisiyya or Karbalāʾ [*q.vv.*]) for the mobilisation of the population. Thus one Iranian stamp bears a red flag, symbolising blood and sacrifice, on a cupola of the tomb of Imām Ḥusayn at Karbalāʾ; inscribed in calligraphic Arabic on that stamp are the words "Every day is ʿĀs̲h̲ūrāʾ, the whole earth is Karbalāʾ, all months are Muḥarram". ʿIrāḳ has issued several stamps propagating "Ṣaddām's Ḳādisiyya" (1981, 1985-6). Special commemorative issues on the occasion of innovated Memorial Days ("The Preparation Day", "Mobilisation of the Oppressed", "Day of the Army", etc.) are printed. War victims are glorified as martyrs on both sides. ʿIrāḳ accuses Iran of committing war crimes and *vice-versa* (1988). ʿIrāḳ even refers to the Geneva Convention on one stamp (nos. 1275-8/1985). The aggressor celebrates the armistice as ʿIrāḳ's Victory Day (nos. 1413-15/1988), whereas Iran shows the resolution no. 598 of the UN with an interrogation mark (1989), indicating thereby its doubts concerning the durability of the agreement. The reconquest of occupied territory (ʿIrāḳ, 1988; Iran, 1985) and later, the reconstruction of destroyed areas (1989 for both countries) is celebrated.

Pan-Arabic themes became popular since the 1940s. In general, events associated with the Arab League, Arab conferences on different subjects, Arab Boy Scout Jamborees, Pan-Arab games, the Arab Postal Union, etc., are commemorated. An exception is found on stamps commemorating the unification attempts of several Arab states, e.g. the formation of the U.A.R. in 1958 was proudly marked by stamps showing an arch uniting the maps of Egypt and Syria. The eagle, a revolutionary symbol which had appeared earlier, and the new U.A.R. flag were frequent subjects on stamps from then onwards. Regular annual issues celebrating the anniversaries of the short-lived union followed. After the break-up (1961), only the continuing use of the name "United Arab Republic" by Egypt remained.

Nearly all Arabic countries, and some Islamic ones, frequently print stamps demonstrating their solidarity with the Palestinian cause. Standard are issues showing the Dome of the Rock or al-Aḳṣā in Jerusalem with an inscription indicating solidarity; the memorialising of massacres (e.g. the Dayr Yāsīn one in 1948; Ṣabrā and S̲h̲ātīlā in 1982); and issues pointing to the refugee problem (see esp. Jordan, 1969) or the outbreak of the *Intifāḍa* and the proclamation of the Palestinian state. More militant standpoints are expressed on stamps of South Yemen, Syria, ʿIrāḳ, Iran, Libya and Kuwait. Whereas the majority of these states seem to see the only chance for the liberation of Palestine in armed struggle, Libya is additionally advising the adoption of the "Third Universal Theory" and Iran the establishment of an Islamic republic. Iran, characteristically, is calling the beginning of the *Intifāḍa* "the Uprising of the Muslim People of Palestine" (1980). Both countries commemorate annually (since the early 1980s) the "Universal Day of al-Ḳuds". South Yemen has been, until 1992, the only country that issued a stamp with the portrait of Yāsir ʿArafāt, the PLO's chairman (1983).

Religious loyalties are commonly expressed by printing stamps on the occasion of the beginning of the 15th century A.H., of Islamic conferences or of the pilgrimage to Mecca. Mediaeval Islamic history is referred to on stamps through monuments, personalities and events dating from that period. Still, it is noteworthy that many of the Islamic symbols are usually local mosques (apart from the Kaʿba in pilgrimage stamps and the famous mosques of Jerusalem). Mediaeval Islamic personalities are quite often native sons. Mediaeval persons who do not pertain to the country on whose stamps they appear are usually those representing the Muslim contribution to world civilisation (esp. science and technology, such

as Avicenna/Ibn Sīnā, Averroes/Ibn Rus͟hd, al-Fārābī, al-Kindī, Rhazes/al-Rāzī). Conservative countries such as Saudi Arabia, significantly enough, do not carry such persons on their stamps, preferring to depict in their stead such people as the founders of the four Islamic schools of law (in the shape of an inscription; nos. 625-28/1977). The anti-Crusader myth has been expoused by almost all Arab countries (in most cases by commemorating the battle at Ḥiṭṭīn [*q.v.*] and the victorious Ṣalāḥ al-Dīn/Saladin). The only exception was Maronite Lebanon, which celebrated the Crusaders as allies of Maronites. The total neglect of a country's Islamic past, as for instance in Lebanon, can also reflect the ruler's secular attitude, as was the case in pre-revolutionary Egypt. Most of the countries hesitate to exploit Islamic sentiments because of the growing fundamentalist opposition. A remarkable exception is again given by the Islamic Republic of Iran; here, stamps commemorate the calling of Muḥammad to the prophethood (*ʿĪd al-mabʿat͟h*, commemorated since 1982) and the birthday of the Mahdī (celebrated since 1980), which is called "The Universal Day of the Oppressed". Islamic unity is the subject of stamps issued annually on the birthday of the Prophet Muḥammad. Most of these feature the Holy Kaʿba surrounded by the faithful of all races. Such stamps attempt to depict Iran as a unifying force for all Muslims; they bear the message that the Islamic Republic of Iran is a leader of world-wide resurgent Islam. By its frequent use of Ḳurʾānic quotations, the régime is trying to depict itself as a vanguard of the Islamic world.

Solidarity with other fundamentalist movements and the intention of exporting the revolution are reflected on Iranian stamps which honour the martyrdom of Muḥammad Bāḳir Ṣadr (an old friend of K͟humaynī and a noted theologian, executed by the ʿIrāḳi régime; no. 2023/1982), President Sādāt's assassin (K͟hālid al-Islāmbūlī; no. 2029/1982), an Egyptian soldier who shot Israeli civilians (Sulaymān K͟hāṭir; no. 2146/1986), or a leading ideologist of the Egyptian Muslim Brothers (Sayyid Ḳuṭb; no. 2078/1984); solidarity is expressed with the Afg͟hān resistance (1985-8) and the militant Ḥizb Allāh in Lebanon (no. 2208/1987). The intention to export the state's ideology is also revealed on Libyan stamps since 1977. Yet before this, the Egyptian régime under ʿAbd al-Nāṣir had cheered the arrival of new converts to the left'st camp; stamps marking the ʿIrāḳi and Yemenī Revolutions and Algeria's independence from France (1958, 1963, 1962) reflect a feeling of triumph and revolutionary brotherhood. Algeria showed its solidarity for Vietnam (1973), Zimbabwe and Namibia (1977). Some countries are underscoring their ties with Africa (Egypt, 1964, 1965; Mauritania, 1966, 1973, etc.) and to the non-alignment movement (e.g. Algeria, 1973).

Anti-Americanism is shown on Iranian and Libyan stamps. A series of Iranian stamps were issued to represent the hostage crisis that occurred during the Carter administration (1983, 1985, 1987); Libyan stamps condemn the USA for its aggression against Libya in 1986, representing Ḳadhdhāfī in the same moment as the peacemaker (nos. 1719-24/1986). In contrast to these examples, Turkey depicted its engagement in the Korean War on the side of the Western powers (nos. 1337-40/1952) and the ensuing alignment with NATO (1954, 1959, 1964, 1989). Afg͟hānistān since 1980 printed several stamps portraying Lenin—a sign of the occupation by Russian forces at that time; stamps marking the centenary of Lenin's birth were, however, frequently printed in other Islamic states (e.g. Egypt and Syria, 1970). Standardised international subjects have been frequently featured on stamps since the 1960s, honouring UNICEF, WHO, FAO, UNRWA, and UNESCO, as well as the parent UN itself. Other world themes have included an International Day for the Elimination of Racial Discrimination, Mothers' Day, Childrens' Day, etc. A major exception is again to be found on an Iranian stamp, issued in 1983 for United Nations Day, which indicates a criticism of the five superpowers' veto power in the Security Council and the struggle of the Islamic Republic against this unjust distribution of power. Anti-racism is interpreted as an Islamic achievement by depicting a black *muʾad͟hd͟hin*, an allusion to the first *muʾad͟hd͟hin* in the history of Islam [see BILĀL B. RABĀḤ]. These internationalist subjects are also stressed for economic reasons, for they are popular with stamp collectors around the world.

National pride and heritage is sometimes revealed on stamps which treat the subjects of sport and traditional activities. As an instance of this intention, one may mention Iranian or Libyan stamps which depict "old Iranian" or "national" sports; Afg͟hānistān has issued several stamps with the motif of traditional mounted games; Turkey and Pākistān have displayed wrestling and hockey respectively, and the Arabic states of the Gulf, falconry.

Bibliography: The information and comments on stamps in this article are based either on the *Michel-Katalog* (*Asien 1991/92, Übersee*, v/1-2, Munich 1991; *Afrika 1989, Übersee*, iii/1-2, Munich 1989; *Europa-Katalog West 1992/93*, part 2, Munich 1992), or on observation of the stamps themselves. The number (or series of numbers) or years of issues in the parentheses refer to the number under the relevant country in *Michel*. Other standard reference works are the following catalogues: *Catalogue de timbres-postes*, Yvert et Tellier Publications, Paris, not revised and enlarged annually; *Minkus new world wide postage stamp catalog*, 2 vols., New York, issued annually; *Scott's standard postage stamps catalogue*, 2 vols., New York, issued annually; *Stanley Gibbons' priced postage stamp catalogue*, London, issued annually.—Specialised catalogues: M.H. Bale, *The stamps of the Palestine Mandate*, rev. and enlarged ed., Ilfracombe, England 1978; ʿAbd al-Ḥ. al-Kīlānī, *al-Dalīl al-ʿarabī li'l-ṭawābiʿ al-ʿarabiyya al-miṣriyya*, Cairo 1967; *Scott's Zeheri catalogue for postage stamps of Egypt, U.A.R., and the Sudan*, ed. by Mehanny Eid (8th ed., Cairo 1987).

Basic information on special philatelic terms and on the postage stamps of Islamic countries can be found in philatelic dictionaries or handbooks, e.g. C. Brühl, *Geschichte der Philatelie*, 2 vols., Hildesheim etc. 1985-6; W. Grallert and W. Gruschke, *Lexikon der Philatelie*, Berlin 1976; U. Häger, *Großes Lexikon der Philatelie*, Gütersloh 1973; G. Schenk, *Sie war dabei. Die Geschichte der Briefmarke*, Gütersloh 1959; J.A. Mackay, *The dictionary of stamps in color*, New York 1973.

POTIPHAR [see ḲIṬFĪR].

PRANG SABIL, the name in Malay of the *d̲j̲ihād* [*q.v.*] in the East Indian archipelago; *prang* = war.

The course of recent history has made it difficult for Muslims to fulfil their duties with respect to the *d̲j̲ihād*. The representatives of the law, however, still teach and the masses readily believe that arms should only be allowed to rest against the *kāfir* so long as any success must be despaired of. In a Muslim country under non-Muslim rule, as were the Netherlands East Indies under Dutch colonial rule, the teachers, however, preferred to be silent. At most they said that under the prevailing conditions there was no legal inducement to conduct the *d̲j̲ihād*, in view of the superior forces and the comparative freedom enjoyed by believers. Or, on the other hand, they expounded particularly those texts which removed the more serious feuds between Muslim and *kāfir* to the next world. When political events, catastrophes, misfortunes of any kind resulted in disturbances, it was not at all uncommon for the Muslim population of what is now Indonesia to look at these things from a religious point of view. It may happen on such an occasion that the feeling of being bound to fight the unbeliever is aroused again. If the leaders utter the war-cry *prang sabil*, it finds a ready answer. It is true that according to the law, the signal for the *d̲j̲ihād* should be given by the *imām*. There is now no *imām*; but even in the time when the Ottoman sultan was still recognised as *imām*, any misgivings were easily overcome if the *imām* remained inactive. Outside the boundaries of the territory in which the holy war is proclaimed, the silent sympathy of the believers was with the fighters. Any forcible conversion which took place anywhere in the East Indies, was generally praised by Muslim chiefs and represented as a fulfilment of the more solid obligations of the *d̲j̲ihād*.

This practical teaching of the *prang sabil* was of particular importance in Atjeh [*q.v.*] in the last quarter of the 19th century. Circumstances were very much in its favour. The Atjehnese were a self-satisfied people, convinced of their own superiority, and also of a warlike disposition. Non-Muslims were everywhere hated or at least despised. At the same time, those individuals who were in any way connected with the Muslim cult were held in great honour. These qualities were, however, not in themselves sufficient to conduct a *prang sabil* with success against a disciplined attacking power. A military leader was necessary. There was indeed a sultan in Atjeh, but he was a negligible factor as regards the situation in the country. The chiefs, the real rulers of the land, preferred to confine themselves to their own territory; they were not fitted for co-operation. Bands of armed men ravaged the country, doing the *kāfir* as much damage as possible, but they could raise no claim for general co-operation and assistance as they were not waging war in the way Allah had willed. The law lays down the sources from which the costs of the *d̲j̲ihād* can be met; pillage and plundering, as was the practice of these bands, could never be blessed by Allah. In addition the organisation of these bands was such that they never held together long. In these circumstances it was the *ʿulamāʾ* (also used as a singular) who took in hand the organisation of the war; among these the most prominent were the *ʿulamāʾ* of Tirò, from olden times a centre of study of sacred learning. They reproached the chiefs with their slothfulness and the people with preferring worldly advantages to heavenly rewards. Going up and down the country, they preached the doctrine of the *d̲j̲ihād* and there was no one who could openly oppose them; indeed, they represented the divine law. In order to be able to wage war, a war-chest was needed. The *ʿulamāʾ* claimed the share of the *zakāt* set aside for Allah's purposes; the *ʿulamāʾ* of Tirò in particular used it to train a strong force of duly converted recruits. The *ʿulamāʾ* were for a long time the soul of the war. It is, however, clear that the authority which they had gained over the secular rulers could only last so long as they were able to inspire the people to continue fighting. When the war was over, they returned to their old, still very influential position as representatives of the holy law. Various writings which, together, formed a regular war literature, proved an effective means of inspiring their warriors with enthusiasm. They were an accompanying feature of the *prang sabil*. *ʿUlamāʾ* wrote pamphlets and epistles in which attention was called to the duty of waging the holy war; emphasis was laid on the heavenly reward that awaited the martyr or *s̲h̲ahīd*, and the *kāfirs* to be overcome were painted in the blackest colours. An elaborate poem, the *Hikajat Prang sabi(l)*, of which there were many versions, was specially intended to be declaimed in order to increase the courage and contempt for death of those who heard it.

PRĒM ČAND (1880-1936), Indian writer of fiction in Urdu/Hindi, best known for his short stories,

which gained him wide recognition as a pioneer of the genre.

During his lifetime, and a hundred years previously, apart from English the official language of the British Government of India was often called Hindūstānī. It was usually written in Persian-style script by and for Muslims, and in Dēvanāgarī script by and for Hindus. The former type, when used as a literary language, was also referred to as Urdū ("the language of the army camp, *urdū* [see ORDO]) and the latter type as Hindī (formerly Hindawī). When written in the Persian script, Hindūstānī was characterised by considerable Arabic-Persian vocabulary. In the Dēvanāgarī script, the literary language had much vocabulary taken from Sanskrit and the Prākrit vernaculars. Even before Independence in 1947, Urdu and Hindi began to be considered distinct languages, and they were recognised as official languages in Pākistān and India (Bhārat) respectively. It must, however, be noted that when we read of Prēm Čand writing novels or short stories in Urdu or Hindi, and then translating them from one language to the other in subsequent editions, we should not assume that major alterations were made in translation. Changes were largely in the script used than in the actual text. Thus Prēm Čand's fiction should be regarded as a single corpus, rather than as two separate corpora from a bilingual author. He depicted social life and preached social reform in the India of his time, with its rich variety of races, classes and religions, but he dealt more with rural than urban life and more with Hindus than with Muslims.

Prēm Čand was born in a village near Benares (Banāras) and named Dhanpat Rāʾē. At the start of his literary career he adopted the nom-de-plume first of Nawāb Rāʾē and then of Prēm Čand. His father was a poor postal clerk, and Prēm Čand's education was somewhat haphazard, and depended increasingly on private studies and tuition. At one time he had to walk ten miles to Benares for lessons, yet in 1919 he graduated B.A. as an external student. His home and family life was not easy; he was orphaned, and had to look after the rest of the family. Before this, his father had arranged Prēm Čand's marriage at the age of 15. Some years later, Prēm Čand married a second and younger wife, by whom he had a son and two daughters. He was never robust in health, and always had to work very hard for his living. He acquainted himself with earlier and contemporary Urdu fiction, ranging from the *dāstān* to the works of Surūr, Sarshār, ʿAbd al-Ḥalīm Sharar and Mīrzā Muḥammad Hādī Ruswā [see ḲIṢṢA. 5. In Urdu]. He obviously had ambitions as a writer, especially of fiction, though he began as a dramatist at the age of 14, writing two plays, both now unfortunately lost. Earning a living presented problems, and he changed his occupation several times. He started as a teacher, then as an inspector of education. He later worked for publishers, including the well-known Nawal Kashōr in Lucknow. For a time he kept a shop. Finally, he went to Bombay as a film script writer. But he could not get on with directors and producers, and was ill at ease in the film studio environment. He returned to Benares, where he died in 1936.

He was a prolific writer. As we have seen, his juvenilia included two plays. Later in life he wrote a major historical drama, *Rambhūmī* ("Earthly terror") in Hindi, the title of whose Urdu version, *Karbalā*, indicates its theme from Arab-Islamic history. Prēm Čand had studied Persian for eight years, and at first showed preference for the Urdu script. But despite his brilliant command of the language, he did not find favour with Urdu readers, and increasingly wrote in the Dēvanāgarī script. After his death, however, he became recognised as a master of Urdu, particularly for his short stories. He also wrote numerous magazine articles, many published in *Zamāna* from 1901 onwards. He championed Hindu-Muslim cooperation and social reform. Strange to say, he first won fame as a writer of novels: some short, others full-length, some published in parts, some in instalments, others as a whole, some originally in Urdu, others in Hindi. Saksena, writing presumably in about 1926, mentions several Hindi novels which he says are to be published in "Urdu translation" (*op. cit.* in *Bibl.*, 344). His short novel, *Asrār-i-maḥabbat*, appeared in 1898, and his Hindi novel *Prēmā* in 1904. *Bāzār-i-ḥusn* ("Brothels") described by Sadiq (*op. cit.* in *Bibl.*, 346-7) as "perhaps the most satisfactory of his novels", appeared in 1918 in two parts. It is the story of a reformed "fallen woman" who finds that the world will not forgive her. She is led astray by a wealthy prostitute, and ends up "saved" and working as head of an orphanage. An account of this and other novels will be found in Muhammad Sadiq, *op. cit.*, 344 ff. These novels are now somewhat dated and appear to have lost some of their popularity.

It is for his short stories that he had gained lasting fame. These, numbering over 200, were published in eleven collections between 1907 and 1936, among the best known being *Prēm Paččīsī*, *Prēm Battīsī* and *Prēm Čālīsī*. Many of them deal with the misfortunes of poor village-dwellers who are "more sinned-against than sinning". They perhaps justify Sadiq's description of him as "an idealist ... a reformer ... and a dreamer". Many of them are masterpieces, though Saksena's paean of praise is as excessive in its way as is Sadiq's lukewarmness. Allowance must surely be made for the taste of readers and writers for melodrama in those days. The rich harvest of Urdu and Hindi short stories in the Subcontinent during the last hundred years owes a great debt to Prēm Čand. Moreover, as Sayyid Waḳḳār ʿAẓīm says, *op. cit.* in *Bibl.*, 592, Prēm Čand's fiction "paints a true picture of social and political life in the early 20th century".

Bibliography: A detailed bibl. would contain few works in English but a good deal not only in Urdu but also in Hindi. Reference should be made to the bibl. in Sayyid Waḳḳār ʿAẓīm's art. *Prēm Čand*, in *Urdu Encyclopaedia of Islam*, v, Lahore 1390/1970, 590-4. For general accounts, see Muhammad Sadiq, *A history of Urdu literature*, London 1964, 344-55, a very perceptive and informative account, which some may find rather severe. Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, 343-4, contains a little additional information and is full of enthusiasm, but was written a little too early, while Prēm Čand was still alive, and is very brief. There are many editions of Prēm Čand's short stories in both Urdu and Hindi, and most anthologies of prose in both languages include examples. Among general works on Urdu fiction containing useful sections on Prēm Čand, see Shāʾista Akhtar Bānū Suhrawardī, *A critical survey of the Urdu novel and short-story*, London 1945; and, in Urdu, ʿIbādat Brēlwi, *Tanḳīdī zāwiyē*, 304-82, Karachi 1957, a detailed history of the Urdu short story.

(J.A. HAYWOOD)

PREVEZE, PREVESE, Greek Prevesa, a coastal town in the southernmost part of Epeiros, in western Greece, situated on the upper entrance of the Ambracian Gulf opposite the ancient Cape Actium and associated with the Italian *prevesione* (= "provisioning"), the Slavonic *perevoz* (= "passage") and the

Albanian *prevëza* or *prevëzë* (= "transportation") (cf. Phourikes, *Zur Etymologie von Prevesa*, in *Philolog. Wochenschr.*, xvii [1927], 509; idem, in *EEBS*, i, 283-93, and in *Epeir.Chr.*, iv, 265-6; Soustal-Koder, 242). The old mediaeval settlement's foundation (Palaeoprevesa) is associated with the destruction of the nearby Nicopolis, 6 km/4 miles north of modern Prevesa, by the invasion of the Turcophone Uzes (Ouzoi) in central and southwestern Hellas (1064-5) (*Chronicle of Galaxeidi*, ed. E. Anagnostakes, Athens 1985, 20-2, 78; cf. A. Savvides, art. *Turks* [in Greek], in *World History*, ii, Athens 1990, 360 D). In the scantily-documented mediaeval period, the first definitive reference appears in the Greek version of the *Chronicle of the Morea* (ed. P. Kalonaros, Athens repr. 1989, vv. 9108, 9119; see also Italian version, ed. K. Hopf, *Chroniques gréco-romanes*, Athens repr. 1961, 468 and French versions, ed. J. Longnon, Paris 1911, §§ 636, 649, with references to the *vieille cité de la Prevasse* and to the latter's harbour as *port de Saint Nicolas de Tort*), which is, however, connected with the new mediaeval Prevesa and its despoliation in 1292 by the Genoese allies of the Byzantine emperor Andronicus II Palaeologus, during the latter's operations against the Epeirot despot Nicephorus I (cf. Phourikes, in *EEBS*, i, 281 ff. and in *Epeir.Chr.*, iv, 266 ff.; Schreiner, *Kleinchroniken*, ii, 528; Soustal-Koder, 242; D. Nicol, *The Despotate of Epiros 1267-1479*, Cambridge 1984, 38 ff., 229 f.). The only direct reference between 1292 and the Ottoman conquest of the 15th century, associates new mediaeval Prevesa with *Nicopolim vetustissimam civitatem*, according to the antiquarian humanist Cyriacus Anconensis, who visited the Ambracian area in 1436-7 (cf. E. Ziebarth, *Cyriacus of Ancona in Epeiros* [in Greek], in *Epeir. Chr.*, i [1925], 111, 114; Phourikes, in *Epeir.;Chr.*, iii [1928], 141 and iv, 271-2; Soustal-Koder, 214).

The gradual Ottoman annexation was recorded by four Byzantine anonymous short chronicles (cf. Schreiner, i, 422, 548, 552, and ii, 528; Soustal-Koder, 242): no. 71/7 dates the conquest to A.M. 6986 (= A.D. 1477-8), i.e. to Meḥemmed II's reign, while nos. 58/23a and 70/39 date the first Ottoman "foundation" (Greek *ktisis*, here signifying "fortification") to A.M. 6995 (= A.D. 1486-7), i.e. to Bāyezīd II's reign. Finally, no. 58/23b dates the second Ottoman fortification to A.D. 1495. In the course of the 1499-1502 Turkish-Venetian war, a Venetian attack on the town's Ottoman garrison, recorded by Saʿd al-Dīn (*Tac-üt-tevarih*, ii, 97) and short chronicle no. 36/30 (Schreiner, i, 295, dating it to A.M. 7008 = A.D. 1500), failed despite extensive damages and, therefore, a supposed Venetian occupation of the town from 1499-1500 to 1529-30 is to be discarded (cf. Phourikes, in *Epeir. Chr.*, iv, 274-6; Hammer-Purgstall, *GOR*, ii, 325 ff.; İ.H. Uzunçarşılı, *Osmanlı tarihi*, ii, Ankara 1988⁵, 217 f., 222). The first Ottoman occupation (1477-8 to 1684) witnessed the most important events in the area's history, i.e. the victory of K͟hayr al-Dīn Pas͟ha [*q.v.*] over an allied western fleet under Andrea Doria in September 1538 (cf. Phourikes, *op. cit.*, 276-8; Uzunçarşılı, *op. cit.*, 375 ff.; D.E. Pitcher, *An historical geography of the Ottoman Empire*, Leiden 1972, 115, 117 and map XIII-A2; K. Setton, *The Papacy and the Levant 1204-1571*, iii, Philadelphia 1984, 445 ff.). Following a brief western recapture of the town (1605), the Venetians under Francesco Morosini succeeded in capturing Prevesa (1684) during the 1684-1718 Turkish-Venetian War (*Short Chronicle*, no. 58/23, in Schreiner, i, 422; cf. Phourikes, *op. cit.*, 279-83). The first Venetian rule (1684-1701) was followed by the second Turkish rule (1699 and 1701 to 1717-18), while the ensuing second Venetian rule (1717-18 to 1797) was terminated by a brief French rule (1797-8), which ended abruptly by the decimation of the French guard and the destruction of the town by ʿAlī Pas͟ha Tepedelenli [*q.v.*] in October 1798 (Phourikes, *op. cit.*, 280-9). The first ʿAlī Pas͟ha period (1798-9) was followed by the third Turkish rule (1800-7), following the Turkish-Russian treaty of 1800, and the second ʿAlī Pas͟ha rule (1807-20), connected with widespread property confiscations and terrorist involvements of Bekir's Albanian guard, but also with an extensive plan of fortifications and building constructions, was eventually followed by the fourth and final Turkish rule (1820-1912) (Phourikes, *op. cit.*, 289-94). The Ottoman period in Prevesa ended during the First Balkan War with the entry of a revolutionary corps of Prevesians in the town on 21 October 1912, following the defeat of the Turkish forces near ancient Nicopolis.

PRIS͟HTINA (Serbo-Croat, Priština), a town in Serbia, the administrative centre of the region of Kosovo. It is situated in the valley of a small river called the Prištevka (a western affluent of the Sitnica) and on the eastern fringe of the Kosovo Plain (Kosovo Polje), at the foot of the western part of the Butovac mountain, at an altitude varying (according to the different quarters of the town) between 585 m/1,918 ft. and 670 m/2,197 ft. The origin of its name is unknown.

Archaeological investigations have shown that the district of the town has been inhabited since the Neolithic period (300-2500 B.C.) and then in the Bronze and Iron Ages. The first Illyrian colonies come from the 4th century B.C. In Roman times, the place was known as an important crossroads, notably between the towns of Naissus (Niš [see nis͟h]), Lissum (Lješ) and Skupi (Skoplje), but also as a centre for roads leading towards Bosnia and Dalmatia. In the 2nd century A.D., at about 12 km/8 miles from the modern Pris͟htina, the Roman town called Ulpiana (Lipljan) grew up, the centre of the province of Dardania. It was rebuilt in the 6th century by Justinian I, and the town became "Justiniana Secunda", but then disappeared completely after the Slavic invasions and the Slav peoples' installation in these districts.

In the mediaeval Serbian state, Pris͟htina was early known as the main town of the Kosovo region. Its rise was linked with mineral exploitation in the nearby region of Novo Brdo and Kopaonik; with the fertility of the Kosovo plain, which was always a real agricultural granary; and with its position, moreover, as the crossroads of the main communication routes in the Balkans. Soon afterwards, at the time of the first

exploitation of mineral resources in the reign of king Milutin (1282-1321), Prishtina became the capital (first the royal one, then the imperial one) of the Serbian state (at that time under the Nemanid dynasty, founded by Stevan Nemanja, 1170-96). The king Stevan Dečanski (Stephen Uroš III, 1321-31) often lived there, but much more frequently, his son (king, then emperor) Stephen Uroš IV, known as "Dušan the Strong" (Dušan Silni, 1331-55). It was in his palace at Prishtina that Dušan in 1342 received the Byzantine emperor John Cantacuzenus when the latter had fled from Constantinople, and it was there that Dušan issued a certain number of imperial charters (e.g. that of 1351). According to the description left by Cantacuzenus, Dušan's palace was situated in the area which is today between the Clock Tower and the Pazar mosque (Čarshî Djāmiᶜ), very likely on the site of the present-day headquarters of the military garrison. Prishtina continued to be the capital under the next king, Stephen Uroš V (1355-71); and then (at a time when the capital of Serbia, in face of the Ottoman menace, was moved further north, first to Kruševac and then to Belgrade) it became the capital of the son-in-law of the "Tsar" (in reality of the Prince) Lazar, Vuk Branković (d. 1398), and this even after the decisive defeat of the Serbian armies by the Ottomans on the "Field of Blackbirds" (Kosovo Polje) not far from Prishtina (June 1389). One might finally add that it was always at Prishtina that the descendants of the Serbian royal family continued to reside until the end of the 15th century.

In the first half of the 15th century, corresponding to the period of the Serbian "despotate", Prishtina remained one of the main commercial and trading centres of mediaeval Serbia. In particular, there was an important colony of merchants from Ragusa [*q.v.*], who also operated a sophisticated banking system, linked on one hand to the customs duties and on the other to the possibilities of cash loans granted to merchants and local business men and to various passing Ragusan emissaries. Thus it is known that the "despot" Djuradj (George) Branković granted to the Ragusans of Prishtina the customs rights in 1411 and 1415. It was also within the framework of this grant that the workshops for refining the silver ore extracted from the nearby silver mines of Novo Brdo and Trepča functioned, and at Prishtina that the famous knightly tournaments took place, in which not only local people from the town and its neighbourhood took part but also people coming from a distance, such as the citizens and nobility of Ragusa.

The Ottoman advance was felt more and more, through the numerous raids which made the roads less safe and to a large extent injured trade. On the fall of the Serbian "despotate" in 1439, the Ottomans installed as their representative in Prishtina ᶜĪsā Bey of Skoplje, son of Isḥāḳ Bey [see BOSNA. 2. (a), at vol. I, 1263a], and a Turkish *ḳāḍī* is mentioned in the town from 1448. Prishtina became definitively Ottoman in 1455. The palace of the Serbian kings was destroyed at a time when the first Ottoman buildings appeared, some of which, however, had been already built at the time of the last Serbian "despots". This was notably the case of the "Pazar mosque" (situated in the eastern part of the main market of the town), founded by Murād II (824-55/1421-51) and completed by Meḥemmed Fātiḥ (855-86/1451-81). The latter also had a further mosque built in Prishtina bearing his own name. Finally, it may be mentioned that not far from the town was constructed the *türbe* of Murād I, killed during the battle of Kosovo Polje in 791/1389 [see KOSOWA].

Under the Ottomans, Prishtina (now only the centre of a *nāḥiye*) lost its political and administrative importance to the town of Vučitrn, the centre of the *sandjaḳ* before 1462. Prishtina remained nevertheless an important economic centre, thanks mainly to the Ragusan colony and to the permanent consulate there of Ragusa; to the proximity of rich mining centres (lead and zinc); and to the numerous trading establishments filled with goods of all kinds handled by the Ragusan and Italian merchants (e.g. those from Verona, Genoa, Mantua and Florence). The 16th century travellers (one could mention the celebrated Felix Petancius (Ragusinus Dalmata), diplomat at the court of the king of Hungary, Vladislas II) underline its importance and richness. In the 17th century, it is mentioned by several authors: in a report addressed to the Vatican in 1685, the Catholic archbishop of Sofia and Skoplje, Pjetër Bogdani (of Albanian origin), classes Prishtina among the category of Serbian towns with as many as 3,000 houses, and he underlines the fact that this was an unfortified town. For Kātib Čelebi, it was a "medium-sized" town, whilst Ewliyā Čelebi (who visited it in 1660-1) records that it was a *ḳāḍīlîḳ* of 150 *aḳčes*, and that it had 2,060 houses ("spacious and in good repair"), among which were distinguished the palace of Alay Bey and the building of the legal tribunal (*meḥkeme*), and also 300 shops, 11 *khāns* and two public baths (*ḥammāms*). It is known that the Ragusan colony there still existed at this time, possessing some twenty houses, and that silver mining still continued (but apparently at a reduced level).

The town suffered a great deal in the Austro-Turkish War, that of the "Holy League" (1683-99), especially in 1689 at the time of the famous raid of the Austrian general Piccolomini, which managed to seize Prishtina and Skoplje (aided in this by local Serbian insurgents led by the Patriarch Arsenije III Čarnojević and by Catholic Albanians led by the archbishop Pjetër Bogdani). Piccolomini's staff headquarters at this time were actually in Prishtina. A plague epidemic which broke out carried off a large number of people, including the Albanian archbishop and the Austrian general. At the time of the precipitate retreat by Austrian forces in 1690, a large part of the Serbian population of the region, fearing future Ottoman reprisals, emigrated northwards en masse. It was this emigration (and also that taking place in similar conditions in 1737, under the patriarch Arsenije IV Jovanović Šakabenta, at the time of a fresh Austro-Turkish War) which was the origin of the installation of Serbian groups in Hungary (at Budapest, Szentendre, Eger, Szekesfehervár and elsewhere) and the beginning of the mass invasion of the Kosovo region by Muslim Albanians from Albania, a process which the Ottoman authorities naturally helped as far as possible (see S. Skendi, *The Albanian national awakening 1878/1912*, Princeton 1967, 7).

Prishtina declined greatly in the course of the 18th century, firstly because of a fresh epidemic of plague in 1707, and then because of a new Austro-Turkish War (that of 1737) and its consequences. From that time, profiting from the growing anarchy in the European lands of the Ottoman empire (an anarchy which made the Ragusan colony and foreign merchants leave), Prishtina and its district fell under the control of an Albanian Muslim family, the Gjinolli (in Albanian, Gjinollëve, in Serbo-Croat Džinići), a domination which lasted, in the shape of an hereditary *pashalîḳ*, for about a century. Towards the end of this century, the town was fortified by means of solid pallisades and had around 7,000 inhabitants; at this time it was the seat of a *pasha*.

There is naturally a lot to say about Prishtina in the

19th century. In 1812, France opened a consulate there, followed soon afterwards by other powers, including (in 1889) the kingdom of Serbia. In *ca.* 1836, the town had a population of about 9,000 (the figures cited in the course of this century vary between 9,000 to 12,000), and it was often described as "a small town fortified by a double wall, and rather dirty in appearance". But it was also mentioned as an important trading centre "between Sarajevo and Istanbul", where two fairs were held annually (in April and in September), frequented by merchants "coming from Niš, Bosnia, Albania, Edirne and Salonica". After the two great fires of 1859 and 1863, which seriously damaged the town, there was only one fair annually held in the second half of May and lasting for two weeks, frequented by traders "from Sarajevo, Skadar, Peć and Prizren" (hence within a much more restricted radius). Despite a famed body of local artisans, the town's economy continued to decline, especially as the "local Turks" (in reality, more Muslim Albanians than Turks proper) in 1873 prevented the line of the railway coming through the town, thus cutting Pris̲h̲tina off from its commercial relations with Skadar and Sarajevo. At that time, afterwards "hardly anything except sheep and goat skins" were exported from it. However, in 1877 Pris̲h̲tina became the seat of the newly-created *wilāyet* of Kosovo (in place of that of Prizren), but not for long, since a dozen years later, in 1888, the seat of the province was transferred to Üsküb/Skoplje, and Pris̲h̲tina became once more a mere *palanka*. During this short period (1877-88) there appeared at Pris̲h̲tina five *Sālnāme-yi wilāyet-i Ḳoṣowa* (in 1878-9, 1882-3, 1884-5, 1886-7 and 1887-8), forming an interesting historical source which has not yet been sufficiently utilised. During the period between Serbian-Turkish Wars of 1876-8 and the Balkan Wars of 1912-13, the more or less continuous terror perpetrated by the local Albanian governors (often in open or latent conflict with the Ottoman central government) on the local Orthodox Serbian population of the town reached heights of savagery. In *ca.* 1910 Pris̲h̲tina had (according to J. Cvijić) "about 4,000 houses, Albanian, Serb, Jewish, Gypsy and Čerkes, including 3,200 of Muslims, 531 of Orthodox Christians and 65 of Jews".

The town was liberated by the Serbian army of 1912. From this time onwards there began an exodus of the local Muslim population which continued all through the First World War and even after it. In 1913 the town had 18,174 inhabitants. In 1915, Pris̲h̲tina was occupied by the Bulgarian army, then again liberated by the Serbian one in 1918. From then till 1941, it formed part of the "Kingdom of the Serbs, Croats and Slovenes" and then of the "Kingdom of Yugoslavia". During 1941-4 it was incorporated (with the entire region of Kosovo and of Metohija) into a Fascist "Greater Albania", at that time under Italian and then German domination.

After the end of the Second World War, it formed part of the "People's Federal Republic of Yugoslavia" as the main town of the "Autonomous Region of Kosovo and Metohija" (and then simply, "of Kosovo"). As the cultural and political centre of the Albanian minority in Communist Yugoslavia, during this latter period it played a preponderant role in the more or less clandestine (but in fact upheld in a perfectly obvious fashion by the Titoist authorities) action aimed at making the non-Albanian population of the region (Serb, Montenegrin and Turkish) flee by terror and intimidation or simply by demographic pressure, an action marked by various abrupt changes of policy, but one in the end successful. As a result, the Albanian population (which is 95% Muslim and 5% Catholic) now forms 90% of the total population of Kosovo and Metohija. Pris̲h̲tina is now the seat of the official "Muslim community of Serbia" and of a *madrasa* (of lower rank in relation to that of Sarajevo), the "Alaudin medresa", where instruction is given in the Albanian language. The Albanian Muslim religious journal called *Edukata Islame* (which is generally considered as a version, meant for the Albanian population of the region, of the official Yugoslavian Muslim journal, *Glasnik Vrhovnog Islamskog Starješinstva* of Sarajevo) appears there and also a Muslim annual in Albanian called *Takvim*.

(A. Popovic)

PRIZREN (in Ottoman Turkish orthography, Perzerīn), the second largest city of the former Yugoslav autonomous district of Kosovo-Metohija with about 40,000 inhabitants, the greater part of which are Albanian-speaking Muslims, the remainder Orthodox Serbians, Muslim Turks, Orthodox Vlachs, Roman Catholic Albanians and some Gypsies. Prizren is the only trilingual city of the Balkans. Until the dismemberment of Yugoslavia, Albanian, Serbian and Turkish were fully recognised, with newspapers and periodical published in all three languages and trilingual street name plaques. Till today, Prizren preserved its Ottoman physionomy of the 19th century better than any other city of the Balkans, entire districts being placed under protection of the law on monuments of culture.

In Ottoman times (1455-1912), Prizren was one of the largest cities of the Balkans interior and was an Islamic centre of considerable importance, possessing dozens of mosques and baths, a number of *medreses* and dervish convents of no less than seven different orders (among which is the *Āsitāne* of the Ḳarabās̲h̲iyye branch of the K̲h̲alwetiyye) and a library with many old Islamic manuscripts. It was the centre of a *sand̲j̲aḳ* throughout the Ottoman period, and a number of important poets and writers of Ottoman literature lived and worked in this city.

Prizren is situated at the southern edge of the fertile plain of Metohija, at the place where the small river Bistritsa (a tributary of the Beli Drim) comes out of the picturesque Duvska Klisura (gorge). The town is partly built on the northern slopes of the Shar Mountains, beneath the ruins of a huge mediaeval and Ottoman citadel, and partly in the plain. Prizren is situated 55 km/34 miles north-west of Üsküb/Skopje and 125 km/77 miles east of the important north Albanian city of Iskenderiye/S̲h̲koder, with which it is linked by a good road over a pass through the Albanian mountains, one since 1912 largely disused, however.

According to C. Jireček and those following him, the present town is the successor of the Roman city of Theranda; but extensive archaeological research in the present town has found nothing older than the Middle Byzantine period. The town is first mentioned in 1019 as the seat of an Orthodox bishop. It seems that between 1169-90, as a result of the Serbo-Byzantine wars, the town was in Serbian hands. In this last-mentioned year it became again Byzantine, and in 1204 it was included in the Second Bulgarian Empire. In the mid-13th century, when the Bulgarian

state collapsed, Prizren was again taken by the Serbians and remained part of their kingdom (later empire) until the Ottoman conquest in 1455. In these two centuries, the Serbians erected a number of important buildings in and around the town. In 1307 King Milutin reconstructed and enlarged the episcopal church of the Byzantines and had it adorned with high-quality fresco paintings. This is the church of Bogorodica Ljeviška, one of the most important monuments of Orthodox Christian art of the Balkans and still in perfect shape. Just outside the town, in the gorge of the Bistritsa, Tsar Dušan (1331-55) constructed the huge marble monastery of the Archangels, which became his imperial sepulcre after his death. Dušan had made Prizren the capital of the Serbian state. Milutin's and Dušan's noblemen constructed a number of other churches in Prizren, of which some are still preserved, largely in original shape (Sv.Spas below the castle).

In 1455, during the war against Vilk-oğlu (George Branković) the Ottomans took Prizren. The fact is apparently not mentioned in the early Ottoman chroniclers, who only mention the capture of the nearby silver mine towns of Novo Brdo and Trepča. Prizren was immediately made the seat of a *sandjak bey*. There are some vague indications of an earlier conquest of the town, under Murād I, but this had no lasting consequences, if it took place at all. The sultan had a garrison stationed in the Prizren castle, and converted the cathedral of King Milutin into a Friday Mosque, which became known as Djāmiᶜ-i ᶜAtīḳ, or Djumᶜa Djāmiᶜ, by which name it is known in the *wakf-nāme* of Kukli Bey from 944/1537-8, and as: "Djāmiᶜ-i Sulṭān Meḥemmed Khān" in the census register Tapu Defter 368 (p. 43), which dates from the time of the first Grand Vizierate of Rüstem Pasha (1544-53). In the Serbian literature, the conversion is supposed to have taken place in the course of the 18th century, the Ottoman sources and the reports of the Catholic bishop-visitator Pietro Masarechi from 1623-4 being wholly ignored. It seems that the monastery of the Archangels was plundered by the Ottomans during the conquest, but survived and functioned throughout most of the 16th century. The *mufaṣṣal* registers of *ca.* 1550 (T.D. 368, p. 51) and from 1569-70 (T.D. 495, p. 46) still mention the "Manastīr-ī Arhangel" paying 50 *akčes* per year as tax for its property. In the town itself, the Christians kept a number of churches for their own use.

There are no records about the size and appearance of mediaeval Serbian Prizren. The walled town, built on a hill which is surrounded by a loop of the Bistritsa, covers two ha and could have contained 300-400 inhabitants. The greater part of the open town was clustered on the steep slopes below this citadel, but the preserved cathedral of B. Ljeviška in the plain, several hundred metres to the north of the castle, suggests that the town also spread out there, following the river and the main road to the north. In the words of the best scholar of the old Serbian culture of bygone days, Jireček, it should not be imagined as being more than a *Bretterbudenstadt*. Perhaps the town had 2,000-2,500 inhabitants, which for the time and the place was considerable.

At the time of the conquest, a sizeable group of Muslim Turkish colonists must have settled in the town, setting up their own *maḥalles*, especially in the plain beneath the castle. The first reliable numbers on the population of Prizren are contained in the Tapu Defter no. 167 from 1530-1, which is based on the information taken during the census of the first years of the reign of Süleymān the Magnificent. At that time the Muslims, 273 households in all, of which 40 were *akīndjīs*, lived in four *maḥalles*. The Christians, 396 households, lived in nine *maḥalles*. The town might have had 3,300-3,400 inhabitants. Islamic life was still little developed. Besides the Mosque of Sultan Meḥemmed, there were only a few *mesdjids*, financed from their own *wakfs*. The Defter mentions: *Mesdjid* of Yaᶜḳūb Bey, *Rikābdār* of Sultan Meḥemmed Khān, *Mesdjid* of Kātib Sinān and the *Mesdjid* of Ayās Bey. The Mosque of Sultan Meḥemmed had no *wakf* of its own but was financed from the poll-tax of the district of Prizren, a rather common procedure for sultanic mosques in the Balkans (cf. Mal. müd. 5625, p. 17).

In the course of the 16th and early 17th centuries, the town did not grow very much, but gained slowly a predominantly Islamic character, due to the slow conversion of the local population (1570: 13% converts) and through the erection of a large number of Muslim buildings. This process of change can be followed with help of the three *taḥrīr defters* available, some poll-tax registers and a *mufaṣṣal ᶜawāriḍ defter*:

Year of registration	*Muslim households*	*Christian households*	*Muslim maḥalles*	*Christian maḥalles*	*Approximate total population*	*Percentage of Muslims*
1530	270	396	4	9	3,300	40%
1550	278	252	4	11	2,700	52%
1570	428	254	8	11	3,500	63%
1591	n.d.	97	n.d.	7		
1643	466	113	14	3	2,900	80%

1530 = T.D. 167, p. 372; 1550 = T.D. 368, pp. 440-45; 1570 = T.D. 495, pp. 37-46; 1591 = Mal. müd. 14930, pp. 2-4; 1643 = Kepeci 2607 Mevkufat 62, pp. 4-8.

The stability of the internal situation in the 16th century can be seen from the size of the garrison of the castle of Prizren; in 1530 and 1550 it contained only twenty soldiers, serving under a *Dizdār*, a *Ketkhüdā* and an *Imām*. The Ottoman registers allow us to follow the expansion of Islamic life in the town. In 1513 the poet Sūzī Čelebi, writer of the important *Ghazawātnāme-i Mīkhāl-oghlu ᶜAlī Bey*, had the *wakfiyye* for his mosque and school in Prizren drawn up. Sūzī Čelebi (real name: Meḥmed b. Maḥmūd b. ᶜAbd Allāh) died in 1522 and was buried in a *türbe* behind his mosque. Both buildings are still extant. Two years later another poet of Prizren, Nehāri (Ramaḍān Efendi), allegedly Sūzī's brother, died and was buried in the same *türbe*. The tombstones of both men are likewise preserved. In Shawwāl 944/March 1538, the *sandjak bey* Kukli Meḥmed Bey founded a mosque in the town, which still exists today, and had the road from the Albanian ports of Lesh and Shkoder secured by the construction of 17 caravanserais. In the town, he built 117 shops providing revenue for his foundations. Another indicator to the growing commercial impor-

tance of the town is the presence of 80 shops belonging to the *wakf* of Ewrenos-oghlu Aḥmed Bey (died 1506) and a *ḥammām*, providing revenue for his foundations in Yeñidje-yi Vardar in (Greek) Macedonia. In 1570 the number of shops had grown to 99. In 1573 the *sandjak bey* of Iskenderiye/Shkoder, Meḥmed Pasha, had a large domed mosque erected in Prizren, which later became known as the Bayraklī Djāmiᶜ. This foundation included a *medrese*, a *mekteb*, a large double bath, a library and a *türbe* for the founder. All these buildings still exist today, the mosque and the *ḥammām* largely in original shape. The library contains a large number of manuscripts, on religion, medicine, mathematics and history. The Grand Vizier Yemen Fātiḥi Sinān Pasha was to add books to this library in 1589. The *medrese* of Meḥmed Pasha functioned till 1947. In 1022/1613, the vizier Ṣofu Sinān Pasha, a native Albanian from the Prizren area, erected the largest mosque in the town, whose huge dome became one of the architectural dominant features of the town. A *medrese* once belonged to it. For the construction of the mosque, the stones of the by now deserted Monastery of the H. Archangels were used, and these are clearly visible at the structure. In the literature, Sinān Pasha is often confused with Yemen Fātiḥi Sinān Pasha, who originated from the same district (Lume belonging to Prizren), as did Ṣofu Sinān, who was governor of Buda, Bosnia and finally of Damascus. He died around 1615. His Prizren mosque belongs to the largest and most monumental ones of the entire Balkans. The expansion of Islamic life in the town can best be shown in a table, based on the surveys of the *wakfs* as indicated in the *taḥrīrs*:

1520	*1550*	*1573*
1 mosque	1 mosque	4 mosques
4 *mesdjids*	7 *mesdjids*	13 *mesdjids*
1 *ḥammām*	1 *ḥammām*	2 *ḥammāms*
1 *mekteb*	2 *mekteb*	3 *mektebs*
	2 caravanserais	2 caravanserais
		1 *medrese*
		1 library

In 1606 and 1614 Prizren is described enthousiastically in the reports of the visiting Catholic bishops Mario Bizzi and Pietro Masarechi, who praised the beauty of the houses, all having courtyards and fountains and a multitude of green and trees. Bizzi maintains that Prizren contained 8,600 houses, of which only 30 were Roman Catholic, having their own church. There were many schismatics (Orthodox), with two churches of their own. It is interesting to remark that the bishop maintains that "in this part of Serbia the inhabitants speak Albanian", a remark also made by Masarechi as pertaining to the town itself. For the villages, the presence of Albanians is confirmed by the Ottoman *taḥrīrs*. In Serbian historiography, the Albanisation and Islamisation of Kosovo has to be seen as a result of the mass emigration of the Serbs after the Christian revolts and Habsburg invasion at the end of the 17th century and the subsequent settlement of Albanians on the vacated lands. The conversion of the great church of Bogorodica Ljeviška is therefore also placed in the early 18th century. According to Masarachi, Prizren had 12,000 Turkish (= Muslim) inhabitants, 600 Serbian inhabitants and 200 Catholics. Only the numbers of the two Christian communities look more or less realistic when compared with the Ottoman data.

Prizren and its district suffered terribly from the invasion of the Habsburg army under Piccolomini in the winter of 1689-90, during which the city was burnt down and a large part of the Muslim population slaughtered. According to the late 19th century historian Ṭāhir Efendi, who used local memory and now unavailable sources, only 60 Muslim families survived. With the help of Albanian Muslims from the unoccupied mountains, the Ottomans succeeded in driving back the Habsburgs and their Serbian and Albanian-Christian auxiliaries, after which terrible vengeance was taken on the remaining Christians. This led to the "Great Exodus" of the Serbs of Kosovo under their Patriarch Arsenije III Crnojević. The Austrian invasion of 1737 led to a repetition of these events. After these disturbances a certain Ṣāliḥ Agha from the village of Nenkovac near Prizren, who had exerted himself in the expulsion of the Austrians, repaired many mosques and schools in Prizren and reorganised normal life in the district, for which he received the title of Pasha. Ṣāliḥ Pasha is the founder of the hereditary dynasty of the (Albanian) Pashas of the Rotulla family, which was to rule Prizren till well into the 19th century. Ṣāliḥ was succeeded by his son Emr Allāh Pasha. The son of the latter, Ṭāhir Pasha, fought against Ḳara Maḥmūd Bushatlī, the powerful Albanian *derebey* [*q.v.*] of Shkoder, who occupied Prizren in 1795 and drove Ṭāhir Pasha away. In 1805 Saᶜīd Pasha, son of Ṭāhir, became *sandjak bey* of Prizren. In 1806 he fought against the rebellious Serbs, a fact memoralised in numerous folksongs. From 1809 till 1836 Prizren was governed by Maḥmūd Pasha, the most important of the Rotulla dynasty. In 1809 he helped to destroy the Serbian insurgents near Niš [see NISH] and subsequently conquered Semendere/Smederevo and Belgrade. As symbols of his victory, he took the bells of the clock towers of Smederevo with him and placed them in three new clock towers which he constructed in the citadel of Prizren and in the large villages of Orahovica and Mamusha. In 1821 Maḥmūd Pasha participated in the suppression of the Greek Revolt. He is especially known for the large mosque, the *medrese* and the *mekteb* he had erected in Prizren. Maḥmūd Pasha also rebuilt the mosque in the Prizren castle and repaired the great *ḥammām* of Meḥmed Pasha and the Mosque of Ḥādjdjī Ḳāsīm, which is already mentioned in the *wakfiyye* of Kukli Meḥmed Bey from 1537-8. In 1831 Maḥmūd Pasha sided with the rebellious Albanian vizier Muṣṭafā Bushatlī but was beaten by the forces of Reshīd Pasha. He was finally removed in 1836, banished to Anatolia and executed there. His brother Emīn Pasha Rotulla succeeded him and remained in charge till his death in 1259/1843. In 1247/1831, Emīn Pasha constructed the last great mosque of Prizren and the fourth and last *medrese* of the city. The mosque still stands, a large domed structure which is visibly inspired by the 200 years' earlier mosque of Ṣofu Sinān Pasha. Emīn Pasha had only one child, his daughter Umm Kulthūm, which is the reason that the rule of the Rotulla pashas over Prizren ended. In 1327/1909, Umm Kulthūm, then living in the Istanbul suburb of Üsküdār, drew up her *wakfiyye* for the *mekteb* she had founded in Prizren.

In 1843, within the framework of the reorganisation of the *eyālets*, Prizren became the capital, instead of Üsküp/Skopje, of a large administrative unit. This had a positive effect on the population of the town, which grew rapidly. In 1865 the experienced traveler Johann Georg von Hahn called "Prisrend" the "largest city of Albania", bigger than Yenişehir/Larissa, Yannina or Shkoder, and probably even bigger than Monastīr. According to the statement of the Austrian consular agent Dr. von Petelenz, who lived many years in the city, there were 11,540

houses, of which 8,400 were Muslim, 3,000 Orthodox and 150 Catholic. In them lived 46,000 inhabitants, 36,000 of whom were Muslims. According to the same source, Prizren had 26 mosques, two Orthodox churches and one Catholic church, as well as 17 *mektebs* for boys and nine for girls, one Rüshdiyye school, and a school for the Orthodox and Catholic communities each. At this time, Prizren was the arms factory of the Balkans, producing swords, all sorts of rifles and pistols as well as excellent saffian leather and a large textile production; silversmiths were especially famous. The population was Turkish, Albanian, Bulgarian/Serbian and Vlach, and most people spoke all these languages because they lived mixed together and not in segregated *maḥalles*, a situation which can be seen as early as 1643 in the *ʿawāriḍ defter* of that year. From 1868 till 1874, Prizren was the capital of the *wilāyet* of Perzerīn. In 1288/1871, a bilingual Turkish-Serbian weekly *Perzerin* started its existence. In 1874, however, the large *wilāyet* was split up into several different units, apparently to counteract the too strong Albanian influence. After this date, the expansion of the city began to stagnate, especially when the new railway from Selānik/Thessaloniki to Kosovo caused a change in the trade network and left Prizren largely outside it. From 1878 till 1881, the Albanian nationalist movement called the "League of Prizren" met in the *derskhāne* of the *medrese* of Meḥmed Pasha in Prizren, trying to keep the "Four Albanian *wilāyets*" (Shkoder, Kosovo, Manastîr and Yanya) together and to prevent Serbian and Greek annexation, attempts which ultimately failed.

In October 1912, during the First Balkan War, the Serbian army under General Janković took Prizren, which was accompanied by a massacre of the Muslim population, according to contemporary press reports amounting to 12,000 victims. After the conquest, the citadel and all its buildings were blown up, the mosque of Sultan Meḥemmed the Conqueror was made into a church and the buildings of Rotulla Maḥmūd Pasha, the victor of Belgrade and Smederevo, were totally destroyed. Later, a beginning was made at demolishing the great mosque of Ṣofu Sinān Pasha, but violent popular protests saved the greater part of the building, its three-domed porch being lost. From the events of 1912 and from the subsequent neglect in the interwar period, Prizren never recovered. In 1961 it still numbered as few as 28,056 inhabitants. Even after the settlement of some industry and the connection with the railroad network after World War II, the city remained smaller than it had been at its height in the 19th century. Neglect and poverty, however, saved it from ugly modernisations. After the War, extensive works of restoration and conservation were carried out on the Christian as well as on the Muslim historical monuments.

In the 16th century Prizren was, in the words of the biographer and prolific writer ʿĀshiḳ Čelebi [*q.v.*], himself a native of Prizren (born 1518 or 1520, died in Üsküb/ Skopje 979/1571), a "fountain of poets". Besides Sūzī Čelebi, Nehārī and ʿĀshiḳ himself, there lived the poet Muʾmin and the mystical poet Semʿī Behārī. Saʿyī from Prizren wrote a *Fetḥ ḳalʿa-yi Belgrad*. Sudjūtī, who is often represented as a native of Kalkandelen/Totovo, was in fact from Prizren; he wrote a *Selīm-nāme* during that sultan's reign and built a bridge at Prizren. Tedjelli (d. Dhu 'l-Ḳaʿda 1100/August-September 1689) is another poet worth mentioning because of his *dīwān*. An important 18th century literary ʿĀdjizī figure was the poet and dervish leader Süleymān Efendi, the founder of the ʿĀdjiziyye branch of the Saʿdiyye dervish order, who lived and died in Prizren (1151/1738). His *türbe*, with a magnificent wooden dome, is still extant and held in veneration. The most important 19th century figure is Khōdja Ṭāhir Efendi, teacher in the *medrese* of Emīn Pasha, whose great work is a *Tārīkh-i Perzerin*, written in Arabic rhyming prose, the publication of which is an urgent desiratum for the history of Ottoman culture in the Balkans.

Prizren was and still is a centre of dervish life. The presence of the Sināniyye order dates from 998/1589-90, when Sheykh Mūsā Efendi founded a *tekke* of the this order in the Ṭabaḳ-khāne Maḥalle. The Ḳādiriyye order apparently came in 1066/1655-6, when Sheykh Ḥasan, son of Sheykh Maḳṣūd, founded the still-existing *tekke* of this order in the Ḳurila Maḥalle. The Ḳarabāshiyye branch of the Khalwetiyye came into being in 1111/1699-1700. Sheykh ʿOthmān Efendi from Serres founded the still-existing *tekke* of this order. A second *tekke* of the Sināniyye was founded in 1118/1706-7. The ʿĀdjiziyye branch of the Saʿdiyye has already been mentioned. The Bektashī order is also said to have been active in Prizren, and some Melāmī groups still exist. Of more recent date is the now very active Rifāʿiyye, whose *tekke* was wholly rebuilt in 1972 by the present (1993) Sheykh Džemali Zukić, replacing a late 19th century foundation. The *Newrūz* ceremony in this *tekke* is one of the greatest events in dervish life of all of the former Yugoslav territories.

The Ottoman *taḥrīrs* from 1530, 1550 and 1570, and the *djizye* and *ʿawāriḍ defters* from 1591 and 1643, preserved in the Başbakanlık Arşivi in Istanbul, have not yet been published. (M. Kiel)

PROCLUS [see buruḳlus].

PTOLEMY [see baṭlamiyūs].

P'U SHOU-KENG, Chinese Muslim merchant and official. Although somewhat neglected by classical Chinese and Muslim writers, P'u Shou-keng, whose surname was probably derived from Arabic "Abū", was born in the mid-13th century. As to his place of origin, one theory suggests he was born into a sinicised Central Asian family that had settled in Sze-chuan during the early Sung and later moved to Ch'üan-chou (known as Zaytūn to Muslim and Western travellers in mediaeval times [see al-ṣīn]). Another has it that his family migrated there from Champa in Southeast Asia in the second half of the Sung period. The third, and most likely, maintains that he was from a South Arabian family who had settled in Kuang-chou.

P'u was one of the wealthiest sea traders in the provinces of Fu-kien and Canton. In about 1250 A.D. he was appointed as Superintendent of Shipping Trade in Ch'üan-chou, a post he held for thirty years. Through this post he monopolised trade profits and amassed great wealth. However, towards the end of the Sung, his defection to the Mongols (attributable to his anger at the misappropriation by the Sung court of his personal fortune to finance the war against the Mongols) led directly to the Mongol conquest of all China. Following the establishment of the Mongol-Yüan Dynasty, P'u was appointed Commissioner for Infantry and Cavalry for Defence and Attack. Later he became Assistant Civil Councillor of Kiang-si Province and in 1281 one of the two Executive Assistants of the Fu-kien Provincial Secretariat. Thereafter he is little mentioned in sources and doubtless at some point died. His family flourished in government posts throughout the Yüen period.

P'u and his family were devout Muslims, sponsoring Muslim communities in Fu-kien, donating money to repair Ch'üan-chou city wall and *wakf* land for Muslim cemeteries. P'u's son donated money for the reconstruction of the city's Ch'ing-chin-ssu mosque. Ch'üan-chou became the biggest trade port and important centre for Muslim missionaries and travellers to China. During the Ming period (1368-1644), however, its significance declined and P'u's descendants were banned from civil posts by the Ming rulers on acount of his previous disloyalty to the Sung. One, however, distinguished himself as a writer during the Manchu-Ch'ing period (1644-1911). P'u Sung-ling's *Liao-Chai Chih-i* ("Strange tales from a Make-up Studio") contains Central Asian characters and reflects many Islamic traditions.

PŪNA, now officially *Pūne*, conventional European rendering Poona, a city of South India located in a District with the same name, on the Dakhan plateau, at 18° 31′ N. latitude and 73° 51′ E. longitude. The Pūna district is first mentioned in Rashtrakuta inscriptions of the 2nd/8th century as *Punya Vishaya* and *Punaka*, which had "a thousand villages." The town can be identified for the first time in the *Punaka-vādi* of another Rashtrakuta inscription of the 4th/10th century. According to local tradition, Pūna was a hamlet of about fifteen huts in 613 A.D.

There are no historical records concerning Pūna from the 5th/11th to the 8th/14th centuries. During the reign of ʿAlāʾ al-Dīn Khaldjī [see khaldjīs], the Sultan of Dihlī from 696/1296 to 716/1316, Pūna came under Muslim control. Hindu temples were now converted into *dargāhs*, the town became a Muslim *ḳaṣaba* and a military base surrounded by a mud-wall. Within the wall there were the Muslim army and a few villagers, outside were the Hindu cultivators, traders, village officials, and brahmans. Pūna commanded the communications to its immediate hinterland, the Maval Hills, but was not situated along any of the major trade routes of the Dakhan. The *ḳaṣaba* was subsequently included in the Bahmanī Sultanate [*q.v.*], from the 8th/14th century onwards, and in the Niẓām Shāhī Sultanate [*q.v.*] in the late 9th/15th and early 10th/16th centuries, both Dakhan-based Muslim powers, which did not, however, make Pūna their capital. The Russian traveller Nikitin mentions Djunnar, not Pūna, as the main town, while travelling through the area in the late days of the Bahmanī Sultanate.

In 1004/1595 the *ḳaṣaba* of Pūna, with its surrounding district, was part of a *djāgīr* [*q.v.*] conferred by the

Niẓām Shāhī government on the ancestors of the future Marāthā king Śivādjī. The town was destroyed several times, worst in 1040/1630, when it was captured and burnt by the ʿĀdil Shāhī army. About 1047/1637 Śivādjī's father first made his residence in the town of Pūna, which started to increase substantially in size. Śivādjī, however, spent most of his time at Satara, in his hill-forts, or campaigning. Pūna changed hands between the Mughals and the Marāthās [*q.vv.*] before it came into the possession of the Pēshwās [*q.v.*] early in the 12th/18th century. Due to the Mughal presence, the number of mosques increased, as did the Muslim population of the town. Khāfī Khān speaks of Pūna in the time of Awrangzīb as "situated in a treeless plain." By 1133/1720, the old *ḳaṣaba* may have had a total population of 20,000 to 30,000. By 1164/1750, Pūna had officially been acknowledged as the Marāthā capital, and, as the residence of the Pēshwās, expanded dramatically, while "a million mango trees" were planted in and around the town. The Pēshwās built the Shanwar Palace, the most magnificent building of Pūna, which was, however, destroyed by fire in 1243/1827. Numerous temples were erected, especially on Parvati hill, to the south-west of the city. From about 1143/1730 to 1234/1818, Pūna was the city of the Pēshwās, a bureaucratic-military capital with a largely Citpāvan-brahman constituency. It did not have the economic base of such Muslim cities as Āgra, Dihlī, Lahore, or Murshidābād, nor did it have the commercial promise of the new British cities of Madras, Bombay or Calcutta. Pūna had a peculiarly brahman character, and, for the most part, was a creation of the Pēshwās, who transformed it into a city of 150,000. Muslims were only a small community in 12th/18th-century Pūna, and many of them were converts from the Hindu population of the period before the rise of Śivādjī. But both Shīʿī and Sunnī groups were represented. Later in the same century, Muʾmins and Bohorās [*q.v.*] came to the city to trade, and there were also a small number of Sīdīs, descendants of African Muslims, and mercenary Arabs. In 1225/1810 there were in Pūna 412 Hindu temples and 10 Muslim shrines or mosques. The Pēshwās' generosity towards Muslim shrines in Pūna (as elsewhere) is nevertheless on record. In general, life in Pūna was much influenced by Indo-Muslim culture. The Pēshwās, for instance, affected a semi-Mughal style of dress for formal occasions.

In 1233/1817 Pūna was occupied by the British, and British troops remained in Pūna until 1368/1948, in a separate cantonment. The population increased again, to 276,000 in 1360/1941. In the post-Independence period, Pūna became an industrialised city of over 800,000 in 1391/1971, and over 1,500,000 in the 1400s/1980s. The percentage of Muslims in the city has, from the mid-12th/18th century onwards, never been more than ten, and is less now. But the Muslim population in Pūna is still sizeable, and there is considerable communalist tension.

PŪR-I BAHĀʾ-i Djāmī, Tādj al-Dīn b. Bahāʾ al-Dīn, a Persian poet who was active in the second part of the 7th/13th century when Persia was ruled by the Mongols. Most of the biographical information is based on statements to be found in his verses. His *takhalluṣ* was Pūr-i Bahāʾ. He was a native of Djām in Khurāsān and was born into a family of *ḳāḍīs* and scholars; his ancestors had held the post of *ḳāḍī* in the *wilāyat* of Djām since the days of the Sāmānids, but by Pūr-i Bahāʾ's time had lost this function. In his youth he lived in Harāt, where Mawlānā Rukn al-Dīn Ḳubāʾī and Saʿīd-i Harawī were his masters in poetry.

Pūr-i Bahāʾ was the *maddāḥ* of several high officials, who all belong to the reign of the Īlkhān Abaḳa (1265-82 [*q.v.*]). While living in Khurāsān he praised ʿIzz al-Dīn Ṭāhir al-Faryūmadī (d. *ca.* 668/1270) and his son Wadjīh al-Dīn Zangī (executed in 685/1287) who both were appointed *wazīr*/*nāʾib* of that province, the former in 1265, the latter in 1270 and again in 1282. Another prominent *mamdūḥ* was Naṣīr al-Dīn Ṭūsī (d. 672/1274 [*q.v.*]). When Pūr-i Bahāʾ left his native province he lived in Tabrīz, Iṣfahān and Baghdād where he became the panegyrist of several members of the Djuwaynī family: Shams al-Dīn the *ṣāḥib dīwān* (executed 1284), ʿAlāʾ al-Dīn ʿAṭā Malik, the famous historian and governor of Baghdād (d. 1283 [*q.v.*]) and Bahāʾ al-Dīn b. Shams al-Dīn, the governor of Iṣfahān (d. 1279). Nothing is known of his fate after the death of these patrons, a fact which must also have affected his life considerably.

Ḥamd Allāh Mustawfī Ḳazwīnī (d. after 740/1339-40) confirms in his *Taʾrīkh-i guzīda* that Pūr-i Bahāʾ's *dīwān* was well-known. Verses of Pūr-i Bahāʾ are quoted in anthologies, biographical or historical works. By far the most comprehensive collection of his poems is to be found in a comparatively late manuscript dated 1029/1619-20, written for the Ḳuṭb-Shāhīs [*q.v.*] of Ḥaydarābād in South India, and entitled *Kitāb-i Pūr-i Bahāʾ*; but as it does not contain all the verses cited in other sources it can hardly represent his complete *dīwān*.

This manuscript comprises 41 *ḳaṣāʾid*, 13 *muḳaṭṭaʿāt*, 1 *tarkīb-band*, 1 *mathnawī* called *Kār-nāma-yi awḳāf*, 2 *ghazals* and 73 *rubāʿiyyāt*, altogether totalling 25,216 verses. With the exception of the *rubāʿiyyāt*, his poetry is devoted to panegyrics (*madḥ*), satire (*hadjw*) or quite often a mixture of both. Sanāʾī and Sūzanī were his favourite poets and admired models.

Pūr-i Bahāʾ shows a predilection for complicated metres and rare words. He makes frequent use of financial and administrative technical terms, and is famous for his macaronic pieces that mix Persian with Mongolian and Eastern Turkic vocabulary, so that most of his verses are not easily understood. There are many comments on the political and social grievances of the time, such as excessive taxation or the improper behaviour of state officials, and allusions to otherwise unknown or little-known individuals. The satirical *mathnawī Kār-nāma-yi awḳāf* criticises the bad state of affairs prevailing within the pious endowments. For his criticism and satire, Pūr-i Bahāʾ indulges in pornographic images and obscene words; this may have been the true motive for the copying of his poems for the Ḳuṭb-Shāhī ruler's library.

PŪR-I DĀWŪD, IBRĀHĪM, Persian scholar, poet and patriot, born in 1886/1264 at Rasht [*q.v.*], the son of a merchant-landowner of Sayyid descent. From boyhood he delighted in poetry, and himself became an acclaimed romantic and patriotic poet (Browne, p. XVIII; Rypka, 376). As a student in Tehran in 1906 he witnessed the struggle for constitutional reform, which affected him deeply. He studied law briefly in Paris, but abandoned it for ancient Iranian studies, which he pursued in France and Germany for a number of years. In 1924 the Pārsīs [*q.v.*] invited him to translate Zoroaster's *Gāthās* into modern Persian. He accordingly spent some time in India, where this translation was published in 1927, to be followed by renderings of the Avestan *Yašts* (1931), *Khorda Avesta* (1932) and *Yasna* (1934) (Tarapore, 14, 19-22, 34-6). His great aim was both to serve Iranian Zoroastrians and enlighten Iranian Muslims about their cultural heritage. In 1938 he became professor of Avestan, Pahlavi and ancient Iranian history at Tehran University, publishing thereafter other scholarly works on Iranian religion, history and folklore, as well as poems. He died in 1347 *sh*/1968.

PUSHTŪNISTĀN [see PASHTŪNISTĀN].

PŪST (P.), skin, Turkish *pōst* or *pōstakī*, a tanned sheepskin, used as the ceremonial seat or throne of a *pīr or shaykh* of a dervish order. The head, sides and foot had mystical significances ascribed to them. It corresponds to the Arabic *bisāṭ*. According to Ewliyā Čelebi (Istanbul 1314/1896-7, i, 495), the *murīd*, after passing the test by the *pīr*, is called *ṣāḥib pūst*. On ceremonial occasions amongst the Bektāshī order, the hall or convent was said to have been set out with twelve *pūst*s of white sheepskin in remembrance of the twelve *Imāms* or standing symbolically for twelve great figures in Bektāshī history, but in the last days of the order's open existence in Turkey (i.e. before 1925; see BEKTĀSHIYYA), the number of special *pūst*s was restricted to not more than four, in the experience of Birge (see *Bibl.*).

Bibliography: J.P. Brown, *The darvishes*, Oxford 1927; G. Jacob, in *Türkische Bibliothek*, ix, Berlin 1908; H. Thorning, in *ibid.*, xvi, 1913; J.K. Birge, *The Bektashi order of dervishes*, London and Hartford, Conn. 1937, 176 (with illustr. no. 2), 178-9. (R. LEVY*)

PŪST-NESHĪN (P.), lit. "the one sitting on the [sheep's] skin", the title given to the *baba* or head of a dervish *tekke* in Persian and Ottoman Turkish Ṣūfī practice, e.g. amongst the Bektāshīs [see BEKTĀSHIYYA].

PUWASA [see Suppl.].

R

RĀʾ the tenth letter of the Arabic alphabet, transcribed as /r/, and with a numerical value of 200, according to the eastern letter order [see ABDJAD].

Definition. Vibrant, apical, alveolar and voiced. This trilled consonant is produced by a series of movements of the tongue produced a little behind the gums of the incisors. Sībawayh calls the consonant /r/ "hard" (*shadīd*) and "repeated" (*mukarrar*), because of the repetition (*takrīr*) of the tongue's movement during the sound's production. For al-Khalīl, the /r/ is a "pointed" (*dhawlaḳī*) consonant because it is produced with the tip (*dhawlaḳ*) of the tongue. In phonology, the phoneme /r/ is defined by the oppositions /r - l/, /r -n/ and /r - gh/; the phoneme /r/ is thus non-lateral, non-nasal and anterior.

Velarisation (*tafkhīm*). As well as the simple realisation of /r/, the grammarians describe an emphatic realisation /ṛ/ brought about by the phonetic surroundings. The /r/ is velarised (*mufakhkham*) when it is followed by the vowel /a/ or the vowel /u/, or by one of the seven "high" (*mustaʿliya*) consonants: /ṭ/, /ḍ/, /ẓ/, /ṣ/, /ḳ/, /kh/ and /gh/, itself followed by /a/ or /u/; contrariwise, the /r/ is not velarised if it is followed by the vowel /i/ or the semi-vowel /y/. This emphatic realisation is a combinatory variant of the same phoneme, and has only a phonetic, extra-phonological value. One of the properties of the emphatic /ṛ/ is to prevent, through its proximity, the inclination (*imāla*) of the vowel /a/ towards /i/. The opposition of non-emphatic /r/ and emphatic /ṛ/ exists also in Arabic dialects. In most eastern dialects, the opposition remains purely phonetic, with no distinctive character,

and the causes producing emphasisation are the same as those in literary Arabic; but in certain eastern dialects and in the western ones, the opposition of the two forms of /r/ has a distinctive value, and one can speak of two phonemes, non-emphatic /r/ and emphatic /ṛ/.

Assimilation (*idghām*). Because of its specific character, the trilling or repetition (*takrīr*) which accompanies its emission, Sībawayh considers that /r/ cannot be assimilated (*mudgham*) to another consonant, since it would lose its character; however, the assimilations of /-rl-/ into /- ll -/ are found amongst certain "readers" (*ḳurrāʾ*) of the Ḳurʾān.

In modern Arabic dialects, /r/ undergoes very few conditioned alterations and is subject to only one non-conditioned alteration; in certain sedentary dialects, both eastern and western, the /r/ may be realised as a voiced velar spirant /gh/.

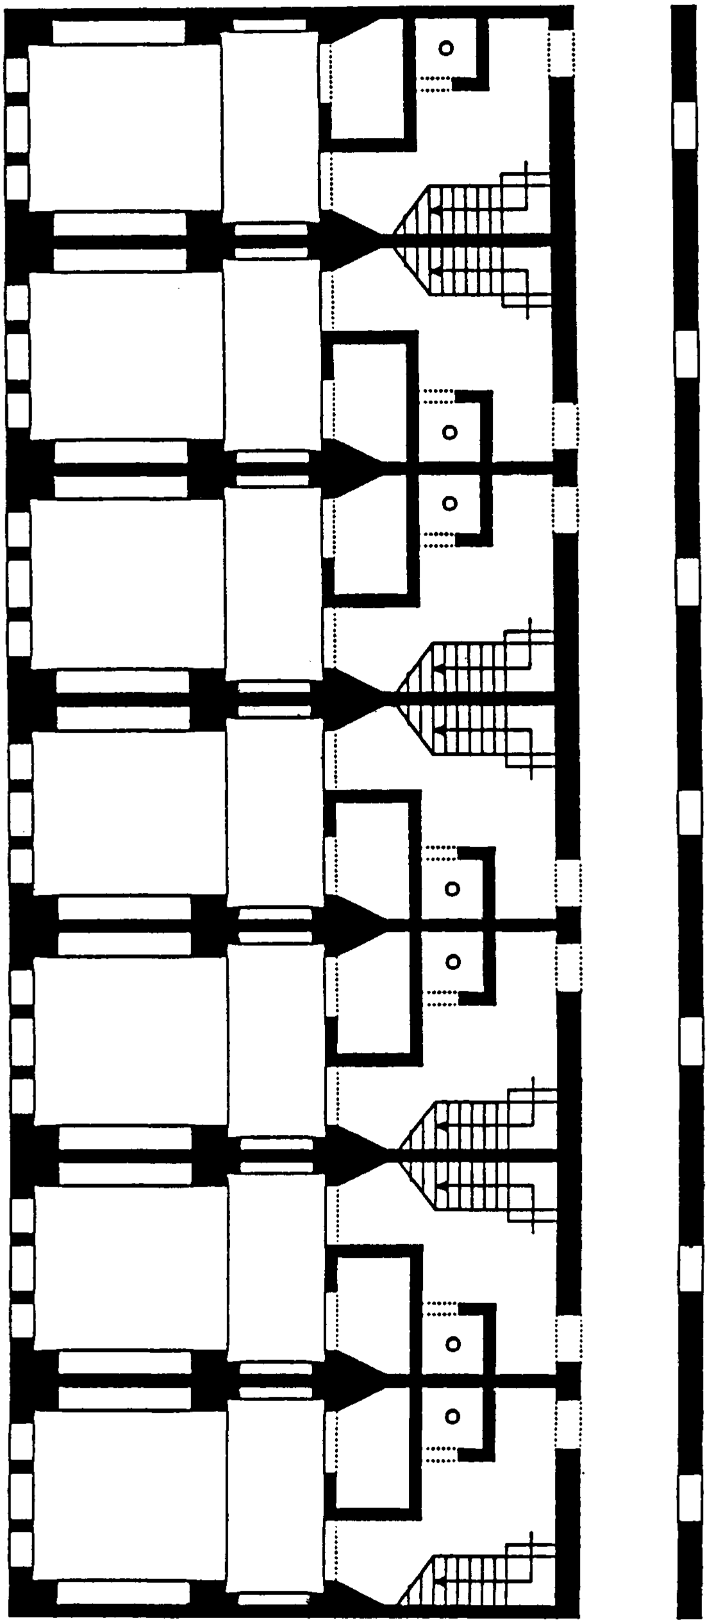
(G. Troupeau)

RABʿ (a., pl. *ribāʿ*) originally means home, domicile, home town or home country; the verb *rabaʿa* means "to dwell". In the context of Cairene architecture, it designates a type of urban dwelling which is a rental multi-unit building founded for investment. It can also refer to the living quarters belonging to a religious institution.

In his description of Cairo in the 5th/11th century, Nāṣir-i Khusraw [*q.v.*] mentions tenant buildings that sheltered as many as 350 dwellers, and ʿAbd al-Laṭīf al-Baghdādī (d. 629/1231-2) writes about *rabʿ*s in Cairo which included 50 living units (*bayt*) (*al-Ifāda wa 'l-iʿtibār*, 55, 58; de Sacy, *Relation*, 374-411). Many travellers have described multi-storied houses in Fusṭāṭ which are also mentioned in Geniza documents (Goitein, *A Mediterranean society*, iv, 58-9). It is not clear, however, whether the multi-storied houses should necessarily be identified with rental buildings. Apart from the multi-storied houses, there were buildings consisting of shops or stores on the street level with living units on the upper level having an independent entrance (*ibid.*, 17). Both the multi-storied house and the rental apartment complex are documented in papyri concerning large Egyptian cities of the Ptolemaic period (Nowicka, *Maison privée*, 108, 125). In the Fāṭimid sources, large dwelling complexes are designated by the term *dār*; it cannot be definitely stated whether or not these were the equivalent of the Roman *insulae*. The *rabʿ* in the specific sense of a Cairene dwelling type consisting of a row of living units built above a row of shops or a commercial structure is not documented before the Mamlūk period.

The most common type of living-unit in a *rabʿ* is called *ṭabaḳa* (pl. *ṭibāḳ*); larger apartments are referred to as *riwāḳ* or *ḳāʿa*. The *ṭabaḳa* was a kind of duplex with a vestibule (*dihlīz*), a recess for water jars, a latrine and a main room consisting of a slightly raised *īwān* and a *dūrḳāʿa*. An inner staircase led up to a mezzanine (*mustaraḳa*) used for sleeping. Each unit had its own enclosed private roof. A *ṭabaḳa* may also be a triplex with an additional room above the mezzanine.



The *rabʿ* was often built on the second floor above a row of shops or store-rooms or above any type of caravanserail like a *wakāla*, a *khān*, a *funduḳ* or a *ḳaysariyya*. In the first case it was built along the street. If it was associated with a commercial structure, it was adapted to its layout, i.e. it was built around a courtyard. As the basic study of L. Ali Ibrahim demonstrates (see *Bibl.*), the windows of the living units, as a rule, overlooked the street whenever they could be located on the street side, which contradicts the wide-spread conception that residential architecture in Egypt is introverted. Each *rabʿ* was served by an independent staircase which was reached through a separate entrance from the street. The staircase led to a gallery leading to the living units. There were also *rabʿ*s built independently without commercial structures, with living units also on the ground floor. Since the 9th/15th century the *rabʿ* type of housing was adopted to serve as living quarters for the community of the *khānḳāhs* and *madrasas* instead of the traditional cells. Such *rabʿ*s were built by Sultan Barsbāy and Amīr Ḳurḳumās at their respective religious-funerary complexes in the cemetery. A different kind of *rabʿ* was the *rabʿ al-zaytī* mentioned by Maḳrīzī (*Khiṭaṭ*, ii, 78). Located in the green outskirts of Cairo, along the Nāṣirī Canal, its apartments on four sides overlooked gardens and orchards. It was frequented by a licentious clientèle (*yanziluhā ahl al-khalāʿa li 'l-ḳaṣf*).

The rental *rabʿ*s were built by members of the ruling class and other wealthy investors who made them into *waḳf*, i.e. they alienated their revenues either to endow philanthropic and religious foundations or for their private family trusts. The dwellers of the *rabʿ* were not poor, but middle-class citizens who were able to pay the rent that made this form of dwelling a lucrative investment. The *waḳf* archives of Cairo provide a wealth of *rabʿ* descriptions from the Mamlūk as well as the Ottoman periods (see H. Sayed). From the Mamlūk period only *rabʿ*s built by the ruling establishment have survived, those of the sultans Barsbāy, Īnāl, Ḳāyitbāy, al-Ghūrī and Amīr Ḳurḳumās. From the Ottoman period there are still a good number of *rabʿ*s built by *amīrs* and other notables.

Diagrammatic plan of a *rabᶜ* unit (by Hazem Sayed).

RABĀB (A.), the generic name for the viol, or any stringed instrument played with a bow (*ḳaws*). The origin of the name has been variously explained: *a.* from the Hebrew *lābab* (*l* and *r* being interchangeable); *b.* from the Persian *rubāb*, which was played with the fingers or plectrum; and *c.* from the Arabic *rabba* (to collect, arrange, assemble together). The first derivation is scarcely feasible. The second has a *raison d'être*, although the mere similarity in name must not be accepted without question. In spite of the oft-repeated statement that the Arabs admit that they borrowed the *rabāb* from the Persians, together with the word *kamān* for the bow, there is not the slightest evidence for it. No Arabic author (so far as the present writer knows) makes an admission of this kind, nor have the Arabs adopted the word *kamān* for the bow, their own term *ḳaws* having been considered sufficient. It is true that we read in the *Mafātīḥ al-ᶜulūm* (10th century) that "The *rabāb* is well known to the people of Persia and Khurāsān" (237), but this author was writing in Transoxania, and we know from al-Fārābī that the *rabāb* was also well known in Arabian lands. One argument against the alleged borrowing from Persia is that the *rubāb* with the Persians was

The *rab*^c of Sultan al-Ghawrī at his *wakāla* near al-Azhar.

always a plucked and not a bowed instrument. Still, the Arabs may have borrowed the plucked instrument and adapted it to the bow. On the other hand, the Arabic root *rabba* as the parent of the word *rabāb* has much in its favour. As the Arabic musical accousticians point out, plucked instruments such as the *ʿūd* (lute), *ṭunbūr* (pandore), etc., gave short (*munfaṣil*) sounds, but bowed instruments such as the *rabāb* gave long or sustained (*muttaṣil*) sounds. It was application of the bow which "collected, arranged, or assembled" the short notes into one sustained note, hence the term *rabāb* being applied to the viol (see Farmer, *Studies*, i, 99).

The *rabāb* is mentioned as early as the Arabic polygraph al-Djāḥiẓ (d. 255/869) in his *Madjmūʿat al-rasāʾil*. Yet we cannot be sure whether this was the bowed *rabāb* or the plucked *rubāb*. At any rate, it already had a legendary history when he wrote. According to the *Kashf al-humūm* (15th-16th century), it is first found in the hands of a woman of the Banū Ṭayyiʾ (fol. 263). Turkish tradition ascribed its "invention" to a certain ʿAbd Allāh Fāryābī (Ewliyā Čelebī, *Seyāḥat-nāme*, i/2, 226, 234). An Andalusian legend places its invention within the Iberian peninsula (Delphin and Guin, *Notes sur la poésie et la musique arabes*, 59). One thing is certain: even if we have iconographic evidence of the viol in the 8th or 9th century (see below), the earliest literary evidence of the use of the bow comes from Arabic sources, i.e. from al-Fārābī (d. 950), the Ikhwān al-Ṣafāʾ (10th century), Ibn Sīnā (d. 1037), and Ibn Zaylā (d. 1048), as I have fully demonstrated elsewhere (*Studies*, i, 101-5).

Seven different forms of viol are known to Islamic peoples, viz. 1. the Rectangular Viol, 2. the Circular Viol, 3. the Boat-Shaped Viol, 4. the Pear-Shaped Viol, 5. the Hemispherical Viol, 6. the Pandore Viol, and 7. the Open Chest Viol.

1. The Rectangular Viol. This consists of a wooden frame, more or less rectangular, over the face (*wadjh*) and back (*ẓahr*) of which is stretched a membrane (*djilda*). The neck (*ʿunuḳ*) is cylindrical and is of wood, whilst the foot (*ridjl*) is of iron. It has either one or two strings (*awtār*), generally of horsehair. Al-Khalīl (d. 791) says that "the ancient Arabs sang their poems to its [the *rabāb*'s] voice [or sound]" (Farmer, *Studies*, i, 100). In the *Kashf al-humūm* (fol. 267) we read that it was used to accompany the pre-Islamic *ḳaṣīda* and the elegiac poem. Probably the pre-Islamic *rabāb* was of this rectangular form. Lane (*Lexicon*, 1005) held this latter view. Ibn Ghaybī (d. 1435) describes this viol of the Bedouin as rectangular (*murabbaʿ*) and with a membrane face and back and one string of horsehair (fol. 78b). Niebuhr (i, 144) says that it was still called the *murabbaʿ* in the 18th century. We certainly have a rectangular instrument shown in the frescoes of Ḳuṣayr ʿAmra (Musil, pl. xxxiv), but it is played with the fingers and not with a bow. Yet even in modern times the *rabāb* of the desert was to be found played in this way as well as with a bow (Crichton, ii, 380; Burckhardt, *Bedouins*, 43; idem, *Travels*, i, 389; Burton, *Personal narrative*, iii, 76). Niebuhr (Tab. xxvi, F) delineates a rectangular viol of two strings, although he says that he saw a viol of one string in Cairo. Villoteau (722-4, 913-18) distinguishes between the two instruments. In Egypt, he says, the *rabāb al-shāʿir* (poet's viol) had one string, whilst the *rabāb al-mughannī* (singer's viol) had two strings. Lane (*Mod. Egypt.*, chs. xviii, xxi) also describes them. These instruments never form part of a concert orchestra, being relegated to the folk. For other delineations of the instrument, see Fétis (*Hist.*, ii, 145), Engel (*Catalogue*, 211; *Researches*, 88), Chouquet (204), Sachs (*Reallex.*, 317). Actual specimens abound in museums, e.g. Brussels, no. 382 and New York, nos. 242, 391.

2. The Circular Viol. The modern instrument of this form consists of a circular wooden frame or pan, the face, and sometimes the back, being covered with a membrane. There is no foot. There is no special reference to this form in Arabic literature nor is there any definite inconographic evidence of it earlier than the 18th century, when it is described and delineated by Niebuhr (i, 144; Tab. xxvi, G), who found it at Baṣra. It had but one string. It is still found among the folk of Palestine (Sachsse, 30, 40, Tab. 3, 17) and the Maghrib (Chottin, 50), where it is still known as the *rabāb* or *ribāb*. For other delineations, see Lavignac (2790) and Chottin (pl. vi).

3. The Boat-Shaped Viol. This form is confined to the Maghrib. It consists of a piece of wood hollowed out into the shape of a boat. The chest (*ṣadr*) is covered with thin metal or wood pierced with ornamental rosettes (*nuwwārāt*), whilst the lower part is covered with a membrane. The head (*raʾs*) is at right angles to the body, and it is generally furnished with two strings. It seems to have been used by the Arabs and Moors of Spain since their invasion of the peninsula. It is praised by their 10th and 11th century writers Abū Bakr Yaḥyā Ibn Hudhayl (see al-Shalāḥī, fol. 15), and Ibn Ḥazm (see Muḥammad b. Ismāʿīl, 473), and doubtless they refer to either this instrument or the Pear-Shaped Viol (see below, 4) since the *Glossarium Latino-Arabicum* (11th century) equates *rabāb* with *lira dicta a varietate*. If we have no iconographic evidence of this viol from Arabian or Moorish sources, it certainly existed among the Spaniards, since the instruments in the *Cantigas de Santa Maria* (13th century) show definite oriental features; see Riaño (129) and Ribera (pl. xi). Ibn Khaldūn (d. 1406) is the first to describe this viol, although not very clearly (*Prolegomena*, in *Notices et extraits*, xvii, 354). It is not until the time of ʿAbd al-Raḥmān al-Fāsī (*ca.* 1650) that we get any musical details of the instrument (*JRAS* [1931], 366). European travellers (Addison, Windhus, Höst, Shaw) mention the instrument as popular in the Maghrib, and today it is one of the principal instruments in concert music. Höst gives us one of the earliest delineations of the instrument from Eastern sources (Tab. xxxi, 2). For a 19th century description, see F. Salvador-Daniel (80), and for a design, see Christianowich (pl. 1). Several delineations of both instruments and players may be seen in al-Ḥafnī (pls. 34, 39-52), Mahillon (i, 416-17), Fétis (*Hist.*, ii, 146), Engel (*Cat.*, 143), Chouquet (205), Sachs (*Reallex.*, 317), etc. For the instrument of Northern India called the *sārangi*, see Lavignac (350) and Fétis (ii, 298).

4. The Pear-Shaped Viol. Probably, the earliest Arabic reference to this instrument is that made by Ibn Khurradādhbih (d. *ca.* 912) who, in an oration before the caliph al-Muʿtamid (d. 893), says that the Byzantines had a wooden instrument of five strings called the *lūra* which was identical with the *rabāb* of the Arabs (al-Masʿūdī, *Murūdj*, viii, 91). We can probably identify the instrument in the famous Carrand Casket at Florence which dates from the 9th century (*L'Arte*, 1896, 24). From the Siculo-Moorish woodwork of the Palatine Chapel at Palermo (12th century) we see to better advantage what the Arabian instrument was like (*BZ* [1893], ii, 383). It was this form of the *rabāb*, probably, with which al-Fārābī (d. 950) deals (see Land, *Researches*, 130, 166). He gives full details of both the *accordatura* and scales. We know little about this instrument in Arabic-speaking lands

after the 13th-14th centuries, until it is described by Niebuhr (i, 143; Tab. xxvi, D) in the 18th century, and even then it appears to have been favoured only by the Greek population. It had three strings. It may have been used in the Maghrib (Jackson, 159-60), but neither Villoteau nor Lane know of it in Egypt. In Turkey, it appears to have been adopted from the Greeks, possibly in the 17th century, and with the *ʿūd* and *lawta* plays a prominent part in concert music today (Lavignac, 3015). Recently, an attempt has been made to introduce this *rabāb turkī* or *arnaba*, as it is now called, into Egypt (al-Ḥafnī, 661, pl. 35). Designs of the instrument may be found in Engel (*Cat.*, 210) and Crosby Brown (iii/1, 22), where they represent specimens in collections at South Kensington (London) and New York.

5. The Hemispherical Viol. This is, perhaps, the best known form of the viol in the Islamic east. The body consists of a hemisphere of wood, coconut, or a gourd, over the aperture of which a membrane is stretched. The neck is of wood, generally cylindrical, and there is a foot of iron, although sometimes there is no foot. It is often known in Arabic as the *kamāndja* or more rarely as the *shīshak*. The former is derived from the Persian *kamānča* (dim. of *kamān*, "bow") whilst the latter is derived from the Persian and Turkish *shīshak*, *shūshak*, *ghishak*, *ghižak*, *ghičak*, etc., which may have had their origin in the Sanskrit *ghoshaka*, an instrument mentioned in the pre-Christian *Nāṭya-shāstra* (ch. xxxiii). The present writer believes that the words *shīshal and shīzān* mentioned in the Ikhwān al-Ṣafāʾ (Bombay ed., i, 97) and al-Shalāḥī (fol. 12) respectively, are copyist's errors for *shīshak* and *shīzāk*. The word *kamāndja* is first mentioned in Arabic by Ibn al-Faḳīh (*ca.* 903) who says that it was used by both the Copts and the people of Sind. Of course, this need not mean that the instrument mentioned was a hemispherical viol, because, being a Persian by origin, the author may have used the word *kamāndja* in its Persian generic sense meaning a viol. That Egypt had an early liking for the *kamāndja* is borne out from various sources. Although in Egypt the hemispherical viol is nowadays called the *rabāb miṣrī* (Egyptian viol), in earlier days it was acknowledged that Egypt borrowed the instrument from Persia (*Kashf al-humūm*, fol. 106). The *kamāndja* was certainly popular at the courts of the Ayyūbid al-Kāmil (d. 1238) and the Mamlūk Baybars (d. 1277); see al-Maḳrīzī, i/1, 136; Lane-Poole, *Hist. of Egypt*, 249. In the Persian *Kanz al-tuḥaf* (14th century) the hemispherical viol is described and figured as the *ghičak*, but in Ibn Ghaybī, where both the *ghižak* and the *kamāndja* are described, the former is a larger type of the latter, having, in addition to its two ordinary strings, eight sympathetic strings (*Kanz al-tuḥaf*, fol. 261b; Ibn Ghaybī, fol. 78). In the 18th century the *kamāndja* is delineated by Russell (i, 152-3, pl. iv), and Niebuhr (i, 144, Tab. xxvi, E). Both Villoteau (900, pl. BB) and Lane (*Mod. Egyptians*, ch. xviii) give minute details of the construction and *accordatura*. Mushāḳa [*q.v.*] also describes the Syrian *kamāndja* (*kamandja*) of his day (*MFOB*, vi, 25, 81). For the modern Persian instrument, see Advielle (14 and pl.) and Lavignac (3074). Turkoman instruments are given by Fitrat (45) and Belaiev (54). For Malaysia, see Kaudern (178); for India, Lavignac (349) and Fétis (ii, 295). For other designs, see Farmer (*Studies*, i, 76), Fétis (*Hist.*, ii, 136-7), Chouquet (203), Sachs (*Reallex.*, 207).

6. The Pandore Viol. This form is practically a *ṭunbūr, sitār*, or the like, which is bowed instead of being plucked by the fingers or a plectrum. The two best-known examples from India are the *esrār* and *ṭāwūs*. The former has a membrane on its face and has five strings played with the bow together with a number of sympathetic strings. The latter is practically identical with the former, but is adorned with the figure of a peacock (hence its name) at the bottom of the body of the instrument. See Lavignac (351) and Mahillon (i, 131) for designs and details. With the Persians and Turkomans we see various kinds of pandores used with the bow. See Advielle (14), Lavignac (3074), Mironov (27) and Kinsky (26).

7. The Open Chest Viol. This is unknown to the peoples of North Africa and the Near East, although it is popular in the Middle East and the Subcontinent. Unlike the preceding forms of the viol, the upper part of the face of the body or sound-chest is left open. The best-known example of this is the *sārindā* of India which has three strings. See Fétis (ii, 296), Lavignac (351), Mahillon (i, 137) and Kinsky (27), for both designs and details. In Turkestan a similar instrument known as the *ḳūpūz* is very popular. It has two strings. See Belaiev (52), Mironov (25) and Fitrat (43).

(H.G. Farmer)

RABAḌ (a., pl. *arbāḍ*), district or quarter of a town situated outside the central part or *madīna* [*q.v.*]. This term, which is very frequently found in mediaeval Islamic historical texts of both the Occident and Orient, lies at the origin of the Spanish word *arrabal*, which has the same meaning. In the strongholds (*ḥiṣn* or *ṣakhra*) of Muslim Spain, the name *rabaḍ* was given to the civil quarter situated below the strictly

military quarter; it was also applied to the quarters of the lepers and of prostitutes, whilst amongst the Spanish Christians, it designated a parish.

These quarters of a town generally bore a special name. Thus we know the names of 21 of the 4th/10th century suburban quarters of the caliphal capital Cordova [see ḲURṬUBA]. Rabaḍ S̲h̲aḳunda or simply al-Rabaḍ was the southern quarter of Cordova, where the celebrated revolt called "that of the suburb" broke out. Situated on the left bank of the Guadalquivir, it was inhabited by the Cordovan plebs, but also by artisans and merchants, as well as by Mālikī *fuḳahā*ʾ who had made it a centre of opposition to the Umayyad authorities. A conspiracy hatched by the notables of the quarter in D̲j̲umādā II 189/May 805 had failed and 72 of those involved had been executed; in the following year, an outbreak of discontent had likewise been followed by several condemnations to death. For about a dozen years, the trouble-makers amongst the *fuḳahā*ʾ seem to have maintained an attitude of mind which provoked a popular rising on 18 Ramaḍān 202/25 March 818 (and not in 198/204, the date generally accepted before Lévi-Provençal's revision of this in *Hist. Esp. Mus.*, i, 165 n. 1). The immediate cause of the uprising was the *amīr* al-Ḥakam I's decision to impose new, extraordinary taxes and to entrust the task of raising them to the chief of his police force, a Christian called Rabīʿ, but the actual pretext was the murder of a tradesman by one of the police. Since al-Ḥakam was, on his return from a hunting session in the Campiña [see ḲANBĀNIYYA], jeered at by the population of the quarter, he had some ten of those involved executed, which enraged the mob. It surged en masse towards the bridge over the Guadalquivir with the intention of going to seize the *amīr*'s palace situated on the right bank. The bridge guards were on the point of being overwhelmed when two officers, the *ṣāḥib al-ṣawāʾif* ʿUbayd Allāh b. ʿAbd Allāh al-Balawī and Isḥāḳ b. al-Mund̲h̲ir, crossed the river at a ford with a rapidly-assembled force of cavalrymen and, taking the mob in its rear, speedily suppressed the insurrection. The *amīr* then allowed the soldiery to give free rein to pillaging and massacring with an unheard-of ferocity. At the end of three days, the killing was halted, and al-Ḥakam allegedly put to death 300 of the notables. The remainder of the inhabitants of the quarter were compelled to flee Cordova, the Rabaḍ was razed to the ground and, right until the end of the 4th/10th century, the prohibition of erecting any sort of building there was respected by his successors.

The bloody repression of the revolt gave to this last the name of Rabaḍī, which was also given to those victims compelled to swarm all over al-Andalus. A number of these exiles fled to Morocco where, in the newly-founded town of Fās, they gave their name to the ʿUdwat al-Andalus(iyyīn), the bank of the Andalus (see R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1950, 136-47 and index).

Bibliography: See E. Lévi-Provençal, *L'Espagne musulmane du Xème siècle*, Paris 1932, 151, 203, 207; idem, *Hist. Esp. mus.*, i, 161-2 and index; R. Dozy, *Supplément*, s.v. (E. LÉVI-PROVENÇAL)

AL-**RABAD̲H̲A**, an early Islamic settlement in western Arabia, now essentially an archaeological site marked by the *birka* or cistern of Abū Salīm. It lies in the eastern foothills of the Ḥid̲j̲āz mountain chain some 200 km/124 miles east of Medina. In early Islamic times it lay on the main pilgrimage route from Kūfa in ʿIrāḳ to Mecca, later known as the Darb Zubayda [*q.v.* in Suppl.], with such facilities as food and drinking water for the pilgrims. Today, the area is green for much of the year and is used by Bedouins for grazing their flocks.

Originally an extensive *ḥimā* [*q.v.*] which Abū Bakr confiscated from the Banū T̲h̲aʿlaba, al-Rabad̲h̲a was a thriving place, and not the contemporary equivalent of Siberia, when the Companion and puritan activist Abū D̲h̲arr [*q.v.*] was either exiled to al-Rabad̲h̲a by the caliph ʿUt̲h̲mān or withdrew there of his own free will, according to some sources, dying there in 31 or 32/651-3 (see ABŪ D̲H̲ARR and also A.J. Cameron, *Abû D̲h̲arr al-G̲h̲ifârî, an examination of his image in the hagiography of Islam*, revised ed. London 1982, 67-8, 73, 78, 80, 89-90, 107-9). The early Arab historians often mention it and the geographers described it as flourishing until 319/931, when warfare of its people with those of Ḍariyya to its east in Nad̲j̲d brought about the intervention and destruction of the town by the Ḳarāmiṭa or Carmathians [see ḲARMAṬĪ]; al-Muḳaddasī, 108, characterises it as having only brackish water and being ruinous.

The modern archaeological site covers an area of approx. 1,740 hectares, and several seasons of excavations have revealed various types of buildings, including palaces, houses, two mosques, large reservoirs and underground water-storage tanks. There is evidence of small-scale artisanal activity such as tanning, dyeing, smelting and metal-working. Many Umayyad and ʿAbbāsid period dirhams and dīnārs have been found, together with a variety of ceramics, including polychrome and lustre ware, steatite and glass objects.

Bibliography: In addition to the references given in the article, see Yāḳūt, *Buldān*, ed. Beirut, iii, 24-5; Ḥamad al-D̲j̲āsir, *al-Rabad̲h̲a fī kutub al-mutaḳaddimīn*, in *al-ʿArab*, i/5-8 (1386/1967); and above all, S.ʿA.ʿA. al-Ras̲h̲id, *Al-Rabadhah, a portrait of early Islamic civilisation in Saudi Arabia*, Riyāḍ 1986, giving the earlier sources and the results of recent excavations. (S.ʿA.ʿA. AL-RAS̲H̲ID)

AL-**RABAḤĪ**, YŪSUF B. SULAYMĀN b. Marwān al-Anṣārī, Abū ʿUmar, b. 367/978, d. at Murcia 448/1056, grammarian of Muslim Spain. Best known as such, he is equally credited with competence in *fiḳh*, poetry, metrics and genealogies. It appears that he played a certain role in the reconciliation of the various grammatical schools in al-Andalus. A *Radd ʿalā 'l-Ḳabrī* and a *Radd ʿalā Abī Muḥammad al-Aṣīlī* are attributed to him, but do not seem to have survived.

Bibliography: Ibn Bas̲h̲kuwāl, *Ṣila*, Cairo 1374/1955, ii, 640 no. 1499; Kaḥḥāla, *Muʾallifīn*, Damascus 1376-80/1957-61, xiii, 303. (ED.)

AL-**RABAʿĪ**, Abu 'l-Ḥasan ʿAlī b. ʿĪsā, grammarian of Bag̲h̲dād of the 4th/10th century and contemporary of Ibn D̲j̲innī.

He was born at Bag̲h̲dād in 328/940, and studied grammar there under the direction of al-Sīrāfī [*q.v.*] before moving to S̲h̲īrāz in order to follow the teaching of al-Fārisī [*q.v.*] over a period of almost 20 years. He then returned to Bag̲h̲dād where he died, at an advanced age, in 420/1029. His eccentricities, seen in a fear of dogs, prevented him from having any pupils. Amongst his works, none of which have survived, are mentioned commentaries (*s̲h̲arḥ*), such as one on the *K. al-Īḍāḥ* of al-Fārisī and one on the *K. al-Muk̲h̲taṣar* of al-D̲j̲armī, and two treatises on grammar, the *K. al-Muḳaddima* and the *K. al-Badīʿ*.

Bibliography: Ibn al-Anbārī, *Nuzha*, 201-3; Ḳifṭī, *Inbāh*, ii, 297; Suyūṭī, *Bug̲h̲ya*, 344-5; Yāḳūt, *Irs̲h̲ād*, v, 283-7; Kaḥḥāla, *Muʾallifīn*, vii, 163-4; Brockelmann, S I, 491; Sezgin, *GAS*, ix, 185. (G. TROUPEAU)

RABAT [see AL-RIBĀṬ].

RABB (A.), lord, God, master of a slave. Pre-Islamic Arabia probably applied this term to its gods or to some of them. In this sense the word corresponds to the terms like Baʿal, Adonis, etc. in the North-western Semitic languages, where *rabb* means "much, great" (see A. Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938, 136-7). In one of the oldest sūras (CVI, 3) Allāh is called the "lord of the temple". Similarly, al-Lāt bore the epithet *al-Rabba*, especially at Ṭāʾif where she was worshipped in the image of a stone or of a rock. In the Ḳurʾān, *rabb* (especially with the possessive suffix) is one of the usual names of God. This explains why in *Ḥadīth*, the slave is forbidden to address his master as *rabbī*, which he must replace by *sayyidī* (Muslim, *al-Alfāẓ min al-adab*, trads. 14, 15, etc.). The abstract *rubūbiyya* is not found in either Ḳurʾān or *Ḥadīth*, but is in common use in mystic theology.

In pre-Islamic times, *rabb* was one of the titles given to certain of the *kāhins* [*q.v.*]; Lammens gives numerous references for this topic (see his *Le culte des bétyles et les processions religieuses*, in *BIFAO*, xvii [1919], 39-101). The name *r b y*, associated with *ś h r* (the Moon), designated in the kingdom of Ḳatabān a class of priest-officials who had the duty of administering the divinity's domains (G. Ryckmans, *Les religions arabes preislamiques*², Louvain 1953, 30). For the usage of *rabb* in the Ḳurʾān, see J. Chelhod, in *Arabica*, v (1958), 159-67. For further details, see T. Fahd, *La divination arabe*, Paris 1987, 107-8.

Bibliography: In addition to references in the text, see the Arabic lexica and the Ḳurʾān commentaries, s.v. (A.J. WENSINCK-[T. FAHD])

RABGHŪZĪ, NĀṢIR AL-DĪN B. BURHĀN AL-DĪN, early writer in Central Asian Turkish, was born somewhere in the second half of the 13th century, possibly in the still unidentified encampment of Ribāṭ Oghuz in Transoxiana (Western Turkestan), then under the hegemony of the Čaghatay Khānate [*q.v.*]. Being himself a Turk and a judge by profession, he also had some rather good relations with the Mongol ruling élite. The date *post quem* for his death is 710/1310. These scarce facts all stem from his own work and no other source so far has come to light revealing anything more about his identity.

Rabghūzī gained his fame as author of the first Middle Turkic version (in prose) of the *Ḳiṣaṣ al-anbiyāʾ* [*q.v.*] genre, commonly referred to as the *Ḳiṣaṣ-i Rabghūzī*, and written in 710/1310 at the instigation of Nāṣir al-Dīn Tuḳ Bugha, a young (not yet identified) prince of Mongol lineage, but of Muslim faith. The text is enriched with some seventy poems in Arabic and Türki (cf. H. Boeschoten and M. Vandamme, 1990); also, it contains some 1200 Arabic quotations from the Ḳurʾān and the *ḥadīth*.

First extracting material from a large range of sources, Rabghūzī then recomposed this chosen material in a number of cyclic stories. However, since the identification of these sources is still problematical, this will not be elaborated here; see, however, Dorleijn (1986) and Boeschoten (1992, 55-6).

Albeit much is still indistinct, Rabghūzī's kind of Turkic, which he himself calls "Türki", is commonly referred to as Khᵂārazm Turkish, the literary Turkic language of Central Asia of the 13th and 14th centuries. It is commonly characterised as the transition stage from the Ḳarakhānid literary language to (early) Čaghatay. As a whole, Rabghūzī's Khᵂārazm Turkish offers the picture of a hybrid language which has been infiltrated by forms from various dialects, notably those spoken by Oghuz and Ḳïpčaḳ tribes (Boeschoten and Van Damme, 1987, and Boeschoten, 1991, 23 ff.). As to language and contents, the *Ḳiṣaṣ-i Rabghūzī* stands very close to Maḥmūd b. ʿAlī's *Nahdjatü l-farādīs*, written before 1358 (facsimile publ. by J. Eckmann, Ankara, 1956, and S. Tezcan and H. Zülfikar, TDK, 518).

Although the archetype has been lost, the *Ḳiṣaṣ-i Rabghūzī* has become the focus of a Central Asiatic tradition which lived on well into this century. This may be summarised briefly as:

(a) The old mss. (13th-16th centuries), of which five are still extant (Boeschoten, 1991, 3-4). Up to now, only one facsimile has been produced (Grønbech, 1948).

(b) A period of loss of interest, the cause of which is still unknown, somewhere in the 17th-18th centuries.

(c) A host of new mss. (18th-20th centuries), which have the particularity of showing rather conservative versions as to the contents, but which were modernised versions seen from the language aspect.

For a listing of the most important mss. and older printed editions, see Hofman (1969), iii/1, 88-9, Jarring (1980), 17-18 and J. Eckmann in *PTF*, i, 104; ii, 218-19.

(M. VAN DAMME)

RABĪʿ (A.), the name of the third and fourth months of the Muslim calendar. The Syriac equivalent *rbīʿā* is used in the Peshitta as a translation of the Hebrew *malḳōsh* (late rain). This and the fact that the two months following Rabīʿ II are called Djumādā (month of frost) suggested to Wellhausen that these four months originally fell in winter and that the old Arab year began with the winter half-year [see AL-MUḤARRAM]. Rabīʿ means originally the season in which, as a result of the rains, the earth is covered with green; this later led to the name Rabīʿ being given to spring. Al-Bīrūnī expressly describes autumn (*kharīf*) as the season indicated by Rabīʿ. As a result of the Ḳurʾānic prohibition of intercalation [see NASĪʾ], since the beginning of the Muslim era the two months no longer fall at a regular season.

Bibliography: Wellhausen, *Reste*², 97; Brockelmann, *Lexicon Syriacum*², s.v.; Bīrūnī, *Āthār*, ed. Sachau, 60, 325. (M. PLESSNER)

AL-**RABĪʿ** B. **YŪNUS** B. ʿABD ALLĀH B. ABĪ FARWA (so-called from his entering Medina with a fleece on his back), emancipated slave of al-Ḥārith al-Ḥaffār, himself the emancipated slave of ʿUthmān b. ʿAffān [*q.v.*]. He was really a man of obscure origin, born in slavery at Medina about 112/730. He was

bought by Ziyād b. ʿAbd Allāh al-Ḥārithī, who presented him to his master Abu ʾl-ʿAbbās al-Saffāḥ, the first ʿAbbāsid caliph. All his life, he served, with varying fortune, three more ʿAbbāsid caliphs: al-Manṣūr, al-Mahdī and al-Hādī.

He reached the zenith of his power under al-Manṣūr (136-58/754-75 [*q.v.*]), who, finding him a capable and useful courtier, appointed him *ḥādjib* and afterwards made him his *wazīr* in succession to Abū Ayyūb al-Mūriyānī [*q.v.*]. His son al-Faḍl b. al-Rabīʿ [*q.v.*], who was destined to play a prominent part in the forthcoming intrigues against the house of Barmak, succeeded to his father's duties as *ḥādjib*. After the foundation of Baghdād, the new town was divided into four quarters, one of which was given as a land-grant by al-Manṣūr to al-Rabīʿ and was thus named after him (*ḳaṭīʿat al-Rabīʿ*).

During the reign of al-Mahdī (158-69/775-85 [*q.v.*]), his influence seems to have dwindled for some time. Abū ʿUbayd Allāh became *wazīr*. From that time onwards, al-Rabīʿ participated in an intrigue which led to the downfall of his rival by exposing his son as a heretic (*zindīḳ* [*q.v.*]) in 163/779-80 and bringing about his execution (see Sourdel, *Vizirat*, 103-11 and index). Even then, al-Rabīʿ only retained his old office as *ḥādjib* and never became al-Mahdī's *wazīr*. It was ʿAbd Allāh Abū Yaʿḳūb b. Dāwūd who succeeded the disgraced minister, but, at the end of 168/middle of 785, the absentee caliph made him his delegated representative in Baghdād. He took part in the intrigues which arose around the succession to al-Mahdī, but on his accession, al-Hādī [*q.v.*] pardoned him and appointed him to the vizierate, the *ḥidjāba* and the chancery. However, the vizierate was taken back from his control shortly afterwards, and the only office which he retained was the *dīwān al-azimma*. The exact date of his death is uncertain. Whilst al-Djahshiyārī and al-Ṭabarī place it in 169/785-6, al-Khaṭīb al-Baghdādī and Ibn Khallikān assert that he died at the beginning of 170/786.

Details about his administration are scanty, but it is certain that he was an able, industrious, temperate and tactful man of affairs. Even al-Mahdī, who was never lavish in showering favours on al-Rabīʿ, once described him as the model of a good administrator (al-Yaʿḳūbī, ii, 486). The literary sources, however, do not single him out as a patron of letters.

(A.S. ATIYA*)

RABĪʿ B. ZAYD, Arabic name of a Mozarab Christian [see MOZARABS] whose true name was RECEMUNDO (Recemundus in Latin = Raymond) and who owes his place in the *EI* to the role which he played in the service of the Umayyad caliphs of Spain ʿAbd al-Raḥmān III al-Nāṣir (who reigned from 300 to 350/912-61 [*q.v.*]) and al-Ḥakam II al-Mustanṣir (350-68/961-76 [*q.v.*]), and to his involvement in the presentation of the well-known *Calendar of Cordova*.

Recemundo was a Cordovan who, with his command of Latin and of Arabic, was able to render considerable services to the caliphal chancellery which employed him, but history remembers him on account of a mission which he undertook in Frankfurt at the court of Otto I the Great, king of Germany (from 936 onward) and Roman emperor (962-73), who had held ʿAbd al-Raḥmān III responsible for depredations and extortions committed by the Moors in Provence [see FRAXINETUM and add to the Bibl., Ph. Senac, *Musulmans et Sarrasins dans le sud de la Gaule (VIII^e-XI^e siècles)*, Paris 1980, and idem, *Provence et piraterie sarrasine*, Paris 1982]. In 953 Otto I, who had considered insolent an initial message sent from Cordova in 950, dispatched a monk named John of Gorze to deliver a letter of protest to the caliph. (The biography of this monk was related by an abbot of St. Arnulph, also known as John, in his *Vita Johannis Gorziensis* (*Monumenta Germaniae Historica, Scriptores*, Hanover 1841, iv, 338-77); the passage (369 ff.) concerning these exchanges was utilised by R. Poupardin in *Le royaume de Bourgogne*, Paris 1907, 94-5; cf. E. Lévi-Provençal, *HEM*, ii, 160-1.) It is stated here that Otto's messenger was detained in Cordova and could thus have been aware of the departure, in the spring of 955, of Recemundo, who returned in June 956, having completed his mission but apparently without much success. It may also be noted that the *Antapodosis* of Liutprand (*Mon. Germaniae Hist.*, 265 ff.) is dedicated to Recemundus. He is mentioned again, but under the name of Rabīʿ b. Zayd, in connection with another mission, this time to Constantinople and Syria, with the object of acquiring works of art for Madīnat al-Zahrāʾ [*q.v.*], under construction since 325/956. He returned with "a basin of sculpted and gilded marble and a fountain of green onyx decorated with bas-reliefs representing human figures" (Lévi-Provençal, *HEM*, ii, 148, quoting al-Maḳḳarī, *Analectes*, i, 372-3; see also H. Terrasse, *L'art hispano-mauresque*, 102). As a reward for his services, ʿAbd al-Raḥmān III had him appointed bishop of Elvira (but, if no errors and omissions have occurred, he is not mentioned in the section of vol. xii of *España sagrada* which is devoted to Iliberis).

It is not only for his missions that he is of interest to historians of Muslim Spain, since he participated—perhaps without knowing it—in the development of the *Calendar of Cordova* (although Sezgin, who is unaware of him, devotes only one line of his *GAS*, i, 327, to the co-author of the work, the continuator of al-Ṭabarī, ʿArīb b. Saʿd; see below).

Recemundo was popular at the court of al-Ḥakam II, who appreciated his expertise in philosophy and astronomy. Since this caliph, to whom the *Calendar* is dedicated, acceded to the throne in 961, the editor of this work, R. Dozy, dated it in this year, but it could have been composed at another date, and in stages. Whatever the case may be, this composite almanac has a history all of its own. Libri had discovered and inserted in his *Histoire des sciences mathématiques en Italie* (Paris 1838, i, 461 ff.) a *Liber Anoe* attributed to *Harib filii Zeid episcopi* (*sic*), and it was not until 1866 that a ms., in the Arabic language but in Hebrew characters, corresponding to the Latin text published by Libri, was found to exist in the B.N. of Paris (see further G. Vajda, *Index général*, Paris 1953, 653). Dozy copied this ms. and sent it to Simonet, who translated

into Spanish the liturgical part of the text, precisely that which may with some confidence be attributed to Recemundo, and published it under the title of *Santoral hispano-mozárabe escrito en 961 por Rabi ben Zaid, obispo de Iliberis* (in *Ciudad de Dios*, v [1871], 105-16, 192-212). Two years later, at Leiden, Dozy decided to publish the original, this time in Arabic characters, and the Latin version, entitling the whole *Le calendrier de Cordoue de 961*. Finally, the author of the present article has revived the Arabic text and the Latin version, combining the two and offering in addition an annotated French translation. The whole, entitled *Le Calendrier de Cordoue* (omitting *de l'année 961*), was published at Leiden in 1961, thus exactly a thousand years after the date assumed by Dozy for the composition of the work. The Arabic text (improved by reference to the *Kitāb al-Anwāʾ* of Ibn Ḳutayba [*q.v.*], which had recently been edited), lacks a title (but it is easy to observe that the Latin expression *Liber Anoe* corresponds exactly to *Kitāb al-Anwāʾ*) and gives as the name of the author ʿArīb b. Saʿd al-Kātib (d. *ca.* 370/980 [*q.v.*]), whereas the Latin version is headed *Harib filii Zeid episcopi quem composuit Mustansir imperatori*, with an unexpected genitive and a relative pronoun which refers to no expressed term. The phrase needs therefore to be completed, to read, for example, *Harib filii* (*Sad liber cum libro* or (according to Saavedra) *additamentis Rabi filii*) *Zeid episcopi*. As for the full name of Rabīʿ b. Zayd, it is supplied by Ibn Saʿīd (*apud* al-Maḳḳarī, *Analectes*, ii, 125), who specifies his role as *uskuf* (bishop) and attributes to him, and to him alone, a *Kitāb Tafṣīl al-zamān wa-maṣāliḥ al-abdān*, while the colophon of the Arabic text reads *tamma kitāb ʿArīb fī tafṣīl*, etc., which does nothing to simplify the issue.

In view of the fact that the almanac comprises a book of traditional *anwāʾ* [*q.v.*] and a liturgical calendar, it seems logical to assert that the latter is the work of Rabīʿ b. Zayd and that the former is to be attributed to ʿArīb b. Saʿd. However the solution is not so simple, since the statement of Ibn Saʿīd and the colophon of the ms. are utterly contradictory. It has to be assumed therefore that an understandable confusion has arisen between the names of the two authors (which are, it may be observed, anagrams one of the other) and that the blending is so perfect that, towards the end of the introduction, a paragraph relating to Christian festivals gives the impression that the work is attributable to a single author. As for information concerning agricultural activities, hygiene, daily life, etc., so precious in the view of historians, it is not unreasonable to give the credit to ʿArīb rather than to Rabīʿ, since the former was apparently more apt to respect the tradition of *kutub al-anwāʾ*, which themselves contain facts of this type as well as material concerning astronomy and meteorology. In view of the fact that a *Kitāb Tafṣīl al-zamān*, etc., evidently as a result of confusion, is attributed to each of the two authors, the problem remains unsolved.

Bibliography: In addition to the references indicated in the text of the article, see Dozy's introduction to his edition of the *Calendrier*; idem, *Die Cordowaner ʿArīb ibn Saʿd der Secretär, und Rabīʿ ibn Zayd der Bischof*, in *ZDMG*, xx (1866), 595-609; Simonet, *Historia de los mozárabes de España*, Madrid 1897-1903, index; Dom Ferotin, in appendix to *Liber ordinum*, in F. (CH. PELLAT)

RABĪʿA and **MUḌAR**, the two largest and most powerful combinations of tribes in ancient Northern Arabia.

The name Rabīʿa is a very frequent one in the nomenclature of the Arab tribes. More important tribes of this name within the Muḍar group are the Rabīʿa b. ʿĀmir b. Ṣaʿṣaʿa, from which came the Kaʿb, Kilāb and Kulayb, then the Rabīʿa b. ʿAbd Allāh b. Kaʿb, Rabīʿa b. Kilāb, Rabīʿa b. al-Aḍbaṭ and Rabīʿa b. Mālik b. Djaʿfar; also the Rabīʿa b. ʿUḳayl and Rabīʿa b. Djaʿda; three branches of the ʿAbd Shams also bear this name. Of larger Yemen tribes may be mentioned: the Rabīʿa b. al-Khiyār, Rabīʿa b. Djarwal and Rabīʿa b. al-Ḥārith b. Kaʿb (Wüstenfeld, *Register*, 377-8). (Banū) Rabīʿa simply or Banū Abī Rabīʿa is a clan of the Shaybān (*ʿIḳd*, iii, $60_{,27\text{-}8}$, $65_{,25\text{-}6}$). The name Rabīʿa al-kubrā or al-wusṭā and al-ṣughrā is given to three clans of the Tamīm: the Rabīʿa b. Mālik b. Zayd Manāt, also called *Rabīʿat al-Djūʿ* "Hunger Rabīʿa", the Rabīʿa b. Ḥanẓala b. Mālik b. Zayd Manāt and Rabīʿa b. Mālik b. Ḥanẓala; the plural al-Rabāʾiʿ includes all these (*LA*, ix, $469_{,9}$ ff.; *ʿIḳd*, ii, $47_{,26}$, $43_{,1}$). In contrast to Rabīʿa, the name Muḍar hardly occurs elsewhere (perhaps only as a variant of Maṭar b. Sharīk: *ʿIḳd*, iii, $74_{,2}$; cf. Wüstenfeld, *op. cit.*, 290).

Genealogies. According to the genealogists, the common ancestor of the greatest part of the North Arabian tribes Nizār b. Maʿadd b. ʿAdnān [*q.v.*] by his wife Sawda bint ʿAkk b. ʿAdnān had two sons Muḍar and Iyād [*q.v.*] and by Djadāla bint Waʿlān of the pre-Arab family of the Djurhum the sons Rabīʿa and Anmār (al-Ṭabarī, i, 1108; al-Batanūnī (see *Bibl.*), 25, has also Ḳuḍāʿa; but cf. Wüstenfeld, *op. cit.*, 137-8). In addition to the well-known story of the division of their father's inheritance at which Muḍar received the epithet *al-ḥamrāʾ* (on account of the red tent: Goldziher, *Muh. Stud.* i, 268; cf. however, *LA*, vii, $26_{,17}$) and Rabīʿa the name *Rabīʿat al-Faras* ("Rabīʿa with the horse"), it is also related that Rabīʿa was buried alongside of Nizār; Muḍar, who settled, however, in Mecca, was buried in al-Rawḥāʾ, two days' journey from Medina, where his grave is said to have been a place of pilgrimage (al-Diyārbakrī, *Taʾrīkh al-Khamīs*, Cairo 1283, i, $148_{,6}$; al-Ḥalabī, *Sīra*, Cairo 1292, i, $21_{,17}$).

According to the genealogical plan, Muḍar had two sons: al-Yās (or Ilyās, Alyās) and ʿAylān al-Nās, the ancestor of large and famous tribes [see ḲAYS ʿAYLĀN; there also the question of the descent of the Muḍar is discussed]. Al-Yās had three sons by his wife Laylā bint Ḥulwān known as Khindif (see Wüstenfeld, *op. cit.*, 133), from whom her descendants are called Banū Khindif: Mudrika, Ṭābikha and Ḳamaʿa (Ibn ʿAbd al-Barr, *al-Inbāh*, 72 ff.). The two first in turn became the ancestors of large and important tribes: Mudrika's sons were Hudhayl [*q.v.*] and Khuzayma; the latter again is the ancestor of the Asad [*q.v.*] and Kināna [*q.v.*], from whom the Ḳuraysh [*q.v.*] are descended amongst others. Udd b. Ṭābikha had as sons Ḍabba [*q.v.*], ʿAbd Manāt, ʿAmr, whose descendants are known as Muzaina from the name of his wife, Murr and Ḥumays. Tamīm [*q.v.*] b. Murr is again the ancestor of one of the largest Arab tribes.

The sons of Rabīʿat al-Faras were Aklub, Ḍubayʿa and Asad; the latter's sons were ʿAmīra, ʿAnaza [*q.v.*] and Djadīla, to whom the ʿAbd al-Ḳays [*q.v.*], al-Namir and Wāʾil b. Ḳāsiṭ trace their descent. Wāʾil

was the ancestor of two of the most powerful Arab tribes: Bakr [*q.v.*] and Taghlib [*q.v.*]. From Bakr are descended the tribes of Ḥanīfa [*q.v.*], Shaybān, Dhuhl, Ḳays b. Thaʿlaba and others (see Ibn Durayd, *Ishtiḳāḳ*, 189-216).

From the introduction to Bakrī's *Muʿdjam* we get the following idea of the dwelling-places of the two tribes. At the partition of Arabia among the descendants of Maʿadd, the Muḍar received the frontiers of the sacred territory as far as al-Sarawāt and the land on this side of al-Ghawr with the adjoining territory; the Rabīʿa received the slopes of the hills of Ghamr Dhī Kinda and the central part of Dhāt ʿIrḳ with the adjoining parts of al-Nadjd as far as al-Ghawr in al-Tihāma. Both tribes increased their lands by driving the other sons of Maʿadd from Mecca and the district. After the withdrawal of the ʿAbd al-Ḳays to Baḥrayn, a number of Rabīʿa tribes occupied the highlands of Nadjd and Ḥidjāz and the frontiers of Tihāma where al-Dhanāʾib, Wāridāt, al-Aḥaṣṣ, Shubayth, Baṭn al-Djarīb und al-Taghlamān were their settlements. As a result of a war, the various clans separated and, pushing forward, for the most part reached Mesopotamia, where they occupied the lands which later bore their names: Diyār Rabīʿa and Diyār Bakr [*q.vv.*] (Wüstenfeld, *Wohnsitze*, 107, 136-7, 161 ff., 168; Blau, in *ZDMG*, xxiii [1869], 579-80).

After the withdrawal of the Rabīʿa from the Tihāma, the Muḍar remained in their settlements until the Ḳays, defeated by the Khindif, advanced into the lands of Nadjd. Dissensions among the Khindif caused the Ṭābikha to migrate to Nadjd, Ḥidjāz and adjoining territories. Clans of the Ṭābikha went as far as Yamāma, Hadjar, Yabrīn and ʿUmān; some groups settled between Baḥrayn and Baṣra. Several Mudrika tribes, however, remained in the Tihāma, like the descendants of Naḍr b. Kināna in the vicinity of Mecca (Wüstenfeld, *Wohnsitze*, 169 ff.). The Muḍar who migrated to Mesopotamia gave their name to Diyār Muḍar, which Blau, *op. cit.*, 577, recognises in the Arab tribe of the Μαυζανῖται mentioned there in the 4th century A.D.

History. Down to the overthrow of the Ḥimyar kingdom by the Abyssinians, the Rabīʿa and Muḍar were under the suzerainty of Yaman, which they were able several times to cast off when they all obeyed one ruler. Of battles in these wars there are recorded al-Baydāʾ, al-Sullān and Khazāz(ā) in which the Maʿaddī tribes were victorious (Reiske, *Primae lineae hist. regn. arab....*, ed. Wüstenfeld, 180 ff.; al-Yaʿḳūbī, ed. Houtsma, i, 257; Yāḳūt, ii, 432 ff., iii, 114-15). They belonged for a time to the kingdom of the Kinda [*q.v.*], the rulers of which bore the title king of the Maʿadd (or Muḍar) and Rabīʿa (A. Sprenger, *Geogr.*, 216). Like the Bakr and Taghlib, the rest of the Rabīʿa and Muḍar recognised the Kindī al-Ḥārith b. ʿAmr al-Maḳṣūr, who led them successfully against the Ghassānid and Lakhmid kings but lost his conquests again (Ḥamza al-Iṣfahānī, ed. Gottwaldt, i, 140). When after his death the kingdom of Dhū Nuwās collapsed under the Abyssinians and the Kindīs no longer recognised the suzerainty of Yemen, the Basūs war [*q.v.*] broke out between the Bakr and the Taghlib. The "first day of al-Kulāb" or "day of Kulāb of the Rabīʿa", so-called because both tribes were descended from Rabīʿa b. Nizār, ended in favour of the Taghlib, and the Bakr turned to the king of Ḥīra al-Mundhir III, who now extended his rule over the Rabīʿa and Muḍar and other Central Arabian tribes (al-Yaʿḳūbī, *op. cit.*; Yāḳūt, iv, 294-5). To this period belongs the irruption into Mesopotamia of the Taghlib, who were probably the first of the Rabīʿa to settle there; they were followed by the Banū Namir b. Ḳāsiṭ and other Rabīʿa tribes. The hostilities between the Taghlib and Bakr did not cease, and in the battle of Dhū Ḳār [*q.v.*] they were on opposite sides. The victory of the Bakr, celebrated as a great success of the Rabīʿa over the Persians (cf. Nöldeke, *Sasaniden*, 310 ff.; an earlier encounter, Yāḳūt, ii, 735 ff.), liberated the Central Arabian tribes from foreign rule and paved the way for Islam.

Legend records very old connections of the Muḍar with the Meccan sanctuary; the Djurhum [*q.v.*], the lords of Tihāma and guardians of the Kaʿba, were driven out of Mecca by the Iyād and Muḍar. In the fight for the possession of the sanctuary the Muḍar were victorious but had to hand over the administration of the Kaʿba and of Mecca to the Khuzāʿa [*q.v.*], so that only three purely religious offices were left to them connected with the pilgrimage (the *idjāza* of ʿArafāt, the *ifāḍa* of Muzdalifa and the *idjāza* of Minā) and these remained with Muḍar families also after the redistribution by Ḳuṣayy [*q.v.*] (Ibn Khaldūn, *ʿIbar*, ii, 333, 335; al-Yaʿḳūbī, i, 274). The influential office of time-reckoner also fell to a Muḍarī under the Kinda (Sprenger, *Geogr.*, 225). While Christianity was widespread among the Rabīʿa in Muḥammad's time, the Muḍar remained more faithful to the old pagan ways and were less susceptible to Aramaic influence than the tribes on the frontier ("this perhaps partly explains their estrangement from the Rabīʿa": Wellhausen, *Reste*², 231). Radjab was the sacred month of the Muḍar (hence Radjab Muḍar; cf. Wellhausen, *op. cit.*, 97; a strange explanation of this from Ibn al-Mudjāwir in A. Sprenger, *Moḥammad*, iii, 301), Ramaḍān of the Rabīʿa (cf. al-Dimishḳī, *Nukhbat al-dahr*, tr. Mehren, 403). From their practices during *iḥrām*, all the Rabīʿa and many groups of the Muḍar, including the Ribāb league, belonged to the *Ḥilla* (al-Yaʿḳūbī, i, 298). In al-Dimashḳī, 385, we find the peculiar view that the Copts are descended from Rabīʿa "or" Taghlib who had migrated into Egypt in search of food.

The Muzayna [*q.v.*] boasted of being the first Muḍar tribe to pay homage to the Prophet (as early as 5 A.H. it is said; Sprenger, *op. cit.*, iii, 201). In 8/630 Khālid b. al-Walīd destroyed the idol al-ʿUzzā in Nakhla, which was revered by the Ḳuraysh, Kināna and "all the Muḍar" (al-Tabarī, i, 1648). In the "year of the Deputations" (9/631), several large clans of the Muḍar and Rabīʿa like the Tamīm, Thaḳīf, ʿAbd al-Ḳays and Bakr b. Wāʾil adopted Islam, but this does not imply the submission of the whole of Central Arabia. The lament of the deputation of the ʿAbd al-Ḳays to Muḥammad is significant: "between thee and us dwell Muḍar tribes and we can only come to thee in the sacred months" (Sprenger, *op. cit.*, iii, 374; cf. 301, n. 1). In the year 11 a saying of the followers of the false prophet Musaylima [*q.v.*], who belonged to the Rabīʿa, is recorded: "a deceiver of the Rabīʿa is dearer to us than a true prophet of the Muḍar" (perhaps the variant "than a deceiver of the Muḍar" is better: al-Tabarī, i, 1936-7; perhaps the earliest clearly expressed contrast between the Rabīʿa and Muḍar?). When in the same year the "Rabīʿa" in Baḥrayn proclaimed a king of their own, this can only refer to the tribes of Ḳays b. Thaʿlaba and ʿAbd al-Ḳays (al-Ṭabarī, i, 1960; al-Balādhurī, *Futūḥ*, 83-4). The tribes of Rabīʿa and Muḍar are from now onwards mentioned as important contingents in the Muslim armies, but sometimes the large numbers given for them are doubtful (cf. Caetani, *Annali*, 12 A.H., § 188, n. 5). When al-Muthannā invaded al-Sawād in 13/635, he surprised the Rabīʿa and Ḳuḍāʿa

assembled at the Sūḳ al-Khanāfis, who still recognised the suzerainty of the Sāsānids (al-Ṭabarī, i, 2202-3); five years later a considerable force was sent against al-Raḳḳa, Naṣībīn and the nomadic Rabīʿa and Tanūkh (Ibn Khaldūn, *ʿIbar*, ii/2, 107-8).

It is unnecessary to follow the history of the Rabīʿa and Muḍar farther, as it is clear from the above that the two names stand only for a few clans and not for the whole confederation of tribes, as the genealogists say (Rabīʿa usually means the Bakr and Taghlib or only one of them). Sometimes we even find the whole Rabīʿa group included in the Muḍar (*ʿIḳd*, ii, $39,_{30}$) which further increases the confusion. The beginnings of the two tribes are further put at so early a date that it is difficult to decide whether they really existed as such, or like Maʿadd and Nizār are only artificial conceptions. Goldziher (*Muh. Stud.*, i, 94-5) surmised that the antagonism between North and South Arabia had its roots in the rivalry between Ḳuraysh and Anṣār, and he regarded the early wars between Maʿadd and Yemen as a later invention. "Maʿadd and Muḍar," he lays down, "is primarily contrasted with the name Anṣār." When tribal antagonism became intensified by political developments, and after the battle of Mardj Rāhiṭ [*q.v.*] in 65/684, the tendency to form confederacies spread ever more widely, and finally the Tamīm with the Ḳays joined the large party of the Muḍar. On the other hand, the Azd [*q.v.*] joined the rest of the Yemenīs, among whom in Khurāsān [*q.v.*] were also included the Rabīʿa (Bakr); finally, the Syrian Ḳuḍāʿa (Kalb) also joined them (Wellhausen, *Das arabische Reich*, 44-5). The effects of this dualism between Muḍar (Tamīm and Ḳays) and Yemen (Azd and Rabīʿa) which wiped out the other antagonisms and polarised the whole Arab world are presented in their main outlines in the article ḲAYS ʿAYLĀN.

RĀBIʿA AL-ʿADAWIYYA AL-ḲAYSIYYA (a double *nisba* because she was attached to a family, the Āl ʿĀtik, of ʿAdī b. Ḳays (of Ḳuraysh; see Ibn al-Kalbī-Caskel, tab. 35)), famous mystic and saint of Baṣra.

One cannot go so far as to throw into doubt her historical existence, but the traditions about her life and teachings include a very large proportion of legend which today can hardly be distinguished from authentic information. With this qualification borne in mind, one may nevertheless be permitted to present a portrait of the saint as it was conceived by her co-religionists over the course of the centuries.

She is said to have been born in 95/714 or 99/717-18 and to have breathed her last at Baṣra in 185/801, where her tomb was shown outside the city (see al-Harawī, *Ziyārāt*, ed. and tr. J. Sourdel-Thomine, 81/88). In the evolution of Ṣūfī mysticism, she became one of the three most famous female mystics of Baṣra, the two others being Muʿādha al-ʿAdawiyya, wife of the "ascetic" ʿĀmir b. ʿAbd al-Ḳays al-ʿAnbarī [*q.v.*], and a certain Umm al-Dardāʾ (see Pellat, *Le milieu baṣrien*, 104).

Born into a poor home, she was stolen as a child and sold into slavery (she is even sometimes made into a *ḳayna* [*q.v.*]), but her sanctity secured her freedom, and she retired to a life of seclusion and celibacy, at first in the desert and then in Baṣra, where she gathered round her many disciples and associates, who came to seek her counsel or prayers or to listen to her teaching. These included ʿAbd al-Wāḥid b. Zayd (d. 177/793; see Pellat, *Milieu*, 102-3 and index), Mālik b. Dīnār [*q.v.*], the ascetic Rabāḥ al-Ḳaysī, the traditionist Sufyān al-Thawrī [*q.v.*] and the Ṣūfī Shaḳīḳ al-Balkhī. Her life was one of extreme asceticism and otherworldliness. Asked why she did not ask help from her friends, she said, "I should be ashamed to ask for this world's goods from Him to Whom they belong, and how should I seek them from those to whom they do not belong?" (it should be noted that al-Djāḥiẓ, more conscious of the neatness of this reply than of its deeper sense, cites it at least twice (in *Ḥayawān*, v, 589, and *Bayān*, iii, 127) and does not mention any other details concerning Rābiʿa, which seems to show that, in the 3rd/9th century, the legend around her had not yet totally crystallised. On the other hand, this tradition, perhaps authentic, is contradicted by a piece of evidence according to which she possessed a *khādim*/*khādima* and by the mention, in al-Ḥusaynī, of another saint called Maryam al-Baṣriyya, her servant and disciple, to whom she had communicated her doctrine of pure love, *ʿilm al-maḥabba*).

To another friend she said, "Will God forget the poor because of their poverty or remember the rich because of their riches? Since He knows my state, what have I to remind Him of? What He wills, we should also will." Miracles were attributed to her as to other Muslim saints. Food was supplied by miraculous means for her guests, and to save her from starvation. A camel, which died when she was on pilgrimage, was restored to life for her use; the lack of a lamp was made good by the light which shone round about the saint. It was related that when she was dying, she bade her friends depart and leave the way free for the messengers of God Most High. As they went

out, they heard her making her confession of faith, and a voice which responded, "O soul at rest, return to thy Lord, satisfied with Him, giving satisfaction to Him. So enter among My servants into My Paradise" (sūra LXXXIX, 27-30). After her death, Rābiʿa was seen in a dream and asked how she had escaped from Munkar and Nakīr [*q.v.*], the angels of the tomb, when they asked her, "Who is your Lord?", and she replied, "I said, return and tell your Lord, 'Notwithstanding the thousands and thousands of Thy creatures, Thou hast not forgotten a weak old woman. I, who had only Thee in all the world, have never forgotten Thee, that Thou shouldst ask, Who is thy Lord?'"

Among the prayers recorded of Rābiʿa is one she was accustomed to pray at night upon her roof: "O Lord, the stars are shining and the eyes of men are closed and kings have shut their doors and every lover is alone with his beloved, and here am I alone with Thee." Again she prayed, "O my Lord, if I worship Thee from fear of Hell, burn me therein, and if I worship Thee in hope of Paradise, exclude me thence, but if I worship Thee for Thine own sake, then withhold not from me Thine Eternal Beauty." Of Repentance, the beginning of the Ṣūfī Path, she said, "How can anyone repent unless his Lord gives him repentance and accepts him? If He turns towards you, you will turn towards Him." She held that Gratitude was the vision of the Giver, not the gift, and one spring day, when urged to come out to behold the works of God, she rejoined, "Come rather inside to behold their Maker. Contemplation of the Maker has turned me aside from contemplating what He has made." Asked what she thought of Paradise, Rābiʿa replied, "First the neighbour, then the house" (*al-d̲j̲ār t̲h̲umma 'l-dār*) and al-G̲h̲azālī, commenting on this, says she implied that no one who does not know God in this world will see Him in the next, and he who does not find the joy of gnosis here will not find the joy of the Vision there, nor can anyone appeal to God in that world if he has not sought His friendship in this. None may reap who has not sown (*Iḥyāʾ*, iv, 269). The otherworldliness of her teaching is shown in her declaration that she had come from that world and to that world she was going, and she ate the bread of this world in sorrow, while doing the work of that world. One who heard her said derisively, "One so persuasive in speech is worthy to keep a rest-house" and Rābiʿa responded, "I myself am keeping a rest-house; whatever is within, I do not allow it to go out and whatever is without, I do not allow to come in. I do not concern myself with those who pass in and out, for I am contemplating my own heart, not mere clay." Asked how she had attained to the rank of the saints, Rābiʿa replied, "By abandoning what did not concern me and seeking fellowship with Him Who is eternal."

She was famed for her teaching on mystic love (*maḥabba*) and the fellowship with God (*uns*) which is the pre-occupation of His lover. Every true lover, she said, seeks intimacy with the beloved, and she recited the lines:

I have made Thee the Companion of my heart,
But my body is present for those who seek its company,
And my body is friendly towards its guests.
But the Beloved of my heart is the guest of my soul.
(*Iḥyāʾ*, iv, 358, margin)

Questioned about her love for the Prophet she said, "I love him, but love of the Creator has turned me aside from love of His creatures"; and again, "My love for God has so possessed me that no place remains for loving any save Him." Of her own service to God and its motive-force, she said, "I have not served God from fear of Hell, for I should be but a wretched hireling if I did it from fear; nor from love of Paradise, for I should be a bad servant if I served for the sake of what was given me, but I have served Him only for the love of Him and desire of Him." The verses often ascribed to her (but now shown by G.J.H. van Gelder to be originally a secular love poem, see his *Rābiʿa's poem on the two kinds of love: a mystification?*, in *Verse and the fair sex, a collection of papers presented at the 15th Congress of the UEAI ... 1990*, ed. F. de Jong, Utrecht 1993, 66-76) on the two types of love, that which seeks its own ends and that which seeks only God and His glory, are famous and much quoted, translated and commented upon:

I love Thee with two loves: a selfish (or concerned, impassioned, instinctive) love
and a love of which Thou [alone] art worthy.
The selfish love makes me turn away from all that is not Thou, making me think only of Thee
But as for that love of which Thou [alone] art worthy.
Thou raisest the veils so that I may see Thee.
In neither the one case nor the other have I any merit, but the praise for the first and the second is wholly Thine.

Al-G̲h̲azālī again comments, "She meant, by the selfish love, the love of God for His favour and grace bestowed and for temporary happiness, and by the love worthy of Him, the love of His Beauty which was revealed to her, and this is the higher of the two loves and the finer of them" (*Iḥyāʾ*, iv, 267). Like all mystics, Rābīʿa looked for union with the Divine (*waṣl*). In certain of her verses she says, "My hope is for union with Thee, for that is the goal of my desire", and again she said, "I have ceased to exist and have passed out of self. I have become one with God and am altogether His."

Rābiʿa, therefore, according to the traditions about her, differs from those of the early Ṣūfīs who were simply ascetics and quietists, in that she was a true mystic, inspired by an ardent love, and conscious of having entered into the unitive life with God. She was one of the first of the Ṣūfīs to teach the doctrine of Pure Love, the disinterested love of God for His own sake alone, and one of the first also to combine with her teaching on love the doctrine of *kas̲h̲f*, the unveiling, to the lover, of the Beatific Vision.

The semi-legendary personality of Rābiʿa has inspired romantic biographies and even two Egyptian films, but one should remember a curious phenomenon, which has its origin in an account which shows the saint holding in one hand fire and in the other water, and replying to some youths who had asked her where she was going: "...towards the heavens, in order to throw some fire into Paradise and some water on Hellfire, so that both of them may disappear and that human beings may contemplate God without hope or fear, for if neither hope for Paradise nor fear of Hellfire existed, would they worship al-Ḥaḳḳ and submit to it?" This text, which appears in Persian in the *Manāḳib al-ʿārifīn* (ms. India Office Library, no. 1670, fol. 114a) of Aflākī (8th/14th century [*q.v.*]), is found again almost word-for-word in the *Mémoires du sieur de Joinville*, ed. Paris 1854, 195, with this difference that a Preaching Friar called Yves the Breton, sent to the "soudan" of Damascus by the King of France Louis IX (the future Saint Louis), meets en route an old woman carrying fire and water, etc. It is not certain that the heroine of this story is our Rābiʿa al-ʿAdawiyya, since the locale is Damascus, where there is said to have lived,

equally in the 2nd/8th century, another holy woman called Rābiʿa bint Ismāʿīl al-ʿAdawiyya. It is astonishing that the oldest attestation in the Islamic world goes back no further than the 8th/14th century when a French chronicler introduces the story a century earlier. In any case, the bishop J.-P. Camus (1582-1653) illustrates pure love by developing the story in question in a work called *La Caritée ou le pourtraict de la vraye charité, histoire dévote tirée de la Vie de Saint-Louis*, Paris 1641.

(MARGARET SMITH-[CH. PELLAT])

RABĪB AL-DAWLA ABŪ MANṢŪR B. ABĪ SHUDJĀʿ MUḤAMMAD B. AL-ḤUSAYN, vizier of the ʿAbbāsids and Saldjūḳs. When the vizier Abū Shudjāʿ Muḥammad al-Rūdhrāwarī [*q.v.*] made the pilgrimage to Mecca in 481/1089, he appointed his son Rabīb al-Dawla and the *naḳīb al-nuḳabāʾ* Ṭirād b. Muḥammad al-Zaynabī his deputies, and in 507/1113-14, on the death of Abu 'l-Ḳāsim ʿAlī b. Fakhr al-Dawla Muḥammad b. Djahīr [see DJAHĪR, BANŪ], Rabīb al-Dawla was appointed vizier of the caliph al-Mustaẓhir [*q.v.*]. In Dhu 'l-Ḥidjdja 511/April 1118 the fourteen-year old Maḥmūd b. Muḥammad [*q.v.*] succeeded his father as Saldjūḳ sultan and, when he was looking around for an able vizier, he was recommended to choose someone who had had the necessary training in the service of the caliph (*min tarbiyat dār al-khilāfa*), allegedly because there was no suitable man in the train of the young sultan. The choice therefore fell upon Rabīb al-Dawla who was at once summoned from Baghdād to Iṣfahān but, as the nominee of the *amīrs* and great men of state, proved himself a somewhat ineffectual vizier until his death after a brief tenure of office in Rabīʿ I 513/June-July 1119; according to another statement he died as early as 512/1118-19.

(K.V. ZETTERSTÉEN)

RĀBIGH (Bandar Rābigh, Rābugh), a port in the Ḥidjāz province of Saudi Arabia, in lat. 22° 48′ N., and long. 39° 1′ E., half-way between Djudda [*q.v.*] and Yanbuʿ. It may perhaps be identified with Ptolemy's 'Αργα χώμη (Sprenger, *Die alte Geographie*, no. 38). North of Rābigh lies al-Abwāʾ [*q.v.*], now called al-Khurayba, the reputed burial place of the Prophet's mother Āmina [*q.v.*]. In the past, the port had no proper harbour. Ships anchored at Sharm Rābigh, an inlet about 3 km long, which offered excellent anchorage (Hogarth, *Hejaz*, 29). From there cargoes were transferred on local sailing craft to Rābigh proper, a group of four hamlets and extensive date-groves, about 6 km from Sharm Rābigh. It used to be the place [see MĪḲĀT] where pilgrims to Mecca, coming overland from Syria, Egypt and the Maghrib, put on the *iḥrām* [*q.v.*] (see Ibn Baṭṭūṭa, *Riḥla*, i, 297, tr. Gibb, i, 186). As such, Rābigh had succeeded the village of al-Djuḥfa which lies in a valley reaching the sea just south of the port. Pilgrims coming down the Red Sea entered into *iḥrām* as their ships passed Rābigh. It was the centre of the Banū Zubayd, a subsection of the Banū Masrūḥ who, together with the Banū Sālim, were the main sections of the Banū Ḥarb [*q.v.*], the dominant tribe in the area between Mecca and Medina (Hogarth, *Hejaz*, 38). Before an asphalt highway joined Mecca and Medina via Djudda, Rābigh and Badr, secondary routes (see Hogarth, *Hejaz*, 114-21) ran from Rābigh northward through the mountains to Medina, providing a more direct but more difficult approach than the *al-Ṭarīḳ* (or *al-Darb* "narrow mountain pass") *al-Sulṭānī*, which follows the coast. In 1924 ʿAbd al-ʿAzīz Āl Saʿūd, the future king of Saudi Arabia, sent the *Ikhwān* [*q.v.*] to capture Rābigh, cutting the communications between Djudda and Medina. In 1925 he declared Rābigh an official pilgrim port.

Gibb, Cambridge 1958-71.

(ED.)

RĀBIḤ B. FAḌL ALLĀH, an adventurer attached to the ivory and slave trader of the eastern Sudan, Zubayr Pasha [*q.v.*]. After the fall of Zubayr in 1291/1874 and the subsequent death of his son Sulaymān, Rābiḥ assumed leadership of Sulaymān's followers. By 1305/1887 he had become associated with the Mahdiyya [*q.v.*] movement in the eastern Sudan. Between 1309-10/1892 and 1310-11/1893 he attacked and defeated the sultanates of Baghirmi and Wadai.

There then followed a period during which Rābiḥ entered into an association with Hayatu dàn Saʾidu, a disaffected grandson of Muhammadu Bello [*q.v.*], first caliph of Sokoto, to conquer Borno [see BORNŪ] and then Sokoto [*q.v.*]. The conquest of Borno was accomplished at the battle of Ngala in 1311/1893, but at that point Hayatu and Rābiḥ quarrelled and the projected attack on Sokoto failed to develop.

Rābiḥ now moved south and occupied Dikwa,

which became his headquarters. After several clashes with the French, he was defeated and killed at the battle of Kusseri in 1900.

RABĪʿIYYĀT. In Ottoman literature.

There is no special literary genre called *rabīʿiyyāt* (*bahāriyyāt*) in Ottoman literature (from now on referred to as *dīwān* literature). Spring, however, has an important place within *dīwān* literature, as is the case for every other national literature. Spring, with its different functions fitting the structure of almost every kind of literary style and genre, was given its own special place in diverse literary genres coeval with the beginnings of written Ottoman literature in the second half of the 13th century. Since this literature favoured the *mesnewī* genre, in which all sorts of religious stories, religio-mythological works, histories, semi-religious books of advice pertaining to literary edification and romances were written, spring acquired a place in romances written in the style of the 13th and 14th centuries, especially those dealing with love adventures. It did so whilst serving two functions: as a sort of setting-décor, but also, beyond that obvious function, as a means to convey certain symbolic-mythological meanings.

Spring in Ottoman literature was naturally connected with the descriptions of orchards and gardens in springtime, thus bringing together the categories of time and space and carrying out the task of creating in the reader/listener the impression of verisimilitude. In this literature most lovers meet or are introduced to one another in the setting of a green, blossoming orchard full of flowers and plants coming back to life. Spring is connected here with the image of an orchard and with the idea of eternal life as the plants that have wilted and died in winter come back to life, and through these two motifs it is further related to the notion of Paradise (that includes an idealised version of all the elements of nature in springtime, such as meadows, gardens, flowers, trees, birds, running waters, light, cool breezes and the like) and its eternal happiness. Thus, in the descriptions of spring it is the notion of Paradise and its central role in the religion and beliefs of Islam that is at the back of the poet's intention and imagery. For instance, Meḥmed, in his *mesnewī ʿIshḳ-nāme* (15th century) has the two lovers meet in an orchard at springtime, and the description of spring is presented in the above-mentioned terms (cf. 102, ll. 1716-1728; 116, ll. 2300-16). Likewise, the first love scenes take place in the same setting, as do the wedding ceremonies (cf. 81-2, ll. 872-91; 248-9 ll. 8081-8100; 225 l. 8409). Descriptions of spring in the same terms are also found in the 14th century *mesnewīs Djemshīd ü Khurshīd* of Aḥmedī of Germiyān, and in the *Khurshīd-nāme* of Sheykh-oghlu Muṣṭafā (ed. Hüseyin Ayan, Erzurum 1979, 176-7, ll. 1263-1319; 192, ll. 1706-29. For the meeting of the lovers in an orchard, cf. 239-40, ll. 2959-87).

In the *mesnewīs*, spring is presented in close association with the sun. For instance, in the *Khurshīd-nāme* of Sheykh-oghlu Muṣṭafā, the garden specially ordered by Sultan Siyāwush for his son Khurshīd is described as a garden in eternal springtime. All the flowers, trees and vegetation in this garden preserve their blossoming in an eternal spring. This garden is in fact an image of paradise. It has been arranged as an eternally unwilting garden, and moreover, it is the garden of a god (cf. 176-7). The owner of this garden is Khurshīd, and if we consider the etymology of the word *khurshīd* we realise that the owner of the garden is the sun. Furthermore, Khurshīd in this work is dressed in green from head to toe, with a green crown and a green veil; in other words, he has been described as a Khiḍir [*q.v.*] figure (cf. 240, ll. 12979, 1981). At the same time, the garden is a symbol of Khurshīd (cf. further *Khurshīd-nāme*, 19-92), since it is a *gülistān* (cf. l. 1653). In this manner, both the image and the concept of the orchard's association with the sun, spring and the rebirth of life at springtime, as well as the thought that the orchard belongs to the beloved or the sun or the ruler, are reminiscent of the Hanging Gardens of Babylon, of the blessed divine gardens (whose gardener is a Sumerian or Akkadian king), of the even more ancient Sumerian temples, of the Sumerian concept of Akat's paradise named Dilmun, and, finally, of the Paradise of the Torah and the gardens of Solomon in eternal springtime as described in the Song of Solomon in the Old Testament. Likewise, the traditional and typified theme in the *mesnewīs* of the meeting of the two lovers in gardens of eternal springtime, and their holding festivities and wedding ceremonies there, may be traced back to the older tradition of the New Year festivals, mostly a tradition orally transmitted for thousands of years and only a small part of which is reflected in written traditions. For instance, the scene of the washing and decoration of Ferāhshād before the meeting of the lovers in the eternal spring garden in the *Khurshīd-nāme* is clearly a distant echo of the ritual washing and decoration of the gods and goddesses before their wedding in the New Year festival (cf. 248-9; cf. also G. Alpay-Tekin (ed.), *Aḥmed-i Dāʿī, Čeng-nāme*, in *Sources of Oriental Languages and Literature*, 16, Harvard University 1992; the ninth and tenth part of the text are a spring and garden description and the celebration of New Year in the spring at the ruler's garden).

These mythological elements preserved their identity during the 14th and 15th centuries but not thereafter, when they were reduced to mere decorative elements after losing their lively character and deeper meaning with the onset of a changing world view that paralleled the changing living conditions, social classes and economic conditions of the Ottoman empire. In the hands of the poets of *dīwān* literature, spring and everything associated with it became means for creating all sorts of literary figures and word plays on the level of style and rhetoric. Nonetheless, the words expressing these mythological viewpoints relating to spring, used in a stereotyped manner both in the *mesnewīs* and in other literary genres to be examined, were used only for the purpose of background description and word plays in the following centuries, while viewpoints whose meaning had been more or less changed were combined with concepts and used, always, in the same stereotyped associations. In the following are outlined the main characteristics of these associations with reference to these particularities:

1. As mentioned above, spring was presented in terms of the association garden-spring-eternal-life-Paradise.

2. Spring was always expressed together with the emotion of eternal happiness, either in connection with Paradise or with youth. In the following centuries, however, the quality of the eternal withered

away and happiness was associated with the transitory quality of spring and depicted as a happiness with an end drawing near. Uzun Firdewsī started depicting spring along with the transitoriness of happiness and youth in his *Ḳuṭb-nāme* (ed. 21.)

3. Spring is the symbol of youth and therefore represents the beloved and beautiful lady. For instance, in the *Yūsuf u Zulaykhā* of the 16th century poet Kemāl Pasha-zāde, spring represents youth, and autumn and winter old age (ed. Mustafa Demirel, Ankara 1983, 183-4, ll. 1850-6; for a classic depiction of spring, see 70-1, ll. 553-70). Spring, garden, beautiful lady, beloved, are all also found in the work *Leylā ile Medjnūn* of the most famous poet of the 16th century, Fuḍūlī (d. 1556 [*q.v.*]). In this case, Leylā, who enters a garden in springtime for a walk with her friends, does not meet her lover there, yet one of her companions gives her tidings of Medjnūn by reading to her a poem of his. Thus the picture which has been painted of spring, the garden and the meeting of the two lovers in it has here been modified. Nevertheless, Leylā is depicted as the symbol of the flower that blossoms in spring and represents youth and beauty, hence the garden is presented in terms of the traditional associations (ed. Necmettin Halil Onan, Istanbul 1956, 133-42, ll. 1321-1418).

4. The relationship between spring and sun is presented mostly in the following fashion. Because at the spring equinox night and day are equal, the sun is considered a symbol of justice and spring is the season when this justice is applied. Moreover, it is because of the sun's beneficial effects that vegetation comes back to life in the spring. Thus generosity is a quality that comes about by the joining of spring and the sun. As a result, in *dīwān* literature, the sun, because of its associations with justice and generosity, has always been conceived in terms of spring and the ruler, on account of his close relation to the sun, has been presented as an indivisible part of spring.

5. Spring has always been considered together with the rains of April and the concepts of blessing and mercy. Moreover, through the coming into being of the pearl out of the raindrop of April that falls into an oyster, the image of the pearl, its preciousness, perfection and beauty are added to these concepts.

6. Spring in *dīwān* literature is frequently presented together with the celebrations, drinking and music at evening gatherings held in gardens in connection with the spring festivals.

Different social and military conditions entered the above general picture after the second half of the 15th century and especially during the 16th century. For instance, the elements used in describing spring started to stand for the different ranks of Ottoman hierarchy, in accordance with the social relations of the time. Thus the rose (*gül*) was the sultan, the tulip (*lāle*) the *sandjaḳ-beyi*, the iris (*süsen*) the *silāḥdār*, the narcissus the *emīr-i tādjdār* and the spring clouds the ruler's tents. As for the cypress and the plane-tree (*čïnar*), they were the servants of the ruler standing around him (*Khayālī Bey Divanı*, ed. Ali Nihad Tarlan, Istanbul 1945, 93-4, ll. 3-5). Likewise, spring was connected to the military and war system: the manifestations of spring on the meadows were the soldiers, and the cypress their banner (*liwā*). Spring itself was the young hero (*pehlewān*). The violet was the mace and the rose the shield, and the iris had its sword girded. (*Yaḥyā Bey Divanı*, ed. Mehmet Çavuşoğlu, Istanbul 1977, 58-9, ll. 1-3, etc.)

During the 17th and 18th centuries, spring was represented in a more realistic way in poetry. These descriptions were in close association with festivities, drinking and music sessions, and spring was greeted as a season of mirth and joy (e.g. Nābī, *Khayriyye*, ed. İ. Pala, Istanbul 1989, 147-50: *der beyān-i ferāḥ-i faṣl-i bahār*). In this way, in every century, new meanings and allegorical allusions peculiar to the century were added to the descriptions of spring. Thus during the 14th century and the first half of the 15th century, spring was full of symbolic, legendary (romance) allusions, whereas during the second half of the 15th and the whole of the next century spring was associated with the wars, social hierarchy and majestic pomp of the expanding empire. Finally, in the 17th and 18th centuries it was described in a realistic language that had more to do with nature and human life, the environment in which people live. However, for all that spring was presented from all these different point of views, it was always described in terms of the stereotyped expressions presented earlier on. Moreover, in the cases where there was no special section devoted to spring itself, these expressions about spring were sprinkled, without much sense of unity and order, in all genres of *dīwān* literature (*methnewī*, *ghazel*, *ḳaṣīde*, *ḳiṭʿa*, *turkī* and *terdjīʿ*). For instance, we find the standard images of classical poetry where the cheek of the beloved was compared to a rose, the locks of hair to hyacinth, the elegant stature to a cypress, etc.

Spring was sometimes the topic of the *nesīb* (*teshbīb*) [see NASĪB] section of the literary genre of the *ḳaṣīde*. In fact *ḳaṣīdes* frequently start with a description of nature, which may have to do with one of the four seasons, and the poem is termed, accordingly, a *bahāriyye*, or a *shitāʾiyye* or a *temmūziyye*. Just like the descriptions of autumn and winter, those of spring are a means for the poet to effect the transition to the short *girizgāh* part, serving as an introduction to the praise (*medḥiyye*) section of a *ḳaṣīde* which he has composed in order to praise his patron-ruler or another high member of the Ottoman hierarchy, such as a Grand Vizier or a pasha or a vizier, or even just a person near and dear to him.

The *ḳaṣīdes*, for all that they conform to the descriptions of spring presented above and are faithful to the whole network of stereotypical relations between themes and concepts, are the poems that best reflect not only the political and social developments of the Ottoman empire but the changing conceptions of spring paralleling those. There are plenty of poets in *dīwān* literature who are famous for their *ḳaṣīdes*, including Aḥmed Pasha and Nedjātī for the 15th century, Fuḍūlī, Bāḳī, Newʿī, Yaḥyā Bey for the 16th, Khayālī and especially Nefʿī for the 17th, and Nedīm for the 18th. Almost all of these poets treated spring as the subject of the *nesīb* section of their *ḳaṣīdes*. There is little doubt that, among these *bahāriyyes*, the most famous is the one dedicated by Nefʿī (d. 1634 [*q.v.*]) to Sultan Murād IV, whose *maṭlaʿ* begins:

Esdi nesīm-i newbahār ačïldï güller ṣubḥ-dem
Ačsun bizim de gönlümüz sāḳī mede ṣun djām-ï Djem
(*Dīwān*, Istanbul 1249, 47).

Another very famous *ḳaṣīde* beginning with a spring depiction was written in the 18th century by Nedīm (d. 1730). This poem that puts to words the excitement and joy of spring is one of the most beautiful examples of *dīwān* literature and was composed in praise of Sultan Aḥmed III. Here is its opening distich:

Gel ey faṣl-ï bahārān māye-i ārām u ḥābïmsïn
Enīs-i khāṭïrïm kām-ï dil-i pür iḍṭirābïmsïn

The following distich is still popularly remembered:

Gülüm shöyle gülüm böyle demekdir yāre muʿtādïm
Seni ey gül sever djānïm ki djānāna khiṭābïmsïn

(Nedīm, *Dīwān*, ed. A. Gölpınarlı, İnkilāp Kitabevi, Istanbul 75.)

The influence of the depictions of spring in *dīwān* literature is so strong that even when writing *shitāʾiyyes* or *temmūziyyes*, poets compare that season to spring. It is also worth mentioning that sometimes a word having to do with the spring répertoire is the rhyming word of the *ḳaṣīde*, even if there is no proper *nesīb* section dealing with spring, and the *ḳaṣīde* is then named according to that rhyme word, e.g. the *gül ḳaṣīdesi* or the *nergīs ḳaṣīdesi*, etc.

A third literary genre (besides the romance *methnewīs* and the *ḳaṣīdes* describing spring in their *nesīb* sections and sometimes therefore named *bahāriyye*) that may deal with spring is the *Sāḳī-nāme*. This genre, which is in fact written in *methnewī* style, was developed especially after the 16th century. Spring in this genre is more closely associated with music and drinking gatherings.

It should be noted that there is a fourth genre dealing with spring, the *münāẓare* [see MUNĀẒARA], even though there appears to be only one extant example, Lāmiʿī Čelebi's prose work *Münāẓare-yi Sulṭān-ī Bahār bā Shehriyār-ī Shitā*. As may be understood from its title, this work deals with a competition between the two seasons.

Apart from all these, the only work of *dīwān* literature entirely devoted to the springtime New Year festivals is the *Čeng-nāme* of Aḥmed-i Dāʿī, who lived in the first half of the 15th century. Except for the last, synonymous work of 70-80 lines by the Persian poet Saʿdī, this work appears to be the only one connecting not just Ottoman but Islamic literature with the New Year festivals of ancient times. In *methnewī* style, it was written to express the desire of man, alone and a stranger in this world, to return to man's real homeland and to find eternal life. The lyre (*čeng*), which represents exactly such a man, is played at a musical gathering on a spring day, entertaining everyone. In the first part of the work there is a description of a spring festival in which the son of Bāyezīd I, Prince Süleymān, is participating. In the second part, the lyre played at this festival tells the poet the adventures of its coming to this strange world through the stories of the cypress, the gazelle, the horse and the silk worm, the origins of the four constituent parts of the lyre. The heroes of the four stories are victims to the chain of eternal change, birth and death, of the material world and at the same time are eaten with the desire to return to their homelands, the source of eternal life. In the *Čeng-nāme*, the lyre celebrating spring and the man wishing for eternal life (symbolised by spring) are joined into one figure.

RABĪʿIYYAT: In Arabic [see ZAHRIYYĀT].

RĀBIṬA (A.), term employed in al-Andalus to denote a fortified enclosure, a bastion constructed on the coast to deter enemy attacks from the sea. This term sometimes served as a substitute for *ribāṭ* [*q.v.*], a term which no longer extended to the concentration point occupied by combatants in a holy war, but was almost reduced to the sense of *djihād* [*q.v.*] or even replaced *ghāra* "sudden attack, raid".

In a *rābiṭa*, "volunteers, who were periodically relieved, maintained a vigilant watch, while practising spiritual exercises and striving to lead an ascetic life. "The best known of these fortified monasteries, on the Mediterranean, was that of the Cape of Gata, at the eastern point of the bay of Alméria... Another known *rābiṭa*, on the other side of the Straits of Gibraltar, was that of al-Tawba or "Penitence"; it stood, opposite Huelva, not far from the estuary of the Río Tinto, on the same site where today stands the famous monastery of the Rabita, whose presence, since the end of the Middle Ages, has continued to uphold the Muslim monastic tradition" (E. Lévi-Provençal, *Hist. Esp. mus.*, iii, 111-12).

Current Spanish toponymy preserves, in the forms Rápita, Rávita, Rábida, the memory of the existence, in other parts of al-Andalus, of hermitages which were places of retreat for persons considered to be saints, accompanied by their disciples. This term thus became synonymous with *zāwiya* [*q.v.*], and it is this which has been adopted by the Spanish language, which uses *rábida* to denote a monastery or a hermitage.

Long before the arrival in the Maghrib of the wave of mysticism and the development in these regions of the "maraboutism" characteristic of religious activity, *rābiṭa* was also used there in concurrence with *zāwiya* (see al-Bādisī, *Maḳṣad*, tr. G.S. Colin, in *AM*, xxvi [1926], 240).

Bibliography: L. Torres Balbás, *Rábitas hispanomusulmanas*, in *al-And.*, xiii/2 (1948), 475-91; C. Villanueva, *Rábitas granadinas*, in *Miscelánea de estudios árabes y hebraicos*, iii (1954), 79-86. (ED.)

AL-**RĀBIṬA** AL-**ISLĀMIYYA** (A.), literally "the Islamic league."

Pan-movements in the Muslim world have been usually rendered by Arabic terms like *waḥda*, *ittiḥād*, *rābiṭa* or *djāmiʿa*. *Rābiṭa* ("bond") in eastern Muslim mystic tradition originally meant the relationship of a *murīd* to his master (R. Gramlich (tr.), *ʿAwārif al-maʿārif. Die Gaben der Erkenntnisse des ʿUmar as-Suhrawardī*, Wiesbaden 1978, 107-8) and hence a close friendship (*rābiṭa-yi ukhuwwat*, Saʿd al-Dīn Khodja Efendī, *Tādj al-tawārīkh*, as cited in Fr.A. Mesgien Meninski, *Lexicon arabico-persico-turcicum*, Vienna 1780, iii, 2-3). It underwent a significant semantic change in the 19th century, when *rābiṭa* became a political notion in Ottoman usage (in the sense of "league", X.T. Bianchi, *Dictionnaire français-turc*, Paris 1846, ii, 300), reflecting the emergence of an Islamic political language. *Djāmiʿa* [*q.v.*] as a noun signifies a gathering, a universality which embraces everything (hence from about 1850 onwards, also meaning a university). In modern usage, *djāmiʿa* has also been used to characterise a political, united movement. It is this sense which made these two terms popular among Muslim intellectuals and politicians in the second half of the 19th century. With the term *islāmiyya* attributed to it, *rābiṭa* and *djāmiʿa* soon became notions to render the European word Pan-Islam [see PAN-ISLAMISM]. Another earlier equivalent is the Ottoman-Turkish term *ittiḥād-i Islām* ("Union of Islam", arabicised as *al-waḥda al-islāmiyya*) which came into use in 1871 at the latest (e.g. Nāmiḳ Kemāl [*q.v.*] in 1872, see Landau, *The politics of Pan-Islam, ideology and organization*, Oxford 1990, 23-4). European travellers identified this political tendency as an Islamic form of the then common pan-movements and accordingly rendered this term with Pan-Islam (Vambéry, see Lee, *Origins*, 278-87), or in German with Panislamismus (Murad Effendi [Franz von Werner], *Türkische Skizzen*, Leipzig 1877, i, 95) from 1877 onwards. The concept of Pan-Islam again was re-arabicised to *al-djāmiʿa al-islāmiyya* or *al-rābiṭa al-islāmiyya* when after 1894 Pan-Islamism became a major concept of contemporary Islamic politics in the Ottoman Empire (see e.g. *al-Manār*, ii [1317/1899], 337-45, where Rashīd Riḍā stated that "today", Djamāl al-Dīn al-Afghānī's call to Islam should be rendered as *al-djāmiʿa al-islāmiyya*).

These dates suggest that after 1880, Islamic politics were primarily conceived as a movement to reunify the Muslim countries and, as al-Afg͟hānī put it in 1884, "to preserve [our] nation's honour, to grieve for what hurts it, and to co-operate to defend a total union against whomsoever attacks it." (al-Afg͟hānī-ʿAbduh, *al-ʿUrwa al-wut͟hḳā*, 71, tr. Landau, in *op. cit.*, 319). Consequently, Islamic politics construed the mass of the whole Islamic *umma* as superseding any national boundaries of Muslim politics (see *al-ʿUrwa al-wut͟hḳā*, 48).

Pan-Islamic rhetorics were of great importance during the reign of the two Ottoman sultans ʿAbd al-ʿAzīz and ʿAbd al-Ḥamīd II [*q.vv.*]. They used the concept of Islamic unity to develop a new form of foreign policy which aimed at mobilising the peoples of the Muslim world in favour of the Ottoman Empire. Though ʿAbd al-Ḥamīd II, who now stressed his identity as caliph, tried to establish a network of Islamic propagandists, the success of his appeal to Islamic unity and of Pan-Islam as an "imperial ideology" (Landau, *op. cit.*, 9-72) was very small. Obviously, national policy was much more able to mobilise Muslim intellectuals, since the nation state offered real positions of power, whereas Pan-Islamism referred to an Islamic *umma* which had only a nebulous existence. Only in India were the activities of the Ottoman emissaries rather more successful.

Since *ca.* 1900, *rābiṭa* has also become a technical term to denote political organisations (e.g. the All-India Muslim League, established in the context of local politics by partisans of Sayyid Aḥmad K͟hān's (1817-98 [*q.v.*]) reform movement in 1906 (W.C. Smith, *Modern Islām in India*, London 1946, 246-92, Lahore 1969, 297-358; Landau, *op. cit.*, 185), in Arabic called *al-rābiṭa al-muslima* (Masʿūd al-Nadwī, *Taʾrīk͟h al-Daʿwa al-islāmiyya fī 'l-Hind*, Beirut 1370/1950, i, 249)). In 1909-10, the famous Egyptian nationalists Ibrāhīm Nāṣīf al-Wardānī (1886-1910) and S͟hafīḳ Manṣūr (1886-1925) called their small, militant organisation either *d̲j̲amʿiyyat al-rābiṭa al-islāmiyya*, *d̲j̲amʿiyyat al-ittiḥād al-islāmī* or simply *d̲j̲amʿiyyat al-rābiṭa al-ak͟hawiyya*.

During the First World War, the Central Powers, especially Germany, induced the Ottoman empire to strengthen its Pan-Islamic activities, hoping that they would serve to mobilise the Muslim world to join the war against the Allies. Again, however, this propaganda failed, since national identities of local élites predominated over trans-national forms of self-identification [see further on this, PAN-ISLAMISM].

Islamic policy formulated as Pan-Islamism was often, but not invariably, connected to the *Salafiyya* [*q.v.*] movement. It continued to be an important field of propaganda, especially in Muslim minority communities and among dissident Muslim political groups. ʿAbd al-Raḥmān al-Kawākibī (1848-1902 [*q.v.*]) elaborated the idea of Pan-Islamism in construing a fictive Muslim congress that should have taken place in Mecca in 1898-9. He stressed the importance of the civil identity of Pan-Islamism as being for him the only policy that could guarantee Muslim social, cultural and political welfare (*Umm al-ḳurā*, Beirut 1982, 38-9; Kramer, *Islam assembled*, 30-5). The congress idea aroused a brief enthusiastic response in 1907-8 and again after the abolition of the caliphate in Turkey on 4 March 1924. From 1926 to 1931, three international Islamic congresses were held (Mecca 1926, Cairo 1926 and Jerusalem 1931), each of which aimed at helping establish an Islamic public opinion on special issues (the question of the Holy Places, the question of the caliphate, and the question of the Sanctuaries in Jerusalem).

The more such independent Islamic groups as the Egyptian Muslim Brotherhood (*d̲j̲amʿiyyat al-ik͟hwān al-muslimīn* [see AL-IK͟HWĀN AL-MUSLIMŪN]) or the Muslim Youth Organisation (*d̲j̲amʿiyyat al-s͟hubbān al-muslimīn*) were able to spread their propaganda and to articulate an Islamic policy which was directed more to a local public than to an imagined Islamic *umma* (the influence of Ras͟hīd Riḍā [*q.v.*] is notable), the more the traditional concept of Pan-Islam lost its influence. Following Ras͟hīd Riḍā, most Islamic activists now favoured a unity of Islamic avant-garde organisations (*rābiṭa islāmiyya*) which would represent "the polity of Islam" (*dawlat al-Islām*) in contrast to the undifferentiated unity of the Islamic *umma* (*d̲j̲āmiʿa islāmiyya*) (cf. Ras͟hīd Riḍā, *Taʾrīk͟h al-Imām al-Ustād͟h Muḥammad ʿAbduh*, i, Cairo 1350/1931, 318-20, 328). It is in this sense that the term *rābiṭa* ("league") has been widely used since the 1930s. In Syria, Morocco, ʿIrāḳ, Algeria and Sudan, for instance, Muslim scholars have founded so-called "leagues" (*rābiṭat al-ʿulamāʾ*), which show that the term *rābiṭa* has now become a word signifying an independent Muslim élite organisation, mostly of *Salafī* orientation.

After the Second World War, Pan-Islamism as a label for independent, trans-national Islamic policy faded out. Instead, national politics of the newly-established or re-established states began to incorporate Pan-Islamic ideals into their own propaganda (Egypt, Jordan, Pakistan, Saudi Arabia) and set up different trans-national Islamic bodies which would attest the Islamic identity of the national régimes, e.g. the Islamic World Congress (1949-52), the General Islamic Congress of Jerusalem (1953), the Higher Council of Muslim Affairs (1960) or the Muslim World League (1962) (Schulze, *Internationalismus*, 104-22). During the so-called Arab Cold War (M.H. Kerr, *The Arab Cold War*, New York-London 1970), Pan-Islamism served as a cornerstone of either faction: Egyptian Nasserists and Saudi Royalists both used Pan-Islamic rhetoric in order to internationalise their policy. In the 1970s, the strengthening of independent Islamic politics led to a competition in the field of trans-national Islamic politics. On the one hand, patronising Muslim states reacted positively to the Saudi call to found an inter-state Islamic organisation (*Munaẓẓamat al-Muʾtamar al-Islāmī*, 1969, 1972) which would serve to establish Islamic solidarity through government policy. On the other hand, however, Islamic politicians favoured the trans-national co-operation of homogenous Islamic tendencies which would serve to establish a network of congenial Islamic organisations. The most famous trans-national league is *Rābiṭat al-ʿĀlam al-Islāmī* (Muslim World League), founded in 1962 at Mecca. Its members claimed to "represent [the Muslim world] in the fields of dogmatics and belief" and to work for the establishing of a "union of the Muslim world" (*d̲j̲āmiʿat al-ʿālam al-islāmī*) (*Mad̲j̲allat Rābiṭat al-ʿĀlam al-Islāmī*, i/1 [1383/1963], 8; Schulze, *op. cit.*, 215). Hence *rābiṭa* now means a political and cultural avant-garde of Muslim scholars and intellectuals whose task is, according to Ḳurʾān, III, 103, to propagate the message of "the true Islam" in order to create a true union of Muslim peoples, whereas *d̲j̲āmiʿa* continues to signify the political unification of Muslim states.

RAḌĀʿ or **RIḌĀʿ**, also RAḌĀʿA (A.), suckling; as a technical term, the suckling which produces the legal impediment to marriage of foster-kinship.

1. Legal aspects.

From the manner in which the Ḳurʾān presents its ruling, it may be supposed that the question was already familiar to those addressed. Sūra IV, 23, falls into two sections comprising lists of those with whom the Muslim may not contract marriage. The first, dealing with blood relatives, begins with the natural mother. The second, opening with the foster-mother and the foster-sister, that is, any female to whom the foster-mother has also given suck, suggested for foster-relations duplication of the list already given for blood-relations. To foster-mother and foster-sister came to be added the foster-niece, the foster-aunt (maternal and paternal), and foster-daughter. Nor may a man simultaneously wed or own two women who are foster-sisters, nor a woman and either of her foster-aunts.

An early and long-lived point of contention, expressed in traditions involving the Prophet's own immediate household, concerned the foster-uncle, that is, the brother of the husband of the wet-nurse. These reports frequently state that discussion of the status of the foster-uncle arose subsequent to the imposition of the segregation of the sexes. What was in view was the need to identify all males with whom females, in terms of interpretation of sūra IV, 23, read in conjunction with XXIV, 31, might lawfully dispense with the inconvenience of the *ḥidjāb*. The latter verse failed to mention the uncle, although sūra IV prohibits marriage with nieces. Informality was taken to be restricted to persons between whom marriage was not permitted. Al-Shāfiʿī argued that the extension of the range of foster-relationship had been based on both the lay-out of sūra IV and the elucidation of the passage supplied by the Prophet in the traditions just mentioned. Some of these illustrate the maxim: "Foster-relationship prohibits precisely what blood-relationship prohibits."

The addition of the foster-uncle to the relations of forbidden degree, as well as the idea, promoted in a series of traditions, that marriage was also prohibited between the foster-children of two wives or slaves of the same man, by including relationship by marriage in foster-relationship, adds to the impediment to marriage by reason of fostership a further impediment on grounds of a relationship in law. Resistance to the idea that the relation established between nurse and infant extended to the nurse's husband and, through him, to his brother, was expressed in variants of the above traditions, one of which exposes the principle underlying the proposed extension. This is the concept of "the sire's milk". It was thought that there inhered in breast-milk some quality similar to that residing in blood. The semen of the husband caused the flow of milk. That was what underlay the ban created by the act of nursing and it was, therefore, of necessity, implicated in its legal consequences. Incorporation of relationship in law within the structure of foster-relationships was upheld but, at least in this aspect, was abandoned by al-Shāfiʿī under the influence of contrary traditions.

Foster-relationship is to a degree specific. The *fuḳahāʾ* are agreed that, whereas it exists between a man and all his descendants and his nurse and all her foster- and blood relatives, and for the majority, all her husband's ones as well, no foster-relationship is assumed between a man and the ascendants or lateral relatives of his foster-brothers and sisters, or between the nurse and the ascendants or lateral relatives of her foster-child.

Since the Ḳurʾān envisages the employment for hire of wet-nurses, the duration of the breast-feeding had to be ascertained, under the rules governing hire. As to the age of the infant, that and the question of the period of his feeding had been addressed in II, 233, which suggested that the complete course would be of two years. For the majority, therefore, only suckling that occurs in infancy and is indispensable for the physical development of the child creates the legally significant bond. The point was illustrated using hypothetical illustrations. A husband, coming to the aid of his wife whose milk is slow to flow, is not barred from future marital relations with her if he should inadvertently swallow any of her milk. Nor can a jealous wife prevent legitimate sexual relations between her husband and any younger co-wife whom he chooses to marry by the expedient of nursing her. The response to such situations was conveyed in traditions traced to prominent Companions, or to the Prophet himself: *innamā 'l-raḍāʿa min al-madjāʿa* "valid suckling is that which alone staves off hunger." Traditions of the kind were directed against the artificial foster-relationship to which we shall shortly return.

The majority of the *fuḳahāʾ* accepted that the suckling provided during the first two years of life was alone legally relevant and (despite the wide circulation of traditions from the Prophet to the contrary), that the swallowing of only a single drop of breast-milk at that age established the legally-recognised affiliation.

The discussion of both these questions had as its background a debate on the legal efficacy of the suckling of non-infants, referred to in the literature as *raḍāʿ al-kabīr*. Various wives of the Prophet are reported to have arranged that certain infants be suckled by their sisters or by the daughters of their brothers, to ensure that, in their later years, such males would be able to visit them. The traditions in question make the point that a minimum number, usually five or ten, of suckling sessions had to be completed if the plan were to succeed. Where the number of sessions fell below the stated minimum, the underlying intent was frustrated. That, it is explained, is why Sālim b. ʿAbd Allāh could never call upon ʿĀʾisha. The discussion on numbers merged with the separate tradition on the plight of a particular family unit. When the wife of a

prominent Companion told the Prophet that, following the revelation of sūra XXXIII's negation of the reality of legal adoption, her husband resented the continued presence in their home of their adopted son, now grown to full manhood, the Prophet counselled her to suckle the man on five separate occasions. A variant says ten separate occasions. Alone among the Prophet's widows, ʿĀʾis̲h̲a is said, on the basis of this episode, to have adopted the principle that the suckling of an adult is legally efficacious. Rebuked by the Prophet's other widows, ʿĀʾis̲h̲a is reported to have replied that she merely followed a precedent established by the Prophet and alluded to XXXIII, 21. This argument from the Sunna proving inadequate in the face of an equal weight of contrary traditions traced to the remaining widows, showing that they regarded that as having been a specific concession granted by the Prophet and never intended for general application, resort had to be made to higher authority. ʿĀʾis̲h̲a is said to have claimed that a Ḳurʾān verse had been revealed to the Prophet setting the minimum number of suckling sessions required to establish the marriage ban at ten. The verse had subsequently been withdrawn and replaced by a second verse setting the limit at five. ʿĀʾis̲h̲a is further held to have stated that this second verse was still being recited as part of the Ḳurʾān when the Prophet died. Mālik reproduced this report in his *Muwaṭṭaʾ* merely to dismiss it, but it became a crucial element in al-S̲h̲āfiʿī's bitter polemic against the Mālikīs of his day. Ḥanafīs and Mālikīs are agreed that one single session suffices to establish the ban; three opinions are transmitted from Aḥmad which show him somewhat equivocal on the matter. Al-Layt̲h̲ b. Saʿd and the Ẓāhirīs Dāwūd and Ibn Ḥazm argued for this limit of five sessions, and defended the legal efficacy of suckling an adult, although al-S̲h̲āfiʿī had already abandoned this element of the tradition as curtly as Mālik had dismissed any minimum number greater than one.

The discussion incidentally furnished the theorists on *nask̲h̲* [*q.v.*] with what were claimed to be two attested instances of the phenomenon. The ten sucklings verse exemplified *nask̲h̲ al-tilāwa wa 'l-ḥukm*, suppression of both wording and ruling of a Ḳurʾān verse, while the five sucklings-verse represented suppression of the wording, but not the ruling of a revealed verse, *nask̲h̲ al-tilāwa dūna 'l-ḥukm*. That the Mālikīs treated both verses as suppressed in respect of wording and ruling shows that they traced their view directly to IV, 23. The verse used the preterite of the verb which can be realised in a single act, an interpretation illustrated in a tradition attributed to ʿAbd Allāh b. ʿUmar: "God's word is superior to ʿĀʾis̲h̲a's word. God merely says 'Your foster-sisters are prohibited'; He does not say 'One suckling' nor 'two sucklings'."

To prove foster-kinship, many authorities were content with the testimony of the foster-mother. But, as the foster-mother may be either free or a slave, Muslim or *d̲h̲immī*, Mālik is said to have expected the evidence of at least two women, although his followers are divided on this. The Ḥanafīs demanded two men, or, failing that, one man and two women (II, 282).

(J. Schacht-[J. Burton])

2. In Arabian society.

Before Islam, the Meccans habitually gave their infants to wet-nurses, choosing these for preference amongst the Bedouins; hence Muḥammad was entrusted to Ḥalīma, of the tribe of Saʿd b. Bakr (al-Balād̲h̲urī, *Ansāb al-as̲h̲rāf*, ed. Ḥamīdallāh, Cairo 1959, i, 93). It was normal for such services to be recompensed, and Ḳurʾān, II, 233, stipulates that the wet-nurse should be rewarded according to the custom. Curiously, it is also envisaged that a husband should make a payment to the mother whom he has repudiated as a wife so that she can suckle her child born of him. If there is any dispute over the amount of this recompense, the mother can refuse to provide milk without the father being able to exert any pressure or compulsion on her. In such a case, the parents can only entrust their child to a wet-nurse (LXV, 6).

Suckling creates fraternal bonds which have a widespread social and moral effect. As a vital element which embodies a sacred principle, milk produces an effect comparable to that of blood, of which it is sometimes a synonym. This is why children suckled from the same breasts were considered as brothers, so that S̲h̲īmā, daughter of the wet-nurse Ḥalīma, was the foster-sister of Muḥammad. When she was captured on the Day of Ḥunayn [*q.v.*], she identified herself to the Prophet, who accorded her a welcome worthy of a sister (al-Balād̲h̲urī, *Ansāb*, i, 93).

The mystical bond of relationship created by suckling gave rise to a number of marriage prohibitions (see 1. above). The prohibition of marrying a foster-sister was pre-Islamic. In order to prevent ʿAntar from consummating his marriage, a rival tried to make him believe that he was the milk-sister of his wife ʿAbla, on the grounds that the latter had allegedly sucked the breasts of Zabība, ʿAntar's mother. In addition to the Ḳurʾānic prohibition (see 1. above), a *ḥadīt̲h̲* adds "suckling prohibits what birth prohibits" (*al-raḍāʿa tuḥarrimu mā tuḥarrimu al-wilāda*) (Muslim, *Ṣaḥīḥ*, *k. al-raḍāʿa*, Cairo 1334, iv, 162), and another tradition states "what is prohibited through fostering is the same as what is prohibited by blood relationship" (*yaḥrumu min al-raḍāʿa mā yaḥrumu min al-nasab*) (al-Buk̲h̲ārī, *Ṣaḥīḥ, k. al-nikāḥ*, Cairo 1376, vii, 9). When a husband learnt that he had been suckled at the same breast as had his spouse, he consulted the Prophet, who ordered him to divorce her (*ibid.*, vii, 10). Since the wet-nurse's husband was considered as a father, the latter's brother became the uncle of the man who had been suckled, i.e. a foster-uncle (see 1. above).

One question to be considered concerns the provenance or source of the milk. Only a woman's milk creates bonds of kinship; if a man suckles a child with milk secreted by his breasts, no prohibitions result (al-S̲h̲aʿrānī, *Mīzān*, Cairo 1322, ii, 143).

Bibliography: Given in the article.

(J. Chelhod)

RADD (a.), the normal term used in classical Islamic literature to denote a response to an adversary, intended to refute his statements or opinions. A number of works, especially those belonging to the earlier period (2nd-4th centuries A.H.), bore the title *Kitāb al-Radd ʿalā...* "response, reply to...": cf. *Fihrist*, ed. Tad̲j̲addud, Tehran 1971, index, 109-11; Sezgin, *GAS*, i, 903-4; viii, 369; ix, 378-9. Also often

used, with the same meaning, was the expression *Kitāb ʿalā...*, cf. *Fihrist*, index, 132. There are also instances where the word *radd* is interposed in the second element of the title; thus, in the field of theological polemic, the *K. Ikhtilāf al-lafẓ wa 'l-radd ʿalā 'l-djahmiyya wa 'l-mushabbiha* of Ibn Ḳutayba, the *K. al-Intiṣār wa 'l-radd ʿalā Ibn al-Rāwandī* of al-Khayyāṭ [*q.v.*], the *K. al-Lumaʿ fi 'l-radd ʿalā ahl al-zaygh wa 'l-bidaʿ* of al-Ashʿarī, the *K. al-Tamhīd fi 'l-radd ʿalā 'l-mulḥida wa 'l-muʿaṭṭila...* of al-Bāḳillānī. Another term in frequent usage is *naḳḍ* "refutation", although *naḳḍ* is principally employed in reference to a book (*K. Naḳḍ Risālat al-Shāfiʿī, K. Naḳḍ K. Ibn al-Rāwandī fi 'l-imāma*, etc.; if the refutation applies to an individual, the expression used is *K. al-Naḳḍ ʿalā...*); cf. *Fihrist*, index, 159-60. The refutation of a work may in its turn be refuted; thus the *Naḳḍ al-Lumaʿ* of ʿAbd al-Djabbār (a refutation of the *K. al-Lumaʿ* of al-Ashʿarī) was followed by a *K. Naḳḍ al-Naḳḍ* of al-Bāḳillānī (cf. *Arabica* [1985], 187, n. 12).

All topics liable to give rise to divergent points of view, between individuals or between schools, could provide material for refutation. Thus in the writings of grammarian-lexicographers, refutations are to be observed, in opposition to Sībawayh, al-Khalīl, al-Farrāʾ, al-Mubarrad, al-Mufaḍḍal b. Salama, Thaʿlab, Ibn Khālawayh, etc. (cf. *GAS*, viii and ix, index of titles). In the field of *fiḳh*, attention may be drawn, among others, to refutations of Mālik by Abū Yūsuf (*Fihrist*, 257, ll. 2-3), of Muḥammad b. al-Ḥasan by al-Shāfiʿī (*ibid.*, 264, l. 22), of al-Shāfiʿ ī by the Mālikī Ibrāhīm b. Ḥammād (*ibid.*, 252, ll. 29-30) and the Imāmī Abū Sahl al-Nawbakhtī (*ibid.*, 225, l. 17). But it is in the field of dogmatic theology that refutations are most abundant; it is accepted, furthermore, that if, in Islam, theology has come to be known as the "science of speech" (*ʿilm al-kalām* [*q.v.*]), it owes this title to the fact that it was, at the outset, of an essentially polemical and apologetic nature (cf., most recently, J. van Ess, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, i, Berlin-New York 1991, 48-55). The adversaries in question are, on the one hand, all adherents of doctrines other than Islam: Jews, Christians, Mazdaeans, Dualists, "Zindīḳs" [*q.v.*], *dahriyya* [*q.v.*], disciples of Aristotle, practitioners of astrology, partisans of "natures" (*ṭabāʾiʿ*), believers in metempsychosis, "sophists", etc. On the other hand, within the context of Islam, there are all the schools or "sects" reckoned to uphold—from the point of view of the author in question—doctrines which are erroneous and which deserve, for this reason, to be opposed: Murdjiʾa, Djahmiyya, Ḳadariyya, Muʿtazila, "assimilationists" (*mushabbiha*), "corporealists" (*mudjassima*), *ḥashwiyya* [*q.v.*], "coercionists" (*djabriyya* or *mudjbira*), Khāridjites, "Rāfiḍīs" [*q.v.*], extreme Shīʿīs (*ghulāt*), etc. As among grammarians and jurists, the polemic is also often of an individual nature: in the bibliography of the Muʿtazilī Bishr b. al-Muʿtamir [*q.v.*], for example, there figures a whole series of refutations of this kind, in opposition to, among others, Abu 'l-Hudhayl, al-Naẓẓām, Ḍirār, Ḥafṣ al-Fard, Hishām b. al-Ḥakam, Abū Bakr al-Aṣamm (*Fihrist*, 185, ll. 2-6).

A uniform model of refutation does not exist. It is possible, however, to identify two principal types. Either the refutation is purely unilateral; the author presents successively each of the assertions of the adversary ("he says", *ḳāla*), and in each case gives his reply ("he is answered", *yuḳālu lahu*), and this is the model followed for example—although in very different registers—by Ibn Ḥanbal in the first section of his *K. al-Radd ʿalā 'l-zanādiḳa* and by al-Khayyāṭ in his *Intiṣār*; or else the refutation is presented in the form of an imaginary controversy (*munāẓara* [*q.v.*]), with a series of questions and answers [see AL-MASĀʾIL WA 'L-ADJWIBA], where, naturally, the author gives himself the best lines and effortlessly reduces his interlocutor to a state of confusion ("he will be asked", *yuḳālu lahu...*, "and if he says", *fa-in ḳāla...*, "he will be answered", *ḳīla lahu...*, "and if he says", etc.). A good example—among a hundred others—of this second method is the *Tamhīd* of al-Bāḳillānī (see especially the chapters opposing the Mazdaeans and the Christians).

Bibliography: Given in the article.

(D. GIMARET)

AL-**RĀDHĀNIYYA**, a name by which is known a group of Jewish merchants whose origin, identity and activities have been the subject of an endless series of questions, opinions, commentaries and contradictory judgments, none of which have proved finally convincing.

These speculations have been inspired by a passage of the *Kitāb al-Masālik wa 'l-mamālik* of Ibn Khurradādhbih [*q.v.*] composed between 232 and 272/846-85. This text, which has been copied and summarised, but never genuinely corroborated by contemporary or later authors, Muslim or non-Muslim, has been avidly studied by a series of scholars who will be mentioned below. It appears in its entirety in the edition-translation of the *K. al-Masālik* produced by Barbier de Meynard (in *JA* [1865]), in the standard edition of M.J. De Goeje (*BGA*, vi, 1885, 153-5), in the edition-translation of M. Hadj-Sadok (*Description du Maghreb et de l'Europe au IIIᵉ/IXᵉ siècle*, Algiers 1949, 20-2) and, partially, in the *Extraits des principaux géographes arabes du Moyen Âge* by R. Blachère (Paris 1957, 28-9). It has furthermore been the object of a quite considerable number of translations into English (for specific references see *Bibl.*) by Sprenger, Jacobs, Adler, Lopez-Raymond, Katz, Rabinowitz (1948 = Jacobs' translation with commentary by I. Friedlander), Goitein (1954), Roth, Baron, Serjeant; into German, by Aronius, Caro, Jacobi; into Hebrew, by Dinur; into Yiddish, by Schipper (this version was also translated into Hebrew).

The best method of introducing the subject is to offer a literal translation of this text:

"Itinerary/itineraries of the Jewish merchants (known as) Rādhāniyya, who speak Arabic, Persian, *Rūmī* (= Greek?), Frankish (= French?), Andalusian (= Romance) and Slavonic, and travel from the East to the West and vice-versa, by land and by sea. From the West they import eunuchs (*khadam*), young slaves of both sexes (*djawārī* and *ghilmān*), silk brocade (*dībādj*), beaver fur (*djulūd al-khazz*), [pelts of] the sable (*sammūr*) and [other] furs, as well as swords."

[*First itinerary*] "They embark in the land of the Franks (Firandja [see IFRANDJ]) on the Western Sea (= the Mediterranean) and disembark at al-Faramā (= ancient Pelusium), then they transport their merchandise by land (*ʿalā 'l-ẓahr*) as far as al-Ḳulzum [*q.v.*] (ancient Clysma), a distance of 25 parasangs; they then traverse the Eastern Sea (= the Red Sea) from al-Ḳulzum to al-Djār (the port of Medina; see Yāḳūt, *Buldān*, s.v.) and to Djudda [*q.v.*]. From here, they continue their journey to Sind [*q.v.*], to India [see AL-HIND] and to China [see AL-ṢĪN]. From China, they bring back musk (*misk* [*q.v.*]), wood of aloes (*ʿūd*), camphor (*kāfūr* [*q.v.*]), cinnamon (*dār ṣīnī* [*q.v.* in Suppl.]) and other (products) which are imported from these countries. Thus they return to al-Ḳulzum, then transport their [consignment] to al-Faramā and

embark on the Mediterranean. Sometimes, they made a detour through Constantinople with their merchandise, which they sold to the Byzantines. Sometimes furthermore, they went to sell them [in the land of the] king of Firandja."

[*Second itinerary*] "When they chose to do so, on leaving Firandja, they transported their merchandise by sea, on the Mediterranean, disembarking at Antioch (Anṭākiya [*q.v.*]), whence they made their way, in three overland stages, to al-Djābiya (see below); they then sailed on the Euphrates (al-Furāt [*q.v.*]) to Baghdād, then on the Tigris (Didjla [*q.v.*]) to al-Ubulla (see *EI*[1], s.v. AL-OBOLLA), and from here they gained access to Oman (ʿUmān [*q.v.*]), Sind, India and China, all these countries being contiguous with one another."

After the succinct description of these two itineraries, the text moves on to the "Russian traders", who are not to be confused with the Rādhāniyya; not only, in fact, do "they call themselves Christians", but moreover their journeys, confined to the Orient, have Baghdād as their western limit. The paragraph devoted to them is possibly an interpolation owed to a copyist, but it is equally possible that the author himself has inserted a few lines regarding these merchants; this would then be one of those intercalations through association of ideas which are such a feature of mediaeval Arab writings, especially in the process of revision, and it is known that Ibn Khurradādhbih adapted his own text. On the subject of the Russians, al-Masʿūdī, who does not know of the Rādhāniyya, speaks (*Murūdj*, ii, 18 = § 458) of the Lūdhʿāna (?) "who come in pursuit of trade to Spain, to Rome, to Constantinople and Khazaria". J. Marquart (*Streifzüge*, 33), D.M. Dunlop (*Khazars*, 209) and A. Seippel (p. xxviii) have proposed various readings and identifications, but it would be tempting to see this name as an adaptation of Rādhāniyya; the author of the present article was rash enough to suggest such a connection (Arabic index of the *Murūdj*, s.v. Lūdhʿāna): Jacobi (252-3) also speculates cautiously on the possibility of the al-Lūdhʿāna = al-Rādhāniyya equation and shows equal circumspection in considering a passage of the *Kitāb al-Tanbīh* of the same author (140; ed. Cairo, 121-2) where it is said that the Byzantine city (*sic*) of Musannāt impounds ships of the Kūdhkūna (= Rādhāniyya ?) and of other Russians.

It is particularly important not to overlook, as R. Blachère has, the continuation of the account of Ibn Khurradādhbih, who returns to the Rādhāniyya without introducing them other than by a personal pronoun (*hum*), which could equally well refer to the Russian merchants. So, having described in the first part of the text two itineraries of the Jewish merchants who, on the outward journey at least, traverse the Mediterranean from end to end, the author moves on to a *Third itinerary*, to

"Their overland route: those among them who set out from al-Andalus or from Firandja, cross over (the strait) to Lower Sūs (al-Sūs al-Aḳṣā [*q.v.*]) and arrive at Tangier, whence they make their way to Ifrīḳiya [*q.v.*] (approximately equivalent to present-day Tunisia, but more specifically Ḳayrawān), to Miṣr [*q.v.*] (Egypt, but more specifically al-Fusṭāṭ); they subsequently pass through al-Ramla [*q.v.*] (in Palestine), Damascus (Dimashḳ [*q.v.*]), Kūfa [*q.v.*], Baghdād, Baṣra [*q.vv.*] (these last three in ʿIrāḳ), al-Ahwāz [*q.v.*] (in Khūzistān), Fārs and Kirmān [*q.vv.*], arriving in Sind, India and China."

[*Fourth itinerary*] "Sometimes they take a route to the rear of Rome (Rūmiya), through the land of the Slavs (al-Ṣaḳāliba [*q.v.*]), reaching Khamlīdj (or Khamlīkh; see *Ḥudūd al-ʿālam*, comm. Minorsky, 454 and index), capital of the Khazars [*q.v.*], then [they sail] on the sea of Djurdjān (= the Caspian), [arriving] at Balkh [*q.v.*] (in northern Afghanistan) and in Transoxiana (Mā warā' al-Nahr [*q.v.*]) before attaining the camp (*wurt*; see below) of the Toghuzghuz [*q.v.*] and moving into China."

The first orientalist to have drawn attention to this passage was A. Sprenger who, in 1844, undertook an English translation of it. Shortly after this, J.-T. Reinaud had occasion to quote it, and C. Barbier de Meynard annotated it in his edition-translation of the *K. al-Masālik*, all of this before historians of the Jewish people or of international trade began to utilise and to analyse it. Among the latter, the most authoritative is undoubtedly W. Heyd who, although having no direct access to the Arabic text, posed some pertinent questions, regarding in particular the land of origin of these Jews, whom he perceived nevertheless as westerners, since they set out from the West. Since then, studies and commentaries have followed in rapid succession: I. Schipper concurred with Heyd and stressed the fact (in his *Anfänge* and *Anteil*) that, among Jewish merchants, only those from the West travelled worldwide, the orientals among them remaining within the limits of the Islamic world. In fact, the issue of the origin or the home-base of the Rādhāniyya has been discussed by numerous scholars who, in general, have considered them to be natives of Spain or of France. M. Lombard has even declared that they set sail from Narbonne, without providing evidence in support of this claim. In this company, only Barbier de Meynard displayed sound judgment, logically linking their name to that of the district of the Sawād of Baghdād known as Rādhān (see Yāḳūt, *Buldān*, s.v.). J. Jacobs, for his part, has sought to locate them at Rayy [*q.v.*], and S. Katz, while appearing to support this hypothesis, has made the remark that between Spain and China there were enough Jewish communities to explain the details of the itineraries described by Ibn Khurradādhbih. In 1957, S.W. Baron (328, n. 39) wrote that the latter undoubtedly included Jewish merchants of Khazaria among the Rādhāniyya, who are not necessarily all of the same origin; this scholar considered that these polyglot travellers could not be linked to any specific place and, rejecting the suggestion of Barbier de Maynard and of Simonsen (see below), he supported the explanation proposed by De Goeje of *rāh-dān* ("itinerant merchants").

Setting aside the question of their name, which will be examined here at a later stage, the problems posed by the Rādhāniyya are not always dealt with, by the authors who mention them, in relation to a wider context. Thus for example, G. Wiet, writing in 1937, described this text as "crucial" and translated it in part, but did not dwell on it and did not even mention the name of the group. In 1954, R. Brunschvig (in *EI*[2], s.v. ʿABD, at i, 32a), on the basis of this "famous" passage, gave prominence to the role of the Jews in the traffic of "Slavs" (i.e. slaves) across eastern and western Europe and even made a connection with the "eunuch factory" situated at Verdun [see KHAṢĪ, at iv, 1083b]. Occasional references such as this exist in abundance, none of them throwing the least light on the problems posed by the Rādhāniyya. The first thorough study of the text in question was due to J. Rabinowitz who, following his survey of *The routes of the Radanites* (1944), devoted a monograph to these merchants, entitled *Jewish merchant adventurers. A study of the Radanites*. This senior South African rabbi

reckoned it necessary to consider in the first place the general situation of the world in the 9th century in order to identify and locate the "Radanites", in reference to whom he asserted (11), quoting Jacobs (194), that "His (Ibn Khurradādhbih's) account gives the key to the whole economic history of the Jews in the Middle Ages" and observed that the members of this group present three unusual features: they begin their journey in Europe; they follow overland routes between Khurāsān and China; they cover half of the fourth itinerary before reaching Islamic territories. In any event, he added, circumstances were favourable to the Radanites, since the trade routes between Christian Europe and the Islamic world were closed, except for the Jews. S.D. Goitein (1955), who was well aware of the work of Rabinowitz, considered the history of the Radanites in the light of documents from the Geniza and saw in their activity the first example of Jewish commerce in the early years of Islam. Writing in 1967, this same scholar attributed in part the major role played by Jews in the silk industry to the Rahdāniyya (*sic*), who could have had the opportunity, during their visits to China, to become acquainted with the professional intricacies of silk production. Goitein was unaware of a seminal article *Y a-t-il eu des Rahdānites*? by Cl. Cahen, who was the first historian (in 1964) to subject the text of Ibn Khurradādhbih to close analysis. The scepticism suggested by the title is explained by the fact that the passage in question—which is not corroborated, it will be remembered, by any independent source—raises a number of queries which, taken together, amount to the question: is it necessary to take Ibn Khurradādhbih's account as valid testimony, such that study of it is confined to critical examination of certain striking details or, on the contrary, if the whole is not to be rejected, should its authenticity at least be seriously questioned, bearing in mind that it is possibly a case of interpolation, the product of the intervention of some copyist? No historian has gone so far as this, not even Cl. Cahen, nor B. Blumenkranz who, writing in 1960, has shown considerable scepticism and has criticised the modern scholars who "by means of ingenious but barely reliable exegesis" locate the Rādhāniyya in the valley of the Rhône (an allusion to Simonsen; see below). He adds "An organisation into commercial companies has been invented for them" and "All the merchants who are known to have traded between the West and the East are automatically assumed to be Jews", but this author criticises above all "the invention" of Jewish merchants, without contributing anything new with regard to the Rādhāniyya. For his part, Cl. Cahen bases his doubts on certain points of the four itineraries described briefly by the geographer. He finds it astonishing that, in the first, al-Faramā is portrayed as a very busy commercial port and he is surprised that, in the second, Antioch should be the port of disembarkation of the Rādhāniyya, for this ancient city, which had lost much of its importance since the Arab conquest, was not a known market. Furthermore, the name of al-Djābiya is suspect (and it hard to understand how Blachère, *op. cit.*, 28, n. 12, discovered that it refers to "a small locality on the Euphrates", whereas the name in question [*q.v.*] is only that of a small town situated to the south of Damascus, and it seems unlikely that itinerant merchants would have made such a detour. In fact, this toponym features in only one of the two mss. of Ibn Khurradādhbih and was omitted by Ibn al-Faķīh (see below). On the other hand, if it is accepted that the name of al-Djābiya is not an addition owed to a copyist but simply replaces that of the locality which is thought to be meant, sc. Bālis [*q.v.*], it is not necessarily a fluvial port which is involved, since the text says simply: *thumma yarkabūn fi 'l-Furāt*. The third itinerary caused even greater astonishment to Cl. Cahen, who justifiably described as "incomprehensible" a "maritime detour leading from France or from Spain to the Atlantic coast of Morocco". (This is also the opinion of Hadj-Sadok who, considering the reading *al-Sūs al-Akṣā* an error, with reason corrected it to *al-Sūs al-Adnā*, which is closer to reality. It is possible that confusion arose in the mind of the author, who was unfamiliar with the Islamic West, between Sūs and the Maghrib, but such an error does not compromise the veracity of the account.) Then, Cahen found it doubtful that the journey between Kirmān and Sind could have been made by overland route "on the terrible Persian coast". Finally, the fourth itinerary crosses central Europe and, via Khazaria, leads to China by way of the Caspian, Balkh, Transoxiana and the Camp of the Toghuzghuz, in other words through the "traditional passes of the Silk Road". (The word *wurt* in the text should no doubt be read *yūrt* or *yurt*, "tent" or "encampement" [see KHAYMA. iv. Central Asia].)

Without rejecting the whole of the paragraph, Cahen questioned the general image of the "Rahdānites". He doubted that Spain could, in this period, have exported beaver furs, that Jewish merchants would have adopted four quasi-specific itineraries, and that there would have been a "Rahdānite" organisation. He admitted, however, the plausible existence of a kind of association between people speaking various languages among those mentioned above and travelling between the West and the Far East.

This explosive article was bound to provoke reactions among historians. Writing in 1965, B. Lewis (in *EI*², s.v. IFRANDJ, at iii, 1044b) supported the sceptical attitude of Cahen. In 1970, E. Ashtor expressed equal surprise at certain sections of the itineraries and considered that Ibn Khurradādhbih without doubt "included in his survey material which does not conform to the conditions of his period, such as the journey to the Indies by way of the Red Sea". In his opinion, the geographer's intention was to indicate the principal routes of worldwide commerce, at a time when Jews played a dominant role in exchanges between the Christian and Muslim worlds.

The most detailed response to Cahen has been that of Jacobi who, in his article *Die Rādāniyya*, has offered a veritable monograph comprising: (1) a German translation of the text, in which the four itineraries are clearly separated (with recourse to the passages mentioned above, by Ibn al-Faķīh and al-Masʿūdī which Marquart was the first to link together in his *Streifzüge*); (2) acceptance of its authenticity; (3) its credibility: discussion of points of detail regarding the languages spoken by the Rādhāniyya, the itineraries (with references, 257 n. 1, to the role of al-Faramā as a commercial port, the role on which Cahen cast doubt). Jacobi contradicts the latter, who had asserted that al-Ubulla was "enclosed within the Muslim city of Baṣra". In regard to the overland itinerary, he sees in the expression al-Sūs al-Akṣā a synonym of al-Maghrib al-Akṣā, which is evidently inaccurate. In view of the fact that Ibn Khurradādhbih indicates (84-9, ed.-tr. Hadj-Sadok, 2-10/3-11) a more detailed overland route, there is a temptation to use it to supplement the itinerary across North Africa which is more succinctly described in the passage studied here; but it does not seem appropriate to accept extrapolations of this kind. Jacobi examines the different types

of merchandise mentioned and supplies, for each of them, references which in general do not contradict Ibn Khurradādhbih's version. The religion of the group poses no problem, the role of the Jews in worldwide commerce being well known; its organisation, however, is a mystery. (4) Etymology and origin: it is specifically in regard to the meaning and etymology of the term that Jacobi presents an interesting hypothesis worthy of serious consideration. Recalling that the author of the *K. al-Masālik* was a member of the managerial staff of the postal organisation (*barīd*) and thereby, of an information service, he proposes to see in the word *rādhāniyya*, not a name as such, but a technical term denoting a group of intelligence agents who, being Jews, were able to move from one community to another without attracting too much attention, using their commercial activity as a cover. This interpretation deserves to be taken seriously, but judgment must be suspended so long as there is no new source available to throw a decisive light on this problem.

The dialogue has not stopped here, and Cl. Cahen returned to the attack with an article intitled *Quelques questions sur les Radanites*. He thanks Jacobi for having corrected a few minor errors and judges "plausible, though unproven" his "interpretation of the word *Ra(h)daniya*", but returns to the major questions posed by the problem of the "Radanites". He adds that the text of Ibn Khurradādhbih gives the impression of "an organisation of people travelling from one end to the other along specific itineraries", which appears to conflict with the information supplied a little later by "the documents of the Geniza, according to which there never was a single commercial route directly followed from the West to the Indian Ocean." Above all, how is it to be explained that Ibn Khurradādhbih should be the only one to speak of the Rādhāniyya, that there was no western testimony regarding their journeys and that Europe knew nothing of the Far East?

The latest, chronologically, to take an interest in the Rādhāniyya has been M. Gil (1974), who presents a historical survey of works devoted to this subject and of answers to some of the questions posed by Cahen. Refusing to follow Kmietowicz (see below) and Jacobi, he sets out to study the relative value of the sources (a comparison with Ibn al-Faķīh), the point of departure and the itineraries (on which he comments at length), the meaning of Firandja (which he prefers to interpret as meaning Italy), the types of merchandise transported (which are subjected to thorough analysis) and finally the land of the Rādhānites: Gil revives the notion that they take their name from Rādhān, a toponym which is the object of a very detailed study. The conclusion (323) is that "they were no organisation, nor association, nor group; they only had in common their country of origin."

An issue which has so far been left to one side is the widely debated question of the etymology of the name of the Rādhāniyya. Reinaud was the first to associate it with a "Persian" word, *rāh-dān*, translating it as "knowers of the way", and it is in fact a Persian origin which has been proposed by the scholars who have tackled the subject, with the exception of those who, like Barbier de Meynard or Gil, see Rādhān as an ethnic term. In his *Glossarium* to the *BGA*, De Goeje followed Reinaud, justifying his acceptance of *rāh-dān* with the reading Rāhdāniyya of Ibn al-Faķīh al-Hamadhānī [*q.v.*] who, in his *Mukhtaṣar Kitāb al-Buldān* (270, tr. H. Massé, *Abrégé du Livre des Pays*, Damascus 1973, 324), summarised the passage of Ibn Khurradādhbih. However, in the course of editing this translation, the author of the present article has established that the Mashhad ms. of the *Mukhtaṣar* also featured *Rādhāniyya*, thus a reading identical to that which De Goeje retained in his edition of the *K. al-Masālik*. In 1907, D. Simonsen returned to the etymological problem and, rejecting the solution of Barbier de Meynard, since the Rādhāniyya came from Europe, he revived Sprenger's hypothesis and suggested that they should be seen as "sea voyagers from the Rhône" (*nautae*) *Rhodanici*. Furthermore in 1931, in a book in Hebrew on the subject of Israel in the diaspora, B. Dinur accepted this etymology, and he was not the only one to do so (see F. Kmietowicz, 166), but it had been rejected as early as 1908 by De Goeje (in his *Opuscula*), for a phonetic reason, a transformation from *o* to *ā* being impossible. Jacobs and Katz, who saw the Rādhāniyya as coming from Rayy [*q.v.*] in Djibāl, where Ibn Khurradādhbih was employed as head of the *barīd*, sought to link their name to this town, although the corresponding ethnic term is Rāzī. In 1957, S.W. Baron considered De Goeje's explanation (= itinerant merchants) more plausible than that of Simonsen. Cl. Cahen (1951, 1964, 499, n. 4) seemed willing to accept *rāhdān*, rejecting *rāhdār* ("custodian of the road"), which could equally well be proposed; he made the point, however, that the orthography of the name of the group is far from being established. He no longer accepted a possible harmonisation with the reading of al-Muķaddasī (*Aḥsan al-taķāsīm*, 30), who mentions a plural *rahādina* and explains it as meaning "sellers of linen and cotton goods". Dozy, who took this reference into account (*Suppl.*, s.v. *r-h-d-n*), added that he had encountered in the ms. of the *Riyāḍ al-nufūs* of al-Mālikī (mid-6th/11th century), the same plural designating (fol. 29b) a quarter of Ķayrawān and (fol. 91b) traders who used their children to sell their merchandise (cf. R. Brunschvig, *Ḥafṣides*, i, 354, ii, 204); there was also at Ķayrawān a Bāb al-Rahādina (al-Muķaddasī, *op. cit.*, 225; partial ed.-tr. Pellat, *Description de l'Occident musulman au IV^e/X^e siècle*, Algiers 1950, 14/15). In 1970, Kmietowicz took a direction radically different from that of all his predecessors, deriving *rādhāniyya* from *veredarii* "couriers" and positing a phonetic evolution *veredarii-rēdārii-rēdhānī*, a somewhat far-fetched notion and one made all the more difficult to justify by the fact that the Latin *veredus* has given to Arabic *barīd* "post and information" and to Berber *abrīd* "road". It emerges that it is precisely espionage which Jacobi had in mind (261-2), accepting the etymology proposed by Reinaud. Finally, the last chronologically, M. Gil (306), is noteworthy for his assertion that the name of these merchants is based *in all probability* on the Syriac *rhadhan*. This rapid survey has shown that, in spite of the erudition or the imagination of scholars, the problem posed by the origin of the term *rādhāniyya* remains unsolved. Other unanswered questions include, whether this name was known throughout the itineraries described, or whether it was current only in the East of the Islamic world or even known only in the services of the *barīd*; was it a kind of password used by spies, assuming that Jacobi's suggestion is to be taken seriously?

What is to be concluded now from examination of the principal works devoted to the Rādhāniyya? If it is accepted that they did really exist—and nobody seriously doubts this—it is beyond doubt that they were merchants who followed numerous itineraries between western Europe and China. On the outward and return journeys they conveyed a number of types of costly merchandise which are carefully listed by Ibn

Khurradādhbih. The latter also informs us that they spoke numerous languages, and it may be supposed that each individual was familiar with two or three among the languages mentioned and that they would have employed a common traders' argot, probably containing many Hebrew elements. This is all that can be said with confidence.

The scholars whose opinions have been summarised above have posed questions which they have attempted to answer with varying degrees of success. They have seized the opportunity to demonstrate their knowledge of international commerce in the Middle Ages and of the economic role of the Jews, but as regards the Rādhāniyya specifically, all their speculations have not brought any discernible progress. For so long as new sources remain undiscovered it is appropriate to avoid both hypercriticism and imprudence and to admit that Ibn Khurradādhbih, occasional geographer, musicologist and above all *ṣāḥib al-barīd wa 'l-khabar*, constituted himself the echo of information which circulated—perhaps confidentially—in the governmental circles of his time.

RĀDHANPŪR, a former princely state, headed by a Nawwāb [*q.v.*], of British India, at that time in the Pālānpūr [*q.v.*] Agency of Bombay Province, now in the Gujarat State of the Indian Union. It is also the name of its capital (lat. 23° 49′ N., long. 7° 39′ E.), lying 90 km/56 miles to the southwest of Pālānpūr and to the east of the Rann of Cutch.

The rulers of Rādhanpūr traced their descent from a Muslim adventurer who came to India from Iṣfahān about the middle of the 11th/17th century. His descendants became *fawdjdārs* and farmers of revenue in the Mughal province of Gudjarāt [*q.v.*]. Early in the 12th/18th century Djawān Mard Khān Bābī, the head of the family at that time, received a grant of Rādhanpūr and other districts (*Mir'āt-i Aḥmadī*, ms. in Ethé, no. 3599, fol. 742). With the decline of the Mughal empire these districts passed into the hands of the Marāthās [*q.v.*], but the Bābī family were confirmed in the possession of Rādhanpūr by Damādjī Rāō Gaekwār.

British relations with Rādhanpūr date back to the year 1813 (Aitchison, vi, c). Some years later, the British were called upon to rid Rādhanpūr of plundering tribes from Sind who were committing serious depredations in the Nawwāb's territories. In return for this the Nawwāb agreed to become a tributary of the British government, but a few years later this tribute was remitted because it was felt that the state was unable to bear the expense. After the Sepoy Mutiny of 1857-8, in 1862, the ruler of Rādhanpūr received an adoption *sanad* from the governor-general (*op. cit.*, cii). It was not until 1900 that the Djorawarsai currency previously in use was discontinued and replaced by British currency.

In the last years of British rule, Rādhanpūr covered an area of 1,150 square miles and supported a population of 70,530, of whom only 8,435 were Muslims.

The town of Rādhanpūr, the capital of the state, had a total population of 11,225, of whom 3,694 were Muslims (1931 Census Report).

(C. COLLIN DAVIES)

AL-**RĀḌĪ BI 'LLĀH**, ABU 'L-ʿABBĀS AḤMAD (MUḤAMMAD) B. AL-MUḲTADIR, the twentieth ʿAbbāsid caliph.

He was born in Rabīʿ II 297/December 909; his mother was a slave named Ẓalūm. He was proposed for the caliphate immediately after the assassination of his father al-Muḳtadir [*q.v.*], but the choice fell upon al-Ḳāhir [*q.v.*]. The latter had him thrown into prison; after the fall of al-Ḳāhir, he was released and put upon the throne (Djumādā I 322/April 934). As his adviser in this difficult period, al-Rāḍī chose al-Muḳtadir's vizier ʿAlī b. ʿĪsā [*q.v.*] who asked, however, to be excused on account of his great age, whereupon Ibn Muḳla [*q.v.*] was given the office. The most influential official, however, continued to be Muḥammad b. Yāḳūt [*q.v.*] and only after his fall in Djumādā I 323/April 935 did Ibn Muḳla gain control of the administration, while the caliph himself fell completely into the background. But Ibn Muḳla's rule did not last long; in Djumādā I 324/April 936 he was seized by al-Muẓaffar b. Yāḳūt, brother of the above-mentioned Muḥammad, and the impotent caliph had to dismiss him and in the same year summon the governor of Wāsiṭ and Baṣra, Muḥammad b. Rāʾiḳ [*q.v.*], to Baghdād and entrust him with complete authority as *amīr al-umarāʾ*. This meant a complete breach with the past; the caliph was only allowed to retain the capital and its immediate vicinity and to abandon all influence on the business of government, while Ibn Rāʾiḳ in combination with his secretary decided all the more important questions. Ibn Rāʾiḳ held power for nearly two years; his name was actually mentioned in the *khuṭba* for the reigning dynasty along with that of the caliph; in Dhu 'l-Ḳaʿda 326/September 938, however, he was replaced by Badjkam [*q.v.*].

To the financial difficulties and the constant quarrels of the viziers and *amīrs* there was now added war with foreign foes. In 323/935 al-Rāḍī endeavoured to remove from office the governor of al-Mawṣil Nāṣir al-Dawla [*q.v.*], but failed, and a few years later Badjkam, accompanied by the caliph, attacked the Ḥamdānids in order to force them to pay tribute levied upon them, but had to make peace because the fugitive Ibn Rāʾiḳ suddenly appeared in Baghdād. The war with the Byzantines was also continued; the Ḥamdānids, however, in this war came forward as defenders of Islam. In Egypt Muḥammad b. Ṭughdj [*q.v.*] founded the dynasty of the Ikhshīdids and at the same time Badjkam had to fight with the Būyids, who were advancing on several sides and a few years later victoriously entered Baghdād.

In the capital itself al-Rāḍī had to take measures against the fanatical Ḥanbalīs (323/935), who had many followers among the common people and committed all kinds of excesses. They entered private houses, destroyed musicial instruments, ill-treated women singers, poured away wine that they found, interfered in business, annoyed passers-by in the streets, beat Shāfiʿīs and generally behaved as arbitrarily as if they represented a kind of tribunal of the Inquisition.

Al-Rāḍī died in the middle of Rabīʿ I 329/December 940 of dropsy. The Arab historians praise his piety, justice, clemency and generosity as well as his interest in literature and it is said of him, for example (Ibn al-Ṭiḳṭaḳā, *al-Fakhrī*, 380): "He was the last caliph, by whom a collection of poems exists, the last who retained his independence as a ruler, the last to preach a sermon from the pulpit on Fridays, the last to mix freely with his friends and to welcome men of learning, and the last who followed the principles of the earlier caliphs as regards rank, tokens of favour, servants and chamberlains." This characterisation may well be correct in its main lines, but al-Rāḍī was not independent; he was on the contrary a ready tool in the hands of his viziers and *amīrs*.

(K.V. ZETTERSTÉEN)

RAḌĪ AL-**DĪN ḤASAN** AL-**ṢAGHĀNĪ** [see AL-ṢAGHĀNĪ].

RADĪF (A.), lit. "one who rides behind", "pillion rider", is used metaphorically in several technical senses (for a poetical figurative use in Turkish, cf. *ordū-yi ẓafer-redīf* "the victorious army [one which has victory on its croup]" in *Tārīkh-i Djewdet*, Istanbul 1270/1853-4, i, 22):

1. In astronomy it has two meanings, which seem, however, not very amply attested: (a) *al-Radīf*, and also, better attested, *al-Ridf*, is the ancient Arabic name for *Dhanab al-Dadjādja*, i.e. the star *Deneb* (α Cygni), called thus because it "rides pillion" to the "Horsemen" (*al-Fawāris*)—δγεζ Cygni. (b) *Radīf* refers to a star or constellation that is rising (*yanūʾu*, cf. also ANWĀʾ) at sunrise, while its opposite (*raḳīb*) is setting. For both meanings see *LʿA* and Lane, s.v., for *al-Ridf* also al-Khʷārazmī, *Mafātīḥ* 212, 6, and P. Kunitzsch, *Arabische Sternnamen in Europa*, Wiesbaden 1959, 82, 143.

2. In Persian and Persianate prosody the term denotes a word or a whole phrase that follows the rhyme letter (*rawiyy*) and recurs in every line of the poem. In Western languages various renditions of the term have been used, such as "over-rhyme" (Schimmel, 21), "echo rhyme" (Bombaci, in *PTF*, ii, pp. xxii, xxv), "refrain" (Thiesen, 76, n. 5), and "hypermeter" (J. Deny, in *EI*¹, s.v. REDĪF). However, "refrain" normally refers to entire lines or even stanzas repeated throughout a poem, while the *radīf* is always shorter than a hemistich, and "hypermeter" denotes a metrically superfluous element, which the *radīf* is decidedly not. The *radīf* is a metrically and semantically necessary element of the line, as Shams-i Ḳays (*Muʿdjam*, 258) and other authorities stress. The following line by Ḥāfiẓ (*q.v.*; *Dīwān*, edd. Ḳazwīnī and Ghanī, no. 233) may serve as an example:

Dast az ṭalab nadāram tā kām-i man bar āyad
yā tan rasad bi-djānān yā djān zi tan bar āyad.

"I do not cease striving, until my desire comes about:

either the body reaches the friend or the soul comes up from the body."

The rhyme (*ḳāfiya*) in this ghazal is *-an* (the *rawiyy* being *-n*) and the *radīf* is *bar āyad*. Clinton (*Manūchihrī*, 51) calls the overall rhyme scheme in such cases very aptly "multiple rhyme", but goes on, as do others as well, to call this ensemble a *radīf*, which is not correct usage: *ḳāfiya* and *radīf* are considered two separate elements.

The length of the *radīf* may vary between one word and several words almost filling the hemistich. Extreme examples are (*radīfs* underlined):

zihī fuzūda djamāl-ē tu zīb u ʾārā rā
shikasta sunbul-i zulf-ē tu mushk-i sārā rā
(Rūdakī [*q.v.*], *apud* Elwell-Sutton, 225)

and

sarw-rā gul-bār nabwad w-ar buwad nabwad čunīn
sarw-e gul-rukhsār nabwad w-ar buwad nabwad čunīn
dīdam-ash way bar sar-ē gulbār u guftam rāstī
sarw dar gulbār nabwad w-ar buwad nabwad čunīn
(Khwādjū [*q.v.*], *apud* Elwell-Sutton, 225)

or, from Čaghatay Turkish:

Meni shaydā ḳila durghan bu köngül dür, bu köngül,
Khōr u ruswā ḳila durghan bu köngül dür, bu köngül.
Oḳ tegin ḳāmatīmīzni ḳara ḳashlīghlar üčün
Muttaṣil ya ḳila durghan bu köngül dür, bu köngül...
Luṭfī [*q.v.*], *apud* J. Eckmann, in *PTF*, ii, 310)

Mere suffixes following the *rawiyy are not considered a radīf* (cf. e.g. Djāmī, *Ḳāfiya*, 1), and statements to the contrary in the secondary literature should be amended. It is true that Naṣīr al-Dīn-i Ṭūsī (*Miʿyār al-ashʿār*, 200-1) prefers to consider everything that follows the *rawiyy-cum waṣl* (see below) a *radīf* but, as al-Tahānawī (*Kashshāf*, i, 576, 23-4) notes, this is against the *communis opinio* (*wa īn khilāf-i mutaʿāraf ast*). The strength of this general opinion is shown by the fact that the early modern Turkish critic Muʿallim Nādjī (*Istılahat*, 51) who would likewise subsume the suffixes under the general heading *radīf*, defends his position with a personal statement to this effect (*Aciz kanaatimizce, reviden sonra her ne gelirse redif sayılmak daha doğrudur*). The suffixes, or rather the letters that make up the suffixes, have special names in "orthodox" *ʿilm-i ḳāfiya*, the first letter after the *rawiyy* being called *waṣl*, the second *khurūdj*, the third *mazīd*, and the fourth, fifth and sixth—which is said to be the maximum—*nāʾira*.

The *radīf* is supposed to have the same meaning throughout the poem. If it does not, a special artifice results (*radīf mutadjānis*, see al-Tahānawī, *Kashshāf*, i, 576) with complete paronomasia between *radīfs*.

Another specific type is the internal *radīf*, called *ḥādjib*, which precedes the rhyme rather than following it. In the following example the *ḥādjib* is *sulṭān* and the rhyme, *-ūr*:

Sulṭān Malik ast u bar dil-ē sulṭān nūr
har rūz bi-rūy-i ū kunad sulṭān sūr etc.
(Masʿūd-i Saʿd-i Salmān, *apud* Elwell-Sutton, 226)

Even more sophisticated is a combination of *ḥādjib* and double rhyme (*dhu 'l-ḳāfiyatayn*), as in the following lines from Muʿizzī [*q.v.*] (*ibid.*), where the first rhyme is *-ān*, followed by the *ḥādjib dārī*, in turn followed by words containing the second rhyme *-akht*:

Ay shāh-i zamīn bar āsmān dārī takht
sust ast ʿadū tā tu kamān dārī sakht etc.

A poem with *radīf* is called *muraddaf*. This should not be confused with the term *murdaf*, which means "provided with a *ridf*". The *ridf* is a letter of prolongation (*alif, wāw, yāʾ*) immediately preceding the *rawiyy*, as in the Arabic rhymes *nāru, nīru, nūru* (spelled *naHru, niyru, nuwru* [*H* = *alif*]); in Persian rhyme theory there is the additional *ridf-i zāʾid* which denotes a consonant intervening between the *ridf* and the *rawiyy*, as in *dūst* (spelled *duwst*), where *w* is the *ridf*, *s* the *ridf-i zāʾid* and *t* the *rawiyy*. Since both *muraddaf* and *murdaf* are terms used in rhyme theory, confusion is not easily avoided.

As for history and the poetics of the phenomenon, much remains to be studied. The first thing to be said is that the *radīf* is unknown to the Arabs, as a critic like Rashīd al-Dīn-i Waṭwāṭ (*Ḥadāʾiḳ*, 79-80) was well aware, except, he says, for innovations of the Moderns. As an example he adduces a *ḳiṭʿa* by al-Zamakhsharī [*q.v.*] in praise of ʿAlāʾ ad-Dawla Khwārazmshāh in which the *laḳab* of the *mamdūḥ* is used as *radīf*. First line:

al-faḍlu ḥaṣṣalahū ʿAlāʾu l-Dawlah
wa l-madjdu aththalahū ʿAlāʾu l-Dawlah

In the Arabic poetry of Persian poets this is actually not uncommon (e.g. Khāḳānī, *Dīwān*, ed. Sadjdjādī, 950-3, a panegyric on the city of Baghdād with its name as *radīf*).

Elwell-Sutton, 176, 178, 225, makes the point that the *radīf* occurs in Persian poetry at a very early date, already in those satirical jingles from the late 7th and early 8th centuries A.D. preserved in Arabic sources. Here the *radīf* is not even preceded by a regular rhyme, but by assonances at best, which may represent an earlier stage in the development. Köprülü, in discussing the origins of the *radīf* (*redīf*) in Turkish poetry, denies that it was taken over from Persian, "car les origines de ce procédé de *redīf* qui, d'ailleurs, est tout à fait conforme à la structure de la langue turque, se trouvent dans l'assonance de la poésie turque ancienne" (*PTF*, ii, 259). It is probably closer to the truth to say that existing rhyme phenomena in pre-Islamic Turkish poetry facilitated the adoption of the Persian *radīf* technique.

Waṭwāṭ alleges that "most" Persian poems have a *radīf* (*Ḥadāʾiḳ, loc. cit.*). In the case of Manūčihrī [*q.v.*] poems with and without *radīf* are about evenly divided (Clinton, *Manūchihrī*, 51). But simple percentages do not tell much without due consideration of the various kinds of *radīfs* that are attested. The most common, and probably most ancient, type is the verbal *radīf* consisting of a simple and mostly rather nondescript verb (cf. the line from Ḥāfiẓ quoted above). This may be expanded into longer phrases and even complete sentences, such as *bar na-tābad bēš az īn* "more than this is not feasible" serving as a *radīf* in a *ḳaṣīda* of seventy-nine lines by Khāḳānī (*q.v.*; Reinert, *Ḫāqānī*, 40; cf. *Dīwān*, 337-40). As for nominal *radīfs*, Khāḳānī does not follow the fad of his time which was to choose just any noun in order to display one's artistic virtuosity; the nouns he selects always have a bearing on the theme of the poem, such as using *khāk* "dust", as a *radīf* in a dirge of forty-two lines (*ibid.*; cf. *Dīwān*, 237-9), or the noun construct *sag-i kūy-at*, "the dog of your street", in a *ghazal* of fifteen lines in which the poet describes himself as the most despicable dog in the beloved's lane (Schimmel, 403, n. 26, cf. *Dīwān*, 575). These nominal *radīfs* can acquire an iconic character, as in a *tardjīʿ-band* by Djannatī Biyā, quoted by ʿAwfī (*Lubāb*, ed. Browne, ii, 394), where they denote various precious stones (*gawhar, laʿl, zumurrud*), thus forming a necklace of sorts for the poem itself (Schimmel, 156). This possibility is also alluded to in a poem by the Mughal poet Ashraf who says about a celadon bowl with craquelé glaze:

You cannot describe it in a quatrain or a *ghazal* -
I think of a *ḳaṣīda* with the *radīf* "Hair"
(Schimmel, 149).

Similarly, almost every poet in Persia, Turkey, and

Muslim India attempted at least one poem with the *radīf gul*, "rose" (Schimmel, 389, n. 65), and in Ottoman poetry such poems with *gül* (and also *nergis*) as *radīf* almost form subgenres of the *ḳaṣīda* [see RABĪʿIYYĀT, toward the end].

Bibliography: 1. Mediaeval works on prosody. 3. In Turkish military usage. Maḥmūd II [*q.v.*] gave the name of *redīf* (*ʿasākir redīfe-yi menṣūre*) to the reserve army created in 1834 (Jouanin and van Gaver, *Turquie*, 425). The historian Luṭfī (iv, 144), speaking of the project for this army, under the year 1249/1833-4, explains the meaning of the term by saying that it was a force that "came after" the regular army (*muwaẓẓafe-ye redīf olaraḳ*). They were, therefore, not soldiers who had, at need, to mount behind the cavalry on the croup, like the Roman *velites*. *Redīf* was contrasted with *niẓām* or *ʿasākir-i niẓāmiyye* or *ʿasākir-i muwaẓẓafe*, taken in the strict sense of active or regular army (standing army), and with *iḥtiyāṭ* "reserve of the regular army". For the lack of an exact equivalent, we may say "militia" in English and "armée de reserve" or "garde nationale" in French. The German term "Landwehr" is perhaps nearest to it, but in the former Prussian rather than the Austrian sense. Sometimes the *redīf* are included in the *niẓāmiyye*, taking the latter term in a wider sense of regular or disciplined troops (synonym *müretteb*). Luṭfī (*loc. cit.*) calls the *redīf bir newʿ-i ʿasākir-i niẓāmiyye* "a kind of regular troops".

The characteristic feature of the *redīf* army was the existence of permanent cadres, whence its mixed character. It was linked with the regular army by its officers and with the reserve by its men (*efrād-ī redīfe*). It was the object of its creators that this army should provide a large number of men, if necessary, without imposing too long a period of service on the rural population (Luṭfī, *op. cit.*).

It was decided from the first that the *redīf* should consist of battalions (*tabur*), and, indeed, this organisation by battalion depots (*tabur dāʾireleri*) remained in force as long as the *redīf* existed. The commanders of these battalions (*biñbashī*) were at first chosen from the chief local families (*maḥalleriñ khānedānīndan*). The first battalions formed in 1250/1834-5 were those of the *sandjaḳs* [*q.v.*] of Ḳaraḥiṣār Ṣāḥib, Anḳara Kangīrī (Čankīrī), Siroz and Menteshe. Ismāʿīl Bey, hereditary Kurdish governor of Palu, was appointed colonel of the three battalions in the *ḳaḍāʾs* known as those of the "Imperial Mines" (*meʿādin-i hümāyūn*) in the *eyālet* of Sīwās (Luṭfī, iv, 171). There were three to four battalions to the *sandjaḳ*, thus 10 to 12 to the *eyālet*. The officers received a quarter of the usual pay, but were only expected to serve and wear uniform two days a week (Muṣṭafā Nūrī Pasha, *Netāʾidj ül-wuḳūʿāt*, iv, 109).

In 1252/1836-7, the *redīf* was organised in wide groups with a high command: *müshīrlik* (*müshürlük*) or "marshal-ship" [see MÜSHĪR] of *redīf*, conferred upon the *wālīs*. The first were those of the *eyālets* of Ḳaramān (Ḳonya), Khudāwendigār (Bursa: guard or *khāṣṣe*), Anḳara, Aydīn, Erzurum and Edirne. At the same time, plans were made to raise the money required for this purpose. The *wālī*-marshals were given the *ḥarwānī* (*kharmānī*) or cloaks of their new rank. Just as the troops of the line (*menṣūre*) were distinguished from those of the guard (*khāṣṣe*), so there were *redīf-i menṣūre* and *redīf-i khāṣṣe*. The appointment of commanders of divisions was to follow (for details, see the *Taḳrīr-i ʿālī* or report of the grand vizier Meḥmed Emīn Raʾūf Pasha, in Luṭfī, v, 165-70). If we may believe the *khaṭṭ-ī hümāyūn* [*q.v.*] promulgated on this occasion by Maḥmūd II, these first steps gave every satisfaction (*ibid.*, 74).

When the Military School (*mekteb-i ḥarbiyye*) instituted in 1251/1835-6 began to supply officers, the *redīf* under arms was converted into active forces and the officers were sent back to their *odjāḳs* (*Netāʾidj ül-wuḳūʿāt*, iv, 109-10). The service as *redīf* (*khidmet-i redīfe*) was now definitely to assume the character of a kind of period of service in the reserve or intermittent service, the duration of which (*müddet-i redīfe*) was to be fixed under conditions which we shall explain below.

In the *khaṭṭ-ī hümāyūn* of Gülkhāne (30 November 1839), there is an allusion to an approaching improvement in the system of regional recruiting. In 1838, five years had been fixed as the period of service in the regular army, previously practically unlimited (one saw young married soldiers leaving their families for life), but this measure did not immediately make its effect felt (cf. von Moltke, *Lettres sur l'Orient*, n.d., 211, letter no. xlvii).

On 6 September 1843, the military law of the *serʿasker* Riḍā Pasha (Engelhardt, i, 71) was promulgated, a law of fundamental importance, half-French and half-German in character, the principles of which survived even into the early Republican period; it confirmed the period of regular service at five years (later reduced to four), to be followed by a period of seven years during which a *redīf* could be recalled to the colours for a month each year (later every two years). Each *ordu* (army corps) was to have its *redīf* contingent (*ṣīnf-ī redīf*) placed in time of peace under the orders of a brigadier-general (*liwā*, brigade) who lived at the headquarters of the *ordu*. In 1853 (Ubicini, i, 456) the *redīf* was organised into 4 (out of 6) *ordus*, namely, those of *khāṣṣe* (Üsküdār [Asia] and Izmīr), Deriseʿādet (Istanbul and Anḳara), Rumeli (Manastīr) and Anatolia (Harput). The *ordus* of ʿArabistān and ʿIrāḳ were still to be organised. Ubicini adds this observation: "By means of this organisation the government has secured....a force at its disposal equal to the regular army and capable of

being moved in a few weeks either to the line of the Balkans or to any other point in the empire." According to Bianchi (*Guide de la conversation*, 1852, 230), the organised reserve (*müretteb redīf*) was then 150,000 men compared with 300,000 of the regular army.

Ḥüseyn ᶜAwnī Pas͟ha's law of 1869, more clearly French in character (Aristarchi, iii, 514; Engelhardt, ii, 37 ff.), provided for 4 years' active service and one of *iḥtiyāṭ* or in the active reserve, a period of 6 years in the *redīf* in two bands (*ṣinf-i mukaddem and ṣinf-i tālī*) of 3 years each (according to Engelhardt, of 4 and 2 years respectively). In practice, in 1877 there were 3 bands, the third (*ṣinf-i t͟hālit͟h*) being represented by the territorial army (*mustaḥfiẓ*) then mobilised (Zboiński, 98). A conscript who obtained a lucky number in the draw was drafted directly into the *redīf* army (art. 17).

The law of 27 Ṣafar 1304/13 Tes͟hrīn-i t͟hānī 1302 (25 November 1886; résumé by Lamouche, 77, and Young, ii, 394) prepared by a commission of reorganisation which included Muẓaffar Wālī Riḍā Pas͟ha and von der Goltz Pas͟ha, fixed the period of *redīf* service at 9 years, but was soon afterwards followed by a special law (*redīf ḳanunu*) of 10 Muḥarram 1305/28 September 1887. According to this, which was, however, not put into force till 1892, the period of *redīf* service was 8 years. The ranks in the *redīf* were the same as in the regular army from general of division down to sergeant-major. These officers formed at the same time the personnel of the recruiting offices for the whole army.

According to the law regulating the uniforms of the army on land (*elbise-yi ᶜaskeriyye niẓām-nāmesi*) of 29 D̲j̲umādā I 1327/5 Ḥazīrān 1325 (18 June 1909), the *redīf* soldiers wore as distinctive badge a dark green (*neftī*) piping (*zīh*, Pers. *zih*, Ar. *zīḳ*) at the bottom of the collar (*yaḳa*) of the tunic (*d̲j̲aket* or *d̲j̲eket*, modern spelling *caket*, *ceket*). The officers wore a piece of cloth of the same colour 7 cm in length fastened on the collar of the undress tunic (*ceket*) or the full dress tunic (*setre*, older *setri*; cf. Pers. *sudre*) (*Düstūr, Tertīb-i t͟hānī*, i, 276; A. Biliotti and Aḥmad Sedād, *Législation ottomane*, Paris 1912, 171 ff.).

The *redīf* system was abandoned by the Young Turks. The law of 18 Ramaḍān 1330/18 Ag͟hustos 1328 (31 August 1912), without proclaiming the dissolution of the corps, ordered the formation of units of *mustaḥfiẓ* with elements furnished by the battalion depots in the second inspection (*müfettis͟hlik*) or *redīf* (*Düstūr, Tertīb-i t͟hānī*, iv, 615). The Young Turks were reproached for this measure, and some even saw in it the cause of the Turkish defeat in the Second Balkan War.

(The collections of Turkish laws or *düstūr* generally refrain from including the principal laws relating to the army and the two works of Aristarchi and Young contain only a very few.)

(J. Deny)

RAḌIYYA, in full, Raḍiyyat al-Dunyā wa 'l-Dīn, female sultan of Dihlī during the period of the Slave Kings (634-8/1236-40) and daughter of the Sultan Iltutmus͟h [*q.v.*] by a daughter of Ḳuṭb al-Dīn Aybak. She was the only female ruler in mediaeval Islamic India, and her rule was a source of wonder to later Indo-Muslim historians.

In 629/1231 she was appointed by her father Iltutmus͟h to govern Dihlī whilst he was away campaigning against Gwalior [see gwāliyār], and shortly afterwards he nominated Raḍiyya as his heir. However, when in 634/1236 he died, the army commanders and courtiers disregarded his wishes and raised to the throne one of his sons, Rukn al-Dīn Fīrūz. Fīrūz wasted his time in riotous living, all power being in the hands of his mother S͟hāh Turkān. The latter's excesses led to a popular revolt. Raḍiyya appeared in red garments before the Dihlī populace, and they and a section of the army raised her to the throne, despite traditionalist objections to a woman ruler. She was astute enough to steer a course between the factions of the Turkish commanders, favouring instead the *Ḥabas͟hī* Malik D̲j̲amāl al-Dīn Yāḳūt, the *amīr-i āk͟hur* [*q.v.*]. Only towards the end of her reign did she appear in men's clothing and unveiled.

Eventually, the Turkish *amīrs* rebelled against her rule, and deposed and imprisoned her, replacing her by her half-brother Bahrām S͟hāh (Ramaḍān 638/March-April 1240). However, the governor of Bhattinda [*q.v.*], Ik͟htiyār al-Dīn Altuniya, to whom she had been entrusted, decided to espouse her cause and married her. The two of them advanced towards Dihlī with their forces, but were defeated by the new sultan, Bahrām S͟hāh, near Kaithal, captured, and both put to death (Rabīᶜ II 638/December 1240), Raḍiyya having reigned three-and-a-half years.

Bibliography: The only contemporary, in part eye-witness, source for her reign is D̲j̲ūzd̲j̲ānī's *Ṭabaḳāt-i Nāṣirī*, ed. Ḥabībī, Kābul 1342-3/1963-4, i, 457-62, tr. Raverty, i, 637-48; see also ᶜIṣāmī, *Futūḥ al-salāṭīn*, ed. A.S. Usha, Madras 1948, and Yaḥyā b. Aḥmad Sirhindī, *Taʾrīk͟h-i Mubārak-S͟hāhī*, ed. Hidāyat Ḥusayn, Calcutta 1931. Habibullah, *The foundation of Muslim rule in India*, Allahabad 1961.

(M. Athar Ali)

RAD̲J̲ᶜA (a.) (or *karra*), lit. "return", a term that has several distinct meanings in the doctrines of S͟hīᶜī groups:

(1) The passing of the soul into another body either human or animal (i.e. metempsychosis), or

(2) the transmigration of the spirit of holiness from one Imām to the next. Both are more usually referred to as *tanāsuk͟h*. It was mainly members of various *g͟hulāt* sects [*q.v.*] that believed in them.

(3) Return of power to the S͟hīᶜa (see further under no. 5).

(4) Return from concealment, usually of a particular Imām at the end of his occultation (*g͟hayba* [*q.v.*]). Already ᶜUmar is said to have initially denied Muḥammad's death, arguing that he had gone into temporary concealment, like Moses before him. Belief in the return of an Imām is first attested among various chiliastic movements in the Umayyad and early ᶜAbbāsid periods. A group of Sabaʾīs, the followers of ᶜAbd Allāh b. Sabaʾ [*q.v.*], for example, reportedly held that ᶜAlī was not dead and would return to install a reign of jusice; similarly, Abū Karib, founder of the Kuraybiyya subsect of the Kaysāniyya [*q.vv.*], denied that Ibn al-Ḥanafiyya had died and predicted that he would return to wreak vengeance on the Umayyads. These beliefs are reflected in the poetry of Kut͟hayyir [*q.v.*] and later of al-Sayyid al-Ḥimyarī [*q.v.*]. Belief in the disappearance and future return of the Imām as Mahdī is characteristic of many Wāḳifī sects. It some-

times incorporates docetic elements: the corpse taken to be that of the Imām is said actually to have belonged to someone else. In Twelver Shīʿism the term *radjʿa* ordinarily has the sense given in the next paragraph, and the most commonly used term for the appearance of the last Imām is *ẓuhūr*.

(5) The return to life of some of the dead before the Resurrection. The earliest adherents of this doctrine are also to be found among subsects of the Sabaʾiyya and Kaysāniyya. Thus some Sabaʾīs claimed that ʿAlī was dead but would be brought back to life (*yubʿathu*) together with others before the Resurrection; and the followers of the Kaysānī Ḥayyān al-Sarrādj believed that Ibn al-Ḥanafiyya had died in the Raḍwā mountains and would return to life with his supporters before the *yawm al-ḳiyāma*. In Imāmī reports, however, Ḥayyān is said to have denied the death of Ibn al-Ḥanafiyya and to have predicted that, like Jesus, he would return (see e.g. Ibn Bābawayh, *Ikmāl al-dīn*, Nadjaf 1389/1390, 34-5). Early proponents of the idea of *radjʿa* are said to have included Djābir b. Yazīd al-Djuʿfī and Bashshār b. Burd [*q.vv.*].

By the early ʿAbbāsid period, belief in *radjʿa* had spread among a number of Zaydī groups, though it was rejected by mainstream Zaydism; more significantly, it became a constituent element of Imāmī, and subsequently of Twelver, Shīʿism. The doctrine is described by al-Ashʿarī (ed. Ritter, 46) as common to most of the Rāfiḍa [*q.v.*]; and al-Khayyāṭ (*K. al-Intiṣār*, 97), who ascribes it to the Rāfiḍa as a whole, asserts that they concealed it from outsiders—a claim which appears to find support in Imāmī texts.

According to Imāmī exegetes, there are a number of Ḳurʾānic verses which prove that the *radjʿa* will take place. Already Djābir b. ʿAbd Allāh al-Anṣārī [*q.v.* in Suppl.] is said to have interpreted the *maʿād* of XXVIII, 85, as referring to the *radjʿa*. Other verses repeatedly cited are II, 243, 259, XVII, 6, XXIV, 55, XXVIII, 5-6, and particularly XXVII, 83 ("On the day when We shall muster out of every nation a troop"). There is also a Shīʿī *ḳirāʾa* [*q.v.*] of III, 185 ("Every soul shall taste of death"), in which the word *wa-manshūra* ("and shall be brought back to life") is added to the canonical text and interpreted as referring to the *radjʿa* (al-Ḥasan b. Sulaymān al-Ḥillī, *Mukhtaṣar baṣāʾir al-daradjāt*, 17).

Some Imāmī traditions say that the *radjʿa* will occur before the coming of the Mahdī, some place it during his coming, and some after his coming. The identity of the Imāms who will be brought back to life was likewise a moot point. A number of traditions refer only to al-Ḥusayn, emphasising that he will reign until he reaches a great age. According to other traditions, al-Ḥusayn will be followed by ʿAlī (often referred to as *ṣāḥib al-karrāt*), who will avenge himself on all those who fought against him. Elsewhere it is claimed that all Imāms (with the exception of the Mahdī) and all prophets will be brought back to life to fight at ʿAlī's side. In addition, some of their followers and opponents will also be returned; in a prelude to the events of the final Day of Judgment, the followers will triumph and the opponents will be punished for their deeds. Then both parties will die to await the Resurrection and their respective eternal reward or punishment. The opponents are typically identified as Ḳurashīs or Umayyads; they will be decapitated, or else the Mahdī will cut off the hands and legs of some and will crucify or gouge out the eyes of others. There is agreement that the *radjʿa* (which is sometimes referred to as *ḥashr khāṣṣ*, "specific resurrection", in contradistinction to the Resurrection which is the *ḥashr ʿāmm*) will involve believers and unbelievers only from Muḥammad's community, and not from earlier communities.

The growing influence of Muʿtazilism on Imāmī thought during the Buwayhid period did not lead to the rejection of the doctrine of *radjʿa*, which remained a subject of dispute between the two sides. It was perhaps in order to accommodate Muʿtazilī objections that a minority among the Imāmiyya interpreted *radjʿa* as referring to the return of power (*dawla* [*q.v.*]) to the Shīʿa during the time of the Mahdī; but this view was rejected by the leading Imāmī scholars of the Buwayhid period. Their main concern was to prove that there was no contradiction between the doctrine of *radjʿa* and Muʿtazilī views about reason and divine justice. A case in point is al-Shaykh al-Mufīd (d. 413/1022 [*q.v.*]), who was told by a Muʿtazilī critic that if *radjʿa* were to take place, this would give the enemies of Shīʿism a chance to repent and thus escape punishment. Al-Mufīd's answer is that the Imāms have made it clear that these enemies will never repent; and even if they were to do so, God would not accept their repentance, just as He did not accept the repentance of Pharaoh. The Muʿtazilī argues that if this were so, then the *radjʿa* would constitute an enticement to disobedience (*al-ighrāʾ bi 'l-ʿiṣyān*) during the period of renewed life that followed it, since God's enemies would know that even if they were to change their ways, their repentance would not be accepted. Al-Mufīd responds that their past experience of punishment after death will deter them from adding to it by further evil deeds when brought back to life (al-Murtaḍā, ʿAlī b. al-Ḥusayn, *al-Fuṣūl al-mukhtāra*, Beirut 1405/1985, 115-9, cited in McDermott, *The theology of al-Shaikh al-Mufīd*, 268-9). The subject of *al-ighrāʾ bi 'l-ʿiṣyān* is also tackled by the Muʿtazilī Abu 'l-Ḳāsim al-Balkhī al-Kaʿbī (d. 319/931). He asserts that if people were to know that they would have a chance to repent following the *radjʿa*, this would incite them to acts of disobedience in this life. Abū Djaʿfar al-Ṭūsī (d. 460/1067) replies that since only some will be brought back to life, and it is not known who they are, no-one can safely act on the assumption that he will be among them (*Tibyān*, i, 255).

This doctrine of *radjʿa* continued to be a favourite subject of attack by opponents of Shīʿism, who claimed that it was a borrowing from Judaism that had no basis in Islam. Such criticism led some Imāmī apologists to minimise its importance. For example, the contemporary Lebanese scholar Muḥammad Djawād Maghniyya maintains that not all Imāmī doctors adhere to this doctrine; he asserts that it is only transmitted in reports (*aḥādīth*, *akhbār*) of a type which may be accepted or rejected, and that it is not among the principles of the religion (*uṣūl al-dīn*) (*al-Shīʿa fi 'l-mīzān*, Beirut n.d., 54-5).

(6) The return to life of all of the dead before the Resurrection (sometimes referred to as *al-radjʿa al-ʿāmma*). Belief in this idea is ascribed to a number of extremist Shīʿī sects.

The term *radjʿiyya* or *aṣḥāb al-radjʿa* may refer to adherents of any of the doctrines described here.

KOHLBERG)

RĀDJĀ GANESH (the latter part of the name being the Hindu name Gaṇésa, appearing in Arabic script as G.n.s or G.n.sī), a local Hindu landowner of northern Bengal, who successfully usurped authority in Bengal during the latter years of the first period of power of the Ilyās Shāhī line, probably in the first decade or so of the 9th/15th century.

The sources are unclear, but it seems that Rādjā Ganesh wielded the real power in the state under the nominal rule of the Ilyāsids, and then in 817/1414 placed on the throne his young son Djadu, who became a Muslim and assumed the name of Djalāl al-Dīn Muḥammad Shāh. The latter ruled until 835/1432, when he was succeeded by his son Shams al-Dīn Muḥammad Shāh, who held power in Bengal till the restoration of the Ilyās Shāhīs in 841/1437. This family of Islamised Hindus had clearly enjoyed considerable support from both the class of Muslim landholders and notables and the Hindus, and it had ruled over a powerful sultanate which extended as far as the Kusi River in the north-west of Bengal to Chittagong [*q.v.*] in the south-east.

RADJAB, the seventh month of the Islamic calendar, was observed as a holy month in the period of the Djāhiliyya in spring. It was the month of the sacrifices of the *ʿatāʾir* offered to the pagan deities as a token of gratitude for the augmentation of their flocks and herds. It was also the time of invocations of their deities to increase the number of their flocks. It was as well the month of the sacrifices of the *furuʿ*, the firstlings of the flocks and herds. The owner of the flock had to sacrifice one ewe out of fifty (or hundred) of his herd.

The holy month of Radjab was also the month of peace in the Arab peninsula; the tribes refrained from raids and warfare. The month was called *al-aṣamm* "the deaf" because no sound of weapons was heard during that month and *al-aṣabb* "the pouring" because the unbelievers of Mecca used to say that the mercy is pouring forth in this month. Another by-name of Radjab was *al-radjm* "the stoning" because the Satans were stoned in that month and were expelled from the dwellings of the tribes. Other by-names attached to Radjab were: *al-muḳīm* "the constant," because its sanctity was a firm one, since Radjab is one of the four *ḥurum* months; *al-harim* "the aged" because the sanctity of the month was an ancient one,

dating from the time of Muḍar b. Nizār; as the tribes of Muḍar venerated this month, it was also named *radjab Muḍar*. Because of the comprehensive peace among the tribes and their abstaining from hostilities, the month was called *munṣil al-all* and *munṣil al-asinna*, pointing to the fact that the spearheads were removed, weapons laid down and no fighting among tribes was launched. The name *al-muʿallā* "the elevated" was attached to Radjab because it was a month highly respected among the Arab tribes. The name *al-mubriʾ* "the clearing [from fault]" was given to the month because warlike activity was given up, no iniquity was committed and no act of hypocrisy was perpetrated during the month. A peculiar name granted to Radjab was *al-muḳashḳish* "the exonerating," denoting that Radjab distinguished between the people who stuck to the tenets enjoining abstention from fighting during the month and those who violated the sanctity of the month by fighting. Finally, the month was called *al-ʿatīra* because the sacrifices of the *ʿatīra* were carried out during this month.

According to tradition, the month of Radjab was a time of devotional practices, exertions and fasting. Invocations against the iniquitous and the wrong-doers in this month were especially efficacious.

The opinions of the scholars of Islam as to the permission to continue these practices in Islam were divergent, controversial and even contradictory. The differences in their opinions are clearly exposed in the utterances attributed to the Prophet in the collections of *ḥadīth*.

An utterance attributed to the Prophet and recorded in the early collection of ʿAbd al-Razzāḳ (d. 211/826) says that the Prophet approved of the sacrifice of the *ʿatīra* which the people used to practice in Radjab. The Prophet said, "Do it, and name it *al-radjība*."

The utterance of the Prophet enjoining sacrifice of the *ʿatīra* and naming it the *radjība* is opposed by an utterance attributed to the Prophet enjoining annulment of the sacrifice of the firstlings and the sacrifice of the Radjabī *ʿatīra* . It is recorded in the same collection and is formulated plainly: *lā faraʿa wa-lā ʿatīra* "there is no [sacrifice] of the firstlings nor of the *ʿatīra*."

This prohibitive tradition was, however, changed by the interpretation given to it by al-Shāfiʿī: there is no sacrifice of the *ʿatīra* nor of the *faraʿa* "as an obligatory practice", adds al-Shāfiʿī. This comment of his changes, of course, the meaning of the tradition and its significance.

In the same way was interpreted the utterance of the Prophet *ʿalā ahlⁱ kullⁱ baytⁱⁿ an yadhbaḥū shātᵃⁿ fī kullⁱ radjabⁱⁿ wa-fī kullⁱ aḍḥā shātᵃⁿ*. The expression *ʿalā kullⁱ ahlⁱ baytⁱⁿ* is, however, interpreted not as an enjoinment but only as a recommendation. The utterance has to be understood as recommendation for every family group to sacrifice a ewe during every month of Radjab and to sacrifice a ewe on every *aḍḥā* celebration.

An utterance of the Prophet about the *ʿatīra* permits the sacrifice of the *ʿatīra* in any month of the year and enjoins the practice of charity, dividing among the poor the meat of the slaughtered beasts. It is obvious that the sanctity of Radjab was, according to this tradition, fairly limited, or even abolished, while the advice of charity was especially stressed.

A tradition reported on the authority of ʿĀʾisha says that the Prophet enjoined the slaughter of the firstling of the herd numbering fifty, which tallies with the prevalent Djāhilī practice. But another tradition attributed to the Prophet says, "Practice the sacrifice of the *faraʿa* if you want". Thus the sacrifice was left to the discretion of the believer.

A peculiar utterance of the Prophet turns the sacrifice of the *faraʿa* into a voluntary practice, with a special reservation of the Prophet changing the aim of the practice. The Prophet permitted the practice but remarked that it would be preferable to feed the camel until it grows up and to ride it on expeditions and raids for the cause of God; similarly, it is preferable to feed the ewe until it grows up, to sacrifice it and to divide the meat among the poor.

Similarly, the utterance of the Prophet in which he is said to have approved of the *faraʿa*, saying *al-faraʿa ḥaḳḳ*, was considerably changed by the added reservation that it would be better to feed the destined sacrificial animal until it grows up and can be used to ride on it in a raid for the cause of God (in the case of a camel) or to slaughter it (in the case of a ewe) and give the meat as charity to a needy widow.

Scholars of Islam stress that the slaughter of animals in Radjab was continued in the first period of Islam and was only later abrogated. Al-Khaṭṭābī (d. 388/998) considered the *ʿatīra* compatible with the principles of Islam: it was in the period of Islam sacrificed to God in contradistinction to the Djāhilī *ʿatīra*, which was sacrificed to the idols. There is indeed a report saying that Ibn Sīrīn (d. 110/729) used to slaughter the *ʿatīra* in Radjab.

Strictly orthodox scholars stressed that there is no valid tradition concerning the virtues of Radjab. There were, however, scholars, especially from among the pious and devoted, who favoured the widely-circulated popular traditions allegedly uttered by the Prophet, emphasising the virtues of Radjab and encouraging the carrying-out of the various practices considered laudable and right. The Prophet is said to have named Radjab "the month of God", *shahr Allāh*, because it was the month of the people of the *ḥaram* (i.e. the people of Mecca) who were called *āl Allāh*. The problem of the sacrifices during the month of Radjab was only one aspect of the disputes among the Muslim scholars as to the ritual practices performed in the Muslim community in that month.

A significant tradition ascribed to the Prophet singled out the peculiar sanctity of three months of the year: "Radjab is the month of God, Shaʿbān is my month and Ramaḍān is the month of my people." As the month of Radjab was put on par with the two other months there was an obvious tendency to competition between these holy months regarding the rewards of the ritual practices performed during these months, the exceptional position of certain nights of the months and the prayers during these months. The competition between Radjab and Shaʿbān is clearly presented in a tradition reported on the authority of Zayd b. Aslam. The Prophet was informed about people fasting during Radjab. He remarked, "How far are they from the virtues of the people fasting during Shaʿbān!" Zayd observed, "Most of the fasting of the Prophet, except in Ramaḍān, was in Shaʿbān." The partisans of Radjab quoted a report of Ibn al-ʿAbbās saying that the Prophet used to fast so many days in Radjab that his Companions did not think that he would break his fast; and he used to break his fast so that they doubted whether he would resume it.

As against the people venerating Shaʿbān, the partisans of Radjab had recourse to utterances attributed to the Prophet in which the fasting of Radjab was recommended and very high rewards were promised to people who were fasting in it. The Prophet is said to have stated that the month of Radjab is of a high position and that the good deeds of the believer gain multiple rewards. He who fasts one day in Radjab is in the position of a believer who would fast a year. He

who fasts nine days, for him the gates of Hell are closed; he who fasts eight days, for him the eight doors of Paradise are opened; he who fasts ten days, God will fulfill for him every wish; he who fasts fifteen days, a herald will announce from Heaven that God forgave him every sin which he had committed in the past. In the month of Radjab God carried Nūḥ (Noah) in the ark; he fasted during Radjab, and bade his people to fast during it, thus expressing their gratitude to God for their salvation.

Aḥmad b. Ḥanbal said that he had in his possession a tradition recording the rewards for fasting of every day of Radjab; he considered, however, the *ḥadīth* a forged one. The fasting of the whole month of Radjab was nevertheless frowned upon and sometimes forbidden in order not to create a similarity with Ramaḍān. The practices of fasting during Radjab were censured by Abū Bakr, ʿUmar and people of the *ṣaḥāba*, says Ibn Taymiyya.

Some nights of Radjab are considered to be replete with God's graces. In the first night of Radjab, God will grant every supplication of the believer. It is one of the five chosen nights in the year. Another prayer strongly censured by Ibn Taymiyya was the prayer practised in the midst of Radjab called *ṣalāt Umm Dāwūd*.

A night highly praised by those who observed Radjab was the night of the *ṣalāt al-raghāʾib* "the night of the prayer for extensive and desirable gifts"; it starts on the eve of the first Friday of Radjab; the prayers and supplications contained hundreds of invocations, prostrations, *rakʿas* and recitations of some sūras of the Kurʾān. The believer is requested to fast on Thursday preceding this night. A night of Radjab distinguished by the rich rewards is the night of the twenty-seventh of Radjab. The believer spending this night in vigils: praying; thanking God; repeating a hundred times the various phrases of gratitude, the oneness of God, invocations and supplications; performing prostrations and *rakʿas*; and reading a sūra of the Ḳurʾān and fasting the next day, will be highly rewarded by God; he will attain God's grace as if he fasted a hundred years and practiced vigils for a hundred years. On that night, Muḥammad was sent as a prophet.

The significant events connected with the life of the Prophet which allegedly happened in Radjab turn the month into one of the most distinctive periods of the year. According to a tradition, the mother of the Prophet conceived him on the first evening of Radjab; another tradition claims that he was born in Radjab. Some traditions assert that the event of the *laylat al-miʿrādj* occured in Radjab. Other traditions claim that the date of the *isrāʾ* was the twenty-seventh day of Radjab.

The struggle of the orthodox scholars against those practices of Radjab widely approved by pious ascetics and Ṣūfīs was not entirely successful. These practices have survived and form until the present time an essential part of Muslim popular belief and ritual.

(M.J. Kister)

RĀDJĀSTHĀN [see Suppl.].

RADJAZ (A.) indicates an Arab metre. The proper meaning of the word is "tremor, spasm, convulsion (as may occur in the behind of a camel when

it wants to rise)". It is not clear how this word became a technical term in prosody. The other etymological meaning of *radjaz* "thunder, rumble, making a noise", may perhaps be taken into consideration. In that case, there might be an allusion to the iambic, monotonous and pounding rhythm of these poems (cf. *ka-mā sami*ʿ*ta radjaza l-ṣawā*ʿ*iḳī*, Abū Nuwās, ed. E. Wagner, ii, 299; for the etymology, see also T. Fahd, *La divination arabe*, Leiden 1966, 153-8). A poem composed in this metre is called *urdjūza*.

1. Prosody

In the system of Arabic metres, the *radjaz* occupies a special place. Whereas in other metres the lines of verse consist of two symmetrical half-lines, separated by a caesura, the line of verse of the *radjaz* is in one part only and has no caesura. In general, the *radjaz* lines are only half as long as the lines of other metres. The basic element is the dipody which consists of four syllables. The first and second syllables can be long or short, but the third one must be short and the fourth one long ⏓ ⏓ ⏑ –. Three such dipodies form a trimeter, which is by far the most widely used form of the *radjaz* poem. In its acatalectic form it has the following scheme: ⏓ ⏓ ⏑ – | ⏓ ⏓ ⏑ – | ⏓ ⏓ ⏑ – (e.g. *innaka lā tadrī ghadan mā fī ghadī*, Ruʾba, no. 20, v. 23). In the catalectic form, the second syllable in the third dipody must be long, while the third (short) syllable is missing: ⏓ ⏓ ⏑ – | ⏓ ⏓ ⏑ – | ⏓ – – (e.g. *nasḳī 'l-*ʿ*idā ghayẓan ṭawīla l-djaʾzī*, Ruʾba, no. 23, v. 10). A brachycatalectic variant seldom occurs.

Next to the trimeter there is a less frequent dimeter (*manhūk al-radjaz*), which again can be acatalectic, catalectic or (rarely) brachycatalectic. An example is Abū Nuwās's panegyric poem for al-Faḍl b. al-Rabīʿ, which begins as follows: *wa-baldatin fīhā zawar* | *ṣaʿrāʾa tukhṭā fī ṣaʿar* | *martin idhā 'l-dhiʾbu ḳtafar* (*Dīwān*, ed. E. Wagner, i, 161 ff.; Abu 'l-Fatḥ ʿUthmān b. Djinnī, *Tafsīr urdjūzat Abī Nuwās*, ed. Muḥammad Bahdjat al-Atharī, Damascus 1966; see also E. Wagner, *Abū Nuwās*, Wiesbaden 1965, 216). A monometrical *radjaz* poem consisting of 17 verses was once composed by Salm al-Khāsir (*urdjūza* ʿ*alā djuzʾ wāḥid* or *muḳaṭṭa*ʿ *al-radjaz*, cf. G.E. von Grunebaum, in *Orientalia*, N.S. xix [1950], 66, no. 15).

By analogy with the other metres, the *radjaz* is sometimes constructed as a distich. In this case, two verses are linked to one another, the first verse becoming the first half-line, the second verse the second half-line. The end of the first verse, lying between the two halves, becomes the caesura, and the rhyme occurs only in the second (half-)verses. Examples are the poems by Kaʿnab b. Ḍamra al-Ghaṭafānī, al-Naẓẓār b. Hāshim al-Faḳʿasī (cf. al-Akhfash al-Aṣghar, *K. al-Ikhtiyārayn*, Damascus 1974, no. 54; Aḥmad b. Abī Ṭāhir Ṭayfūr, *K. al-Manthūr wa 'l-manẓūm*, xii/1, Beirut 1977, 103-8), Ibn al-Rūmī (ed. Naṣṣār, i, no. 165), Ibn al-Muʿtazz, Ibn Durayd (the famous *Maḳṣūra*, ed. Maḥmūd Djāsim Muḥammad, Beirut 1986, with commentary by Ibn Khālawayh), al-Maʿarrī, Ṣafī al-Dīn al-Ḥillī, and others. Such a distichal poem was composed by Aḥmad b. ʿAbd al-Raḥmān b. Nafāda (d. 601/1204), who in a playful way introduced four different rhymes in the 2nd, 3rd, 4th and 6th dipodies (cf. al-Ṣafadī, *Wāfī*, vii, 44).

A further variety of the old *urdjūza* is the *muzdawidj* [*q.v.*] poem, in which the principle according to which one and the same rhyme is obligatory for the entire poem is abandoned. Instead, only two verses rhyme. This type of poem came into being in the ʿAbbāsid period. By restricting the constraint imposed by the rhyme, it became possible to compose narrative, historical or didactic poems of some length. In this way, Abān b. ʿAbd al-Ḥamīd al-Lāḥiḳī (d. *ca.* 200/815; Sezgin, ii, 515-16) retold the book of fables *Kalīla wa-Dimna* [*q.v.*] (cf. al-Ṣūlī, *K. al-Awrāḳ*, i, 46 ff.). This poem is said to have comprised 14,000 verses. Later, Muḥammad b. al-Habbāriyya [*q.v.*] (d. 509/1115-16) and ʿAbd al-Muʾmin b. al-Ḥasan al-Ṣāghānī (Brockelmann, SI, 235) also presented the same material in *muzdawidj* verses. Proverbs and aphorisms were treated in this type of verse by Abu 'l-ʿAtāhiya (*Dīwān*, ed. L. Cheikho, 346-8; ed. Sh. Fayṣal, Damascus 1965, 444-66), while historical subjects were treated in this way by ʿAlī b. al-Djahm, Ibn al-Muʿtazz, Ibn ʿAbd Rabbih (cf. J.T. Monroe, *The historical Arjūza of Ibn* ʿ*Abd Rabbihi*, in *JAOS*, xci [1971], 67-95), ʿAbd al-Djabbār al-Mutanabbī and Lisān al-Dīn b. al-Khaṭīb. In general, any subject-matter, when versified for the sake of instruction, was preferably presented in the form of an *urdjūza muzdawidja*. Such poems exist on astronomy (ʿAbd al-Raḥmān al-Ṣūfī), medicine (Ibn Sīnā), agriculture (Ibn Luyūn), navigation (Ibn Mādjid), grammar (*Mulḥat al-i*ʿ*rāb* by al-Ḥarīrī, the *Alfiyya* by Ibn Mālik), metrics, law of inheritance, chess, hippology, archery and many other subjects. The simple, rhythmical verses were an easy vehicle for memorising.

Next to the *muzdawidj*, in which every two verses have the same rhyme, other groups were developed. In the *urdjūza muthallatha* every three verses are rhymed, in the *murabba*ʿ*a* every four, in the *mukhammasa* every five, in the *mu*ʿ*ashshara* every ten. In these forms the strophic poem thus becomes visible. These poems, too, serve to present scientific doctrines, lexical problems, various descriptions and travel accounts.

2. Historical development

In pre-Islamic times, the *radjaz* was only used for short poems. They originated from a concrete situation, were mostly improvised [see IRTIDJĀL] and as a rule comprised only three to five verses. It is true that these compositions in *radjaz* were correct prosodic units, but they were no poems in the sense of works of art. Initially, the *radjaz* was not a "literary" metre. During the *Djāhiliyya* [*q.v.*], no-one composed a *ḳaṣīda* in the *radjaz*.

A typical situation was the man-to-man fight, in which two adversaries came forward from their battle array. Both heroes called their names and boasted about their strength. Abū Ḥayya al-Fazārī, for instance, said *anā Abū Ḥayyata wa-smī Wad*ʿ*ān / lā ḍara*ʿ*un ṭiflun wa-lā* ʿ*awdun fān / kayfa tarā ḍarbī ruʾūsa l-aḳrān* (cf. al-Āmidī, *Muʾtalif*, ed. ʿAbd al-Sattār Aḥmad Farrādj, Cairo 1961, 146). The purpose of such utterances was to intimidate the adversary and to make him insecure. Self-praise (*fakhr*) was here linked to cursing (*hidjāʾ*) the enemy. The factual power of words should hit the adversary and weaken him. Here it becomes clear that magic was one of the ancient elements of the *radjaz*.

Hidjāʾ also indicates another group of *radjaz* poems, namely, trivial mocking verses of an erotic and obscene content. Occasionally, a dialogue is then staged between man and wife during intercourse, the dialogue being divided by conventional expressions such as *ḳultu...ḳālat*. A typical example is the poem by al-Aghlab al-ʿIdjlī, in which he ridicules the pseudo-prophets Musaylima [*q.v.*] and Sadjāḥi (cf. Djumaḥī, *Ṭabaḳāt*, ed. Maḥmūd Muḥammad Shākir, Cairo 1974, 740-2).

Radjaz is also the metre for tunes, sung at rhythmical activities such as urging camels or drawing water [see GHINĀʾ]. Rhythmical games are also accompanied by *radjaz* verses: mothers used to sing such

verses when making their children dance in a circle (cf. W. Walther, *Altarabische Kindertanzreime*, in *Studia Orientalia in memoriam Caroli Brockelmann*, Halle 1968, 217-33). Finally, incantations were also composed in *radjaz*. Hind bint al-Khuss [*q.v.*] was able to cast, with such verses, a spell on birds that were flying by (*Aghānī*[1] ix, 175; [3]xi, 36).

In the old days, the *radjaz* therefore was only artless folk poetry. Great poets such as al-Nābigha al-Dhubyānī, Zuhayr, Ṭarafa, ʿAntara, Imruʾ al-Ḳays, etc., hardly used this metre and the few verses in it ascribed to them cannot be vouched for as being authentic. In the early Islamic period a change gradually becomes apparent. According to the Arab literary historians, al-Aghlab b. Djusham al-ʿIdjlī, who allegedly fell in the battle of Nihāwand in 21/641, is said to have been the first to compose longer poems in *radjaz* (Sezgin ii, 163-4; collection of fragments by Nūrī Ḥammūdī al-Ḳaysī, in *Madjallat al-Madjmaʿ al-ʿIlmī al-ʿIrāḳī*, xxxi/3 [1980], 104-44). But Labīd b. Rabīʿa al-ʿĀmirī and al-Shammākh b. Ḍirār al-Ghaṭafānī, together with his companions Djabbār b. Djazʾ, Djundab and al-Dhulayḥ, also composed several *urdjūzas* which comprise as many as 40 verses. They contain parts of the real *ḳaṣīda*, like the *nasīb* [*q.v.*], the ride through the desert or the description of the bull antelope. The Hudhalī Mulayḥ b. al-Ḥakam composed an *urdjūza* of 94 verses (*Ashʿār al-Hudhaliyyīn*, ed. J. Wellhausen, no. 278; German tr. H.H. Bräu, in *ZS*, v [1926], 277-82).

This development of the *radjaz* into a metre for real literary poems continued in the second half of the 1st/7th century. It culminated in two eminent poets, namely, ʿAbd Allāh b. Ruʾba b. Labīd, called al-ʿAdjdjādj [*q.v.*] (d. *ca.* 91/710, Sezgin ii, 366-7) and his son Ruʾba (d. *ca.* 145/763, Sezgin ii, 367-9). Both composed verses exclusively in *radjaz* and did not use any other metre. But as far as the contents are concerned, their poems are full *ḳaṣīdas*, which start with the complaint addressed to the remains of the abandoned camp (*aṭlāl*), pass into the desert ride (*raḥīl* [*q.v.*]) and end in a request to the patron. They contain the usual images which are developed into independent episodes, and all the other elements of the traditional *ḳaṣīda*. Both poets are inclined to exaggeration and immoderation. Their phrasing is marked by rudeness and coarseness, and their arsenal of words of abuse is inexhaustible. But it looks as if even the greatest self-glorification and the devastating scoffing of the adversary are not meant that seriously. Again and again, ironic and humoristic turns of phrase are woven into their diatribes, and irony does not exempt their own persons. Sarcastic, grotesque, comical and humoristic elements may be said to turn al-ʿAdjdjādj's and Ruʾba's *urdjūzas* into a persiflage of the regular two-hemistich *ḳaṣīda*.

Next to these two poets mention should be made of their contemporary al-Faḍl b. Ḳudāma al-ʿIdjlī, called Abu 'l-Nadjm [*q.v.*], of whose poems, apart from a *lāmiyya* (ed. ʿAbd al-ʿAzīz al-Maymanī, *al-Ṭarāʾif al-adabiyya*, Cairo 1937, 55-71), only fragments have been preserved (collected by ʿAlāʾ al-Dīn Aghā, al-Riyāḍ 1981). Other *radjaz* poets of this period are Muḥammad b. Dhuʾayb al-Fuḳaymī, called al-ʿUmānī (collection of fragments by Ḥannā Djamīl Ḥaddād, in *RIMA*, xxvii/1 [1983], 73-119), Abū Nukhayla al-Ḥimmānī [*q.v.* in Suppl.], al-Zafayān, Ḥumayd al-Arḳaṭ [*q.v.*], Manẓūr b. Marthad al-Asadī and Himyān b. Ḳuḥāfa al-Saʿdī.

As for the great poets of the Umayyad period, they were not as unfavourably disposed towards the *radjaz* metre as had been their colleagues of the *Djāhiliyya*. There exist at least 20 *urdjūzas* by Djarīr (d. 111/729 [*q.v.*]), some of which contain more than 40 verses. They deal mainly with satire, but some are undoubtedly fragments of original *ḳaṣīdas*. Typical Bedouin *ḳaṣīdas* are also the 10 *urdjūzas* which have been transmitted in the *dīwān* of Ghaylān b. ʿUḳba, called Dhu 'l-Rumma (d. 117/735-6 [*q.v.*]). Among them are long pieces of 60 to 80 verses. This metre is also used by the poets of the ʿAbbāsid period. Bashshār b. Burd [*q.v.*] (d. 167/783), for instance, composed lengthy *ḳaṣīdas* in *radjaz* after the old fashion. They contain mainly panegyrics on the governors Dāwūd b. Yazīd, ʿUḳba b. Salm and Yazīd b. Ḥātim. Two of these poems contain more than 160 verses (*Dīwān*, ed. Muḥammad al-Ṭāhir b. ʿĀshūr, Cairo 1950-7, i, 134 ff., 140 ff.; ii, 219 ff.; iii, 92-3, 178 ff.). Important and lengthy *urdjūzas* were also composed by Ibn al-Rūmī [*q.v.*] (*Dīwān*, ed. Ḥusayn Naṣṣār, Cairo 1973 ff., nos. 60, 76, 91, 141, 217, 293, 310, 340, 355, 357, 368, 415, 438, 440, etc.). They are for the greater part defamatory poems (*hidjāʾ* [*q.v.*]), whose contents are grossly obscene. Abū Tammām, al-Buḥturī, al-Sharīf al-Murtaḍā and his brother al-Raḍī, al-Aʿmā al-Tuṭīlī and many other poets occasionally also used this metre, moulding all the usual themes of the earlier poets. Worth mentioning is that Maḥmūd b. al-Ḥusayn al-Sindī, called Kushādjim (d. *ca.* 350/961 [*q.v.*]), often uses the *radjaz* in description poems (*ekphrasis, waṣf*). He depicts a fried fish (*Dīwān*, ed. Khayriyya Muḥammad Maḥfūẓ, Baghdād 1970, no. 5), an abacus (no. 24), a wine filter (no. 30), a cake (nos. 48, 63), sugar-cane (no. 50), ink and reed pen (no. 53), fodder beans (nos. 55, 143), figs (no. 86), the polo game (no. 108), a hen (no. 136), a cloud (nos. 151, 153), asparagus (no. 160), a melon (no. 166), a mill (no. 206), a quince (no. 223), and many other objects. He thus asserted the rights of the *radjaz* in a field which otherwise is dominated by other metres (cf. A. Giese, *Waṣf bei Kušāǧim*, Berlin 1981).

A special place is taken by the hunting poems (*ṭardiyyāt*). Unlike the hunting descriptions of ancient poetry, in which a poor man is hunting for antelopes and onagers in order to secure his sustenance, the *ṭardiyyāt* deal with descriptions of courtly hunting, organised by high-placed personalities as a pastime and for pleasure. These poems are composed almost exclusively in *radjaz* and are, from their beginning onwards, largely standardised in their motives and wording. They very often start with the striking of camp in early morning, the formula *ḳad aghtadī wa 'l-ṣubḥu*... occurring quite repeatedly; or it is simply said, *anʿatu kalban*... The hunting animals are dogs and cheetahs, and as trained birds of prey are named the hawk (*bāzī, zurraḳ*), the saker or lanner (*ṣaḳr*), the peregrine (*shāhīn*), the merlin (*yuʾyuʾ*), the eagle (*ʿuḳāb*) and the sparrowhawk (*bāshiḳ*). The quarry are antelopes, hares, foxes, cranes, bustards (*ḥubārā*), francolins, geese and other birds. The dog is said to fly away without wings or, when running, to resemble a falling star. Its muzzle looks like burning coal, the falcon's plumage like a piece of embroidery, its claws like spearheads or a butcher's knives. At the end, the preparation of the game for the meal is often described, and the poet praises his dog or falcon.

The beginnings of this poetry are apparently to be found with al-Shamardal b. Sharīk al-Yarbūʿī, a contemporary of al-Farazdaḳ. From his work, 17 *urdjūzas* are transmitted, but most of these are only small fragments (ed. T. Seidensticker, *Die Gedichte des Šamardal*, Wiesbaden 1983, nos. 19-29, 36-41). Al-Shamardal was the model for Abū Nuwās, in whose *Dīwān* the *ṭardiyyāt* take up a full chapter (ed. Āṣāf,

Cairo 1898, 206-34; ed. E. Wagner, ii, 176-327; cf. also Wagner, *Abū Nuwās*, Wiesbaden 1965, 265-89). Even if, according to the transmitters, many of them are not authentic, yet the full range and richness of this literary genre are shown in Abū Nuwās. More than others he strongly influenced later poets when they were writing about hunting. Among other poems, ʿAbd al-Ṣamad b. al-Muʿadhdhal (d. *ca.* 240/854; Sezgin ii, 508) composed one on hunting with the cheetah (*fahd*), 49 verses of which are transmitted by Kushādjim (*Maṣāyid*, Baghdād 1954, 190 ff.). Among the hunting poems of ʿAbd Allāh b. al-Muʿtazz (d. 296/908) are 48 *urdjūzas*, and only 5 in other metres (*Dīwān*, ed. B. Lewin, iv, 2-44; ed. Yūnus A. al-Sāmarrāʾī, ii, Baghdād 1978, 405 ff.). His contemporary ʿAbd Allāh b. Muḥammad al-Nāshiʾ al-Akbar (d. 293/906; Sezgin, ii, 564 ff.) also composed numerous *urdjūzas* on falcons, dogs and on fox-hunting (cf. the inventory of his poems in J. van Ess, *Frühe muʿtazilitische Häresiographie*, Beirut 1971, 155-61; see also ʿAlī b. Muḥammad al-Shimshāṭī, *K. al-Anwār wa-maḥāsin al-ashʿār*, Baghdād 1976, 284-5, 300, 305, 311, 322). Kushādjim, too (see above), composed a number of hunting *urdjūzas* (*Dīwān*, ed. Khayriyya Muḥammad Maḥfūẓ, Baghdād 1970, nos. 2, 12, 88, 172, 259, 260, 267, 321, 354, 371, etc.). He was very familiar with this métier. In his *K. al-Maṣāyid wa 'l-maṭārid* he also quotes numerous hunting poems by other poets. Finally, mention should be made of Ṣafī al-Dīn al-Ḥillī (d. 749/1349; Brockelmann, II, 159, S II, 199), who composed 7 *urdjūzas* on hunting with falcons, cheetahs and dogs (*Dīwān*, Beirut 1962, 257 ff.). One of his *muwashshahāt* [*q.v.*] (*Dīwān*, 245 ff.) is also composed in *radjaz*. He describes in it bird-hunting with the crossbow (*ḳaws al-bunduḳ*), a theme already treated by Abū Nuwās.

3. Special characteristics

As said above, the length of line of the *radjaz* is in general only half of that of the other metres. The *ḳarīḍ* verse contains an average of 8, 9 words, while the *radjaz* trimeter consists of only 4, 3 words. This means that every fourth or fifth word must be a rhyme word (in the dimeter the relations are even less favourable), and thus the poet is quite limited in the choice of his words. Nowhere does the *ḍarūrat al-shiʿr* impose itself so strongly as in the *radjaz*. If, for instance, the poet chooses the *-ayn* rhyme, almost every fourth word must be a dual. In Ruʾba's poem no. 32 the rhyme is *-āṭī*. Consequently, almost all the rhyme words of the 94 verses must be nouns in the genitive. In the *-ītū* rhyme (Ruʾba, no. 10) the forms of the first person perfect of the *verba tertiae infirmae* dominate, and in al-ʿAdjdjādj's poem no. 40, which has the *-iyyū* rhyme and which comprises 200 verses, innumerable *nomina relativa* (*nisba*) occur. The part of speech, the case and the grammatical person thus are largely determined by the requirements of the rhyme, and so the syntax of the verses is fixed to a high degree. It is also evident that a full sentence can only rarely be accomodated in the short lines of verse. Nowhere does enjambment (*taḍmīn*) occur so often as in the *radjaz* (cf. G.J.H. van Gelder, *Breaking rules for fun ..., On enjambment in classical Arabic poetry*, in *The challenge of the Middle East: Middle Eastern studies at the University of Amsterdam*, 1982, 25-31, 184-6; idem, *Beyond the line*, Leiden 1982, 123-4). The choice of words, too, depends on the requirements of the rhyme. Since the lexicon of literary speech is not sufficient for the rhymes of a long *urdjūza*, the poet searches for rare words, i.e. expressions which have become obsolete or which originate from certain dialects, or he reaches even for foreign words. In order to meet the requirements of the rhyme, the poet furthermore often has to change, to mutilate or to expand the words; he has to replace one sound by another, to form irregular plurals, and so on. Metre and rhyme had to be taken into account correctly in any case, while sounds, forms and syntax could eventually be changed. All this gives the *radjaz* poems their unmistakable, distinctive hall-mark. They belong to the most difficult texts of Arabic literature.

4. As a term of non-metrical poetry

In some early Arabic traditions the term *radjaz* is used not in its metrical sense, but to denote poetry defined by "halved" (*mashṭūr*), i.e. three-foot, lines without caesura. Since poetry in the *radjaz* metre is, at least for the most part, also characterised by tripodies (see above under 1.), the two applications of the term are certainly related. The priority may lie with the *mashṭūr* meaning, which would then have been narrowed down to the one metre in which *mashṭūr* verses occurred most.

The first early attestation of this use is in al-Akhfash al-Awsaṭ (d. 215/830 or 221/836 [*q.v.*]), *Ḳawāfī*, 67-8, where poetry is divided into *ḳaṣīd*, *ramal*, and *radjaz*, which are defined as having lines that are *tāmm*, *madjzūʾ*, and *mashṭūr*, i.e. "complete", "shortened by one foot per hemistich", and "halved". In terms of metres, the *ḳaṣīd* comprises *ṭawīl, basīṭ, kāmil, madīd, wāfir*, and *radjaz* (sic, here meant as the *radjaz* hexameter with caesura), the *radjaz* includes everything with three feet and no caesura (thus presumably the *radjaz* and the *munsariḥ* trimeter), and the *ramal* [*q.v.*] covers everything else (thus the metres *ramal, hazadj*, the metres of the Fourth [unless they are trimeters] and the Fifth Circles, and all *ḳaṣīd* metres, if they are *madjzūʾ*).

A slightly different system is found in al-Djawharī (d. 393/1003 or later [*q.v.*]), *Ḳawāfī*, fols. 34b-35b. Here we have the following fourfold division:

1. *ḳaṣāʾid tāmm*		*ṭawīl, al-basīṭ al-tāmm, al-wāfir al-tāmm, al-kāmil al-tāmm, al-radjaz al-tāmm,* [some say *al-khafīf al-tāmm*]
2. *ramal*	*madjzūʾ*	*madjzūʾ al-madīd, madjzūʾ al-basīṭ, madjzūʾ al-wāfir, madjzūʾ al-kāmil,* and the like (sic).

3. *radjaz* *mashtūr* *mashtūr al-radjaz, mashtūr al-munsariḥ*

4. *manhūk* *manhūk al-radjaz, manhūk al-munsariḥ*

The difference is the addition, in al-Djawharī, of the *manhūk* metres, i.e. the "emaciated" dimeters, which however do not have their own name. The rest seems to be identical, although for lack of a complete enumeration of the metres covered by each term in both authors we cannot be certain. A system similar to al-Djawharī's is quoted by al-Tahānawī, *Kashshāf*, i, 745, where the last category is called *khafīf*.

Of particular interest are the various functions attributed to these formal types of poetry. Al-Akhfash says that *ḳaṣīd* is sung (*taghannā*) by the caravan riders, while *radjaz* is chanted (*tarannama*) to accompany work, to drive herds, and to urge on riding-camels (the function of *ramal* is not mentioned). Al-Djawharī offers a similar picture with slight changes: *ḳaṣāʾid* are for chanting and singing when mounted, *ramal* for social rank disputes, praises and lampoons, *radjaz* for chanting at the market places, during work and while driving the camels, and the *manhūk* metres for urging on the camels, for letting little children dance (*tarḳīṣ*), and for drawing water from wells.

These various divisions are explicitly attributed to the *ʿArab*, the Bedouins, and they soon fell into desuetude. Al-Djawharī says that all four genres were later also used in situations different from the original ones mentioned.

Gätje (ed.), *Grundriss der Arabischen Philologie*, ii, *Literaturwissenschaft*, Wiesbaden 1987, 191-2.

(W. Heinrichs)

RADJʿIYYA (A.), also IRTIDJĀʿ, the term coined in modern Arabic for reaction in the political sense (from *r-dj-ʿ* "to return"). Towards the same end of the political spectrum appear also the terms *muḥāfiẓ* "conservative" and *muḥāfaẓa* "conservatism"; cf. A. Ayalon, *Language and change in the Arab Middle East*, New York-Oxford 1987, 125. (Ed.)

RADJM (A.), the casting of stones. *R-dj-m* is a Semitic root, derivatives from which are found in the Old Testament with the meaning of "to stone, to drive away or kill by throwing stones" an abominable creature; *radjma* is "a heap of stones, an assembly of men, cries, tumult".

In Arabic, the root means "to stone, to curse"; *radjam*, "heap of stones", also means simply the stones placed upon tombs either as flagstones or in a heap, a custom which *ḥadīth* condemns, recommending rather that a grave should be level with the surface of the ground. On the *ḥadīth* of ʿAbd Allāh b. Mughfal, it is discussed whether *lā turadjdjimū ḳabrī* means "do not build my grave in a mound" or "do not utter imprecations there".

The lapidation and heaps of stones at Minā [*q.v.*] are called *djamra*, and *djamarāt al-ʿArab* means the groups of Bedouin tribes; we find there the two old meanings of the root which can be taken back to *dj-m*, in Arabic *djamma* and *djamaʿa* "to reunite". The Arab grammarians derive *djamra* "lapidation" from *djamarāt al-ʿArab*.

In addition to the meaning of "ritual stoning as a punishment for fornication", *radjm* means the casting of stones at Minā, which is one of the pre-Islamic rites preserved by Muḥammad and inserted among the ceremonies of the pilgrimage. See here DJAMRA, HADJDJ and MINĀ with their bibliographies.

The Ḳurʾān does not mention this rite, but it knows *radjama* in its Biblical sense of "stoning of prophets by unbelievers", and also *radjīm* (= *mardjūm*) as an epithet of Satan, "driven away and struck with projectiles of fire by the angels", and lastly (XVIII, 21) in an abstract sense which indicates a long semantic evolution.

The rite of casting stones at Minā was regulated by *ḥadīths* in the classical collections. There is a model *ḥadjdj*, that of the Prophet which we find in the manuals of *manāsik al-ḥadjdj*, e.g. in the *Risāla* of Ibn Taymiyya (cf. Rifʿāt, i, 89 ff.). Some *ḥadīths* of archaic form (e.g. al-Bukhārī, *Nikāḥ*, *bāb* 2; *Salam*, *bāb* 1 and 2; *ʿUmda*, viii, 489) show that Muḥammad had to lay down rules for the essential question of the *wuḳūf*, the culmination of the *ḥadjdj*. The *Ḥums*, i.e. the Ḳuraysh and their allies, observed it at Djamʿ (Muzdalifa [*q.v.*]), in the *ḥaram*; the others, the *ʿArab*, at ʿArafa, outside of the *ḥaram* of Mecca. Having to choose between his companions of two different origins, the *Muhādjirūn* and the *Anṣār* [*q.vv.*], Muḥammad decided with the latter for ʿArafa; but he retained a secondary *wuḳūf* at Muzdalifa, and the two *ifāḍas*, the new combination of rites culminating in the throwing of stones at ʿAḳaba.

Situated at the bottom of the valley of Minā, on the slope of the defile towards Mecca, al-ʿAḳaba is "not in Minā but it is its boundary on the side of Mecca" (*ʿUmda*, iv, 770). On the morning of 10 Dhu 'l-Ḥidjdja, the pilgrim goes down into the valley, passes without saluting them in front of the great *djamra*, 500 yards farther on the middle one, and 400 yards beyond he comes to *djamrat al-ʿAḳaba* (Rifʿat, i, 328). There he throws 7 stones, and this is one of the four ceremonies which on the tenth day are intended to remove his state of sanctity. He must also have his hair shaved (*ḥalḳ*), sacrifice a victim (*naḥr*) and return in procession to Mecca (*ifāḍa*). This last rite prepares the sexual deconsecration; the three others together abolish the prohibitions of the *ḥadjdj*, but the legists are not agreed on the order in which they have to be accomplished. The *ḥadīths* say that the Prophet replied to the pilgrims who were worried, not having followed the order in which he had himself followed them, *lā ḥaradja* "no harm (in that)" (al-Bukhārī, *Ḥadjdj*, *bābs* 125, 130 etc.). It is explained that the Prophet on this day of rejoicing did not wish to hurt the feelings of the ignorant Bedouins. We may imagine that these *ʿArab* did not follow the customs of the Ḳuraysh and that Muḥammad had neither the time nor the inclination to impose his own choice between the varying customs.

Muḥammad began with the lapidation at al-Aḳaba. After the *ḥalḳ*, the sacrifice and the *ifāḍa*, he returned to spend the night in Minā. Then on the 11th, 12th and 13th days, he cast 7 stones at the three *djamarāt*, ending with that of al-ʿAḳaba. The pilgrims imitating him ought therefore to throw $7 + (7 \times 3 \times 3) = 70$ stones. But in general, they take advantage of the liberty (*rukhṣa*) given them by the *ḥadīth* to leave Minā finally on the 12th day and therefore only to throw $7 + (7 \times 2 \times 3) = 49$ stones. It is probable that there was no ancient usage; the presence of the bodies of the sacrificial victims made Minā a horrible place. It is difficult to see how Wavell (*Pilgrim*, 202) threw 63 stones, i.e. $7 \times 3 \times 3$; this is, however, the number of victims which, according to tradition, Muḥammad sacrificed with his own hand, one for each year of his life.

The stoning of al-ʿAḳaba is done on the 10th day by

the pilgrims in *iḥrām*; those of the three days following by the deconsecrated pilgrims. The whole business is not a fundamental element of the pilgrimage (*rukn*).

Little stones are thrown, larger than a lentil, but less than a nut, what the old Arabs called *ḥaṣa 'l-khadhf* which were thrown either with the fingers or with a little lever of wood forming a kind of sling (*mikhdhafa*: al-Tirmidhī, iv, 123). A *ḥadīth* forbids this dangerous game, which might knock out an eye but is not strong enough to kill an enemy; it must therefore have had something magical or pagan in its character. The stones have to be collected of the proper size and not broken from a rock. Gold, silver, precious stones, etc., are condemned; but some texts allow, in addition to date-stones, a piece of camel-dung or a dead sparrow, which we find are also the means used by the women of the *Djāhiliyya* at the end of their period of isolation to remove the impurity of their widowhood and prepare a new personality. It is recommended that the seven stones for the lapidation of al-ʿAḳaba should be gathered at the *mashʿar al-ḥaram* at Muzdalifa, outside of Minā. As a rule, the 63 others are gathered in the valley of Minā, but outside of the mosque and far from the *djamarāt* to avoid their having already been used (Ibn Taymiyya, 383). Besides, it is thought that stones accepted by Allāh are carried away by angels. Stones collected but not used should be buried; they have assumed a sacred character which makes them dangerous.

The model pilgrimage of the Prophet fixed the time of the *djamrat al-ʿAḳaba* for the day of the 10th Dhu 'l-Ḥidjdja. It shows him beginning the *ifāḍa* of Muzdalifa after the prayer at dawn (*fadjr*) and casting the stones after sunrise. But by survival of an ancient custom more than for reasons of convenience, other times are allowed by law. Al-Shāfiʿī, against the three other imāms, permits the ʿAḳaba ceremony before sunrise (Rifʿat, i, 113); in general, the time is extended to the whole morning (*ḍuḥā*), till afternoon (*zawāl*), till sunset, till night, till the morning of the day following; these infractions of the normal routine are atoned for by a sacrifice or alms, varying with the different schools. The *djamarāt* of the three days of the *tashrīḳ* take place in the *zawāl*: here again there are various opinions (al-Bukhārī, *Ḥadjdj*, *bāb* 134). In fixing the time of the lapidations, the law has always endeavoured to avoid any Muslim rite, e.g. prayer, coinciding with one of the three positions of the sun by day, rising, noon, setting. A.J. Wensinck asserted (in ḤADJDJ, at vol. III, 32b) the probability of the solar character of the pagan *ḥadjdj*.

Muḥammad made his lapidation at al-ʿAḳaba from the bottom of the valley, mounted on his camel, turned towards the *djamra*, with the Kaʿba on his left and Minā on his right, standing at a distance of five cubits (eight feet). But there are other possible positions. Rifʿat (i, 328) gives the *djamra* the following dimensions: 10 feet high and 6 feet broad on a rock 5 feet high (see the photographs, *ibid.*). It is said to have been removed at the beginning of Islam and replaced in 240/854-5 (al-Azraḳī, 212). Muḥammad made the lapidations of the other two *djamarāt* on foot, turning towards the *ḳibla*. In brief, the stones are cast in the attitude one happens to be in. The position facing the Great Devil is explained by the nature of the ground, but it would also be in keeping with the idea of a curse cast in the face of a fallen deity. The position which makes the pilgrim turn towards the Kaʿba is due to the Muslim legend of the tempter Satan and to the rule of the *takbīr*, which will be explained below.

According to the *sunna*, the stones are placed on the thumb and bent forefinger and thrown, one by one, as in the game of marbles. However, the possibility of the stones having been thrown together in a handful has been foreseen, and it was decided that this should only count as one stone and that the omission could be made good. The stone should not be thrown violently nor should one call "look out! look out!" (al-Tirmidhī, iv, 136), a pagan custom which the modern Bedouins still retained until quite recently (Rifʿat, i, 89). It seems that Muḥammad put some strength into it, for he raised his hand "to the level of his right eyebrow" (al-Tirmidhī, iv, 135) and showed his armpit (al-Bukhārī, *Ḥadjdj*, *bāb* 141).

In Islam, the casting of each stone is accompanied by pious formulae. It is generally agreed that the *talbiya* is no longer pronounced at ʿArafa or at least before the lapidation of al-ʿAḳaba (al-Bukhārī, *Ḥadjdj*, *bāb* 101); some writers however approve of it after al-ʿAḳaba. The *tahlīl* and *tasbīḥ* are permitted, but it is the *takbīr* which is recommended (Ibn Taymiyya, 382; al-Bukhārī, *Ḥadjdj*, *bābs* 138, 143). The spiritual evolution of the rites even sees in this the essential feature of the rite, the throwing of the stone and the figure formed in throwing it by the thumb and forefinger forming an *ʿuḳd* which represents 70, being no more than symbolical and mnemonic gestures. "The throwing of the stones was only instituted to cause the name of God to be repeated" (al-Tirmidhī, iv, 139). To al-Ghazālī (*Iḥyāʾ*, i, 192), it is an act of submission to God and of resistance to Satan, who seeks to turn man away from the fatigues of the *ḥadjdj*, but the rite is without rational explanation *min ghayr^i^ ḥaẓẓ^in^ li 'l-ʿaḳl^i^ wa 'l-nafs^i^ fīhi* (cf. Goldziher, *Richtungen*, 252). The devout man adds a prayer (*duʿāʾ*) which is as a rule quasi-ritual. The usual one is *Allāhumma 'djʿalhu ḥadjdj^an^ mabrūr^an^ wa-dhanb^an^ maghfūr^an^ wa-saʿy^an^ mashkūr^an^* "Lord, make this pilgrimage a pious one, pardon our sins and recompense our efforts!" There is, as a matter of fact, after the stoning, a halt, a *wuḳūf*, before the two higher *djamarāt*, that at the second being especially long: the duration is calculated by the recitation of the sūra of the Cow (II), or of Joseph (XII), or of the Family of ʿImrān (III) by altering the indication in the *ḥadīth* (al-Bukhārī, *Ḥadjdj*, *bābs* 135-7). This would take the place of an ancient ceremony of imprecation.

Breaches of the rules for the performance of these diverse ceremonies, especially as regards the number of stones thrown and the time when they are thrown (*ʿUmda*, iv, 767 ff.; Rifʿat, i, 113), are punished by atonements, the exact nature of which the legists delight to vary, from the sacrifice of an animal to the giving of a *mudd* of food in alms.

The Muslim teachers have sought to explain the lapidations of Minā. Some exegetes (e.g. al-Ṭabarī, *Tafsīr*, xxv, 167) have seen quite clearly that they represent ancient rites and have compared the *ramy* of the tomb of Abū Ridjāl. Others are known, for example at the well of Dhu 'l-Ḥulayfa (Lammens, *Bétyles*, 94). The works quoted [see ḤADJDJ] show the spread of this rite and the cases in which we are certain that it is a question of the driving away or the expulsion of evil. Stones used to be thrown behind an individual whom one wished never to return (al-Hamadhānī, *Maḳāmāt*, ed. Beirut, 23). At Alexandria, tired people used to go and lie down on a fallen pillar, throw 7 stones behind them on a pile "like that of Minā", then go away quite recuperated (al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, iii, 322). But comparisons would take us out of the region of Arabia (Lods, *Prophètes d'Israël*, 354).

Popular legend has connected the lapidation, like many other rites, with Abraham. It was Abraham or Hagar or Ishmael, or even Muḥammad, that Satan

wished to deter from accomplishing the rites of the *ḥadjdj* and who chased him, whoever this was, away with stones. If we conclude that he is *radjīm*, we are some way to the explanation of sūra LXVII 5 (see above).

One would like to be able to locate the lapidations among the rites of the pre-Islamic pilgrimage. One would first have to have a clear idea of the meaning and details of the ceremonies and of the part played by lapidations and sacred piles of stones in Semitic and Mediterranean antiquity. Stoning seems to have been a rite of expulsion of evil which coincided with the deconsecration of the pilgrim and seems to protect his return to everyday life. It is possible that lapidations at one time followed the sacrifices which perhaps took place at ʿArafa and Muzdalifa.

To sum up, the lapidation at Minā has been by turns interpreted as a vestige of the cult of the dead (refs. in Lammens, *Le culte des bétyles*, 39 and esp. 96 ff.); a rite honouring protective deities, after the manner of the Ἑρμαῖον (refs. in Fahd, *La divination arabe*, 189 n. 1); a symbol of the expulsion of malevolent spirits (*averuncatio*), in the sense given by Tradition to the rite at Minā (refs. in *ibid.*, 189); a gesture of cursing against certain tombs of persons of sinister memory (*ibid.*, n. 3); and, finally, as an act of scopelism born out of the hatred of the nomads for the sedentaries (see V. Chauvin, *Le jet de pierres au pèlerinage à la Mekke*, in *Annales de l'Académie Royale d'Archéologie*, 74, 5th sér., iv [Antwerp 1902], 272-300, a thesis refuted by Van Vloten and Th. Houtsma; refs. in Fahd, 189 n. 4).

In regard to the basic sense of *djamra* [*q.v.*], pl. *djimār*, which designates, among other things, the tribe (*ḳabīla*), this rite seems merely to have been in origin a simple gesture of coming together, done by means of a ballot. In practice this term denotes essentially the internal uniting of all the fractions of a tribe or a tribal grouping (see *TA*, iii, 129: *al-djamra al-ḳabīla inḍammat fa-ṣārat yadᵃⁿ wāḥidatᵃⁿ lā tanḍammu ilā aḥadⁱⁿ wa-lā tuḥālifu ghayra-hā*). Thus "the secondary sense, expressed in *djamra*, pl. *djimār*, 'pile of pebbles', allows the gesture of union, which renews the tribe periodically or occasionally, to be represented as being like the throwing of a pebble on a precise spot, near to a sacred site or in the midst of an encampment, done by all the members of the tribe or by the heads of the clans composing it, and thus symbolising the indissoluble unity of the tribe and its adhesion to a decision which has been taken. The standing at Minā which ends the sacred sequence of the Pilgrimage, before entry into the sacred city, lends itself well to the idea of a renewal of a pact of union between clans and tribes. In short, the basic aim of the Meccan Pilgrimage was to serve as a rallying point for all the Arab tribes, involving the exclusion of all outsiders, in order to put an end to the internal quarrels between tribes and in order to undertake common action aimed at permanently opposing all outside intervention in this inviolable centre of the Arabian peninsula" (Fahd, *op. cit.*, 190).

(M. Gaudefroy-Demombynes-[T. Fahd])

RĀDJMAHĀL, a former city of Muslim Bengal during Mughal times, now a small town 6 km/4 miles to the east of the ruinous Mughal site, in the Santāl Parganas District of Bihār Province in the Indian Union (lat. 25° 3′N, long. 87° 50′E.). To its west run the basaltic Rādjmahāl Hills of central Bihār. Rādjmahāl city grew up in the strategically important gap between the Hills and the right bank of the Ganges, a corridor defended in Mughal times by the fortress of Teliāgarhi.

When the Rādjput governor of the Mughals, Mān Singh [*q.v.*], had in 1000/1592 conquered Orissa [see úrisā], he made the existing settlement Agmahāl into Rādjmahāl and into the capital of Bengal, and it remained the capital until this was moved to Dacca/Dhaka [*q.v.*] in 1069/1659. European travellers testify to the importance of Rādjmahāl, which, with Dhaka, was one of Bengal's two minting centres. It still had probably some 25,000 to 30,000 inhabitants in the early 19th century, but its prosperity was adversely affected by changes in the channels of the Ganges. It is now notable for a remarkably large number of significant monuments of Mughal architecture, many now ruinous, including the Akbarī mosque, the Čhota ("small") mosque, the Djumma mosque, the enormous Djāmiʿ mosque, etc.

RĀDJPŪTĀNA [see rādjāsthān in Suppl.].

RĀDJPŪTS, inhabitants of India, who claim to be the modern representatives of the Kshatriyas of ancient tradition. (From the Sanskrit *rādjaputra* "a king's son". For the connection between Rādjanya and Kshatriya see Macdonell and Keith, *Vedic index*, i, s.v. Kṣatriya) The term Rādjpūt has no racial significance. It simply denotes a tribe, clan, or warlike class, the members of which claim aristocratic rank, a claim generally reinforced by Brahman recognition.

The origin of the Rādjpūts is a problem which bristles with difficulties. The theory which was held earlier this century was that propounded by Bhandarkar, Smith and Crooke. According to this theory, the Rādjpūts can be divided into two main classes, the foreign and the indigenous. The foreign clans, such as the Čawhāns, Čālukyas, and Gurdjaras, are the descendants of invaders of the 5th and 6th centuries of the Christian era. The indigenous Rādjpūts include the Rāshtrākūtas of the Deccan, the Rāthors of Rādjpūtāna proper, and the Čandēls and Bundēlas of Bundēlkhand.

The theory that certain Rādjpūt clans are of foreign extraction is chiefly based on Rādjpūt legends and folklore, according to which there are three branches of Rādjpūts: the Sūradjbansi, or Solar race; the Čandrabansi, or Lunar race; and the Agni Kula, or Fire-group. The legend relates how the Agni Kula Rādjpūts, that is, the Čawhāns, Čalukyas, Parihārs (Pratihāras), and the Pramāra, originated in a fire-pit around Mount Abu in southern Rādjpūtāna. From this it has been concluded that the four clans in this group are related and that the fire-pit represents a rite of purgation by which the taint of foreign extraction was removed. Since these writers believed the Parihārs to be invaders of Gurdjar stock, it was concluded that the other three Agni Kula clans were also invaders.

According to Smith, the Gurdjaras were invaders who founded a kingdom around Mount Abu. In time the rulers of this kingdom, who were known as Gurdjara-Pratihāras, conquered Kanawdj [*q.v.*] and became the paramount power in northern India about 800 A.D. Smith contends that the Pratihāras were a clan of the Gurdjara tribe. This seems to be the chief

evidence produced by these writers for the foreign extraction of certain Rādjpūt clans.

It seems wrong to base this theory of foreign descent principally upon the Agni Kula legend, for Waidya and other writers have proved this to be a myth first heard of in the *Prithwīrādj-rāisā* of the poet Čand, who could not have composed this work before the 12th century A.D. Recent research has brought to light the fact that the inscriptions of the Pratihāras and Čawhāns before the 12th century represent them as Solar Rādjpūts, while the Čālukyas are represented as of the Lunar race. The Agni Kula legend does not therefore deserve the prominence given to it by Smith and other writers. Even the contention that the Pratihāras were a branch of the Gurdjara tribe has met with much hostile criticism.

According to the orthodox Hindu view, the Rādjpūts are the direct descendants of the Kshatriyas of the Vedic polity, but this claim is based on fictitious genealogies. The Kshatriyas of ancient India disappear from history, and this can probably be explained by invasions from Central Asia which shattered the ancient Hindu polity. It is accepted that these invading hordes, such as the Yüeh-či and Hūnas, became rapidly Hinduised, and that their leaders assumed Kshatriya rank and were recognised as such. Out of this chaos arose a new Hindu polity with new rulers, and the families of invaders which became supreme were recognised as Kshatriyas or Rādjpūts. In later times, many chiefs of the so-called aboriginal tribes also assumed the title of Rādjpūt.

It is therefore safe to assert that the Rādjpūts are a very heterogeneous body and probably contain some survivors of the older Kshatriyas. A mass of legend arose assigning to the various clans a descent from the sun and the moon, or from the heroes of the epic poems. These are the legendary pedigrees recorded in great detail by Tod. The main argument which can be brought forward in support of the foreign descent of certain Rādjpūt clans is the incorporation of foreigners into the fold of Hinduism to which the whole history of India bears testimony. Even though the Agni Kula legend be discredited, it is still possible to argue that the Rādjpūts are not a race. Anthropologically they are definitely of mixed origin. That some Rādjpūts were of foreign origin can be proved by the acceptance of the Hūnas in the recognised list of Rādjpūt tribes.

Whatever may be the origin of the Rādjpūts, we know that disorder and political disintegration followed the death of Harsha, and that until the Muslim invasions of northern India the chief characteristic of this period was the growth and development of the Rādjpūt clans. Except for about two hundred years, when the Gurdjara-Pratihāras were the paramount power in Hindustān, there was constant internecine warfare between the various Rādjpūt kingdoms. This weakness considerably facilitated the Muslim conquest. It was not, however, until the days of Muḥammad of Ghūr that the Rādjpūt dynasties in the plains were finally overthrown [see MUḤAMMAD B. SĀM, MUʿIZZ AL-DĪN]. Driven from Dihlī and Kanawdj, they retreated into modern Rādjpūtāna [see RĀDJĀSTHĀN in Suppl.] where they eventually built up a strong position and were able to resist the Muslim invader, for it cannot be said that the Sultans of Dihlī ever really subdued the Rādjpūts of Rādjpūtāna. Nevertheless, throughout this period there was constant warfare, fortresses and strongholds frequently changing hands. The Rādjpūts nearest to Dihlī were naturally the weakest because the eastern frontier of Rādjputāna was exposed to attack. The Sultans of Dihlī appear to have realised the value of communications with the western coast, and we find that the route between Dihlī and Gudjarāt via Adjmēr was usually open to imperial armies. The chief menace to the Rādjpūts was not from Dihlī but from the independent Muslim kingdoms of Gudjarāt [*q.v.*] and Mālwā [*q.v.*].

The outstanding feature of the period from the end of the so-called Sayyid rule to the final invasion of Bābur [*q.v.*] was the growth of Rādjpūt power in northern India under Rānā Sāṅgā [*q.v.*] of Mēwāŕ [*q.v.*]. Taking advantage of the weakness of the Lōdīs [*q.v.*] under Ibrāhīm and of the war between Gudjarāt and Mālwā, he had extended his sway over the greater part of modern Rādjpūtāna. The battle of Khānuʾā in 1527, when Bābur shattered his power, marks a turning-point in the history of Muslim rule in India, for the Rādjpūts never again attempted to regain their lost dominions on the plains and contented themselves with remaining on the defensive. After Khānuʾā, the place of the Sesodias in Rādjpūt politics was taken by the Rāthors, the growth of whose power under Maldēō of Mārwār was facilitated by the struggle between Humāyūn [*q.v.*] and Shēr Shāh. Akbar's Rādjpūt policy was based on conquest and conciliation. The fall of Čitawŕ and Ranthambhōr made him master of the greater part of Rādjputāna, with the exception of Mēwāŕ [*q.v.*], which was not completely subdued until the reign of Djahāngīr [*q.v.*]. The reversal of Akbar's conciliatory policy produced the great Hindu reaction of Awrangzīb's reign, when, faced at the same time with the Rādjpūts of the north and the Marāthās [*q.v.*] of the Deccan, Awrangzīb [*q.v.*] was unable to concentrate on either campaign. But internal dissensions once more prevented the Rādjpūts from taking advantage of the decline of Mughal power, and, in the second half of the 18th century, they proved no match for the Marāthās, who easily overran their country. It was not until the beginning of the 19th century, when the British were at war with the Marāthās, that they entered into political relations with the Rādjpūt states. Before the end of the year 1818, the group of states which in British Indian times comprised Rādjpūtāna had been taken under British protection.

In British India of the 1930s, there were 10,743,091 Rādjpūts distributed throughout the country as follows: United Provinces, 3,756,936; Pandjāb, 2,351,650; Bihār and Orissa, 1,412,440; Rādjputāna, 669,516; Central Provinces and Berār, 506,087; Gwāliōr, 393,076; Central India, 388,942; Bombay, 352,016; Djammū and Kashmīr, 256,020; Western India States, 227,153; Bengal, 156,978; Baroda, 94,893; and Ḥaydarābād 88,434 (1931 *Census report*). It will be noted that, in Rādjpūtāna, only 669,516 Rādjpūts were to be found out of a total population of 11,225,712. The native states of Rādjpūtāna were ruled by Rādjpūts, with the exception of Tonk, which was Muslim, and Bharatpur and Dholpur, which was Djāt. the chief Rādjpūt clans in Rādjpūtāna are the Rāthor, Kačhwāha, Čawhān, Djādon, Sesodia, Ponwar, Parihār, Tonwar and Djhāla. Rādjasthānī is the mother tongue of 77% of the inhabitants of this area. It is interesting to note that in some parts of India, Rādjpūts have embraced Islam, as for example the Manhās, Kātils and Salahria of the Pandjāb.

RĀDKĀN, the site of a mediaeval Islamic monument in northern Persia. The tomb tower (Iranian National Monument 145) sits on the edge of an isolated, 1,300 metre long valley in the Alburz Mountains north of the Nikā River, 70 km/43 miles east of Nikā in the province of Māzandarān. It is often known as Rādkān West to distinguish it from another tomb tower, the Mīl-i Rādkān at Rādkān East near Ṭūs in Khurāsān. The cylindrical tower (height 35 m; exterior diameter 9.8 m; interior diameter 5.80 m) is built of baked brick and is topped with a conical roof. An inscription plaque in terra cotta once stood over the entrance doorway, and another inscription band in Pahlavi and Arabic (illustrated in kitābāt, Pl. XIX, no. 22) encircles the tower below the roof. Both record that the patron was the *amīr* and *ispahbad* Abū Djaᶜfar Muḥammad b. Wandarīn Bāwand and that the building was constructed during his lifetime between Rabīᶜ II 407/September-October 1016 and 411/1020-1. He was a member of the first branch of the Bāwand [*q.v.*] dynasty, the Kayūsiyya, which ruled the mountainous area south of the Caspian 45-397/665-1006. The family lost power when the *ispahbad* Shahriyār revolted against the Ziyārid Ḳābūs b. Wushmgīr [*q.v.*], was captured, and later executed, but several local princes such as Muḥammad b. Wandarīn continued to rule in isolated localities. The tomb tower at Rādkān exemplifies a type of funerary construction which became common in the area at the time (the most striking example is the stellate tower that Ḳābūs ordered in 397/1006-7 at nearby Gunbadh-i Ḳābūs) and is remarkable for its superb inscriptions in plaited Kūfic script.

al-**RĀDŪYĀNĪ**, Muḥammad b. ᶜUmar, author of the first Persian treatise on rhetoric, the *Kitāb Tardjumān al-balāgha*. The little that can be inferred about the author's life is known from the *Tardjumān* itself; no other source mentions him. According to the researches of A. Ateş, he seems to have lived in Transoxania, and his book was written between 481/1088, the beginning of the Karakhānid Aḥmad Khān's incarceration at the hand of Malik Shāh, as mentioned in one of the poems quoted, and 507/1114, the date of the unique ms. of the *Tardjumān*, the *madjmūᶜa* Istanbul, Fatih 5413, fols. 233a-290a.

As al-Rādūyānī explicitly states (*Tardjumān*, 3), his book was modelled on the Arabic *Maḥāsin al-kalām* of Abu 'l-Ḥasan Naṣr b. al-Ḥasan al-Marghīnānī, recently published by G.J. van Gelder as *K. al-Maḥāsin fi 'l-naẓm wa 'l-nathr* (see *Bibl.*). However, in spite of his assertion, there are substantial differences between the two works in size and structure, e.g. the *Maḥāsin* has about 33 rhetorical figures as opposed to 73 in the *Tardjumān*, the figures being slightly misleading because of different taxonomies; also, the *Maḥāsin* uses examples from Ḳurʾān and Ḥadīth, which are totally lacking in the *Tardjumān* (see further, Ateş, Introd. to *Tardjumān*, 39-42).

The *Tardjumān* in turn was known to Rashīd al-Dīn-i Waṭwāṭ (d. 573/1177 [*q.v.*]), who found it lacking and wrote his own *Ḥadāʾiḳ al-siḥr fī daḳāʾiḳ al-shiᶜr* to supersede it (*Ḥadāʾiḳ*, 1). He does not mention the author's name. Later sources do not seem to have had direct access to the *Tardjumān* and uniformly attribute it to the poet Farrukhī (d. 429/1037-8 (?) [*q.v.*]).

Whereas Waṭwāṭ adduces both Persian and Arabic examples, all poetic examples in the *Tardjumān* are in Persian. Due to its early date it is an important source for the beginnings of Persian poetry (see Ateş, *Etude*, and Lazard).

(W.P. Heinrichs)

RAḌWĀ, the name of the crags west of Medina, occasionally mentioned in connection with the mountain Thabīr (*Sīrat al-Ḥabasha*, 86). Lying behind Yanbuᶜ, between the regions of Madyan [see madyan shuᶜayb] and Mecca, they were known to Ptolemy (Sprenger, *Die alte Geographie*, nos. 28, 30) and are mentioned by Ibn Isḥāḳ (*The life of Muhammad*, tr. 413, 542). Al-Hamadhānī quotes a tradition, according to which the Prophet said: "May God be satisfied (*raḍiya*) with it (Raḍwā)!" Abū Karib, leader of the Kuraybiyya [*q.v.*], a sub-sect of the Kaysāniyya, is said to have believed that Muḥammad b. al-Ḥanafiyya, a son of ᶜAlī b. Abī Ṭālib, was alive hidden in the mountains of Raḍwā.

(Ed.)

RAFᶜ (a.), literally, "elevation, the act of raising something".

1. *As a technical term of Arabic grammar*

Here it denotes the vowel /u/ which affects the final

consonant of words (nouns and verbs) which are inflected (*muᶜrab*). The term indicates not a function but the position of the tongue "raised" (*marfūᶜ*) towards the top of the palate in order to pronounce the vowel /u/. European grammarians see in this vowel the mark of the nominative case of nouns and the mark of the indicative mood in verbs.

Nouns "raised" (*marfūᶜāt*) by the vowel /u/ are of five kinds:

(1) The inchoative (*mubtadaʾ*), which is to be connected (*musnad*) with an item of information, and which is stripped (*mudjarrad, muᶜarrā*) of any regent (*ᶜāmil*) which is expressed (*lafẓī*); it is "raised" by the fact of beginning a piece of speech utterance (*ibtidāʾ*), which is an understood (*maᶜnawī*) regent.

(2) The noun which is a predicate (*khabar*), to which the inchoative is connected (*musnad ilayhi*). For certain of the Baṣran grammarians (including Sībawayh and Ibn al-Sarrādj), it is "raised" at the same time by both the act of beginning and by the noun which forms this; for other Baṣran grammarians, it is "raised" by the act of beginning by means of (*bi-wāsiṭa*) the noun which forms this; for the Kūfans, it is "raised" solely by the act of beginning.

(3) The noun which is an agent (*fāᶜil*) built upon a verb formed (*buniya*) for it and to which it is connected; it is "raised" by this verb, which is what one is talking about (*mā yuḥaddath ᶜanhu*).

(4) The noun which is a direct object (*mafᶜūl bihi*) built upon a verb formed by it and to which it is connected, but whose agent is not named (*summiya*); it is "raised" by this verb, which is what one is talking about (*mā yuḥaddath ᶜanhu*).

(5) The noun which is assimilated (*mushabbah*) to the agent in actual utterance (*lafẓ*). This noun comes after incomplete verbs, such as *kāna* and its sisters, which are not genuine (*ḥaḳīḳī*) verbs, since they express only time. It can also come after two negative particles assimilated to these verbs, such as *mā* and *lāta* in the dialect of the Ḥidjāz; it is "raised" by this verb or by this particle.

As for the "similar" (*muḍāriᶜ* [*q.v.*]) verb, it is "raised" by an understood (*maᶜnawī*) regent, which is the fact that it occupies (*wuḳūᶜ*) the place (*mawḳiᶜ*) of a noun, whatever its inflexion might be.

2. As a technical term in the science of Muslim tradition = *ḥadīth* [*q.v.*].

Beside the verbal noun, the passive participle *marfūᶜ* (plural *marfūᶜāt*), "lifted up", is commonly used. An *isnād* [*q.v.*] of a tradition is *marfūᶜ*, when it is, as it were, "lifted up", sc. to the level of the Prophet Muḥammad, supporting a *matn* (= text) containing either his words and/or describing some activity of his as transmitted by one of his Companions. (In contrast, when the transmission of such a tradition is put in the mouth of a Successor, who could not possibly have been present, or someone who lived even later, one speaks of a *mursal* [*q.v.*] *isnād*; on the other hand, when the text of a tradition does not contain a mention of the Prophet, but describes the words and/or deeds of a Companion or somebody later, tradition science defines that as a *mawḳūf* tradition, a qualification also applied to its *isnād*, since it has literally "stopped" at the Companion.)

During the initial stages of *ḥadīth* transmission, a time roughly coinciding with the first three quarters of the 1st/7th century, the necessity of naming one's source(s) was not yet generally felt. In the course of the last few decades of that century, however, the *isnād* as authentication device came into use. In order to validate a report of which one claimed that it described an event of the past, one was requested to call an older authority to witness. The earliest *isnāds* contained only one name, mostly that of an alleged expert in legal or ritual matters, a Companion or somebody of a later generation, resulting in a *mawḳūf isnād* strand, or the Prophet himself, resulting in a *mursal isnād*, thus without a Companion. But, as a result of inaccurate handling of *isnāds* and/or because of widespread *isnād* fabrication, they became subject to a more sophisticated evaluation, which resulted in the course of time in fully-fledged *isnād* criticism. Merely supplying *mawḳūf* or *mursal isnāds* in an attempt to guarantee the veracity of a report which one wished to circulate was no longer sufficient, and the call for *isnāds* ending in a Companion, who reported on the authority of the Prophet, became louder. Muslim tradition scholars generally credit the founder of the legal school that bears his name, Muḥammad b. Idrīs al-Shāfiᶜī (d. 204/820) [*q.v.*], with the foresight of having been the first to emphasise the authority of *marfūᶜ isnāds*, more so than the other types of *isnād* strands. This was also underlined in western studies, notably in those of J. Schacht (cf. his *The origins of Muhammadan jurisprudence*, Oxford 1950, ch. 3). As from al-Shāfiᶜī's days, the prestige of these latter types began to diminish and traditions supported by them gradually failed to attract the attention of tradition collectors, while supplying *marfūᶜ isnād* strands, which in the beginning were vastly outnumbered by the other types as is especially clear in the pre-canonical *ḥadīth* collections, became the rule.

The qualification *marfūᶜ* for an *isnād* strand does not necessarily imply that it is at the same time beyond criticism. To be considered unassailable, the strand has to show up an uninterrupted string of names of known transmitters, from the Prophet to the collector in whose collection that strand turns up. At the same time, each pair of transmitters in that string of names must be believed to have transmitted from one another. For this quality of a strand the technical term *muttaṣil* is used. Because not each *muttaṣil* strand is *marfūᶜ*, but can "stop" at a Companion (= *muttaṣil mawḳūf*) and because not every *marfūᶜ* is at the same time *muttaṣil* (e.g. a *munḳaṭiᶜ marfūᶜ*), a strand deemed genuinely reliable has to be both *marfūᶜ* as well as *muttaṣil*; for both terms taken together the technical term *musnad* [*q.v.*] came into use. It is only a tradition with a *matn* supported by a *musnad isnād* strand which may have a claim to be considered *ṣaḥīḥ* [*q.v.*], "sound".

The Arabic root *r-f-ᶜ* has given rise to yet another derivative being widely used in a technical sense in the context of *ḥadīth*. With the prestige of *marfūᶜ* strands gradually increasing, but especially after al-Shāfiᶜī's insistence on them, many transmitters became known as *raffāᶜūn*, i.e. people who developed the habit of frequently "raising" *isnād* strands "to the level" of *marfūᶜāt*, either by inserting the name of a Companion in *mursal* strands which they had, or replacing the actor in a *mawḳūf*-supported *matn* by the Prophet.

In later times certain form rules were less strictly observed. Thus the mention of the Prophet was often dropped in a saying ascribed to him by the mere addition of the adverbially used *marfūᶜan* after the name of the Companion of that saying's *isnād* strand. Alternative loose formulae for this were the verbal forms *yarfaᶜu 'l-ḥadīth, yanmīhi, yablughu bihi* or *riwāyatan* im-

mediately following the name of the Companion in an *isnād* strand. Reports, furthermore, in which Companions are alleged to have said: "We used to do (or say) such and such a thing in the time of the Prophet", were considered *mawḳūf* as to the actual wording but *marfūᶜ* as to the underlying meaning, since they implied Muḥammad's tacit approval, in Arabic *taḳrīr* (plural *taḳrīrāt*). Moreover, although Muḥammad's name is not mentioned, additional statements in a *matn* such as: "... while the Ḳurʾān was still being revealed", or a Companion's assertion that a certain Ḳurʾān verse pertained to one particular situation to which he bore witness, were likewise considered to be *marfūᶜ*-supported, but only by implication.

RAFᶜ [see ṬALĀḲ].

RAFAḤ, conventional modern rendering Rafah, originally a town 5 km/3 miles inland from the eastern Mediterranean (lat. 31° 18′ N., long. 34° 15′ E.), on the borders of Egypt and Palestine and now administratively divided between Egypt and the Israeli-occupied Gaza Strip as two separate towns.

The name is ancient, and appears in Egyptian records of *ca.* 1300 BC as RPH. In Byzantine times it was part of Palestina Prima and a prosperous place, depicted on the famous Madaba map. At the time of the Arab invasions, it seems to have surrendered to ᶜAmr b. al-ᶜĀṣ on condition of paying the poll-tax and the *ᶜus̲h̲r* [*q.v.*] in return for security of life and property: subsequently, it was included in the *d̲j̲und* [*q.v.*] of Filasṭīn. The Arabic geographers often mention it as a stage on the route between Damascus and Egypt and as being in the zone of *d̲j̲ifār*, sand dunes difficult to traverse. However, water was easily available through digging, and in the 18th century Asad al-Luḳaymī (d. 1765), en route for Jerusalem, compared the water from Rafaḥ's well to that of the Nile in its sweetness. The geographer al-Muhallabī (d. 376/986), cited by al-Ḳalḳas̲h̲andī, says that the population of this *madīna* was composed of Lak̲h̲m and D̲j̲ud̲h̲ām tribesmen; it had a market, a mosque with a *minbar*, *funduḳs*, and was administered by a *wālī al-maᶜūna* who had a force of soldiers at his disposal. Modern archaeological surveys and investigations have disclosed a number of derelict settlements in the neighbourhood, including on the coast, Tall Rafaḥ, which served as the town's landing-place. Yāḳūt describes Rafaḥ as ruinous in his own time, and for several centuries it is hardly mentioned.

But in the 19th century it regained some of its old importance, being from 1865 a telegraph station on the Damascus-Cairo line. In 1870 the Khedive Ismāᶜīl visited the place, and two granite columns were erected to define the border there of Egypt and Ottoman Syria. Subsequently, however, Rafaḥ became a point of dispute. In 1898 ᶜAbbās Ḥilmī [*q.v.*] visited it after threats of an Ottoman annexation of the Sinai peninsula, discouraged at this time by British diplomatic intervention; but in April 1906 the Ottomans occupied Rafaḥ, removed the two columns and uprooted the telegraph poles. Negotiations followed, and the borders were defined in October 1906, with the telegraphic service restored and telephone and camel postal services introduced. During the First World War, British forces under Sir Archibald Murray occupied Rafaḥ in June 1917, establishing a military camp; a double-track, standard-gauge railway from al-Ḳanṭara to Rafaḥ, thence to Beersheba, was built. The town later grew by the settlement of Bedouins there and, after 1948, of Palestinian refugees; and in 1956 and 1967 it was occupied by Israeli forces. Following the Camp David Accords and the peace treaty between Israel and Egypt of 1978, Palestinian Rafaḥ was again separated from its Egyptian counterpart.

RĀFIᶜ b. **HART̲H̲AMA**, a soldier of fortune who disputed control of K̲h̲urāsān with other adventurers and with the Ṣaffārid Amīr ᶜAmr b. al-Layt̲h̲ [*q.v.*] in the later 3rd/9th century, d. 283/896.

Rāfiᶜ had been in the service of the Ṭāhirids [*q.v.*], and after the death in 268/882 at Nīs̲h̲āpūr of the previous contender for power in K̲h̲urāsān, Aḥmad al-K̲h̲ud̲j̲istānī, he set himself up as *de facto* ruler of K̲h̲urāsān, subsequently securing legitimisation from the ᶜAbbāsid caliphs when al-Muwaffaḳ [*q.v.*] broke with the Ṣaffārids. By 283/896, however, ᶜAmr managed to defeat Rāfiᶜ and to drive him out of K̲h̲urāsān to K̲h̲ʷārazm, where he was killed.

Bibliography: R. Vasmer, *Über die Münzen der Ṣaffāriden und ihrer Gegner in Fārs und Ḫurāsān*, in *Num. Zeitschr.*, N.F., xxiii (1930), 138 ff.; C.E. Bosworth, in *Camb. hist. of Iran*, iv, 118-20; idem, *The Ṣaffārids of Sistan and the Maliks of Nīmrūz*, Costa Mesa, Calif. 1993. (C.E. Bosworth)

RĀFIᶜ b. al-**LAYT̲H̲** b. **NAṢR** b. **SAYYĀR**, apparently the grandson of the last Umayyad governor of K̲h̲urāsān Naṣr b. Sayyār [*q.v.*] and rebel against the ᶜAbbāsid caliphate in the opening years of the 9th century A.D.

In 190/806 Rāfiᶜ led a rising in Samarḳand which turned into a general rebellion throughout Transoxania against the harsh rule and financial exploitation of the caliphal governor of K̲h̲urāsān, ᶜAlī b. ᶜĪsā b. Māhān [see IBN MĀHĀN]. As well as receiving support from the local Iranian population, Rāfiᶜ secured help

from the Turks of the Inner Asian steppes, the Toghuz-Oghuz [see GHUZZ] and Ḳarluḳ [*q.v.*]. Hārūn al-Rashīd sent against him the commander Harthama b. Aʿyan [*q.v.*], and was about to take charge of the campaign against Rāfiʿ personally when he died at Ṭūs in 193/809. Only after Hārūn's death did Rāfiʿ surrender to the successor as ʿAbbāsid governor in the East, al-Maʾmūn, and receive from him *amān* or pardon, after which Rāfiʿ fades from historical mention.

Daniel, *The political and social history of Khurasan under Abbasid rule 747-820*, Minneapolis and Chicago 1979, 172-7; C.E. Bosworth (tr.), *The History of al-Ṭabarī. xxx. The ʿAbbāsid caliphate in equilibrium*, Albany 1989, index, with the other primary sources (Yaʿḳūbī, Masʿūdī, Gardīzī, Narshakhī, etc.) indicated at 259 n. 891 and 261 n. 894. (C.E. BOSWORTH)

RAFĪʿ AL-DĪN, MAWLĀNĀ SHĀH MUḤAMMAD B. SHĀH WALĪ ALLĀH B. ʿABD AL-RAḤĪM AL-ʿUMARĪ (after the caliph ʿUmar b. al-Khaṭṭāb), was born in 1163/1750 in Dihlī, in a family which enjoyed the highest reputation in Muslim India for learning and piety, from the 18th century onwards, and produced a number of eminent *ʿulamāʾ* up to the Sepoy Rebellion of 1837-8 (see Ṣiddīḳ Ḥasan Khān, *Ithāf al-nubalāʾ*, Kānpur 1288, 296-7; *JASB*, xiii, 310). He studied *ḥadīth* with his father, Shāh Walī Allāh [see AL-DIHLAWĪ, SHĀH WALĪ ALLĀH] who was the most celebrated traditionist in his time, in India.

After the death of his father in 1176/1762-3, he was brought up by his elder brother Shāh ʿAbd al-ʿAzīz (1159-1239/1746-1823), with whom he completed his studies in the usual sciences, being specially interested in *ḥadīth*, *kalām* and *uṣūl*. When about twenty, he entered upon his career as *muftī* and *mudarris*, and later succeeded in these capacities his brother and teacher, who, in his old age, had lost his eyesight, and had indifferent health. He died on 6 Shawwāl 1233/9 August 1818, at the age of 70 (lunar years), of cholera, and was buried in their family graveyard outside the city of Dihlī.

He wrote about 20 works, mostly in Arabic and Persian, and a few in Urdū. He is praised for the subtlety of his ideas and the conciseness of his style. Among his works are:

In Urdū: 1. a translation of the Ḳurʾān, interlinear to the Arabic text, which it follows closely and faithfully. He and his brother ʿAbd al-Ḳādir [*q.v.*] were the pioneers in this field, though their work was considerably facilitated by their father Shāh Walī Allāh's Persian translation of the Ḳurʾān (entitled *Fatḥ al-Raḥmān fī tardjamat al-Ḳurʾān*). The first edition of Shāh Rafīʿ al-Dīn's translation appeared in Calcutta in 1254/1838-9 and another, in 1266/1849-50. For some of its numerous editions (from 1866 onwards) see Blumhardt, *Cat. of the Hindustānī printed books of the Libr. of the British Museum*, London 1889, 290-1, and its *Supplement*, London 1909, 403.

In Arabic: 2. *Takmīl al-ṣināʿa* or *Takmīl li-ṣināʿat al-adhhān*, dealing with a. logic, b. *taḥṣīl*, i.e. principles of dialectics, teaching, learning, authorship and self-study, c. *mabāḥith min al-umūr al-ʿāmma* (some metaphysical discussions) and, d. *taṭbīḳ al-ārāʾ* (i.e. an enquiry into the causes and the criteria for judging conflicting opinions in religious matters). A considerable portion of the work has been quoted in the *Abdjad al-ʿulūm*, 127-35 and 235-70; 3. *Muḳaddimat al-ʿilm*; see *Abdjad al-ʿulūm*, 124; 4. *Risālat al-Maḥabba*, a discourse on the all-pervading nature of love; see *Abdjad al-ʿulūm*, 254; 5. *Tafsīr Āyat al-Nūr*, a commentary on sūra XXIV, 35; 6. *Risālat al-ʿArūḍ wa 'l-ḳāfiya*; see *Abdjad*, 915; 7. *Damgh al-bāṭil*, dealing with some abstruse problems of the *ʿilm al-ḥaḳāʾiḳ*; 8. a gloss on Mīr Zāhid al-Harawī's commentary on Ḳuṭb al-Dīn al-Rāzī's *Risālat al-Taṣawwurāt wa 'l-taṣdīḳāt* (see *GAL*, II², 271); 9. *Ibṭāl al-barāhīn al-ḥikmiyya ʿalā uṣūl al-ḥukamāʾ*.

In Persian: 10. *Ḳiyāmat-nāma* (Lahore 1339; Ḥaydarābād, undated ed.), on the last judgment also called *Maḥshar-nāma* (see Browne's *Supplementary handlist*, 189). For the two poetical versions, in Urdū, of this popular work, viz., *Āthār-i maḥshar* (chronogrammatic name, which gives 1250/1834-5 as the date of composition), and *Āthār-i ḳiyāmat*, see Sprenger, *Oudh catalogue*, 624, and Blumhardt, *Cat.*, 290, and for an Urdū prose version, *Ḳiyāmat-nāma* or *Daʾb al-ākhirāt*, see Blumhardt, *loc. cit.*; 11. *Fatāwā*, Dihlī 1322; 12. *Madjmūʿat tisʿ rasāʾil*, Dihlī 1314, small treatises on religious and mystical topics; 13. *Sharḥ al-Ṣudūr bi-sharḥ ḥāl al-mawtā wa 'l-ḳubūr*, an eschatological work, in a ms. copy in the Dār al-ʿUlūm, Deoband, which institution also possesses the ms. of his 14. *Laṭāʾif khamsa*, a mystical work (ff. 32).

Bibliography: Besides the references given above, *Malfūẓāt Shāh ʿAbd al-ʿAzīz Muḥaddith Dihlawī* (composed 1233/1818), Meerut 1314, 79, 83-4; Muḥammad b. Yaḥyā (commonly known as al-Muḥsin) al-Tirhutī, *al-Yāniʿ al-djanī fī asānīd al-Shaykh ʿAbd al-Ghanī* (lithogr. on the margin of the *Kashf al-astār ʿan ridjāl maʿāni 'l-āthār*, and composed in Medīna in 1280/1863), Deoband 1349, 75; Ṣiddīḳ Ḥasan Khān, *Abdjad al-ʿulūm*, Bhopāl 1295, 124, 914-15, and other places mentioned in the article; Karīm al-Dīn, *Farāʾid al-dahr*, Dihlī 1847, 410; Sayyid Aḥmad Khān, *Āthār al-ṣanādīd*, Dihlī 1270, 106; Faḳīr Muḥammad Djihlamī, *Ḥadāʾiḳ al-ḥanafiyya*, Lucknow 1891, 469; Raḥmān ʿAlī, *Tadhkira ʿulamāʾ-i Hind*, Lucknow 1914, 66 (and 4, 24, 51, 63, 223, 276 for notices, etc., of the Shāh's sons and pupils); Bashīr al-Dīn Aḥmad, *Wāḳiʿat Dihlī*, Agra 1918, ii, 588-9; Garcin de Tassy, *Histoire de la littérature hindoue et hindoustanie*, 2nd ed., Paris 1870, ii, 548-9; Saksena, *History of Urdu literature*, Allāhābād 1927, 253; *Maʿārif* (an Urdū monthly published from Aʿẓamgaṛh, India) for Nov. 1928, 344 ff.; *The Oriental College Magazine, Lahore* (an Urdū quarterly) for Nov. 1925, 42-9 (life, including a biogr. notice from the unpublished *Nuzhat al-khawāṭir* by Mawwī ʿAbd al-Ḥayy of Lucknow, and a list of works).

(MUḤAMMAD SHAFĪʿ)

AL-**RĀFIḌA** OR AL-RAWĀFIḌ, a term that refers to (i) the proto-Imāmiyya (and, subsequently, the Twelver Shīʿa); (ii) any of a number of Shīʿī sects. In this article it is used in the former sense unless otherwise indicated.

The origin of the term is a matter of dispute. 1. Early Imāmī heresiographers maintain that the name was first applied to the adherents of Djaʿfar al-Ṣādiḳ by al-Mughīra b. Saʿīd (executed in 119/737), immediately after they had dissociated themselves from him [see MUGHĪRIYYA]. 2. Other reports, in contrast, relate it to the abortive uprising of Zayd b. ʿAlī against the Umayyads (in 122/740). According to these reports (including one from the Kūfan historian ʿAwāna b. al-Ḥakam and another from Abū Mikhnaf [*q.vv.*]), some Kūfans who had initially joined Zayd's camp made their continued support conditional on his rejection (*rafḍ*) of Abū Bakr and ʿUmar (or of the entire *ṣaḥāba*). When Zayd refused to accede to their demands they deserted him (*rafaḍūhu*), thus bringing about his defeat. The term *Rāfiḍa* is therefore variously said to recall the desertion of Zayd, the rejection of the first two caliphs, or both.

The name is used to refer to the proto-Imāmiyya in

statements of dubious authenticity ascribed to the traditionist al-Shaʿbī (d. 103/721 or 110/728), and was current by the mid-2nd/8th century, when it was reportedly used by (among others) the Zaydī Sulaymān b. Djarīr. Not surprisingly, Ḥasanid circles were particularly active in propagating anti-Rāfiḍī traditions. Zayd himself is said to have quoted the Prophet as telling ʿAlī that he should kill any Rāfiḍī whom he meets; the reason given is that they are polytheists (Nashwān al-Ḥimyarī, *al-Ḥūr al-ʿīn*, Cairo 1948, 185). Muḥammad is also said to have declared: "At the end of time there will appear a group ... called *Rawāfiḍ* who will reject (*yarfuḍūna*) Islam." According to an account attributed to al-Suddī (d. 127/744-5), Zayd compared the Rāfiḍī desertion with the Khāridjī revolt against ʿAlī (Ibn ʿAsākir, *Taʾrīkh Madīnat Dimashḳ*, facsimile ed., vi, 648). Detractors argue that *rafḍ* is based on Judaism; they allege that ʿAbd Allāh b. Sabaʾ [*q.v.*] was of Jewish origin, and claim that anthropomorphism (*tashbīh*), allegedly a hallmark of Judaism, was first introduced into Islam by the Rāfiḍa (cf. J. van Ess, *Theologie und Gesellschaft*, i, 399-403).

While *Rāfiḍa* was originally intended as a pejorative term, the Imāmīs soon turned it into an honorific. The traditionist al-Aʿmash [*q.v.*] quotes Djaʿfar al-Ṣādiḳ as explaining that it was bestowed on the Shīʿīs by God and is preserved in both the Torah and the Gospels. According to al-Ṣādiḳ, there were seventy men among the people of Pharaoh who rejected their master and chose to join Moses instead. God therefore called them *Rāfiḍa*, i.e. those who rejected evil, and ordered Moses to write this word, in the original Arabic, in the Torah. After Muḥammad's death, when most of the early adherents of Islam began to stray from the path of truth, only the Shīʿīs rejected evil. They thus became the successors of the original Rāfiḍa. According to another version, those who renounced Pharaoh were not Egyptians but Israelites who had adopted (or perhaps been born into) Pharaoh's religion; having later become aware of their error, they rejoined their erstwhile co-religionists (al-Kulīnī, *al-Kāfī*, ed. ʿAlī Akbar al-Ghaffārī, Tehran 1375-7, viii, 34). Yet another account states that the term was originally applied to Aaron and his followers by the worshippers of the golden calf, whence it was given to the followers of ʿAlī (al-ʿĀmilī al-Bayāḍī, *al-Ṣirāṭ al-mustaḳīm ilā mustaḥiḳḳī 'l-taḳdīm*, ed. Muḥammad Bāḳir al-Bihbūdī, Tehran 1384, i, 323); this reflects the well-known Imāmī tradition that equates ʿAlī's position with regard to the Prophet with that of Aaron with regard to Moses. A retrojection of the term into an even earlier period occurs in an Imāmī account about Idrīs [*q.v.*]. According to this account, Idrīs lived during the reign of the infidel tyrant Bīwarāsb (i.e. al-Ḍaḥḥāk, cf. al-Masʿūdī, *Murūdj*, ed. Pellat, §537), who belonged to the progeny of Cain; those who rejected the tyrant and counted themselves among the followers (*shīʿa*) of Idrīs were called *Rāfiḍa* (al-Masʿūdī, *Ithbāt al-waṣiyya*, Nadjaf 1955, 20-1). Another version, finally, states that the first Rāfiḍa were the seventy followers of Noah (ʿAbd al-Djalīl Ḳazwīnī, *Kitāb al-Naḳḍ*, 585-6).

Rāfiḍism, which first emerged in Kūfa, had spread to Ḳumm by the end of the 2nd/8th century. Ḳumm became a bastion of Rāfiḍī orthodoxy, in contrast to Kūfa, where the various Shīʿī sects were in continual conflict with each other. It was primarily in Ḳumm that Rāfiḍī traditions were sifted and collected. The Ḳummī traditionists were largely Arabs, whereas those of Kūfa were mostly *mawālī*. Rāfiḍī centres which arose in the 3rd/9th century included Ahwāz, Rayy and Naysābūr; by the 4th/10th century, Rāfiḍism had spread to Ṭūs, to Bayhaḳ and to various places in Ṭabaristān and Transoxania, and Baghdād (particularly the Karkh quarter) had become a stronghold of Rāfiḍī rationalist *kalām* (see W. Madelung, *Religious trends in early Islamic Iran*, Albany 1988, 78-86).

The early Rāfiḍīs combined extreme anti-Sunnī positions with political quietism. Their most prominent theologians included Zurāra b. Aʿyan (d. 150/767), Shayṭān al-Ṭāḳ, Hishām al-Djawālīḳī and Hishām b. al-Ḥakam (d. 179/795-6 [*q.v.*]). They were divided into a number of subsects, some of which are noted in the list which the prefect of police Ibn al-Mufaḍḍal drew up for the caliph al-Mahdī (al-Kishshī, *Ridjāl*, Nadjaf n.d., 227). While disagreeing on points of detail (as indicated for example by the title of one of Hishām b. al-Ḥakam's works, *Kitāb al-Radd ʿalā Hishām al-Djawālīḳī*), most Rāfiḍīs shared a number of basic doctrines. They affirmed that God has a form, that his attributes are essentially subject to change, and that he may reverse his rulings [see BADĀʾ]. On the question of the imāmate they maintained that ʿAlī had been appointed as Muḥammad's successor by an explicit designation (*naṣṣ*) and that the majority of the Companions were sinners or even unbelievers for failing to support him after the Prophet's death. The Rāfiḍīs asserted further that ʿAlī's enemies deleted or changed passages in the Ḳurʾān in which ʿAlī's rights were mentioned; as a result the Ḳurʾān as we have it is not identical with the original revelation. They maintained that both the Imāms and their community were created of a heavenly substance and are thus sharply distinguished from the outside world. Only members of this community are believers; they remain in a state of belief even when they sin, and are guaranteed entry into Paradise. The Imāms are immune from error and sin [see ʿIṢMA] and are the supreme authority since they possess virtually limitless knowledge; their teachings formed the basis for the Rāfiḍī legal system. The Rāfiḍīs held that self-protection through dissimulation (*taḳiyya* [*q.v.*]) is often permitted and sometimes obligatory, and believed that there will be a return to this world before the resurrection [see RADJʿA]. As noted by al-Ashʿarī, some Rāfiḍīs had by the 3rd/9th century adopted Muʿtazilī ideas about God's unity and about the Ḳurʾān.

In practice, the Imāms' authority manifested itself chiefly in religious guidance. Muḥammad al-Bāḳir and Djaʿfar al-Ṣādiḳ [*q.vv.*] laid down the principles of Rāfiḍī doctrine and law and taught them to a circle of students in Medina. With the advent of the ʿAbbāsids, the Imāms' activities were severely hampered by the restrictions placed on their movements; they were often incarcerated or placed under house arrest, and so had little direct contact with their followers. This, combined with the geographical expansion of the Rāfiḍa, led naturally to the growth of a local leadership, to which the Imāms delegated some of their authority. In the mid-3rd/9th century, for example, Aḥmad b. Muḥammad al-Ashʿarī served as leader of the Rāfiḍī community in Ḳumm and as the upholder of Rāfiḍī orthodoxy. In addition, the Imāms relied on a network of financial agents for the collection of the *khums*. The groundwork was thus laid for the assumption of responsibility by the *ʿulamāʾ* after the onset of the Occultation [see GHAYBA].

The Rāfiḍīs were attacked by representatives of most other religious groups; Ibn al-Nadīm, for example, records three works entitled *al-Radd ʿalā 'l-rāfiḍa*, one by the Ibāḍī ʿAbd Allāh b. Yazīd, a second by the

Muʿtazilī Bishr b. al-Muʿtamir and the third by the Zaydī al-Ḳāsim b. Ibrāhīm (on which see W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm*, 98; ed. B. Abrahamov, in *The theological epistles of al-Ḳāsim ibn Ibrāhīm*, Ph.D. diss., Tel-Aviv University 1981, unpubl.). While some Sunnī scholars permitted traditions to be transmitted on the authority of Rāfiḍīs, others did not (al-Khaṭīb al-Baghdādī, *al-Kifāya fī ʿilm al-riwāya*, Ḥaydarābād 1357, 120-5). Opposition to the Rāfiḍīs also came to the fore in the legal sphere: the *ḳāḍī* of Kūfa Ibn Abī Laylā (d. 148/765 [*q.v.*]) reportedly refused to accept their testimony (Wakīʿ, *Akhbār al-ḳuḍāt*, Cairo 1366-9/1947-50, iii, 133; al-Madjlisī, *Biḥār al-anwār*, lxviii, 156), while one of his successors as *ḳāḍī*, the Kūfan traditionist Ḥafṣ b. Ghiyāth al-Nakhaʿī (d. 194/809-10), is said to have denied permission for women to marry them. His stated reason was that the Rāfiḍīs consider a triple repudiation (*ṭalāḳ*) pronounced in one session to be tantamount to a single repudiation, and hence revocable; Rāfiḍīs who pronounced this formula therefore regarded themselves as still married (Wakīʿ, *Akhbār al-ḳuḍāt*, iii, 185, 188; *Taʾrīkh Baghdād*, viii, 193-4). The ascription of this view to Ḥafṣ has polemical overtones, since he was generally regarded as pro-ʿAlid. Sunnī authors often contrast *rafḍ* with *tashayyuʿ*, a favourable attitude to ʿAlī and members of the Prophet's family which in itself is not objectionable.

As already noted, the appellation *Rāfiḍa* had wider applications. For example, Khushaysh b. Aṣram (d. 253/867), as cited by al-Malaṭī, refers to fifteen Rāfiḍī groups, most of whom were extremist Shīʿīs, and al-Shahrastānī also includes the *ghulāt* in the term *Rāfiḍa*; and the Rāfiḍīs whose veneration for ʿAlī is likened in some traditions to the Christian deification of Jesus may likewise be the *ghulāt*. Ibn Ḥanbal (as cited in Ibn Abī Yaʿlā, *Ṭabaḳāt al-ḥanābila*, i, 33), Ibn Ḳutayba, ʿAbd al-Ḳāhir al-Baghdādī, Abu 'l-Muẓaffar al-Isfarāyīnī and others used the term Rāfiḍa to refer, *inter alia*, to the Zaydīs.

Yet in general the term continued to denote the Twelver Shīʿīs throughout the Middle Ages and into the modern era, particularly in a polemical context. Of late it has again been used in a positive sense, as when the Lebanese Shīʿī leader Mūsā al-Ṣadr described the Shīʿīs as men who reject evil (*rāfiḍūn*) and who revolt against tyranny (cited by Fouad Ajami, *The vanished Imam*, Ithaca and London 1986, 155).

AL-**RĀFIʿĪ**, ʿABD AL-KARĪM B. ABĪ SAʿĪD MUḤAMMAD b. ʿAbd al-Karīm al-S̲h̲afiʿī, Abu 'l-Ḳāsim Imām al-Dīn, S̲h̲āfiʿī scholar, born at Ḳazwīn in 555/1160 and died there in 623/1226. He is best known by his *nisba* of al-Rāfiʿī and, because of this, occasionally confused in some oriental sources with the poet of Ṭabaristān Rāfiʿī Naysābūrī and with a poet of G̲h̲ūr called Abu 'l-Ḳāsim Rāfiʿī, whilst Browne, *LHP*, iii, 88, 381, takes him for al-Yāfiʿī.

Skilled in *fiḳh*, he was the author of several works, numbering ten if one examines the sources which contain notices of his scholarly works: (1) *K. al-Muḥarrar*; (2) *K. al-Tadwīn fī d̲h̲ikr ahl al-ʿilm bi-Ḳazwīn*; (3) *al-Amālī al-s̲h̲āriḥa li-mufradāt al-Fātiḥa*; (4) *Sawād al-ʿayn fī manāḳib Abu 'l-ʿālamayn Aḥmad al-Rifāʿī*; (5) *al-Tad̲h̲nīb*; (6) *S̲h̲arḥ al-Wad̲j̲īz* (sc. by al-G̲h̲azālī); (7) *S̲h̲arḥ Musnad al-S̲h̲āfiʿī*; (8) *al-S̲h̲arḥ al-ṣaghīr*; (9) *al-Tartīb*; (10) *K. al-Īd̲j̲āz fī ak̲h̲ṭār al-Ḥid̲j̲āz*. The first six are to be found in Brockelmann (I, 393, S I, 678), and the others in al-Subkī (*Ṭabaḳāt*, Cairo 1965, v, 120). To underline al-Rāfiʿī's high standing amongst Sunnī scholars, one may merely note that the famous *Minhād̲j̲ al-ṭālibīn* of al-Nawawī [*q.v.*] (Fr. tr. L.W.C. Van Den Berg, Batavia 1882) is a compendium of his *K. al-Muḥarrar*.

However, one should also note the value for the history of Ḳazwīn and its region of his *K. al-Tadwīn*, a dictionary containing over a thousand biographies, listed more or less alphabetically, spread out over the first six centuries of Islam and devoted to the Sunnī *ʿulamāʾ*, above all the S̲h̲āfiʿī ones, of Ḳazwīn. The pre-eminence of this *mad̲h̲hab* there is confirmed by it, even if, in the Ṣafawid period, another scholar of the town, Raḍī al-Dīn Ḳazwīnī, who was fiercely critical of the *Tadwīn* and its author, was to endeavour, in his *Ḍiyāfat al-ik̲h̲wān* (ed. al-Sayyid Aḥmad al-Ḥusaynī, Ḳumm 1977), by somewhat dubious methods, to exaggerate the importance of the Imāmīs in Ḳazwīn, by bringing to light a good number of them concealed amongst the persons listed in the *Tadwīn*; such is the remarkable case of Muntad̲j̲ab al-Dīn [*q.v.*], one of the most famous Imāmī S̲h̲īʿī scholars of the period and who was, moreover—a testimony to the strength of *taḳiyya*—one of al-Rāfiʿī's masters.

But the book's value can especially be seen in the four chapters prefixed to the actual biographies (of which preliminary chapters, lengthy extracts translated into Persian may be found in Sayyid ʿAlī Gulrīz's *Mīnūdar yā bāb al-d̲j̲anna Ḳazwīn*, Tehran 1337). They provide rich historical and geographical information which was extensively used, a century later, by Ḥamd Allāh Mustawfī Ḳazwīnī [*q.v.*] in the 6th chapter of his *T.-i Guzīda* and even, in a very synthetic fashion, in the passages on Ḳazwīn in his *Nuzhat al-ḳulūb*. Since the formal dependence of this section of the *T.-i Guzīda* on the *Tadwīn* is demonstrable, one will need to reconsider the importance of this history, which has generally been considered as one of the main sources on Ḳazwīn, since its information dates from a century before.

As well as the Persian extracts from the *Tadwīn* mentioned above, there exists an index of the persons listed in it compiled by Mīr D̲j̲alāl al-Dīn Ḥusayn (*Fihrist asmāʾ al-rid̲j̲āl* [Tehran] 1374), who has used only a single one of the mss. of this work.

RAFSAND̲J̲ĀN, a town of Kirmān province, central Persia (lat. 30° 25′ N., long. 56° 00′ E., altitude 1,572 m/5,156 ft.), situated on the Yazd road 120 km/74 miles to the west of Kirmān city. It is the chef-lieu of a *s̲h̲ahrastān* or district of the same name. Known also as Bahrāmābād, in 1991 it had an estimated population of 87,798 (*Preliminary results of September 1991 census*, Statistical Centre of Iran, Population Division). Its chief claim to fame is as the home of the present (1993) head of state of the Islamic Republic of Iran "President and Prime Minister" ʿAlī Akbar Hās̲h̲imī Rafsand̲j̲ānī.

AL-**RĀG̲H̲IB** AL-**IṢFAHĀNĪ**, ABU 'L-ḲĀSIM AL-ḤUSAYN b. Muḥammad b. al-Mufaḍḍal, religious and Arabic literary scholar. Despite the considerable popularity of his works, at least a dozen of which are extant, and his demonstrable influence on al-G̲h̲azālī and other later figures, al-Rāg̲h̲ib's name is missing from almost all the standard biographical collections, and information about his life is extremely scanty. Although late sources place him in the 6th/12th century, more recent scholarship has confirmed al-Suyūṭī's statement (*Bug̲h̲ya*, ii, 297) that he died early in the 5th/11th. In his literary anthologies he alludes a number of times to contemporaries who can be identified as members of the circle of the Būyid vizier Ibn ʿAbbād (d. 385/995 [*q.v.*]); and the fact that he refers to Ibn ʿAbbād's successor, Abu 'l-ʿAbbās al-Ḍabbī (d. 399/1008), exceptionally, by his full title suggests that he may have been writing during the latter's vizierate. There is no sound evidence that al-Rāg̲h̲ib ever visited Bag̲h̲dād or left his native Iṣfahān.

Further knowledge of al-Rāg̲h̲ib comes almost entirely from his own works, whose variety made it difficult for later biographers to pigeonhole him; al-Suyūṭī calls him simply an "author" (*ṣāḥib al-muṣannafāt*). His best-known work, the *Muḥāḍarāt al-udabāʾ wa-muḥāwarāt al-s̲h̲uʿarāʾ wa 'l-bulag̲h̲āʾ* (2 vols., Beirut 1960, and earlier editions), is a comprehensive *adab* encyclopaedia, organised in twenty-five chapters covering such topics as intellect, rulership, crafts, food, courage, love, death, and animals, and including poetry and short prose anecdotes from all periods of Islamic history in approximately equal proportions; particularly prominent are verses by al-Mutanabbī and al-S̲h̲arīf al-Rāḍī [*q.vv.*] and poetry and prose by Ibn ʿAbbād. Similar in scope, and overlapping in content, is the *Mad̲j̲maʿ al-balāg̲h̲a* (ed. Muḥammad ʿAbd al-Raḥmān al-Sārīsī, ʿAmmān 1986), which differs from the *Muḥāḍarāt* in purpose, however, being essentially a thesaurus of elegant expressions for the use of the aspiring littérateur; this title is not recorded by the biobibliographical sources, but is probably to be identified with the *Kitāb al-Maʿānī al-akbar* referred to by Ḥād̲j̲d̲j̲ī K̲h̲alīfa (ed. Flügel, v, 616), quoting from the extant but unpublished introduction to al-Rāg̲h̲ib's own *Durrat al-taʾwīl* (see below). A third literary work by al-Rāg̲h̲ib, preserved without proper title in a Yale manuscript (ms. Landberg 165) and dealing with the standard rhetorical figures of poetry, is perhaps to be identified

with the *Afānīn al-balāgha* mentioned by al-Suyūṭī and later sources.

Al-Rāghib's predilection for subtle semantic analysis, apparent in the *Madjmaʿ al-balāgha*, is even more pronounced in his alphabetical lexicon of Ḳurʾānic vocabulary, the *Mufradāt alfāẓ al-Ḳurʾān* (ed. Nadīm Marʿashlī, Beirut 1972, and other editions). This work, whose influence can be traced in later *tafsīr* as well as lexicography, was one of a series of monographs by al-Rāghib on the Ḳurʾān; in its introduction the author refers to his previous *Risāla munabbiha ʿalā fawāʾid al-Ḳurʾān* and *Risāla fī 'l-ḳawānīn al-dālla ʿalā taḥḳīḳ munāsabāt al-alfāẓ*, both apparently lost, and promises a further work specifically on the "obscure distinctions" to be drawn between apparent synonyms in the Holy Book. The latter is probably to be identified with the *Durrat al-taʾwīl fī mutashābih al-tanzīl*, a study of phrases repeated in the Ḳurʾān in slightly varying forms, offering explanations for the significance of such minor variations. This work is extant in a number of manuscripts with varying titles, and has been shown by Muḥammad ʿAbd al-Raḥmān al-Sārīsī to be substantially identical, except for its introduction, with the *Durrat al-tanzīl wa-ghurrat al-taʾwīl* (Beirut 1973, and other editions) attributed to al-Khaṭīb al-Iskāfī (d. 421/1030), a contemporary and compatriot of al-Rāghib and a member of the circle of Ibn ʿAbbād in Rayy; whatever the source of the confusion, al-Rāghib's authorship seems to be supported on stylistic grounds, as well as by an internal reference to the author's *Djāmiʿ al-tafsīr*, which accords with other information on al-Rāghib but not on al-Iskāfī.

Al-Rāghib's *tafsīr*, of which only the initial sections are known to be extant in manuscript, is quoted in the *tafsīrs* of al-Bayḍāwī (anonymously) and Fakhr al-Dīn al-Rāzī (explicitly). It may never have been completed. Most celebrated was its methodological introduction, which was often copied separately and has been printed several times (most recently, as a *mulḥaḳ* to al-Nāhī, *al-Khawālid* [see *Bibl.*]). A model of clarity, this brief essay combines traditional philology with concepts derived directly from the philosophical tradition in an elegant and novel way.

The same combination of traditional religious scholarship and *falsafa* is even more apparent in al-Rāghib's best-known ethical work, *al-Dharīʿa ilā makārim al-sharīʿa* (ed. Abū Yazīd al-ʿAdjamī, Cairo 1985, and earlier editions). This work is structured in terms of a Platonic-Aristotelian psychology, with separate chapters on man's faculties in general, his intellect, the concupiscent and irascible faculties, justice, labour and money, and human acts. The pervasive philosophical influence is highly reminiscent of Miskawayh [*q.v.*] (who died and was buried in Iṣfahān in 421/1030), although no textual parallels between the two authors' works have been identified (except for a few brief quotations from Miskawayh in the *Muḥāḍarāt*). Al-Rāghib's *falsafa* is, however, considerably more Islamicised than Miskawayh's, with virtually every assertion being backed up by appropriate citations from Ḳurʾān and *ḥadīth*. The statement by al-Bayhaḳī (*Taʾrīkh ḥukamāʾ al-Islām*, ed. M. Kurd ʿAlī, Damascus 1946, 112-13) that al-Rāghib combined *sharīʿa* and *ḥikma* in his works is particularly apposite to the *Dharīʿa*. The work's ultimate influence was considerable, as it was al-Ghazālī's direct source for a good half of his *Mīzān al-ʿamal*, as well as for significant sections of his *Iḥyāʾ ʿulūm al-dīn* and *Maʿāridj al-ḳuds*. Al-Rāghib also wrote a companion piece to the *Dharīʿa*, the *Tafṣīl al-nashʾatayn wa-taḥṣīl al-saʿādatayn* (ed. ʿAbd al-Madjīd al-Nadjdjār, Beirut 1988), which presents many of the same ideas but stresses even more explicitly the complementarity of *ʿaḳl* and *sharʿ*.

Influence from the *falsafa* tradition is equally apparent in a theological treatise by al-Rāghib published (very imperfectly) under the title *al-Iʿtiḳādāt* (ed. Shamrān al-ʿAdjalī, Beirut 1988). Its proper title is unknown, although one of the three known manuscripts of the work calls it (rather implausibly) *Taḥḳīḳ al-bayān fī taʾwīl al-Ḳurʾān*, a title referred to by the author himself in his *Dharīʿa*. In this work, al-Rāghib deals with a series of standard *kalām* topics, such as the attributes of God and the problem of free will, but much of his argumentation is philosophical, including his conception of God as the Necessary Existent (*wādjib al-wudjūd bi-dhātihi*) and the Unmoved Mover. Repeated attacks on the Muʿtazilīs, and occasional ones on the Shīʿa, show traditional questions about al-Rāghib's adherence to either of these positions to be groundless, although the existence of such questions from an early period suggests that this work was never widely known. Al-Rāghib's actual theological stance seems in fact to have been close to that of the Ashʿarīs, although he attacks them once for denying the existence of a rational moral order in the universe; his pointed omission of Abū Ḥanīfa from a list of major formative figures in jurisprudence can be added to other evidence for his adherence to the Shāfiʿī school in law. He also explicitly supports Ṣūfism in some form.

Al-Sārīsī has noted the existence of four brief epistles by al-Rāghib in an Istanbul manuscript (Esad Efendi 3645), with the titles *R. fī anna faḍīlat al-insān bi 'l-ʿulūm*, *R. fī dhikr al-wāḥid wa 'l-aḥad*, *R. fī ādāb mukhālaṭat al-nās*, and *R. fī marātib al-ʿulūm*. The status of a few other titles in manuscript catalogues and bibliographical sources remains to be investigated. Apparently uninfluenced by his contemporary Ibn Sīnā, al-Rāghib is significant as a precursor of al-Ghazālī in accepting and utilising a more diffuse form of *falsafa* in maintaining a rationalised but relatively conservative Islamic stance.

(E.K. Rowson)

RĀGHIB PASHA, Khodja Meḥmed (1111-76/1699-1763), Ottoman Grand Vizier and littérateur. He was born in Istanbul, the son of the *kātib* Meḥmed Shewḳī, and was soon on account of his unusual ability employed in the *dīwān*. He then acted as secretary and deputy-chamberlain to the governors of Van, ʿĀrifī Aḥmed Pasha, and Köprülü-zāde ʿAbd al-Raḥmān Aḥmed Pasha [*q.v.*], and, lastly, to Ḥekīm-zāde ʿAlī Pasha. In 1141/1728 he returned to

the capital and in the following year went back to Baghdād as deputy to the *re'īs efendi*. Soon after the conquest of Baghdād in 1146/1733 he was appointed *defterdār* there, but very soon received the post of chief of the petition department of the *māliyye* office in Istanbul. Two years later he accompanied the governor Aḥmed Pasha, who had been appointed as *ser'asker* of Baghdād, as deputy of the *re'īs efendi*, and returned to the capital as chief of the poll-tax office (*djizye müḥāsebedjisi*). In this capacity he went into the field in 1149/1736 and took a leading part in the peace negotiations of Nimirov. In Dhu 'l-Ḥidjdja 1153/ February 1741 he succeeded the *re'īs efendi* Muṣṭafā in his office, and three years later was promoted to be governor of Egypt. For five years he struggled there with the factions of the Mamlūks [*q.v.*], but had finally in Ramaḍān 1161/September 1748 to yield to the superior power of the begs. He returned to the capital, and as *nishāndjī-bashī* was given a seat in the *dīwān*. After brief periods as governor in Raḳḳa and Aleppo, he was appointed to the highest office in the state, the Grand Vizierate, in succession to Muṣṭafā, who had been dismissed on 20 Rabī' I 1170/13 December 1756. He filled this office gloriously for seven years till his death, and was the last outstanding Grand Vizier of the Ottoman empire. He died in Istanbul on 24 Ramāḍān 1176/8 April 1763 and was buried in the garden of the noble library founded by him (see J. von Hammer, *GOR*, viii, 249).

Meḥmed Rāghib Pasha was not only one of the greatest of Ottoman statesmen but is one of the classical authors of Turkish literature. His works, which are distinguished by beauty of style as well as by graceful presentation, cover all possible fields (see J. von Hammer, *GOR*, viii, 255-6). He was also a distinguished political historian. His state documents and letters of congratulation known as *telkhīṣāt* were famous as models of perfect writing (see *GOR*, ix, 626, nos. 3338-3653). His translations into Turkish of two Persian histories, Mīrkhwānd's [*q.v.*] *Rawḍat al-ṣafā'* and 'Abd al-Razzāḳ b. Isḥāḳ al-Samarḳandī's history of the Tīmūrids, *Maṭla' al-sa'dayn*, unfortunately only survive in fragments but even in this state are masterpieces of Ottoman prose. Rāghib Pasha is no less highly esteemed as a poet. His *Dīwān* (printed at Būlāḳ in 1252 and n.p. [= Būlāḳ] in 1253) contains his most important poems, some of which are in praise of great contemporaries.

On mss. of his works, see Babinger, *GOW*, 290 (to which may be added Istanbul, Ḥamīdiyye, no. 598; Zagreb Acad. of Sciences, orient. coll., no. 833, 1 and 2 (with *Dīwān*), both containing his *telkhīṣāt*; Uppsala, no. 706 (see Zettersteen, *Cat.*, ii, 106-7) obviously contains another work).

Bibliography: See F. Babinger, *GOW*, 288 ff., and the sources given on 290; *İA*, art. *Râgıp Paşa* (Bekir Sıtkı Baykal-Abdülkadir Karahan)

(F. Babinger)

RAGHŪSA, the mediaeval Arabic form of the name of the Dalmatian city of Ragusa, until the advent of Bonaparte a free state, the modern Dubrovnik in Croatia (see 2. below), situated in lat. 42° 40′ N., long. 18° 07′ E.

1. History up to the beginning of the 19th century.

Ragusa, the Roman Ragusium (see *PW*, 2. Reihe, 1.A. 1, col. 130), is situated on the south side of a peninsula which runs out into the Adriatic, picturesquely situated (50 feet) at the foot and on the slopes of Mount Sergius, and was founded in the 7th century by Romance fugitives from Epidaurus which had been destroyed by the Slavs; it later belonged to Byzantine Dalmatia which had been settled by a Romance population. At the end of the 10th century the town, which had became strong and rich through its prosperous maritime trade, was paying homage to the Venetians, under whose suzerainty it remained after various interludes continuously from 1204 to 1358. In this year, Ragusa passed to Hungary and soon attained such power through its flourishing trade that it formed a free state with an aristocratic form of government. Authority was in the hands of the nobles (Grand Council) who chose the Senate (45 members). The latter chose the Little Council (10, later 7 members) which chose every month a Rector (*rettore*) as head of the state. Al-Idrīsī [*q.v.*] mentions Ragusa in his *Opus geographium* (761, 769, 790, 791) as رغوسه (other readings: رغوص, رغوصة), and is evidently quoting Frankish sources (cf. thereon W. Tomaschek, *Zur Kunde der Hämus-Halbinsel: II. Die Handelswege im XII. Jahrh. nach den Erkundungen des Arabers Idrisi*, in *SB Ak. Wiss. Wien*, phil.-hist. Kl., vol. cxiii [1887], fasc. 1). In the Ottoman period, the Slav name Dubrovnik is found exclusively, in place of Ragusa.

Ragusa's relations with Islam, at first completely hostile, go back to a remote date. When the Arabs in the 9th century conquered Sicily and established themselves on the mainland in Bari (Apulia), they besieged Ragusa on one occasion, which defended itself bravely and was relieved by the navy of the emperor Basil I (867-86). Under the emperor Romanus III (1028-34) the Ragusans distinguished themselves in the sea-fights between Byzantines and Arabs. It was not till a later date that relations became more peaceful, when Ragusan commerce, which extended to Egypt and Syria, to Tunis and as far as the Black Sea, began to flourish. As early as the 14th century, corn was exported to Ragusa from the harbours of Anatolia and the relations to the beyliks (*tewā'if-i mülūk*) in Anatolia were well established. The first documented relations between Ragusa and the Ottoman empire belong to the period of Bāyezīd I Yïldïrïm (791-805/1389-1403 [*q.v.*]), as the relations of the free state with Orkhan [*q.v.*] and Murād I [*q.v.*] mentioned in later Ragusan histories will not bear serious investigation. It is, however, certain that at quite an early date it became necessary for the Ragusans to remain on good terms with the Ottomans, who were advancing westward, for the sake of their trade. They were able to deal with tact and skill with their new neighbours. Ragusan trade in Turkey developed considerably as the many frontiers and customs offices of the numerous petty rulers of the Balkans, who had been dispossessed by the Turks, disappeared and the Turkish duties were uniform and low. Articles manufactured in Ragusa itself, like cloth, metal, soap, glass, wax, etc., or goods imported from Italy for the Balkan peninsula, were taken into the interior on safe roads. There was a caravan trade which went from Ragusa via Trebinje, Tientište, Foča, Goražde, Plevlje, Prijepolje, Trgovište, Novibazar, Niš [see Nish], Sofia and Plovdiv to Edirne and later to Istanbul (cf. C.J. Jireček, *Die Handelsstrassen und Bergwerke von Serbien und Bosnien während des Mittelalters*, Prague 1879, 74 ff.: *Von Ragusa nach Niš*). In the interior of the Peninsula, there were the factories of the Ragusans like Rudnik, Prizren, Novo Brdo, Priština [see Prishtina], Zvornik, Novibazar, Skoplje and Sofia, with many other settlements extending as far as the mouths of the Danube. On 12 May 1392 the Little Council of Ragusa gave the nobleman Teodoro Gisla in Novo Brdo orders to travel to the Turkish sultan and to

make representations about the capture of some Ragusan merchants. There is a Turkish safe-conduct (*litera securitatis*) of 20 June 1396 prepared for Ragusan merchants. In 1397 Sultan Bāyezīd I allowed the Ragusans to trade unhindered in the Ottoman empire, and a few years later (1399), the first Ottoman embassy led by Kefalja Feriz (Fīrūz)-Beg arrived in Ragusa from the citadel of Zvečan (in Kosovo) (cf. F. von Kraelitz-Greifenhorst, *op. cit.* below, 7). The first embassy from Ragusa to the Sublime Porte was, however, not sent until 1430. It was received by the sultan in his court at Edirne and received from him the first extant charter of trading privileges, dated Edirne, 6 December 1430 (cf. Čiro Truhelka, *Turskoslovjenski spomenici dubrovačke arhive*, in *Glasnik zemaljskog muzeja u Bosni i Hercegovini*, Sarajevo, xxiii [1911], no. 2). To protect her widespread trade in the Balkan Peninsula, Ragusa, after the first temporary conquest of Serbia by the Ottomans, found herself forced to offer the Porte an annual present of 1,000 ducats in silver plate (*argenterie*), but when Georg Branković restored the independence of Serbia in 1444 this promise was promptly withdrawn; on the final subjection of Serbia by the Turks in 1459, this tribute (*kharādj*) became a regular institution. From 1459 it was 1,500 ducats and gradually increased to 15,000 ducats. From 1481 it was 12,500 ducats and was annually brought to the imperial court by special *oratores tributi* with very detailed instructions (cf. the text of one of these *commissione* for the Paladins Marino de Gondola and Pietro di Luccari of 1458, and of a later one for the *ambasciatore del tributo* Giov. Mar. di Resti of 1572, in Lujo knez Vojnović, *Dubrovnik i osmansko carstvo. Prva knjiga: Od prvoga ugovora s portom do usvojenja Hercegovine*, Belgrade 1898, 118-55, 256-66); cf. Jireček, *Die Bedeutung von Ragusa*, etc., no. 49. A number of the earliest documents relating to these missions have been published by F. von Kraelitz-Greifenhorst, in his *Osmanische Urkunden in türkischer Sprache aus der zweiten Hälfte des XV. Jahrhunderts*, in *SB Ak. Wiss. Wien*, phil.-hist. Kl., cxvii (1922); they come without exception from the archives of Ragusa, part of the Turkish portion of which was taken after 1918 Belgrade.

On their journey the envoys had to give all kinds of presents, for example to the *sandjakbeg* of Herzegovina in Sarajevo [*q.v.*] and the *beglerbeg* of Rumelia whose headquarters were in Sofia. The readiness with which the Ragusans adapted themselves to the requirements of dealings with the infidel Turks did not at first find approval at the Holy See. Paul II in 1468 gave the Ragusans express permission to trade with the heathen Ottomans (cf. W. Heyd, *Histoire du commerce du Levant*, ii, Leipzig 1885, 347-8, with further references to Ragusan trade with the Ottomans). The lands of the free state of Ragusa, which stretched from the mouth of the Narenta to the Gulf of Cattaro (Kotor), thanks to the skilful policy of its leaders, thus remained intact till its end in 1808. Only occasionally the Ragusans had to suffer from the covetousness of Ottoman rulers, e.g. about 1667 when Ḳara Muṣṭafā [*q.v.*] demanded from the Ragusan envoys 150,000 talers as "blood money" for the Dutch ambassador G. Crook who perished in the great earthquake in Ragusa (6 April 1667) (cf. J. von Hammer, *GOR*, vi, 203-4), or when ten years later the same Grand Vizier endeavoured to extort the same sum and threw the ambassadors of the free state into prison (cf. *GOR*, vi, 346). When Ragusa had fallen several years behind with the tribute, it had in 1695 to pay a considerable sum in compensation (cf. *GOR*, vi, 616). In 1722 a similar case recurred (cf. *GOR*, vii, 312-13) when the tribute was three years in arrears. It is, however, a fact that Ragusa cunningly used every opportunity to avoid its oppressive obligations (cf. the significant saying in the Levant quoted by von Hammer, *GOR*, vii, 29: *Non siamo Christiani, non siamo Ebrei, ma poveri Ragusei*), until the peace of Carlowitz (1699) [see KARLOFČA] made it possible for the Ottomans to collect the tribute again (cf. von Hammer, *GOR*, vii, 29). From 1703 it was paid every three years and, in 1804 delivered for the last time in Istanbul by the envoys Paul Gozze and Blasius Menze.

In the Turkish wars of 1683-99 and 1714-18 the Venetians occupied the hinterland of Ragusa and Trebinje, but at the peaces of Carlowitz and Passarowitz [see PASAROFČA] the Ragusans, protected by Austria and the Porte, negotiated so skilfully that Turkey was not only left the land as far as the Ragusan frontier but also two strips of territory on the coast (Klek and Sutorina) so as not to become direct neighbours of Venice. This was the last great coup of Ragusan policy.

With the decline in Ragusan trade, which came about for the same reasons as the general decline of Italian trade in the Levant, the political decline of the republic set in, with only a final revival during the Napoleonic era (see 2. below).

The Ottoman traveller Ewliyā Čelebi [*q.v.*] in his *Seyāḥet-nāme* (vi, 443 ff., esp. 445-53) gives a full description of *Dobre Venedīk* which he contrasts with *Bundukānī Venedīk*, i.e. Venice proper (cf. on these terms, F. Babinger, *Aus Südslaviens Türkenzeit*, Berlin 1927, 38 n., and H. v. Mžik, *Beiträge zur Kartographie Albaniens*, in *Geologica Hungarica*, series geologica, tomus iii, Budapest 1929, 639 = 19, n. 88). In 1074/1664 he came via Ljubomir, Popovo to Dubrovnik, whence he went on to Castelnuovo (Hercegnovi). On Hungarian and Serbo-Croat translations of this section, cf. Babinger, *Ewlijâ Čelebi's Reisewege in Albanien*, Berlin 1930, 1 and 2, n. 8.

Statistics regarding the population of Ragusa in the older period are not available. With the prosperity and long period of peace, a literary life began; poetry—Latin and Slav—was definitely cultivated from the end of the 15th century. Latin was used in the offices for over 1,000 years, in recording the proceedings of the Senate till 1808. Within its walls Ragusa frequently sheltered illustrious fugitives from Turkish persecution (e.g. Skanderbeg).

The archives of Ragusa, kept in the Rector's palace, still await thorough study and contain a large number of unpublished Turkish documents and countless documents of value for the history of Turkish rule in southeastern Europe. Cf. F. Giese, *Die osmanisch-türkischen Urkunden im Archive des Rektorenpalastes in Dubrovnik (Ragusa)*, in *Festschrift für Georg Jacob zum siebzigsten Geburtstag*, Leipzig 1932, 41-56. Cf. also J. Gelcich (Djelčić), *Dubrovački arhiv*, in *Glasnik zemaljskog muzeja u Bosni i Hercegovini*, xxii (1910), and Milan v. Rešetar, *Dubrovački arhiv*, in *Narodna Enciklopedija*, i, 584 ff.

Ragusa had busy commercial relations with other Muslim states besides Turkey. In 1510, for example, Ragusa received from the Mamlūk sultan Ḳānṣawh al-Ghawrī [*q.v.*] a charter which gave its trade with Egypt protection and freedom (cf. Giacomo Luccari, *Copioso ristretto degli Annali di Rausa*, Venice 1605, 126, and thereon Fr.M. Appendini, *Notizie sulle istorico-critiche antichità, storia e letteratura de' Ragusei*, Ragusa 1802, i, 213, with erroneous conclusions). The relations were, it is true, not always of a peaceful nature, as the "state of war" in 1194/1780 between Ragusa and Morocco showed (cf. thereon, F. Babinger, *Ein marokkanisches Staatsschreiben an den Freistaat Ragusa vom*

Jahre 1194 (1780), in *MSOS*, xxx [Berlin 1927], part ii, 191 ff., and *ibid.*, xxxi, 98-9). The archives of Dubrovnik contain further unpublished Moroccan documents of the end of the 18th century, e.g. a government document of 9 Rabī II 1195/4 April 1781.

Bibliography: In addition to the works mentioned in the text, see also the older travellers in so far as they describe the road through the Balkan Peninsula (*Sclavonia*), especially Jean Chesneau, *Les Voyages de Monsieur d'Aramon* (1547), Paris 1887, ed. Ch. Schefer; Sieur D[es Hayes de] C[ourmenin], *Voyage du Levant fait par le commandement du roy en l'année 1621 par le Sieur D.C.*², Paris 1632; *Les Voyages de M. Quiclet à Constantinople par terre*, Paris 1664 and later printings; Sir George Wheeler, *Journey into Greece*, London 1682, or French translation, *Voyage de Dalmatie, de Grèce et du Levant*, Amsterdam 1689, 2 vols.—A scholarly account, particularly one based on the documents, of the relations of Ragusa with the Ottoman Empire is still lacking, as is a full commercial history of the republic.—The principal work on the history of Ragusa is the *Geschichte des Freistaates Ragusa*, Vienna 1807, by Johann Christ. von Engel (1770-1814). On other relations between Ragusa and the lands of Islam, see Vladimir Mažuranić, *Südslaven im Dienste des Islams (vom X. bis ins XVI. Jahrhundert)*, German tr. publ. by Camilla Lucerna, Zagreb-Leipzig 1928, 55 pp., a work which does not, however, on every point stand the test of strict examination.—On the coinage of Ragusa, see Milan v. Rešetar, *Dubrovačka numizmatika*, 2 parts, 1924-6.—Of the Ragusan historians of the older period, in addition to S. Razzi, *La storia di Raugia*, Lucca 1588, and Jun. Resti, *Chronica Ragusina* (in the *Monumenta Slav. Merid.*, xxv, Zagreb 1893), Giacomo di Pietro Luccari [= Jakov Lukarević (1551-1615)] most deserves mention, but a thorough study of the probably unreliable sources of his *Copioso ristratto degli annali di Rausa* (Venice 1605, xxxvi, 176 pp., 4°, and Ragusa 1790, xxiii, 325 pp., 8°) is still a desideratum; see for the present Vl. Mažuranić, *Izvori dubrovačkoga historika Jakova Lukarevića*, in *Narodna Starina*, Zagreb 1924, no. 8, 121-53.—An excellent and exhaustive bibliography on Ragusa is given in the introduction to the work of Ivan Dujčev, *Avvisi di Ragusa. Documenti sull' Impero turco nel secolo XVII e sulla guerra di Candia*, Rome 1935, which is also of great importance for the history of relations between Ragusa and Turkey.—There is no collection or edition of the surviving reports of Ragusan envoys on their journeys to the Porte on the lines of the long-available Venetian *relazioni*. The only possible exception is the *Relazione dello stato della religione nelle parti dell' Europa sottoposte al dominio del Turco* of Matthäus Gundulić (Gondola), who was in Turkey for 28 months until July 1674, written in Rome in 1675, ed. by Banduri, *Imperium orientale*, Paris 1711, ii, *Animadversiones in Constant. Porphyrogen. de administratione imperii*, 99-106 (cf. thereon Drinov, in *Periodičesko Spisanie* of Braila, ii, 65, who did not know this edition and published extracts from another manuscript). Nor is there a list of these envoys available (see von Hammer, *GOR*, ix, 318), among whom we find representatives of almost all the noble families of Ragusa such as the Bona, Caboga, Gozze, Gondola, Menze, Pozza, Resti, etc. Ragusa being a tributary country, the Porte never sent ambassadors to it but only commissioners (see *GOR*, ix, 331), so that we have no Turkish reports at all.—Modern studies include: J. Radonić, *Dubrovačka akta i povelje* ("Acts and charters of D."), 5 vols., Belgrade 1945-51; B. Krekić, *Dubrovnik et le Levant au Moyen-Age*, Paris and the Hague 1961.

(F. Babinger)

2. History after 1800.

During the period 1800-5 of the Napoleonic Wars, Ragusa especially flourished as the only neutral state of the Mediterranean shores, hence was able to expand its carrying trade. But the French seized the city, and in 1808 the Republic was extinguished, with Marshal Marmont as Duke of Ragusa, and it was in 1809 incorporated into the newly-established Kingdom of Illyria. The Congress of Vienna of 1815 awarded Dalmatia, including Ragusa, to Austria, under whose control it remained till 1918, by that time connected to Mostar, Serajevo and Belgrade by a narrow-gauge railway. From 1918 to 1941 Ragusa formed part of the newly-created Kingdom of Yugoslavia and became generally known by the Slav name Dubrovnik (Serbo-Croat *dubrova* "wooded", because until mediaeval times the main street of Ragusa, the Placa Stradone, was a marshy channel dividing the Latin island of Ragusa from the forest settlement of Dubrovnik). During the Second World War, it was occupied 1941-4 by Italian and German troops. From 1945 it has been part of the People's Republic of Croatia within the People's Federal Republic of Yugoslavia. The population in 1971 was 31,106. During the fighting attending the break-up of Yugoslavia in 1991-2, the mediaeval city was indiscriminately bombarded and damaged by the (essentially Serbian) Yugoslav army.

RAḤĀ [see ṬĀḤŪN].

AL-**RAḤBA**, Raḥbat Mālik b. Ṭawḳ or Raḥbat al-Sha'm, a town on the right bank of the Euphrates, the modern al-Miyādīn.

Hardly anything definite is known about the history of the town before the Muslim era. In the Middle Ages it was usually identified as the Reḥōbōt han-Nāhār of the Bible (Gen. xxxvi, 37) i.e. Reḥōbōt on the river (Euphrates) especially in the Talmud and by the Syriac authors (e.g. Mich. Syr., cf. index, 63*; Barhebraeus, *Chron. syr.*, ed. Bedjan, 273 and *passim*), who usually call it Reḥabōt, Raḥabat (M. Hartmann, in *ZDPV*, xxiii, 42, n. 1). A. Musil (*The Middle Euphrates*, New York 1927, 340) takes it to be the Thapsakos of Ptolemy, which he—certainly wrongly—wants to distinguish from the well-known town of the name at the bend of the Euphrates (*ibid.*, 318-20), instead of seeing only an erroneous location by the Alexandrine geographers (cf. the article *Thapsakos*, in Pauly-Wissowa, *RE*, v. A, cols. 1272-80). The name al-Raḥba is explained by Yāḳūt (*Muʿdjam*, ii, 764, following the grammarian al-Naḍr b. Shumayl) as the flat part of a wādī, where the water collects (E. Herzfeld, *Archäolog. Reise im Euphrat- und Tigris-Gebiet*, ii, 382; cf. A. Socin, in *ZDPV*, xxii, 45).

According to Arabic accounts, it was at one time called Furḍat Nuʿm (al-Ṭabarī, i, 917) or simply al-Furḍa (Miskawayh, *Tadjārib*, ed. Caetani, 87); in the vicinity was a monastery, Dayr Nuʿm (Yāḳūt, ii, 704, iv, 797).

According to al-Balādhurī, *Futūḥ*, 180, there was no evidence that al-Raḥba below Ḳarḳīsiya is an old town; on the contrary it was only founded by Mālik b. Ṭawḳ b. ʿAttāb al-Taghlibī (cf. Ibn Taghrībirdī,

Nudjūm, ed. Popper, ii, 34) in the caliphate of al-Maʾmūn (198-218/813-33) (a legendary embellishment of the story of its foundation by ʿUmar al-Bisṭāmī, in Yāḳūt, ii, 764). The new foundation was in the form of a long, rectangular head cloth (*ṭaylasān*). After the death of its founder (Ibn al-Athīr, vii, 188) in 260/873-4, he was succeeded as ruler of the town by his son Aḥmad, who was, however, driven out of it in 270/883 by Muḥammad b. Abi 'l-Sādj, lord of al-Anbār, Ṭarīḳ al-Furāt and Raḥbat Ṭawḳ (al-Ṭabarī, iii, 2039).

The Ḳarmaṭī Abū Ṭāhir al-Djannābī took the town on 8 Muḥarram 316/3 March 928 and killed many of its inhabitants (Miskawayh, *Tadjārib*, ed. Amedroz, i, 182-3; al-Masʿūdī, *Tanbīh*, 384-5; Ibn al-Athīr, viii, 132; ʿArīb, 134). In the following decades, the town suffered much from civil wars until ʿĀdil, who had been sent from Baghdād by Badjkam, in 330/941-2 took possession of the town and the whole province of Ṭarīḳ al-Furāt and a part of al-Khābūr (Ibn al-Athīr, xiii, 266-7, 295). In the reign of the Ḥamdānid Nāṣir al-Dawla, the Taghlibī Djamān rebelled in al-Raḥba, and the town suffered very much; he was finally driven out and was drowned in the Euphrates (*op. cit.*, 357-8). After the death of Nāṣir al-Dawla (358/969), his sons Ḥamdān, Abu 'l-Barakāt and Abū Taghlib disputed for the possession of the town, which finally fell to the last-named, who had its walls rebuilt (Ibn al-Athīr, viii, 437-8). He lost it again in 368/978-9; it then passed to the Būyid ʿAḍud al-Dawla (Ibn al-Athīr, viii, 511-12). Bahāʾ al-Dawla in 381/991-2, at the wish of the inhabitants, appointed a governor to al-Raḥba (Ibn al-Athīr, ix, 64). Soon afterwards the town passed to Abū ʿAlī b. Thimāl al-Khafādjī, who was killed by the ʿUḳaylid ʿĪsā b. Khalāṭ in 399/1008-9. The latter in turn was defeated by an army sent by al-Ḥākim from Egypt and slain. The ʿUḳaylid Badrān b. Muḳallid was, it is true, able to drive back the Egyptian army but Luʾluʾ of Damascus soon afterwards brought al-Raḳḳa and al-Raḥba into Egyptian power.

A citizen of the town, Ibn Muḥkān, next made himself its independent master and also took ʿĀna, an enterprise in which the Kilābī Ṣāliḥ b. Mirdās of al-Ḥilla at first supported him but later killed him in order to make himself master of al-Raḥba (Ibn al-Athīr, ix, 148; Ibn Khaldūn, *ʿIbar*, ed. Būlāḳ, iv, 271). Between 447/1055 and 450/1058, Arslān al-Basāsīrī [*q.v.*] fled to al-Raḥba in order to join up with the Egyptian caliph al-Mustanṣir from there (Yāḳūt, i, 608). Ṣāliḥ's son, Thimāl, later lord of Aleppo, followed him in possession of the town (Ibn al-Athīr, ix, 163). In the spring of 452/1060 his brother ʿAṭiyya (Ibn al-Athīr, x, 8) captured it. He was driven from Aleppo in 457/1065 by his nephew Maḥmūd, but remained lord of al-Raḥba, Aʿzāz, Manbidj and Bālis (Kamāl al-Dīn, *Historia Merdasidarum*, tr. J.J. Müller, 59). To the district of al-Raḥba at this time (455/1063) there also belonged al-Khānūḳa, Ḳarḳīsiya and Duwayra (Ibn al-Ḳalānisī, ed. Amedroz, 116). Malikshāh in 479/1086-7 granted al-Raḥba with the country round it, Ḥarrān, Sarūdj, al-Raḳḳa and al-Khābūr to Muḥammad b. Sharaf al-Dawla (Ibn al-Athīr, x, 105). In 489/1096 Karbūḳa of al-Ḥilla seized and plundered the town (Ibn al-Athīr, x, 177). After his death it passed in 495/1102-3 to Ḳāymāz, a former general of Alp Arslan, then to the Turk Ḥasan. It was taken from him by the ruler of Damascus, who sent the Shaybānid Muḥammad b. al-Sabbāḳ to govern it (Ibn al-Athīr, x, 249). On 24 Ramaḍān 500/19 May 1107, Djāwalī, the general of ʿImād al-Dīn Zangī, took the town through treachery (Ibn al-Athīr, x, 297; Ibn al-Ḳalānisī, ed. Amedroz, 156-7; Michael Syrus, tr. Chabot, iii, 193, iv, 592; Barhebraeus, *Chron. syr.*, ed. Bedjan, 273). ʿIzz al-Dīn Masʿūd b. al-Bursuḳī took it in 521/1127 shortly before his death (Ibn al-Athīr, x, 360-1; Mich. Syr., iii, 228, v, 610; Barhebr., *Chron. syr.*, 287). His successors killed one another fighting for the succession and al-Raḥba then passed to ʿIzz al-Dīn's young brother, for whom Djāwulī governed it as vassal of Zangī (Ibn al-Athīr, x, 453-4). Ḳuṭb al-Dīn, son of Zangī, in 544/1149-50 occupied the town (Ibn al-Athīr, xi, 93). On 4 Radjab 552/12 August 1157, al-Raḥba with Ḥamāt, Shayzar, Salamiyya and other towns were destroyed by an earthquake (Ibn al-Ḳalānisī, ed. Amedroz, 344; Mich. Syr., iii, 316; Barhebr., *Chron. syr.*, 325-6). The Khafādja tribe who in 556/1161 had plundered the district of al-Ḥilla and al-Kūfa returned to Raḥbat al-Shaʾm, followed by the government troops, where they were reinforced by other nomads and scattered the enemy (Ibn al-Athīr, xi, 182-3). Nūr al-Dīn granted the Kurd Asad al-Dīn Shīrkūh b. Aḥmad b. Shādī of Dwīn, Ṣalāḥ al-Dīn's uncle, in 559/1164, al-Raḥba and Ḥimṣ (Mich. Syr., iii, 325; Barhebr. *Chron. syr.*, 330). The latter entrusted the government of al-Raḥba to an officer named Yūsuf b. Mallāḥ. Shīrkūh built al-Raḥbat al-Djadīda with a citadel about a *farsakh* (3 miles) from the Euphrates, because the town of Raḥbat Mālik b. Ṭawḳ was now in ruins (Abu 'l-Fidāʾ, *Taḳwīm al-buldān*, ed. Reinaud, 281; Ḥādjdjī Khalīfa, *Djihān-nümā*, Istanbul 444). The new town of al-Raḥba became an important caravan station between Syria and the ʿIrāḳ, as we learn from Ibn Baṭṭūṭa amongst others (iv, 315) who travelled from there via al-Sukhna to Tadmur.

The town remained for a century in Shīrkūh's family until in 662/1264 Baybars installed an Egyptian governor there (Ibn al-Athīr, xi, 341, xii, 189; Abu 'l-Fidāʾ, *Annales muslem.*, ed. Reiske-Adler, iv, 142, v, 16). Sunḳur al-Ashḳar of Damascus, who rebelled against Ḳalāʾūn in 678/1279, fled after a defeat to al-Raḥba to the *amīr* ʿĪsā and from there appealed to the Mongol Abaḳa for protection (Barhebr., *Chron. syr.*, 543).

The Mongols under Kharbanda besieged al-Raḥba in 712/1312-13 on their way to Syria. On his return, Kharbanda left his siege artillery behind, whereupon it was taken by the defenders of the town into the citadel (Abu 'l-Fidāʾ, v, 268-9; al-Ḥasan b. Ḥabīb b. ʿUmar, *Durrat al-aslāk fī dawlat al-atrāk*, in H.E. Weijers, in *Orientalia*, ed. Juynboll, ii, Amsterdam 1846, 319). Its governor at the time, Ibn al-Arkashī, died in 715/1315-16 in Damascus (Abu 'l-Fidāʾ, v, 300). Al-Muhannā and his family, the ʿĪsā, were driven from the district of Salamiyya in the spring of 720/1320 and pursued by the Syrian troops as far as Raḥba and ʿĀna (Abu 'l-Fidāʾ, v, 340-1); the town was perhaps destroyed on this occasion.

In 731/1331 the Euphrates inundated the country round al-Raḥba (Ibn al-Athīr, Vienna ms. in Musil, *The Middle Euphrates*, 3, n. 3).

According to the Muslim geographers, al-Raḥba lay on the Euphrates (Ḳudāma, 233; al-Muḳaddasī, 138; al-Idrīsī, tr. Jaubert, ii, 137-8; al-Dimashḳī, ed. Mehren, 93; Abu 'l-Fidāʾ, ed. Reinaud, 51) and also on the canal Saʿīd led off from it at Fam Saʿīd on the right bank, which rejoined the Euphrates below the town, the gardens of which it watered, and above al-Dāliya also called Dāliyat Mālik b. Ṭawḳ (Suhrāb, ed. von Mžik, in *Bibl. arab. Histor. u. Geogr.*, v, Leipzig 1930, 123; Yāḳūt, iv, 840; Abu 'l-Fidāʾ, *Taḳwīm*, 281). The town lay 3 *farsakhs* from Ḳarḳīsiya (al-ʿAzīzī, in Abu 'l-Fidāʾ, ed. Reinaud, 281) and, ac-

cording to al-Muḳaddasī, 149, a day's journey each from this town, al-Dāliya and Bīrā (the latter statement is quite inaccurate; cf. Musil, *op. cit.*, 253-4). Musil (*ibid.*, 250) wrongly takes al-Dāliya to be al-Ṣāliḥiyya, which is impossible, as 8-10 miles above it the Euphrates flows close to the foot of Djabal Abu 'l-Ḳāsim, so that the Saʿīd canal must have flowed north of it back into the Euphrates (cf. the *Karte von Mesopotamien* of the Prussian Survey, Feb. 1918, 1: 400,000, sheet 3c: ʿÂna; Cumont, *Fouilles de Doura-Europos*, Paris 1926, Atlas, pl. i.: *Cours de l'Euphrate entre Circesium et Doura-Europos d'après l'Aéronautique de "l'Armée du Levant"* on the same scale and the maps in Sarre-Herzfeld, *Arch. Reise*). The town of al-Raḥba was a Jacobite bishopric (a list of the bishops in Mich. Syr., iii, 502); that it—for a time at least—was also a Nestorian bishopric is shown from a life of the Catholicos Eliyā I (on him, see Baumstark, *Geschichte der syr. Literatur*, 286-7) who, shortly before his death on 6 May 1049, appointed a bishop to this town (Assemani, in *BO*, iii, 263).

In the statements of the Arab geographers, it is clear that the old Raḥbat Mālik b. Ṭawḳ lay on the bank of the Euphrates (al-Iṣṭakhrī, 13, 72; Ibn Ḥawḳāl, ed. de Goeje, 17, 138; al-Muḳaddasī, 138; Yāḳūt, iii, 860; Ibn Khurradādhbih, 233), i.e. it presumably corresponded to the modern al-Miyādīn (pl. of *maydān*) (G. Hoffmann, *Auszüge aus syr. Akten pers. Märtyrer*, 165; Herzfeld, *Arch. Reise*, ii, 382, n. 1; A. Musil, *The Middle Euphrates*, 3, 253, 340), while the new al-Raḥba, as we saw, was built a *farsakh* from it, where in the south-west of al-Miyādīn there still are the ruins of the citadel al-Raḥaba or al-Raḥba. According to Abu 'l-Fidāʾ (ed. Reinaud, 281), towers were still standing among the ruins of the old town. Opposite al-Raḥba on the left bank of the Euphrates stood a fortress taken by Marwān II (127-32/744-50) in the fighting with Hishām (Maḥbūb of Manbidj, *Kitāb al-ʿUnwān*, ed. Vasiliev, in *Patr. Orient.*, viii, 517-18). In this fortress Musil (*op. cit.*, 338-9) has recognised al-Zaytūna (al-Balādhurī, Futūḥ, 180; al-Ṭabarī, ii, 1467-8; Ibn Khurradādhbih, 74) and the ancient Ζαιδά which is still called al-Marwāniyya after this caliph, but is not really opposite al-Miyādīn but fourteen miles farther down.

Ibn Ḥawḳal, 155, praises the fertility of the well-watered region of Raḥba, where the orchards on the east bank of Euphrates also produced date-palms; their quinces were also famous (al-Muḳaddasī, 145). The *Karte von Mesopotamien* (1 : 400,000) marks at "Mejādin" "the first (most northerly) palm". Dates really only ripen in specially favourable weather in the region of Albū Kamāl (Musil, *op. cit.*, 342). According to al-Iṣṭakhrī, 77, Raḥbat Mālik b. Ṭawḳ was larger than Ḳarḳīsiya; al-Muḳaddasī, 142, calls it the centre of the Euphrates' district (*ʿamal al-Furāt* or *nāḥiyat al-Furāt*), as in the early Islamic period the fertile plain from Dayr al-Zawr to Albū Kamāl with the towns of al-Raḥba, Dāliya, ʿĀna and al-Ḥadītha was called (Herzfeld, *op. cit.*, ii, 382). According to him, the town was built in a semi-circle on the edge of the desert and defended by a strong fortress.

Yāḳūt visited the town, which according to him was eight days' journey from Damascus, five from Aleppo, 100 *farsakhs* from Baghdād and a little over 20 *farsakhs* from al-Raḳḳa. In al-Dimashḳī, 202, it is called Raḥbat al-Furātiyya. In the time of Khalīl al-Ẓāhirī (*Zubda*, ed. Ravaisse, 50) it belonged to Aleppo. According to al-ʿUmarī, Syria, or, to be more exact, its eastern marches with the capital Ḥimṣ, reached as far as al-Raḥba; he mentions there "a citadel and a governorship and there are Baḥriyya, cavalry, scouts and mercenaries stationed there" (al-ʿUmarī, tr. R. Hartmann, in *ZDMG*, lxx, 23, 30). Ibn Baṭṭūṭa calls the town "the end of al-ʿIrāḳ and the beginning of al-Shaʾm". Ḥādjdjī Khalīfa reckons from ʿĀna to al-Raḥba three days' journey and from there to al-Dayr one days' journey (*Djahān-nümā*, 483; cf. thereon, Musil, *op. cit.*, 257).

The Venetian jeweller Gasparo Balbi, who passed by the town on 6 February 1588 on the Euphrates, says (*Viaggi dell' Indie orientali*, Venice 1599, without pagination) *vedemmo castello Rahabi appresso il qual castello si vede una città rovinata, ma in alcuni lati di essa habitata da alcune poche persone di nome di Rahabilatica* (on the form Raḥabī, cf. M. Hartmann, in *ZDPV*, xxii, 44, at no. 390). Pietro Della Valle (*Viaggi*, Venice 1544, i, 571) saw the town of "Rachba" at some distance from the Euphrates and heard that there were some old buildings there. Tavenier (*Les six voyages*, i, Paris 1676, 285) mentions a place called "Mached-raba", i.e. Mashhad al-Raḥba (six miles to the south-west of al-Raḥba).

The mediaeval Arabic texts on al-Raḥba have now been published over the last half-century. For the period 640-1060, for which no further publication of importance is to be expected, a tentative sketch of its history has been made by Th. Bianquis, *Raḥba et les tribus arabes avant les Croisades*, in *BEO*, xli-xlii (1989-90), with a detailed bibliography.

As for the period 452-923/1060-1517, the work of extracting information from the texts is still in progress. Ibn al-Dawādārī's history, especially rich on the sieges of al-Raḥba (see, in particular, the year 711/1311-12), has not been exploited, and the appearance of chronicles from the 7th/13th and 8th/14th centuries is announced. Until an extended study on al-Raḥba and the middle Euphrates in general during the Arab period shall appear, a survey of some recently acquired pieces of information is given here.

Numerous projects have been carried out since 1970 on the material culture of the region in mediaeval and post-mediaeval times. Archaeological excavations have been made on the site from 1976 to 1981 by the General Directorate of the Syrian Museum of Antiquities, the Institut Français d'Études Arabes de Damas and the University of Lyons II. Subsequently, Syrian, European and American multi-disciplinary teams, working on the societies of the desert margins, have carried out surveys on both banks of the Euphrates and on those of the Khābūr. Our knowledge of the past of al-Raḥba and its region has thus been considerably enlarged, but the sparse publications so far available are still only provisional.

Work has been carried out at three sites. To the south of the town of al-Miyādīn, a stretch of territory on the banks of the Euphrates, near an old Ottoman caravanserai, was excavated from 1976 to 1981, mainly revealing dwellings from the Ayyūbid period and with abundant material. The excavation had to be relinquished in the face of contemporary building operations just when an old level, probably ʿAbbāsid (4th/10th century) had been uncovered beneath a layer of material abandoned when irrigated gardens were laid out, corresponding to an urban decline in the 5th/11th century. The coins discovered at this site have been published by A. Nègre, *Les monnaies de Mayādīn*, in *BEO*, xxxii-xxxiii (1980-1), and the pottery will shortly be published also. Some urban life then continued along the Euphrates banks long after the earthquake of 551/1156.

The great citadel on a cliff some 2.5 miles/4 km from the Euphrates (for earlier illustrations of this, see

Musil, *The Middle Euphrates*, 7, fig. 2, and Sarre-Herzfeld, *Arch. Reise*, iii, pls. LXXIX ff.) is now deteriorating rapidly, with erosion eating away the supports of the walls. A study made 1976-81 allowed the drawing up of plans and elevations of the site, bringing out the complexity of the building, which was destroyed, rebuilt and enlarged on several occasions; see J.L. Paillet, *Le château de Raḥba, étude d'architecture militaire islamique médiévale*, diss. Univ. of Lyons II 1983, unpubl. Large numbers of featherings for arrows, cut out of the paper of registers, have been found, souvenirs of sieges by the Mongols. From the Ottoman period onwards, the building no longer had any military value and provided shelter for sheep-raising villagers.

From 1976 to 1978, work was undertaken at the foot of this fortress in the abandoned ruins of an urban settlement. A great enclosure, quadrangular in shape with sides of some 30 m, surrounded by a wall one metre thick, restored on various occasions and in some places more than 4 m in height, has been partially revealed. One can guess at an ensemble comprising a public building—a *k͟hān*, a cavalry barracks or a great mosque, probably including a small oratory—with a complex network of canals for the bringing in of fresh water and for carrying away waste and dirty water. The pottery and coins which have been analysed are mainly Mamlūk, with some Ayyūbid sherds in the deeper layers. The houses around this great building have not yet been excavated but offer a clearly more rural aspect than the houses spread along the Euphrates banks.

Until the end of the 5th/11th century al-Raḥba was a riverine port to which came caravans arriving via Tadmur or Palmyra from Damascus, Ḥimṣ, Salamiyya and Ḥamāt. After then, this river traffic declined, for reasons not yet clear; lack of wood for the construction of river craft? Decrease in the amount of water through desiccation? Insecurity? Caravan traffic running parallel to the river, on the plateau above the right bank, now enjoyed a corresponding increase. The ability to survey the steppe lands, which stretch as far as eye can see, always justified the building of a progressively stronger citadel on the river banks. To the north-east, it dominated the valley and could easily block or hold up the advance of an army venturing into the 4 km-wide plain along the right bank of the Euphrates. The fortress being at a lower level, on the edge of the cliff, on the alluvial plain, and unable to command a view of the steppes at a higher level, lost some of its value.

Al-Raḥba formed part of various types of regional groupings: the Euphrates valley in the context of the administration of the *ṭarīḳ al-Furāt*, the D͟jazīran principality of Mawṣil under the Ḥamdānid Nāṣir al-Dawla, Fāṭimid Egypt and southern Syria at the beginning of the 6th/12th century, northern Syria under the Kilābī Mirdāsids after 416/1025, the Seld͟jūḳ principality of Damascus at the end of the 5th/11th century and the Syrian steppe principality extending from Salamiyya to the Euphrates in the Zangid and Ayyūbid periods. Under the Mamlūks, the citadel was rebuilt and held an important garrison, and it protected the new town which had grown up right at its feet. The *nāʾib* commanding it had a high place in the military hierarchy. It played a notable role at the time of the Turco-Mongol invasions between 1260 and 1400, forcing these invaders to detach from their fighting force powerful contingents to watch over and besiege the fortress. There are several mentions of al-Raḥba in the *Taʾrīk͟h* of Ibn Ḳāḍī S͟huhba, ed. Adnan Darwich, Damascus 1977; on p. 479 the author states that, in 795/1392-3, when Tīmūr Lang had conquered Mesopotamia, he sent messages to the *nāʾib* of al-Raḥba, who after having read them, put the Turco-Mongol emissaries to death.

(E. HONIGMANN-[TH. BIANQUIS]

RAHBĀNIYYA (A.), monasticism. The term is derived from *rāhib* [*q.v.*] "anchovite, monk"; it occurs in the Ḳurʾān once only, in a complicated passage (sūra LVII, 27) that has given rise to divergent interpretations: "And we put in the hearts of those who followed Jesus, compassion and mercy, and the monastic state (*rahbāniyya*); they instituted the same (we did not prescribe it to them) only out of a desire to please God. Yet they observed not the same as it ought truly to have been observed. And we gave unto such of them as believed, their reward; but many of them have been doers of evil."

According to some of the exegesis, the verb "we put" has two objects only, viz. compassion and mercy, whereas the words "and the monastic state" are the object of "they instituted". Accordingly, the monastic state or *rahbāniyya* appears here as a purely human institution, which, moreover, has been perverted by evil-doers.

According to others, however, the object of the words "and we put" is compassion, mercy and the monastic state. According to this exegesis, monasticism is called a divine institution, although not prescribed for mankind. But it has been perverted by evil-doers. This exegesis seems preferable to the other, although the juxtaposition of compassion, mercy and the monastic state seems rather unnatural. Of the two, the first interpretation displays a much less favourable attitude to the monastic state than the second. L. Massignon pointed out that this latter exegesis is the older one; the younger one expresses a feeling hostile to monasticism, which coined the tradition "No *rahbāniyya* in Islam."

This tradition does not occur in the canonical collections. Yet it is being prepared there. When the wife of ʿUt͟hmān b. Maẓʿūn [*q.v.*] complained of being neglected by her husband, Muḥammad took her part,

saying: "Monasticism (*rahbāniyya*) was not prescribed for us" (Aḥmad b. Ḥanbal, vi, 226; al-Dārimī, *Nikāḥ, bāb* 3). The following tradition is less exclusive: "Do not trouble yourselves and God will not trouble you. Some have troubled themselves and God has troubled them. Their successors are in the hermitages and monasteries, 'an institution we have not prescribed for them'" (Abū Dāwūd, *Adab, bāb* 44).

Islam, thus rejecting monasticism, has replaced it by the *d̲j̲ihād*: "Every prophet has some kind of *rahbāniyya*; the *rahbāniyya* of this community is the *d̲j̲ihād*" (a tradition ascribed to Muḥammad, in Aḥmad b. Ḥanbal, iii, 266; and to Abū Saʿīd al-K̲h̲udrī, *ibid.*, iii, 82). See also ṬARĪḲA, ZUHD.

Bibliography: L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, 123 ff.; the commentaries of the Ḳurʾān on sūra LVII, 27; Ibn Saʿd, *Ṭabaḳāt*, ed. Sachau, iii/1, 287; Ḥarīrī, *Maḳāmāt*, ed. de Sacy, 570-1; Zamak̲h̲s̲h̲arī, *al-Fāʾiḳ*, Ḥaydarābād 1324, i, 269; Ibn al-At̲h̲īr, *Nihāya*, s.v.; A. Beck, *Das christliche Mönchtum im Koran*, Helsinki 1946. (A.J. WENSINCK)

RĀHIB (A., pl. *ruhbān, rahābīn, rahābina*), a monk. The figure of the monk is known to pre-Islamic poetry and to the Ḳurʾān and Tradition. The pre-Islamic poets refer to the monk in his cell, the light of which the traveller by night sees in the distance and which gives him the idea of shelter.

In the Ḳurʾān, the monk and the *ḳissīs*, sometimes also the *aḥbār*, are the religious leaders of the Christians. In one place it is said that rabbis and monks live at the expense of other men (sūra IX, 34) and that the Christians have taken as their masters instead of God their *aḥbār* and their monks as well as al-Masīḥ b. Maryam (IX, 31). In another passage, the Christians are praised for their friendship to their fellow-believers, which is explained from the fact that there are priests and monks among them (V, 87). In *Ḥadīt̲h̲*, the *rāhib* is frequently encountered in stories of the nature of the *ḳiṣaṣ al-anbiyāʾ* (see al-Buk̲h̲ārī, *Anbiyāʾ, bāb* 54; Muslim, *Zuhd*, trad. 73; *Tawba*, trad. 46, 47; al-Tirmid̲h̲ī, *Tafsīr*, sūra LXXXV, trad. 2; *Manāḳib*, trad. 3; al-Nasāʾī, *Masād̲j̲id*, trad. 11; Ibn Mād̲j̲a, *Fitan*, trad. 20, 23; al-Dārimī, *Faḍāʾil al-Ḳurʾān*, trad. 16; Aḥmad b. Ḥanbal, i, 461; ii, 434; iii, 337, 347; v, 4; vi, 17 *bis*).

From the fact that in the Islamic literature of the early centuries A.H. the epithet *rāhib* was given to various pious individuals, it is evident that there was nothing odious about it then; see, however, the article RAHBĀNIYYA.

Bibliography: See that to RAHBĀNIYYA. (A.J. WENSINCK)

RĀḤĪL, in the Bible Rachel, wife of Jacob, mother of Joseph and Benjamin, is not mentioned in the Ḳurʾān. There is, however, a reference to her in sūra IV, 27: "Ye may not have two sisters to wife at the same time; if it has been done formerly, God now exercises pardon and mercy." This is said to allude to Jacob's marriage with Liyā and Rāḥīl; before Moses revealed the Tora, such a marriage was valid. Al-Ṭabarī gives this explanation in his *Annals*, i, 356, 359-60. Ibn al-At̲h̲īr, i, 90, adopts it. But already in *Tafsīr*, iv, 210, al-Ṭabarī explains the verse correctly: Muḥammad forbids for the future marriage with two sisters but he does not dissolve such marriages concluded before the prohibition.—Islamic tradition generally adopts the view that Yaʿḳūb only married Rāḥīl after Liyā's death. So already in al-Ṭabarī, i, 355, al-Zamak̲h̲s̲h̲arī, al-Bayḍāwī, Ibn al-At̲h̲īr, etc. Al-Kisāʾī even thinks that Yaʿḳūb only married Rāḥīl after the death of Liyā and of his two concubines. Here again Muslim legend differs from the Bible, in making him not marry Rāḥīl until after 14 years of service; in the Bible, Jacob serves seven years, marries Leah and, after the wedding week, Rachel and serves another seven years. Yaʿḳūb's wooing and Lāban's trick by which he substitutes Liyā for Rāḥīl as "neither lamp nor candle-light" illuminate the bridal chamber, is embellished in Muslim legend.

Rāḥīl is also of importance in the story of Yūsuf. Yūsuf inherits his beauty from Rāḥīl; they had half of all the beauty in the world, according to others two-thirds, or even according to the old Haggadic scheme (*Ḳiddus̲h̲in*, 49b), nine-tenths (al-T̲h̲aʿlabī, 69). When Yaʿḳūb left Lāban, he had no funds for the journey; at Rachel's suggestion, Yūsuf steals Lāban's idols. As Yūsuf, sold by his brothers, passes the tomb of Rāḥīl he throws himself from his camel on the grave and laments: "O mother, look on thy child, I have been deprived of my coat, thrown into a pit, stoned and sold as a slave." Then he hears a voice: "Trust in God." The old Haggada does not know this touching scene. But it has found its way into the late mediaeval book of stories *Sefer Hayas̲h̲ar* (ed. Goldschmidt, 150). The Judaeo-Persian poet S̲h̲āhīn (15th century) adapts this motif from Firdawsī's *Yūsuf u Zulayk̲h̲ā* in his book of Genesis.

RAḤĪL (A.), "travelling by camel", a term applied in Arabic poetry to themes involving a desert journey. In its specific meaning it denotes a section of the polythematic *ḳaṣīda* [*q.v.*], following the *nasīb* [*q.v.*], where the poet describes his camel and his travels. The term is derived from the verb *raḥala* "to saddle a camel" or "to mount a camel". In Arabic poetics, the *raḥīl* is not classified among the "genres" (*ag̲h̲rāḍ*) of poetry, nor is the term used in a technical sense. Mediaeval critics usually paraphrase the theme (cf. Ibn Ḳutayba, *S̲h̲iʿr*, 14).

In the *D̲j̲āhiliyya* [*q.v.*], poets allude to the perilous desert journey at the beginning of their self-praise [see MUFĀK̲H̲ARA], introducing it, like other themes of *fak̲h̲r*, by *wāw rubba* ("and many a...") or by *ḳad* preceding a verb in the imperfect tense ("and often I..."). But already in early texts, there is a tendency to connect the *raḥīl* with the *nasīb*. The poet, after his disappointment in love, turns to his camel for consolation, or he asks whether it will be strong enough to carry him to his beloved. Then usually follows a detailed description of the camel (*waṣf al-d̲j̲amal*), embellished by scenes of animal life, introduced as comparisons, the camel being compared to a wild bull, an onager, an ostrich, and, very rarely, to an eagle. If the ode ends with a *madīḥ* [*q.v.*], the poet sometimes adds, by way of transition (*tak̲h̲alluṣ*), that he is travelling towards the *mamdūḥ*, the addressee of his panegyric. From the corpus of pre-Islamic verse it appears that the *raḥīl* originally formed a theme of *fak̲h̲r*, and that its interpretation as a journey to the

mamdūḥ is a secondary development. For poets in the *Dj̲āhiliyya* do not travel towards a destination; travelling is the mode of Bedouin life, and the camel is its most significant symbol. By turning to his excellent mount after the emotional crisis of the *nasīb*, the "Bedouin hero" regains his equanimity and his ability to perform the tasks demanded of him by tribal society.

During the first part of the 7th century, a transformation of the camel-section sets in, which is continued in the Umayyad period. As a result, the traditional description of the poet's camel is replaced by a *raḥīl* to the *mamdūḥ*, by which the poet emphasises the dangers and hardships which he took upon himself on his way. In the Umayyad *raḥīl*, the destination is always stated, and the length of the way dwelled upon. The poet mentions a group of travellers and their mounts, and describes their state of weariness and exhaustion. Some odes begin with a *raḥīl*, which is often blended with the *madīḥ* in an ingenious way. Thus the *raḥīl* is now entirely determined by the panegyrical function of the ode, as described by Ibn Ḳutayba (*loc. cit.*), who evidently had the Umayyad *ḳaṣīda* in mind, when explaining the genre (cf. R. Jacobi, *The camel-section of the panegyrical ode*, in *JAL*, xiii [1982], 1-22).

In the early ʿAbbāsid period, the *raḥīl* is gradually reduced in length or omitted altogether (Jacobi, *op. cit.*, 19-21). ʿAbbāsid odes are as a rule bipartite in structure, a development already beginning in the Umayyad period. However, later poets occasionally fall back upon traditional patterns, and there are some original variations of the travel theme. As part of the panegyrical ode, the *raḥīl* survives until modern times.

Bibliography: In general works, the *raḥīl* is treated in connection with the *ḳaṣīda*, cf. *GAP*, ii (index), *CHAL*, ii (index); E. Wagner, *Grundzüge der klassischen arabischen Dichtung*, i-ii, Darmstadt 1987-8 (Index). Studies limited to the *Dj̲āhiliyya*: R. Jacobi, *Studien zur Poetik der altarabischen Qaṣide*, Wiesbaden 1971, cf. 49-65; A. Hamori, *The poet as hero*, in idem, *On the art of medieval Arabic literature*, Princeton 1974, 3-30; W. Rūmiyya, *al-Riḥla fi 'l-ḳaṣīda al-dj̲āhiliyya*, 1975. (R. Jacobi)

RAḤĪM [see ALLĀH].

RAḤMA (A.), a Ḳurʾānic term (attested 114 times), denoting either kindness, benevolence (synonym of *raʾfa*) or—more frequently—an act of kindness, a favour (synonym of *niʿma* or *faḍl*). Almost invariably, the term is applied to God; in only three verses is there reference to the *raḥma* which humans have, or should have, in their relationships with others: sons towards their father and mother (XVII, 24), married couples between themselves (XXX, 21), Christians among themselves (LVII, 27).

The French translation by "miséricorde", although often used, is misleading, since in current usage, particularly in religious vocabulary, "miséricorde" essentially includes the notion of forgiveness, this being the kindness whereby God forgives men for their sins (the same observation applies moreover, although less precisely, to the English "mercy" and the German "Gnade"). It is true that the indulgence of God with regard to sinners is an eminent form of his kindness, and in fact in some instances the Ḳurʾān associates the two notions (cf. for example XVIII, 58; XXXIX, 53; XL, 7). It is also possible to understand in this sense (although not necessarily, cf. al-Ṭabarsī's commentary) the formula of VI, 12 and 54: *kataba ʿalā nafsih al-raḥma*. But in the majority of cases, the notion of the forgiveness of sins is totally absent from Ḳurʾānic usages of *raḥma*. As previously stated, this term is to be understood most often as a simple equivalent of *niʿma*. It represents a "kindness" which God grants (*ātā, wahaba*) to men (cf. III, 8; XI, 28; XVIII, 10, 65), a good which He "makes them taste" (*adh̲āḳa*), as opposed to the evils which he inflicts upon them, *raḥma* being, in such instances, opposed to *ḍurr, ḍarrāʾ*, or *sayyiʾa* (cf. X, 21; XI, 9; XXX, 33, 36; XLI, 50; XLII, 48); sometimes, in fact, it is an affliction (*sūʾ, ḍurr*) which He wills upon them, and sometimes a *raḥma* (cf. XXXIII, 17, and XXXIX, 38).

These *raḥmas* which God gives as benefits to men, or to one or another individual, are of various kinds. There is the "Book given to Moses", described as *hudā wa-raḥma* (VI, 154; VII, 154), *īmān wa-raḥma* (XI, 17; XLVI, 12); the Ḳurʾān itself, also frequently described as *hudā wa-raḥma* (XXVII, 77; XXXI, 3; etc.) or as *sh̲ifāʾ wa-raḥma* (XVII, 82); Jesus (XIX, 21); Muḥammad (XXI, 107). Also a *raḥma* is the fact of having given to Moses, to assist him, his brother Aaron (XIX, 53), to Zachariah a son (XIX, 2); of having saved from annihilation Hūd and his supporters (VII, 72; XI, 58). *Raḥma* is furthermore the treasure destined to the two orphans of XVIII, 82; the wall erected by Dh̲u 'l-Ḳarnayn (XVIII, 98); the maintenance (*rizḳ*) which the Prophet awaits from God (XVII, 28); the rain (VII, 57; XXV, 48; XXVII, 63; XXX, 50); and the alternation of day and night (XXVIII, 73).

There is disagreement among the early exegetes regarding the original meaning of the term, a disagreement which essentially divides, it seems, lexicographers from theologians. For the former, *raḥma* denotes at the outset an aggregate of related emotional states, of which the most characteristic is that of *riḳḳat al-ḳalb*, which may be translated, for want of a better choice, by "sensibility", the "fact of having a sensitive heart". Al-Mubarrad would define *raḥma* by *taḥannun* ("tenderness") *wa-riḳḳa* (according to al-Zadj̲dj̲ādj̲ī, *Ish̲tiḳāḳ asmāʾ Allāh*, Beirut 1986, 41, 8), *riḳḳa wa-taʿaṭṭuf* ("benevolence") (according to Abū Ḥātim al-Rāzī, *al-Zīna*, ii, Cairo 1958, 23, 7-8; cf. also *LA*). In his "exoteric" commentary on the *basmala*, al-Sh̲ahrastānī gives the following definition: "In Arabic, *raḥma* denotes sensibility (*riḳḳat al-ḳalb*), compassion (*sh̲afaḳa*), softness (*līn*) and gentleness (*rifḳ*); this term has for antonyms hardness (*faẓāẓa*) and severity (*gh̲ilẓat al-ḳalb*)" (*Mafātīḥ al-asrār*, facs. ed. Tehran 1989, fol. 33b). Lending force to this interpretation is a saying of Ibn ʿAbbās, glossing *raḥmān* with *raḳīḳ* and *raḥīm* with *ʿāṭif* (cf. Gimaret, *Les noms divins en Islam*, Paris 1988, 379). The question which is posed is, for a theologian, whether, thus understood, *raḥma* can truly be used in connection with God. On account, no doubt, of what this term implies in the sense of vulnerability, fragility, it is generally reckoned in fact that *riḳḳa* could not be counted among the divine attributes (thus al-Kh̲aṭṭābī and al-Ḥusayn b. al-Faḍl al-Badj̲alī, according to al-Bayhaḳī, *al-Asmāʾ wa 'l-ṣifāt*, Cairo 1939, 51, 13-18). A *riḳḳa*, explains al-Gh̲azālī, is a cause of suffering, and it is in order to alleviate this suffering that the "sensitive" man performs an act of beneficence; God, on the other hand, is not susceptible to suffering (*al-Maḳṣid al-asnā*, Beirut 1961, 66, 1-11). For this reason al-Zamakh̲sh̲arī considers that, when *raḥma* is applied to God, it is to be taken in a figurative sense, signifying His beneficence (*inʿām*) towards His creatures (*al-Kash̲sh̲āf*, Cairo 1385/1966, i, 44-5). For al-Mubarrad, the term is frankly ambiguous. Applied to men, it signifies "tenderness and sensibility"; applied to God, it means "beneficence and generosity" (*inʿām wa-ifḍāl*) (al-Zadj̲dj̲ādj̲ī, *Ish̲tiḳāḳ*, 41, 8-9). Al-

Djubbāʾī, for his part, goes further; for him, the true sense of *raḥma* is that which makes it an equivalent of *niʿma*; if a man of sensitive heart is described as *raḥīm*, it is in fact because such a man is beneficent (ʿAbd al-Djabbār, *al-Mughnī*, xx/b, 207, 6-8). The same point of view is expressed by Ibn Bābawayh (*al-Tawḥīd*, Nadjaf 1387/1968, 203-4).

The question of the origin and meaning of the divine name *al-Raḥmān*, as well as of the formula *al-Raḥmān al-Raḥīm*, has already been discussed [see BASMALA and AL-ḲURʾĀN, 4.c]. For almost all the ancient commentators—the single exception being Thaʿlab—there is no doubt that *raḥmān* and *raḥīm* are quite simply two parallel qualificatives, both derived from the root *r-ḥ-m*, one in the *faʿlān* form, the other in *faʿīl*, both attesting that the person thus described practises the virtue of *raḥma*. Some, including the grammarian Abū ʿUbayda, even saw the words as pure doublets, analogous, they declared, to the pair of *nadmān* and *nadīm*, the only difference being that *raḥmān* could be applied only to God (thus, in particular, al-Ashʿarī, according to Ibn Fūrak, *Mudjarrad*, Beirut 1987, 47, 21-3; al-Djuwaynī, *Irshād*, Cairo 1950, 145, 4-6). However, later authorities—these being the majority—attribute to *raḥmān* a stronger quality, precisely because the word is applied only to God, and because, according to a frequent exegesis, *raḥmān* is reckoned to have a broader "extension" than *raḥīm*. It is said that God is *raḥmān* for all men, believers or non-believers, while He is *raḥīm* only for believers (in conformity with Ḳurʾān, XXXIII, 43, *wa-kāna bi 'l-muʾminīna raḥīm*^an^). For al-Ḥalīmī, for example, God is *raḥmān* in that He gives to all men the means of finding their salvation, so that they have no excuse not to worship Him; He is *raḥīm* for the believers in that He rewards them without stinting (al-Bayhaḳī, *al-Asmāʾ*, 49, 20-1). Some writers (for example, Ibn Bābawayh, *al-Tawḥīd*, 203, 13-14) furthermore assert that, if God alone is described as *raḥmān*, while *raḥīm* can be applied to anyone who has compassion for the suffering of others, this is because God alone has, in addition, the power of removing this suffering (on this area of speculation, see Gimaret, *Noms divins*, 379-82).

Bibliography: Given in the article.

(D. GIMARET)

RAḤMA B. DJĀBIR [see KURṢĀN. iii].

RAḤMĀN [see BASMALA; ḲURʾĀN].

RAḤMĀNIYYA, Algerian Ṣūfī order (*ṭarīḳa*) called after Muḥammad b. ʿAbd al-Raḥmān al-Gashtulī al-Djurdjurī al-Azharī Abū Ḳabrayn, who died in 1208/1793-4. It is a branch of the Khalwatiyya [*q.v.*] and is said to have at one time been called Bakriyya after Muṣṭafā al-Bakrī al-Shāmī. At Nafṭa [*q.v.*], in Tunisia, and some other places it is called ʿAzzūziyya after Muṣṭafā b. Muḥammad b. ʿAzzūz.

Life of the founder. His family belonged to the tribe Ayt Smāʿīl, part of the Gashtula confederation in the Ḳābiliyya Djurdjura; having studied at his home, and then in Algiers, he made the pilgrimage in 1152/1740, and on his return spent some time as a student at al-Azhar in Cairo, where Muḥammad b. Sālim al-Ḥafnawī (d. 1181/1767-8: *Silk al-durar*, iv, 50) initiated him into the Khalwatī order, and ordered him to propagate it in India and the Sūdān; after an absence of thirty years he returned to Algeria, and commenced preaching in his native village, where he founded a *zāwiya*; he seems to have introduced some modifications into Khalwatī practice, and in his Seven Visions of the Prophet Muḥammad made some important claims for his person and his system; immunity from hell-fire was to be secured by affiliation to his order, love for himself or it, a visit to himself, stopping before his tomb or hearing his *dhikr* recited. His success in winning adherents provoked the envy of the local *murābiṭs*, in consequence of which he migrated to Ḥamma in the neighbourhood of Algiers. Here, too, his activities met with opposition from the religious leaders, who summoned him to appear before a *madjlis* under the presidency of the Mālikī *muftī* ʿAlī b. Amīn; through the influence of the Turkish authorities, who were impressed by the following which he had acquired, he was acquitted of the charge of unorthodoxy, but he thought it prudent to return to his native village, where shortly afterwards he died, leaving as his successor ʿAlī b. ʿĪsā al-Maghribī. His corpse is said to have been stolen by the Turks and buried with great pomp at Ḥamma with a *ḳubba* and a mosque over it. The Ayt Smāʿīl, however, maintained that it had not left its original grave, whence it was supposed to have been miraculously duplicated, and the title *Abū Ḳabrayn* "owner of two graves" was given to him.

History and propagation of the order. ʿAlī b. ʿĪsā al-Maghribī was undisputed head from 1208/1793-4 to 1251/1835; his successor died shortly after, and from the following year, though the order continued to win adherents, it divided into independent branches. This was owing to the objections raised by the Ayt Smāʿīl to the succession of al-Ḥādjdj Bashīr, another Maghribī; in spite of the support of the *amīr* ʿAbd al-Ḳādir [*q.v.*], he had to quit his post, which was held for a time by the widow of ʿAlī b. ʿĪsā, who, however, owing to the dwindling of the revenues of the *zāwiya*, had ultimately to summon Bashīr back. Meanwhile, the founders of other *zāwiya*s were assuming independence. After the death of Bashīr in 1259/1843, the widow's son-in-law al-Ḥādjdj ʿAmmār succeeded to the headship of the order. Finding his influence waning owing to his failure to participate in the attack on the French organised by Bū Baghla, in Dhu 'l-Ḥidjdja 1272/August 1856 he called his followers to arms and obtained some initial successes; he was, however, compelled to surrender in the following year, together with his wife (or mother-in-law) at the head of a hundred *khwān* shortly afterwards. ʿAmmār retired to Tunis, where he endeavoured to continue the exercise of his functions, but he was not generally recognised as head of the order, and his place among the Ayt Smāʿīl was taken by Muḥammad Ameẓẓyān b. al-Ḥaddād of Ṣaddūḳ, who at the age of 80 on 8 April 1871 proclaimed *djihād* against the French, who had recently been defeated in the Franco-Prussian War. The insurrection met with little success, though it spread far, and on 13 July Ibn al-Ḥaddād surrendered to General Saussier, who sent him to Bougie. The original *zāwiya* was closed as a precautionary measure.

His son ʿAzīz, who had been transported to New Caledonia, succeeded in escaping to Djudda, whence he endeavoured to govern the community; but various *muḳaddam*s who had been appointed by his father, as well as other founders of *zāwiya*s, asserted their independence. Lists have been given by Depont and Coppolani of these persons and their spheres of influence, which extended into Tunisia and the Sahara. In their work, the numbers of the adherents to the order were reckoned at 156,214 (1897). In 1954, L. Massignon revised this number to 156,000 adherents, with 177 *zāwiya*s, whilst in 1961 Fauque estimated them at 230,000. It should be said that the Raḥmāniyya constitute the most important Ṣūfī order in Algeria, with more than one-half of the *khwān* of the land. It predominates in the towns of the Constan-

tinois such as Constantine, ʿAnnāba, Souk-Ahrag, Batna, Biskra, etc., and naturally in Kabylia, where it originated. Rinn noticed that the Raḥmāniyya of Tolga regularly maintained good relations with the French authorities.

Practices of the order. The training of the *murīd* consists in teaching him a series of seven "names", of which the first is the formula *lā ilāha illa 'llāhu*, to be repeated from 12,000 to 70,000 times in a day and night, and followed by the others, if the *shaykh* is satisfied with the neophyte's progress; these are: 2. *Allāh* three times; 3. *huwa*; 4. *ḥaḳḳ* three times; 5. *ḥayy* three times; 6. *ḳayyūm* three times; 7. *ḳahhār* three times (Rinn's list differs slightly from this). Rinn stated that the *dhikr* of the order consists in repeating at least 80 times from the afternoon of Thursday to that of Friday the prayer ascribed to al-Shādhilī [*q.v.*], and on the other weekdays the formula *lā ilāha illa 'llāhu*. Favourite lessons are the "Verse of the Throne" followed by sūras I, CXII-CXIV (prescribed in the Founder's diploma, translated by A. Delpech, in *RA* (1874), and the Seven Visions mentioned above (translated by Rinn, 467).

Literature of the order. Most of this would seem to be still in ms.; the founder is credited with several books. A. Cherbonneau, in *JA* (1852), 517, describes a catechism called *al-Raḥmāniyya* by Muḥammad b. Bakhtarzī with a commentary by his son Muṣṭafā, perhaps identical with a work called by French writers *Présents dominicaux*. Another work belonging to the order which they mention is called *al-Rawḍ al-bāsim fī manāḳib al-Shaykh Muḥammad b. al-Ḳāsim*.

(D.S. Margoliouth*)

RAHN (A.), pledge, security; *rāhin*, the giver and *murtahin*, the taker of the pledge. The Ḳurʾān (II, 283), obviously in confirmation of pre-Islamic legal usage, provides for the giving of pledges (*rihānun maḳbūḍa*) in business in which a definite period is concerned, if the preparation of a written document is impossible. The part here played by the security as evidence of the existence of an obligation is in Islamic law much less important than that of securing the fulfilment of a demand. From the latter point of view, the traditions are mainly concerned with two questions: *a.* whether the security in case of non-fulfilment passes without more ado into the ownership of the creditor or not (the two answers are crystallised in the legal maxims *al-rahn bi-mā fīh* or *al-rahn lā yaghlaḳ*); and *b.* who is entitled to use it and is bound to maintain it (the answer often found in earlier authorities that the taker of the pledge may enjoy its use if he sees to its maintenance, later fell out into disuse). According to the doctrine of Islamic law, the giver of the pledge is bound to maintain it, but can enjoy the use of it only according to the Shāfiʿīs; its use by the taker of the pledge is also forbidden (except by the Ḥanbalīs); the yield (increase) belongs to the giver of the pledge but also becomes part of the security (except with the Shāfiʿīs); the taker of the pledge is responsible for it according to the Ḥanafīs and (with limitations) the Mālikīs. Among the Shāfiʿīs and the Ḥanbalīs, the agreement regarding the security is regarded as a bailment relationship (with much less responsibility). The basis for the condition of a pledge must be a claim (*dayn*); the accessory character of the security is in general allowed; but exceptional cases are recognised in which the debt is extinguished by the disappearance of the security, i.e. the risk passes to the taker of the pledge. While the ownership of the pledge remains with the debtor, he has no power of disposal over it and possession passes to the creditor; the latter has the right to sell it to satisfy his claim if the debt becomes overdue or is not paid. Mortgage is unknown, as well as a graded series of rights to the same object of pledge. To be distinguished from the pledge is the detention (*ḥabs*) of a thing to enforce fulfilment of a legal claim, which represents a concrete right afforded by the law in individual cases so that it has contacts with the legal right to pledge.

(J. Schacht)

AL-**RĀʿĪ**, *laḳab* of a poet of the Banū Numayr [*q.v.*] who lived in the 1st/7th century. His real name was ʿUbayd b. Ḥuṣayn (see his genealogy in Ibn al-Kalbī, *Djamharat al-nasab*, ed. W. Caskel, Leiden 1966, Taf. 92 and 112; for other sources see R. Weipert, *Studien*, 27-8), but he was commonly known as al-Rāʿī al-Numayrī. His *kunya* Abū Djandal refers to his son Djandal, who inherited his father's poetical talent and produced some poems (for a collection of some fragments see N.Ḥ. al-Ḳaysī and H. Nādjī, *Shiʿr al-Rāʿī*, 8-13).

Al-Rāʿī was a *sayyid* of his tribe and commanded great respect. He spent a considerable part of his life in ʿIrāḳ, especially in Baṣra, where he was on good terms with Umayyad rulers and governors, e.g. Bishr and ʿAbd al-Malik b. Marwān, Yazīd and ʿAbd Allāh b. Muʿāwiya [*q.vv.*], Khālid b. ʿAbd Allāh b. Khālid b. Asīd and Saʿīd b. ʿAbd al-Raḥmān b. ʿAttāb, to whom he addressed his panegyrical odes. It is evident that he kept these close relations with wealthy men of political influence for his personal profit, because, as many of his invectives against other tribes and poets like ʿAdī b. al-Riḳāʿ, al-Akhṭal, and Djarīr [*q.vv.*] show, he did not get on easily with neighbours or fellow poets. When he interfered in the *naḳāʾiḍ* [*q.v.*] between Djarīr and al-Farazdaḳ [*q.v.*] and gave preference to the latter, Djarīr was deeply hurt and reacted by composing his famous *ḳaṣīda* "*al-dammāgha*" (see his *Dīwān*, ed. Nuʿmān Muḥammad Amīn Ṭāhā, Cairo 1969 f., ii, 813 ff. no. 3), in which he slighted al-Rāʿī and the Banū Numayr entirely. This poem silenced al-Rāʿī at once and, as many traditions say, led to his premature death less than a year after this event (see M.N. Ḥidjāb, *al-Rāʿī*, 76-7, who fixes the date of his death in 96/714 or 97/715).

Al-Rāʿī's verses are a typical example of Old Arabian Bedouin poetry; he excels in the description of the camel and its shepherd (hence his nick-name), the wild bull, the oryx, the wild ass, and other animals of the desert. The Arab literary critics highly esteemed

al-Rāʿī's qualities and ranked him besides Ḥumayd b. Thawr and Ibn Muḳbil [*q.vv.*] at the head of the Muḍar poets (see al-Aṣmaʿī, *Fuḥūlat al-shuʿarāʾ*, ed. C.C. Torrey, in *ZDMG*, lxv [1911], 500). According to Ibn Sallām, who called him "*faḥl Muḍar*" (see his *Ṭabaḳāt*, i, 503), he belonged to the first class of Islamic poets and was equal in value to Djarīr, al-Farazdaḳ, and al-Akhṭal.

His *dīwān* was transmitted by his *rāwī* Dhu 'l-Rumma [*q.v.*], whose own poetry is strongly influenced by al-Rāʿī's style (see Ibn Sallām, *Ṭabaḳāt*, ii, 551). About a century later, al-Aṣmaʿī [*q.v.*] composed the first philological recension of his *dīwān*, which was largely used by Abū ʿUbayd al-Bakrī [*q.v.*] in his *Muʿdjam ma 'staʿdjam* (see the index). Other recensions are due to al-Sukkarī [*q.v.*], Ibn al-Anbārī [see AL-ANBĀRĪ, ABŪ BAKR], and Thaʿlab [*q.v.*] (see R. Weipert, *Studien*, 34-5). Thaʿlab's recension and commentary was still known to Yāḳūt [*q.v.*], who often quoted it in his *Muʿdjam al-buldān* (see the index).

Though al-Rāʿī's *dīwān* has been cited and valued by many lexicographers, philologists and *udabāʾ*, no manuscript of it has been discovered so far. Fortunately, Muḥammad b. al-Mubārak b. Maymūn (d. 591/1201) selected from the *dīwān* twenty complete *ḳaṣīdas* for his *Muntahā 'l-ṭalab min ashʿār al-ʿarab* (ms. Yale 389, fols. 135b-163a). These long poems, which are missing in the obsolete collections of G. Oman and N. al-Ḥānī, form the basis of the comprehensive editions of al-Rāʿī's poetical remains, published by R. Weipert and, less critically, by N.Ḥ. al-Ḳaysī and H. Nādjī in 1980, each of them containing about 1,300 verses, to which only a dozen may be added today.

AL-**RĀʾID** AL-**TŪNUSĪ** ("The Tunisian Scout"), the first official newspaper to be published in the Arabic language, appearing on 22 July 1860 and thereafter on a weekly basis. Considered the third-oldest newspaper of the Arab world [see DJARĪDA], after *al-Waḳāʾiʿ al-miṣriyya* (1828) and the Algerian *Moniteur*, *al-Mubashshir* (1847), this leading light of the Tunisian press was created by the twelfth Ḥusaynī Bey Ṣādiḳ (1859-82), at the instigation of the minister Khayr al-Dīn [*q.v.*], champion of the Tunisian reformist movement, with the object of promoting the reforms set in motion by the promulgation, in 1857, of the *Fundamental Pact* (*ʿAhd al-Amān* [see DUSTŪR]) and provoked by the combined effect of European economic penetration, the French occupation of Algiers in 1830 and the *Tanẓīmāt* (1839 and 1856).

The creation of *al-Rāʾid*, as well as that of the first Arabic printing-press [see MAṬBAʿA. 2.] followed on from attempts to introduce lithographical presses, private and governmental, in progress since 1847; these were at first, in the frantic race for concessions, granted to a British subject, Richard Holt, who published on an experimental basis, in April 1860, several issues of a weekly, in Italian, *La Gazetta di Tunisi*. But this private agreement was soon revoked by the Beylical government which, by a decree of 17 July 1860, inaugurated *al-Rāʾid al-Tūnusī* and *al-Maṭbaʿa al-rasmiyya*, placing them under the direct authority of the President of the Municipal Council, General Ḥusayn (d. 1887), and specifying that "no political issue is to be addressed without express authorisation from the above-named President".

Pascal-Vincent (alias Manṣūr) Carletti (1822-90), a French subject, born in Nicosia of Italian parentage, brought up in Syria, former pupil of Silvestre de Sacy and founder of the weekly *ʿUṭārid* ("Mercury"), which appeared first in Marseilles in 1858, then in Paris in 1859, was engaged both as editor (*munshī*) of *al-Rāʾid* and as supervisor of the printing-press. Pro-French, Carletti succeeded in retaining his post for seventeen years, until the downfall, in 1877, of his patron, General Khayr al-Dīn.

He contributed, however, to ensuring his own replacement by Tunisian personnel: Shaykh Maḥmūd Ḳābādū (d. 1871), author of the first editorials of the 1860s and inventor of the title of the journal; Bayram V (d. 1889); and Muḥammad al-Sanūsī (d. 1900).

With a circulation of about a thousand (in a population of a million, the vast majority being illiterate), and with an average annual frequency of 40 to 50 issues, drawing its revenue from subscriptions imposed on more than 400 officials and from a government subsidy, *al-Rāʾid* was sold for one *riyāl* (piastre), or 60 centimes, per copy. Consisting of four pages *in plano* 50/28, each of three columns, it appeared with a headline bearing the title, surmounted by the Tunisian flag—a revealing sign of the aspirations for independence of the Regency in relation to the Sublime Porte—surrounded by palms and Beylical heraldic symbols. From 1870, the headline bore, in addition, a supposed *ḥadīth*: *ḥubb al-waṭan min al-īmān* ("love of country is part of faith").

The contents of al-*Rāʾid* fell under two major headings: an official section (*ḳism rasmī*), devoted to the publication of laws and decrees, and a non-official section (*ghayr rasmī*), devoted to national news (*ḥawādith dākhiliyya*) and international news (*khāridjiyya*), commercial activity (*matdjar*) and literary and scientific items. Sources were Beylical governmental ordinances for the *ḳism rasmī*, and European, principally French journals, for international news.

Although providing strictly-regulated information, and in spite of three intermissions (1867-8, 1875 and 1880-2), *al-Rāʾid* is of undeniable documentary and historical interest for the pre-colonial period of Tunisia (1860-81); it was definitely the chronicler of the constitutional era, from 1860 to 1864 (promulgation in April 1861 of the first Tunisian constitution [see DUSTŪR] and the lavish festivities which marked the event), and of the reforms of Khayr al-Dīn between 1870 and 1877, in his capacity as controlling Minister (*mubāshir*) and as Prime Minister.

During the peasant insurrection of 1864, led by Ibn

G͟hid͟hāhum [*q.v.* in Suppl.], *al-Rā'id*, although experiencing a few very brief interruptions, displayed objectivity and calmness, all relative of course, but worthy of recognition.

It compensated for the interruption of the publication of the texts of laws and decrees relating to reforms with the publication of literary articles, consisting in most cases of excerpts from works published by the *maṭbaʿa* (some 70 titles, from 1860 to 1880).

Thus, as admitted by the eminent historian Ibn Abi 'l-Ḍiyāf (1802-74 [*q.v.*]), *al-Rā'id* constituted both the best complement and the most faithful continuation to the *Itḥāf*, which came to an end in 1872. It remains, furthermore, a first-hand source for the study of the rise of modern Arabic culture.

Under the French Protectorate and since Independence, *al-Rā'id* has continued to appear into the present day, as an official journal, *stricto sensu*, bilingual and bi-weekly.

(M. CHENOUFI)

RĀ'IḲA, a slave singing-girl (*ḳayna* [*q.v.*]) in the earliest days of Islam. She is mentioned as being in the poetry and music-making circles of Medina in ʿUt͟hmān's caliphate, i.e. the middle years of the 7th century A.D., and as being the teacher (*ustād͟ha*) of the celebrated singer ʿAzza al-Maylā' [*q.v.*].

RA'ĪS (A.), pl. *ru'asā'*, from *ra's*, "head", denotes the "chief, leader" of a recognisable group (political, religious, juridical, tribal, or other). The term goes back to pre-Islamic times and was used in various senses at different periods of Islamic history, either to circumscribe specific functions of the holder of the office of "leadership" (*ri'āsa*) or as a honorific title (*laḳab* [*q.v.*]).

1. In the sense of "mayor" in the central Arab lands.

Here, the *ra'īs* most commonly referred to was the head of a village, a city or a city-region. He emerged as a kind of local "mayor" and was particularly active from the 4th/10th to the 6th/12th centuries. Although references to such *ru'asā'* well before that time do exist, the exact date of origin, as well as its place, remains open to question. The areas of activity of the *ru'asā'* were located in ʿIrāḳ and the Persian regions, in Syria and the Djazīra. Thus *ru'asā'* (in the sense of mayors) established their position mainly in territories under Būyid, Fāṭimid and Saldjūḳ rule.

The degree of power exercised by the *ra'īs* was dependent on the weakness or strength of the political authorities. Just as, if not more, important were groups of the local population who lent support to the *ra'īs*. Most famous were native-born, non-professional militias of "young men", the *aḥdāt͟h* [*q.v.*], as they were called in Syria and the Djazīra, and the *fityān* [see FATĀ] or *ʿayyārūn* [see ʿAYYĀR], in ʿIrāḳ and Persia. Together with such popular elements, the *ra'īs*, himself as a rule of local origin, constituted a dynamic force of urban self-representation vis-à-vis the central rulers, usually foreigners. This situation was most evident in Syrian cities, in Damascus more than in Aleppo, when the *ra'īs* succeeded in transforming "classical" government offices, such as that of the police (*s͟hurṭa* [*q.v.*]), the supervision of the market and public order (*ḥisba* [*q.v.*]), and the vizierate (*wizāra* [*q.v.*]), into local self-representative institutions. Things evolved so far that the *ru'asā'* complemented or even replaced the official rulers and their garrisons. In time, they became institutionalised collaborators within the régimes. By forcing the authorities to recognise the *ra'īs al-aḥdāt͟h* as the *ra'īs al-balad* ("mayor of the city"), symbolised through the grant of robes of honour [see K͟HILʿA] and estates, the latter rose to a semi-official position. Competition or even cooperation between the *ra'īs* and the central government became more frequent than resistance by local leaders against foreign rule (which earlier had been the case when the *ra'īs* was only leader of the *aḥdāt͟h*). An illustrative example of this new arrangement of power was the appointment of several *ru'asā'* in Damascus to the office of vizier. Another was the political and military cooperation against common enemies from outside. With the increase of functions attributed to or gained by the *ra'īs*, some cities established hereditary dynasties of *ru'asā'*, comparable with the dynasties of *ḳāḍīs* [*q.v.*] in Syrian coastal cities (Tyre, Tripoli) at that time, but lacking in their degree of "urban independence". Concerning the social origin of the *ru'asā'*, it seems that some of them came from a low social milieu, even from rural background. This holds true for those *ru'asā'* who did not acquire official recognition through the rulers. On the other hand, most *ru'asā'* obviously were members of wealthy families—a fact which also may have eased their access to a semi-official position.

After the middle of the 6th/12th century, the urban office of the *ra'īs* started to experience a gradual, but irresistible decline. Due to a new policy of centralising rule by the Saldjūḳids and their successors, who installed military commanders (*s͟hiḥna* [*q.v.*]) at the head of each city, the *ra'īs* was doomed to political insignificance. Military, political, and administrative functions were now exercised by the *s͟hiḥna*, and the control of the urban economy was returned to the classical holder of this office, the *muḥtasib*. The *ra'īs* as mayor of the city became much more rarely mentioned by the sources, only to disappear from them altogether during the second half of the 7th/13th century.

With regard to ʿIrāḳ and also Persia, many cities also had a *ra'īs* who appears sometimes to have been the *ra'īs* of the *fityān* or *ʿayyārūn* in his place. Parallels to conditions in Syria are existent, but just as important are dissimilarities which also must be seriously taken into consideration, if one wants to understand the varieties of the institutional history of Islamic cities.

(A. Havemann)

2. In the sense of "mayor" in the Eastern Islamic lands.

Here, as in the lands further west also, the *riyāsa* was an office that was of concern to both the state and to the urban bourgeoisie and notables what Bulliet has styled, with regard to Nīshāpūr, the patriciate although the actual functions of a *raʾīs* are less easy to pinpoint than those of e.g. the *khaṭīb* and the *ḳāḍī*, who were in a similar, dual position as state nominees and as socially significant members of the local *aʿyān* or notables. In general, the *ruʾasāʾ* of the 4th-5th/10th-11th centuries seem to have been prominent in those towns which did not form normally the residences or courts of rulers; thus they are seldom mentioned for Shīrāz and Rayy in the Būyid and Saldjūḳ periods or for Bukhārā under the Sāmānids, although under the Būyids, the *ruʾasāʾ* of quite small towns in provinces like rural Fārs and Gurgān could play significant political roles (see R.P. Mottahedeh, *Loyalty and leadership in an early Islamic society*, Princeton 1980, 150-3).

In Khurāsān, the position of the *ruʾasāʾ* of Nīshāpūr is quite well known to us because of the plethora of biographical information on its scholars and notables. One of the greatest of Nīshāpūr families, the Mīkālīs [*q.v.*], who were the confidantes of and diplomatic representatives for princes, held the office there for most of the Sāmānid period and that of the Ghaznawids, i.e. till *ca.* 431/1040, interspersed with members of the Ḥanafī Ṣāʿidī family and one Ibn Rāmish, equally from top Nīshāpūr families. From the pages of the Ghaznawid historian Abu 'l-Faḍl Bayhaḳī, it emerges that, during Sultan Masʿūd's reign at least, when firm control over Khurāsān in the face of the Turkmen incursions was vital to the ruler, the state nominated or at least approved the *raʾīs* and marked him out by the award of official robes, a fine horse, etc., the *raʾīs* being then responsible to the central government for the town's internal security and taxation (see Bosworth, *The Ghaznavids*, 180 ff., 184-5; R.W. Bulliet, *The patricians of Nishapur. A study in medieval Islamic social history*, Camb., Mass. 1972, 66-8).

In Saldjūḳ times, the central government certainly appointed the *raʾīs* on some occasions, e.g. the vizier Niẓām al-Mulk [*q.v.*] appointed to Nīshāpūr an outsider from Marw al-Rūdh, Abū ʿAlī Ḥassān al-Manīʿī, as *shaykh al-Islām* and *raʾīs* of the town, intending to use him as the agent for favouring Ashʿarī theology and Shāfiʿī law there, with Abū ʿAlī holding office there *ca.* 465-82/1073-89; but after al-Manīʿī's death, the office of *shaykh al-Islām* reverted to a member of the Ṣāʿidī family, a former persecutor of the Ashʿarīs in Nīshāpūr (Bulliet, *op. cit.*, 45, 52 n. 13, 66, 68, 74, 170). During the 6th/12th century, the Saldjūḳ sultans continued to nominate *ruʾasāʾ* for the larger towns, although in the smaller ones, the *ruʾasāʾ* tended to emerge from the local urban notables without any outside interference. We possess the texts of various administrative documents nominating these heads of towns or regions, such as that for Tādj al-Dīn Abu 'l-Makārim Aḥmad as *raʾīs* over Māzandarān, Gurgān and Dihistān during Sandjar's reign, in which Tādj al-Dīn is granted by the sultan's *dīwān* full civil powers over the populations there and is invested with splendid insignia of office consonant with the exaltedness of his office. As before, the *raʾīs*, whether appointed by an outside ruling body or not, was not simply a salaried official of the state but the representative of his town and its interests *vis-à-vis* the provincial or central government, above all, over questions of the taxation due from the town, and he could report back to the sultan's *dīwān* if any of the state officials were grossly abusing their power locally. The *raʾīs* seems often to have had an office or *dīwān* of his own and to have been paid for his official duties by dues (*rusūm*) levied locally; but most *ruʾasāʾ* were men of substance anyway (see A.K.S. Lambton, in *Camb. hist. of Iran*, v, 251-2; eadem, *The administration of Sanjar's empire as illustrated in the* ʿAtabat al-kataba, in *BSOAS*, xx [1957], 383-7; H. Horst, *Die Staatsverwaltung der Großselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 53-6 and index s.nn. *raʾīs, riyāsat*).

The *raʾīs* recedes from mention in the history of the Persian lands by the time of the Mongol invasions, but it should be noted that the Āl-i Burhān, the line of Ḥanafī *ruʾasāʾ* in the Transoxanian city of Bukhārā, held hereditary office there from the mid-6th/12th century well into the middle years of the 7th/13th one, with the additional title, expressive of their religious leadership also in the city, of *ṣadr al-ṣudūr* [*q.v.*] or *ṣadr-i djahān* (see Bosworth, *EIr* art. *Āl-e Borhān*).

Within Persia, during Aḳ Ḳoyunlu, Ṣafawid and subsequent times, up to the 19th century, many of the functions of the earlier *raʾīs* were assumed, as the link between the central government and the taxpayers, by the headman of a town or district, who was then known as the *kalāntar* [*q.v.*], although the parallels are not completely exact.

3. In the sense of "sea captain".

Here *raʾīs*, in Turkish *reʾīs*, with its derivation from *raʾs* "head", followed the same semantic process as "captain" from *caput* "head", and came to mean "ship's captain" in Ottoman Turkish. The names of most major figures of the empire's naval history from the 15th and 16th centuries are followed by this epithet: Kemāl Reʾīs, Pīrī Reʾīs, Selmān Reʾīs, Seyyidī ʿAlī Reʾīs, Turghut Reʾīs [*q.vv.*]. Towards the end of the 16th century, further nuances appeared. In the imperial navy, *reʾīs* began to be restricted to captains of single units, while *ḳapudan* or *ḳaptan* was applied to those who commanded actual fleets (see ḲAPUDAN PASHA). Meanwhile, in the semi-independent *beylerbeyilik* of Algiers [see AL-DJAZĀʾIR], the term became associated with commanders of corsair ships (the *ṭāʾifa* of the *ruʾasāʾ*), an institution that vied with the Turkish *odjaḳs* of Janissaries or their offspring (the *ḳul-oghlus* [*q.v.*]) for political power. In modern Turkish, the word, spelt *reis*, means "captain of a small merchant vessel, skipper; able-bodied seaman" (*Redhouse Yeni türkçe-ingilizce sözlük*, Istanbul 1974, 953). For the completely different usage in Ottoman bureaucracy, see REʾĪS ÜL-KÜTTAB.

Bibliography: İ.H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 432 and *passim*; Kātib Čelebi, *Tuḥfat ul-kibār fī esfār il-biḥār*, Istanbul 1329, *passim*. (S. Soucek)

RAʿIYYA (A.), pl. *raʿāyā*, literally "pasturing herd of cattle, sheep, etc.", a term which in later Islam came to designate the mass of subjects, the tax-paying common people, as opposed to the ruling military and learned classes.

1. In the mediaeval Islamic world.

Ḳurʾānic use of the verb *raʿā* and its derivatives

covers the two semantic fields of "to pasture flocks" (e.g. XX, 56/54; XXVIII, 23) and "to tend, look after someone's interests" (e.g. XXIII, 8; LVII, 27; LXX, 32). Since other Near Eastern religions and cultures have evolved the image of the ruler, in both a theocratic and a secular sense, as the shepherd superintending his flock, sc. the subjects (the obvious example being that of Christianity with Jesus as the Good Shepherd), it is not surprising that Islam evolved similar ideas. In the later developments of the personality and role of Muḥammad—developments which were in many cases influenced by the figure of Christ, his characteristics and his miracles, in Eastern Christianity—the Prophet is said by the Ḳāḍī ʿIyāḍ al-Yaḥṣubī (d. 544/1149 [*q.v.*]) to have been awarded the epithets *al-raʾūf* "the kindly one" and *al-raḥīm* "the merciful one" by God from amongst His own Most Beautiful Names [see AL-ASMĀʾ AL-ḤUSNĀ] (*al-Shifāʾ bi-taʿrīf ḥuḳūḳ al-Muṣṭafā*, cited in T. Andrae, *Die Person Muhammeds in Lehre und Glauben seiner Gemeinde*, Upsala 1917, 254), and he is described by the mystic Muḥammad b. ʿAlī al-Ḥakīm al-Tirmidhī (*flor.* later 3rd/9th and early 4th/10th centuries, see Brockelmann, I², 216, S I, 355-7, and Sezgin, i, 653-9) as the shepherd of mankind, whose sheep the latter are: he guides them in the right way, gives them pure water, provides them with winter and summer pasture, keeps them from the dangerous places, cares for the newly-born lambs, etc. (*Nawādir al-uṣūl fī maʿrifat akhbār al-rasūl*, cited in Andrae, *op. cit.*, 254-5).

Both the image from Islamic ethics of the secular ruler (as opposed to the Prophet) as *rāʿī* "shepherd" and that of his subjects as *raʿiyya* "flock" appear in the manuals of constitutional law and the "mirrors for princes" literature [see NAṢĪḤAT AL-MULŪK]. But there further developed, in the eastern Islamic world in particular, the additional concept—foreign to the emphases of early Islam on piety and worthiness of God's grace as ideally determining the conduct of worldly affairs—that the *raʿiyya* were the lowest stratum of a hierarchical social structure, the taxable classes of traders and cultivators, whilst above them were the ruling military and civilian classes, the *ahl al-sayf wa 'l-ḳalam*. The roots of this conception probably lay in Sāsānid Persia, where society had been divided into the military aristocracy; the secretaries; the Zoroastrian clergy; and finally, the peasants, artisans and merchants, who paid taxes. Certainly, the duties of treating the *raʿiyya* with benevolence and equity are stressed in the mirrors and in other sententious and moralising literature. Thus ch. 5 of Niẓām al-Mulk's [*q.v.*] *Siyāsat-nāma* deals with the holders of land grants, *muḳṭaʿān*, and the need for their enquiring into the condition of the *raʿāyā*; and solicitude for the interests of the taxpayers who financed the armies and administration of the Mongol Il-Khāns is expressed by Rashīd al-Dīn [*q.v.*] in the maxim "there are no *raʿiyyat* if there is no justice."

But the ethical aspect of the ruler-subject relationship, the ruler's duty to further agriculture and trade and the prosperity of the cultivators and artisans, tended to fall into the background in the face of relentless financial exigencies in which the duties of the docile taxpayers were emphasised but not the reciprocal duties of the rulers. The lot of the peasantry in particular deteriorated in the Saldjūḳ and Mongol periods, not least from the incessant warfare in the lands stretching from northern Syria to Transoxania and from the alienation of much land to feudatories, with a consequent loss of direct control by the ruler [see IḲṬĀʿ]. Although legally free in status, their freedom was in practice a fiction, and they were oppressed and ill-treated, liable e.g. for forced labour (*bīgārī, ḥashar*); for housing and feeding officials, messengers, soldiers, etc. and their staffs (*nuzūl*); and for providing mounts for the postal courier service (*olagh*). These requirements had, of course, existed before, but they became much more onerous in the central and eastern lands of Islam from the 5th/12th century onwards (see A.K.S. Lambton, *Landlord and peasant in Persia*, London 1953, chs. II-IV; I.P. Petrushevsky, in *Camb. hist. of Iran*, v, 492-4, 515, 527 ff.; 535-7; B. Fragner, in *ibid.*, vi, ch. 9).

Hence it was during these times that the word *raʿiyya* became narrowed down in the eastern lands to its present meaning in Persia, sc. that of "peasantry" pure and simple, and this meaning was carried into Indo-Muslim society, yielding the Anglo-Indian term *ryot* = "farmer, cultivator" (see *Hobson-Jobson, a glossary of Anglo-Indian words and phrases*, new ed. London 1903, 777). *Raʿiyya* also tended increasingly, in the central and eastern Islamic lands of the later mediaeval period, to have the connotation of "those classes in society who were not allowed to bear arms", and this usage passed into Ottoman official terminology, for which see section 2. below.

2. In the Ottoman empire.

Here, the plural *reʿāyā* was commonly used. In the Ottoman context down to and including the 12th/18th century, the term denotes the tax-paying subject population as opposed to the servitors of the Ottoman state (*ʿaskerīs*). The *reʿāyā* paid taxes and possessed few opportunities for legitimate political activity. From the 12th/18th century onwards, the term is increasingly used for the Christian taxpayers only; 13th/19th century population counts distinguish between *reʿāyā* and Islām; all statements in the present context refer to members of the subject population regardless of religion. In the 9th/15th and 10th/16th centuries, *reʿāyā* status was proven by showing that the person in question or his father had been recorded in the Ottoman tax registers as one of the *reʿāyā*. In later periods, the evidence of witnesses was regarded as decisive.

Reʿāyā *and* ʿaskerīs: *boundaries and boundary crossing.*

Exemption from certain taxes, particularly the *ʿawāriḍ-i dīwāniyye* [*q.v.*], were quite readily granted to *reʿāyā* performing special services to the Ottoman state, such as the guarding of dangerous passes, the repairing of bridges or auxiliary services to the military. Down to the 10th/16th century, *reʿāyā* soldiers formed special corps in the Ottoman army, known as *yaya* and *müsellem* [*q.v.*]. Certain members of those corps performed military service, while others engaged in agriculture on special landholdings (*čiftliks* [*q.v.*]) to finance their fellows' campaign expenses. Detribalised nomads in the Balkans (*yürüks* [*q.v.*]) also were originally employed as soldiers. But from the late 10th/16th century onwards, the *yaya* and *müsellem* corps were abolished and their members demoted to the status of ordinary peasants, while the *yürüks* increasingly were confined to guard duties. In principle, tax exemptions for special services did not place a *reʿāyā* classified as *muʿāf* (or *muʿāf we müsellem*) in the *ʿaskerī* category. However, certain *reʿāyā* doubtlessly used tax-exempt status as an opportunity to claim the privileges of the ruling group.

From the point of view of established *ʿaskerīs*, people born as *reʿāyā* could only under very specific conditions legitimately abandon their station. The study of religious law and subsequent careers as *ḳāḍī*, *müftī* and *müderris* were open to all Muslims. While

minor mosque personnel often were reconsidered *ᶜaskerī* only for the duration of their appointments, the higher ranks of the *ᶜilmiyye* [*q.v.*] permanently left their subject status behind. More problematic was the position of *zāwiyedārs* in charge of the numerous Ottoman dervish convents; in the 9th/15th and 10th/16th centuries, they could sometimes claim *ᶜaskerī* status by default, if able to demonstrate that in the contemporary tax registers they had not been recorded as *raᶜiyyet*. Dervishes suspected of heterodoxy were occasionally reclassified as *reᶜāyā* by way of punishment. Down to the 11th/17th century, the levy of boys (*dewshirme* [*q.v.*]) normally permitted the young men thus recruited unchallenged entry into the Ottoman ruling group, provided they survived the often arduous training period. In later centuries, it was possible to enter the ranks of the *ᶜaskerīs* by service in the household of a high official. In particular, the sultan could move the young men he called into his service from their humble status as *reᶜāyā* to a position of power. More problematic was the status of mercenaries of *reᶜāyā* background who were awarded *tımārs* [*q.v.*] for service on the frontiers. Such promotions occured, for instance during the Hapsburg-Ottoman "Long War" (1001-15/1593-1606), but the beneficiaries might find their status challenged at a later time.

ᶜAskerīs could frequently count upon support from the Ottoman sultans in their attempts to limit upward mobility on the part of the *reᶜāyā*. In the later 10th/16th and throughout the 11th/17th century, the *reᶜāyā* best placed to wage a struggle for *ᶜaskerī* privileges were the musket-armed mercenaries who now constituted the bulk of Ottoman armed forces on the Hapsburg and Persian frontiers. Time and again, the attempts of these former peasants turned mercenaries to obtain the regular pay and privileges of Janissaries and other regular military corps resulted in full-scale civil war. The authorities armed peasant militias (*il erleri*) against the rebellious mercenaries, and in extreme cases mobilised militias over entire provinces (*nefīr-i ᶜāmm* [see NEFĪR]). Some mercenaries of *reᶜāyā* background doubtlessly gained admission to the *ᶜaskerī* class in the course of this unrest, but most were unable to shake off their subject status.

From the 11th/17th century onwards, merchants and craftsmen increasingly protected themselves from unforeseeable demands for supplementary taxes by joining the Janissary and other military corps of the major cities. By paying fixed dues to the corps to which they adhered, the Muslim merchants and artisans of *reᶜāyā* origins became pro-forma soldiers and joined the lowest ranks of the *ᶜaskerīs*. This process has been particularly well studied in the case of Cairo, where it was virtually completed by the middle of the 12th/18th century.

Competition for economic resources.

The *reᶜāyā* constituted a political and not an economic category. In terms of economic activity, this group was extremely diverse; town dwellers, nomads and peasants all counted as *reᶜāyā*. Disparities of wealth were equally great. While rich merchants of *reᶜāyā* status were active in 9th/15th century Bursa or 10th-11th/16th-17th century Aleppo and Cairo, the majority of *reᶜāyā* were peasants of modest income, who, from the evidence of their estate inventories, must have reproduced their families with great difficulty. Moreover, in the 9th/15th and 10th/16th centuries substantial merchants of *reᶜāyā* status could not compare in wealth with even quite modest *ᶜaskerīs*.

In principle, *reᶜāyā* were able to transfer their wealth to their descendants, while the inheritances of *ᶜaskerīs* were largely confiscated. However, debts to the fisc, incurred particularly by tax farmers, led to the confiscation (*müṣādere* [see MUṢĀDARA]) of *reᶜāyā* estates as well. Heirless estates reverted to the state; the right to collect these properties was often farmed out and sometimes gave rise to major abuses. Toward the end of the 12th/18th century, previous rules concerning *müṣādere* were frequently disregarded, as the central administration confiscated the estates of wealthy *reᶜāyā* in an effort to raise cash.

The competition between *reᶜāyā* and *ᶜaskerīs* for the control of economic resources constitutes an important aspect of Ottoman commercial history. While substantial merchants of *reᶜāyā* status engaged both in internal and external trade, governors and other important officials had the grains, cottons and other products of their *khāṣṣ* [*q.v.*] marketed, and gained economic advantage from their political position. Ottoman officials sometimes also used their political power to make loans to peasants, or to market peasant produce. After the institution of the *mālikāne* [*q.v.*] (life-time tax form) in 1106/1695, *ᶜaskerīs* gained a further advantage over their *reᶜāyā* competitors, as the latter were barred from direct access to this form of investment. The attempts of Christian *reᶜāyā* merchants to gain tax-exempt status by association with European consulates thus may be seen as a move in their challenge to the economic supremacy of the *ᶜaskerīs*.

The Ottoman system of taxation depended upon the marketing of peasant produce. Peasants were obliged to carry the *timār* holders' grain to the nearest market, while tax farmers supplied provincial towns and thereby remitted to the central administration in money taxes which they had collected in kind. In the 9th/15th century, low-level administrative districts (*ḳaḍāʾ*) generally possessed a single market; but by the end of the 10th/16th century, markets in villages, and in some areas even in the open countryside, multiplied. In Thessaly and Thrace during the same period, minor local fairs developed into centres for inter-regional and at times even international exchange. Pious foundations profited by this upsurge of rural trade by providing shops and booths and by collecting rents in return. From the later 10th/16th century onwards, peasants also made money by selling, often illegally, grain, cotton or raw silk to European merchants.

However, the profits from this trade were not for the most part retained by the peasantry but collected by the central government or local administrators in the shape of taxes or interest on loans. In addition, a 10th/16th century peasant paid at least 15% and up to 50% of his gains from agriculture in the form of tithes and other taxes; this percentage does not include the money which he needed to set aside for dues such as *ᶜawāriḍ* and *sürsat*, whose level was not predetermined as it depended on the demands of current campaigns. When comparing the estates of peasants and townsmen from one and the same area, the substantially lower standard of living in the villages immediately strikes the eye. (On farming and peasant tenure, see ᶜOTHMĀNLĪ. II. Social and economic history.)

Peasant reᶜāyā *and local government.*

Most Ottoman peasants ran their smallholdings independently, with minimal involvement on the part of *tımār* holders and other tax grantees. But since the tax registers specified that taxes in kind were levied on specific crops, and the taxes were assessed on the village as a whole, the pressure to conform to locally established crop patterns was very strong. This situation did not, however, preclude changes in response to

market conditions. The expansion of a town or city encouraged the conversion of fields into gardens and vineyards, and from the 11th/17th century onwards the villages surrounding Bursa switched over to mulberry orchards and silk cultivation.

Disputes between peasants and local administrators focussed on taxes and the manner of their collection. Frequent tours of inspection on the part of governors, accompanied by numerous armed men, resulted in spoliation of the *reᶜāyā*; concern about peasant flight and erosion of the tax base caused Sultan Murād III to totally prohibit these armed incursions in the 990s/1580s. This prohibition did not last long, but *reᶜāyā* complaints continued to refer to their existence for a much longer time. Monetisation of the economy formed another source of complaints, as tax collectors increasingly demanded payments in coin from peasants whose access to markets remained limited. *Reᶜāyā* at times sought redress of their grievances by complaining to the *Dīwān-i hümāyūn* [*q.v.*] and demanding an official commission in charge of redressing grievances (*me<u>kh</u>āyif müfetti<u>sh</u>i*). At the height of the <u>Dj</u>elālī rebellions [see <u>DJ</u>ALĀLĪ in Suppl.], some villages also built strongholds for use in emergencies. Others fled to neighbouring provinces, the cities or remote areas. The frequent flight of *reᶜāyā* to some degree checked the abuses committed by local administrators, as such events were considered "bad points" in the official's record on the part of the central government. However, financial considerations often induced the latter to allow governors and tax farmers notorious for their oppression of the *reᶜāyā* to go unpunished.

The abolition of reᶜāyā *status*.

With the *<u>Kh</u>aṭṭ-i <u>sh</u>erīf* [*q.v.*] of Gül<u>kh</u>āne, promulgated in 1255/1839, all subjects of the Ottoman sultans were accorded equal rights, and the disappearance of *ᶜaskerī* privileges entailed the abolition of the *reᶜāyā* as a special legal category. However, increasing nationalist and communal rivalries among the inhabitants of the Ottoman Empire and the political, economic and cultural interventions of the various European powers nullified the attempt to create a unified Ottoman citizen body irrespective of social, religious and national differences.

(SURAIYA FAROQHI)

RAKᶜA (A.), literally "the act of bowing, bending", a sequence of utterances and actions performed by the Muslim believer as part of the act of worship or *ṣalāt*, involving utterance of the *takbīr* and *Fātiḥa*, then the bending of the body from an upright position (*rukūᶜ*) and then two prostrations (*su<u>dj</u>ūd*). See further ṢALĀT. (ED.)

AL-**RAḲĀ<u>SH</u>Ī** [see ABĀN B. ᶜABD AL-ḤAMĪD].

RAḲĪB (A.), from a root signifying "to guard", "to wait", "to observe, watch over", is one of the names of God, with the sense of "guardian, vigilant one who knows everything that takes place", but it is especially familiar as a term in Arabic love poetry, *<u>gh</u>azal* [*q.v.*], where it denotes the person who, by watching or simply being present, prevents the lovers from communicating with each other. The character first appears in the amorous poetry of the Umayyad period (B. Blachère, *Les principaux thèmes de la poésie érotique au siècle des Umayyades de Damas*, in *AIEO*, v [1934-41], 82-128 = *Analecta*, Damascus 1975, 333-78), in particular, in the poetry which Blachère (*Histoire de la littérature arabe des origines à la fin du XV^e de J.-C.*, iii, 620 ff.) calls "of Ḥi<u>dj</u>āzian spirit", in company with other enemies of lovers, such as the *kā<u>sh</u>iḥ*, "secret, spiteful enemy", the *wā<u>sh</u>ī*, "slanderer" and the *ᶜā<u>dh</u>il*, "censorious person", who, in the poems of ᶜUmar b. Abī Rabīᶜa [*q.v.*], appear to make reference to real individuals (Ibn Abī ᶜAtīḳ [*q.v.*], for example), but who, very soon, become fictional characters inhabiting the world of the lovers.

In this early period, the figure of the *raḳīb* appears relatively infrequently (it does not appear in the *dīwān* of <u>Dj</u>amīl al-ᶜU<u>dh</u>rī [*q.v.*]), in comparison with that of the *kā<u>sh</u>iḥ* and especially that of the *wā<u>sh</u>ī*. The same applies to the poetry of al-ᶜAbbās b. al-Aḥnaf (d. 193/808 [*q.v.*]) but, in the course of the 3rd/9th century, through the influence, perhaps, of amorous narratives and the romanticised biographies of love poets, the *raḳīb* becomes one of the principal obstacles to the union of the lovers. He appears as such in the treatises on love written by the Arabs, in particular in the work of those authors who are more interested in the psychology of love or in the situations in which lovers find themselves (Ibn Dāwūd, Ibn Ḥazm and Ibn Abī Ḥa<u>dj</u>ala [*q.vv.*]), than in the ethical problems posed by unrestrained love. Ibn Ḥazm, who devotes three chapters of the *Ṭawḳ al-ḥamāma* to the *ᶜā<u>dh</u>il*, the *wā<u>sh</u>ī* and the *raḳīb*, classifies the last-mentioned according to three categories: the unwelcome, but not malevolent witness to the meeting of the lovers; the curious who seeks to discover, by observing the lovers, whether his suspicions are justified; the guardian charged with watching over the loved one—this last being, in his opinion, the one about whom the poets complain. The similarity between this type of

raḳīb and the *gardador*, or between the *wās͟hī* and the *lauzengier*, in the poetry of the troubadours, constitutes one of the arguments in favour of establishing links between Hispano-Arab and Provençal poetry (R. Menéndez Pidal, *Poesia árabe y poesía europea*, Madrid 1941; A.R. Nykl, *Hispano-Arabic poetry and its relations with the old Provençal Troubadours*, Baltimore 1946, 371 ff.; R. Boase, *The origin and meaning of courtly love. A critical study of European scholarship*, Manchester 1977).

The *raḳīb* appears quite frequently in the poetry of al-Andalus (H. Pérès, *La poésie andalouse en arabe classique au XI^e siècle*, Paris 1953, 417-20). With the *wās͟hī* and the *ʿād͟hil*, he is the subject of a brief monograph by the later poet Ibn K͟hātima [*q.v.*] (S. Gibert, *Un tratadito de Ibn Jātima sobre los enemigos de los amantes (Notas sobre el ms. 5974 de la B.N. de Paris)*, in *Al-Andalus*, xviii [1953], 1-16). Predictably, this theme of amorous poetry plays a significant role in the *muwas͟h-s͟haḥāt* (A. Jones, *OCCAM. Computer-based study of the Muwaššaḥ and the K͟harja*, in F. Corriente and A. Sáenz-Badillos (eds.), *Poesía estrófica. Actas del Primer Congreso Internacional sobre Poesía Estrófica Árabe y Hebrea y sus Paralelos Romances (Madrid, diciembre de 1989)*, Madrid, Facultad de Filologia, UCM-ICMA, 1991, 187-200, Appendix A), and is even introduced into the *k͟hard̲j̲as* in Hispanic vernacular (E. García Gómez, *Las jarchas romances de la serie árabe en su marco*, Madrid 1965, nos. IV, XXVIII).

(Teresa Garulo)

RĀḲID (a.) "the sleeping child". This term (in Mag͟hribī dialects, *rāged* or *bū mergūd*) is used to indicate a foetus which is considered to have stopped its development, continuing to stay in the womb in an unchanged condition for an indefinite period of time, after which it may "wake up" again and resume its development until it is born. The "falling asleep" and "waking up" may either take place spontaneously or (at least in the Mag͟hrib) be induced by a religious scholar (*fḳīh*) or by a midwife (*ḳābla*) with the help of charms (a written charm to that effect is found in ms. Leiden Or. 14048, B2 fol. 12b) and herbs (see Gaudry, *Société féminine*, 370).

This belief is firmly rooted in Islamic culture as far back as the earliest Islamic times, and has been incorporated in the legal systems of the four leading *mad͟hāhib*. Some famous cases are mentioned by Ibn Ḳutayba (*K. al-Maʿārif*, Cairo 1960, 594-5), among them Mālik b. Anas, the founder of the Mālikī law school; by Mālik himself (*Muwaṭṭaʾ*, Cairo 1951, 740, = *K. al-Aḳḍiya*, no. 21), where a case is discussed that dates back to D̲j̲āhiliyya days; and by ʿArīb b. Saʿīd al-Ḳurṭubī, *K͟halḳ al-d̲j̲anīn*, 32. The latter text, which is of a medical nature, also illustrates the fact that Islamic physicians were little inclined to include the idea of the *rāḳid* in their theoretical considerations; they took their ideas from the Greek rather than from the ancient Arabian tradition, which implied that the eleven-month pregnancies sometimes allowed for by Hippocrates were the maximum that they were prepared to consider.

From early Islamic times onwards, jurists have disagreed about the possible duration of the prolonged pregnancy; some saw two years as a maximum, but according to others it could last much longer. Even in the midst of the 20th century, Libyan Courts of Appeal were prepared to accept pregnancies of up to twelve years, as A. Layish's research into the practice of Libyan *S͟harīʿa* courts (which have yielded a number of cases of children legally born after prolonged pregnancies) has shown (*Divorce in the Libyan family*, New York etc. 1991, 161). Recent law reforms in Muslim countries have generally abolished the practice and have put the maximum duration of pregnancy at one year, although sometimes allowing for extension, as for instance in the Moroccan Civil Code of 1958, the *Mudawwana* (arts. 76, 84).

Although the idea of the *rāḳid* is accepted by all four Sunnī law schools, it seems to have taken root mainly under Mālikī law, especially in North Africa, where until very recent times it was firmly incorporated into the social system, thus creating a device to protect women as well as children against the sanctions attached to pregnancies and births out of wedlock: a *rāḳid* might be born legally long after its parents' marriage had come to an end by death or divorce. At the same time, the system offered barren wives an escape from the odium of infertility and the practical and psychological consequences attached to it, such as depression, loss of social status and repudiation.

al-**RAḲĪM** [see aṣḥāb al-kahf].

RAḲḲ, Riḳḳ (a.), parchment.

1. History of the use of parchment in the Islamic world.

Raḳḳ is the term employed by the Arabs to denote parchment, alongside certain other terms used in a less specific manner, such as *ḳirṭās* [*q.v.*] (from the Greek χάρτης, through the intermediary of Aramaic) denoting papyrus, a sheet of papyrus or even a scroll of papyrus; *waraḳ*, which was later to be reserved for paper; and *d̲j̲ild* [*q.v.*] (leather). Furthermore, all these words occur from time to time, in reference to the early years of Islam, to denote writing materials in general, whereas *bardī* or *waraḳ al-bardī* was the particular term for papyrus [see papyrus] and *raḳḳ* the particular term for parchment. The latter is derived from the verb *raḳḳa* "to be thin, fine" (hence the explanatory terms observed at a later stage, such as *d̲j̲ild raḳīḳ*, or "fine leather"). Parchment (on the subject of which Grohmann wrote a very fine article, see *Bibl.*) was fashioned initially, in most cases, from the hide of certain animals such as sheep, goats or calves, but sometimes also from the hide of gazelles (see below).

Its usage in Arabia may conceivably be attested from the 5th century A.D., as may be observed in the *Ḳaṣīda* of Ḳudam b. Ḳādim (A.D. 400-80) (on this see Griffini, *Il poemetto*, 352, v. 56), if this is not—as

seems very probable—later ʿAlid or ʿAbbāsid propaganda (Caskel); at a later stage, Ṭarafa speaks of *kirṭās al-Shām*, and Labīd mentions a *ṭirs nāṭik* ("speaking parchment"). *Ṭirs* is a palimpsest, of which only a few exist dating from the Arabic period. Such a fragment is preserved in the papyrological collection of Florence: on the *recto* is a Latin fragment of the Bible, Exodus viii, 16, and on the *verso* an Arabic economic text of the 1st century A.H. (on this, see Vaccari, and on Labīd, see A. von Kremer, *Über die Gedichte des Labîd*, 583).

Before the time of the Arabs, parchment had been in use among the ancient Babylonians, and, in particular, among the Egyptians from the 2nd century B.C., and it was subsequently to become ever more important. The Prophet Muḥammad is said to have used, alongside leather, a very fine variety of parchment for his correspondence; evidence of this is a document allocating territory to the Tamīm tribe, written by ʿAlī and mentioned by Ibn Durayd, *K. al-Ishtiḳāḳ*, ed. Wüstenfeld, 226, n.*b*. The Ḳurʾān itself (LII, 2-3) declares that it is written on *raḳḳ manshūr* ("unfolded parchment"). It is known that certain fragments (*riḳāʿ*), containing what the Prophet left behind, must have contained verses of the Ḳurʾān, some of them written on parchment (cf. al-Suyūṭī, *Itḳān*, 137, ll. 11-13; idem, *Muḳaddimatān*, i, 36, l. 22; 49, l. 8; L. Marraccius, *Prodromus*, i, 257; A. Sprenger, *Das Leben*, iii, 39); the corpus of the Holy Book of Islam, the assembly of which was undertaken by Zayd b. Thābit, must have been written on parchment, *waraḳ* (on this, see Sprenger, *ibid.*, iii, 40; al-Suyūṭī, *Itḳān*, 138, l. 3); the ancient sections of the Ḳurʾān which have survived provide convincing evidence of this (see e.g. the Vienna collection, published by Loebenstein).

This tradition was continued under the Rightly-Guided Caliphs, as is noted by Ibn Khaldūn (see *Muḳaddima*, index; cf. Karabacek, *MPER*, ii/3, 1887, 119), since by this means their correspondence, their instructions and their edicts had a more artistic and attractive appearance, and were better assured of long-term survival; furthermore, use of this material added to the renown of the scribes.

In the Umayyad period, the situation was unchanged (see e.g. Abu 'l-Faradj al-Iṣfahānī, *Aghānī*, xvi, 111, ll. 3-5, where the subject is the biography of the poet Dhu 'l-Rumma). Furthermore, the caliph Muʿāwiya personally instructed the officials of his administration to use parchment, in order to underline the importance of the edicts emanating from it (see Quatremère, tr. of Rashīd al-Dīn, *Histoire des Mongols de la Perse*, Paris 1836, i, 134; Karabacek, *MPER*, ii/3, 1887, 152). It would, moreover, be surprising if sections of the *Akhbār* of ʿAbīd/ʿUbayd b. Sharya, lively tales related to this caliph in Damascus and put into writing by order of the same sovereign, were not written, at least in part, on parchment, in view of the high regard in which Muʿāwiya held them, particularly admiring their innumerable verses (see, on this subject, R.G. Khoury, *Kalif, Geschichte und Dichtung*, 214-15).

Even in the early years of the ʿAbbāsid caliphate, parchment continued to be used, albeit alongside papyrus, the use of which was dominant, and paper, the use of which was becoming ever more widespread but which did not command, at the outset, the same degree of acceptance. Ibn Ḥanbal himself, when asked which method of writing he preferred, replied, "A pen of reed, shining ink and fine hide" (al-Manūfī, *Laṭāʾif*, fol. 100a); this is definitely a reference to parchment, this being the meaning of *djild raḳīḳ*, which is the expression used in this phrase; the lexicographer al-Djawharī, *Ṣiḥāḥ*, ii, 85, 28 f., provides testimony in support of the use of these two words. And when the *dīwāns* were ransacked, under Muḥammad b. Zubayda, the caliph al-Amīn [*q.v.*], the parchments taken from them, from which the texts had been obliterated, were re-used as writing materials (*ṭirs*). At Kūfa and Edessa (al-Ruhā [*q.v.*]), parchment of the finest quality was produced. But as paper progressively gained acceptance in administrative circles, the use of parchment declined, before coming to a definitive end. In the 11th and 12th centuries A.D. it was still being used alongside paper (see *ʿUmdat al-kuttāb*, Codex gothanus 1357, fol. 11b).

In al-Andalus, as late as the time of al-Muḳaddasī, who composed his work after 373/985, parchment was still being used for all copies of the Ḳurʾān and books of accounts (*Aḥsan al-taḳāsīm*, 239). As for the Maghrib, the situation there was the same, as has been proved by the discovery of hundreds of literary codices on parchment in the mosque of Sīdī ʿUḳba at Ḳayrawān (see G. Marçais *et alii, Objets kairouanais*). Recent discoveries in the Great Mosque of Ṣanʿāʾ also confirm this well-established tradition.

Besides the other types of hide described above, the fine hide of gazelles was also used for the making of parchment, especially for copies of the Ḳurʾān, as is attested by codices preserved e.g. in Cairo (see *Fihrist al-kutub al-ʿarabiyya*, i, 2; Ahmed Moussa, *Zur Geschichte der islamischen Buchmalerei*, 45-6; Muḥammad Ṭāhir al-Makkī al-Khaṭṭāṭ, 81) or in Medina (Spies, 102-3). Furthermore, in the various collections of papyrus, which contain not only documents on papyrus but also texts written on hide and all other kinds of ancient material, striking examples of all types of parchment are to be found (see A. Grohmann, *Einführung*, 3; Khoury, art. *Papyrus* in *EI²*; *Chrestomathie*, 7).

Initially, it was usually the *recto*, this being the smoother surface, which was written on; when space was insufficient, the *verso* was used. Judicial documents were often bound up with a strip of leather or a thread of some kind. The dimensions of parchments vary between 85.2 × 82 cm (see P. Lond. B.M. Or. 4684/III) and 4.8 × 1.8 cm (see *PER Inv. Perg. Ar.*, 53). Some of the Vienna fragments are saffron coloured and there is no way of knowing whether the material has been dyed or if this is merely the effect of long-term storage. On the other hand, there is at least one undisputed example of the use of blue dye: this is a leaf which belonged to a Ḳurʾānic manuscript of Mashhad (Persia) datable to the 2nd/8th century. In addition, manuscripts on purple parchment are well known among mediaeval Latin documents.

The earliest known and datable Arabic parchment is a fragment which Ernst Kühnel saw in the possession of a German consul in Luxor, of which neither Grohmann, during his stay in Egypt, nor the writer of this article, have succeeded in finding any trace. The most recent is from the year 498/1105 (P. Berol. 9160). Naturally, these observations apply to known parchments; it is possible that there are others which will come to light in the future, either in private collections or in the unclassified stocks of certain libraries.

2. The production of parchment and modern knowledge of Islamic parchment.

Parchment was used in the early Islamic period as one of the common durable writing materials for books, chancery documents, letters and registers, the less durable material being papyrus. In Europe, it remained in use till well in the 15th century. In Ethiopia, which may have given Islam the term *muṣḥaf* [*q.v.*], parchment remained in use as a writing material for religious and superstitious texts till well in the 20th century. Although its primary and main use in the Middle East was as a writing material, it was used for other purposes as well. Most notable in this respect is its use in musical instruments and in puppets for shadow plays [see khayāl al-ẓill]. For these uses, parchment may have been made of the skin of other, larger, animals as well.

Parchment is manufactured by cleaning the skin from hair and impurities, by applying lime or certain other preserving materials to it and by then letting it dry under tension, the skin being stretched on a frame. This stretching and the absence of tanning make parchment different from leather. In many parchments it is still possible to discern the flesh side from the hair side, the latter being recognisable from its grained appearance caused by the roots of the hairs. Techniques were developed in mediaeval times visually to diminish this difference as much as possible. This was done either by finely thinning and scrubbing or chafing the skin or by splitting it. The use of the skin of unborn animals also vouches for a soft and minimally hairy appearance of the parchment.

Being of natural origin, parchment had its limit in size determined by the size of the animal it was made of. Many of the large Kurʾānic manuscripts of the early period consist of single or at best double leaves of parchment only. For smaller-sized books, the parchment may have been folded once or twice more, thereby making quarto or octavo arrangements. Depending on whether the first fold was in the length or in the width, the quarto quire resulting from this operation would be oblong shaped or not. The square shape of Maghribī books on parchment may be explained by supposing that the animal-shaped material was first folded two times in the width and then once in the length, whereby a quire of six almost square leaves of moderate size was produced. In the Middle East, Gregory's rule, by which parchment leaves in a quire are so arranged that flesh sides would only face flesh sides and hair sides only hair sides, was as often as not unobserved. This rule apparently did not matter as much in the Middle East as it did in Europe.

The basic tools for a comprehensive study of the Middle Eastern parchment book are lacking. A catalogue of a corpus of parchment codices does not exist. There are a few large collections of parchments books and fragments that together would constitute the main elements of such a corpus. The most important of these are the Kurʾānic fragments in the Bibliothèque Nationale of Paris (a varied collection which served as the source of the typology of the graphics of the early Kurʾān codex as developed by François Déroche); the Nasser D. Khalili collection in London, which contains coloured fragments as well (extensively described by Déroche); the fragments that were discovered in *ca.* 1970 in the Great Mosque of Ṣanʿāʾ and that are now kept in the Dār al-Makhṭūṭāt in Ṣanʿāʾ (studied by G.-H. Puin, H.C. Graf von Bothmer and Ursula Dreibholz; no major description published as yet); and, finally, the Şam Evrakı, the Kurʾānic fragments that were transferred some one hundred years ago from the Umayyad Mosque in Damascus to Istanbul and that are now kept in the Türk ve Islam Eserleri Müzesi in Istanbul (studied by Déroche; no major description published as yet). The library of the Monastery of St. Catherine in Sinai contains an important number of Christian Arabic codices on parchment. It would seem that the use of parchment persisted longer with the Oriental Christians than among Muslims. Parchment of several types has continued to be used for religious reasons by Oriental Jewry till the present day. Their extensive technical literature on the subject is also of relevance to the study of Islamic parchment. Many parchment fragments of the Kurʾān, and to a limited extent also of other Islamic texts, have surfaced since *ca.* 1970 in the international art market, a fact witnessed by their frequent appearance in the auction catalogues of Christie's and Sotheby's of London. Parchment material is present in virtually all larger collections of Middle Eastern manuscripts.

Gacek, *A select bibliography of Arabic language publications concerning Arabic manuscripts*, in *MME*, i (1986), 106-8.

(J.J. Witkam)

al-**RAKKA**, a mediaeval Islamic town on the left bank of the Middle Euphrates, at the junction of its tributary the Nahr al-Balīkh. Today it is the administrative centre of the al-Raḳḳa governorate of the Arab Republic of Syria; in mediaeval Islamic historic topography it was considered to be the capital of Diyār Muḍar [*q.v.*] in al-Djazīra/Northern Mesopotamia.

The origin of settlement on opposite sides of the Nahr al-Balīkh is attested by the Tall Zaydān and the Tall al-Bīʿa, the latter identified with the Babylonian city of Tuttūl (excavated since 1980; reports published in *MDOG*, cxiii [1981] and later). To the south of the Tall al-Bīʿa, on the border of the Euphrates, Seleucus I Nikator (301-281 B.C.) founded the Hellenistic city of Nikephorion, later probably enlarged by Seleucos II Kallinikos (246-226 B.C.) and named Kallinikos/Callinicum after him. Destroyed in A.D. 542 by the Sāsānid Khusraw I Anūshirwān [*q.v.*], the emperor Justinian (527-65) soon after rebuilt the town in the course of an extensive fortification programme at the Byzantine border alongside the Euphrates (on the pre-Islamic city, see the article by M. al-Khalaf and K. Kohlmeyer in *Damaszener Mitteilungen*, ii [1985], 133-62).

The classical city was conquered in 18/639 or 19/640 by the Muslim army under ʿIyāḍ b. Ghanm, who became the first governor of the Djazīra (in this connection, see W.E. Kaegi, *Byzantium and the early Islamic conquests*, Cambridge 1992). Renamed al-Raḳḳa, the Muslim faith was heralded by a congregational mosque, founded by the succeeding governor Saʿīd b. ʿĀmir b. Ḥidhyam, which was subsequently enlarged to monumental dimensions of c. 73 × 108 m. Recorded by the German scholar Ernst Herzfeld in 1907, the mosque, together with the square brick minaret (Pl. XXVI, 1), supposedly a later addition from the mid-4th/10th century, has since vanished completely.

In 36/656 ʿAlī crossed the Euphrates at al-Raḳḳa on his way to Ṣiffīn [*q.v.*], the place of the battle with Muʿāwiya b. Abī Sufyān, the governor of Damascus and founder of the Umayyad dynasty. Located near the village of Abū Hurayra opposite the mediaeval citadel of Ḳalʿat Djaʿbar [*q.v.*] *ca.* 45 km/28 miles west of al-Raḳḳa, the burials of ʿAlī's followers remained venerated places of Shīʿī pilgrimage (listed extensively in al-Harawī's *Kitāb al-Ziyārāt*). The last of those tombs located in the Muslim cemetery on the western fringes of the early Islamic city of al-Raḳḳa, the mausoleum of Uways al-Ḳaranī, recently had to give way to a huge pilgrimage centre. Another witness from the early days of Islam, a stone column supposedly depicting an autograph of ʿAlī from the Mashhad quarter of al-Raḳḳa, was already in the 6th/12th century transferred to Aleppo, where it was incorporated in the Masdjid Ghawth (E. Herzfeld, *CIA*, part ii, Northern Syria, *Inscriptions et monuments d'Alep*, i, Cairo 1955-6, 271-2 no. 142).

Throughout the Umayyad period al-Raḳḳa remained an important fortified stronghold protected by a garrison, occasionally involved in revolts and internal fighting over supremacy in the Djazīra, as described by al-Ṭabarī. Opposite al-Raḳḳa, near the south bank of the Euphrates, the Umayyad caliph Hishām b. ʿAbd al-Malik (105-25/724-43), residing mainly at al-Ruṣāfa [*q.v.*] *ca.* 50 km/31 miles further to the southwest in the Syrian desert, created the agricultural estate of Wāsiṭ al-Raḳḳa, irrigated by two canals named *al-Hanī wa 'l-Marī*. Further north, at a distance of *ca.* 72 km/45 miles, near the river al-Balīkh, another member of the Umayyad family, the famous military commander Maslama b. ʿAbd al-Malik (d. *ca.* 121/739 [*q.v.*]), a half-brother of the caliph Hishām, founded the residential estate of Ḥiṣn Maslama, which served as an advanced outpost towards the Byzantine frontier (on the ruins of Madīnat al-Fār, probably to be identified with Ḥiṣn Maslama, see the report by C.-P. Haase in *Bilād al-Shām during the Abbasid period. Proceedings of the fifth International conference on the History of Bilād al-Shām*, ed. Muḥammad ʿAdnān al-Bakhīt and R. Schick, Amman 1991, 206-13).

Though the treaty between the inhabitants of al-Raḳḳa and the victorious Muslim general ʿIyāḍ b. Ghanm, as quoted by al-Balādhurī, 173-4, stipulated that the Christians should retain their places of worship but were not allowed to build new churches, the non-Muslim community is recorded to have thrived well into the Middle Ages. Till the 6th/12th century a bishop is attested to have resided there, and at least four monasteries are frequently mentioned in the sources, the most famous of which, the Dayr Zakkā, can be identified with recently excavated ruins on the Tall al-Bīʿa (on the Christian sources and the newly-detected remains, see M. Krebernik, in *MDOG*, cxxiii [1991], 41-57). To this monastery belonged the estate of al-Ṣāliḥiyya, a favourite halting place for hunting expeditions (described by al-Bakrī, iii, 582, and Yāḳūt, ii, 644-5), possibly to be associated with the ruins of al-Ṣuwayla near the river al-Balīkh, *ca.* 4 km/2.5 miles to the northeast of al-Raḳḳa (recently investigated archaeologically and recorded in *Damaszener Mitteilungen*, ii [1985], 98-9). There also existed a large Jewish community maintaining an ancient synagogue, still operating during the visit of Benjamin of Tudela in about 1167 (see his *Travels*, tr. M.N. Adler, London 1907, 32).

The early ʿAbbāsid period. Early in the ʿAbbāsid period the programme of border fortifications in all of the Muslim empire resulted in the construction of an entire new city about 200 m/660 feet west of al-Raḳḳa. Named al-Rāfiḳa, "the companion (of al-Raḳḳa)", the city, according to al-Yaʿḳūbī (*Taʾrīkh*, i, 238) was already conceived in the time of the first ʿAbbāsid caliph al-Ṣaffāḥ (132-6/749-54); nevertheless, al-Ṭabarī attributes the foundation of al-Rāfiḳa to his brother and successor al-Manṣūr (136-58/754-75), who in 154/770-1 decided on the construction of the city, which was eventually implemented by his son and heir-apparent al-Mahdī from 155/771-2 onwards. Construction work was still continuing when, in 158/775, al-Mahdī was summoned to Baghdād to be invested as caliph upon the sudden death of his father. Purposely modelled after the only recently completed residential city of Baghdād, the partly surviving city fortifications testify to the military might of the ʿAbbāsid empire. In the form of a parallelogram surmounted by a half circle with a width of *ca.* 1300 m/4,265 feet, the city was protected by a massive wall of almost 5000 m/16,400 feet in length (Pl. XXV, 1). Fortified by 132 round projecting towers, an advance wall and a moat further improved the defence system (see Murhaf al-Khalaf, in *Damaszener Mitteilungen*, ii [1985], 123-31). Originally accessible by three axial entrances, the recently ex-

cavated northern gate (Pl. XXV, 2) has revealed stately dimensions, with a portal opening of four metres/13 feet. Remains of iron door posts attest the existence of massive or metal-plated doors, which attracted special praise in the Arabic chronicles. One of the doors, according to the mediaeval tradition, is identified with spoils from the Byzantine city of Amorion or ᶜAmmūriya [*q.v.*] in Asia Minor, transported by al-Muᶜtaṣim (218-27/833-42) in 223/838 to his newly-founded residence at Sāmarrāʾ in central Mesopotamia, from where it supposedly reached al-Raḳḳa towards the end of the 3rd/9th century. Only about half-a-century later, the door was again dismantled in 353/964 on behalf of the Ḥamdānid Sayf al-Dawla ᶜAlī (333-56/945-67), to be later incorporated in the Bāb al-Ḳinnasrīn at Aleppo (E. Herzfeld, *CIA*, part ii, Northern Syria, *Inscriptions et monuments d'Alep*, i, 60).

In the centre of al-Rāfiḳa another Great Mosque was constructed with monumental proportions of 108 x 93 m/354 x 305 feet in order to serve the garrison of soldiers from Khurāsān (Pl. XXVI, 3). Built with massive mud brick walls, strengthened by burnt brick facing and encircled by a chain of round towers, the plan layout is characterised by triple aisles on brick piers in the prayer hall and by double arcades on the three other sides of the interior courtyard (see Creswell, *Early Muslim architecture*, ii, Oxford 1940, 45-8, and recent project reports). This first pillar mosque in Islamic architecture obviously served as a model for later Friday mosques at Baghdād (enlarged from 192/808 till 193/809 by Hārūn al-Rashīd), Sāmarrāʾ (both mosques of al-Mutawakkil, inaugurated in 237/852 and 247/861 respectively) and at Cairo (Mosque of Aḥmad b. Ṭūlūn, completed in 265/879).

Al-Raḳḳa as capital of the ᶜAbbāsid empire. The new city al-Rāfiḳa alone almost matches the traditional Syrian capital Damascus in size; but the two sister cities of al-Raḳḳa and al-Rāfiḳa together formed the largest urban entity in Syria and northern Mesopotamia, probably only surpassed by the ᶜAbbāsid centre of power, Baghdād, in central Mesopotamia. Therefore, it was a logical choice that the caliph Hārūn al-Rashīd (170-93/786-809), when searching for an alternative residence in 180/796, settled on al-Raḳḳa/al-Rāfiḳa, which remained his base for a dozen years till 192/808. This resulted not only in additions to the city fortification (inscription on the eastern gate of al-Rāfiḳa, the Bāb al-Sibāl, quoted by Ibn Shaddād, iii/1, 71), but more importantly, in the construction of an extensive palatial quarter to the north of the twin cities. This caliphal residence of almost 10 km^2, as attested by aerial photographs, includes about twenty large-size complexes, of which the most monumental of *ca.* 350 x 300 m/1,148 x 984 feet in a central position obviously served as the main residence of Hārūn al-Rashīd (Pl. XXVII, 1), probably to be identified with the Ḳaṣr al-Salām mentioned by Yāḳūt. The other structures were evidently used for housing the family members and court officials residing with Hārūn al-Rashīd at al-Raḳḳa, or else were devoted to service functions.

The huge area of ruins outside the twin cities has since 1944 attracted archaeological investigations. First trial soundings were conducted by the Syrian Antiquities Service at the Main Palace, but were soon discontinued due to the poor state of preservation. Instead, another major complex of *ca.* 120 x 150 m/393 x 492 feet, only 400 m/1,312 feet north of the city wall of al-Rāfiḳa, named Palace A, was partly excavated. Excavations eventually continued at three other complexes to the east of the Main Palace: Palace B (1950-52), Palace C (1953), and Palace D (1954 and 1958), all of rather monumental dimensions measuring *ca.* 170 x 75 m/557 x 246 feet, 150 x 110 m/492 x 360 feet and 100 x 100 m/328 x 328 feet respectively; (see the series of reports by Nassib Saliby in *Les Annales Archéologiques de Syrie*, iv-v [1954-5], 205-12, Arabic part 69-76; vi [1956], Arabic part 25-40). Additionally, further soundings in the vicinity of and at Palace A were implemented between 1966 and 1970 (summarised by Kassem Toueir in the excavation review by P.H.E. Voûte [ed.], in *Anatolica*, iv [1971-2], 122-3). Since the modern town development caused the overbuilding of most of the palace city, the German Archaeological Institute in Damascus has conducted ten seasons of rescue excavations from 1982 till 1992. At the eastern fringes of the site, four larger buildings bordering on a public square were investigated: the so-called Western Palace of *ca.* 110 x 90 m/360 x 295 feet divided into representative, living and infrastructural units; the North Complex of *ca.* 150 x 150 m/492 x 492 feet, probably the barracks of the imperial guards; the East Complex of *ca.* 75 x 50 m/246 x 164 feet, mostly of recreational functions; and the Eastern Palace of *ca.* 70 x 40 m/230 x 131 feet, reserved entirely for representative purposes. On the northeastern limits of the palace area, another large-size complex with an extension of *ca.* 300 x 400 m/984 x 1,312 feet was also partly excavated, revealing an elongated double courtyard structure encircled by round towers, which was obviously left unfinished (see the reports by J.-Chr. Heusch and M. Meinecke).

All the investigated buildings depended on mud as the major construction material, either in the form of sun-dried bricks or of stamped mud, only occasionally strengthened by burnt bricks. The ground plans, on the other hand, are generally characterised by precisely calculated geometrical subdivisions, indicating the careful laying-out of the built fabric. The publicly visible parts, on the exterior as well as in the interior, received a coating of white plaster, masking and protecting the mud core of the walls. On the representative units the buildings were decorated by stucco friezes in deep relief (Pl. XXVII, 2-3), depicting mostly vine ornament in numerous variations (partly documented by Meinecke, in *Rezeption in der islamischen Kunst*, ed. B. Finster, forthcoming). Genetically, these patterns are only vaguely related to Umayyad predecessors; instead, the dependence on classical models indicates an intended revival of the ornamental corpus of the monuments from the 2nd and 3rd centuries A.D. at Palmyra (see Meinecke and A. Schmidt-Colinet, in the exhibition catalogue by E.M. Ruprechtsberger [ed.], *Syrien. Von den Aposteln zu den Kalifen*, Linz 1993, 352-9). Selections of excavation finds and decorative elements from the Raḳḳa palaces are exhibited at the Damascus National Museum and at the archaeological museum at al-Raḳḳa.

Though the investigated complexes lack building inscriptions pointing to their original function or to the patron, their history can be clearly defined by the numismatic evidence. Among the coins collected during the recent excavations on the eastern border structures of the palace belt, examples minted at al-Rāfiḳa in the year 189/804-5 in the name of Hārūn al-Rashīd are especially numerous, while only individual items minted at al-Rāfiḳa in the reigns of the succeeding sons al-Maʾmūn (208/823-4 and 210/825-6) and al-Muᶜtaṣim (226/840-1) have been recorded (on the ᶜAbbāsid mint at al-Rāfiḳa, see now L. Ilisch, in *Numismatics - witness to history. IAPN publication*, viii [1986], 101-21). Consequently, those structures

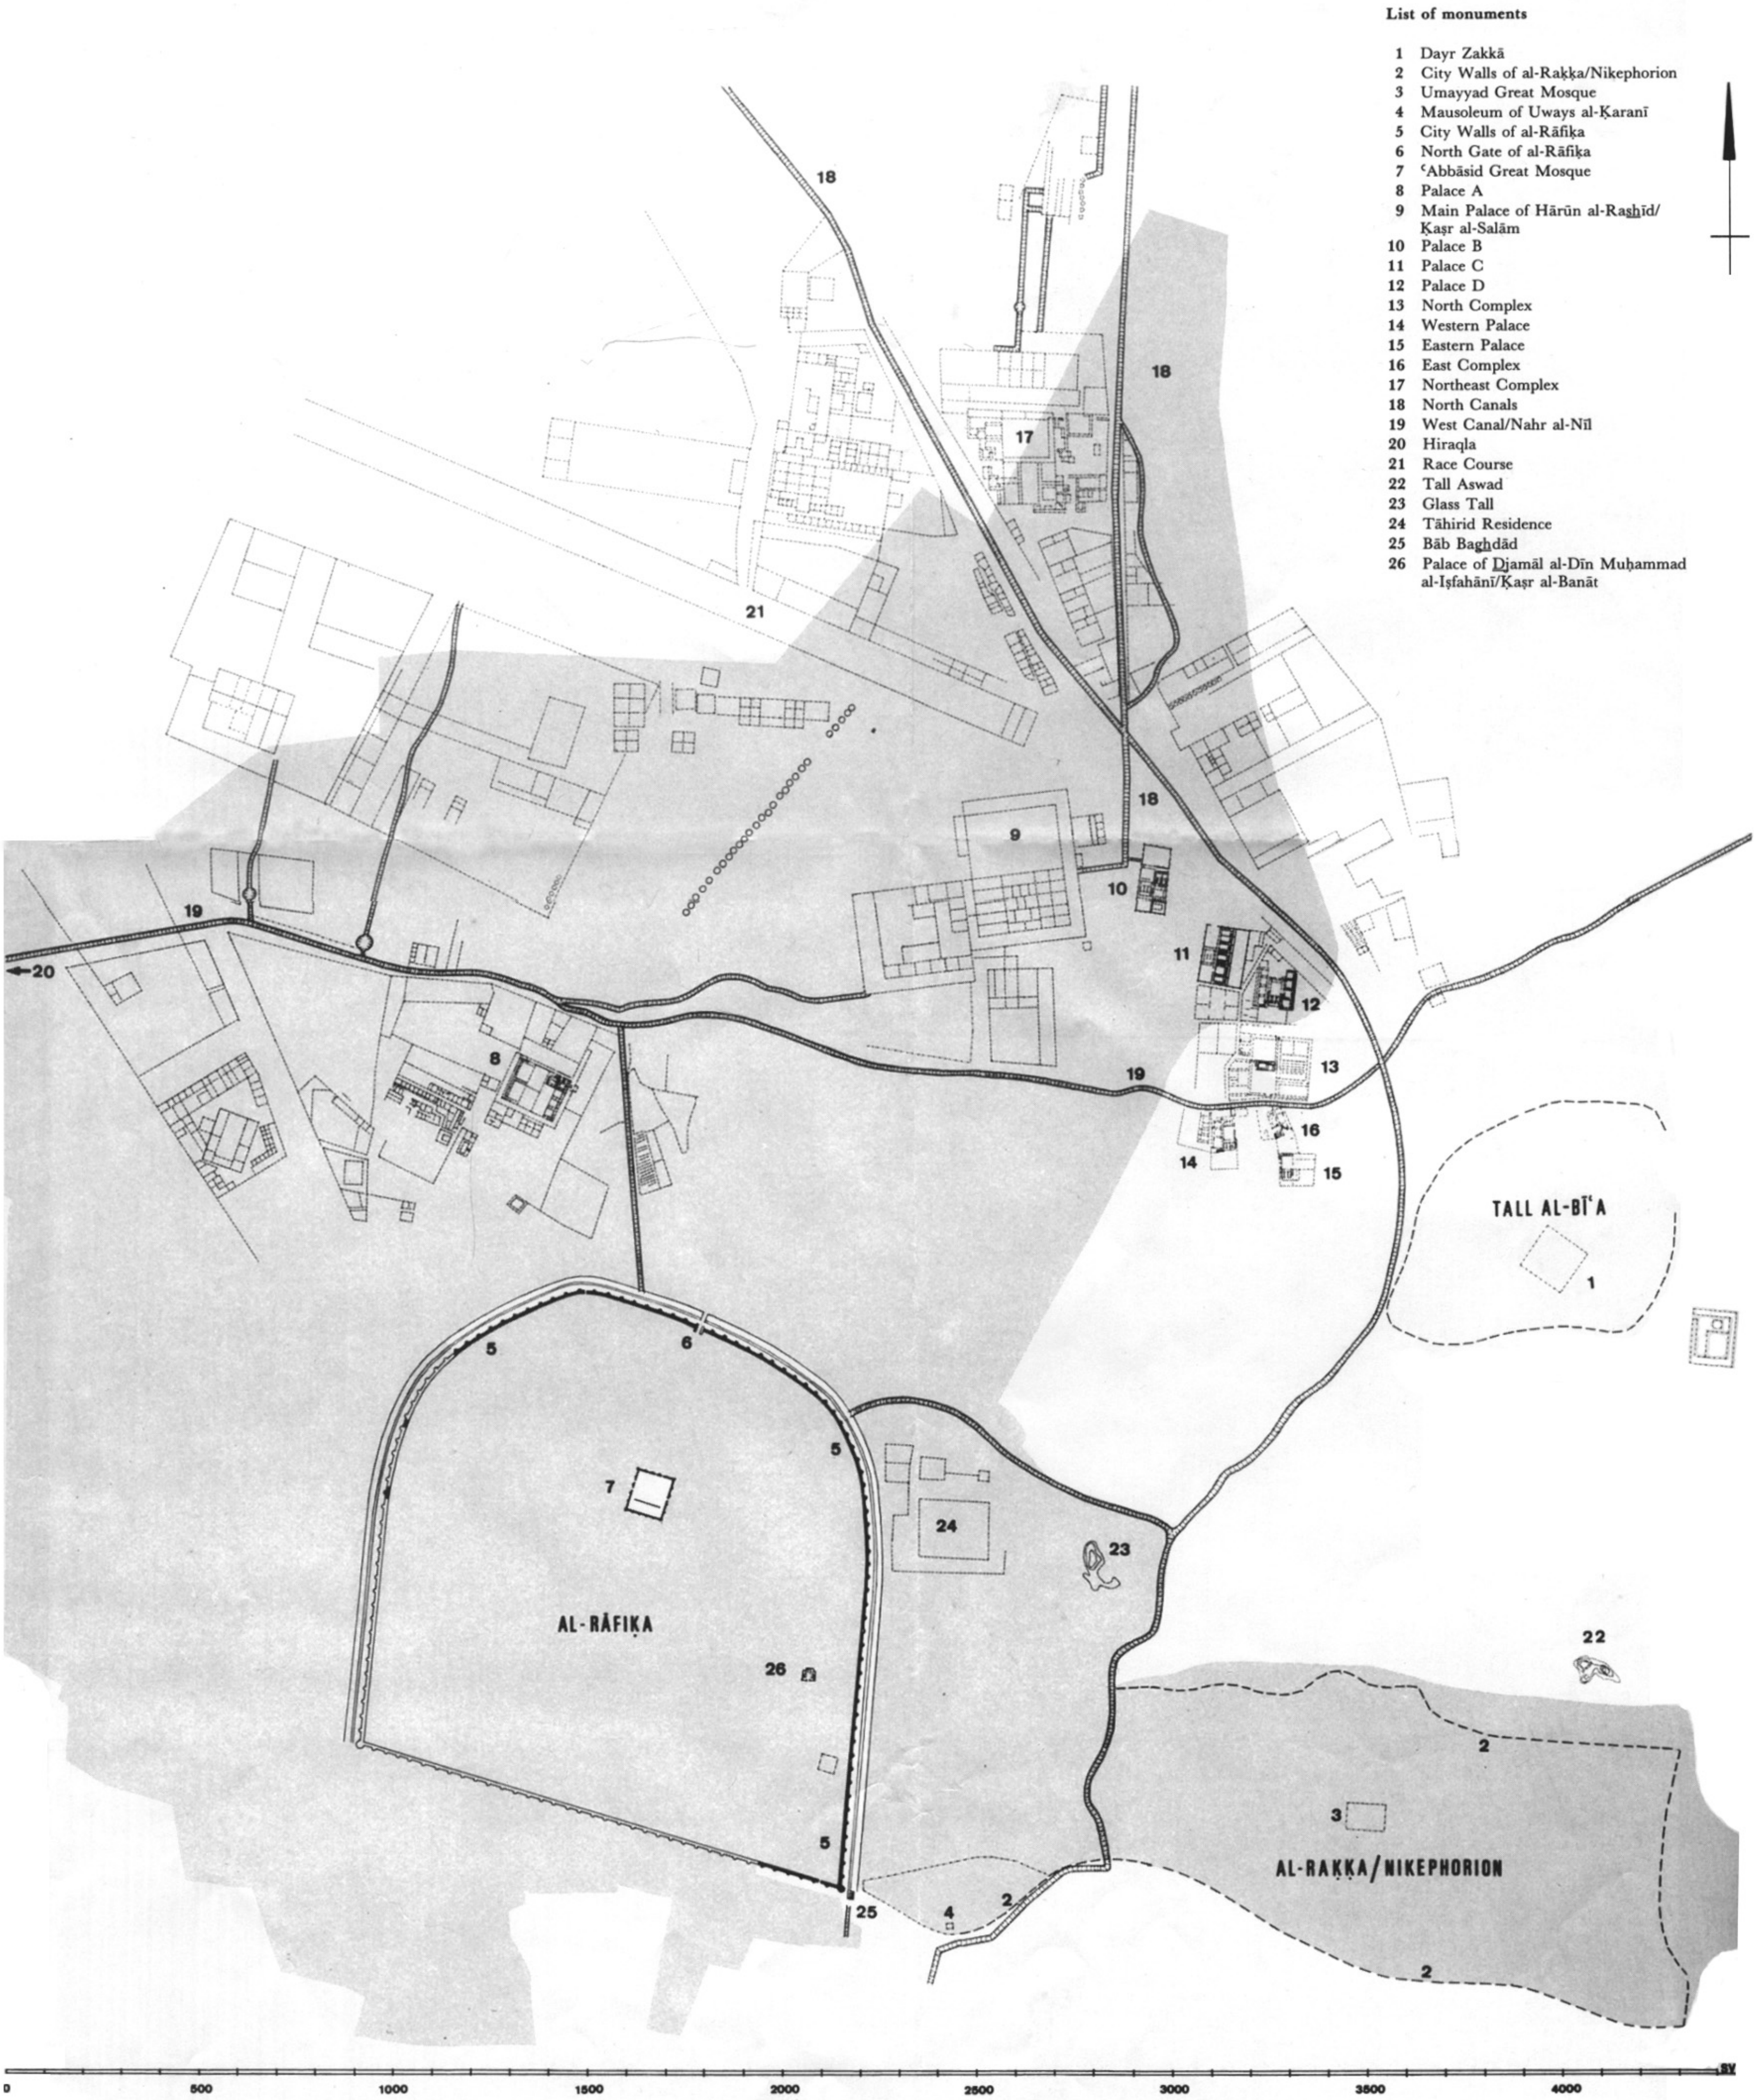
investigated recently must have been in use towards the end of Hārūn al-Rashīd's tenure of power at al-Rakka. After the removal of the court back to Baghdād on the death of Hārūn al-Rashīd in 193/809, the palaces were obviously in use only briefly and occasionally.

This extensive residential city was evidently founded in 180/796 by Hārūn al-Rashīd and continuously further enlarged for over a decade. These buildings formed the backstage of the political events of this period, described in great detail by al-Ṭabarī and others. From there, the yearly raids (*ṣawā'if*, sing. *ṣā'ifa* [*q.v.*]) into the Byzantine empire and the frequent pilgrimages to the Holy Cities of Mecca and Medina were organised. In these palaces lived the family of the caliph, including his wife Zubayda and his heirs apparent, al-Amīn, al-Ma'mūn and al-Kāsim, and also al-Muʿtaṣim, for much of their youth (as described by N. Abbott, *Two queens of Baghdad*, Chicago 1946). Here was the military centre with the army command and the administrative centre of the vast ʿAbbāsid empire, where the treasuries and the material wealth of the caliph were safeguarded (al-Ṭabarī, iii, 654). Here the members of the Barmakid family managed the affairs of the state until they were executed or imprisoned in 187/803 [see AL-BARĀMIKA].

For his periodic centre of administration, Hārūn al-Rashīd also improved the infrastructure decisively. For the irrigation of the palace city, two canals were laid out: one channelling the water of the Euphrates from about 15 km/9 miles further west, and another of over 100 km/62 miles collecting water from the Anatolian mountains to the north. According to Yākūt, one of these (probably the Euphrates canal) was named Nahr al-Nīl (described by Kassem Toueir, in *Techniques et pratiques hydro-agricoles traditionelles en domaine irrigué. Actes du Colloque de Damas*, ed. B. Geyer, Paris 1990, 217-20).

About 8 km/5 miles to the west of the city, the Euphrates canal passes by another monument to be associated with Hārūn al-Rashīd. Surrounded by a circular enclosure wall of 500 m/1,640 feet in diameter, with round buttresses and four portals on the cardinal points, the centre is occupied by a massive square building of *ca.* 100 m/328 feet for each side. Accessible on the ground level only are four vaulted stately halls on the main axis, from where ramps lead to the upper storey, which was not, however, completed. This curious stone structure, recently also investigated archaeologically, with the traditional name of Hirakla obviously alluding to the conquest of the Byzantine city of Heraclea by Hārūn al-Rashīd in 190/806, can be interpreted as a victory monument. The stone material used seems to have originated from churches of the frontier region whose dismantling was ordered in 191/806-7 by the caliph (Ibn Shaddād, iii/1, 342). Obviously, due to the departure of the imperial patron to Khurāsān in 192/808 and his death shortly thereafter, the building was left unfinished (see Toueir, in *World Archaeology*, xiv/3 [1983], 296-303, and in *La Syrie de Byzance à l'Islam, VII^e-VIII^e siècles, Actes du Colloque International*, ed. P. Canivet and J.-P. Rey-Coquais, Damascus 1992, 179-86).

The extensive construction programme at al-Rakka was accompanied by accelerated industrial activities; these are attested by a string of mounds with large piles of ashes outside the northern wall of the city of al-Rakka/Nikephorion. Recently investigated archaeologically at two points, workshops for pottery and glass production have been detected, for which the numismatic evidence points to their use in the time of Hārūn al-Rashīd. The expertly-potted ceramics with incised or moulded decoration, as well as the fragile glass vessels featuring incised, relief or lustre decoration, which are known from the inventories of the excavated palaces, were thus evidently for the most part fabricated locally.



The later ʿAbbāsid period. Shortly after the sudden death of Hārūn al-Rashīd, his widow Zubayda in 193/809 organised the transfer of the vast state treasures to Baghdād, where her son al-Amīn (193-8/809-13) was enthroned as ruler of the ʿAbbāsid empire (al-Ṭabarī, iii, 775). While this marks the reinstallation of Baghdād as the administrative centre of the Muslim world, the city of al-Rakka remained of regional importance as seat of the governor of the Djazīra province until the mid-4th/10th century.

In opposition to al-Ma'mūn (198-218/813-33), who succeeded in capturing Baghdād from his brother al-Amīn, a revolt caused the destruction by fire of the market quarter between the sister cities of al-Rakka and al-Rāfika in 198/813 (Michael Syrus, ed. J.-B. Chabot, iii, 26). To police the situation, al-Ma'mūn sent the general Ṭāhir b. al-Ḥusayn [*q.v.*] as governor of the Djazīra to al-Rakka, followed by his son ʿAbd Allāh b. Ṭāhir [*q.v.*] until 210/825-6, when he was nominated governor of Egypt. In the time of the Ṭāhirids, the palace belt outside the city walls was already evidently falling into disrepair. Nevertheless, a last reactivation is attested for the time of al-Muʿtaṣim on the basis of fresco inscriptions with his name found at the Palace B to the east of Hārūn al-Rashīd's central residence (A. Grohmann, *Arabische Paläographie*, ii, Vienna 1971, pl. 18). This is to be connected with the last military campaign into the Byzantine empire conducted from al-Rakka, which resulted in the conquest of the city of ʿAmmūriyya/Amorium in 223/838 (Ibn Shaddād, ii/1, 341). From there, the caliph carried off the famous iron doors to his newly-founded capital of Sāmarrā', to be set up at the main entrance, the Bāb al-ʿĀmma, of his residential palace, then under construction.

Instead of utilising the palace city of Hārūn al-Rashīd, new structures were built up on top of the suburb between the sister cities; soundings conducted by the Syrian Service of Antiquities (1953 and 1969) have revealed stucco decorations in the bevelled style of Sāmarrā' from the mid-3rd/9th century. About the same time also, the prayer-niche of the Great Mosque at al-Rāfika received a new stucco decoration with similar features. A series of stone capitals, now scattered to many museum collections, featuring the characteristic slant cut and related ornamental patterns, bear witness to continuous building activities (M.S. Dimand, in *Ars Islamica*, iv [1937], 308-24; Meinecke, in *Bilād al-Shām during the Abbasid period*, in *Proceedings of the fifth International Conference on the History of Bilād al-Shām*, 232-5).

Though the size of the inhabited area became drastically diminished, the city of al-Rakka remained the only real antipode to Baghdād. Therefore, it was the obvious alternative for caliphs in exile or seeking refuge, as it was the case with al-Mustaʿīn in 251/865, al-Muʿtamid in 269/882, al-Muʿtaḍid in 286/899 and 287/900, and finally with al-Muttakī in 332-3/944, as recorded by al-Ṭabarī and other historians. But the fame of the city at that period did not result from political might or artistic achievements but from the scholars living and teaching at al-Rakka, for instance the famous astronomer Abū ʿAbd Allāh Muḥammad al-Battānī (d. 317/929 [*q.v.*]), or Muḥammad b. Saʿīd al-Kushayrī (d. 334/945), the author of a *Ta'rīkh al-Rakka*, ed. Ṭāhir al-Naʿsānī, Ḥamā 1959.

The first period of decline. The decline of the

Medieval Cities of al-Raḳḳa and al-Rāfiḳa. Topographical map based on aerial photographs, in scale 1:15.000 (drawing by Silke Vry and others/German Archaeological Institute Damascus 1993); extension of modern city indicated in grey.

central administration of the ʿAbbāsid caliphate affected also the city of al-Raḳḳa. Since the conquest by the Ḥamdānids in 330/942, the urban centre on the Euphrates was contested between the rulers of Mawṣil and Aleppo, as being the gate for supremacy in Northern Mesopotamia. The founder of the Aleppo branch of the Ḥamdānid dynasty, Sayf al-Dawla ʿAlī, (333-356/945-967) is blamed by Ibn Ḥawḳal and Ibn Shaddād for the devastation of the Djazīra and the former capital al-Raḳḳa. Political instability caused, for instance, the destruction by fire of part of the city of al-Raḳḳa/Nikephorion in 332/944, resulting in a gradual depopulation of the initial urban settlement. The dismantling in 353/964 of the iron doors from an entrance gate to the city is another proof for a marked reduction of the population (on the history of this period in general, see M. Canard, *Histoire de la dynastie des H'amdânides de Jazîra et de Syrie*, i, Algiers-Paris 1951). This development is also mirrored by the Umayyad Great Mosque, which, according to the position of the minaret in the interior courtyard, only remained in use with part of the initial prayer hall.

After the Ḥamdānids there followed a century of turmoil, when the governorship of al-Raḳḳa was fought over by the Arab tribal dynasties of the Numayrīds, the Mirdāsids and the ʿUḳaylids (described in great detail by Ibn Shaddād, iii/1, 74-8). Nothing is attested as having been added to the urban fabric; on the contrary, the shrinking population retreated increasingly from the initial city al-Raḳḳa to the ʿAbbāsid foundation of al-Rāfiḳa, which according to Yāḳūt, followed by al-Dimashḳī, eventually also took over the name of the sister city.

The revival of al-Raḳḳa in the Zangid and Ayyūbid periods. The fate of the city only changed with the appearance of the Zangids in the region (on the history of that period, see C. Alptekin, *The reign of Zangi (521-541/1127-1146)*, Erzurum 1978). Conquered by ʿImād al-Dīn Zangī in 529/1135, al-Raḳḳa was soon to regain importance, as attested by building activities (listed partly by Ibn Shaddād, iii/1, 71). When Zangī was murdered in 541/1146 whilst besieging Ḳalʿat Djaʿbar further up the Euphrates, he was first buried at Ṣiffīn, but soon afterwards his corpse was transferred to a domed mausoleum constructed for this purpose in the Mashhad quarter of al-Raḳḳa (Ibn al-ʿAdīm, ii, 285). Following the death of Zangī, his *wazīr* Djamāl al-Dīn Muḥammad al-Iṣfahānī organised from al-Raḳḳa the succession of Zangī's son, Nūr al-Dīn Maḥmūd (N. Elisséeff, *Nūr ad-Dīn*, Damascus 1967, 390-2). In this connection a palace is mentioned, which may eventually be identified with the Ḳaṣr al-Banāt (Pl. XXVIII, 2), a ruined structure from that period (on the archaeological investigation since 1977, see Toueir, in *Damaszener Mitteilungen*, ii [1985], 297-319). Ibn Shaddād in addition also mentions a *khānḳāh* of the same patron, as well as another commissioned by Nūr al-Dīn Maḥmūd, together with a hospital (*bīmāristān*) and two *madrasas*, one for Shāfiʿīs and the other for Ḥanafīs, presumably all erected by or in the time of the same ruler. Most indicative for the reactivation of the city during this period is the ʿAbbāsid Great Mosque of al-Rāfiḳa, which already attracted minor construction and decoration activities in 541/1146-7 and 553/1158, as recorded on re-used inscription fragments (photographed by G.L. Bell in 1909) and on newly-discovered inscription panels (excavated in 1986, now on display at the Raḳḳa Museum). The surviving parts of the mosque, the façade or the *ḳibla riwāḳ* and the cylindrical minaret (Pl. XXVI, 1), are due to the reconstruction programme of Nūr al-Dīn Maḥmūd, completed in 561/1165-6. The reduced size of the reactivated mosque, limited to the former prayer hall, mirrors the comparatively modest population of the town, which only occupied the eastern half of the ʿAbbāsid city, where evidently most of the lost other religious buildings mentioned were also located. As the main entrance to the mediaeval city, there functioned the Bāb Baghdād at the southeast corner of the ʿAbbāsid city walls, according to the brick decoration erected at this time (Pl. XXVIII, 1) (re-dated by J. Warren, in *Art and Archaeology Research Papers*, xiii [1978], 22-3; and R. Hillenbrand, in *The art of Syria and the Jazira 1100-1250*, ed. J. Raby, Oxford 1985, 27-36).

With the conquest by Ṣalāḥ al-Dīn in 578/1182, the city passed into the control of the Ayyūbids. As one of the chief towns of the principality of Diyār Muḍar, al-Raḳḳa was especially favoured by the Ayyūbid prince al-Malik al-ʿĀdil Abū Bakr, who took up residence at the city between 597/1201 and 625/1128. He is attested to have constructed palaces and bath complexes, and laid out many gardens with extensive plantations (Ibn Shaddād, iii/1, 71-2). Of these Ayyūbid additions to the town, nothing has survived. But in this period, al-Raḳḳa emerged as a major production centre for glazed ceramics of high artistic perfection, which were exported widely. Most frequent among these are figural or vegetal designs in black under a transparent turquoise glaze, but other variations with lustre on turquoise and purple glazes, or coloured designs, including red, under a colourless glaze, are also recorded (see the detailed studies by E.J. Grube, in *Kunst des Orients*, iv [1963], 42-78; V. Porter, *Medieval Syrian pottery (Raqqa ware)*, Oxford 1981; and also the extensive bibliography by Cr. Tonghini and Grube, in *Islamic Art*, iii [1989], 59-93). The pottery workshops were located in the immediate vicinity of the urban settlement, even partly within the ʿAbbāsid city walls to the south of the Great Mosque (on a kiln excavated in 1924 immediately outside the east wall of the city, see J. Sauvaget in *Ars Islamica*, xiii-xiv [1948], 31-45).

The Ayyūbids successfully repulsed occasional attacks on the city by the Saldjūḳs of Asia Minor and the Khwārazmians, but finally had to yield to the Mongol forces, who invaded northern Mesopotamia in 657/1259 (on the history of that period, see R.S. Humphreys, *From Saladin to the Mongols*, Albany 1977). Urban settlement at Diyār Muḍar ceased in the early years of the Mamlūk era, when in 663/1265 all the fortified cities on the middle Euphrates were destroyed for tactical reasons, including al-Raḳḳa (L. Ilisch, *Geschichte der Artuqidenherrschaft von Mardin zwischen Mamluken und Mongolen 1260-1410 AD*, Münster 1984, 51-2).

The Ottoman period. Throughout the Mamlūk period, al-Raḳḳa remained practically deserted, as certified by Abu 'l-Fidāʾ. Only after the Syrian campaign of the Ottoman sultan Selīm I (918-26/1512-20), which resulted in the downfall of the entire Mamlūk empire in 923/1517, was it reactivated as a military outpost. In the time of sultan Süleymān II Ḳānūnī (926-74/1520-66), al-Raḳḳa was the nominal capital of a province of the Ottoman empire, probably in memory of its past glory. A building inscription commemorating the restoration of a castle and a sacred building (*ḥaram*) by Sultan Süleymān b. Selīm Khān remains the only testimony to this limited reactivation as a military and administrative centre (originally located at the Mausoleum of Uways al-Ḳaranī, now on display in the archaeological museum of the modern city). Due to destruction by Türkmen and Kurdish tribes, the governorship was transferred

to the city of al-Ruhā/Urfa *ca.* 135 km/84 miles further north (according to Ewliyā Čelebi, *Seyāḥat-nāme*, tr. J. von Hammer, i/1, London 1834, 95, 101, 104, 110; tr. Danişman, v, Istanbul 1970, 41, 52-3). On the visit of Ewliyā Čelebi in winter 1059/1649, the place was deserted following recent raids, though the ruins of the glorious past and formerly-irrigated gardens still remained visible.

The site was only repopulated in the late 19th century, when the Turkish government settled there a group of Circassians in order to police the region. Initially a village of only a few houses near the southwest corner of the ᶜAbbāsid city, the population grew slowly but steadily, counting somewhat less than 5,000 inhabitants by the middle of the 20th century. Since then, due to the agricultural revival of the region, the settlement has reached a population of nearly 90,000 inhabitants in 1981 (Syrian ... Central Bureau of Statistics (ed.), *Statistical abstract*, xxxvii, Damascus 1984). Now the capital of a province administered by a governor, and an active commercial and industrial centre, the city has reached a size larger than ever in its history, consequently submerging most of the historic fabric. This in turn has motivated an extensive programme of archaeological research and architectural conservation for the monuments from the Islamic past.

(M. Meinecke)

RAḲḲĀDA, a city of the Maghrib which was the centre of power of the Aghlabid *amīrs* of Ifrīḳiya about 6 miles south of Ḳayrawān, was founded in 263/876 by Ibrāhīm II, seventh prince of the dynasty. Until then the Aghlabids [*q.v.*] had resided in ᶜAbbāsiyya [*q.v.*] nearer the capital. A chance trip into the country by Ibrāhīm, it is said, determined the site of the new residence. The *amīr* was suffering from insomnia and on the advice of his physician, Isḥāḳ b. Sulaymān, went out to take the air. Stopping in a certain place, he fell into a deep sleep and decided to build a palace there which was called Raḳḳāda, the "soporific". The story is probably based on a popular etymology of the name, which is found elsewhere in North Africa. Another explanation, equally suspect, is that which attributes the name to the memory of a massacre of the Warfadjūma by the Ibāḍī chief Abu 'l-Khaṭṭāb [*q.v.*] in 141/758 and the many dead left lying there.

In the same year that the work of building was begun, Ibrāhīm settled in Raḳḳāda in the Castle of Victory (*Ḳaṣr al-Fatḥ*). He was to live there the rest of his life, as were his successors, except for the stays the *amīrs* made in Tunis. Raḳḳāda became a regular town just as al-ᶜAbbāsiyya had been before it. Besides Ḳaṣr al-Fatḥ (or Ḳaṣr Abi 'l-Fatḥ), there were several other castles in it: Ḳaṣr al-Baḥr (the castle on the lake), Ḳaṣr al-Ṣaḥn (castle of the court), Ḳaṣr al-Mukhtār (castle of the elect) and Ḳaṣr Baghdād, a large mosque, baths, caravanserais and *sūḳs*. Al-Bakrī says that it had a circumference of 24,040 cubits (over 6 miles); al-Nuwayrī makes it smaller (14,000, nearly 4 miles). A wall of brick and clay surrounded this vast area, and this wall was renovated by the last Aghlabid with a view to a final effort at resistance. Al-Bakrī further tells us that the greater part of the enceinte was filled with gardens. The soil was fertile and the air temperate. The *amīrs* and their followers enjoyed in Raḳḳāda a liberty of conduct which would have caused a scandal in Ḳayrawān. The sale of *nabīdh* [*q.v.*], forbidden in the pious old city, was officially permitted in the royal residence.

It was from Raḳḳāda that Ziyādat Allāh III, the last of the Aghlabids, fled on the approach of the Shīᶜī Fāṭimids. The victorious Abū ᶜAbd Allāh [*q.v.*] installed himself in Ḳaṣr al-Ṣaḥn. His master, the Mahdī ᶜUbayd Allāh, lived in Raḳḳāda until 308/920 when he moved to al-Mahdiyya [*q.v.*]. After being deserted by the ruler, Raḳḳāda fell into ruins. In 342/953 the Fāṭimid caliph al-Muᶜizz ordered what was left of it to be razed to the ground and ploughed over. The gardens alone were spared.

A few traces of the Aghlabid foundation are still to be seen at the present day. A great rectangular reservoir with thick walls strengthened by buttresses may be identified with the lake (*baḥr*) which gave its name to one of the palaces. A pavilion (?) of four stories stood in the centre. Nothing is left of it, but on the west side of the reservoir may be seen the remains of a building which must have been reflected in the great mirror of water. Three rooms may still be distinguished with their mosaic pavements. The technique and style of decoration closely connect these Islamic buildings of the 3rd/9th century with the Christian art of the country.

Excavations under the auspices of the National Institute of Archaeology of Tunisia have been carried on at the site since 1962. The finds have only been very partially studied until now (1993), but are preserved in a rich National Museum of Islamic Art established not far from the ruins, whilst awaiting a fuller examination.

(G. Marçais*)

RAKKĀṢ (A.), in French *rekkas*, a term which has several meanings but which only merits an entry in the *EI* because, amongst several technical senses, it particularly denotes, in the Muslim West, a messenger who travels on foot long distances in order to carry official or private mail. The name is derived from the noun *raḳṣ* meaning "trotting" (of a horse or camel; see *LA*, s.v.), but is also applied to a man who "trots", as is the case with the *raḳḳāṣ*. The development of various means of communication has put an end to this calling, now unnecessary, and the word *raḳḳāṣ* can now only denote an occasional messenger, above all in time of war.

Dozy, *Supplément*, s.v., gathered together a certain number of references in the Arabic sources (notably al-Maḳḳarī, *Analectes*, i, 557, since the term was used in Spain, as P. de Alcala indicates in his *Vocabulista*) and in the accounts of Western travellers, and also indicated various other technical senses of *raḳḳāṣ*, notably "pendulum", "hand of a watch" (cf. Fr. "trotteuse"), "trigger of a fire-arm" and, after Mehren (in *Acts of the Royal Society of Sciences*, Copenhagen 1872, 28), "part of a mill which produces a noise through the movement of the millstone". It is nevertheless also useful to note that the Kabyle *arəḳḳas* (with de-emphasisation of the sibilant) is equally applied to the hand of a watch and the pendulum of a clock, as well as to a piece better described by J. Dallet (*Dictionnaire kabyle-français*, Paris 1982, 732) than by Mehren: "a simple contrivance of a water-mill made from a pin fixed on a small stick floating above the moving mill-stone; this pin, fixed to the trough containing grain, transmits a vibration to it which ensures the regular feeding of the grain into the mouth of the mill."

Bibliography: Given in the article. (Ed.)

RAKṢ (A.), dance. The following article deals with the dance in Ṣūfism.

During recent decades, one could sometimes read in American newspapers about "Courses in Sufi Dance", and "Sufi dance" became a fashionable way of cultivating one's soul. However, the topic of dancing is frowned upon in Islam, for dancing is connected, in the history of religions in general, with ecstasy. It takes the human being out of his/her normal movement and makes him/her gyrate, so to speak, around a different centre of gravity. To be sure, cheerful parties of well-to-do people in the Islamic Middle Ages often ended with music and dancing, but in the context of religion, the dance, basically an epi-phenomenon of music or melodious recitation, was felt to contradict the nomos-oriented character of Islam because it could make the individual stray from the divinely ordered way, the *sharīʿa*. Therefore, normative Islam has opposed dancing, and, based on sūra VIII, 35, it also opposed handclapping and related movements. Treatises and articles against dancing have been written throughout the centuries, for one saw here demonic influences; hence musicians and dancers should not serve as witnesses at court. Typical is a *risāla* attributed to Ibn Taymiyya [*q.v.*] about *raḳṣ* and *samāʿ* [*q.v.*] which are, as he claims, as dangerous for the believers as is their obedience to the Mongols (more than one later scholar has seen in the Ṣūfī dance an influence from or reminiscence of shamanistic dancing). Even the sober Ṣūfīs themselves blamed those for whom dancing constituted the main feature of Ṣūfism and who joined the Ṣūfī movement because they wanted to indulge in such ecstatic experiences.

They agreed with Hudjwīrī [*q.v.*], who wrote in the 5th/11th century "Dancing has no foundation in the religious law or the Path ... frivolous imitators have made it a religion..." (*Kashf al-maḥdjūb*, Eng. tr. Nicholson, 416).

The first known *samāʿ-khāna* or place for religious music-making and dancing was founded in Baghdād in the second half of the 3rd/9th century. There, Ṣūfīs could listen to the musical recitation of poetry, during which some were borne into a whirling movement. Sometimes, their ecstatic state led them to tear their robes; the pieces were carefully collected, since they were thought to be filled with *baraka* [*q.v.*], "blessing and charismatic power." The question was whether beginners on the Ṣūfī path should be allowed to participate, so that their sensual lusts might be dissipated (thus the Ṣūfī *shaykh* of Khurāsān Abū Saʿīd [*q.v.*]), or should be prohibited from listening and dancing. Another problem was, whose mystical "state" was loftier, that of a Ṣūfī who left himself to whirl at the sound of music, or the one who, like al-Djunayd [*q.v.*], refrained from showing movement?

Stamping and handclapping were part of such

dances, which might end in a frenzied group ecstasy (as the poet Djāmī [*q.v.*] describes it ironically in his *Silsilat al-dhahab*), and numerous miniatures, mainly from the Persian world, show Ṣūfīs in whirling dances, with their long sleeves resembling wings. The normative believer disliked the fact that the presence of a *shāhid*, a handsome young man, was regarded as necessary during the *samāʿ*; in fact, the very contemplation of such a person might induce the Ṣūfī involuntarily to dance (as would any overwhelming experience).

It is related that al-Ḥallādj [*q.v.*] (executed in 309/922) went dancing in his fetters to the execution, and a "dance in chains" occurs as a literary cliché, as does the Persian expression of the *raķṣ-i bismil*, the "dance" of a ritually slaughtered bird, that is, the convulsions of the lover who resembles "a headless chicken".

Although dance as part of the *samāʿ* occured in various dervish groups, especially among the Čishtiyya [*q.v.*], it was institutionalised only in the Mewlewī order [see MAWLAWIYYA]. Mawlānā Djalāl al-Dīn Rūmī (604-72/1207-73 [*q.v.*]) had composed most of his lyrical poetry while listening to music, and many of his *ghazals* [*q.v.*] can easily be accompanied by rhythmical handclapping. Terms like "clapping", "stamping" and the like abound in his lyrics, especially in his *rubāʿiyyāt* [*q.v.*], for the *rubāʿī* was the poetical form generally used in *samāʿ* sessions. For Rūmī, the whole universe is moving in a wonderful dance, from the moment that Not-Being heard God's primordial address "Am I not your Lord?" (sūra VII, 172) and came into existence by dancing (*Dīwān*, no. 1832), an idea alluded to as early as in Djunayd's sayings. Dance and *samāʿ* are the ladder to heaven, that is, the true *miʿrādj*, and angels and demons participate in it. Stamping the ground makes the water of life gush forth; it is like treading the grapes out of which the spiritual wine is made. The trees, touched by the spring breeze, move their twigs in happy dance. Rūmī's son Sulṭān Walad [*q.v.*] institutionalised the music and dance from which his father had drawn much of his inspiration. Thus the dance of the Mewlewīs is by no means a wild ecstatic act but rather a well-organised "ballet" in which the individual dervish, however, may experience something like an ecstatic rapture. But it is "a dance for God", a way of praising God. The whirling is often compared to the movement of the stars around the central sun, or the dance of the moth around the candle in order to become annihilated; it is experiencing *fanāʾ* "annihilation" in God in order to reach a higher level of consciousness. Later Mewlewī poets such as Ghālib Dede in Istanbul (d. 1213/1799 [*q.v.*]) took over this symbolism into their poetry as did Indo-Persian poets, most outspokenly Mīrzā Ghālib (d. 1869 [see GHĀLIB, MĪRZĀ ASAD ALLĀH KHĀN]) in his *ghazal* with the *radīf ba-raķṣ*.

Among the dervishes, and in particular the Mewlewīs, funerals were often accompanied by ecstatic dance, and so was the *ʿurs*, the celebrations to commemorate a dead saint. It is therefore not astonishing that some Ṣūfīs claimed that there was dance in Paradise (thus reminding the western reader of Fra Angelico's paintings), and Rūzbihān-i Baķlī (d. 605/1209 [*q.v.*]) saw himself dancing with the archangels and with the Prophet, symbolising the end of his mystical journey as a "dance with God".

As for folk dances in Islamic countries, they are usually performed by either men or women, and in cases when both sexes participate—as is the case among some Berber tribes—dancing is frowned upon by both normative believers and serious Ṣūfīs. The fact that, nowadays, even women participate in dervish dances in "modernised" orders contradicts all classical tradition because the dervish dance does not aim at sensual goals, especially as conservative, traditionalist critics of Ṣūfism like the Ḥanbalī Ibn al-Djawzī [*q.v.*] in his *Talbīs Iblīs* branded dancing as a demon-inspired, "immoral" activity.

(ANNEMARIE SCHIMMEL)

RĀM-HURMUZ (the contracted form *Rāmiz, Rāmuz* is found as early as the 4th/10th century), a town and district in Khūzistān [*q.v.*] in southwestern Persia. Rām-Hurmuz lies about 55 miles southeast of Ahwāz, 65 miles south-south-east of Shūshtar, and 60 miles north-east of Bihbihān. Ibn Khurradādhbih, 43, reckons it 17 *farsakhs* from Ahwāz to Rām-Hurmuz and 22 *farsakhs* from Rām-Hurmuz to Arradjān. Ķudāma, 194, who gives a more detailed list of stages, counts it 50 *farsakhs* from Wāsiṭ to Baṣra, thence 35 *farsakhs* to Ahwāz, thence 20 *farsakhs* to Rām-Hurmuz, and then 24 *farsakhs* to Arradjān. The importance of Rām-Hurmuz lay in the fact that it was situated at the intersection of the roads from Ahwāz, Shūshtar, Iṣfahān and Fārs (via Arradjān); that it is the natural market for the Bakhtiyārī and Kūh-gilū tribes [see LUR] and that there is oil in its vicinity. The town lies between the rivers Āb-i Kurdistān and Gūpāl. The first of these (also called Djibur) is made up of the following streams: Āb-i Gilāl (Āb-i Zard), Āb-i Aʿlā (coming from Mungasht), Rūd-i Pūtang and Āb-i Darra-yi Kūl. A canal is led from the right bank of the Djibur to supply the town of Rām-Hurmuz. Farther down, the Djibur joins the Āb-i Mārūn which comes from the southeast in the region of Bihbihān and of the old town of Arradjān [*q.v.*]. Their combined waters are known as the Djarrāḥī. The other little river (Gūpāl) runs north of Rām-Hurmuz and is lost in marshes. Rām-Hurmuz (160 m/500 feet above sea-level, in lat. 31° 15 'N., long. 49° 38′ E.) is situated above the plain to the northeast of which rise the hills of Tūl-Gorgūn 490 m/1,600 feet high.

The town is rarely mentioned by historians. The Pahlavi list of *the towns of Iran*, § 46 (ed. Markwart, *A catalogue of the provincial capitals of Ērānshahr*, 19, 98) attributes the building of Rām-Hurmuz to Hurmuzd b. Shāhpuhr (272-3) (cf. also al-Ṭabarī, i, 833). Accord-

ing to Ḥamza, ed. Gottwald, 46-7, the town was built by Ardashīr I and its name was *Rām-(i) Hurmizd Ardashīr*, which Marquart explains as "the delight of Ahura Mazda is Ardashīr". According to a tradition recorded by al-Iṣṭakhrī, 93, Mānī was executed in Rām-Hurmuz, but al-Ṭabarī, i, 834, says that Mānī was exposed on the "gate of Mānī" at Djundī-Sābūr (cf. also al-Bīrūnī, *Chronology*, 208). The Nestorian bishops of Rām-Hurmuz are mentioned in the years 577 and 587 (Marquart, *Ērānšahr*, 27, 145). Al-Muḳaddasī, 414, says that ʿAḍud al-Dawla built a magnificent market near Rām-Hurmuz and that the town had a library founded by Ibn Sawwār (according to Schwarz, the son of Sawwār b. ʿAbd Allāh, governor of Baṣra, who died in 157/773), and was a centre of Muʿtazilī teaching. According to Ibn Khurradādhbih, 42, Rām-Hurmuz was one of the 11 *kūras* of Khūzistān (Ḳudāma, 242, and al-Muḳaddasī, 407: one of the 7 *kūras*). Its towns (al-Muḳaddasī) were Sanbil, Īdhadj [*q.v.*], Tyrm(?), Bāzank, Lādh, Gh.rwa(?), Bābadj, and Kūzūk, all situated in the highlands. To these Yāḳūt, i, 185, adds Arbuk (with a bridge, 2 *farsakhs* from Ahwāz). On the other places in the *kūra* of Rām-Hurmuz (Asak, Būstān, Sasān, Ṭāshān, Ūr) see Schwarz, *op. cit.*, 341-5. According to al-Muḳaddasī, 407, Rām-Hurmuz had palm-groves but no sugar-cane plantations (in the 8th/14th century, however, Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 111, says that Rām-Hurmuz used to produce more sugar than cotton); among the products of Rām-Hurmuz, al-Iṣṭakhrī (93) mentions silks (*thiyāb ibrīsam*) and al-Dimashḳī, 119, tr. 153, the very volatile white napththa which comes out of the rocks.

Oil seepages in the region between Shūshtar and Rām-Hurmuz were noted as commercially exploitable from the beginning of the 20th century, and Rām-Hurmuz has in recent decades benefited from the expansion of the Khūzistān oil industry, with the Haft Gel oilfield just to its north and the Agha Djārī one just to its south. It also remains, with other towns of the northern rim of the province like Dizfūl and Masdjid-i Sulaymān, a market centre for the tribespeople of the adjacent Zagros massif. The population of Rām-Hurmuz was in 1991 34,059 (*September 1991 census, Statistical Centre of Iran, Population Division*). The ethnic composition of the Rām-Hurmuz region includes, as well as Persians, Arabs of the Āl Khamsīn from the Djarrāḥīs.

(V. Minorsky-[C.E. Bosworth])

RAMAD (A.), an eye disease, "ophthalmitis; ophthalmia, conjunctivitis". *Ramad*, nomen verbi of *ramida*, follows the morpheme *faʿal* which is commonly used to denote chronic and congenital diseases. Being a genuine Arabic word, *ramad* occurs in pre- and early Islamic poetry in the broad sense of inflammation of the eye (ophthalmitis). Accordingly, the Arab lexicographers often explain *ramad* by referring to one or another symptom of ophthalmitis, i.e. pain, oedematous swelling, increased lachrymation, redness, itching, hyperaemia *et alia*. In the course of the transmission of Greek medicine, especially the *Corpus Galenianum*, to the Arabs during the late 2nd/8th and 3rd/9th centuries, *ramad* became a proper medical term. It was used by the Arab physicians in the specifically narrowed sense of inflammation of the conjunctiva, based upon Galen's observation that an inflammation of the eye usually means an inflammation of its mucous membrane (*multaḥim*, ἐπιπεφυκώς): ὀφθαλμία ἡ τοῦ [ἐπι]πεφυκότος ὑμένος φλεγμονή (thence ophthalmia = conjunctivitis). Clinically, the disease was classified into "[acute] conjunctivitis" (*ramad*, ὀφθαλμία/φλεγμονή τοῦ ἐπιπεφυκότος), "chronic c." (*r. muzmin*, πολυχρόνιος ὀφθαλμία), "inveterate c." (*r. ʿamīḳ*, κεχρονισμένη ὀφθαλμία), and "severe c." (*r. ṣaʿb*/*shadīd*, χήμωσις); the initial stage was called "irritation [of the conjunctiva]" (*takaddur*, τάραξις).

(O. Kahl)

RAMAḌĀN (A.), name of the ninth month of the Muslim calendar. The name from the root *r-m-ḍ* refers to the heat of summer and therefore shows in what season the month fell when the ancient Arabs still endeavoured to equate their year with the solar year by intercalary months [see NASĪʾ].

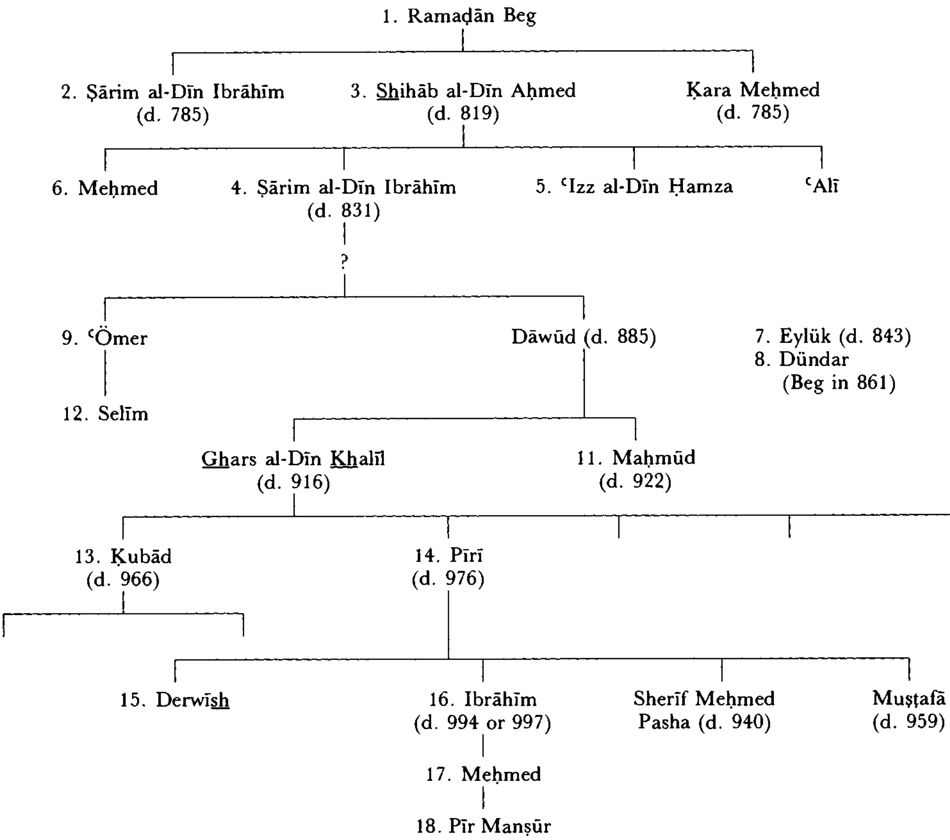
Ramaḍān is the only month of the year to be mentioned in the Ḳurʾān (II, 181/165): "The month of Ramaḍān (is that) in which the Ḳurʾān was sent down", we are told in connection with the establishment of the fast of Ramaḍān. Concerning the origins of this, to what is said in *EI*[1] ṢAWM should be added the researches of S.F. Goitein, *Zur Entstehung des Ramaḍān*, in *Isl.*, xviii (1929), 189 ff., who in connection with the above-mentioned verse of the Ḳurʾān calls attention to the parallelism between the mission of Muḥammad and the handing of the second tablets of the law to Moses, which according to Jewish tradition took place on the Day of Atonement (*ʿāshūrāʾ*, the predecessor of Ramaḍān) and actually was the cause of its institution. Goitein suggests that the first arrangement to replace the ʿĀshūrāʾ [*q.v.*] was a period of ten days (*ayyām maʿdūdāt*, sūra II, 180/184), not a whole month, which ran parallel with the ten days of penance of the Jews preceding the Day of Atonement and survives to the present day in the 10 days of the *iʿtikāf* [*q.v.*]. If we consider further that the Muslim ideas of the *Laylat al-Ḳadr* which falls in Ramaḍān, in which according to Ḳurʾān, LXXXVII, 1, the Ḳurʾān was sent down, coincide in many points with the Jewish ones on the Day of Atonement, we must concede a certain degree of probability to Goitein's suggestions, in spite of the undeniable chronological difficulties (alteration of the length of the period of the

fast, within a very short time) and although the final settlement of the term as a whole month is not thereby satisfactorily explained. On the other hand, to strengthen Goitein's position, it ought perhaps to be pointed out that the *Laylat al-Barā'a* (on which see G.E. von Grunebaum, *Muhammadan festivals*, repr. London and Ottawa 1976, 53-4) precedes Ramaḍān in the middle of the preceding month of Shaʿbān. The ideas and practices described by Wensinck in *EI*[1] art. SHAʿBĀN, which are associated with this night, really to some extent resemble Jewish conceptions associated with the New Year—which precedes the Day of Atonement by a rather shorter interval than the *Laylat al-Barā'a* precedes Ramaḍān—that the connection between the latter and the Day of Atonement is thereby strengthened. If we try to connect the so far unexplained word *barā'a* with the Hebrew *b'rī'ā* "creation" and reflect that, according to the Jewish idea, the world was created on New Year's Day (numerous references in the liturgy of the festival), we have perhaps a further link in the chain of proof; but first of all the age of the ideas associated with the *Laylat al-Barā'a* must be ascertained.

The legal regulations connected with the fast of Ramaḍān are given in ṢAWM [see also TARĀWĪḤ]. Of important days of the month, al-Bīrūnī, among others, mentions the 6th as birthday of the martyr al-Ḥusayn b. ʿAlī, the 10th as the day of death of Khadīdja, the 17th as the day of the battle of Badr, the 19th as the day of the occupation of Mecca, the 21st as the day of ʿAlī's death, and of the Imām ʿAlī al-Riḍā's, the 22nd as birthday of ʿAlī and finally the night of the 27th as *Laylat al-Ḳadr* [*q.v.*].

The name of this night is Ḳur'ānic; sūra XCVII is dedicated to it. It is there described as a night "better than a 1,000 months" in which the angels ascend free from every commission (*bi-idhn Allāh min kull amr*) and which means blessing till the appearance of the red of dawn. The revelation of the Ḳur'ān, as already mentioned, is expressly located in it. The same night is obviously referred to in sūra XLIV, 2, as a "blessed" one. The date, the 27th, is not, however, absolutely certain; the pious therefore use all the odd nights of the last ten days of Ramaḍān for good works, as one of them at any rate is the *Laylat al-Ḳadr* [see IʿTIKĀF].

Trade and industry are largely at a standstill during Ramaḍān, especially when it falls in the hot season. The people are therefore all the more inclined to make up during the night for the deprivations of the day. As sleeping is not forbidden during the fast, they often sleep a part of the day; and the night, in which one may be merry, is given up to all sorts of pleasures. In particular, the nights of Ramaḍān were formerly the time for public entertainments, the shadow play [see KHAYĀL AL-ẒILL] and other forms of the theatre.



On the termination of the fast by the "little festival", see ʿĪD AL-FIṬR.

RAMAḌĀN OGHULLARÎ, a petty Anatolian dynasty. The earlier history of the Ramaḍān oghullarî is, like that of most of the minor Anatolian begs (*mülūk-i ṭewā'if*), wrapped in obscurity. According to tradition, this Turkoman family came in Ertoghrul's time from Central Asia to Anatolia where they settled in the region of Adana and founded their power. Their territory comprised the districts of Adana. Sīs, Ayās, a part of the territory of the Warsaḳ Turkomans, Tarsūs, etc. The date of the earliest known prince of the dynasty, Mīr Aḥmad b. Ramaḍān (see below), is put at 780-819/1379-1416. Nothing definite is known about the real founder, Ramaḍān Beg. The French traveller Bertrandon de la Broquière thus characterises Mīr Aḥmad b. Ramaḍān: "lequel estoit tresgant personne d'homme et treshardy et la plus vaillante espée de tous les Turcz et le mieulx ferant d'une mache. Et avoit esté filz d'une femme crestienne laquelle l'avoit fait baptiser à la loy gregiesque pour luy enlever le flair et le senteur qu'ont ceulx qui ne sont point baptisiez. Il n'estoit ne bon crestien ne bon sarazin" (cf. *Le Voyage d'Outremer de Bertrandon de la Broquière*, ed. Ch. Schefer, Paris 1892, 90-1). Mīr Aḥmad was succeeded by Ibrāhīm Beg (819-830/1416-27). The beginning of his reign is put by some, e.g. Meḥmed Nüzhet Bey, as early as 810, while its end is put in 819. Ibrāhīm Beg was deposed before his death (831) by his brother ʿIzz al-Dīn Ḥamza-Beg, who reigned from 830. He was succeeded by another brother Meḥmed Beg and the latter's brother ʿAlī, who seem to have reigned jointly. The ensuing years are obscure, and we only know that Ibrāhīm's son Dāwūd fell in 885/1480 in a battle in the vicinity of Diyārbakr. His body was brought to Aleppo and buried there. The history of the Ramaḍān Oghullarî now becomes a little better known. His son and successor, Ghars al-Dīn Khalīl, known from a number of inscriptions (cf. Max von Oppenheim and Max van Berchem, *Inschriften aus Syrien, Mesopotamien und Kleinasien*, Leipzig 1909, 109-10, nos. 141-5 of the years 898, 900, 906, 913) ruled for 34 years with his brother Maḥmūd Beg and died in battle in 916/1510. The date of his death (beginning of Djumādā I 916/beginning of August 1510) is known with certainty from his epitaph in Adana, in von Oppenheim and van Berchem (*op. cit.*, 110, no. 145). His son Pīrī Meḥmed Pasha, who appears as ruling from 916-76/1510-68), distinguished himself as an Ottoman vassal, fighting against the rebels of Ič-eli (Anatolia; cf. J. von Hammer, *GOR*, iii, 71) in Shaʿbān 934/May 1528 as well as in the civil war between the princes Bāyezīd and Selīm at Ḳonya (May 1559; cf. von Hammer, *GOR*, iii, 368 ff.). He died in 972/1568 in his capital Adana. He had an equal command of Persian and Turkish and composed a *dīwān*. His son Derwīsh Beg, who had been *mutesarrif* of Tarsūs in his father's life-time became after his death governor (*wālī*) of Adana but died young in 986/1578. He was succeeded by his eldest brother Ibrāhīm Beg, who had previously been *sandjaḳ beyi* of ʿAyntāb. He acted as governor at his father's capital till his death in 994/1586 or 997/1589. His son Meḥmed and the latter's son Pīr Manṣūr seemed to have retained some power until 1017/1608-9.

(F. Babinger*)

RAMAḌĀN-ZĀDE Meḥmed Čelebi Pasha, Yeshildje, known as Küčük Nishāndjī, an Ottoman historian. He was born in Merzifūn [*q.v.*] and was the son of a certain Ramaḍān Čelebi. He was a secretary in the *dīwān*, became in 960/1553 chief *defterdār*, in 961/1554 *reʾīs ül-küttāb* or secretary of state, and in 965/1558 secretary of the imperial signature (*ṭughra* [*q.v.*]). He was later appointed *defterdār* of Aleppo, then governor of Egypt and finally sent to the Morea to make a survey (*taḥrīr*). He retired in 970/1562 and died in Djumādā I 979/September-October 1571. To distinguish him from Djelāl-zāde Muṣṭafa, known as the Great Nishāndjī (see F. Babinger, *GOW*, 102-3), he is usually called *Küčük Nishāndjī*, the Little *Nishāndjī*.

At the bidding of sultan Süleymān, Ramaḍān-zāde compiled the history, widely known under the name of *Taʾrīkh-i Ramaḍān-zāde* but the real name of which is *Siyer-i enbiyāʾ-i ʿiẓām we-aḥwāl-i khulefāʾ-i kirān we-menāḳib-i selāṭīn-i āl-i ʿOthmān*; it remained till the end of the Ottoman period one of the most widely-used and most popular handbooks of Ottoman history. After a very brief sketch of the history of the world, the history of the Ottoman empire up to the time of Süleymān the Magnificent in 969/1561 is dealt with more fully. Scattered throughout are notes on celebrated scholars, saints, authors and poets as well as of buildings by the sultans.

The history of Ramaḍān-zāde is preserved in countless mss. (see F. Babinger, *GOW*, 104-5, to which may be added Paris, Bibl. Nat., *a.f.t.* 95, 96, 100; *s.t.* 191, 493, 496, 520, 734, 1131, 1319; Uppsala, Univ. Libr., no. 665 (cf. Zetterstéen, *Cat.*, ii, 42-3) and Rhodes, Library of Ḥāfiẓ Aḥmad, no. 459) and in two printed editions (Istanbul 1279 and the second impression—not mentioned in Babinger, *GOW*, 105—of the *Taʾrīkh-i Nishāndji Meḥmed Pasha*, Istanbul 17 Rabīʿ II 1290/1873).

Bibliography: ʿĀlī, *Künh ül-akhbār*, repeated in Pečewi, *Taʾrīkh*, i, 44; *Sidjill-i ʿothmānī*, iv, 120; Bursalī Meḥmed Ṭāhir, *ʿOthmānlī müʾellifleri*, iii, 53; Babinger, *GOW*, 103-5; *İA*, art. s.v. (Şerâfeddin Turan).

(F. Babinger)

al-**RAMĀDĪ**, whose full name was Abū ʿUmar (wrongly Abū ʿAmr) Yūsuf b. Hārūn al-Kindī al-Ḳurṭubī al-Ramādī, poet of Muslim Spain, who lived in the 4th/10th century and died in 403/1013, according to Ibn Ḥayyān (in Ibn Bashkuwāl, cf. *Bibl.*), in 413/1022-3 according to al-Maḳḳarī (quoting the same Ibn Ḥayyān); he was buried in the cemetery of Cordova known as Maḳbarat Kalaʿ.

The ethnic al-Ramādī is explained in two ways: 1. the poet is said to have come from al-Rammāda, a little town between Alexandria and Barḳa; this explanation is to be rejected, for this toponym would not give an ethnic like al-Ramādī (with one *m*); 2. the second explanation, which derives Ramādī from *ramād* "ordinary ashes" or "ashes for washing", is the only possible one; the poet perhaps in his youth followed the trade of an ash-merchant; in confirma-

tion of this we may call attention to the Romance surname which was originally given to him of *Abū Djanīs* (wrongly *Abū Sabīḥ* in the *Yatīmat al-dahr*), i.e. *padre ceniza*, "father cinders" or "the man with the cinders".

Al-Ramādī, a native of Cordova, spent all his life in his native town except for a brief period of exile in Saragossa. His life was dominated by three great factors: his attachment to al-Ḳālī [*q.v.*], his devotion to the cause of the *ḥādjib* al-Muṣḥafī [*q.v.*] and his love for Khalwa.

Abū ʿAlī al-Ḳālī, summoned from the east to Spain by the Umayyad caliph ʿAbd al-Raḥmān III al-Nāṣir (300-50/912-61) had from his arrival in Cordova in 330/942 no more faithful disciple than al-Ramādī, who studied under his direction the *Kitāb al-Nawādir*. The young scholar's admiration found expression in a poem which has remained famous (rhyme *-li*, metre *kāmil*) of which some thirty lines are preserved in the *Yatīmat al-dahr* of al-Thaʿālibī and the *Maṭmaḥ al-anfus* of al-Fatḥ b. Khāḳān (see *Bibl.*). It is this poem which gained him the title of Mutanabbī al-Gharb (which had already been given to Ibn Hānī al-Andalusī and which was later to be given to Ibn Darrādj al-Ḳasṭallī and to Abū Ṭālib ʿAbd al-Djabbār). Al-Ramādī studied also under an Andalusian scholar named Abū Bakr Yaḥyā b. Hudhayl al-Kafīf or al-Aʿmā ("the blind"), of whom we know very little.

When at the height of his powers, al-Ramādī became laureate to the Umayyad caliph al-Ḥakam II al-Mustanṣir (350-66/961-76), then to his son and successor Hishām II al-Muʾayyad (366-99/976-1009); but his attachment to the cause of the *ḥādjib* Abu 'l-Ḥasan al-Muṣḥafī and his participation in the plot fomented by the eunuch Djawdhar to overthrow Ḥakam II and proclaim a caliph other than his son Hishām brought down upon him the wrath of the great minister al-Manṣūr Ibn Abī ʿĀmir [*q.v.*]. Thrown into prison at al-Zahrāʾ, he suffered all sorts of ill-treatment; during his imprisonment, he wrote the most touching verses (including a poem in *-ḳī*, metre *ṭawīl*, and another in *-luhu*, metre *ṭawīl*) and he prepared a poetical work on birds, the description of which concluded with a poem in praise of the heir-presumptive Hishām II. Liberated through the intercession of friends, he had to go into exile. He went to Saragossa to the governor ʿAbd al-Raḥmān b. Muḥammad al-Tudjībī, whose merits he celebrated in a poem in *-mi*. Amnestied by al-Manṣūr, he was able to return to Cordova, but on condition that he did not go into society. Finally pardoned, he entered the entourage of the all-powerful *ḥādjib* as a recipient of allowances (*murtaziḳ*) and it was in this capacity that he took part in an expedition against Barcelona in 375/985. During the *fitna* which was to lead to the collapse of the Umayyad caliphate and the formation of petty independent states ruled by the *mulūk al-ṭawāʾif* [*q.v.*], al-Ramādī led a miserable existence and it was in the greatest distress that he died in the early years of the 5th/11th century.

Al-Ramādī became celebrated chiefly for his chaste love for the enigmatic Khalwa (wrongly: Ḥalwa or Ḥulwa), whom he met one Friday in the public gardens of the Banū Marwān on the left bank of the Guadalquivir at the end of the bridge but was never able to see again. It was Abū Muḥammad Ibn Ḥazm, whose ascetic tendencies on this subject are well known, who did most to spread this lovestory; but it seems that the memory of Khalwa occupied the heart or mind of the poet only very little. If it still possessed him at Saragossa to the extent of inspiring all the *nasīb* of the panegyric in honour of the Tudjībī governor, on his return to Cordova, it disappeared completely, for we see al-Ramādī henceforth completely overwhelmed by a new passion, the object of which is not a woman but a Mozarab boy to whom the poet gives the name of Yaḥyā (John) or Nuṣayr (Victor?).

The *Dīwān* of al-Ramādī never seems to have been collected; of his book on birds, *Kitāb al-Ṭayr*, written in prison, there survives only the *Lāmiyya* in which he described the falcon hunting; the more important fragments that have survived have already been mentioned. A pupil of al-Ḳālī, al-Ramādī is inclined to imitate the poetry of the east, but after Ibn ʿAbd Rabbihi and before ʿUbāda b. Māʾ al-Samāʾ, he shows a marked fondness for the *muwashshaḥ*, into the construction of which he introduced several innovations. In spite of its classical structure, his verse has a very personal character, especially when he calls upon Khalwa or describes his sufferings in the prison at al-Zahrāʾ. The few lines in which he alludes to the weakness of Hishām II and to his complete domination by his mother Ṣubḥ and by the *ḥādjib* al-Manṣūr, and those in which he speaks of Djawdhar's plot, are not without historical interest; finally, the information which he gives about Mozarabs (worship and costume) in connection with his favourite enables us to check what Abū ʿĀmir Ibn Shuhayd says on the same subject and is for this reason of some documentary importance.

AL-**RĀMAHURMUZĪ**, ABŪ MUḤAMMAD AL-ḤASAN b. ʿAbd al-Raḥmān b. Khallād, often referred to in mediaeval Arabic literature as IBN AL-KHALLĀD, *ḳāḍī* and author of various works of *adab* [*q.v.*]

who died in 360/971. His date of birth is unknown, but judging by the death dates of his alleged tradition masters, he must have been born some one hundred years earlier, if credence were to be granted at all to the usual longevity ascribed to transmitters of that period. For references to biographical notices on him, see *GAS*, i, 193. Of the poetry attributed to him a few lines have been preserved in *Yatīmat al-dahr*, ed. Cairo, iii, 423-7, by al-Thaʿālibī [*q.v.*], cf. also Yāḳūt, *Irshād*, iii, 140-4. Of his prose works, only two seem to have survived, both related to *ḥadīth* [*q.v.*]. First, a collection called *Amthāl al-nabī*, which comprises some 140 proverbs and other assorted wise sayings attributed to the Prophet and moulded in the form of *ḥadīth*s, cf. the editions of Amatulkarim Qureshi, Ḥaydarābād (Sind) 1968, and ʿA.ʿA. al-Aʿẓamī, Bombay 1983. For the *amthāl* genre in general, see R. Sellheim, *Die klassisch-arabischen Sprichwörtersammlungen insbesondere die des Abū ʿUbaid,* The Hague 1954. Rāmahurmuzī's fame squarely rests, however, on a comprehensive, theoretical work on the science of *ḥadīth* entitled *al-Muḥaddith al-fāṣil bayna 'l-rāwī wa 'l-wāʿī*, the first such work to be written in Islam, which exerted a lasting influence on all theoretical *ḥadīth* works to follow.

The title refers to two sorts of *ḥadīth* transmitters which he distinguishes from one another: those who merely transmit without paying proper heed to all sorts of crucial details in *isnād* [*q.v.*] as well as contents of a tradition, whose transmission he calls *riwāya*; and those who have learned to discern between all transmission minutiae, whose activities he summarises under the term *dirāya*. Examples of these minutiae are (1) the proper distinction between namesakes and people bearing names with (nearly) the same consonantal pattern (*rasm*); (2) the identification of transmitters not known by their patronymics but by grandfathers, other forebears or (grand)-mothers; (3) the identification of transmitters who share *kunya*s or *nisba*s, etc. Rāmahurmuzī's exploration of this thorny terrain is exemplary and constitutes to this day an indispensable tool for any approach towards *isnād* analysis. His is in fact the first systematic attempt to unravel an, until his time ever-increasing, multitude of no longer correctly identified transmitters, thus exposing many hitherto undetected cases of *isnād* tampering (*tadlīs* [*q.v.*]). Furthermore, his division into generations (*ṭabaḳāt*) of those transmitters who travelled extensively in order to collect traditions (*fī ṭalab al-ʿilm* [*q.v.*]) is the first such survey and is remarkable for its exhaustiveness as well as the relatively late chronology he proposes for its onset. Moreover, Rāmahurmuzī is fully aware of what Islam owes to its *mawālī* of the first hour by emphasising time and again their undeniably important role in the development of juridical thinking and in transmitting traditions in order to derive *fiḳh* precepts from them. This book is available in the reliable edition of Muḥammad ʿAdjdjādj al-Khaṭīb, Beirut 1971.

(G.H.A. JUYNBOLL)

RAMAL (A.) 1. As a poetic metre. This is the name of the eighth metre in Arabic prosody [see ʿARŪḌ], based on the foot *fāʿilātun* in which the first syllable may be either long or short (⏓ ⏑ – –). Of the two current types, one has three feet to the hemistich with 22 syllables to the line (⏓ ⏑ – – | ⏓ ⏑ – – | ⏓ ⏑ – || ⏓ ⏑ – – | ⏓ ⏑ – – | ⏓ ⏑ –). The other one, called *madjzūʾ al-ramal* (*ramal* shortened by a foot or *djuzʾ*), has 16 syllables to the line: ⏓ ⏑ – – | ⏓ ⏑ – – || ⏓ ⏑ – – | ⏓ ⏑ – –. The final syllable of the line is normally long, but occasionally poems with overlong last syllables are found. In modern poetry, so-called "free verse" (*al-shiʿr al-ḥurr*) in *ramal* is built on the *fāʿilātun* foot, but shows lines of unequal length.

Ramal poems are few in pre-Islamic poetry, but some are ascribed to Imruʾ al-Ḳays [*q.v.*] and ʿAbīd b. al-Abraṣ [*q.v.*] (cf. Ibn al-Sarrādj, *al-Miʿyār fī awzān al-ashʿār*, ed. M.R. al-Dāya, 1979^{3}, 156-7). One of the three *Mufaḍḍaliyyāt* [*q.v.*] in *ramal* is by al-Muthaḳḳib al-ʿAbdī (died *ca.* 590). According to al-Akhfash al-Awsaṭ [*q.v.*] (*Kitāb al-ʿArūḍ*, ed. S. al-Baḥrāwī, in *Fusul* vi/2 [1986], 152) a lot of *ramal* poetry was practised by the Bedouins, but this may refer to *ramal* as a genre name for "poetry which is neither *ḳaṣīd* nor *radjaz*" (al-Akhfash, *Kitāb al-Ḳawāfī*, ed. ʿIzza Ḥasan, Damascus 1970, 68; Lane, s.v. *r-m-l*), apparently referring to *madjzūʾ* poetry. This fits in with al-Tahānawī's division of Arabic poetry into four classes (*al-ḳaṣīda, al-ramal, al-radjaz* and *al-khafīf*) in *Kashshāf iṣṭilāḥāt al-funūn*, Calcutta 1862, 745, where a poet who writes mainly verse of the second class is called a *rāmil* (cf. W. Stoetzer, *Theory and practice in Arabic metrics*, Leiden 1989, 61-73). Al-Djawharī [*q.v.*] labels both variations of *ramal* as ancient (*ḳadīm*) (see *ʿArūḍ al-waraḳa*, ed. Muḥammad al-ʿAlamī, Casablanca 1984, 52). As from the Umayyad period, both types of *ramal* are regularly found in monostrophic poems, in *muwashshaḥ* and *zadjal* (cf. M. Ben Cheneb, *Tuḥfat al-adab*^{3}, Paris 1954, 117 and 131), popular ballads (cf. P. Cachia, *Popular narrative ballads of modern Egypt*, Oxford 1989, 103) and modern poetry, where it has gained popularity over the years (S.K. Jayyusi, *Trends and movements in modern Arabic poetry*, Leiden 1977, 608 n.).

Data on the occurrence of *ramal* are found in J.E. Bencheikh, *Poétique arabe, précédée de Essai sur un discours critique*, Paris 1989, 201-27 (incorporating statistics by Bräunlich and Vadet) and in S. Moreh, *Modern Arabic poetry 1800-1970*, Leiden 1976, 219. See also the article RAMAL in the Supplement of the first edition and E. Wagner, *Grundzüge der klassischen arabischen Dichtung*, i, 52-5.

According to Ḥāzim al-Ḳarṭādjannī [*q.v.*], *ramal*, together with *madīd*, comes, aesthetically, after *ṭawīl*, *basīṭ*, *wāfir* and *khafīf* and is characterised by "smoothness (*līn*) and facility (*suhūla*) and therefore more suitable for elegies and the like" (see his *Minhādj al-bulaghāʾ*, ed. M.H. Belkhodja, Tunis 1966, 268-9).

For the role of *ramal* in the relationship between music and verse, see O. Wright, in *Arabic literature to the end of the Umayyad period* (= *The Cambridge history of Arabic literature*, i) Cambridge 1983, 450-9. One of the indigenous explanations of the name is precisely that *ramal* is a kind of music characterised by this pattern (*yakhrudju ʿalā hādhā 'l-wazn*) (see Ibn Barrī, *Sharḥ al-ghumūḍ min masāʾil al-ʿarūḍ*, ms. Escorial 288, fol. 46a = 410, fol. 171a). See also section 2. below.

For a discussion of the arguments for and against the possible Persian origin of *ramal*, see E. Wagner, *op. cit.*, 47-8.

(W. STOETZER)

2. As a musical metre (*īḳāʿ* [*q.v.*]). This was "invented" in Mecca at the end of the 1st/7th century. In early Arabic music theory, distinction is made between a "heavy" (*thaḳīl*) or slow, and a "light" (*khafīf*) or quick version of the metre. According to 3rd/9th and 4th/10th century sources, a "period" (*dawr*) of the "heavy" *ramal* consisted of one heavy and two light "beats" (*naḳarāt*), followed by a rest (*fāṣila*). Abū Naṣr al-Fārābī, who developed a very advanced *īḳāʿ* theory, explains this pattern by means of

the mnemonic syllables *tanna tan tan* which represent the length of the notes (and also correspond to the metric scheme of the prosodic *ramal*):

(3/2) ♩ ♩ ♩ ▬
tanna tan tan + *fāṣila*
fāʿi- lā- tun

Ibn Sīnā's disciple Ibn Zayla (d. 440/1048) added the alternative form of (3/2) which was confirmed later by Ṣafī al-Dīn al-Urmawī (d. 693/1294) and his successors up to the 9th/15th century. They transcribe it by substituting a consonant (*t* or *n*) for each quaver, and define the length of the notes by the number of syllables:

(3/2) ♩ ♩ ♩ ♩
tan tan tananan tananan

Simple ternary patterns such as these were also attested in Muslim Spain and still survive in the *nawba* [*q.v.*] of North Africa, though the name *ramal* vanished there long ago.

As a result of "duplication" (*taḍʿīf*), the *ramal* developed into the very popular form of (6/2) ♩♩♩♩♩♩♩♩ which was called a Persian variety and first occurs in 7th/13th century sources. ʿAbd al-Ḳādir al-Marāg̲h̲ī (d. 838/1435) expanded this pattern in his own compositions, as he says, from 12 to 48 and even 96 units per period.

Another sophisticated form developed in Ottoman Turkey (*al-ramal al-turkī; remel*). Its basic scheme consists of 28 units per period (or 56 units, when "doubled"):

(2/2 + 3/2 ...)

Here, the mnemotic syllables represent the quality but no longer the length of the beats.

The "light" version of *ramal* had a basic pattern of (3/4) ♩♩𝄽, plus some variant forms, as listed in Arabic sources from the 3rd/9th to the 7th/13th centuries. From Ibn Sīnā's time on, a "limping" (*aksak*) variety (2/8 + 3/8), ♩♩., is also recorded. In al-Urmawī's school, both patterns were transmitted side by side.

(E. Neubauer)

RĀMĪ MEḤMED PAS̲H̲A, an Ottoman Grand Vizier and poet, was born in 1065 or 1066/1654 in Eyyūb, a suburb of Istanbul, the son of a certain Ḥasan Ag̲h̲a. He entered the chancellery of the Reʾīs Efendi as a probationer (*s̲h̲āgird*), and through the poet Yūsuf Nābī [*q.v.*] received an appointment as *maṣraf kātibi*, i.e. secretary for the expenditure of the palace. In 1095/1684 through the influence of his patron, the newly-appointed *Ḳapudān Pas̲h̲a* [*q.v.*] Muṣṭafā Pas̲h̲a, he became *dīwān efendi*, i.e. chancellor of the Admiralty. He took part in his chief's journeys and campaigns (against Chios) and on his return to Istanbul became *reʾīs kesedārī*, i.e. pursebearer to the *Reʾīs Efendi*. In 1102/1690 he was promoted to *Beylikd̲j̲i*, i.e. Vice-Chancellor, and four years later, *Reʾīs Efendi* in place of Abū Bakr, in which office he was succeeded in 1108/1697 by Küčük Meḥmed Čelebi. After the battle of Zenta (12 September 1697), he became *Reʾīs Efendi* for a second time and was one of the plenipotentiaries at the peace of Carlowitz [see karlofča], by the conclusion of which "he put an end to the ravages of the Ten Years War but also for ever to the conquering power of the Ottomans" (J. von Hammer). As a reward for his services at the peace negotiations, he was appointed a vizier of the dome with 3 horse-tails (*tug̲h̲*) in 1114/1703, and in Ramaḍān 6, 1114/24 January 1703, appointed to the highest office in the kingdom in succession to the Grand Vizier Daltaban Muṣṭafā Pas̲h̲a. In this office he devoted particular attention to the thorough reform of the civil administration, through the abuses in which he saw the security of the state threatened (cf. von Hammer, *GOR*, vii, 64). "By lessening the burden of fortresses on the frontiers in east and west, by raising militia against the rebel Arabs, by securing the pay of the army from the revenues of certain estates, by making aqueducts, by restoring ruined mosques, by taking measures for the safety of the pilgrim caravans and for the security of Asia Minor, by settling Turkmen tribes, by ordering the Jewish cloth manufacturers in Selānīk and the Greek silk manufacturers in Bursa in future to make in their factories all the stuffs hitherto imported into Turkey from Europe", he exercised a most beneficent activity, which however soon aroused envy and hatred, and, especially as Rāmī Meḥmed Pas̲h̲a, as a man of the pen entirely and not of the sword, was unpopular with the army, particularly the Janissaries, finally was bound to lead to his fall (cf. *GOR*, vii, 72). In the great rising in Istanbul which lasted four weeks, beginning with the enthronement of Sultan Muṣṭafā II and ending with his deposition (9 Rabīʿ II, 1115/22 August 1703), his career came to an end. He was disgraced, but pardoned in the same year and appointed governor, first of Cyprus, then of Egypt (October 1704). His governorship there terminated as unhappily as his grand viziership (cf. *GOR*, vii, 133, following Rās̲h̲id and La Motraye). In D̲j̲umādā I 1118/September 1706 he was dismissed and sent to the island of Rhodes, where he died in D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1119/March 1707, either under torture or a result of it (cf. *GOR*, vii, 134, quoting the *internuntius* Talman). Rāmī Meḥmed Pas̲h̲a is regarded as a brilliant stylist, as the two collections of his official documents (*ins̲h̲āʾ*) containing no less than 1,400 pieces, distinguished by their simple clear and elevated style, amply show (cf. the mss. in Vienna, Nat. Bibl. nos. 296 and 297, in G. Flügel, *Die arab., pers. u. türk. Hss.*, i, 271-2). Rāmī Meḥmed Pas̲h̲a also left a complete *Dīwān*, of which specimens are available in the printed *Ted̲h̲kire* of Sālim (cf. F. Babinger, *GOW*, 272-3: Istanbul 1315). His poetical gifts were inherited by his son ʿAbd Allāh Reʾfet (cf. Bursalī Meḥmed Ṭāhir, *ʿOt̲h̲mānlī müʾellifleri*, ii, 187). His son-in-law was the *ted̲h̲kired̲j̲i* Sālim [*q.v.*].

Bibliography: J. von Hammer, *GOR*, vii, *passim*; the history of the Istanbul rising was written by Meḥmed S̲h̲efīḳ; Bursalī Meḥmed Ṭāhir, *ʿOt̲h̲mānlī müʾellifleri*, ii, 186-7; Sālim, *Ted̲h̲kire*, 252-8; ʿOt̲h̲mān-zāde Aḥmad Tāʾib, *Ḥadīḳat al-wuzarāʾ*, Istanbul 1271, at the end; Aḥmed Resmī, *K̲h̲alīfat al-ruʾasāʾ*, Istanbul 1269, 47 ff.; *Sid̲j̲ill-i ʿot̲h̲mānī*, ii, 367-8; von Hammer, *Geschichte der Osmanischen Dichtkunst*, iv, 26 ff.; Fahir İz, *Eski türk edebiyatında nazım*, Istanbul 1966-7, i, 387-8; *İA* art. s.v. (Bekir Sıtkı Baykal).

(F. Babinger)

RĀMĪ TABRĪZĪ, S̲h̲araf al-Dīn Ḥasan b. Muḥammad, Persian rhetorician and poet, who

flourished in the middle of the 8th/14th century. Very little is known about his life and the few chronological indications that we possess are either imprecise or unreliable. Dawlatshāh states that he was the poet laureate (*malik al-shuʿarāʾ* [*q.v.*]) of ʿIrāḳ during the reign of the Muẓaffarid Shāh Manṣūr (reigned 789-95/1387-93), but dedications in his two most important works prove that he attended the court of Sultan Abu 'l-Fatḥ Uways Bahādur or Shaykh Uways (757-76/1356-74) of the Djalāyirids [*q.v.*], presumably after the latter's conquest of Adharbāydjān in 761/1360. In his *Anīs al-ʿushshāḳ*, Rāmī mentions the poet Awḥadī (d. 738/1337) as a contemporary and Ḥasan b. Maḥmūd Kāshī, who died as early as 710/1310, as his teacher (cf. Iḳbāl, introd., p. *dāl*). A late and unlikely dating for his death is 795/1392-3 (see Storey, iii, 182-3).

His most original work is *Anīs al-ʿushshāḳ*, a short treatise on the poetical description, "from head to foot", of a beautiful person. According to his own statement, the author made up his mind to compile this book while he was in Marāgha on a visit to the observatory of Naṣīr al-Dīn Ṭūsī [*q.v.*]. He dedicated it to Shaykh Uways. In this treatise, Rāmī discusses the conventions of *ghazal* poetry, as well as of romantic *mathnawīs*, in depicting the charms of a *maʿshūḳ*, male or female (see *EIr*, iv, s.v. *Beloved*). Twelve of the nineteen chapters deal with parts of the head: the hair, the temple, the eyebrows, the eyes, the eye lashes, the face, the down on the cheeks (*khaṭṭ*), the beauty spot (*khāl*), the lips, the teeth, the mouth and the chin; then follow the neck, the breasts, the fore-arm, the fingers and finally the stature, the waist and the legs. The Persian text, preserved in a great number of manuscripts, was published by ʿAbbās Iḳbāl (Tehran 1325 *Sh.*/1946, with a short introd.) and was translated into French by Cl. Huart (*Anîs el-ʿochchâq. Traité des termes figurés relatifs à la description de la beauté*, Paris 1875).

Under the title *Ḥaḳāʾiḳ al-ḥadāʾiḳ* (erroneously called *Ḥadāʾiḳ al-ḥaḳāʾiḳ* by Dawlatshāh), Rāmī prepared a commentary on the well-known textbook of rhetorical figures *Ḥadāʾiḳ al-siḥr fī daḳāʾiḳ al-shiʿr* by Rashīd al-Dīn Waṭwāṭ [*q.v.*]. To the order of Shaykh Uways, he removed the Arabic quotations from the basic text. This work was edited by Sayyid Muḥammad-Kāẓim Imām (Tehran 1341 *Sh.*/1962, with an introd. and extensive notes).

Rāmī's *Dīwān*, containing *ḳaṣīdas*, *muḳaṭṭaʿāt* and quatrains, was in the days of Dawlatshāh still available in western Persia but now seems to have disappeared. Only a few poems are preserved in anthologies (cf. Imām, introd. 12 ff.). Other works ascribed to Rāmī are known to exist only in very few copies: *Badāʾiʿ al-ṣanāʾiʿ* or *Tuḥfat al-faḳīr*, treating of sixteen figures of speech (Munzawī, iii, 2127-8); *Dah faṣl*, a *mathnawī* in the metre of Djalāl al-Dīn Rūmī's *Mathnawī-yi maʿnawī* (Munzawī, iv, 2817-8); *Ṣifat-i ṣanʿat-i shiʿr wa shuʿarāʾ* (Munzawī, iii, 2142) and *Mukhtaṣar-i ṣanāʾiʿ-i shiʿrī*. About *Ḥulyat al-maddāḥ*, a work also attributed to Rāmī (Ḥādjdjī Khalīfa, iii, 112) nothing else is known.

(E. Berthels-[J.T.P. de Bruijn])

RAML (A.), pl. *rimāl, armul*, "sand", with *ramla*, pl. *rimāl* for "area of sands, sand dunes". For the sands of the Arabian peninsula, see AL-ʿARAB, DJAZĪRAT AL-. ii; DAHNĀʾ; NAFŪD; AL-RUBʿ AL-KHĀLĪ. For geomancy, divination by means of the patterns in sand (in Arabic, *al-khaṭṭ bi 'l-raml*), see AL-KHAṬṬ.

AL-**RAMLA**, a town of Palestine, in early Islamic times in the *djund* [*q.v.*] of Filasṭīn [*q.v.*]. It is situated on the coastal plain 40 km/25 miles west-north-west of Jerusalem, in lat. 31° 50′ N., long. 34° 52′ E., and now lies between the modern Israeli towns of Rehovot and Lod (Lydda, Ludd [*q.v.*]). The Umayyad caliphs liked to choose little country towns, usually places in Palestine, to live in rather than Damascus. Muʿāwiya, and after him Marwān and others, frequently resided in al-Ṣinnabra on the south bank of the Lake of al-Ṭabariyya, Yazīd I in Hawwārīn, Adhriʿāt, ʿAbd al-Malik in al-Djābiya, Walīd in Usays (now Djabal Says [*q.v.* in Suppl.] to the south-east of Damascus) and al-Ḳaryatayn, and his sons in al-Ḳasṭal, Yazīd II also in al-Muwaḳḳar [*q.v.*] near Fudayn or in Bayt Raʾs (Lammens, *La Bâdia et la Ḥîra sous les Omaiyades*, in *MFOB*, iv [1910], 91-112; A. Musil, *The country residences of the Omayyads*, in *Palmyrena*, New York 1928, 277-97; BĀDIYA, in Suppl.).

In the reign of al-Walīd, his brother Sulaymān was governor of Filasṭīn. Stimulated by the examples of ʿAbd al-Malik, the builder of the Ḳubbat al-Ṣakhra in Jerusalem, and of his brother who had restored the mosque of Damascus (Yāḳūt, *Muʿdjam*, ed. Wüstenfeld, ii, 818), he founded the new town of al-Ramla and removed to it the seat of the provincial government which had been in Ludd since the "plague of ʿAmwās" [*q.v.*] in 18/638-9. As caliph also he continued to live in al-Ramla (96-9/715-17).

The whole population of Ludd was transferred to the new capital of the *djund* of Filasṭīn and the latter fortified, while Ludd was allowed to fall into ruins. Sulaymān first of all built his palace (*ḳaṣr*) then the "house of the dyers" (*dār al-ṣabbāghīn*) which was provided with a huge cistern; at a later date it was confiscated with all the property of the Umayyads and came into the possession of the heir of the ʿAbbāsids, Ṣāliḥ b. ʿAlī b. ʿAbd Allāh. Sulaymān also began to build the mosque and continued it when caliph. It was finished under ʿUmar b. ʿAbd al-ʿAzīz, although not on the scale originally intended. The financial management of the building of the palace and of the chief mosque was in the hands of a Christian of Ludd, al-Biṭrīḳ b. al-Naḳā (al-Balādhurī, 143-4; vars. Biṭrīḳ b. Baḳā in Ibn al-Faḳīh, 102, and Ibn Bīṭrīḳ in Yāḳūt, *Buldān*, ii, 818). According to Yāḳūt (ii, 817) the latter asked the people of Ludd to give him a house near the church, and when they refused he decided to pull down the church; according to al-Muḳaddasī, iii, 164-5, the caliph Hishām threatened the people of Ludd that he would destroy their church if they did not hand over the marble columns, which they had intended for a splendid building and concealed. Sulaymān also began to bring a canal called Barada to the new town and to dig wells of fresh water, as it was 12 miles distant from the nearest river, the Nahr Abū Fuṭrus [*q.v.*] (al-Yaʿḳūbī, *Buldān*, 328). The considerable cost of keeping up the canal was later taken over by the ʿAbbāsid caliphs and at first voted annually but from the time of al-Muʿtaṣim included as current expenditure in the budget.

The advantages and disadvantages of the new town are vividly described by al-Muḳaddasī. Rich in fruits, especially figs and palms, good water and all foodstuffs, it combined the advantages of town and

country, those of a position in the plain with the proximity of hills and sea, of places of pilgrimage like Jerusalem and coast fortresses. It had a splendid chief mosque, fine *khāns*, comfortable baths, commodious dwellings and broad streets. On the other hand, in winter it was like a muddy island, in summer a sand-bin and as it was not on a river the ground was hard and without grass; and the lack of ample running water was the chief defect of this otherwise so favoured town, for the little drinking water in the cisterns was not accessible to the poorer part of the population. The town covered an area of a whole square mile. Its buildings were of fine building stone and brick. The town's wares were exported chiefly to Egypt.

Al-Ramla had several gates, enumerated by the geographers, and in the centre of its market-place was the chief mosque, Djāmiʿ al-Abyaḍ, the *miḥrāb* of which was regarded as the largest of all that were known, the pulpit of which was second only to that in Jerusalem and whose splendid minaret was much admired.

Whether there had been an older town on the site of al-Ramla is problematic. The old attempts to identify it with Arimathia, Ramatha or Ramathaim have now been generally abondoned. An ancient Παρεμβολή, "Camp" (> al-Ramla, the initial Greek ρ being interpreted as the Coptic article, as in *usḳuf* < επισκοπος), should rather be considered, a place-name particularly frequent in Palestine, which was borne for example by the camp of Jerusalem (Hebr., xiii, 11, 13; Acts, xxi, 34-xxiii, 32) and bishoprics in Palestine I. (now Biʾr al-Zarāʿa, cf. Féderlin in Génier, *Vie de S. Euthyme le Grand*, 104-11) and in Phoinike Libanesia (R. Aigrin, art. *Arabie*, in *Dict. d'hist. et de géogr. ecclés.*, iii, 1194-6); for the Egyptian al-Ramla four miles to the north-east of Alexandria corresponds to an ancient Nicopolis and later Parembole. But the Arabic writers say there was no town previously on this site but only a sandy area, after which the town was named (al-Balādhurī, 143, etc.).

The population of al-Ramla was in the time of al-Yaʿḳūbī (*Buldān*, 327) a mixture of Arabs and Persians (on the settlement of Persians in Syria, cf. al-Kindī, *Governors of Egypt*, ed. Guest, 19); the clients were Samaritans.

The great cistern ʿUnayziyya (ʿAnēziyye) to the north-west of al-Ramla near the road to Yāfā, known as the cistern of St. Helena, has a Kūfic inscription of Dhu 'l-Ḥidjdja 172/May 789, i.e. of the time of Hārūn al-Rashīd (van Berchem, *Inscr. arabes de Syrie*, Cairo 1897, 4-7; M. de Vogüé, *La citerne de Ramla*, in *Comptes-rendus de l'Acad. des Inscr. et Belles-lettres*, xxxix [1911], 362-3, 493-4).

By the Frankish pilgrims the town is first mentioned in 870 as "Ramula". The Crusaders made it a bishopric. In the 12th century was built the beautiful church of the Crusaders, now the mosque (*Djāmiʿ al-Kabīr* in the east of the town) with its noble Gothic portal, to which was later added very unskilfully an inscription of Sultan Kitbughā. It also has an inscription, according to which its square tower (now replaced by a round minaret) was built or restored in 714/1314-15 by Sultan Muḥammad.

The old "white mosque" was restored by Ṣalāḥ al-Dīn in 587/1191 and given by Baybars in 666/1267-8) two domes, above the minaret and the *miḥrāb*, and the gateway opposite it (Mudjīr al-Dīn, Būlāḳ, 418, tr. Sauvaire, 207; the inscription in van Berchem, *op. cit.*, 57-64). The minaret, the so-called "tower of al-Ramla" or "Tower of the 40 martyrs", was, according to Mudjīr al-Dīn and an inscription over its gateway, rebuilt in Shaʿbān 718/October 1318 (*Zwei arabische Inschriften*, in *Jerusalemer Warte*, lxix [1913], 100-1); the mosque as well as the minaret have both been wrongly taken for the work of the Crusaders (cf. against this van Berchem, *op. cit.*, 63-4).

Nāṣir-i Khusraw, who visited al-Ramla in Ramaḍān 438/March 1047, calls it a large town with high and strong walls of stone and gates of copper; the inhabitants had a receptacle for the collection of rain-water at the door of each house. There was also a large cistern for general use in the middle of the Friday mosque.

An earthquake of 15 Muḥarram 425/10 December 1033 destroyed a third of the town and its mosque fell into ruins (cf. also Ibn al-Athīr, ix, 298).

Most of the public and private buildings were built of marble and adorned with fine sculptures and ornaments. Figs were the chief export of al-Ramla. The name of the province of Filasṭīn was also given to the capital al-Ramla (Clermont-Ganneau, *Recueil d'Arch. Orient.*, vi, 101).

Ṣalāḥ al-Dīn in 583/1187 destroyed the town so that it might never again fall into the hands of the Franks and it remained in ruins (Yāḳūt, i, 818; Ṣafī al-Dīn, *Marāṣid*, i, 483). Ibn Baṭṭūṭa visited it in 756/1355; he mentions the Djāmiʿ al-Abyaḍ in which, he was told, 300 prophets were buried. A Latin monastery was founded in 1420 in al-Ramla by Duke Philip the Good, and restored at a later date by Louis XIV.

In 1798 the town was Bonaparte's headquarters during his unsuccessful attempt to take Palestine from the Ottomans. It was the scene of fighting in July 1948 when the Transjordanian Arab Legion was driven out by Israeli forces. Most of the largely Christian Arab population left, to be replaced by Jewish immigrants. In 1970 the estimated population was 31,000.

AL-**RAMLĪ**, MUḤAMMAD B. AḤMAD B. Ḥamza al-Manūfī al-Miṣrī al-Anṣārī Shams al-Dīn, prominent Shāfiʿī jurist, born in Cairo on 30 Djumādā I 917/1511 (*Luṭf al-samar*, i, 78; al-Muḥibbī, iii, 347, and later sources give 919/1513), where he died on 13 Djumādā I 1004/1595. His father, Shihāb al-Dīn al-Ramlī (d. 957/1550), a student of Zakariyyāʾ al-Anṣārī (d. 926/1520), was the leading Egyptian

Shāfiʿī jurist of his day and held the high post of *nāẓir al-khāṣṣ* in 905/1499-1500 under the Mamlūk sultan al-Ẓāhir Ḳānṣūh (Ibn Iyās, *Badāʾiʿ al-zuhūr*, ed. M. Muṣṭafā, Cairo 1383/1963, iii, 424, 440).

Al-Ramlī's principal teacher was his father, who instructed him in the entire range of religious sciences. Upon the elder al-Ramlī's death, Shams al-Dīn took over his teaching duties in the Azhar mosque (al-Shaʿrānī, 122). He also held teaching positions in the Khashshābiyya (*Luṭf al-samar*, i, 265; cf. *al-Kawākib al-sāʾira*, ii, 36) and in the Sharīfiyya (al-Muḥibbī, i, 146) *madrasas*, both positions designated by their terms for the leading Egyptian Shāfiʿī. Al-Ramlī actively transmitted the writings and authorised texts of Zakariyyāʾ al-Anṣārī, both directly through a general *idjāza* that he received in his childhood from al-Anṣārī (*Luṭf al-samar*, i, 78) and indirectly on the authority of his father (e.g. al-Muḥibbī, i, 332, Ibrāhīm al-Kūrānī, *al-Amam li-īḳāẓ al-himam*, Ḥaydarābād 1328/1910, 79-80). Al-Ramlī's numerous students, in both Shāfiʿī *fiḳh* and *ḥadīth*, included Syrians as well as Egyptians, the most prominent being the Egyptian Shāfiʿī jurist Nūr al-Dīn ʿAlī b. Yaḥyā al-Zayyādī (d. 1024/1615) (*Luṭf al-samar*, ii, 568-78; al-Muḥibbī, iii, 195-7), and in the realm of letters Shihāb al-Dīn al-Khafādjī (d. 1069/1659 [*q.v.*]). His influence also extended to the *ḥaramayn* (al-Iṣāmī, *Simṭ al-nudjūm al-ʿawālī fī anbāʾ al-awāʾil wa 'l-tawālī*, Cairo n.d., iv, 357 quoted by al-Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348, ii, 102) through his teaching in Mecca (cf. the *isnāds* in Aḥmad al-Nakhlī, *Bughyat al-ṭālibīn*, Ḥaydarābād 1328/1910, 48, 54), where he made the pilgrimage on numerous occasions (*Luṭf al-samar*, i, 80) and where he spent a period of *mudjāwara* in 991/1583 (al-Muḥibbī, ii, 458). Like his father, al-Ramlī was the pre-eminent Egyptian Shāfiʿī *muftī* of his day, and was officially recognised as such (al-Muḥibbī, i, 117).

Both father and son were favourably disposed toward the Ṣūfīs. They were on familiar terms with the famous Egyptian Ṣūfī ʿAbd al-Wahhāb al-Shaʿrānī (d. 973/1565) (M. Winter, *Society and religion in early Ottoman Egypt: studies in the writings of ʿAbd al-Wahhāb al-Shaʿrānī*, New Brunswick, N.J. 1982, 221-2), and Shams al-Dīn's son-in-law Abu 'l-Mawāhib (d. 1037/1628) was a son of the Ṣūfī leader and poet Muḥammad al-Bakrī (d. 994/1586) (al-Muḥibbī, i, 146).

The most important of al-Ramlī's writings is his large-scale commentary on the *Minhādj al-ṭālibīn* of Abū Zakariyyāʾ al-Nawawī (d. 676/1278), entitled *Nihāyat al-muḥtādj ilā sharḥ al-minhādj*, begun in 963/1556 and completed in 973/1566, some fifteen years after the completion of *Tuḥfat al-muḥtādj bi-sharḥ al-minhādj* of his father's student (*al-Kawākib al-sāʾira*, iii, 112) Ibn Ḥadjar al-Haytamī [*q.v.*] (*Tuḥfat al-muḥtādj*, i, 3 gloss). Although apparently neglected at first in favour of Ibn Ḥadjar's *Tuḥfat al-muḥtādj* (al-Muḥibbī, iii, 176), al-Ramlī's commentary came to be recognised as the leading Shāfiʿī work of authority outside of Yemen (including Ḥaḍramawt) and part of the Ḥidjāz, where Ibn Ḥadjar's commentary was followed (Muḥammad b. Sulaymān al-Kurdī (d. 1194/1780) quoted in Bā Ṣabrayn, *Ithmid al-ʿaynayn*, 4-5).

The esteem in which al-Ramlī was held and his significance in the history of the Shāfiʿī *madhhab* are indicated by the honorific title bestowed on him of al-Shāfiʿī *al-ṣaghīr* and by his being reckoned by many as the *mudjaddid* of the 10th century of the *hidjra* (al-Muḥibbī, iii, 342, 344, 346-7).

Al-Ramlī's printed works include *Nihāyat al-muḥtādj* (8 vols., Cairo 1286, Būlāḳ 1292, and later), *Ghāyat al-bayān fī sharḥ zubad Ibn Raslān* (Būlāḳ 1291, Cairo 1305, and later), and his collection of his father's *Fatāwā* (on the margin of Ibn Ḥadjar al-Haytamī's *al-Fatāwā al-kubrā*, Cairo 1308, 1329, and later) (Sarkīs, *Muʿdjam al-maṭbūʿāt al-arabiyya wa 'l-muʿarraba*, Cairo 1346/1928, i, 952). The title-page of the *Fatāwā* gives al-Ramlī's lineage as Muḥammad b. Aḥmad b. Aḥmad (*sic*) b. Ḥamza, which apparently led Hurgronje, *Versp. Geschr.*, ii, 333 n. 1, to misidentify the *Fatāwā* as those of Aḥmad al-Ramlī, "the brother [*sic*] of the author of the *Nihāya*", although he later, *ibid.*, 423 n. 1, again erroneously, identified them as those of Shams al-Dīn.

The *nisba* al-Ramlī refers to the Egyptian village Ramlat al-Manūfiyya (al-Shaʿrānī, 67 and al-Zabīdī, *Tādj al-ʿarūs*, vii, 352, s.v. Ramla). This is the present-day Ramlat Banhā (lat. 30° 26′ N, long. 31° 10′ E) (U.S. Dept. of Interior, Office of Geography, *Gazeteer No. 45, Egypt and the Gaza Strip*, Washington, D.C. 1959, 57) in al-Ḳalyūbiyya Province (M. Ramzī, *al-Ḳāmūs al-djughrāfī li 'l-bilād al-miṣriyya*, Cairo 1954-68, ii/1, 19; H. Halm, *Ägypten nach den mamlukischen Lehensregistern*, Wiesbaden 1979-82, ii, 669 and Map 24), incorrectly identified as Ramlat al-Angeb by Winter (*Society and religion*, 221).

Bibliography: Biographies of Shams al-Dīn al-Ramlī: ʿAbd al-Wahhāb al-Shaʿrānī, *al-Ṭabaḳāt al-ṣughrā*, ed. ʿAbd al-Ḳādir Aḥmad ʿAṭā, Cairo 1390/1970, 121-3, referred to in later sources as *al-Ṭabaḳāt al-wusṭā*; Nadjm al-Dīn Muḥammad al-Ghazzī, *Luṭf al-samar wa-ḳaṭf al-thamar min tarādjim aʿyān al-ṭabaḳa al-ūlā min al-ḳarn al-ḥādī ʿashar*, ed. Maḥmūd al-Shaykh, Damascus 1981-2, i, 77-85; al-Muḥibbī, *Khulāṣat al-athar fī aʿyān al-ḳarn al-ḥādī ʿashar*, Cairo 1867, iii, 342-8; Ziriklī, *al-Aʿlām*, Beirut 1979, vi, 7-8; Kaḥḥāla, *Muʿdjam al-muʾallifīn*, Damascus 1957-61, viii, 255-6; Dār al-kutub al-miṣriyya, *Fihris al-khizāna al-taymūriyya*, Cairo 1367/1948, iii, 115; Brockelmann, II², 418-19, S II, 442.

Biographies of Shihāb al-Dīn al-Ramlī: Shaʿrānī, 67-9; Ghazzī, *al-Kawākib al-sāʾira bi-aʿyān al-miʾa al-ʿāshira*, ed. Djibrāʾīl Sulaymān Djabbūr, Beirut 1945-58, ii, 119-20; Ibn al-ʿImād, *Shadharāt al-dhahab fī akhbār man dhahab*, Cairo 1350-1, viii, 316; Ziriklī, i, 120; Kaḥḥāla, i, 224; *Fihris al-khizāna al-taymūriyya*, ii, 115-6; Brockelmann II², 416, S II, 440. Both Brockelmann and Sarkīs, i, 951-2, apparently following the title-page of the *Fatāwā* (see above), give Shihāb al-Dīn al-Ramlī's name as Aḥmad b. Aḥmad b. Ḥamza, creating some confusion (e.g. Kahhāla, i, 147-8) with another student of Zakariyyāʾ al-Anṣārī, Shihāb al-Dīn Aḥmad b. Aḥmad b. Ḥamza al-Ramlī (d. *ca.* 971/1563), whom the sources (*al-Kawākib al-sāʾira*, iii, 111, *Shadharāt al-dhahab*, viii, 359), however, do not connect with the two jurists discussed here.

C. Snouck Hurgronje frequently called attention to the authority in the Shāfiʿī school of the commentaries on al-Nawawī's *Minhādj al-ṭālibīn* of Ibn Ḥadjar and al-Ramlī as illustrative of the force of consensus in Islamic law (e.g. *Verspreide Geschriften*, Bonn-Leipzig-Leiden 1923-7, ii, 331-2, 355, 387-8, iv/1, 105, 288-90, vi, 8). The points of disagreement between al-Ramlī and Ibn Ḥadjar al-Haytamī are collected in ʿAlī b. Aḥmad b. Saʿīd Bā Ṣabrayn (d. 1304/1887), *Ithmid al-ʿaynayn fī baʿḍ ikhtilāf al-shaykhayn*, printed on the margin of ʿAbd al-Raḥmān b. Muḥammad Bā ʿAlawī, *Bughyat al-mustarshidīn*, Cairo 1952, which, however, does not extend beyond the *ʿibādāt*. (A. Zysow)

RĀMPUR, a former Muslim-ruled princely

state of Rohilkhand [*q.v.*] in northern India. In British times, the state was under the political supervision of the government of the United Provinces. In the post-1947 Indian Union, Rāmpur became a district of Uttar Pradesh, bounded on the north by Nainī Tāl, on the east by Bareilly, on the south by Badāʾūn and on the west by Murādābād districts, with an area of 2,318 km²/895 sq. miles and a population in 1961 of 701,537; in 1931, 45% of the population was Muslim.

The early history of Rāmpur is that of the growth of Rohilla power [see ROHILLAS] in Rohilkhand. After the establishment of Muslim rule in India, large bodies of Afghāns or Pathāns settled down in the country. So powerful did they become that they were twice able to establish their rule in northern India, under the Lodīs [*q.v.*] in the second half of the 15th century, and under the Sūrs [*q.v.*] in the time of Shīr Shāh. After the death of Awrangzīb and with the decline of the Mughal empire, Afghān settlements increased until in the words of the *Siyar al-mutaʾakhkhirīn* "they seemed to shoot up out of the ground like so many blades of grass". The name Rohilla was applied to those Afghāns who settled in what is now known as Rohilkhand.

The real founders of Rohilla power were an Afghān adventurer, named Dāwūd Khān, who arrived in India immediately after the death of Awrangzīb, and his adopted son, ʿAlī Muḥammad Khān, who succeeded him as leader of a band of mercenary troops. It was during the lifetime of ʿAlī Muḥammad Khān that his possessions came to be called Rohilkhand or the land of the Rohillas. In course of time, ʿAlī Muḥammad Khān became so powerful that he refused any longer to pay his revenues to the central government, in which course he was encouraged by the anarchy consequent upon the invasion of Nādir Shāh [*q.v.*]. The growth of his power so alarmed Ṣafdar Djang [*q.v.*] of Oudh [see AWADH] that he persuaded the emperor to send and expedition against him, as a result of which ʿAlī Muḥammad Khān surrendered to the imperial forces and was taken prisoner to Dihlī. After a time he was pardoned and appointed governor of Sirhind. In 1748, according to the *Gulistān-i raḥmat*, he was transferred to Rohilkhand, but it seems more probable that he took advantage of the invasion of Aḥmad Shāh Durrānī [*q.v.*] to recover his former possessions. Two factors had contributed to the growth of Rohilla power: the weakness of the central government and the fact that they were able to take advantage of the internal struggles between the various Rādjput chiefs and *zamīndārs* of Rohilkhand.

ʿAlī Muḥammad Khān left six sons, but the absence of the two eldest in Afghānistān, combined with the extreme youth of the other four, meant that all real power remained in the hands of a group of Rohilla *sardārs*, the most important of whom were Ḥāfiẓ Raḥmat Khān [*q.v.*] and Dūndi Khān. This naturally produced intrigues and disputes and eventually weakened the Rohilla power.

In 1771 the Marāthās [*q.v.*] turned their attention to the conquest of Rohilkhand, whereupon the Rohillas applied for aid to Shudjāʿ al-Dawla, the *nawāb-wazīr* of Oudh. It was agreed that Shudjāʿ al-Dawla should receive forty lakhs of rupees for his services (Aitchison, i, 6-7), but the Rohillas later refused to abide by their pecuniary engagements. In accordance with his promise at the Conference of Benares in 1773, Warren Hastings agreed to assist the *nawāb-wazīr* in expelling the Rohillas from Rohilkhand, for which he was to receive forty lakhs of rupees. On 23 April 1774, the Rohillas were defeated and their leader, Ḥāfiẓ Raḥmat Khān, slain. At the end of this war Fayḍ Allāh Khān, a son of ʿAlī Muḥammad Khān, concluded a treaty with Shudjāʿ al-Dawla at Laldang (India Office mss., Bengal Secret Consultations, 31 October 1774; see also extracts from the Persian interpreter's journal, 14 February 1775).

By this treaty, Fayḍ Allāh Khān received a *djāgīr* consisting of Rāmpur and other districts with a revenue estimated at approximately fifteen lakhs of rupees. To prevent him from becoming a menace to Oudh, he was not allowed to retain in his service more than 5,000 troops. After the death of Shudjāʿ al-Dawla, in 1775, Fayḍ Allāh Khān was informed that his engagements with the late *nawāb-wazīr* still continued in force with his son, Āṣaf al-Dawla (Bengal Secret Consultations, 17 April 1775. Draft correspondence with the Country Powers, no. 34).

In 1780, the English Company needed additional troops and Hastings urged Āṣaf al-Dawla to demand from Fayḍ Allāh Khān the 5,000 horses he had engaged to supply by treaty. This demand for cavalry was an unwarrantable interpretation of the Treaty of Laldang for which no justification has ever been attempted. In 1781 Hastings empowered Āṣaf al-Dawla to resume Fayḍ Allāh Khān's *djāgīr*, but fortunately this order was never carried out, and it was eventually decided to solve the problem by means of a fresh agreement whereby the obligation to provide troops for the *nawāb-wazīr*'s service was commuted under the Company's guarantee to a cash payment of fifteen lakhs of rupees. In 1801, on the cession of Rohilkhand to the British, Fayḍ Allāh Khān's descendants were continued in their possessions. For his services in the Sepoy Rebellion of 1857, Muḥammad Yūsuf ʿAlī Khān, the ruler of Rāmpur, received a grant of land and was assured by *sanad* that, on the failure of natural heirs, any succession in his state, which might be legitimate according to Islamic law, would be upheld by the Government of India.

Modern Rāmpur City, situated on the left bank of the Kosi River in lat. 28° 48′ N., long. 79° 03′ E., had a population in 1961 of 135,407. The rulers of Rāmpur were great patrons of learning, and the state-supported Madrasa ʿAliyya attracted for its Arabic teaching students from as far as Central Asia; the modern Raḍā College is affiliated to Agra University. Rampur also has a famed library with an outstanding collection of Islamic manuscripts.

(C. Collin Davies*)

RAMZ (A.), a verbal noun with the original meaning of "winking", "signalling with your eyes and eyebrows, or by forming words with your mouth without a sound" (see also section 3. below, first para.). This developed into a concrete noun, with the pl. *rumūz*, denoting a variety of indirect methods of ex-

pression, such as "allusion", "symbol", "cypher".

1. In rhetoric.

Here the term is used sparingly. It does have its place in the scholastic discipline based on al-Sakkākī's (d. 626/1229 [*q.v.*]) *Miftāḥ al-ʿulūm*, where it denotes a specific subcategory of *kināya* [*q.v.*], here used in the sense of "circumlocution" ("leaving the direct mention of a thing for the mention of something concomitant with it" (*Miftāḥ*, 402); note that the definitory statements in the entry KINĀYA do not always reflect the Sakkākī tradition). More specifically, *ramz* has the following position within al-Sakkākī's system: the *kināya* is characterised either by oblique intention, in which case it is called *taʿrīḍ*, or not so; the latter is characterised either by many intermediaries between the allusion and the thing alluded to—this is called *talwīḥ*—or by few; if the latter, it is either marked by a certain obscurity (*khufya*)—this is *ramz*—or it is not, in which case it is called *ishāra* or *īmāʾ* (*Miftāḥ*, 411-12). An example is *ʿarīḍ al-wisāda* "with flattened pillow", meaning "sleepy, stupid." This system ultimately finds its way into the nineteenth-century Western handbooks (Mehren, Ar. text, 46, 62; 95-6; Garcin de Tassy, 75). It is noteworthy that *ramz* does not occur in the great compilations outside the Sakkākī tradition, such as the *Taḥrīr al-taḥbīr* of Ibn Abi 'l-Iṣbaʿ (d. 654/1256) and the *Badīʿiyya* commentaries of Ibn Ḥidjdja al-Ḥamawī (d. 837/1434 [*q.v.*]), Ibn Maʿṣūm (d. 1117/1705), and ʿAbd al-Ghanī al-Nābulusī (d. 1143/1731 [*q.v.*]).

Earlier, the term *ramz* is used by Ibn Rashīḳ (d. 456/1064 or later [*q.v.*]) for one of the thirteen subcategories of *ishāra*, "allusion", although for lack of a definition one cannot clearly identify its meaning (*ʿUmda*, i, 305-6). The two examples adduced by the author allow the assumption that it refers to an enigmatic turn of phrase, which can only be solved with reference to an earlier line of poetry—though, whether or not this last qualification is a necessary prerequisite cannot be said with any certainty. The first example is by an anonymous ancient poet: "As bloodmoney for her husband I have paid her the counting of pebbles at morning time or in the darkness of every evening." The enigmatic "counting of pebbles" is explained as going back to a line of Imruʾ al-Ḳays [*q.v.*]: "I remained [there] sitting with my tunic over my head, counting the pebbles, my tears never ceasing." (*Dīwān*, ed. M. Abu 'l-Faḍl Ibrāhīm, no. 6, v. 3); in other words, it is a sign of grief, and grief is all she will ever receive. Ibn Rashīḳ's jumble of *ishāra* subcategories is brought into a neat logical system, bearing little resemblance to al-Sakkākī's, by al-Sidjilmāsī (d. after 704/1304-5), who enumerates *laḥn* (letter riddle), *ramz*, *tawriya* (mispointing information for secrecy), and *ḥadhf* (truncation of words) as different types of *taʿmiya* (mystification), which in turn is a subcategory of *ishāra*. Since again *ramz* is not defined and only exemplified by a single *shāhid*, it cannot be adequately identified; however, the author does call it "riddle-like (*lughzī*). Thus, whereas in the Sakkākī tradition *ramz* belongs to the genus of "circumlocution", with the Maghribī authors it is one of a number of literary types of riddles. The enigmatic plays a role in both.

2. Related uses.

(a) *Ramz* as "code." Ibn Wahb al-Kātib (first half of 4th/10th century) includes a chapter on *ramz* in his book on the four ontological stages of expressivity (i.e. *bayān* on the successive levels of the thing, thought, speech, and writing). Since the author deals with the conveyance of information in a general rather than a strictly literary sense, *ramz* here has the meaning of "code", especially "code names" (*Burhān*, 137-8). The sender (*mutakallim*) would use, for a word or a letter, the name of a bird or a wild animal or another letter; the resulting message would be clear to sender and recipient, but cryptic to anyone else (*marmūzᵃⁿ ʿan ghayrihimā*). The author contends that the books of the ancient philosophers and scientists were full of *rumūz*, most of all those of Plato. Furthermore, there are highly important *rumūz* in the Ḳurʾān, from which one may prognosticate the major events of Islamic history, the duration of reigns, momentous upheavals, etc. This refers to the mysterious letters and to the oaths at the beginning of a number of suras. Knowledge of this code belongs to the Imāms, who have been entrusted with the knowledge of the Ḳurʾān. Here the author reveals his Shīʿī persuasion.

The idea that the Ancient sages used *rumūz* to make their writings inaccessible to the uninitiated is not uncommon. One has to distinguish here between (1) the level of language, i.e. *rumūz* in the sense of code-names, symbols, and allegories, and (2) the level of script, i.e. *rumūz* meaning secret characters and alphabets.

(i) The Ismāʿīlī thinker Abū Ḥātim al-Rāzī (d. 322/933 [*q.v.*]) says that the ancient philosophers were used to coining analogies (*ḍarb al-amthāl*), in which they followed the methods of the prophets (*dhahabū* ... *madhhab al-anbiyāʾ*); people say that most of Plato's speech is *ramz* (*Aʿlām al-nubuwwa*, *apud* Kraus, *Jābir*, ii, 274). Occult sciences such as alchemy are particularly prone to the use of such codes. The author of the Djābir corpus again mentions Plato as the most typical representative of *ramz* use (*ibid.*, 281) and contrasts him with Aristotle who uses *ighmāḍ*, "obscurity," rather than *ramz* for the same effect (*ibid.*, 48). He himself, although conversant with the Ancients' use of *rumūz*, does not approve of it, using instead the principle of *tabdīd al-ʿilm*, "the scattering of knowledge" throughout the corpus with elaborate cross-references, to make access to the "art" difficult for the unworthy (*ibid.*, 32-3). Because of the enigmatic language of the Ancients—here he uses the term *lughz*—their books are less profitable than those of the moderns (*mutaʾakhkhirūn*, i.e. the Arabs), who are the commentators (*mufassirūn*) of the Ancients (*ibid.*, 281). This attitude did not, however, diminish the popularity of *rumūz* in later alchemical writings. Nor did it inhibit philosophers like Ibn Sīnā (d. 428/1037 [*q.v.*]) and Shihāb al-Dīn al-Suhrawardī (d. 587/1191 [*q.v.*]) from composing stories in the allegorical-symbolic mode.

(ii) One specific type of *ramz* was the secret alphabet. Ibn Waḥshiyya (first half of 4th/10th century [*q.v.*]) is credited with a collection of existing scripts, entitled *Shawḳ al-mustahām fī maʿrifat rumūz al-aḳlām*, "The yearning of the infatuated for the knowledge of the signs of the alphabets" (cf. also MUʿAMMĀ). This is a strange mixture of (a) regular alphabets (Arabic, Syriac, Hebrew, Greek, and others), (b) invented alphabets said to be those of ancient nations, such as the Nabaṭ [*q.v.*] and the Chaldaeans, (c) secret alphabets attributed to various ancient philosophers, sages, and kings (including the well-known tree script, *al-ḳalam al-mushadjdjar*, attributed to Dioscorides and, in another form, to Plato, and the spectacled script invented by "Ḳalafṭariyūs" (cf. the *ḳalafṭīriyyāt*, χαρακτῆρες "Brillenbuchstaben", see Ullmann, *Natur- und Geheimwissenschaften*, 362), (d) planetary and zodiacal alphabets for magical purposes, and (e) the non-alphabetical symbols invented by the Hermeses (*Harāmisa*), which they wrote on Egyptian temples and pyramids and "made as a

shield for their sciences and treasures" (*fa-dja*ʿ*alū hādhihi 'l-rumūz*ᵃ *sitr*ᵃⁿ ʿ*alā* ʿ*ulūmihim wa-kunūzihim*, Ibn Waḥshiyya, 91-2). The latter clearly refer to the hieroglyphs, and a number of them are easily recognisable, albeit fancifully explained, in Ibn Waḥshiyya's book. The double function of these symbols becomes clear: they are said to encode (a) occult (alchemical, magical, astrological) knowledge, and (b) information about hidden treasures. In his book on the pyramids, Abū Djaʿfar al-Idrīsī (d. 649/1251) reports about people who claim to be able to decode—*ḥall al-rumūz*—the hieroglyphs (*al-kalam al-birbāwī*) and thus to find the hidden treasures (*Ahrām*, 36, 61, 141). As a result of this idea *Ḥall* (or *Fakk*) *al-rumūz fī kashf al-kunūz* becomes a very popular book-title, not only in the field of the occult sciences (cf. Brockelmann, I², 139-40, S I, 144, 430, 531, 712, 783, S II, 768, etc., and the indices of *GAS*).

In all this, it is important to be aware of the fact that the *ramz*, whether linguistic or graphic symbol, can be used for encoding as well as for decoding, and that the latter, interpretive, function may be applied to texts that were not encoded in the first place. Allegories of non-allegorical technical writings (cf. e.g. Kraus, *Jābir*, p. 12-13, n. 7) and symbolic interpretation of hieroglyphs are both instances of this phenomenon.

(b) *Ramz* as "symbolic action". This may refer to cryptic messages conveyed by sending certain objects that the recipient needs to interpret. In a chapter entitled "cryptic remarks (*rumūz*) current among literary men and their playing with allusions (*ma*ʿ*ārīḍ*) which only the eloquent can understand", Abu 'l-ʿAbbās al-Djurdjānī (d. 482/1089) enumerates many cases in which the *rumūz* are enigmatic references to poetical lines, but also some where the language of objects is used. These, he says, are very hard to solve, because they are restricted to the mere acts (*al-iḳtiṣār* ʿ*alā mudjarrad al-fi*ʿ*l*) without words (*Kināyāt*, 71-85, esp. 79). Al-Ḳalḳashandī (d. 821/1418 [*q.v.*]) gives a few examples of such wordless messages as used in diplomacy (*Ṣubḥ al-a*ʿ*shā*, ix, 249-51 [= ch. on *al-rumūz wa 'l-ishārāt allatī lā ta*ʿ*alluḳ lahā bi 'l-khaṭṭ wa 'l-kitāba*], tr. C.E. Bosworth, in *Arabica*, x [1963], 148-53). In a different way, the term *ramz* is used by Ibn Abī ('l-)Sarḥ (wrote 274/887) to denote the superstitious acts of the ancient Arabs, on which he was the first to write a comprehensive work (*Rumūz*, ed. Ḥusayn, 641-42; tr. Bellamy, 227). He actually uses the construct *ramz al-nafs*, not yet satisfactorily explained, and divides the *rumūz* into three categories: supernatural, natural, and mixed.

(c) *Rumūz* as "sigla". This modern meaning is already attested in mediaeval contexts. Muḥammad b. ʿAbd al-Raḥmān al-ʿUkbarī (*fl.* 665/1267), in his *Madjma*ʿ *al-aḳwāl fī ma*ʿ*ānī al-amthāl*, uses thirty different abbreviations to indicate his sources after each proverb and calls these signal *rumūz* (see A.J. Arberry, in *JAL*, i [1970], 109-10).

3. In mystical and other esoterical discourse. Like its counterpart, *ramz* originally meant "gesture" or "sign", usually a silent one, especially a speechless movement of the lips practiced by interlocutors in order to conceal the contents of their conversation from a third party. By extension, the term also denotes any silent gesture made by the hand, the head, the eyes, the eyebrows, etc. (see *LA*, s.v. *r-m-z*; al-Fīrūzābādi, *al-Ḳāmūs*, Beirut n.d., ii, 183-4). In this sense, *ramz* appears in the Ḳurʾān, III, 41, where God bids Zakariyyāʾ "not to speak to the people except by gesture" (*ramz*ᵃⁿ). While the majority of commentators agree that *ramz* here is synonymous with either *ishāra* or *īmā*ʾ (yet another word for a silent sign), al-Ṭabarī adds that in pre-Islamic poetry it also meant an unintelligible murmur or whisper (see al-Ṭabari, *Djāmi*ʿ *al-bayān*, Beirut 1984, iii, 259-60). For al-Thaʿālibī, *ramz* is "movement indicative of what is [concealed] in the heart of the gesturer (*rāmiz*)", and also "a speech deflected from its apparent meaning (*muḥarraf* ʿ*an ẓāhirihi*)", i.e. a symbolic and allegoric speech *par excellence* (see his *Djawāhir al-ḥisān*, Beirut n.d., i, 264-5). In both cases, *ramz* is viewed as the opposite of *taṣrīḥ*, an unequivocal declaration of one's feelings and intentions. These two terms, together with their synonyms, became closely associated with the major opposition between the explicit style of thinking and narration and that involving deliberate ambiguity, an opposition that pervades Muslim intellectual culture as a whole [see ẒĀHIR and BĀṬIN].

As a statement implying more than its words and thus evoking a host of various associations, *ramz* was employed by mediaeval literary critics (see above, section 1.). In its broader meaning, *ramz* was often used to describe literary works which utilised the allegoric language, vague symbols, allusions and obliquities, e.g. "an allegorised poem" (*ḳaṣīda marmūza*), mentioned by al-Maḳḳarī [*q.v.*] (*Analectes*, i, 608).

In early Ṣūfī literature, it was also overshadowed by *ishāra*. A striking example of the wide currency enjoyed by the latter word is Abū Ḥayyān al-Tawḥīdī's [*q.v.*] *al-Ishārāt al-ilāhiyya*, in which Ṣūfī knowledge is forthrightly equated with the capacity to comprehend mystical symbols and allusions. Throughout the work, the author constantly referred to them as *ishārāt* but never as *rumūz* (see al-Tawḥīdī, *op. cit.*, ed. Wadād al-Ḳāḍī, ²Beirut 1982). In other Ṣūfī writings, *ramz* almost invariably appears in conjunction with, or as an explanation of, *ishāra*. According to early Ṣūfī authors, symbolic language and allusions play a double role. On the one hand, they are the only way to

convey the elusive spiritual experiences and ineffable visions bestowed upon the "friends of God" (*awliyā*ʾ [see WALĪ]). On the other, they effectively preserve the essence of these higher mysteries and insights from the uninitiated, who should satisfy themselves with the "externals" (*ẓāhir*) of religion. Hence the knowledge of *rumūz* pertains exclusively to the Ṣūfī masters, and is not to be divulged to the outsiders (see *Adab al-mulūk. Ein Handbuch zur islamischen Mystik aus dem 4./10. Jahrhundert*, ed. B. Radtke, Beirut 1991, 20, 34, 70-1). Attesting the importance of the word *ramz* for the mystical doctrines of the Ṣūfīs, Abū Naṣr al-Sarrādj (d. 378/988) included *ramz* in his list of the specifically Ṣūfī terms. According to this author, *ramz* designates "an inner meaning hidden under the guise of outer speech, which no one will grasp except for its people (*ahluhu*)." Such symbols should be looked for primarily in the correspondence between the Ṣūfī masters, rather than in works addressed to the uninitiated reader (al-Sarrādj, *al-Lumaʿ*, ed. ʿAbd al-Ḥalīm Maḥmūd and Ṭāhā Surūr, Baghdād 1960, 414, cf. 314). Rūzbihān Baḳlī Shīrāzī (d. 606/1209 [*q.v.*]), who cites a similar definition of *ramz*, adds that it allows one to grasp "the mysteries of the unseen by means of the subtleties of knowledge, which, in turn, find their expression in the language of mystery through the words opposite to their meanings" (*Commentaire sur les paradoxes des soufis*, ed. H. Corbin, Tehran-Paris 1966, 561). Thus, when dealing with the language of the Ṣūfīs, one should be careful in distinguishing between the verbal shell (*lafẓ*) and the kernel of an allusion (*ramzuhu*). A person unaware of such a symbolic method of expression can be easily misled by some Ṣūfī utterances and condemn them as an expression of the worst kind of unbelief. At the same time, a more perspicacious interpreter will find them in complete accord with the inner meaning (*bāṭin*) of the Ḳurʾān and the Sunna (see Ibn ʿAbd al-Salām al-Sulamī, *Ḥall al-rumūz wa-mafātīḥ al-kunūz*, Cairo 1961, 5-20, *et passim*). In a sense, the opposition between *lafẓ* and *ramz* reflects the irreducible contradiction between the normative, outward aspects of religion (*sharīʿa* [*q.v.*]), and its spiritualised interpretation and interiorisation practiced by the Ṣūfī gnostics (*ḥaḳīḳa* [*q.v.*]). To Ṣūfī authors, *rumūz* appeared to be the most convenient way to express the latter without disclosing it to those from whom it ought to be withheld (see al-Ghazālī, *Mishkāt al-anwār*, ed. Abu ʾl-ʿAlāʾ ʿAfīfī, Cairo 1382/1964, 40).

Ibn al-ʿArabī (d. 638/1240 [*q.v.*]), who often treats *ramz* as a synonym of *lughz* [*q.v.*] (puzzle or enigma), defines it as "a speech which does not convey the meaning implied by the speaker". In his view, the use of *ramz* is not an end in itself, because what matters is the implicit meaning behind it. Due to his overall proclivity toward allegorisation of reality, Ibn al-ʿArabī tends to envision the whole cosmos as a giant arrangement of symbols that require an explanation. In keeping with their ability (or inability) to comprehend the true meaning of these cosmic symbols (which, in many respects, are similar to the verbal symbols and allusions permeating revelation), people are divided into several categories ranging from the greatest knowers, the "men of symbols" (*ridjāl al-rumūz*), who can grasp the allegorical meaning of all things and events through supersensory unveiling (*kashf* [*q.v.*]), to the ignorant populace, who accept everything at face value and are, therefore, doomed to wander in darkness. Ibn al-ʿArabī's *magnum opus, al-Futūḥāt al-makkiyya*, abounds in descriptions of various symbolic events and personalities, whose real meaning is sometimes disclosed but, more often, is tantalisingly left open to a wide variety of interpretations. On many occasions, Ibn al-ʿArabī draws close parallels between Ṣūfī modes of self-expression and poetic language, both of which, in his view, endeavour to clothe their meanings in intricate symbols and allegories. No wonder that in his major works, *al-Futūḥāt al-makkiyya* and *Fuṣūṣ al-ḥikam*, this author normally introduces his daring insights in the form of symbolic verses, then proceeds to elucidate them in prose (*al-Futūḥāt al-makkiyya*, ed. O. Yaḥyā and I. Madkūr, Cairo 1972–, i, 67, 218, 251, iii, 120, 196-7, 201, etc.; *Fuṣūṣ al-ḥikam*, ed. Abu ʾl-ʿAlāʾ ʿAfīfī, Beirut 1946, *passim*; cf. idem, *Dīwān*, Bulāḳ 1271/1855, *passim*). Stressing Ibn al-ʿArabī's propensity for an abstruse and allegoric style meant to hide his real intentions, his compatriot Ibn Khātima [*q.v.*] wrote that this Ṣūfī thinker "spoke from behind the veil (*ḥidjāb*), fortifying himself with [the use of] *ramz* in an impenetrable mountain citadel, and seeking refuge in the *ishāra* of dubious import" (see al-Maḳḳarī, *Azhār al-riyāḍ fī akhbār ʿIyāḍ*, ed. Muṣṭafā al-Saḳḳā, Ibrāhīm al-Abyārī and ʿAbd al-Ḥafīẓ Shalabī, Cairo 1361/1942, iii, 54-5).

Ibn Sīnā's [*q.v.*] usage of *ramz* is a corollary to his theory of prophecy which, in his view, should of necessity be communicated to the masses in a symbolic or allegorical form lest they misinterpret the prophetic message, thus ruining the divinely-established order. Therefore, the prophet "should inform them (sc. the masses) about God's majesty and greatness through symbols (*rumūz*) and images (*amthila*) derived from things that for them are majestic and great." The same is true concerning other articles of faith, e.g. divine punishment and reward, destiny (*ḳadar*), etc. Basically, however, symbols communicate the same knowledge that can be stated in demonstrative or expository language employed by the rational philosophers (see D. Gutas, *Avicenna and the Aristotelian tradition*, Leiden 1988, 300-1). Because "the majority of humans are ruled not by pure intellect but rather by their lower passions", they are unqualified to grasp such an abstract language and the syllogistic argumentation it conveys. Conversely, symbols and images primarily appeal to imagination and not to intellect. Hence they are more likely to be comprehended by uncultured minds (see P. Heath, *Allegory and philosophy in Avicenna*, Philadelphia 1992, 150-2). Irrespective of whether or not Ibn Sīnā actually regarded the allegorical method of communication as inferior to the demonstrative and expository (Gutas, *op. cit.*, 302; cf. Heath, *op. cit.*, 153-65), he was convinced that "those individuals with philosophical propensities" were in a position to penetrate the authentic meaning of the symbols found in the revelation, and would eventually acquire a philosophical vision of the universe (Gutas, *op. cit.*, 307). A similar view of the function of *ramz* was adopted by the later philosophers of Muslim Spain, namely Ibn Ṭufayl and Ibn Rushd [*q.vv.*]. According to the former, "pure truth does not at all suit the vulgar, enslaved by senses." In order "to penetrate those materialistic intelligences, ... it is obliged to clothe itself with the wisdom that constitutes the revealed religions", in other words, with symbols and allegories (L. Gauthier, *Ibn Thofaïl*, Paris 1909, 63). Symbols can also be helpful as a means to present some abstract philosophical ideas. Thus Ibn Ṭufayl's *Ḥayy b. Yaḳẓān* [*q.v.*] may be taken as a symbolic representation of the evolution undergone by the human active intellect. Ibn Rushd seems to have envisaged *ramz* as an essential part of rhetoric argument (as opposed to demonstrative and dialectical), which the prophets address to their communities because most of the people are not intellectually mature

enough to understand the more sophisticated types of discourse. This fact accounts for the necessity to explicate revelation allegorically [see TAʾWĪL] with a view to reconciling it with the conclusions reached through the syllogistic argument.

Proponents of messianic expectations, who sought to substantiate their claims regarding the imminent advent of the *mahdī* [*q.v.*] by exploiting the numerical values and occult properties of the Arabic characters, often viewed the latter as *rumūz*—esoteric signs pointing to the inevitable fulfillment of their predictions. To decipher such signs contained, for instance, in the mysterious letters preceding some Ḳurʾānic sūras and the divine names [see AL-ASMĀʾ AL-ḤUSNĀ, and cf. above, section 2(a), first para.], Muslim esotericists—primarily, the S̲h̲īʿa, including the Ismāʿīlīs, and some Ṣūfī leaders harbouring messianic hopes—practiced elaborate divinatory techniques known as *d̲j̲afr* [*q.v.*; see also ḤURŪF]. Ḳurʾānic stories and certain *ḥadīt̲h̲*, mostly of an esthatological nature, were also treated by the esoterically-minded Muslims as symbols and signs, whose true meaning could only be elucidated by means of an allegoric interpretation. A curious mixture of Ismāʿīlī and Ṣūfī views utilising both types of *ramz* can be observed in a divinatory poem by a purported Ismāʿīlī *dāʿī* [*q.v.*], ʿĀmir b. ʿĀmir al-Baṣrī, d. in the early 8th/14th century (see Y. Marquet, *Poésie ésotérique ismaïlienne*, Paris 1985, 73-4, 81, 101, etc.; cf., however, Ibn ʿArabī, *ʿAnḳāʾ mug̲h̲rib*, Cairo n.d., where in similar predictions the word *ramz* is never mentioned).

Aḥmad al-Būnī (d. 622/1225 [*q.v.* in Suppl.]), the celebrated fortune teller and master of "letter magic" (*sīmīyya*), considered the usage of *rumūz* to be part and parcel of the occult sciences permitting to predict the future. As in the case with the philosophers and Ṣūfīs, symbols, according to al-Būnī, perform the twofold function. They conceal the secrets of the divinatory procedures from the uninitiated, while at the same time helping to impart them to the deserving few (see *Manbaʿ uṣūl al-ḥikma*, Cairo 1370/1951, 5, 6, 325).

Interestingly, *ramz* (spelt *rams*) is one of the few Arabic words mentioned by the great Catalan philosopher, missionary, and mystic Ramon Llull (d. 1316), for whom it apparently meant a tropological-moral purport behind some scriptural parables (see Ch. Lohr, *Christianus arabicus*, in *Freiburger Zeitschrift für Philosophie und Theologie*, xxxi [1984], 59). Normally, however, when referring to the moral lessons contained in the Ḳurʾānic text, Muslim exegetes would rather use such terms as *mat̲h̲al* [*q.v.*] and *ḥadd* (see G. Böwering, *The mystical vision of existence in classical Islam*, Berlin 1980, 138-41).

4. In modern Arabic literature.

In this literature, which took shape under the strong influence of European literary trends, *ramz* became an exact equivalent of the Western term "symbol" defined as "a deliberate use of a word or a phrase to signify something else, not by analogy (for, unlike metaphor and simile, it lacks a paired subject), but by implication and reference" (S. Jayyusi, *Trends and movements in modern Arabic poetry*, Leiden 1977, ii, 709). As in the West, in the Middle East also, an acute interest in, and extensive use of, symbols gave rise to a literary movement known as "symbolism" (*al-ramziyya*) that flourished from the 1920s to the 1940s, but then gradually lost ground as a cohesive literary trend. Its representatives, primarily poets such as Adīb Maẓhar, Saʿīd ʿAḳl, Bis̲h̲r Fāris, and, to a lesser extent, Abu 'l-Ḳāsim al-S̲h̲ābbī have employed symbol as "a vehicle for feelings, for complex and valuable states of awareness" as well as a means to express an idea or a set of ideas. While most of the Arab symbolists drew their inspiration from the European literary notions of "universal relationships" and "latent affinities" which they sought to convey through symbolist imagery (K. Abu Deeb, *Al-Jurjānī's theory of poetic imagery*, Warminster, Wilts. 1979, 124-6; Jayyusi, *op. cit.*, 478-81), they seem to have neglected the fact that similar approaches to creative process had already been maintained, albeit spontaneously and unconsciously, by their Muslim predecessors, namely, Ibn al-Fāriḍ, D̲j̲alāl al-Dīn Rūmī and many other mediaeval Ṣūfī poets, who communicated their nonrational and intuitive perception of being by having recourse to elaborate symbols and allegories (see e.g. Ibn al-Fāriḍ's masterful use of wine symbolism to convey his mystical vision of reality, Ibn al-Fāriḍ, *Dīwān*, Beirut 1962, 140-3). Ṣūfī imagery and symbols were more readily adopted by the less Westernised poets and prose writers, who, being well versed in the Islamic *turāt̲h̲*, succeeded in creating original works in which Islamic and Western influences were inextricably intertwined (see, e.g. Nad̲j̲īb Maḥfūẓ, Adūnīs, Muẓaffar al-Nawwāb, D̲j̲amāl al-G̲h̲īṭānī, etc.). On the other hand, some symbols, which became particularly popular with the modern Arab poets (e.g. the sea, the rain, the wind etc.), have suffered from over-use and have gradually developed into mere conventions devoid of any poetic originality (Jayyusi, *op. cit.*, 710).

(A. KNYSH)

RAN [see NĀẒIM ḤIKMET].

RĀṆĀ SĀṆGĀ (reigned 915-35/1509-28), Rād̲j̲pūt ruler of the kingdom of Mēwāṛ [*q.v.*] on the borders of Rād̲j̲āsthān and Mālwā, with his capital at Čitawṛ. He was a strenuous opponent of the Muslim rulers of northern and western India in the years before Bābur's establishment of the Mug̲h̲al empire, and under him, Mēwāṛ became a major power in India.

In the first 15 years of his reign, he made firm his power within Mēwāṛ and strengthened his position vis-à-vis his Muslim neighbours. The reaction of the ruler of Mālwā, Maḥmūd II K̲h̲ald̲j̲ī, against the ascendancy of his Rād̲j̲pūt *wazīr* Mēdinī Rāʾī [*q.v.*], led in 923/1517 to Maḥmūd's seeking military assistance from Muẓaffar II of Gud̲j̲arāt [*q.v.*], whereupon Mēdinī Rāʾī in Māndū sought in turn the aid of Rāṇā Sāṇgā. In 925/1519 the latter decisively defeated Maḥmud, capturing him and only releasing him the next year on payment of a war indemnity and the provision of hostages at the Mēwāṛ court, and in the next year Rāṇā Sāṇgā successfully repelled an attack by the forces of Gud̲j̲arāt under Muẓaffar's general Malik Ayāz [*q.v.*].

He was, however, disposed to make peace because of his ambitions on the Dihlī Sultanate [*q.v.*] itself (after 923/1517 under the rule of Ibrāhīm Lōdī [see LŌDĪS]). A Lōdī invasion of Mēwāṛ was repelled, in part because of the temporary treachery of Ibrāhīm's Afg̲h̲ān commander Ḥusayn K̲h̲ān Farmulī, and the power of Mēwāṛ was extended into Mālwā as far as Kalpī [*q.v.*] on the D̲j̲amnā river. Rāṇā Sāṇgā now proposed to the Mug̲h̲al Bābur [*q.v.*] a concerted attack on Ibrāhīm Lōdī. Bābur accordingly defeated Ibrāhīm at the first battle of Pānīpat [*q.v.*] in 932/1526, but was now obviously aiming at establishing a kingdom in northern India for himself. Rāṇā Sāṇgā secured in effect control over Gud̲j̲arāt, but at the battle of K̲h̲ānuʾā near Fatḥpūr Sīkrī in 933/1527 the numerically superior Rād̲j̲pūt army was completely routed by Bābur. Rāṇā Sāṇgā himself died

a year later at the age of 46 and with him, Mēwāṙ lost its power as an independent kingdom.

RANGĪN, the *ta<u>kh</u>alluṣ* of several Indian poets. The *Riyāḍ al-wifāḳ* of <u>Dh</u>u 'l-Fiḳār ʿAlī, biographies of Indian poets who wrote in Persian, and the *Ta<u>dh</u>kira* of Yūsuf ʿAlī <u>Kh</u>ān (analysed by Sprenger, *A catalogue of the Arabic, Persian and Hindustan mss... of the King of Oudh*, i, 168, 280) mention five of them. The first, a native of Ka<u>sh</u>mīr, lived in Dihlī in the reign of Muḥammad <u>Sh</u>āh (1719-48): his *<u>gh</u>azals* were sung by the dancing-girls.—The most celebrated, however, was Saʿādat Yār <u>Kh</u>ān of Dihlī. His father, Ṭahmāsp Beg <u>Kh</u>ān Tūrānī, came to India with Nādir <u>Sh</u>āh and settled in Dihlī where he attained the rank of *haft-hazārī* and the title of Muḥkim al-Dawla. In his turn, Saʿādat Yār <u>Kh</u>ān entered the service of Mīrzā Sulaymān <u>Sh</u>ikūh, son of the emperor <u>Sh</u>āh ʿĀlam II, who lived in Lucknow. He was a good horseman and able soldier; for a time he commanded a part of the artillery of the Niẓām of Ḥaydarābād, but he gave up this post to go into business. He was in his youth a friend of the poet In<u>sh</u>āʾ [*q.v.*] in Lucknow; a pupil of the poet Muḥammad Ḥātim of Dihlī (cf. Ram Babu Saksena, *A history of Urdu literature*, 48; Sprenger, *op. cit.*, 235), he afterwards submitted all his verses to the criticism of Ni<u>th</u>ār (cf. Sprenger, 273), then of Muṣḥafī [*q.v.*] (Saksena, 90); he died in 1251/1835 aged eighty (or a year later; cf. Garcin de Tassy).—The following are his works in Urdu: *Ma<u>th</u>nawī dilpazīr*, a poem of romantic adventures (1213/1798); *Īdjād-i Rangīn, a ma<u>th</u>nawī* of fables and anecdotes (Lucknow 1847, 1870); another *ma<u>th</u>nawī* of anecdotes: *Maẓhar al-ʿa<u>dj</u>āʾib* or *<u>Gh</u>arāʾib al-ma<u>sh</u>ʿūr* (lith. Agra and Lucknow); four *dīwāns* collectively known as *Naw ratan* ("the Nine Jewels"), the two first lyrical, the third humorous and partly in *re<u>kh</u>ti* (language peculiar to women), the fourth in this same language with a preface by Rangīn explaining the principal words (on the development of *re<u>kh</u>ti* and Rangīn's skill in this licentious genre (see URDŪ, and Saksena, *op. cit.*, 94); in prose a treatise on horsemanship (*Faras-nāmā*, 1210/1775, several times edited) and a collection of critical observations on a number of poets, entitled *Ma<u>dj</u>ālis-i Rangīn*. In Persian (if the work is really his; cf. Sprenger, *op. cit.*, 54, no. 462), Rangīn under the title *Mihr u-māh*, sang of the adventure of a son of a *sayyid* and of a daughter of a jeweller, based on an incident that occurred in Dihlī in the reign of <u>Dj</u>ahāngīr (cf. *GrIPh*, ii, 254).

RANGOON, a city of the Pegu district of Burma and the country's capital, situated on the Rangoon (Hlaing) River (lat. 16° 47′ N., 96° 10′ E.). It was developed as a port in the mid-18th century by the founder of the last dynasty of Burmese kings, with a British trading factory soon established there and with flourishing groups of Parsee, Armenian and Muslim merchants. In 1852, during the Second Anglo-Burmese War, it passed definitively under British control, and Rangoon became a more modern city, and also, through immigration, largely Indian in composition. These last included Muslims, who in 1931 comprised 17% of the city's population. But the Indian and European population was reduced by the Japanese occupation of 1941-5, and after Burma's opting for independence in 1948, the Indian and Muslim element in Rangoon was reduced still further by the policies of governments hostile to non-Burmese in general and Muslims in particular (for these in Burma, see ARAKAN, BURMA, MERGUI). Today, 90% of Rangoon is Burmese, with Muslims only a small part of the remaining 10%.

AL-**RĀNĪRĪ** [see INDONESIA. vi].

RANK (P.), literally "colour, dye", a term used in mediaeval Arabic sources primarily to designate the emblems and insignia of *amīrs* and sultans in Egypt, Syria, and al-<u>Dj</u>azīra. Mamlūk historians occasionally also use it as a generic term for emblem in general, such as the *ranks* of merchants' guilds (al-Ḳalḳa<u>sh</u>andī, *Ṣubḥ al-aʿ<u>sh</u>ā*, Cairo 1913-18, v, 207), those of Bedouin chieftains in Tunisia (Ibn <u>Sh</u>addād, *Taʾrī<u>kh</u> al-Malik al-Ẓāhir*, Wiesbaden 1983, 196), and, oddly, the *rank* of Ḳassām, a Damascene rebel under the Fāṭimids who lived even before the word was in common use (Ibn al-Dawādārī, *al-Durra al-muḍiyya fī a<u>kh</u>bār al-dawla al-Fāṭimiyya*, Cairo 1961, 195, 210). There is no indication otherwise that the term, or the practice of having *ranks*, was known beyond the historic or geographic limits of the Ayyūbid and Mamlūk states.

From the Ayyūbid period there are a number of references to *ranks* (Ibn Ta<u>gh</u>rībirdī, *al-Manhal al-ṣāfī*, Cairo 1988, v, 296; Ibn al-Dawādārī, *al-Durra al-<u>dh</u>akiyya fī a<u>kh</u>bār al-dawla al-turkiyya*, Cairo 1971, 56-7) but no corresponding, conclusive material to show how they looked. The fleur-de-lis associated with Nūr al-Dīn Maḥmūd b. Zangī (541-70/1146-74 [*q.v.*]), and the truncated bicephalic eagle in the Cairo Citadel attributed to Ṣalāḥ al-Dīn (Saladin) are no longer accepted as *ranks* (L. Mayer, *Saracenic heraldry*, Oxford 1938, 152, 195; M. Meinecke, *Zur mamlukischen Heraldik*, in *Mitteilungen des Deutschen Archäologischen Instituts Abteilung Kairo*, xxviii [1972] 215-16). The earliest firmly established *rank* is the feline motif of al-Ẓāhir Baybars (658-76/1260-77 [*q.v.*]), many more or less identical examples of which are attested on buildings, coins, and other objects. From Baybars's time until the end of the Mamlūk period, *ranks* were adopted by sultans, *amīrs*, and perhaps other high officials. They were carved on buildings, painted on glass, wood, and pottery, engraved on metalwork, struck on coins, and embroidered or dyed on textiles. But the profusion of material evidence is not matched by contemporary textual testimony. Mayer counted less than fifty references in the sources he knew. Today, we have perhaps seventy. This paucity of historical information led early studies to consider *ranks* in terms of European heraldry, but most authors today caution against doing this and try to study *ranks* on their own terms.

Mamlūk *ranks* come in different shapes and forms. They may be monochromatic or multicolored, free-standing or enclosed in round, pointed, or polygonal shields. They first appeared as single-element emblems. Horizontal strips, called *<u>sh</u>aṭfa* in the sources, were introduced to the shields in the early

14th century, and, in the 15th and early 16th centuries, *ranks* developed into composite shields with three fields, each containing one sign or more. Some rare *ranks* may be termed representative, such as the felines of Baybars, which may have implied power and courage or illustrated his own name *bay bars*, meaning "chief panther" in Ḳipčaḳ Turkish. Others are denotative, displaying the attribute of the office held by the *amīr*, such as Ḳawṣūn (d. 743/1342) who started his career as a cupbearer (*sāḳī*) and who carried a *rank* showing a cup. Still others combine more than one sign of office, or a sign and an image, such as the *rank* of Ṭuḳuztamur (d. 746/1345) which includes an eagle over a cup.

a *b* *c*

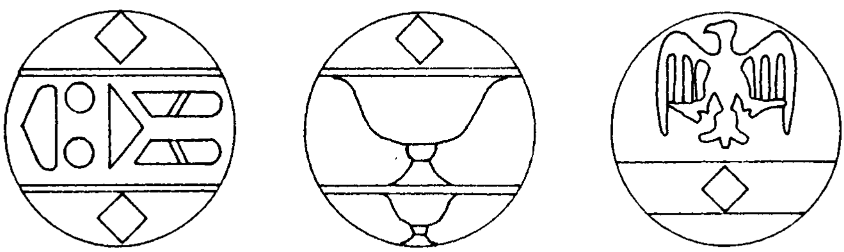

Fig. 2. Examples of composite *ranks*. (Drawing Nasser Rabbat 1993).

Initially, the sultan assigned *ranks* to his newly appointed *amīrs* as symbols of their positions at court (Ibn Tag̲h̲rībirdī, *op. cit.*, vii, 4). Thus, for instance, the *rank* of a *dawādār* (secretary) [*q.v.*] was a pen box or an inkwell, and that of a *d̲j̲amdār* (wardrobe master) [*q.v.*] was a lozenge. This practice may have been inherited from earlier Islamic rulers, notably the K̲h̲ʷārazm-S̲h̲āh Muḥammad b. Teki̲s̲h̲ (596-617/1200-20), who is said to have honoured his close pages with emblems (designated by the Arabic term *ʿalāma*) representing their offices (Abu 'l-Fidāʾ, *Kitāb al-Muk̲h̲taṣar fī ak̲h̲bār al-bas̲h̲ar*, Beirut 1979, vi, 49). *Amīrs* usually held their *ranks* for their entire careers, whether or not they subsequently held other offices. Midway in the Mamlūk period, *ranks* appear to have become the choice of the individual *amīr*, irrespective

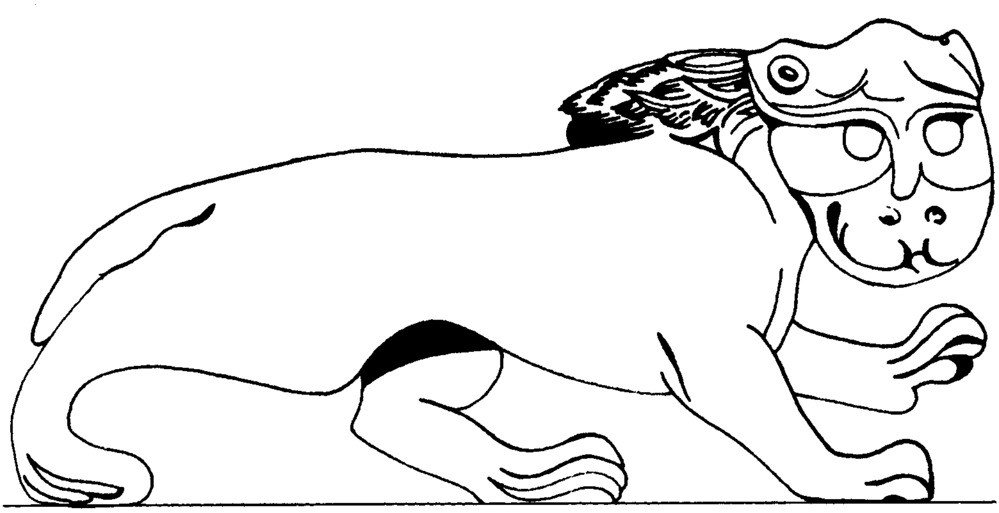

Fig. 3. Line drawing of the feline *rank* of Baybars (658-76/1260-77) as it appears on a recently-uncovered tower at the Citadel of Cairo. (Drawing Nasser Rabbat 1993).

of the insignia associated with his original office (al-Ḳalḳashandī, *Ṣubḥ*, iv, 61-2). Later still, *ranks* became composite, each containing a number of elements from a fixed repertoire disposed in three strips. Mayer noted that the composite *ranks* of a group of *amīrs* who were *mamlūks* of a given sultan exhibited the same arrangement (*Saracenic heraldry*, 29-33). They appear to have differed chiefly in the attribute of the position held by each individual which was inserted somewhere in his own *rank*. This may mean that *ranks* had by then become an indication of an affiliation with a royal household in addition to being a sign of office (see Meinecke, 258-78). Furthermore, additions to *ranks* appear to have been made as the *amīr* ascended up the Mamlūk hierarchy. Yashbak Min Mahdī *al-dawādār* added a lion (*sabuʿ*) to his *rank* in 885/1480 before he led a campaign to Anatolia (Ibn Iyās, *Badāʾiʿ al-zuhūr fī waḳāʾiʿ al-duhūr*, Cairo 1982-84, ii, 127).

Ranks of sultans were different from those of *amīrs*. Round, tripartite shields with the name, title, and a short motto inscribed on one, two, or all three strips became the norm in sultans' *ranks* from the beginning of the 14th century. But they were not exclusively utilised, especially in the Burdjī period (784-922/1382-1517) when most sultans were former *amīrs* with denotative *ranks*, which they sometimes displayed alongside their inscribed shields.

Very little is known about the significance of *ranks* in Mamlūk society. Like European nobility, sultans and *amīrs* seem to have used their *ranks* both as decipherable codes and as signatures displayed on their buildings and objects or on those they wanted to claim as their own (Ibn Taghrībirdī, *op. cit.*, xiii, 199). But, unlike coats-of-arms in Europe, *ranks* do not seem to have carried any heraldic potential. In rare instances, sons of *amīrs* who became *amīrs* themselves inherited their fathers' *ranks*. But even then, these individuals did not acquire the offices or privileges that had originally pertained to their fathers' *ranks*, perhaps because of the peculiar structure of the Mamlūk ruling class whose members passed their power to recruited *mamlūks* rather than to their own sons [see MAMLŪK]. This apparent absence of a hereditary mechanism may have been the major reason why the institution of *rank* died out after the fall of the Mamlūks and the coming of the Ottomans in 922/1517.

Purcell, *Heraldic symbols, Islamic insignia and Western heraldry*, London 1986; Estelle Whelan, *Representations of the Khassakiyah and the origins of Mamluk emblems*, in *Content and context of visual arts in the Islamic world*, Philadelphia 1988, 219-43.

(NASSER RABBAT)

RAPAK (Javanese; A. *rafʿ*) is a technical term used among the Javanese, in this one case only, for the charge made by the wife, at the court for matters of religion, that the husband has not fulfilled the obligations which he took upon himself at the *taʿlīḳ* of *ṭalāḳ* or divorce [see ṬALĀḲ]. These obligations are of a varied and changing nature. Among the conditions the following always occurs: "If the man has been absent a certain time on land or (longer) over seas" i.e. without having transmitted *nafaḳa*, i.e. payment for maintenance to his wife. A clause that is never omitted is the following: "If the wife is not content with this." She is therefore at liberty to be quite satisfied with the husband's non-fulfilment of his vows, without taking steps for a divorce. The work of the court is only to ascertain the fulfilment of the condition and the arising of *ṭalāḳ*. As always, the *ṭalāḳ* is still entered in a register. It is evident that this procedure guarantees the integrity of the law otherwise endangered.

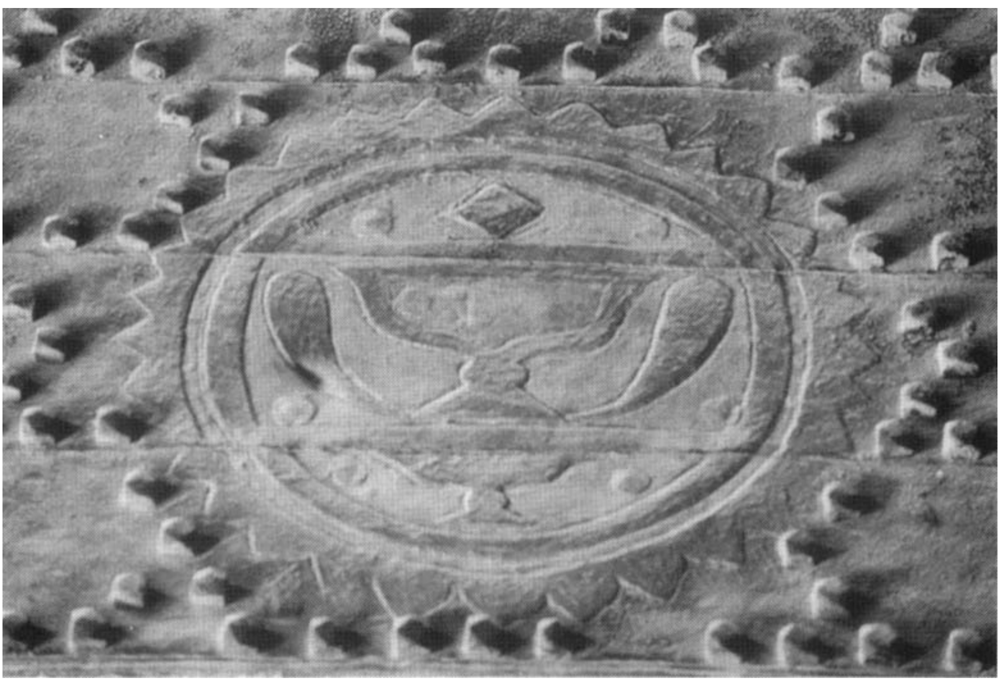
(R.A. KERN)

RAʾS (A. pl. *ruʾūs/arʾus*), "head", in geography the common word for "cape" (cf. Latin *caput* → cape), but it is also used with the meaning of "headland, promontory". The Musandam Peninsula in ʿUmān is sometimes called Raʾs Musandam, while the small territory occupying the northern tip of the Peninsula is called Ruʾūs al-Djibāl "the Mountain tops". Raʾs Tannūra [*q.v.*], the terminal of pipelines in eastern Saudi Arabia, derives its name from the tip of a small peninsula, at which the modern port is situated. In the name Raʾs al-Khayma [*q.v.*] "Tent Point", the word *raʾs* is not geographical, but refers to a large tent formerly used as a navigational device.

(ED.)

RAʾS AL-ʿĀM (A.) means New Year's Day, lit. "beginning of the year", i.e. 1 al-Muḥarram. For the difference with *Raʾs al-sana*, see Lane, *Lexicon*, s.v. *ʿām*. Sunnī Muslim law does not prescribe any particular celebration for the first month of the year, except that a voluntary fast-day is recommended on the tenth [see ʿĀSHŪRĀʾ]. However, the first ten days of the month are considered as particularly blessed (Lane, *Manners and customs*, chs. ix, xxiv). The Shīʿa know several celebrations during this month [see MUḤARRAM; TAʿZIYA]. In most Islamic countries, New Year's Day has long been indicated by the Persian word *Nawrūz* [*q.v.*], Arabic variant *Nayrūz*. (ED.)



RAʾS AL-ʿAYN or ʿAYN WARDA, Syriac Rēsh ʿAynā, a town of classical and mediaeval Islamic times of al-Djazīra, deriving its name ("spring-head") from the famed springs of the locality (see below). It is situated on the Greater Khābūr [*q.v.*] affluent of the Euphrates in lat. 36° 50′ N. and long. 40° 02′ E. It is now little more than a village straddling the modern border between Syria and Turkey, with the Syrian settlement still known as Raʾs al-ʿAyn and the Turkish one as Resülayn or Ceylânpınar.

In classical times it was known as Resaina-Theodosiopolis, receiving from the Emperor Theodosius I (379-95) urban rights and its latter name, one also borne by the Armenian town of Karin (Erzurūm [*q.v.*]), probably from the time of Theodosius II (408-50), so that it is sometimes difficult in the sources to distinguish which one is meant. The Persian general Ādharmahan twice (in 578 and 580) destroyed Rēsh ʿAynā, according to Michael Syrus, and in the reign of the Emperor Phocas the Persians captured the rebuilt town.

In 19/640 ʿIyāḍ b. Ghanm, after the subjection of Osrhoëne, marched against the province of Mesopotamia and by ʿUmar's orders sent ʿUmayr b. Saʿd against the town of ʿAyn Warda or Raʾs al-ʿAyn, which was besieged and stormed by him (al-Balādhurī, ed. de Goeje, 175-7). When a portion of the people of the town abandoned it, the Muslims confiscated their property. Among the rebels who rose against the caliph ʿAbd al-Malik in *ca.* 700 was ʿUmayr b. Ḥubāb of Raʾs al-ʿAyn (Abu 'l-Faradj, *Kitāb al-Aghānī*, Būlāḳ, xx, 127; Ibn al-Athīr, iv, 254-5; Mich. Syr., ii, 469; Barhebraeus, *Chron. syr.*, ed. Bedjan, 111). In the reign of al-Maʾmūn, Ḥubayb

Feline *rank* from the entrance of Khān al-Wazīr, Aleppo (1682).

Composite *rank* on the metal sheathing of the entrance to the Khān of Khāyir Bek, Aleppo (1516).

took the town in 1125 Sel. (A.D. 814) (Mich. Syr., iii, 27; Barhebraeus, *op. cit.*, 137). The Jacobite patriarch Yōḥannān III died on 3 December 873 in Rēsh ʿAynā (Mich. Syr., iii, 116; Barhebraeus, *Chron. eccles.*, ed. Abbeloos-Lamy, i, Lyons 1872, col. 387). After their campaign against Dārā and Naṣībīn (A.D. 942) the Byzantines in 943 took Raʾs al-ʿAyn, plundered it and carried off many prisoners (Ibn al-Athīr, viii, 312). A man from Raʾs al-ʿAyn, Aḥmad b. Ḥusayn Aṣfar Taghlib, called al-Aṣfar, disguised as a dervish, in 395/1005 with a body of Arabs made a raid into Byzantine territory as far as Shayzar and Maḥrūya near Anṭākiya but was driven back by the Patricius Bīghās. The governor Nicephorus Uranus in the following year undertook a punitive expedition to the region of Sarūdj, defeated the Banū Numayr and Kilāb and had al-Aṣfar thrown into prison by Luʾluʾ, lord of Aleppo in 397/1007 (Yaḥyā b. Saʿīd al-Anṭākī, in *Patrol. Orient.*, xxiii, 1932, 466-7; Georg. Kedren.-Skylitz., Bonn, ii, 454, 8; Barhebraeus, *Chron. syr.*, ed. Bedjan, 229). In *ca.* 523/1129 the Franks were lords of the whole of Syria and Diyār Muḍar and threatened Āmid, Naṣībīn and Raʾs al-ʿAyn. The latter was taken by Joscelin and a large part of the Arab population killed and the remainder taken prisoners (Mich. Syr., iii, 228; Barhebr., *Chron. syr.*, ed. Bedjan, 289). But the Franks cannot have held the town for very long.

Sayf al-Dīn of Mawṣil and ʿIzz al-Dīn Masʿūd of Aleppo in 570/1174-5 attacked Ṣalāḥ al-Dīn and besieged Raʾs al-ʿAyn, but were soon afterwards defeated by him at Ḳurūn Ḥamā. In 581/1185-6 Ṣalāḥ al-Dīn crossed the Euphrates and marched via al-Ruhāʾ, Raʾs al-ʿAyn and Dārā to Balad on the Tigris. His son al-Afḍal in 597/1200-1 received from al-ʿĀdil the towns of Sumaysāṭ, Sarūdj, Raʾs al-ʿAyn and Djumlīn; when he then marched on Damascus, Nūr al-Dīn of Mawṣil and Ḳuṭb al-Dīn Muḥammad of Sindjār again took Djazīra from him, but fell ill at Raʾs al-ʿAyn in the heat of summer and concluded peace again. In 599/1202-3 al-ʿĀdil took from al-Afḍal the towns of Sarūdj, Raʾs al-ʿAyn and Djumlīn (other fortresses also are mentioned). When the Kurdj [*q.v.*] (Georgians), who had advanced as far as Khilāṭ in 606/1209-10, learned that al-ʿĀdil had reached Raʾs al-ʿAyn on his way against them, they withdrew (Kamāl al-Dīn, tr. Blochet, in *ROL*, v, 46). Al-Malik al-Ashraf, who had defeated Ibn al-Mashṭūb in 616/1219-20 forgave him for rebelling and gave him Raʾs al-ʿAyn as a fief (Kamāl al-Dīn, *op. cit.*, 61; according to Barhebraeus, *Chron. syr.*, 439, however, Ibn al-Mashṭūb died in prison in Ḥarrān).

Ṣalāḥ al-Dīn's nephew al-Ashraf in 617/1220-1 was fighting against the lord of Mārdīn. The lord of Āmid made peace between them, when Raʾs al-ʿAyn was ceded to al-Ashraf, al-Muwazzar and the district of Shabakhtān [*q.v.*] (around Dunaysir) to the lord of Āmid. In exchange for Damascus, al-Ashraf, in 626/1229 gave his brother al-Kāmil the towns of al-Ruhāʾ, Ḥarrān, al-Raḳḳa, Sarūdj, Raʾs al-ʿAyn, Muwazzar and Djumlīn (Kamāl al-Dīn, in *ROL*, v, 77; Barhebraeus, *Chron. syr.*, 458) who occupied them in 634/1236-7 (Kamāl al-Dīn, *op. cit.*, 92). After the defeat of the Khʷārazmians at Djabal Djalahmān near al-Ruhāʾ, the army of Aleppo in 638/1240-1 took Ḥarrān, al-Ruhāʾ, Raʾs al-ʿAyn, Djumlīn, al-Muwazzar, al-Raḳḳa and the district belonging to it (Kamāl al-Dīn, in *ROL*, vi, 12). But in 639/1241-2 the Khʷārazmians, who had made an alliance with al-Malik al-Muẓaffar of Mayyāfāriḳīn, returned to Raʾs al-ʿAyn, where the inhabitants and the garrison, including a number of Frankish archers and crossbowmen, offered resistance. An arrangement was made by which they were admitted to the town by the inhabitants, whose lives were promised them, and captured the garrison. When al-Malik al-Manṣūr had returned to Ḥarrān and al-Muẓaffar had retired to Mayyāfāriḳīn with the Khʷārazmians, they sent their prisoners back (Kamāl al-Dīn, in *ROL*, vi, 14). In the same year also, the Mongols came to Raʾs al-ʿAyn (*ibid.*, 15). When the Khʷārazmians and Turkmens raided al-Djazīra, the army of Aleppo under the *amir* Djamāl al-Dawla in Djumādā II 640/1242-3 went out against them, and the two armies encamped opposite one another near Raʾs al-ʿAyn. The Khʷārazmians combined with the lord of Mārdin, and finally a peace was made by which Raʾs al-ʿAyn was given to the Artuḳid ruler of Mārdīn (Kamāl al-Dīn, in *ROL*, vi, 19).

In a Muslim cemetery in the north of Raʾs al-ʿAyn, M. von Oppenheim found an inscription of the year 717/1317-18. The Syrian chroniclers mention Rēsh ʿAynā as a Jacobite bishopric (11 bishops between 793 and 1199 are given in Mich. Syr., iii, 502) in which a synod was held in 684 (Barhebraeus, *Chron. eccl.*, i, 287). Towards the end of the 8th/14th century the town was sacked by Tīmūr.

Raʾs al-ʿAyn is built at a spot where a number of copious, in part sulphurous, springs burst forth, which form the real "main source" of the Khābūr (al-Dimashḳī, ed. Mehren, 191). The Wādī al-Djirdjib, which has not much water in it and starts further north in the region of Wirānshehir, and which may be regarded as the upper course of the Khābūr, only after receiving the waters from the springs of Raʾs al-ʿAyn becomes a regular river, known from that point as the Khābūr. According to M. von Oppenheim (cf. his map in *Petermanns Mitteil.* [1911], ii, pl. 18), the springs at Raʾs al-ʿAyn are ʿAyn al-Ḥuṣān, ʿAyn al-Kebrīt and ʿAyn al-Zarḳāʾ; according to Taylor (*JRAS*, xxxviii, 349 n.), ʿAyn al-Bayḍāʾ and ʿAyn al-Ḥasan are the most important; he also gives the names of 10 springs in the north-east and 5 in the south of the new town. The Arab geographers talk of 360, i.e. a very large number of springs, the abundance of water from which makes the vicinity of the town a blooming garden. One of these springs, ʿAyn al-Zāhiriyya, was said to be bottomless. According to Ibn Ḥawḳal, Raʾs al-ʿAyn was a fortified town with many gardens and mills; at the principal spring there was according to al-Muḳaddasī a lake as clear as crystal. Ibn Rusta (106) mentions Raʾs al-ʿAyn, Ḳarḳīsiyā, and al-Raḳḳa as districts of al-Djazīra. Ibn Djubayr in 580/1184-5 saw two Friday mosques, schools and baths in Raʾs al-ʿAyn on the bank of the Khābūr. According to Ḥamd Allāh Mustawfī (8th/14th century), the walls had a circumference of 5,000 paces; among the rich products of Raʾs al-ʿAyn he mentions cotton, corn and grapes. The historical romance *Futūḥ Diyār Rabīʿa wa-Diyār Bakr* (10th/16th century?) wrongly ascribed to al-Wāḳidī, which contains much valuable geographical information, mentions at Raʾs al-ʿAyn a plain of Muthaḳḳab and a Mardj al-Ṭīr (var. al-Dayr); it also mentions a Nestorian church in the town and several gates (in the translation by B.G. Niebuhr and A.D. Mordtmann, in *Schriften der Akad. von Hamburg*, i, part iii, Hamburg 1847, 76, 87. The "gate of Istacherum" in the east and the "Mukthaius or gate of Chabur" are not precisely located.

At Raʾs al-ʿAyn were the Jacobite monasteries of Bēth Tirai and Spequlos (*speculae*; Ps.-Zacharias Rhet., viii, 4, tr. Ahrens-Krüger, 157, 2; so also for Asphulos in Mich. Syr., iii, 50, 65, cf. ii, 513, n. 6; Saphylos in Mich. Syr., iii, 121, 449, 462;

Barhebraeus, *Chron. eccl.*, ed. Abbeloos-Lamy, i, 281-2; Sophiclis, *ibid.*, 397-8, probably so to be read throughout).

A little to the southwest of Ra'ʾs al-ᶜAyn on the right bank of the K͟hābūr is the great mound of ruins, Tell Ḥalāf, where M. von Oppenheim excavated the ancient palace of Kapara (see *Bibl.*).

RAʾS AL-K͟HAYMA (officially Ras-al-Khaimah), a constituent Amirate of the United Arab Emirates federation [see AL-IMĀRĀT AL-ᶜARABIYYA AL-MUTTAḤIDA in Suppl.], to which it acceded in February 1972. It is also the name of the capital of the Amirate. The town seems to take its name from a configuration of hills on the coast which, seen from seaward, suggest the profile of the pole ridge of a nomad tent. The name is known to Portuguese geographers by the 16th century, but it is not until the 18th century that Raʾs al-K͟hayma supplants its predecessor, D̲j̲ulfār, whose deserted tells lie immediately north of the suburbs of the town. The capital of the Amirate is divided into several major areas, of which the oldest is the old town, where the fort of the Āl Ḳāsimī rulers is situated. It has a good port as a result of dredging. There is also an airport.

The Amirate is ruled by the Āl Ḳāsimī, members of the Hawālā Arab tribe, who, according to their tradition, originate in ᶜIrāḳ. The present Amirate constitutes the remains of very much larger Āl Ḳāsimī territories which once encompassed most of the ᶜUmān peninsula, as well as places on the Persian coast opposite. The borders of the present Amirate are complex and, at certain points, they are subject to dispute. The main Raʾs al-K͟hayma territory lies in the far north of the U.A.E., principally bordered by the neighbouring Amirates of Umm al-Ḳuwayn and Fud̲j̲ayra. In the north, it borders the Sultanate of ᶜUmān's territory on the Musandam Peninsula. There is also a large enclave of Raʾs al-K͟hayma territory further south, centring on Ḥuwaylāt and Wādī al-Ḳawr, bordering the Amirate of Fud̲j̲ayra, and the eastern enclaves of the Amirates of al-S͟hāriḳa (i.e. Sharjah) and ᶜAd̲j̲mān, and the Sultanate of ᶜUmān. Raʾs al-K͟hayma also formerly held two Gulf islands known as the Tunbs until they were seized by Iranian forces on 30 November 1971.

The indigenous population of the Amirate is Arab and Sunnī, with marked Wahhābī sentiments since the late 18th century. The inhabitants of the mountains are S͟hihūh, who continue into the ᶜUmānī territory of Musandam. There is also a nomadic element to the population. Migrant workers including Indians, Pakistanis and Persian Balūč have settled in the Amirate in recent years.

The main coastal settlement in the past was the port of D̲j̲ulfār, before it gave way to Raʾs al-K͟hayma town. Other coastal settlements which belong to the Amirate include S͟haᶜm, al-Rams and D̲j̲azīrat al-Ḥamrāʾ. Between the coastal strip and the D̲j̲abal Ḥad̲j̲ar highlands there is a belt of agricultural land irrigated by rainfall, wells and *aflād̲j̲*. The S͟hihūh farm small plots of land on the top of the D̲j̲abal Ḥad̲j̲ar chain.

The Amirate preserves a large number of archaeological sites testifying to settlement in ancient times, especially during the Bronze and Iron Age: there are numerous tombs associated with the 3rd-1st millennium in northern Raʾs al-K͟hayma, on the Daya plain and around S͟himāl. There are also early sites further south at al-K͟haṭṭ and along the course of Wādī al-Ḳawr in southern Raʾs al-K͟hayma. Ceramic finds suggest activity in the 3rd century A.D. on D̲j̲azīrat al-Hulayla on the coast, north of al-Rams.

The main town for much of the Islamic period was D̲j̲ulfār. In its broadest application, the place-name D̲j̲ulfār seems to have related to successive settlements between Raʾs al-K͟hayma town in the south and the D̲j̲azīrat al-Ḥulayla area in the north. Indeed, it now seems likely that before Islam and in the early Islamic period, D̲j̲ulfār was centred on al-Ḥulayla. The name of D̲j̲ulfār is mentioned in context of the early Islamic sea-borne expeditions against Persia when ᶜUt̲h̲mān b. al-ᶜĀṣ in *ca.* 16/637 sailed with a force from D̲j̲ulfār. Umayyad and ᶜAbbāsid caliphs repeatedly used D̲j̲ulfār to disembark armies engaged in campaigns against the Ibāḍī community of ᶜUmān. This reflects the fact that D̲j̲ulfār's harbour was the finest in the lower Gulf. In the 4th/10th century, al-Muḳaddasī, 70-1, numbered D̲j̲ulfār among the *ḳaṣaba*s of ᶜUmān and on an equivalent level with Maṣkaṭ, Ṣuḥār and Nizwa [*q.vv.*].

Around the 7th/14th century the centre of D̲j̲ulfār shifted to the area of tells known as al-Maṭāf and al-Nudūd on the northern edge of modern Raʾs al-K͟hayma town. The port was engaged in pearl fishing and commerce with China and south-east Asia, as well as India; imported Chinese porcelain and celadon found in quantity at the site bear witness to this trade. By the 7th/14th century, D̲j̲ulfār was under the jurisdiction of the sultans of Hurmūz [*q.v.*], whose coinage it used, and when Hurmūz passed under Portuguese control, they established a garrison at D̲j̲ulfār. The Portuguese remained in control of the coast until 1043/1633 when they were finally driven out by the ᶜUmānī Imām, Nāṣir b. Murs͟hid al-Yaᶜāriba. Thereafter, D̲j̲ulfār declined, possibly because of the silting channels into the port, and the town of Raʾs al-K͟hayma to the south increasingly supplanted D̲j̲ulfār.

The Persian ruler Nādir S͟hāh [*q.v.*] sent a force through D̲j̲ulfār in 1149/1737 to occupy much of ᶜUmān, establishing garrisons at a number of places, including D̲j̲ulfār and al-K͟haṭṭ (in the Amirate of Raʾs al-K͟hayma today). The Persians were finally expelled in 1157/1744. During the latter part of the 12th/18th century, Raʾs al-K͟hayma passed under the Āl Ḳāsimī *s͟hayk͟h*s, of the Ḥawāla Arab tribe, which has elements on both the Arab and the Persian coasts. The Āl Ḳāsimī have continued to rule Raʾs al-K͟hayma until the present time. In the framework of

the traditional ʿUmānī factions, they espouse the Ghifārī cause as opposed to the Hināwī.

The Āl Ḳāsimī *shaykhs* adopted Wahhābism under the influence of the Āl Suʿūd, with whom they still maintain good relations. As a sea-borne power, they engaged in piracy in the Gulf in the latter years of the 18th and the early 19th century, challenging East India Company shipping and the British Navy. In 1224/1809 British and Indian forces from Bombay attacked Raʾs al-Khayma to suppress the "Joasmee" (Ḳawāsimī) forces. These operations were repeated in 1234/1819, which led to the reduction of the Āl Ḳāsimī and the demolition of their fortresses, the destruction of their fleet and a brief British occupation of Raʾs al-Khayma. A General Treaty between the British and the Āl Ḳāsimī was signed at al-Falāya near to Raʾs al-Khayma town in 1235/1820, aimed at suppressing piracy in the Gulf: it was to this treaty that other *shaykhs* along the coast acceded, creating the foundation of the Trucial ʿUmān states. The Treaty was finally reinforced by The Perpetual Maritime Truce of 1853 which set the framework of relations between the various shaykhdoms and the British until 1971. Raʾs al-Khayma underwent a period of decline with its power sharply reduced by the British attack. The main political concern of the Āl Ḳāsimī during the following years was to prevent incursions on their territory by ʿUmān and by the Banū Yās of Abū Ẓabī.

The Āl Ḳāsimī ruled their territories from either Sharjah or Raʾs al-Khayma, but after 1921 the family territories were conclusively divided and Raʾs al-Khayma was recognised by the British as an independent Amirate. The British recognition of the Amirate of Fudjayra in 1952 marked the formal ending of al-Ḳāsimī control of this part of the east coast of the ʿUmān Peninsula: today the border of Raʾs al-Khayma with Fudjayra lies at the western edge of the Djabal Ḥadjar.

With the ending of the British treaty relationship with the Trucial States in 1971, Raʾs al-Khayma acceded to the newly created United Arab Emirates on 10th February, 1972. The Ruler of Raʾs al-Khayma since 1948, *Shaykh* Ṣaḳr b. Muḥammad al-Ḳāsimī, is a member of the Supreme Council of the U.A.E. Today, Raʾs al-Khayma, lacking oil in any quantity, is one of the poorer members of the U.A.E. Its major exports are stone from the Djabal Ḥadjar and cement, and its manpower contributes to the federal administration and the armed forces.

(G.R.D. King)

RAʾS MUSANDAM, a rocky peninsula that lies at the northernmost point of the promontory that terminates the Djabal Ḥadjar mountain range, the spine of the Oman Peninsula. It is attached to the mainland by the narrow Maḳlab isthmus. The Peninsula is deeply indented by creeks, of which the most important are Khawr al-Shamm, Khawr Ḥabalayn and Khawr Ghubb ʿAlī. Khawr al-Shamm is known as Elphinstone Inlet after Mountstuart Elphinstone, Governor of Bombay when the Court of Directors of the East India Company initiated a coastal survey of the western side of the Oman Peninsula, starting in the neighbourhood of Musandam in 1820. Buckingham comments on the depth of the water in the inlets of Musandam, but also remarks on the area's dangers as an anchorage and the risks entailed to shipping entering the channels (J.S. Buckingham, *Travels in Assyria, Media and Persia*, London 1830, ii, 385-6).

In modern usage, the term "Musandam" encompasses the dramatic cliffs of the mountainous mainland, properly termed Ruʾūs al-Djibāl (J.G. Lorimer, "Ruūs al Jibāl", in *Gazetteer of the Persian Gulf, ʾOmān, and Central Arabia*, ii/B, 1604-14; S.B. Miles, *The countries and tribes of the Persian Gulf*², 378, 449; A.T. Wilson, *The Persian Gulf*, London 1959, 3) and the term also indicates the northernmost territory of the Sultanate of Oman (ʿUmān).

The term "Musandam" is taken by D.G. Hogarth (*The penetration of Arabia*, repr. Beirut 1966, 230) to mean "Anvil Head". The name is not known to the Classical or Arabic geographers and it seems to enter the literature in the Portuguese period, and, thereafter, the northern tip of the Oman Peninsula regularly appears as Raʾs Musandam.

Raʾs Musandam and Ruʾūs al-Djibāl reflect marked geological activity in the late Quaternary. The highlands are formed of limestones and dolomites, while sandy gravels form slope deposits and alluvial fans, a characteristic of the entire Oman Peninsula.

The earliest reference to Raʾs Musandam dates to 326 B.C., when Alexander's admiral Nearchos saw it from the Persian side of the straits of Hurmuz and was told it was called Maketa. It is further mentioned by Eratosthenes and Strabo, and possibly by Pliny, whilst the *Periplus of the Erytraean Sea* refers to the mighty range of the *Asabon*; Miles (*op. cit.*, 10) suggested that *Asabon* is preserved in the place-name Khaṣab, a village on the northern end of the promontory.

Al-Muḳaddasī (70-1) refers to a sequence of places between Masḳaṭ and Djulfār, but makes no reference to the villages of Raʾs Musandam that we know today. Al-Idrīsi refers to al-Khayl, al-Djabal or Ḥabal lying between Masḳaṭ and Djulfār (*Opus geographicum*, ed. A. Bombaci *et alii*, Naples-Rome 1972, ii, 162, tr. Jaubert, i, 157). The reading al-Djabal, if correct, is an appropriate reference to Djabal Ḥadjar, Ruʾūs al-Djibāl and Raʾs Musandam.

Evidence of early settlement at Raʾs Musandam is slender, although the accumulation of gravels in the alluvial fans may mask early archaeological sites. The earliest evidence of settlement in the region is indicated by a site on Djazīrat al-Ghanam attributed to the Sāsānid period (B. de Cardi, *A Sasanian outpost in northern Oman*, in *Antiquity*, xlvi, no. 184 [1973], 305-

10; eadem, *Archaeological survey in Northern Oman, 1972*, in *EW*, xxv [1975], 24-6). It included foundations of rectangular buildings along the foreshore to which a date after S̲h̲āpūr II had occupied parts of eastern Arabia has been suggested (early 4th century A.D.), based on ceramic evidence. Evidence of Sāsānid occupation is limited elsewhere in this area and most ceramics recovered from the Musandam settlements indicate a 14th to 15th century A.D. date range.

Information increases about Raʾs Musandam with the coming of the Portuguese. A Portuguese fleet is shown off "Cabo de Mocamdam" in the *Livro de Lizuarte de Abreu* of *ca.* 1564. K̲h̲aṣab (Casapo) is marked in Fernao Vaz Dourado's map drawn at Goa in 1571: Ṣībī is indicated in Dourado's map of 1575. Ruy Freyre de Andrada visited Kumzār and K̲h̲aṣab in 1620 during the last period of Portuguese dominion. Finding a fort at K̲h̲aṣab, de Andrada reinforced and garrisoned it (C.R. Boxer (ed.), *Commentaries of Ruy Freyre de Andrada*, London 1930, 189; Miles, 446; De Cardi, *Archaeological survey in Northern Oman, 1972*, 28). An inscription in the fort also records restoration in 1649 by the Portuguese. There are other Portuguese forts at Lima, at D̲j̲azīrat al-G̲h̲anam and Sīfa Maḳlab, the latter appearing to be 17th century.

From the second half of the 18th century, the Sultan of Masḳaṭ [*q.v.*] would collect taxes at Raʾs Musandam on commerce passing through the straits of Hurmuz (Miles, 291). The deep creeks of Raʾs Musandam gave cover to Ḳawāsimī pirates [see AL-ḲAWĀSIM] in the early years of the 19th century, and Buckingham describes the use of the Musandam creeks by pirates with their oar-driven boats sailing out to prey on shipping. From 1809, East India Company vessels in alliance with the Sultan of Masḳaṭ took up station off Raʾs Musandam, in order to control the piracy of the Ḳawāsim (Miles, 314). Colonel Lewis Pelly, the British Resident in the Gulf, proposed in 1862-3 the siting of a British station near K̲h̲aṣab from which to control local disputes and the slave trade.

In 1862-4 a cable was laid for the Indo-European Telegraph across Raʾs Musandam, running through Elphinstone Inlet (K̲h̲awr al-S̲h̲amm) and Malcolm Inlet (K̲h̲awr Ḥabalayn). The cable system remained in use until 1955 (C.P. Harris, *The Persian Gulf submarine telegraph of 1864*, in *GJ*, cxxxv/2 [June 1969], 170-90).

According to Lorimer, the population of Ruʾūs al-D̲j̲ibāl was 13,750 in 1908 ("Oman", in *op. cit.*, ii/B, 1411, and "Ruūs al-Jibāl", 1605). Estimates in 1970-1 suggested that the population remained much as in Lorimer's time, but with a greater concentration in the coastal settlements (A. Coles, in *EW*, xxx [1975], 16). The majority of the people are S̲h̲ihūh, dominating the mountain summits and the coasts alike, with elements of the much smaller D̲h̲āhiriyya residing at Buk̲h̲a and K̲h̲aṣab among other places.

Raʾs Musandam has little cultivable lowland, and the people of Kumzār take their flocks by boat to D̲j̲azīrat al-G̲h̲anam to graze. By contrast, K̲h̲aṣab and Buk̲h̲a on the coast of Ruʾūs al-D̲j̲ibal have somewhat more extensive date groves. Fish, shell fish and pearling remain part of the economy as they have since ancient times, when people of this area were termed *Ichthyophagi* by the Classical sources.

Isolated and inaccessible farmsteads characterise the mountains, where the terraced fields depend on rainfall for irrigation. Various types of distinctive, stone-built structures have been developed in the highlands, including the *bayt al-kifl*, a storage grain building.

Politically, Raʾs Musandam and Ruʾūs al-D̲j̲ibāl are under the jurisdiction of the Sultanate of ʿUmān (Oman), although the southern areas of Ruʾūs al-D̲j̲ibāl lie in the Amīrate of Raʾs al-K̲h̲ayma, while Dibba is under the joint jurisdiction of ʿUmān, al-Fud̲j̲ayra (Fujairah) and al-S̲h̲āriḳa (Sharjah).

(G.R.D. KING)

RAʾS (AL-) TANNŪRA, a cape in eastern Saudi Arabia on the Persian Gulf, in lat. 26° 40′ N., 50° 13′ E., north of al-Ḳaṭīf [*q.v.*]. The word *tannūr* occurs in Kurʾān, XI, 42, and XXIII, 27, in the story of Noah, meaning "oven". It also indicates any place from which water pours forth (Lane, *Lexicon, s.v.*). In July 1933 King ʿAbd al-ʿAzīz gave the concession for drilling oil in the eastern part of Saudi Arabia to the Standard Oil Company of California. The first consignment of Saudi oil was sent away from Raʾs Tannūra in 1939. Its refinery is connected by a pipeline with the Dammām field, about 60 km/37 miles away.

RAS̲H̲ĀʾIDA, *ḳabīlat al-Ras̲h̲āʾida*, an Arab and Muslim nomadic people of the eastern Sudan and Eritrea, which emigrated from the coast of Arabia in the middle of the 19th century. Installed in the first instance on the *sāḥil* between Sawākin (Suakin) and ʿAḳīḳ, they were forced by the Mahdiyya [*q.v.*] to move southwards. Some of them then returned to the Anglo-Egyptian Sudan, so that today they can be found dispersed along the coast from Port Sudan to Massawa [see MAṢAWWAʿ] and on the left bank of the Atbara beyond Kassala. In the Sudan, their number was estimated in 1922 at one to two thousand and in 1986 at 40,000. They are less numerous in Eritrea.

They herd goats in the more confined areas and, more often, camels in the wider expanses. The most northerly group nomadises, for example, along the axis of the Atbara over 500 km/310 miles. In the wet season, from the end of June to October, the herds (from 50 to 70 head) are between Kassal and Goz Regeb. In the dry season, they go down towards Doka and the Dinder National Park in order to graze on the fields of sorghum which have just been watered.

The Ras̲h̲āʾida have other resources. The camel rearers of the fringes are carriers and have benefitted from the Eritrean war up to 1991. Certain of them sometimes engage in agriculture. One group has even tried to live by fishing on two of the Dahlak [*q.v.*] islands.

They do not ally either with the Cushitic peoples of whom they are neighbours (Bichari, Hadendowa,

etc.) nor with other Arabs, and have preserved their own dialect and traditions. They live in small family groups (*dār*) of two to eight tents, grouped together in the dry season in an encampment (*farīg*) of 100 to 200 persons who recognise the authority of an *ʿomda*. The cohesion of the community as a whole is not kept together by any central authority able to represent them vis-à-vis the political authorities.

The men wear a long shirt over trousers with wide legs, have on their heads a voluminous turban and never move anywhere without a long whip. The womenfolk wear long black robes and a veil of material and leather decorated with embroidery in which two square holes are made for the eyes. Among the young girls, the veil, decorated with cowrie shells, hides only the nose and mouth.

RAS̲H̲ĪD, Rosetta, a town in Egypt, situated in lat. 31° 24′ N., long. 30° 24′ E., on the western bank of the western branch of the Nile. The town which is situated near the site of the ancient Bōlbouthiō (Greek Bolbitínē) seems not to have existed before the Arab conquest. Even at the beginning of the 8th century A.D., the papyri mention only the name of Bolbitínē as emporium for merchandise from Upper Egypt (Bell, *The Aphrodite papyri*, 1414, 1. [59], 102, etc.). Till the 9th century A.D., ships sailed direct to Fuwwa; but owing to the excessive depositing of the silt in this region, Ras̲h̲īd began to take its place.

Ras̲h̲īd is first mentioned in 132/750 when the Copts of the town revolted against the caliph Marwān II who had taken refuge in Egypt from the ʿAbbāsids (al-Kindī, *Wulāt*, 96). In 278/891-2, al-Yaʿḳūbī (*Buldān*, 338) mentions its port. When the Fāṭimid heir-apparent (the future caliph al-Ḳāʾim) tried to conquer Egypt in 307/920, his fleet was prevented by an ʿAbbāsid squadron from sailing into the mouth of the Ras̲h̲īd branch of the Nile, and was then annihilated (al-Kindī, *Wulāt*, 276).

Ras̲h̲īd is numbered among the *kūras* [*q.v.*] of Egypt (al-Yaʿḳūbī, *loc. cit.*; al-Ḳuḍāʿī, quoted by al-Maḳrīzī, *K̲h̲iṭaṭ*, ed. Wiet, i, 311, 1. 5). After the reorganisation of the provinces of Egypt, probably during the reign of the Fāṭimid caliph al-Mustanṣir (427-87/1035-94), it became a unit of its own, not belonging to any of the newly-created provinces of the Delta. Al-Idrīsī, *Opus geographicum* (ed. E. Cerulli *et alii*), 343, describes it as a commercial town and mentions the fishery activities on the Nile and the Sea and the export of pickled mussels (*dallīnas*). The Arab geographers usually qualify Ras̲h̲īd as a frontier station (*t̲h̲ag̲h̲r*), where probably customs were levied. In the 8th/14th century, its revenues were given as an *iḳṭāʿ* to Mamlūk officers; but *ca.* 885/1480, under sultan Ḳāyit Bāy, it was part of the crown-lands (*al-k̲h̲āṣṣ al-sulṭānī;* Ibn al-D̲j̲īʿān, *al-Tuḥfa*, ed. B. Moritz, Cairo 1898, 138). In the last years of the 8th/14th century, Ibn Duḳmāḳ (*al-Intiṣār*, ed. Vollers, Cairo 1893, v, 113-14) calls Ras̲h̲īd a *ribāṭ* and says that the inhabitants of the town were exclusively volunteers (*murābiṭūn*).

After the Ottoman conquest of Egypt in 1517 and the decay of European trade through Alexandria, Ras̲h̲īd became an important centre for maritime trade with Istanbul and the Aegean territory of the Turkish Empire. The viceroy ʿAlī Pas̲h̲a, in 915/1509, restored its old *k̲h̲āns* (warehouses) and *funduḳs* (hostelries), built new ones, and cleared the silt from its docks. Till modern times, its wall was maintained for defence against Arab raids. At the mouth of the River, near Kōm al-Afrāḥ, two castles guarded the waterway entrance to the town. Vansleb, who visited Ras̲h̲īd in May 1672, gives a description of the castles and their garrison (*State of Egypt*, London 1678, 105). When Carsten Niebuhr passed through Ras̲h̲īd in November 1761, the town was the residence of a French and a Venetian consul; it served as port of trans-shipment for the trade between Cairo and Alexandria (*Reisebeschreibung*, i, 56-7 and pl. VI). In 1799, in the neighbourhood of the town, Boussard, an officer of the French Expedition, discovered the famous Rosetta Stone with its trilingual inscription (now in the British Museum). In 1218/1803 Ras̲h̲īd witnessed al-Bardīsī's victory over the combined sea and land forces of the Ottoman Porte; and in 1222/1807 it was seized by the British who came to help al-Alfī and his Mamlūk successors.

The town continued to flourish until Muḥammad ʿAlī [*q.v.*] reconstructed the Maḥmūdiyya Canal for navigation between Alexandria and the Nile, and thus diverted the course of trade from Ras̲h̲īd, which declined rapidly to a mere fishing town with but a few minor local industries such as rough cotton weaving, rice production and oil manufacture. Its population in 1907 was only 16,660, but in 1970 the population of the town, which still benefits from coastal trade and fisheries, had risen to 36,711.

RAS̲H̲ID, ĀL, an Arabian tribal dynasty belonging to the ʿAbda clan (*ʿas̲h̲īra*) of the S̲h̲ammar tribes and ruling over parts of northern and central Arabia from 1251/1835 until 1340/1921. Although the area under their control fluctuated with their political fortunes, their essential power base was in the D̲j̲abal S̲h̲ammar region of northern Nad̲j̲d where they could rely on tribal allegiance and make the small town of Ḥāyil [*q.v.*] their centre of government.

The history of Āl Ras̲h̲īd is closely linked with that of Āl Suʿūd [see suʿūd, āl], at first as their allies and supporters, later as their rivals for domination over central Arabia. The founder of the Ras̲h̲īdī dynasty, ʿAbd Allāh b. Ras̲h̲īd, is usually presented as a close friend and supporter of the Suʿūdī *amīr* Fayṣal b. Suʿūd and, on a religious and military level, enthusiastic to promote the Wahhābī cause. He managed to establish himself as ruler in Ḥāyil in 1251/1835 after a power struggle with cousins from the rival family of Ibn ʿAlī, but to what extent he owed his position to the Suʿūdīs or to his personal abilities and tribal backing is a subject of dispute. He was noted for his largely successful efforts to enforce security, despite resentment in some quarters of his pro-Suʿūdī and Wahhābī stance. He was succeeded on his death in 1264/1847 by his eldest son Ṭalāl.

Ṭalāl's rule from 1264-84/1847-67 saw the achievement of a high point in commercial prosperity and stability due to his encouragement of trade. More religiously tolerant than his father, he accepted the settlement of S̲h̲īʿī merchants from ʿIrāḳ, generally hated by the Wahhābīs. His apparently accidental death from a gunshot wound led to a brief period of

internecine struggle, characteristic of the Ras͟hīdīs and a major cause of their downfall, before Muḥammad, a younger brother of Ṭalāl, came to power following his massacre of all Ṭalāl's sons.

Despite its bloody beginnings, the long reign of Muḥammad b. Ras͟hīd (1289-1315/1872-97) witnessed the expansion of Ras͟hīdī power over al-Ḳaṣīm [*q.v.*] and the Wahhābī heartlands of southern Nad͟jd, including the Suʿūdī capital, al-Riyāḍ [*q.v.*]. After a long contest with Āl Suʿūd he defeated them decisively at the battle of al-Mulayda in 1309/1891, expelling them from Nad͟jd, after which they sought refuge in al-Kuwayt, among them the young ʿAbd al-ʿAzīz [*q.v.*], future founder of the modern kingdom of Suʿūdī (Saudi) Arabia. The *amīr* Muḥammad was noted for his military skills and the energy with which he sought to control recalcitrant tribes. European visitors to Ḥāyil during his reign included C.M. Doughty, the poet Wilfred Scawen Blunt and his wife, Lady Anne.

Following the death of their last great *amīr*, Āl Ras͟hīd sank into their final decline, faced with the rising new power of ʿAbd al-ʿAzīz b. Suʿūd as well as political and economic pressures exerted by the Ottomans and British, especially during World War I and its aftermath. Muḥammad's immediate successor, his nephew ʿAbd al-ʿAzīz, was killed in battle with the Suʿūdīs, and the Ras͟hīdīs then fell prey to savage internal quarrels reminiscent of the time before Muḥammad's accession. Four *amīrs* were murdered by their own relatives in the period from 1325/1907 to 1339/1920. The last two *amīrs*, who ruled only briefly, were forced to surrender to Ibn Suʿūd in 1339-40/1921.

al-RAS͟HĪD [see hārūn al-ras͟hīd].

al-RĀS͟HID bi'llāh, Abū D͟jaʿfar al-Manṣūr, the thirtieth ʿAbbāsid caliph, the son of al-Mustars͟hid [*q.v.*] and a slave girl called K͟hus͟hf, was probably born around 501/1107-8 since the sources record the date of his *walī al-ʿahd* ceremony as 2 Rabīʿ II 513/13 July 1119 when he was aged twelve (Ibn al-At͟hīr, x, 377). Al-Rās͟hid became caliph after al-Mustars͟hid's murder in D͟hu 'l Ḳaʿda 529/August 1135 (Sibṭ Ibn al-D͟jawzī, 158; Ibn al-At͟hīr, xi, 16) and died in 532/1138.

His reign was tragically short. He was drawn immediately into a bitter and ultimately fatal battle of wills with the Sald͟jūḳ sultan Masʿūd b. Muḥammad [*q.v.*] who now, after his clashes with al-Mustars͟hid, wanted a malleable caliph ready to stay put in Bag͟hdād and to confine himself to religious matters (Ibn al-Azraḳ, 73). Al-Rās͟hid, however, was of a different ilk, demanding vengeance for his father's murder and no doubt cherishing hopes of continuing al-Mustars͟hid's aim of expelling the Sald͟juḳs from ʿIrāḳ. The sources record in some detail the deteriorating relationship between caliph and sultan.

Shortly after al-Rās͟hid's accession, Masʿūd demanded tribute from him, but this the caliph refused to disgorge. Indeed, he proceeded to prepare for conflict by raising troops and fortifying Bag͟hdād (Ibn al-D͟jawzī, x, 54; Ibn al-At͟hīr, xi, 22; Bar Hebraeus, 262; Ibn al-ʿImrānī, 222), whilst factions hostile to Masʿūd, notably his nephew Dāwūd b. Maḥmūd, and Zangī, converged on the city in Ṣafar 530/November 1135 and persuaded al-Rās͟hid to make common causes with them. After the *k͟huṭba* had been pronounced in Dāwūd's name on 14 Ṣafar 530/23 November 1135 (Ibn al-D͟jawzī, x, 55; Ibn al-At͟hīr, xi, 23), Masʿūd hastened to besiege Bag͟hdād and the intimidated rebels soon dispersed in disarray. After an initial display of bravado, al-Rās͟hid fled in panic with Zangī to Mawṣil (al-Bundārī, 180; Ibn al-Azraḳ, 76-7; Ibn al-D͟jawzī, x, 59; Ibn al-At͟hīr, *Atābegs*, 51).

It was a serious blunder for al-Rās͟hid to vacate the traditional seat of caliphal power. In D͟hu 'l-Ḳaʿda 530/August 1136, Masʿūd entered Bag͟hdād peacefully and engineered the deposition of the absent caliph. A group of *ʿulamāʾ* summoned by Masʿūd declared al-Rās͟hid unsuitable for office, accusing him of wine-drinking and immorality and of breaking a solemn oath to Masʿūd that he would never leave Bag͟hdād or take up arms against him (Ibn al-Azraḳ, 72) and producing a document to this effect signed by al-Rās͟hid (Ibn al-At͟hīr, xi, 26; Ibn al-D͟jawzī, x, 60; Bar Hebraeus, 263). A *fatwā* deposing al-Rās͟hid was pronounced by the S͟hāfiʿī *ḳāḍī*, ʿImād al-Dīn Ibn al-Kark͟hī (Ibn al-At͟hīr, *Atābegs*, 53; Ibn al-Azraḳ, 78). Al-Rās͟hid's uncle al-Muḳtafī [*q.v.*] was proclaimed caliph in his stead.

Zangī's support for the exiled al-Rās͟hid proved short-lived. The ex-caliph soon felt too insecure to remain in Mawṣil and he moved to Ād͟harbayd͟jān to join Dāwūd and a coalition of Turkish *amīrs* who resolved to restore him to the caliphate (al-Ḥusaynī, 108-9; al-Bundārī, 180; Ibn al-At͟hīr, xi, 39-40). These and other offers of support soon evaporated (*ibid.*, xi, 41; Ibn al-Azraḳ, 81) and after wandering from place to place, the hapless al-Rās͟hid was finally killed outside Iṣfahān on 25 or 26 Ramaḍān 532/6 or 7 June 1138. Although some sources blame the Assassins for his murder (ʿImād al-Dīn al-Iṣfahānī, *apud* Sibṭ Ibn al-D͟jawzī, 168; Ibn al-At͟hīr, *Atābegs*, 55), Sald͟jūḳ complicity seems likely, since Masʿūd could clearly no longer tolerate the way that the peripatetic al-Rās͟hid was arousing rebellion within the western Sald͟jūḳ sultanate. What is indisputable, however, is that two successive ʿAbbāsid caliphs, father and son, who had ventured forth from Bag͟hdād and defied the Sald͟jūḳ sultan, had now been eliminated.

Al-Rās͟hid was buried in the Friday mosque of S͟hahristān in a *turba* set aside exclusively for him (al-Bundārī, 181; Sibṭ Ibn al-D͟jawzī, 168). His caliphate had lasted about eleven months (Ibn al-At͟hīr, xi, 27).

Little is known of al-Rās͟hid's personality, although his recorded conduct suggests that he was ambitious, foolhardy and easily embroiled in intrigue. It was his misfortune to clash with Masʿūd, a ruthless warrior sultan who in difficult times contrived to stay in power for twenty years. Al-Rās͟hid's sexual precocity was legendary—by the age of nine he had fathered a son from one of al-Mustars͟hid's concubines and he had allegedly sired twenty more by the time of his accession (Sibṭ Ibn al-D͟jawzī, 158; Ibn al-Azraḳ, 73). Like his father, he had a ruddy complexion and dark blue eyes and was of medium stature (Ibn al-ʿImrānī, 224).

AL-**RASHĪD** (MAWLĀY) B. AL-SHARĪF B. ʿALĪ B. MUḤAMMAD B. ʿALĪ, ʿAlid sultan of Morocco and the real founder of the dynasty which still rules the Sharīfian empire. He was born in 1040/1630-1 in Tāfīlālt [*q.v.*] in the south of Morocco, where his ancestors, the Ḥasanī Shurafāʾ (Shorfāʾ [*q.v.*]) of Sidjilmāsa [*q.v.*], had founded a flourishing *zāwiya* [*q.v.*] and gradually acquired a fairly considerable political influence, which increased with the decline of the Saʿdian [*q.v.*] dynasty. Morocco being at this time plunged into anarchy, the Shorfāʾ of Tāfīlālt were able rapidly to become masters of the great tracts of steppe-like country to the north of the cordon of oases which formed their appanage. The eldest son of the chief of the *zāwiya*, Mawlāy Maḥammad, having successfully fought the marabout of the *zāwiya* of Īligh in Tāzarwālt (in the south-west of Morocco), ʿAlī Abū Ḥassūn, who had political ambitions of his own, assumed a royal title in 1050/1646. He did not, however, yet succeed in crushing the power of the marabouts of the *zāwiya* of al-Dilāʾ [*q.v.* in Suppl.] in central Morocco; he had to be content, after a very brief occupation of Tāzā and Fās in 1060/1650, with effective sovereignty over eastern Morocco only.

On the death of Mawlāy al-Sharīf in 1069/1659, his son, Mawlāy al-Rashīd, not trusting his brother, Mawlāy Maḥammad, left the ancestral *zāwiya* for the rival *zāwiya* of al-Dilāʾ, where in spite of a superficially warm welcome, he was soon given the hint to go; he proceeded to Āzrū, then to Fās, which, regarded as an undesirable by the lord of the city, the adventurer al-Duraydī, he was not allowed to enter. He next went to eastern Morocco, and very soon succeeded in gaining a large number of followers, particularly, in the important tribe of the Banū Īznāssen (Benī Snassen), the Shaykh al-Lawātī, a religious dignitary, then of great influence. At the same time he attacked a very rich Jew, who behaved like a great lord and lived in the mountains of the Banū Īznāssen, at the little town called Dār Ibn Mashʿal: al-Rashīd slew him and seized his wealth. This coup vividly impressed the imagination of the people of the district and was to give rise, as P. de Cenival brilliantly showed, to a legend, the memory of which still survives in the annual festival which follows the election of the "sultan of the *ṭulbāʾ*" at Fās. Mawlāy al-Rashīd by this murder not only acquired considerable material resources but also a real ascendancy over the people of the neighbourhood. In 1075/1664, the large tribe of the Angād rallied to his authority, and he set up in Oujda [see WADJDA] as a regular ruler. On the news of the proclamation of al-Rashīd, his brother Mawlāy Maḥammad, much disturbed, hurried from Tāfīlālt to eastern Morocco; his troops were met by those of al-Rashīd, and Mawlāy Maḥammad having been killed early in the battle, his men then went over to the surviving prince. Thenceforth, Mawlāy al-Rashīd went on from success to success.

He very soon seized Tāzā without difficulty, and directly threatened Fās, but he first of all took care to secure his power solidly at Tāfīlālt, the cradle of his line, and added to his lands the mountains of the Rīf [*q.v.*] on the shores of the Mediterranean, which were then ruled by an enterprising individual named Abū Muḥammad ʿAbd Allāh Aʿarrāṣ. This *shaykh* had made an agreement, first with the English and then with the French, for the establishment of factories on the Rīf bay of Alhucemas [see AL-ḤUSAYMA in Suppl.] (transcribed in the documents of the period as Albouzème). Mawlāy al-Rashīd deprived him of the Rīf in Ramaḍān 1076/March 1666, just when the Marseillais Roland Fréjus, having obtained from the King of France the privilege of trading in the Rīf, was landing on the Moroccan coast. Fréjus then went to see Mawlāy al-Rashīd at Tāzā, but the negotiations into which he endeavoured to enter with the *shaykh* soon collapsed.

Al-Rashīd without delay turned his attention to the capital of northern Morocco, Fās, which still withstood his authority. He laid siege to it and took it by storm on 3 Dhu 'l-Ḥidjdja 1076/6 June 1666; the adventurer in command there, al-Duraydī, took to flight. Al-Rashīd took vigorous steps to punish certain of the notables of the town, and the people proclaimed him sultan. He was at the same time able to rally to his side the important group of Idrīsid Shorfāʾ in the capital.

The years that followed were used by Mawlāy al-Rashīd to extend his possessions towards west and south. He first made an expedition against the Gharb, out of which he drove the chief al-Khaḍir Ghaylān, and seized al-Ḳaṣr al-Kabīr [*q.v.*] (Alcazarquivir); he also took Meknes [see MIKNĀS] and Tetuan [see TIṬṬĀWĪN] as well as Tāzā, the inhabitants of which had rebelled. In 1079/1668, he took and destroyed the *zāwiya* of al-Dilāʾ after having routed its chief Maḥammad al-Ḥādjdj at Baṭn al-Rummān. The same year, Mawlāy al-Rashīd seized Marrākush and put to death there the local chief ʿAbd al-Karīm al-Shabbānī, surnamed Karrūm al-Ḥādjdj. In 1081/1670, he undertook an expedition into the Sūs [*q.v.*], where agitators still disputed his authority. He took Tārūdānt [*q.v.*] and the fortress of Īligh and returned to Fās, now lord of all Morocco. At this time, says the chronicler al-Ifrānī, "all the Maghrib, from Tlemcen to the Wādī Nūl on the borders of the Ṣaḥārā, was under the authority of Mawlāy al-Rashīd".

The next year the sultan went from Fās to Marrākush, where one of his nephews was endeavouring to set up as a pretender to the throne. During his sojourn in the southern capital, Mawlāy al-Rashīd, not yet 42, died as the result of an accident on 11 Dhu 'l-Ḥidjdja 1082/9 April 1672; the horse he was riding having reared, he fractured his skull against a branch of an orange tree. He was buried at Marrākush, but later his body was brought to Fās, where he was interred in the chapel of the saint ʿAlī Ibn Ḥirzihim (vulg. Sīdī Ḥrāzem). His brother, Mawlāy Ismāʿīl [*q.v.*], who succeeded him, was proclaimed sultan on the 15 Dhu 'l-Ḥidjdja following.

The brief political career of Mawlāy al-Rashīd was, as has been seen, particularly active and fruitful. The Muslim historians of Morocco never tire of praising this ruler, whose memory is still particularly bright, especially in Fās. It was he who built in the town the

"*Madrasa* of the Ropemakers" (*Madrasat al-Sharrāṭīn*), the bridge of al-Raṣīf, the *ḳaṣaba* of the Sharārda (Casba of the Cherarda) and 2½ miles to the east of Fās, a bridge of nine arches over the Wādī Sabū (Sebou).

(E. LÉVI-PROVENÇAL)

RĀSHID, MEḤMED (?-1148/1735), Ottoman historian and poet. He was born in Istanbul, the son of *ḳāḍī* Muṣṭafā Efendi from Malaṭya. From 1116/1704 he held a regular series of posts as a *müderris* culminating in appointment to the Süleymāniyye in 1130/1718, the latter held concurrently with the post of *Ḥaremeyn müfettishi*, inspector of the *awḳāf* of Mecca and Medina. He then served as *ḳāḍī* of Aleppo 1135-7/1723-4. His career thereafter was irregular by comparison, and much influenced by political considerations, in particular by his closeness to the Grand Vizier Newshehirli Ibrāhīm Pasha [*q.v.*] and his consequent identification with the palace culture of the *lāle dewri* [*q.v.*] period (described in Aḥmed Refīḳ [Altınay], *ʿĀlimler ve ṣanatkārlar*, Istanbul 1924, 311-22). In 1141/1728-9, Rāshid went as Ottoman ambassador to Iṣfahān, and shortly afterwards was appointed *ḳāḍī* of Istanbul (1141-3/1729-30). Following the Patrona Khalīl [*q.v.*] rebellion of 1730, Rāshid spent three years in exile, first in Bursa, then on the island of Limni. His final appointment, in 1147/1734, was as *ḳāḍī ʿasker* [*q.v.*] of Anatolia, in which post he died in 1148/1735.

Although enjoying a contemporary reputation also as a leading poet and prose stylist, Rāshid is remembered principally as an historian, successor to Naʿīmā [*q.v.*] as official Ottoman historiographer. In 1126/1714 he was commissioned by the Grand Vizier Dāmād ʿAlī Pasha [see DĀMĀD] to write the history of the reign of Aḥmed III, from his accession in 1115/1703. For this purpose he was given the title *weḳāyiʿ-nüwīs* (or *waḳʿa-nüwīs* [*q.v.*]), allowed access to official documents, and required to attend in person on the Morea and Waradīn campaigns of 1714 and 1716 respectively. In 1130/1718 at the request of Newshehirli Ibrāhīm Pasha, newly-appointed Grand Vizier, Rāshid then revised his work to begin in 1071/1660, at the point where Naʿīmā's history ceased. The *Taʾrīkh-i Rāshid* terminates in 1134/1722. Rāshid was succeeded as *waḳʿa-nüwīs* by Küčük Čelebi-zāde Ismāʿīl ʿĀṣim Efendi [*q.v.*].

The *Taʾrīkh-i Rāshid* has been published twice: in 1153/1741, by the Müteferriḳa press, 3 vols., and 1282/1865, 5 vols. (both editions also include the continuation by Küčük Čelebi-zāde Ismāʿīl ʿĀṣim Efendi for the period 1134-41/1722-8; cf. Babinger, *GOW*, 268-70).

Bibliography: For the biography and a list of Rāshid's works, see M. Kemal Özergin, *İA*, *Râşid*, with detailed bibl.; see also *Taʾrīkh-i Rāshid*, i, 4-10, v, 449-54, and *passim*. (CHRISTINE WOODHEAD)

RĀSHID, N.M., modern Urdu poet (1910-75). His real name was Nadhar (Nadhr) Muḥammad, but he is universally known by his literary name, Nūn Mīm Rāshid.

He was born in the township of ʿAlīpūr Ćaṫṫha (formerly Akālgaṙh) in the Gūdjarānwāla district of the Pandjāb in present-day Pākistān. His father, Faḍl Ilāhī Ćishtī, was in the provincial educational service from which he retired as District Inspector of Schools. Rāshid pursued his early education in his native town passing his high school examination in 1926. Thereafter, he studied in Lāyalpūr and Lahore respectively, and received his M.A. in economics from Government College, Lahore, in 1932. After completing his education he was employed from 1932 to 1934 as editor of *Nakhlistān*, a semi-literary journal published by the Punjab government's Rural Welfare Department. During 1934 and 1935 he worked as assistant editor for the literary journal *Shāhkār*, which was published from Lahore. He was associated with All-India Radio from 1939 until 1943, after which he joined the Indian Army as Public Relations Officer in Inter-Services Directorate. His job in that capacity lasted until 1947, and involved his stay in outside countries such as Iran, ʿIrāḳ, Egypt and Ceylon (presently Sri Lanka). In 1947 he rejoined All-India Radio as Assistant Regional Director. Following the partition of the sub-continent in 1947, he transferred himself to Radio Pakistan, where he remained until 1951. In October 1952 he joined the United Nations as Information Officer, rising eventually to the position of Director, U.N. Information Centre. In that position he was posted in 1967 to Tehran, where he was stationed until his retirement in 1974. Thereupon, he took up permanent residence in England, and died in London on 9 October 1975 of a heart attack. In accordance with his own wish, his body was cremated instead of being buried as required under Muslim custom.

Rāshid's first volume of poetry appeared in 1941 under the title *Māwarā* ("Beyond"), which immediately established him as a non-traditional poet of considerable originality and boldness. His next collection was published in 1955, entitled *Īrān meṅ adjnabī* ("A stranger in Iran"), and contained, in part, a group of poems arranged collectively under the same name. This work was followed in 1969 by *Lā = Insān* ("X = Man"), the poems of which indicated a more complex symbolistic style. Rāshid's last poetical collection was *Gumān kā mumkin* ("The possibleness of doubt"), which was published in 1977 after the poet's death. Finally, a complete edition of his entire verse (*Kulliyyāt*) was published in 1988.

Apart from original works, Rāshid also made a number of translations from foreign languages such as Alexander Kuprin's *Yama the pit* (1939), William Saroyan's *Mama I love you* (1956), and an anthology published under the title *Djadīd Fārsī shāʿirī* ("Modern

Persian poetry") (1987), which contained Urdu translations from modern Persian poets as well as notices on the life and works of the authors.

The dominant note of Rās͟hid's poems is personal, often interspersed with political subjects. Sexual themes are prominent in the poems which belong to his early and middle periods, but in his later works he shows an increasing disposition towards complex human and personal issues. An overly-Persianised idiom pervades his diction, and his expression is complicated and difficult. His poetic technique has given impetus to the widespread use of *naẓm-i āzād* (the Urdu form of "free verse"), and he is regarded as one of the pioneers whose influence has been of paramount importance in giving a new direction to modern Urdu poetry.

(MUNIBUR RAHMAN)

RĀS͟HID AL-DĪN SINĀN, the greatest of the mediaeval Nizārī Ismāʿīlī leaders in Syria, d. 588/1192 or 589/1193. Also referred to as Sinān Rās͟hid al-Dīn by the Nizārīs, his full name was Rās͟hid al-Dīn Sinān b. Salmān (or Sulaymān) b. Muḥammad Abu' 'l-Ḥasan al-Baṣrī. He was born into an Imāmī S͟hīʿī family during the 520s/1126-35, near Baṣra, where he converted to Nizārī Ismāʿīlism in his youth. Subsequently, Rās͟hid al-Dīn Sinān went to the central headquarters of the Nizārī *daʿwa* at Alamūt [*q.v.*], in northern Persia, to further his Ismāʿīlī education. There, Sinān became a close companion, and possibly a schoolfellow, of the then lord of Alamūt's heir apparent Ḥasan, the future Ḥasan II *ʿalā d͟hikrihi 'l-salām*. Soon after his accession in 557/1162 to the central leadership of the Nizārī *daʿwa* and state, Ḥasan II dispatched Sinān to the Nizārī community in Syria, which henceforth became the centre of his activities.

Initially, Sinān spent some time at Kahf, a major Nizārī stronghold in the D̲jabal Bahrāʾ region of central Syria, making himself extremely popular locally as a schoolmaster. The death of S͟hayk͟h Abū Muḥammad, who had led the Syrian Nizārīs for some years, resulted in unprecedented succession disputes within the community, but soon Sinān was appointed by Alamūt as the chief Nizārī *dāʿī* in Syria, a post he held for some thirty years until his death.

Immediately upon his appointment, Sinān, who normally resided at the fortresses of Kahf, Maṣyāf or Ḳadmūs, began the task of reorganising the Nizārī *daʿwa* and community in Syria and also of fortifying the existing sectarian strongholds and acquiring new ones in the D̲jabal Bahrāʾ. He also paid special attention to establishing a corps of *fidāʾīs* (or *fidāwīs*), the self-sacrificing devotees who would undertake missions to remove prominent enemies of their sect. The absolute obedience of the *fidāʾīs* and their seemingly irrational behaviour, as well as the much exaggerated reports about their assassination attempts, gave rise to a number of imaginative legends, especially in the Crusaders' circles, regarding the strange practices of the sectarians (known to the mediaeval Europeans as the Assassins) and their awe-inspiring chief, Sinān, who now became famous in the occidental sources as the "Old Man of the Mountain"; or, "*le Vieux de la Montagne*" (see William of Tyre, *Willelmi Tyrensis Archiepiscopi Chronicon*, ed. R.B.C. Huygens, Turnholt 1986, ii, 953-4; L. Hellmuth, *Die Assassinenlegende in der österreichischen Geschichtsdichtung des Mittelalters*, Vienna 1988, 78-116).

When Ḥasan II proclaimed the *ḳiyāma* within the Persian Nizārī community in 559/1164, it fell upon Sinān to inaugurate the new dispensation in Syria. A while later, Sinān did ceremonially announce the spiritual Resurrection of the Syrian Nizārīs; and he taught his own version of the *ḳiyāma* doctrine, which evidently never acquired any deep roots in the community (see S. Guyard, *Fragments relatifs à la doctrine des Ismaélîs*, Paris 1874, text 17-9, 66-9, tr. 99-101, 204-9; Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār fī mamālik al-amṣār*, ed. A.F. Sayyid, Cairo 1985, 77-8).

Sinān played a prominent part in the regional politics of his time, successfully resorting to diplomacy and other suitable policies in the interest of safeguarding the independence of the Syrian Nizārī community. To this end, he entered into an intricate and shifting web of alliances with the major neighbouring powers and rulers, especially the Crusaders, the Zangids and Ṣalāḥ al-Dīn.

When Sinān assumed the leadership of the Syrian Nizārīs, the ardently Sunnī Nūr al-Dīn [*q.v.*], who ruled over the Zangid dominions in Syria, was at the height of his power, posing a greater threat to Sinān than the Crusaders, who had been sporadically fighting the Nizārīs for several decades over the possession of various strongholds. The Nizārīs were also under pressure by the Hospitallers and Templars [see DĀWIYYA and ISBITĀRIYYA in Suppl.], who acted rather independently and often successfully demanded tribute. Hence, from early on Sinān aimed to establish peaceful relations with the Crusaders; and, in fact in 569/1173, he sent an embassy to king Amalric I, seeking a formal rapprochement with the Latin state of Jerusalem. On Nūr al-Dīn's death in 569/1174, Sinān came to be confronted by Ṣalāḥ al-Dīn, leader of the Muslim holy war against the Crusaders, who was then extending his own authority over Syria. Sinān now allied himself temporarily with the Zangids of Aleppo, equally threatened by Ṣalāḥ al-Dīn's rise, and he dispatched *fidāʾīs* to kill the latter on two occasions without success during 570-1/1174-6 (see B. Lewis, *Saladin and the Assassins*, in *BSOAS*, xv [1953], 239-45). In vengeance, Ṣalāḥ al-Dīn then laid siege to Maṣyāf. However, hostilities soon ceased permanently between Sinān and Ṣalāḥ al-Dīn, who had reached some sort of truce. Towards the end of Sinān's life, relations seem to have deteriorated once again between the Crusaders and the Syrian Nizārīs. According to Ibn al-At͟hīr (*anno* 588 A.H.) and other sources hostile to Ṣalāḥ al-Dīn, the murder of Conrad of Montferrat, the Frankish king of Jerusalem, in 588/1192 at the hands of *fidāʾīs*, had been instigated by Ṣalāḥ al-Dīn.

Sinān enjoyed an unprecedented popularity within the Syrian Nizārī community, which enabled him, alone amongst the Syrian Nizārī leaders, to act somewhat independently of Alamūt in managing the affairs of his community. There are, indeed, reports indicating that serious disagreements had developed between Sinān and Ḥasan II's successor at Alamūt, Nūr al-Dīn Muḥammad II (561-607/1166-1210 [*q.v.*]).

But there is no evidence suggesting that Sinān was ever acknowledged as an *imām* by the Syrian Nizārīs, who were sometimes called by the outsiders as the Sinānīs after his name (Ibn Khallikān, tr. de Slane, iii, 340). An outstanding organiser, strategist, and statesman, Rāshid al-Dīn Sinān led the Syrian Nizārīs to the peak of their power and laid solid foundations for the continued existence of the Nizārī community and *da^cwa* in Syria. He died in 589/1193, or, less probably, a year earlier.

Bibliography (in addition to the works cited in the article): 1. Sources: References to Rāshid al-Dīn Sinān may be found in most of the general Muslim histories and the regional chronicles of Syria dealing with his period, and in the occidental chronicles of the Third Crusade. However, the chief primary sources on Sinān's life and career are: (i) *Faṣl min al-lafẓ al-sharīf*; or *Manāḳib al-mawlā Rāshid al-Dīn*, ed. and tr. S. Guyard in his *Un grand maître des Assassins au temps de Saladin*, in *JA*, 7 série, ix (1877), 387-489; a new ed. of its Arabic text in M. Ghālib, *Sinān Rāshid al-Dīn*, Beirut 1967, 163-214, which is a Syrian Ismāʿīlī hagiographical work attributed to the Nizārī *dāʿī* Abū Firās Shihāb al-Dīn al-Maynaḳī (*flor.*, 10th/16th century); and (ii) Kamāl al-Dīn Ibn al-ʿAdīm's biography of Sinān in a still undiscovered volume of his *Bughyat al-ṭalab*, as preserved in later recensions, ed. and tr. B. Lewis in his *Kamāl al-Dīn's biography of Rāšid al-Dīn Sinān*, in *Arabica*, xiii (1966), 225-67; repr. in his *Studies in Classical and Ottoman Islam*, London 1976, no. X.

RASHĪD AL-DĪN ṬABĪB, Persian statesman and the greatest historian of the Īlkhānid period (*ca.* 645-718/*ca.* 1247-1318).

Rashīd al-Dīn Faḍl Allāh b. ʿImād al-Dawla, Abu 'l-Khayr, was born in Hamadān into a Jewish family with a professional medical tradition: his father was an apothecary. He himself was originally trained as a physician (hence he remained known as Ṭabīb), and in that capacity he entered the service of the Mongol court during the reign of the Īlkhān Abaḳa (r. 663-80/1265-82). He had converted from Judaism to Islam at around the age of 30. His Jewish religious background remained throughout Rashīd al-Dīn's career a potential embarrassment, and the demonstration of his Islamic orthodoxy and respectability may well have been his principal motive for writing a number of somewhat derivative works on Islamic theology (see J. van Ess, *Der Wesir und seine Gelehrten*, Wiesbaden 1981, and the comments in A.Z.V. Togan, *The composition of the History of the Mongols by Rashīd al-Dīn*, in *CAJ*, vii [1962], 60-72). It may be that he should be identified with the Rashīd al-Dawla who, according to Bar Hebraeus, was prominent in the household of the Īlkhān Gaykhatu (r. 690-4/1291-5) during the troubles caused by the introduction of paper currency, *ch'ao*, on the Chinese model (J.A. Boyle, introduction to Rashīd al-Dīn, *The successors of Genghis Khan*, New York and London 1971, 3).

Rashīd al-Dīn did not achieve high political office until 697/1298, during the reign of Ghazan, when after the fall of Ṣadr al-Dīn Zandjānī (to whom Rashīd al-Dīn had briefly acted as deputy) he was appointed associate *wazīr* to Ṣadr al-Dīn's successor, Saʿd al-Dīn Sāwadjī. He remained at the summit of state affairs for the rest of his life, though always with a colleague; he was never sole chief minister. He is usually credited with having been the principal architect of Ghazan's great programme of administrative reforms. His position, though always, like that of all Īlkhānid ministers, precarious, was one of great power and influence, and he accumulated vast wealth, such that he was able to construct quarters in both the capitals, Tabrīz and Sulṭāniyya. The *waḳf-nāma* for his quarter in Tabrīz, the Rabʿ-i Rashīdī, survives, in part in his own hand (facsimile ed. Tehran 1972, printed ed., Tehran 1977-8, both ed. Ī. Afshār and M. Mīnovī). His interests extended beyond history and administration including, as well as theology, agriculture and related subjects, on which he left a treatise, the *Āthār wa aḥyā'* (ed. M. Sutūda and Ī. Afshār, Tehran 1990). (A volume of letters attributed to him and known as the *Mukātabāt-i Rashīdī*, ed. M. Shafīʿ, Lahore 1945, or as *Sawāniḥ al-afkār-i Rashīdī*, ed. M.T. Dānishpazhūh, Tehran 1980-1, is now generally regarded as a spurious compilation, perhaps of the Tīmūrīd period.)

Rashīd al-Dīn's last colleague, during the reign of Öldjeytü (r. 703-16/1304-16), Tādj al-Dīn ʿAlī Shāh, was also a bitter rival. Relations between them eventually became so bad that administrative responsibility had to be divided, with Rashīd al-Dīn taking the centre and south of the empire, and Tādj al-Dīn the north-west, Mesopotamia and Anatolia. During the reign of Öldjeytü's son and successor, Abū Saʿīd, Tādj al-Dīn's intrigues were ultimately successful in bringing about Rashīd al-Dīn's overthrow. He was charged with having poisoned Öldjeytü, and together with his son Ibrāhīm was executed in 718/1318. His property was confiscated and the Rabʿ-i Rashīdī looted; but later in the reign, his son Ghiyāth al-Dīn followed his father in the office of *wazīr*.

Rashīd al-Dīn's enduring fame rests more on his work as a historian than on his career as a prominent official. His *Djāmiʿ al-tawārīkh* is undoubtedly the most important single historical source for the Mongol Empire as a whole, not merely of the realm of the Īlkhāns. The work was commissioned by Ghazan, who seems to have feared that the Mongols, as they settled down as Muslims in Persia, might be in some danger, ultimately, of forgetting who they were and where they had come from. It initially contained an account of the history of the Mongols and their steppe predecessors. This part, which became known as the *Ta'rīkh-i Ghāzānī*, was presented to Öldjeytü after the death of his brother and predecessor. Öldjeytü asked Rashīd al-Dīn, as a memorial to Ghazan, to continue the work so as to provide a history of all the peoples with whom the Mongols had come into contact. It is this part of the history that justified Boyle's description of Rashīd al-Dīn as "the first world-historian". The history, when completed (there appears to have been an earlier, shorter version), consisted of the following parts: (1) The Mongol and Turkish tribes; the Mongols, from Čingis Khān to the death of Ghazan; (2) A history of Öldjeytü (of which no copy is known, though Togan claimed to have seen one in

Mas̲h̲had in 1923), followed by the "universal history": Adam and the Patriarchs, the pre-Islamic kings of Persia, Muḥammad and the caliphs, the dynasties of Persia in the Islamic period, the Og̲h̲uz and the Turks, China, the Jews, the Franks, and India; (3) The *S̲h̲uʿab-i pand̲j̲gāna* [the "Five genealogies" of the Arabs, Jews, Mongols, Franks and Chinese: unpublished but surviving as Topkapı Sarayı ms. 2932]; (4) The *Ṣuwar al-aḳālīm*, a geographical compendium of which no copy has yet come to light. These sections are very uneven in length: the first is by far the largest. In 1908 E.G. Browne produced a scheme for publication of the whole, organised more manageably (*Suggestions for a complete edition of the Jami 'ut-Tawarikh of Rashidu'd-Din Fadlu'llah*, in *JRAS* [1908], 17-37). Much, though not all, of this has since been accomplished (for details of the more important editions and translations of the various sections of part 1, see the *Bibl.* to MONGOLS).

Study of the *D̲j̲āmiʿ al-tawārīk̲h̲* is not without its problems. Even the authorship of the book has been questioned. Togan (*art. cit.*) contended, not very persuasively, that it was a translation from a Mongol original. The author of the most important surviving contemporary source for the reign of Öld̲j̲eytü, Abu 'l-Ḳāsim Ḳās̲h̲ānī, maintained that he was himself the true author of the work, for which Ras̲h̲īd al-Dīn had stolen not only the credit but also the very considerable financial rewards (Ḳās̲h̲ānī, *Taʾrīk̲h̲-i Ūld̲j̲āytū*, ed. M. Hambly, Tehran 1969, 240). It is not easy to judge what justification there may have been for this claim. Ras̲h̲īd al-Dīn was of course a busy government minister, whose available time for scholarship must have been limited; he tells us that he wrote his history between morning prayer and sunrise. It may well have been that he was obliged to use one or more research assistants to deal with the collection of material and perhaps the initial writing up, and that Ḳās̲h̲ānī was among these; this was Barthold's hypothesis (*Turkestan*, 47).

The various parts of the *D̲j̲āmiʿ al-tawārīk̲h̲* differ greatly in their value to the historian. Not all of them can be regarded as primary. Much of Ras̲h̲īd al-Dīn's material on the period after the death of Činggis K̲h̲ān, for example, is lifted straight from his predecessor D̲j̲uwaynī [*q.v.*], and has limited independent significance. The "universal history" sections are of undeniable historiographical interest because they are evidence of so unprecedented an intellectual endeavour; but no one would go to them to find out what happened in China, India or Europe. On the other hand, Ras̲h̲īd al-Dīn's account of the life and career of Činggis K̲h̲ān is of the first importance, even though he was writing a century after the events. This is because his material is derived from a now lost Mongolian chronicle, the *Altan debter*, whose contents appear to have been conveyed to him by Bolad Chingsang, the representative in Persia of the Great K̲h̲ān in China. So far as can be judged by comparison with Chinese use of the same chronicle, the Persian version accurately preserves what was in the original (see P. Pelliot and L. Hambis (ed. and tr.), *Histoire des campagnes de Gengis Khan*, i, Leiden 1951).

For the historian, by far the most important section is Ras̲h̲īd al-Dīn's history of the Īlk̲h̲āns, the period of which he was a contemporary, and for much of which he held high office and was, presumably, well placed to gather full and accurate information. There can be no doubt that Ras̲h̲īd al-Dīn's position at the centre of affairs makes his history of those affairs uniquely authoritative. Yet this creates its own problems: not, perhaps those of accuracy as such, but of perspective and partisanship (see D.O. Morgan, *The problems of writing Mongolian history*, in S. Akiner (ed.), *Mongolia today*, London 1991, 1-8). Ras̲h̲īd al-Dīn, inevitably, had a point of view and a set of assumptions: those of a Persian bureaucrat, which were by no means necessarily identical with those of his Mongol masters, who are rarely represented directly in our sources. We almost always see the Mongols through the eyes of others.

Equally, as both chief minister and, in effect, "official" historian to G̲h̲azan and Öld̲j̲eytü, Ras̲h̲īd al-Dīn had an interest in painting the troubles of the pre-G̲h̲azan era in colours as black as possible and in depicting G̲h̲azan's reforms as a total success. This should be treated with a degree of scepticism. The *Taʾrīk̲h̲-i G̲h̲āzānī* provides us with the full texts of the reforming edicts (*yarlīg̲h̲s*), which are vivid, convincing and full of detail. There may be less reason, however, for supposing that the edicts were in fact universally implemented. Ras̲h̲īd al-Dīn was a remarkable historian of great importance; but it should not be supposed that he was an impartial one.

Bibliography: Given in the article. See also Browne, *LHP*, iii; Spuler, *Mongolen*[4], Leiden 1985; *CAJ*, xiv (1970), an issue which contains numerous valuable articles on aspects of Ras̲h̲īd al-Dīn's life and work, e.g. Ī. Afs̲h̲ār, *The autograph copy of Rashīd al-Dīn's Vaqfnāmeh*, 5-13, J.A. Boyle, *Rashīd al-Dīn and the Franks*, 62-7, K. Jahn, *Rashīd al-Dīn and Chinese culture*, 134-47, I.P. Petrushevsky, *Ras̲h̲īd al-Dīn's conception of the state*, 148-62.

(D.O. MORGAN)

RAS̲H̲ĪD AL-DĪN Muḥammad b. Muḥammad b. ʿAbd al-D̲j̲alīl al-ʿUmarī, known as **WAṬWĀṬ**, secretary and prolific author in Arabic and Persian. A reputed descendant of the caliph ʿUmar, he was born either in Balk̲h̲ or Buk̲h̲ārā, but spent most of his life in Gurgānd̲j̲, the capital of K̲h̲ʷārazm. He died, according to Dawlats̲h̲āh, in 578/1182-3, in his 97th year, which would put his birth in 481/1088-9; Yāḳūt (at least in the published text) has him die 5 years earlier.

Ras̲h̲īd al-Dīn was chief secretary (*ṣāḥib dīwān al-ins̲h̲āʾ*) under the K̲h̲ʷārazms̲h̲āh Atsïz (521-51/1127-56) and his successor Īl-Arslān (d. 568/1172). His loyalty to Atsïz earned him the enmity of the Sald̲j̲ūḳ Sand̲j̲ar who, according to D̲j̲uwaynī, resolved at one point to cut Ras̲h̲īd al-Dīn into 30 pieces, but was dissuaded from doing so by his own chief secretary, Muntad̲j̲ab al-Dīn al-D̲j̲uwaynī, the uncle of our informant's great-grandfather. We possess a considerable number of Ras̲h̲īd al-Dīn's highly ornate letters, including those which he wrote on behalf of his two masters (in Arabic to the caliphs and their entourage, in Persian to Sand̲j̲ar and others) and also his private letters in both languages. Two bilingual collections of epistles were compiled by Ras̲h̲īd al-Dīn himself, *Abkār al-afkār fī 'l-rasāʾil wa 'l-as̲h̲ʿār* and *ʿArāʾis al-k̲h̲awāṭir wa nafāʾis al-nawādir*, and others are preserved elsewhere. The Persian letters found in the two collections were edited by Ḳ. Tūysirkānī (Tehran 1338 *S̲h̲*./1960), and a large number of Arabic letters were published (from an unidentified source) by Muḥammad Fahmī under the title *Mad̲j̲mūʿat rasāʾil Ras̲h̲īd al-Dīn al-Waṭwāṭ*, 2 parts, Cairo 1315/1897-8. Ten of the latter are translated in H. Horst, *Arabische Briefe der Ḫōrazmšāhs an den Kalifenhof aus der Feder des Rašīd ad-Dīn Waṭwāṭ*; in *ZDMG*, cxvi (1966) 24-43, and the same author has summarised many of the Persian letters in his *Die Staatsverwaltung der Großselǧūqen und Ḫōrazmšāhs*, Wiesbaden 1964.

Ras̲h̲īd al-Dīn's Persian *dīwān* contains more than

8,500 verses in S. Nafīsī's edition (Tehran 1339 Sh./1960) and consists largely of poems eulogising Atsïz. Modern Persian critics have in general not had a high estimate of their merits. But the best known of his works is *Maṭlūb kull ṭālib min kalām amīr al-muʾminīn ʿAlī b. Abī Ṭālib*, or *Tardjama-yi ṣad kalima*, consisting of the 100 Arabic sayings of ʿAlī said to have been collected by al-Djāḥiẓ [*q.v.*]; each apothegm is followed by a verbose Arabic paraphrase, then a Persian commentary and finally a poetic paraphrase in the form of a mostly rather pedestrian Persian *dubaytī*. It has frequently been printed in the East—though in many of the editions (and mss.) one or both of the prose commentaries are omitted—also with a Latin translation by Stickel (Jena 1834), with a German version by Fleischer (Leipzig 1837) and with an English verse rendering (but without the prose versions) by Harley (Calcutta 1927). Rashīd al-Dīn subsequently gave the same treatment to 100 sayings of each of the three first caliphs, with his works entitled *Tuḥfat al-ṣadīḳ ilā 'l-ṣadīḳ min kalām amīr al-muʾminīn Abī Bakr al-Ṣiddīḳ*, *Faḍl al-khiṭāb min kalām amīr al-muʾminīn ʿUmar b. al-Khaṭṭāb* and *Uns al-lahfān min kalām imām al-muʾminīn ʿUthmān b. ʿAffān*; these remain unpublished, though mss. are available. Another work of comparable nature, *Laṭāʾif al-amthāl wa ṭarāʾif al-aḳwāl*, is a collection of several hundred Arabic proverbs, each with a Persian prose translation and often extensive commentary. It was published by S.M.B. Sabzwārī (n.p. 1358 Sh./1979) on the basis of an old ms. found in Medīna. Further paraenetic works survive in manuscript.

His much-admired handbook of rhetorical figures, *Ḥadāʾiḳ al-siḥr fī daḳāʾiḳ al-shiʿr*, is available in a richly annotated edition by ʿAbbās Iḳbāl (Tehran 1308 Sh./1929-30; reprinted, but without the editor's introduction and endnotes, in the appendix to Nafīsī's edition of the *dīwān*, and again, with a Russian translation by N.Yu. Čalisova, Moscow 1985). It is strongly dependent both on al-Marghīnānī's *al-Maḥāsin fī 'l-naẓm wa 'l-nathr*, from which many of the Arabic prose and verse quotations are derived, as well as on Rādūyānī's *Tardjumān al-balāgha*, whence Rashīd al-Dīn has virtually all of the illustrative quotations from early Persian poets (see the editions of the two books by Van Gelder and Ateş respectively), but he added a good number of citations from Persian poets of the 6th/12th century as well as from his own poems in both languages. He has also been credited with a Persian dictionary (*Ḥamd wa thanā*, or *Nuḳūd al-zawāhir wa ʿuḳūd al-djawāhir*, extant in both prose and verse versions) and a short treatise on metre (*Risāla-yi ʿarūḍ*), but the question of their authenticity requires closer scrutiny.

Bibliography: ʿAlī b. Zayd al-Bayhaḳī, *Tatimmat Ṣiwān al-ḥikma*, ed. M. Shafīʿ, Lahore 1935, 166-8 of the Arabic section; Muḥammad b. Muḥammad al-Kātib al-Iṣfahānī, *Kharīdat al-ḳaṣr* (the relevant entry was published by M. Shafīʿ in *Oriental College Magazine* [1934-5], at the end of fascicules xi/1, xi/2, xi/3, xii/4, separate pagination); Yāḳūt, *Udabāʾ*, vii, 91-5; ʿAwfī, *Lubāb* i, 80-6; Djuwaynī ii, 6-14, 18; Zakariyyāʾ b. Muḥammad al-Ḳazwīnī, *Āthār al-bilād*, ed. Wüstenfeld, Göttingen 1848, 223-5; Dawlatshāh, 87-92; Browne, *LHP*, ii, 330-3; Brockelmann, I 275-6, S I 486; A. Ateş, *Raşīd al-Dīn Vaṭvāṭ'ın eserlerinin bazı yazma nüshaları*, in *Tarih Dergisi*, x (1959) 1-24; Storey, iii/1, 85-7, 176-8. See also the editors' introductions to Rashīd al-Dīn's various works (listed in the article).

(F.C. de Blois)

RASHĪD ʿALĪ AL-GAYLĀNĪ (al-Djīlānī), Prime Minister of ʿIrāḳ on four occasions in the 1930s and 1940s and for long a symbol of ʿIrāḳī resistance to British interests. He was a descendant of the famous religious leader ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] and a member of a cadet branch of the family which held the office of *naḳīb al-ashrāf* [*q.v.*] in Baghdād several times in the 19th and 20th centuries (b. Baghdād 1892, d. Beirut 1965).

Rashīd ʿAlī qualified as a lawyer and became an appeal court judge in 1921; in 1924 he became Minister of Justice in the cabinet of Yāsīn al-Hāshimī, perhaps his most intimate political colleague. Together with other opponents of Nūrī al-Saʿīd [*q.v.*], he and Yāsīn were co-founders of the Party of National Brotherhood (*Ḥizb al-Ikhāʾ al-Waṭanī*) formed to spearhead opposition to the Anglo-Iraqi Treaty of 1930. However, after the treaty had come into effect and ʿIrāḳ had become at least theoretically independent of Britian, both men came to adopt a more pragmatic approach. Rashīd ʿAlī accepted his first premiership on 20 March 1933 and held office until the end of October of the same year. After this he remained out of power until March 1935, but he and Yāsīn spent much of the intervening period attempting to incite the Middle Euphrates tribes to rise against the governments of their rivals ʿAlī Djawdat and Djamīl Midfaʿī. Their efforts succeeded to the extent that tribal demonstrations in Baghdād prevented Djawdat and Midfaʿī from forming cabinets, and in March 1935 Yāsīn became Premier, with Rashīd ʿAlī as Minister of Interior, in a government which lasted until Bakr Ṣidḳī's coup d'état in October 1936.

By the latter part of the 1930s, especially after the Palestine rebellion and the failure of the Franco-Syrian independence negotiations, Britain and France had become widely unpopular in the Arab Middle East. At the same time, the governments of Italy and Germany were held up by Arab nationalists as exemplars of states whose strength lay in their national unity. Pan-Arab nationalism had little following in ʿIrāḳ outside the officer corps, but the weakness of the central institutions of the state after the death of King Fayṣal, the existence of widely shared aspirations for genuine independence from Britain, the arrival of al-Ḥādjdj Amīn al-Ḥusaynī, Muftī of Jerusalem [*q.v.* in Suppl.] in Baghdād in October 1939, and the fact that a clique of four powerful nationalist officers, the so-called "colonels of the Golden Square" had come to exercise a pivotal influence on ʿIrāḳī politics, combined to heighten anti-British feeling, and also to create a climate of opinion in ʿIrāḳ which was either neutral or benevolent towards the Axis powers at the beginning of the Second World War.

Rashīd ʿAlī became the chief political ally of the nationalist colonels of the Golden Square, and became Prime Minister for the third time in March 1940, after the fall of Nūrī al-Saʿīd's fifth ministry. Nūrī, who stayed on under Rashīd ʿAlī as Minister of Foreign Affairs, was unpopular because of his staunchly pro-British past, but he thought that a government headed by Rashīd ʿAlī, who had been famous for his opposition to the Anglo-Iraqi Treaty, would be both less compromised because of the latter's anti-British record and better able to resist the more extreme demands of the Golden Square. However, after the fall of France in June 1940, and under the combined influence of the Golden Square, the Muftī and prominent Syrian politicians in exile in Baghdād, Rashīd ʿAlī gradually adopted a more openly anti-British and pro-Axis stance.

Under the terms of the Anglo-Iraqi Treaty of 1930, the ʿIrāḳī government was obliged to allow the transit of British troops across its territory in wartime. Bri-

tain requested this facility in June 1940, and permission was eventually if somewhat grudgingly given in mid-July. However, in spite of requests from Britain, the ʿIrāḳī government refused to break off relations with Italy when Italy declared war on Britain in June 1940, and the Italian legation developed into a centre of anti-British intrigue. In addition, the ʿIrāḳī government now began to approach the legations of Italy and Japan for arms supplies, and in August 1940 Rashīd ʿAlī and the Muftī entered into direct if somewhat fruitless negotiations with Berlin (for details, see Majid Khadduri, *Independent Iraq 1932-1958: a study in Iraqi politics*², London 1960, 181-2, 378-80, and U.S. Department of State, *Documents on German foreign policy 1918-1945*, Series D, vol. x, 141-4, 154-5, 275, 415-16, 558-60).

Matters came to a head, when Rashīd ʿAlī, who now had the support of most of the armed forces, refused to yield to British pressure to resign in November 1940 in the face of his unwillingness to allow British troops to land in or pass through ʿIrāḳ. He was forced to step down temporarily as Prime Minister in January 1941 but returned to power on 12 April; by this time the Regent, Nūrī and other pro-British politicians had fled to Transjordan.

On 17 and 18 April 1941 British troops landed at Baṣra; there was no doubt that Rashīd ʿAlī and his government enjoyed widespread support (cf. Khadduri, *op. cit.*, 214; Hanna Batatu, *The old social classes and the revolutionary movements of Iraq; a study of Iraq's old landed classes and its Communists, Ba'thists and Free Officers*, Princeton 1978, 453-62), but, given the balance of forces involved, the defeat of the ʿIrāḳī army in May 1941 was a foregone conclusion. The German assistance which Rashīd ʿAlī had requested never materialised, and he was obliged to flee first to Iran, and then to Germany, where he arrived in November 1941.

Rashīd ʿAlī stayed in Germany until May 1945, and then found his way to Saʿūdī Arabia, where he remained until 1954. He returned to ʿIrāḳ a few weeks after the overthrow of the monarchy in July 1958, apparently hoping that his previous services would be duly acclaimed. When adequate recognition was not forthcoming he set about planning the sort of coup that he had engineered successfully in the mid-1930s, inciting rebellion among the tribes of the Middle Euphrates in a quixotic attempt to unseat the government of ʿAbd al-Karīm Ḳāsim [*q.v.*]. He was arrested in December 1958, tried and condemned to death, but the sentence was commuted by Ḳāsim, and he was eventually released from prison in October 1961. He died in Beirut on 30 August 1965.

Bibliography: Given in the article.

(P. Sluglett)

RASHĪD RIḌĀ, whose full name was Muḥammad Rashīd b. ʿAlī Riḍā b. Muḥammad Shams al-Dīn b. Muḥammad Bahāʾ al-Dīn b. Munlā (i.e. Mullā) ʿAlī Khalīfa (1865-1935), one of the most productive and influential authors of Islamic reform [see IṢLĀḤ], of Pan-Islamism [*q.v.*] and also, to a certain extent, of Arab nationalism [see ḲAWMIYYA]. His name is connected with the journal *al-Manār* [*q.v.*] in the first place, whose editor he was from its foundation in 1898 till his death.

Rashīd Riḍā was born on 27 Djumādā I 1282/23 September 1865 in Ḳalamūn, a village near Tripoli (Ṭarābulus al-Shām [*q.v.*]) on the Mediterranean coast in northern Lebanon (for his day of birth, see Sharabāṣī, 102). The inhabitants of Ḳalamūn were exclusively Sunnī Muslims and the great majority of them claimed descent from the Prophet (for the allegedly Ḥusaynid pedigree of Rashīd Riḍā's family, see Shakīb Arslān, 809-11, and Sharabāṣī, 103-7).

Rashīd Riḍā received his first education in the *kuttāb* [*q.v.*] of Ḳalamūn, and after that in an Ottoman state school in Tripoli and, above all, in the *madrasa waṭaniyya*, founded there in 1879. The director of this school was Shaykh Ḥusayn al-Djisr (1845-1909). It was from this scholar that Rashīd Riḍā received the incentives that were essential for his intellectual development, such as, for instance, those regarding the modernistic interpretation of scientific achievements. Later, he also had heated differences of opinion with al-Djisr (see Sharabāṣī, 231-46; Ebert, index, 188; for other teachers of Rashīd Riḍā in Lebanon, see Sharabāṣī, 246 ff.).

In the winter of 1897-8, Rashīd Riḍā travelled to Egypt. Already the day after his arrival in Cairo he went to see Muḥammad ʿAbduh [*q.v.*] in order to expound to him his aim of publishing a journal dealing with Islamic reform. The first issue of this journal, *al-Manār*, appeared on 22 Shawwāl 1315/mid-March 1898.

The house which Rashīd Riḍā acquired at Cairo, after some time, served as private residence, printing establishment, bookshop and bookstore (Sharabāṣī, 137). Notwithstanding the success of many of his publications and the occasional gifts of friends and patrons, he apparently was seldom free from financial worries (Sharabāṣī, 166-9, based, among other sources, on letters of Rashīd Riḍā to Shakīb Arslān).

Some information on his being married three times (the first two marriages broke down after a short time) and on his children can be found in Sharabāṣī, 216-27.

After the Ottoman constitution had been reinstated in 1908, Rashīd Riḍā visited *Bilād al-Shām*. On this journey, as well as on later journeys to Istanbul (1909-10), to India (1912; on his way back he visited Masḳaṭ and Kuwayt), to the Ḥidjāz (1916 and again in 1926), to Syria (1919-20), to Europe (1921-2) and to the Pan-Islamic Congress in Jerusalem (1931), he each time reported in *al-Manār* (partly reprinted in Yūsuf Ibish (ed.), *Riḥalāt*; see also Sharabāṣī, 145-61).

For Rashīd Riḍā, all these journeys were connected with specific political aspirations, but he was not seldom disappointed in his immediate expectations. For instance, during the journey to Syria in 1908, an incident in the Umayyad mosque in Damascus and a subsequent riot made it clear to him that he had to reckon there with considerable opposition, and that he could not rely unconditionally on support from the Young Turks (Ibish, 29-40; cf. Arslān, 147-8 and Commins, nn. 129-31). His stay in Istanbul (October 1909-October 1910) was aimed at removing misunderstandings in the relationship between Arabs and Turks. Rashīd Riḍā also wanted to establish in Istanbul a modern Islamic institution of higher education, whose graduates —much better scholars than the *ʿulamāʾ* educated in the traditional way—would be able to defend Islam according to modernist standards.

After some initial successes, Rashīd Riḍā came to the conclusion that both aims could not be attained —in any case not according to his own conceptions— mainly because of the opposition of influential members of the *Ittiḥād we Terakkī Djemʿiyyeti* [*q.v.*], the ruling Committee of Union and Progress (Tauber, 104-6; al-Shawābika, 193 ff.). Disappointed, he returned to Egypt and immediately started preparations for establishing an association that should serve as the basis for the planned institution of higher education. The latter was indeed founded in 1911,

under the name of *Dār al-Daʿwa wa 'l-Irshād*. Regular instruction began in March 1912, but had to be discontinued soon after the outbreak of the First World War for want of financial donations (Tauber, 106; for the curriculum, see *RMM*, xviii [1912], 224-7).

As a result of his disappointment with the Young Turks, Rashīd Riḍā began to develop political plans on the lines of Pan-Arabism [*q.v.*]. Already in 1902-3 *al-Manār* had printed in instalments the work of ʿAbd al-Raḥmān al-Kawākibī [*q.v.*], *Umm al-ḳurā* (see for this and for the further political context, Kramer, esp. 30-5). Now, from 1911-2 onwards, Rashīd Riḍā adhered to the public agitation against the Young Turks and at the same time founded a secret political association with Pan-Arabic aims, the *Djamʿiyyat al-Djāmiʿa al-ʿArabiyya*. Its purpose was, on the one hand, to reconcile the rulers of the Arabian Peninsula with one another, and on the other, to put the Arabic secret associations in touch with one another (Tauber, 106-11). These activities led Rashīd Riḍā to establish relations with most of the rulers of the Arabian Peninsula, such as Ibn Suʿūd and the Sharīf of Mecca, but they also burdened for years to come, especially during the First World War, his contacts with those of his friends who, like Shakīb Arslān, associated themselves, notwithstanding many reservations, with the Ottoman Empire (Arslān, 152-6).

During the First World War, Rashīd Riḍā supported the "Arab Revolt" in the Ḥidjāz and even after the War's end he belonged for some time to the propagandists of its aims. During his journey to Syria in 1919-20 he was elected president of the "Syrian Congress", but he returned to Egypt after the French mandatary troops had marched into Syria.

In the following years, his relations with the King of the Ḥidjāz, Ḥusayn b. ʿAlī, and with the Hashimite dynasty in general, deteriorated. After the Wahhābī Āl Suʿūd had taken over power in the Ḥidjāz, and the Hāshimites had been expelled (1924-6), Rashīd Riḍā came to belong to those authors who tried, on historico-political grounds, to justify this development (see Boberg, esp. 290-314).

The most important proof of this attitude is his work *al-Wahhābiyyūn wa 'l-Ḥidjāz* (Cairo 1925-6), a collection of articles which had appeared in *al-Manār* and in the daily newspaper *al-Ahrām* (see also Kawtharānī, 191-238, 290-318). Until his death in 1935 he repeatedly explained how and why his judgement of the Wahhābiyya had changed: in his youth, under the influence of Ottoman propaganda, he had regarded the Wahhābīs as fanatical sectarians; after his arrival in Egypt, however, through reading the chronicle of al-Djabartī [*q.v.*] and works of other authors and through direct information, he had understood that it was the Wahhābīs, not their opponents, who defended true Islam, even if they were inclined to certain exaggerations. Parallel to this, Rashīd Riḍā aimed at the rehabilitation of authors like Ibn Taymiyya [*q.v.*] and of his school (see Laoust, *Essai*, 557-75, and idem, *Le réformisme*, esp. 181-2; cf. Rashīd Riḍā's preface to Muḥammad Bashīr al-Sahsuwānī, *Ṣiyānat al-insān ʿan waswasat al-Shaykh Daḥlān*, 3rd ed., Cairo 1958-9, 8-9).

This change of views, for which he also referred to remarks made in private by his mentor Muḥammad ʿAbduh, necessarily led to a deterioration of his relations with the Shīʿīs and of his judgement on the rôle of the Shīʿa in Islamic history. Already earlier, separate articles in *al-Manār* had provoked protests by Shīʿī scholars (see, for example, Sayyid Muḥsin al-Amīn al-ʿĀmilī, *al-Ḥuṣun al-maniʿa fī radd ma awradahu ṣāḥib al-Manār fī ḥaḳḳ al-Shīʿa*, Damascus 1910, new impr. Beirut 1985). In opposition to these protests, however, there existed numerous statements of Rashīd Riḍā and other authors of *al-Manār* in favour of Pan-Islamic unity and of interconfessional overtures. After his overt endorsement of the Wahhābiyya, Rashīd Riḍā became the chosen target of Shīʿī polemics, as for instance in the work of the above-mentioned Sayyid Muḥsin al-Amīn al-ʿĀmilī, *Kashf al-irtiyāb fī atbāʿ Muḥammad b. ʿAbd al-Wahhāb*, Damascus 1927-8, re-impr. Tehran *ca.* 1973. Rashīd Riḍā's objections against these polemics are resumed in his *al-Sunna wa 'l-Shīʿa aw al-Wahhābiyya wa 'l-Rāfiḍa*, i, Cairo 1929-30, ii, 2nd ed. 1947.

Already at an early stage, Rashīd Riḍā, who in his younger years had been for a while a *murīd* of the Naḳshbandī order, criticised ideas and practices which appeared to him as false and harmful Ṣūfism. His increasingly critical statements on the rôle of the Ṣūfī orders, especially of those of his own day, which later also brought him in conflict with leading scholars of al-Azhar, are not, however, to be understood as a radical refusal of all forms of Ṣūfism (Hourani, *Rashīd Riḍā and the Sufi orders*).

In the internal Islamic debates on the past and the future of the caliphate [see KHILĀFA, KHILĀFAT MOVEMENT], Rashīd Riḍā, after the First World War, opted more and more for a renewed, Arabic caliphate. His work *al-Khilāfa aw al-imāma al-ʿuẓmā* (Cairo 1923) is an answer to the fact that the Great Turkish National Assembly had abolished the sultanate on 1 November 1922, i.e. had stripped the caliphate of all secular authority (for the contents of this work, see H. Laoust's annotated translation, *Le califat*, and M. Kerr, 151-86). Rashīd Riḍā took a lively part in the further discussions on the caliphate, in the preparations of several Pan-Islamic congresses [see MUʾTAMAR] as well as in their sessions (see Kramer, index, 248; Shawābika, 337-54).

Many aspects of his political activities, such as his attitude towards the British occupation forces in Egypt, require further investigation (Shawābika, 264-75; Tauber, 105, 110).

The extraordinary influence exercised by Rashīd Riḍā in many parts of the Islamic world as the spokesman of the *Salafiyya* [*q.v.*], as well as the development of his views in a great number of individual questions concerning theology and the *Sharīʿa*, cannot be dealt with here. For this, see the articles IṢLĀḤ, AL-MANĀR, and the literature given in the *Bibliography*, in particular the works of Adams, Jomier, Kerr, Marrākushī and Sāmarrāʾī.

Bibliography: Numerous publications of Rashīd Riḍā consist of series of articles published first in *al-Manār* and later brought together in book form. A useful (even if not faultless) survey is given by Yūsuf Asʿad Dāghir, *Maṣādir al-dirāsa al-adabiyya*, ii/1, Beirut 1956, 396-401; see also Brockelmann, S III, 321-4; Khayr al-Dīn al-Ziriklī, *al-Aʿlām*, 3rd ed. Beirut 1969, vi, 361-2; ʿUmar Riḍā Kaḥḥāla, *Muʿdjam al-muʾallifīn*, Damascus 1960, ix, 310-2, and *Mustadrak*, Beirut 1985, 639.

Since 1970, certain texts from *al-Manār* have been selected thematically and reprinted in book-form. See especially: 1. Ṣalāḥ al-Dīn al-Munadjdjid and Yūsuf Ḳ. Khūrī (eds.), *Fatāwā 'l-Imām Muḥammad Rashīd Riḍā*, 6 vols., Beirut 1970; 2. Yūsuf Ibish, *Riḥalāt al-Imām Rashīd Riḍā*, Beirut 1971; 3. Wadjīh al-Kawtharānī, *Mukhtārāt siyāsiyya min madjallat al-Manār*, Beirut 1980. A general survey of the contents of the individual volumes of *al-Manār* is found in Anwar al-Djundī, *Taʾrīkh al-ṣiḥāfa al-*

islāmiyya. i. al-Manār, Cairo 1983. A *mu<u>kh</u>taṣar* of his *Tafsīr*, already begun by Ra<u>sh</u>īd Riḍā, was completed and published by Muḥammad Aḥmad Kanᶜān and Zuhayr al-<u>Sh</u>āwī<u>sh</u> as *Mu<u>kh</u>taṣar tafsīr al-Manār*, 3 vols., Beirut-Damascus 1984.

From the extensive secondary literature in Arabic, there may be mentioned <u>Sh</u>akīb Arslān, *al-Sayyid Ra<u>sh</u>īd Riḍā aw i<u>kh</u>āʾ arbaᶜīn sana*, Damascus 1937; Ibrāhīm Aḥmad al-ᶜAdawī, *Ra<u>sh</u>īd Riḍā, al-imām al-mu<u>dj</u>āhid*, Cairo n.d. [*ca.* 1965]; Aḥmad al-<u>Sh</u>arabāṣī, *Ra<u>sh</u>īd Riḍā, ṣāḥib al-Manār*, Cairo 1970; Ḥasīb al-Sāmarrāʾī, *Ra<u>sh</u>īd Riḍā al-mufassir*, Ba<u>gh</u>dād 1977; Muḥammad Ṣāliḥ al-Marrāku<u>sh</u>ī, *Tafkīr Muḥammad Ra<u>sh</u>īd Riḍā min <u>kh</u>ilāl ma<u>dj</u>allat al-Manār*, Tunis-Algiers 1985; Muḥammad Aḥmad Durnayḳa, *al-Sayyid Ra<u>sh</u>īd Riḍā, iṣlāḥātuhu al-i<u>dj</u>timāᶜ-iyya wa 'l-dīniyya*, Tripoli-Beirut, 1986; Aḥmad Fahd Barakāt al-<u>Sh</u>awābika, *Muḥammad Ra<u>sh</u>īd Riḍā wa dawruhu fi 'l-ḥayāt al-fikriyya wa 'l-siyāsiyya*, ᶜAmmān 1989.

(W. ENDE)

RA<u>SH</u>ĪD YĀSIMĪ, modern Persian poet and scholar, born on 4 December 1896 at Kirmān<u>sh</u>āh and died in 1951. His real name was <u>Gh</u>ulām Riḍā, but he is popularly known as Ra<u>sh</u>īd Yāsimī in literary and intellectual circles. He came from a cultured and well-educated family, which counted as one of its respected members the author of the novel *<u>Sh</u>ams u ṭu<u>gh</u>rā*, namely Muḥammad Bāḳir Mīrzā <u>Kh</u>usrawī (1849-1950), who was his maternal uncle. After completing his early education in his native town, Ra<u>sh</u>īd Yāsimī proceeded to Tehran in 1333/1914-15 and joined the Saint Louis High School, from where he graduated with proficiency in French language and literature. Simultaneously, he devoted his attention to the pursuit of Persian studies as well as to the study of Arabic, Pahlavi and English. Having finished his education, he served for some time as principal of a local high school in Kirmān<u>sh</u>āh. But soon afterwards he returned to Tehran, where he joined Malik al-<u>Sh</u>uᶜarāʾ Bahār (d. 1951 [see BAHĀR]) in founding the journal *Dāni<u>sh</u>kada*, which began to appear in 1918 as the organ of the literary association bearing the same name. Among his contributions to this journal were a series of articles which he published under the title *Inḳilāb-i adabī* describing the history of changes in French literature from the 18th to the 20th century. Translated for the most part from French sources, these articles were of special value to Persian readers in so far as they contained useful information about French writers and their works. His early writings also appeared in such journals as *Dunyā-yi imrūz*, *<u>Sh</u>arḳ*, *Naw bahār* and *Armān*.

Ra<u>sh</u>īd Yāsimī held a number of government jobs before he was appointed in 1933 to the chair of Islamic history in the Faculty of Letters, Tehran University, and the Advanced College for Teachers. Subsequently, he was also made a member of the Iranian Academy. In 1944 he travelled to India as part of a cultural delegation representing the Iranian government. He died in early May 1951 after a prolonged illness.

Ra<u>sh</u>īd Yāsimī was the author of numerous books covering a variety of subjects. These included biographical accounts of Ibn Yamīn (d. 769/1368) and Salmān Sāwa<u>dj</u>ī (d. 778/1376), editions of the poetical works of Masᶜūd Saᶜd Salmān (d. 515/1121) and Hātif Iṣfahānī (d. 1198/1783-4), publication of <u>Dj</u>āmī's *ma<u>th</u>nawī Salāmān u Absāl*, and translation of the fourth volume of E.G. Browne's *Literary history of Persia* as well as of books from other writers. His creative writing consisted mainly of a modest collection of poetry which was first published in 1337/1958. On the basis of the dates appended to most of his poems, it may be assumed that his poetic career began around 1295/1916-17. His verse is characterised by a lyrical outlook and love of nature. It contains a moral tone tending towards philosophising. His literary position may be best described as that of a transitional poet representing preliminary changes from traditionalism in the 20th century Persian poetry.

AL-**RA<u>SH</u>ĪDIYYA**, *al-<u>Dj</u>amᶜiyya al-Ra<u>sh</u>īdiyya li 'l-Mūsīḳā al-Tūnisiyya*, a Tunisian musical society founded in November 1934.

A general assembly of 71 participants (including a singer-actress, <u>Sh</u>āfiya Ru<u>sh</u>dī), from all walks of life—artisans, members of the liberal professions, musicians, poets and men of letters—decided to create an "association to safeguard the heritage of Tunisian music and its spread amongst the coming generations". Muṣṭafa Ṣfar, mayor of the Medina of Tunis, was unanimously elected its first president. Various names were proposed before that of Ra<u>sh</u>īdiyya was chosen, thereby glorifying the work of the music-loving Bey Muḥammad al-Ra<u>sh</u>īd (d. 1172/1759). During its period of evolution, the Ra<u>sh</u>īdiyya was to assume the work of an Institute, whence its name *al-Maᶜhad al-Ra<u>sh</u>īdī li 'l-mūsīḳā al-tūnisiyya*, *ca.* 1945).

The setting-up of this famous institution was not fortuitous. It formed part of the Tunisian nationalist movement founded at the beginning of the century, and for which the 1930s formed a period of transition on the cultural and artistic level. It marked the beginning of a period of intense activity, of recovery and

preservation and of creativity on behalf of an identity which felt itself threatened. In practice, music had during this period become the profession of a despised class, whose depraved morals and avidity for nothing but financial gain had ended in dragging the whole art, and as a result, the artist's status, down to a deplorable situation. Just as there were many factors leading to a series of attempts aiming at the rehabilitation of Tunisian music, so these were favoured by several important events concerning the poetic and musical spheres. Such a spirit had already taken shape thanks to the creative impetus of Shaykh Aḥmad al-Wāfī (1850-1921) and the genius of Khumayyis Tarnān (1894-1964), both reared, like so many others, in the pure tradition of the *zāwiyas* of the Ṣūfī brotherhoods, and to the efforts of Baron Rudolphe d'Erlanger (d. 1932) and of the musicians and musicologists gathered round his palace of Sīdī Bū Saʿīd. In 1931 the famous Syrian musician Shaykh ʿAlī Darwīsh of Aleppo arrived in Tunisia and within the Khaldūniyya gave the first courses in tonic sol-fa, and in the modes and rhythms of Arab music, as well as tuition in the *nāy*. There was also the first congress of Arab music at Cairo (14 March-3 April 1932), which was an event of great artistic importance. The Tunisian delegation included various famous figures, such as Ḥasan Ḥusnī ʿAbd al-Wahhāb, Mannūbī Snūsī, Ḥassūna Ben ʿAmmār, and a musical ensemble composed of Muḥammad Ghānin (*rabāb*), Khumayyis Tarnān (*ʿūd ʿarabī*), ʿAlī bin ʿArfa (*ṭār*), Khumayyis al-ʿĀtī (*nakkārāt*) Muḥammad al-Mukrānī and Muḥammad Billaḥsan (singers). In this way, the Rashīdiyya, whose setting up had been for music the culmination of a concatenation of circumstances, very soon became "a real bed of flowers", as Shāfiya Rushdī liked to stress, a nursery of high-quality artists, poets and musicians who succeeded, "through work and faith", in rehabilitating Tunisian musical art.

The Rashīdiyya was controlled by a legal charter which gave it civil and financial autonomy, and its directing committee was composed of a dozen members from amongst its most faithful supporters and patrons, chosen by the duly qualified electors and with a mandate which was renewable. It had three commissions: literary, musical and the sphere of public relations; the first two sat in the form of a committee of sifting and selection. In 1935, a first concert was given in its provisional headquarters, on the patio of the patron Belaḥsen Laṣram, before it acquired its own centre. An initial competition was held to stimulate creative activity amongst Tunisian artistes. Thereafter, a lively activity was embarked upon, envisaging three vital objectives:

(1) Safeguarding the musical heritage (and more especially, the *maʾlūf* or popular one), against all currents of deformation, preserving it intact against the effects of time and the blurring of the collective memory, giving it fresh impetus and spreading it widely. A long work of recovery and transcription was envisaged, a somewhat arduous and delicate mission, given that the music of an oral tradition, difficult to pin down in a fixed, standard notation, was involved, and that numerous versions, making up a field of great richness, had to be gathered together. Hence the effort was carried out on two fronts: collection and transcription (led by M. Trīkī), and restoration, the giving of fresh impetus and new compositions (a work given effect by Kh. Tarnān). The text and music of thirteen complete *nawbas* [*q.v.*], as well as those of numerous traditional pieces of music, instrumental and vocal, were gathered together, transcribed and published (cf. the nine fascicules of the Tunisian musical heritage). The greater part of this repertoire was likewise recorded.

(2) Laying the foundations for a centralised musical teaching, involving mainly national and Arab music. Through the seriousness and successfulness of this policy, the Rashīdiyya speedily became an Institute for educating cadres who were well qualified to keep up this role until 1972, when its courses were transferred to the National Centre for Folk Music and the Arts.

(3) Launching a vigorous movement of musical creativeness and high quality poetic activity, as much on the level of the texts as the music and interpretation. Tunisian song had its genuine creative spirits, composers, song-writers, instrumentalists and singers of great talent, notably the famous group *Taht al-Sūr* ("below the city wall") or *ʿAskar al-līl* ("soldiers of the night"), artistes, intellectuals and bohemians who were known by the name of the famous café which gave them shelter.

One by one, the new wave of musicians and poets were to help in the building of a new edifice, all bringing their contribution to the Tunisian song, for which they provided an impulse which brought it to the forefront of Arab music. The Rashīdiyya did much to render respectable practical musical-making. A tradition of weekly concerts was begun, and, according to Trīkī, one went there "as to the mosque".

The founding of a national radio network (Tunis R.T.T. in 1936), which began to transmit its own emissions towards the end of 1938, helped the rise of the Tunisian song and probably contributed to promote the efforts of the Rashīdiyya, notably through the live transmission of its weekly concerts. However, this institution gradually lost its potentialities once an orchestra had been created (1948), and then a choir (1957), both belonging to the R.T.T. and which attracted the best artistes of the time. At the present time, the Rashīdiyya, with its headquarters in the rue du Dey, no. 5, comes under the Ministry of Culture and is supported financially by the municipality of Tunis. A new breath has been recently given to it so that it may recover its former status.

RASHT, RESHT, a town of the Persian province of Gīlān [*q.v.*], in the Caspian Sea lowlands and lying on a branch of the Safīd Rūd [*q.v.*] in lat. 37° 18′ N. and 49° 38′ E. It has long been the commercial centre of Gīlān, with its fortunes fluctuating with the state of sericulture and silk manufacture. However, the town is not mentioned by the early Arabic geographers, who localise the silk industry in

the province of Ṭabaristān to the east [see MĀZANDARĀN], and it is the *Ḥudūd al-ʿālam* which first gives the name, but as a district, not a town (tr. Minorsky, 137, § 32.25). It does appear as a town in Ḥamd Allāh Mustawfī, writing soon after the Mongol conquest of Gīlān in 706/1307, and by that time, the silk of Gīlān was famous and, according to Marco Polo, sought after by Genoese merchants whose ships had recently appeared on the Caspian waters. Subsequently, Rasht became the seat of a minor dynasty of Gīlān, the Isḥāḳids of Fūmin, until these rulers were replaced by the Kiyā princes of Lāhidjān [*q.v.*], and then, in 1000/1592, Shāh ʿAbbās the Great [*q.v.*] annexed Gīlān to the Persian state.

Among the events of this period was the establishment in Gīlān, of which Rasht became the administrative and economic centre, of the "Muscovite Company" founded in 1557 by Anthony Jenkinson, Richard and Robert Johnson, who, taking the Russian route, sent ten expeditions into Persia between 1561 and 1581. It is to noteworthy that the last independent ruler of Gīlān, Aḥmad Shāh, sent ambassadors to Moscow to seek help against Shāh ʿAbbās and obtained promises of protection which, however, came to nothing. The Cossacks at the same time were plundering in Gīlān and Rasht and trying to gain the support of the Persian court. The most notable invasion was that of Stenka Razin who sacked Rasht in 1045/1636. On 2 Ṣafar 1082, the day of Stenka's execution, the Persians in Moscow at the time were invited to be present at it (cf. the journal *Kāweh*, 12, N.S., 1 December 1921). From 1722 to 1734, Rasht and Gīlān were occupied by the Russians (Shipov, then Matushkin) invited by the governor who was threatened by the Afghāns. In 1734, Gīlān was restored to Persia after a treaty. Rabino quotes a Persian testimony in favour of the Russian occupation. For military reasons the Russians cleared the jungle round Rasht.

The history of Gīlān and that of Rasht, which has always played a preponderant part in it, merges into the general history of Persia after its annexation. During the Persian Revolution, a body of Social Democrats was sent by the Regional Committee of the Caucasus to Rasht, and there helped in February 1909 to overthrow the authority of the Shāh and to establish a revolutionary committee which elected as governor the Sipihdār ʿAẓam, who played a prominent part in the history of the period along with Sardār Asad Bakhtiyārī (cf. *Persia v borbé za nezavisimost*, by Pavlovič and Iranskii, Moscow 1925). Rasht then became the base of operations of the northern revolutionary army. A few years later, during the First World War, Rasht again attracted attention in connection with the movement of the *Djangalīs*, created by Mīrzā Kūčak Khān [*q.v.*]. Assisted by German (von Passchen), Turkish and Russian officers, an armed force was organised to oppose the passage of the British troops under General Dunsterville on their way to Bākū, without, however, much success (battle of Mandjīl, 12 June 1918). The British were able to force their way through with the help of Bičerākhov's detachment of Cossacks and established a garrison in Rasht. A second battle with the *Djangalīs* in the town itself on 20 July 1918 also ended in British victory. On 25 August peace was signed with Kūčak Khān at Enzelī. At one time, at the end of March 1918, the position of Kūčak Khān was so strong that the capture not only of Ḳazwīn, but even of Tehran, was feared (cf. *The adventures of Dunsterforce* by Maj. Gen. L.C. Dunsterville, London 1920).

Rasht again became the arena of the revolutionary *Djangalī* movement, aimed at the pro-British government in Tehran of Mushīr al-Dawla in 1920. After the capture of Bākū on 28 April 1920 by the Reds, the White Fleet sought refuge in the port of Enzelī, which was held by the British. Enzelī fell to the Soviet forces, who then twice occupied Rasht. But after the Perso-Soviet agreement of May 1921, Russian and British troops left Persian territory, Kūčak Khān's movement was suppressed by Riḍā Khān's [see RIḌA SHĀH PAHLAWĪ] Cossack Brigade, and Persian authority re-established in Gīlān and Rasht.

Rasht was again occupied by Russian forces in the Second World War. At the present time, it is the administrative centre of the *ustān* of Gīlān. It has road connections with Tehran and Bandar Anzalī and an airport. In 1972 it had an estimated population of 160,000.

RASHTĪ, SAYYID KĀẒIM B. ḲĀSIM (d. 1259/1844), the head and systematiser of the Shaykhī school of Shīʿism after Aḥmad al-Aḥsāʾī [*q.v.*]. The son of a merchant, Sayyid Kāẓim was born in Rasht [*q.v.*], in northern Persia, between 1194/1784 and 1214/1799-1800. Details of his early life are sparse and contradictory. Educated in Rasht, he underwent mystical experiences and, somewhere between his mid-teens and early twenties (between 1809 and 1814?), became a pupil of al-Aḥsāʾī, then living in Yazd. He also studied under and received *idjāzāt* from other *mudjtahids*.

The Sayyid soon came to hold an important position among al-Aḥsāʾī's entourage, acting as his *nāib* or deputy and spokesman, answering questions on his behalf, continuing and translating some of his writings, and defending him from the attacks of hostile *ʿulamāʾ*. On al-Aḥsāʾī's death, Rashtī succeeded him as head of the central group of his pupils in Karbalāʾ. This led to the emergence of a sort of order for the transmission of inspired knowledge within orthodox Shīʿism, with Rashtī as "the bearer of innate knowledge" (Kirmānī) and the interpreter of al-Aḥsāʾī's words. Although he denied trying to establish a new *madhhab*, he became embroiled in major public debates with leading *ʿulamāʾ*. These disputes, and Rashtī's own development of an esoteric teaching divulged to a privileged circle of students, made it inevitable that Shaykhism should be viewed as a school of heterodox opinion within Twelver Shīʿism.

In spite of this, Rashtī acquired considerable political influence in Karbalāʾ and Persia, where he numbered many members of the ruling Ḳādjār family among his admirers. His death on 11 Dhu 'l-Ḥidjdja 1259/1 January 1844 sparked off a leadership struggle within the school, resulting in the emergence of two sharply opposed branches: that of Karīm Khān Kirmānī, which attempted a rapprochement with orthodoxy, and that of ʿAlī Muḥammad Shīrāzī [*q.v.*], which grew into the Bābī sect.

(D. MacEoin)

RASHWA (A.) or, apparently preferred by purists, *rishwa/rushwa*, pl. *rushā*, Persian *rishwat, rishwe, rushwa*, Turkish *rüşvet*, the legal term for "bribe." Like English "bribe", its connotation is absolutely negative and whatever is called *rashwa* is strictly forbidden by law. The word itself does not occur in the Ḳurʾān. More general passages like II, 188, and V, 42, 62-3 (*suḥt*) were interpreted to include the prohibition of bribe-taking. The *ḥadīth*, however, makes the matter perfectly clear. One of the most explicit statements invokes the divine curse upon those who offer and who take bribes (*rāshī, murtashī*), sometimes adding the go-between (*rāʾish*) and the specification *fi 'l-ḥukm*.

Other words may refer to the process of bribery such as *djaʿāla/djuʿl* or, in the course of time, drift in that direction such as *itāwa* or *bakhshīsh* [*q.v.*], but none of them ever became as unambiguous and forceful as *rashwa*. An insignificant exception may possibly be *birṭīl*, if it is derived from Greek *proteleia* and the interpretation of *proteleia* as "previous payment, advance" (Liddell and Scott, 1524) in a 6th-century papyrus from Egypt is correct; in this case, Persian *partala* "gift" could be secondary or another derivation from the Greek (see S. Fraenkel, *Aram. Fremdwörter*, Leiden 1886, 84). A picturesque euphemism for bribing, "pouring oil in the lamp" or simply *ḳandala*, is listed by al-Thaʿālibī, *Kināya*, Beirut 1405/1984, 70; al-Rāghib, *Muḥāḍarāt*, Būlāḳ 1286-87, i, 128.

Nothwithstanding the legal prohibition, bribery was as common in Islam as in other large societies, although the degree of its prevalence no doubt widely varied. It was, therefore, necessary for jurists to define what distinguished it from allowable gifts [see HIBA] and to circumscribe its boundaries. In contrast to supposedly disinterested and unconditional gifts, bribes were stated to be what was given for a purpose. This left open the possibility of beneficial purposes such as attempts to prevent wrongdoing and injustice, see, e.g., *LA*, s.v. *r-sh-w*: "gifts that lead to obtaining a right or ward off a wrong," or al-Sharīshī, commenting on "death does not take bribes" in al-Ḥarīrī's twenty-first *maḳāma*: "a gift given for warding off the harm of someone who has power over you" (*Sharḥ al-Maḳāmāt*, Cairo 1306, i, 279). In the legal view, however, the beneficial purpose did not invalidate the general prohibition; while the briber may be within his rights in offering a bribe, it is illegal to accept it, since the intended recipient should do on his own volition what is required and proper. It was, however, recognised by some that any gift whatever was given for some purpose. Al-Ghazālī thus discusses hypothetical situations such as giving something to a ruler's officials or intimates in order to gain access to him, as well as other situations of gift-giving for expected services. The negative view mostly prevailed, but it is obvious that the very discussion opened up potential loopholes. Note that the alleged "first case of bribery in Islam" involves outstanding early Muslims and access to the caliph (Ibn Ḳutayba, *Maʿārif*, ed. ʿUkkāsha, 558, and the *awāʾil* collections).

The environment where unlawful bribing was seen as particularly at home was the twin realms of government and judiciary. On a widely discussed problem where the two clearly intertwined concerned the expenditure of money for an appointment to a judgeship, see, most concisely, al-Māwardī, *Adab al-ḳāḍī*, ed. M.H. Sarḥān, Baghdād 1391/1971, i, 151-2, and Tyan. While bribery on various governmental levels, internally as well as internationally, was discussed (see al-Subkī, *Faṣl al-maḳāl fī hadāyā al-ʿummāl*; Rosenthal, 137-8), the principal concern was with the judiciary, where the concept of bribery and its practical role were seen as most deeply embedded and unquestionably corruptive. In the case of judges, the acceptance of well-intentioned gifts even by relatives could constitute a problem calling for legal discussion. Gift-giving among ordinary individuals and, presumably, in business pursuits not involving officialdom was, it seems, not considered to incur the danger of developing into forbidden *rashwa*.

Someone found guilty of bribery could, of course, be dismissed. Legally, punishment was left to the decision of the judge (*taʿzīr*). The Ḥanafī Ibn Nudjaym appears to have considered public exposure as the most effective deterrent.

The attention paid to *rashwa* throughout the literature proves, if proof is needed, that bribery was an ever-present problem. Its social effects were no doubt considerable but cannot be accurately, or even approximately, quantified. It appears to have become institutionalised at certain periods and locations. From Ottoman times, an increase in monographs on the subject is noticeable. Political thinkers were much concerned with it and even ended up in almost despairing of finding a remedy for it (see Wright). Westerners often felt convinced that bribery was a way of life in the East. It may, however, be doubted whether detailed research will provide valid clues to a specific role of bribery in mediaeval Muslim civilisation as a whole, if, indeed, there was anything specific to it.

RĀSIM [see AḤMAD RĀSIM].

RASM (A., pl. *rusūm*), the act of drawing, a drawing, is not always distinguished from painting; nor can it be. Drawing was performed both as a preliminary to painting and to produce works to stand alone. It might be representational [see TAṢWĪR] or decorative (historians of Islamic manuscripts confine the term illumination to decorative work). *Naḳḳāshī* covers drawing and painting, whether representational or decorative; *ṭarrāḥī* is designing, in the context of pictures, the production of the underdrawing. In addition to the illustration of manuscripts, drawing is an important element in the decoration of ceramics and other forms of applied art; draughtsmen might exercise their skill in several fields. Writing in the ear-

ly 11th/17th century, Ḳāḍī Aḥmad distinguishes two sorts of *ḳalam*, the one from a plant and the other from an animal (see *Calligraphers and painters: a treatise by Qāḍī Aḥmad, son of Mīr-Munshī (circa A.H. 1015/A.D. 1606)*, tr. V. Minorsky, Washington, D.C. 1959, 50): these are the calligrapher's reed pen and the painter's brush, probably made with squirrel-hair. Ink [see MIDĀD] was prepared from soot, gallnut and alum, in a medium of gum arabic. Dilute ink (or a red pigment, perhaps minium) was used, usually with a brush, for the underdrawings of paintings. Either pen, brush, or a combination, was used for autonomous drawings; some drawings include small areas of ink wash, thin colour or details in gold. Training in the drawing of particular motifs might be carried out by pouncing, using a gazelle skin (Persian *čarba*). A draughtsman often worked with a drawing-board supported by his knee. The line generally reveals the influence of the calligraphy of its period, in its curves and rhythms. Ruler and compass were used in the basic layout of schemes of illumination, but many complex curved lines appear to be drawn freehand. There is occasional use of stencils from the 15th century onwards. The illuminator (*mudhahhib*) worked, among other things, with brush-gold, gold-leaf rubbed into moist or dry glue and diluted.

Early period

Surviving examples of drawing from the early Islamic period are mostly in the service of wall- or floor-paintings in Umayyad palaces (Ḳuṣayr ʿAmra [see ARCHITECTURE] or Ḳaṣr al-Ḥayr al-Gharbī [*q.v.*]); there is an evident debt to late classical and Sāsānid art, and outlines are heavily marked (but have sometimes been exaggerated in excessive restoration). The earliest surviving book illustrations appear to be the highly formalised, coloured drawings of mosques and trees in an Umayyad Ḳurʾān, discovered in Ṣanʿāʾ (see H.-C. Graf von Bothmer, *Architekturbilder im Koran: eine Prachthandschrift der Umayyadenzeit aus Yemen*, in *Pantheon*, xlv [1987], 4-20). The earliest surviving drawings in which line is exploited for aesthetic effect are figures of the constellations in a manuscript of al-Ṣūfī's *Ṣuwar al-kawākib al-thābita* (Bodleian Library, Oxford), whose text was copied in 400/1009-10, presumably in Baghdād. The wiry line describes the notional body with smooth contours and the clothing with exuberant bracketing folds; Sāsānid and Chinese influences are evident. Approximately contemporary is a Fāṭimid drawing of a nude female musician (Israel Museum, Jerusalem). Over a red underdrawing, the line is slightly more variable, but volume is chiefly conveyed by curves. In works of the Arab school of the 7th/13th and 8th/14th centuries, figures have large and expressive faces and eloquent gestures of the hand (fig. 1). The line is rapid and confident, sometimes to the point of carelessness. Drawing in the Saldjūḳ tradition at this period, as represented in *Warḳa u Gulshāh* (Topkapı Sarayı Library, Istanbul) or on lustre ceramics, is more sober; faces are more oriental, and on the ceramics pattern is more pervasive.

Chinoiserie

A new mode of drawing begins in the late 7th/13th century as Chinese influence, mediated by various arts, introduces new motifs and softens the Islamic line. Finished ink drawings, exercises and designs for applied arts are preserved in Albums in the Topkapı Sarayı, Istanbul, and the Staatsbibliothek in Berlin [see MURAḲḲAʿ]. In general, these are datable to the 8th/14th and 9th/15th centuries, but more particular datings are a matter of debate; vigour tends to suggest the earlier century, and delicacy the later. Ink drawing was known at this period as *ḳalam-i siyāhī/siyāh ḳalam*; Dūst Muḥammad, who compiled one of the Albums for the Ṣafawid Bahrām Mīrzā in 951/1544, mentions one Amīr Dawlat Yār, proficient in this field in the 14th century (see W.M. Thackston, *A century of princes: sources on Timurid history and art*, Cambridge, Mass. 1989, 345). Islamic arabesque ornament accepted new motifs, lotus leaves or flowers, Chinese clouds, ducks, peris, cloud-deer, dragons and *sīmurghs* (a Chinese form for the legendary Persian bird); cartouches have "cloud-collar" edges (fig. 2). Some studies draw on Buddhist mythology. In the 9th/15th century, chinoiserie is enriched by motifs from the Islamic tradition, hunting felines, monkeys, peacocks, and the *wāḳwāḳ* scroll (a scroll inhabited by faces, named after the tree of talking heads encountered by Iskandar in Firdawsī's *Shāh-nāma*). By the 10th/16th century Persian illuminators execute chinoiserie borders in brush-gold with subtle variations in density. Chinoiserie was carried to the Ottoman sphere, where, in the 10th/16th century, draughtsmen make a speciality of ink drawings of the *sāz* motif, the feather-like flower of the reed. From the late 10th/16th century, Mughal painters introduce into gold chinoiserie borders figures which are increasingly realistic and coloured.

Classical Persian and Mughal drawings

In classical Persian painting, produced from the 1390s to 1540s, outline becomes much less visible than hitherto. A sketchy underdrawing indicates where one block of colour is to abut on another, and the edge of the colour-block assumes the greater part of the defining function. Lines applied over the colour blocks to indicate features, folds, patterns or other details, are delicate. Chinese influence is evident in the convention of round, small-featured faces. Outlines are more evident in provincial styles. Drawings of narrative subjects are preserved in the Albums, and drawing predominates over painting in the illustrations to a *Ṣuwar al-kawākib al-thābita* made for Ulugh Beg [*q.v.*], presumably in the 1430s and at Samarḳand (Bibliothèque Nationale, Paris).

In Mughal painting of the late 10th/16th and early 11th/17th centuries [see MUGHALS. 9], the Persian colour-block system is modified by traditions both linear and painterly. Line may be strongly marked, and is sometimes further emphasised by a surrounding shadow; at other times it is lost. For drawing *per se*, a fruitful source of inspiration was found in European prints (and probably also illustrations in *grisaille*). In the late 10th/16th century, Basāwan produced masterly drawings with adaptations of European style and European classical mythology. In the 11th/17th century, the Mughal interest in reportage fostered portrait drawings—including those of elephants—and drawing from the life [see MUGHALS. 9]. Some drawings, usually of more traditional subjects, were accompanied with half-colour (*nīm ḳalam*). A class of *jeu d'esprit*, perhaps a development from metamorphic tendencies in Persian ornament with assistance from chinoiserie, is formed by drawings in which ridden elephants or camels are composed from subsidiary figures in the archimboldesque manner.

Later Persian drawing

With a growing taste for Albums in Persia in the later 10th/16th century [see MURAḲḲAʿ], the finished ink drawing gains in importance as an independent work. Subjects are often single figures of the upper classes, sitting or standing, by the 11th/17th century sometimes presented against a minimal landscape of hills, trees and cloud. Conversation pieces are also found, low-life or eccentric characters, and animals; in addition, there are a small number of studies of

earlier manuscript illustrations. Line of strongly calligraphic quality and varying width is used, both for its descriptive and abstract value. Volumes are largely implied by fold lines; hatching is not employed, but in some areas fold lines cluster together. Signatures, or attributions, and dates are not infrequent. Prominent draughtsmen of the 10th/16th and 11th/17th centuries are Ṣādiḳ, Riḍā-yi ᶜAbbāsī [*q.v.*] and the latter's pupil Muᶜīn Muṣawwir.

The second half of the 19th century sees the acceptance of new means of graphic expression, the pencil (with shading by hatching and smudging) and the lithograph. Influential in this was Abu 'l Ḥasan Ghaffārī, Ṣāniᶜ al-Mulk, first director of art in the *Dār al-Funūn* (Polytechnic) in Tehran, who died in 1866. Portraits in the new media have a cautious stillness, derived from photography; but drawing of a more traditional character may venture into caricature.

(BARBARA BREND)

RASM. In ottoman Turkish usage [see RESM].

AL-**RASS**, the name in Arabic geographical writing for the Araxes River (Perso-Turkish form Aras, Armenian Eraskᶜ, Georgian Rakhshī, modern Aras). It rises in what is now eastern Turkey near Erzurum and flows generally in an eastwards direction for 1,072 km/670 miles into the Caspian Sea. Its middle reaches, from a point near Mount Ararat, today form the boundary between the former Azerbaijan SSR and Persia, with the lower stretch receiving the Kur River and flowing through the Mūḳān [*q.v.*] steppes and what is now wholly Azerbaijani territory.

The early Arabic name al-Rass led the Muslim exegetes to connect it with the *Aṣḥāb al-Rass* [*q.v.*] of Ḳur'ān, XXV, 38, L. 12, mentioned as one of the unbelieving peoples destroyed for their impiety. The eastern and middle stretches of the Araxes came under Arab control when the Muslim invaders pushed through Ādharbāydjān towards eastern Caucasia in the later 1st/7th century, but for many centuries these remained frontier regions, open to attacks from the Alans [see OSSETES], the Khazars and the Rūs [*q.vv.*] from the north and from the Armenian princes and the Byzantines from the west.

The river valley was a very fertile area and formed a corridor for commerce connecting the Black Sea with the Caspian and northwestern Persia, so that urban centres like Dwīn [*q.v.*] or Dabīl, Ānī [*q.v.*] and Djulfa flourished greatly. In the Saldjūḳ period, migratory Turkmens passed along it heading for eastern Anatolia once the Byzantine defences there had collapsed after the battle of Malāzgird [*q.v.*] in 464/1071. In later times, independent or semi-independent local khānates like those of Ḳarabāgh, Nakhčiwān and Ordūbād [*q.vv.*] formed buffers between the Ṣafawids and Ottomans. By the early 19th century, Persia was compelled to relinquish control over the lands to the north of the Araxes and of its lower course, with the Treaty of Turkmančay of 1828 establishing the present boundary between Azerbaijan and Armenia on the one side and Persia on the other along the river's middle stretch.

AL-**RASS** [see AṢḤĀB AL-RASS].

AL-**RASSĪ**, AL-ḲĀSIM B. IBRĀHĪM b. Ismāᶜīl b. Ibrāhīm b. al-Ḥasan b. al-Ḥasan b. ᶜAlī b. Abī Ṭālib (169-246/785-860), Zaydī *imām* and founder of the legal and theological school later prevalent among the Zaydīs in the Yemen.

He grew up in Medina where he was taught basic Zaydī religious doctrine in his family and Medinan *ḥadīth*, and perhaps Ḳur'ān readings and Arabic language, by Abū Bakr ᶜAbd al-Ḥamīd b. Abī Uways, a nephew of Mālik b. Anas. Before 199/815 he came to Egypt, probably al-Fusṭāṭ. It is doubtful whether he was, as reported by a late source, sent there by his brother Muḥammad who at that time was recognised as *imām* by the Kūfan Zaydīs. Al-Ḳāsim, in any case, later expressed reservations about Muḥammad's theological views. In Egypt he studied the Jewish and Christian scriptures and Christian theological and philosophical treatises and engaged in debates with Muslim and non-Muslim scholars. His refutations of a Manichaean treatise ascribed to Ibn al-Muḳaffaᶜ [*q.v.*] (ed. M. Guidi, *La lotta tra l'islam e il manicheïsmo*, Rome 1927) and of the Christians (ed. I. Di Matteo in *RSO*, ix [1921-3], 301 ff.) were written there. Evidently under the influence of Christian writings he adopted some of his characteristic views on the divine attributes and upholding human free will which deviated from the earlier Zaydī tradition. Under suspicion of seditious activity by the authorities, he left Egypt soon after 211/826, returning to Medina. He bought an estate at al-Rass near Dhu 'l-Ḥulayfa and stayed there writing and teaching Zaydī visitors, especially from Kūfa and western Ṭabaristān, until his death. There is no sound evidence that he ever seriously attempted to lead a Zaydī revolt.

Al-Ḳāsim summed up his religious teaching in five principles (*uṣūl*) which only partly agreed with those of the Muᶜtazila [*q.v.*].

1. In his sharply anti-anthropomorphist doctrine of the unity of God he stressed, in agreement with contemporary Christian theology, the total dissimilarity (*khilāf*) of God to all creation, while rejecting the corollary of an aspect of similarity upheld in the Christian doctrine. Under Christian theological influence he also placed the essential generosity (*djūd*) and goodness of God at the centre of his doctrine of divine attributes. He ignored the Muᶜtazilī distinction between divine attributes of essence and of act.

2. Concerning divine justice he strictly dissociated God from evil acts and affirmed human free will. He rejected, however, the Muᶜtazilī doctrine of compensation (*ᶜiwaḍ*) owed by God for undeserved pain inflicted by Him and held, in accordance with Christian doctrine, that the blessings of God to children and others completely outweighed any pains. He also distanced himself from the Muᶜtazilī interpretation of the predestinarian terms *ḳaḍā'* and *ḳadar* as meaning merely commandment and judgment. Here he clearly tried to avoid expressing condemnation of the traditional Zaydī position affirming predestination.

3. On the basis of his concept of divine justice he upheld the tenet of the divine "promise and threat"

Abū Zayd's son commends his father's sermon, *Maḳāmāt* of al-Ḥarīrī, 723/1323. Add. 7293, 285b. Courtesy of the British Library, London.

Chinoiserie cartouche, *ca.* 1410. Diez A Fol. 73, S. 54. Staatsbibliothek zu Berlin, Preussischer Kulturbesitz, Orientabteilung.

(*wa*ʿ*d wa-wa*ʿ*īd*) entailing the unconditional punishment of the unrepentant sinner in the hereafter. Unlike the Muʿtazila, and in agreement with the early Zaydī view, he held that evil acts, in particular injustice, oppression and transgression (ʿ*udwān*) constituted forms of unbelief (*kufr*), though not of unbelief in God or polytheism (*shirk*). Thus it was licit to make war on Muslim oppressors and their supporters.

4. The fourth principle stressed the overriding authority of the Ḳurʾān as a guide-line in all religious matters. Al-Ḳāsim affirmed that the Ḳurʾān as a whole is detailed, unambiguous and free of contradiction. He rejected Imāmī assertions that parts of it had been lost or tampered with. Although his theological principles implied the created nature of the Ḳurʾān, he refused to call it either created or uncreated, partly because of his veneration of the Holy Book and partly because the question was controversial among the contemporary Zaydīs, the majority considering the Ḳurʾān uncreated. Sharply reacting against the rising tide of Sunnī traditionalism, he affirmed that the *sunna* of the Prophet consisted only of what was mentioned or intended in the Ḳurʾān. He accused the Ḥashwiyya (Sunnī traditionalists) of massive forgery of *ḥadīth* and viewed them as the main supporters of the oppressors.

5. Al-Ḳāsim defined the lands dominated by the illegitimate Muslim rulers as an "abode of injustice (*dār al-ẓulm*)" where disposal over property, trade, and economic gain were not fully licit because of the prevalence of usurpation and extortion. Unable to resist the tyrants, the faithful were obliged to emigrate from there. The Ḳurʾānic duty of *hidjra*, imposed initially on the faithful in order that they should dissociate from the polytheists, was permanent and now applied to their dissociation from the unjust and oppressors.

Al-Ḳāsim's view on the imāmate agreed generally with the contemporary Zaydī position [see IMĀMA]. He stressed, however, superior religious knowledge as a prime requirement for the rightful imāmate and ignored the traditional Zaydī requirement of armed revolt. He considered ʿAlī the only legitimate successor of Muḥammad and rejected the caliphate of his three predecessors.

His legal doctrine was basically Medinan and lacked some characteristic Shīʿī elements like the formula *ḥayya* ʿ*alā khayri 'l-*ʿ*amal* in the *adhān* [*q.v.*] and rights of non-agnates in inheritance. He recognised, however, the validity of the consensus of the Family of the Prophet and relied on reports about ʿAlī transmitted to him by Abū Bakr b. Abī Uways from Ḥusayn b. ʿAbd Allāh b. Dumayra with a family *isnād*. He accepted the fifth *imām* of the Imāmī Shīʿa, Muḥammad al-Bāḳir [*q.v.*], as a legal authority, but condemned the later Imāmī *imāms* as wordly exploiters of their pious followers. He is known, however, to have transmitted a book of traditions of Djaʿfar al-Ṣādiḳ [*q.v.*] from his father on the authority of Mūsā al-Kāẓim [*q.v.*] (al-Nadjāshī, *Ridjāl*, ed. Mūsā al-Zandjānī, Ḳumm 1407, 314).

Al-Ḳāsim's theological and legal teaching became basic in the Zaydī communities in western Ṭabaristān and the Yemen. It was, however, partly superseded by the Muʿtazilī and more strictly Shīʿī teaching of his grandson al-Hādī ila 'l-Ḥaḳḳ [*q.v.* in Suppl.].

RASSIDS, a name sometimes used, most notably by Ibn Khaldūn (ʿ*Ibar*, iv, 111), of the Zaydī imāms of the Yemen [see ZAYDIYYA]. The term "Banu 'l-Rassī" is not commonly used by the Yemeni Zaydī historians and may only have gained some currency in Europe after Kay's translation (*Yaman*, 184 ff.) of the chapter in Ibn Khaldūn's ʿ*Ibar*. Perhaps also as a result of Kay's translation, the term Rassid imāms was used soon after in Lane-Poole's *Dynasties*, 102 and table, for the Zaydī imāms down to *ca.* 700/1300. The *nisba* is derived from a place in the Ḥidjāz, al-Rass, held by al-Ḳāsim b. Ibrāhīm Ṭabāṭabā al-Rassī [*q.v.*], the grandfather of al-Hādī ilā 'l-Ḥaḳḳ Yaḥyā b. al-Ḥusayn [*q.v.*], the first Zaydī imām in the Yemen.

SMITH)

RASŪL (A., pl. *rusul*), messenger, apostle.

1. In the religious sense. According to the Ḳurʾān, there is a close relation between the apostle and his people (*umma* [*q.v.*]). To each *umma* God sends only one apostle (sūra X, 48, XVI, 38 cf. XXIII, 46, XL, 5). These statements are parallel to those which mention the witness whom God will take from each *umma* at the Day of Judgment (IV, 45, XXVIII, 75 and cf. the descriptions of the *rasūl* who will cross the bridge to the other world at the head of his *umma*: al-Bukhārī, *Adhān, bāb* 129; *Riḳāḳ, bāb* 52).

Muḥammad is sent to a people to whom Allāh has not yet sent an apostle (XXVIII, 46, XXXII, 2, XXXIV, 43). The other individuals to whom the Ḳurʾān accords the dignity of *rasūl* are Nūḥ, Lūṭ, Ismāʿīl, Mūsā, Shuʿayb, Hūd, Ṣāliḥ and ʿĪsā.

The list of the prophets [see NABĪ in *EI*[1] and NUBUWWA] is a longer one; it contains, besides the majority of the apostles, Biblical or quasi-Biblical characters like Ibrāhīm, Isḥāḳ, Yaʿḳūb, Hārūn, Dāwūd, Sulaymān, Ayyūb and Dhu 'l-Nūn. Muḥammad in the Ḳurʾān is called sometimes *rasūl*, sometimes *nabī*. It seems that the prophets are those sent by God as preachers and *nadhīr* [*q.v.*] to their people, but are not the head of an *umma* like the *rasūl*. One is tempted to imagine a distinction between *rasūl* and *nabī* such as is found in Christian literature: the apostle is at the same time a prophet, but the prophet is not necessarily at the same time an apostle. But this is not absolutely certain, the doctrine at the basis of the Ḳurʾānic utterances not being always clear.

As to the close relation which exists between the *rasūl* and his *umma*, it may be compared with the doctrine of the *Acta apostolorum apocrypha*, according to which the twelve apostles divided the whole world among them so that each one had the task of preaching the Gospel to a certain people.

As regards the term *rasūl*, account must be taken of the use of the word apostle in Christianity, as well as

of the use of the corresponding verb (*shalah*) in connection with the prophets in the Old Testament (Exodus, iii, 13-14, iv, 13; Isaiah, vi, 8; Jeremiah, i, 7). The term *rasūl Allāh* is used in its Syriac form (*sheliḥeh d-allāhā*) *passim* in the aprocryphal Acts of St. Thomas.

Post Ḳurʾānic teaching has increased the number of apostles to 313 or 315 without giving the names of all of them (Ibn Saʿd, ed. Sachau, i/1, 10; *Fiḳh Akbar III*, art. 22; Reland, *De religione mohammedica*, 2nd ed., Utrecht 1717, 40).

The doctrine that they were free from mortal sin is part of the faith [see ʿIṢMA]. For the rest, the difference between *rasūl* and *nabī*—apart from the considerable difference in point of numbers—seems in later literature to disappear in the general teaching about the prophets. Thus in the *ʿAḳīda* of Abū Ḥafṣ ʿUmar al-Nasafī, the two categories are treated together and the author makes no difference between *rasūl* and *nabī*. Similarly, al-Īdjī deals with prophets in general, so far as can be seen, including in them the *rasūls*. If one difference can be pointed out, it is that the *rasūl*, in contrast to the prophet, is a law-giver and provided with a book (commentary on the *Fiḳh Akbar II* by Abu 'l-Muntahā, Ḥaydarābād 1321, 4). According to the catechism published by Reland (40-4), the *rasūl* lawgivers were Ādam, Nūḥ, Ibrāhīm, Mūsā, ʿĪsā and Muḥammad.

In the catechism of Abū Ḥafṣ ʿUmar al-Nasafī, the sending of the apostles (*risāla*) is called an act of wisdom on the part of God. Al-Taftāzānī's commentary calls it *wādjib*, not in the sense of an obligation resting upon God but as a consequence arising from his wisdom. This semi-rationalist point of view is not, however, shared by all the scholastics: according to e.g. al-Sanūsī (cf. his *Umm al-barāhīn*), it is *djāʾiz* in itself but belief in it is obligatory.

2. In the secular sense. For its meaning of "diplomatic envoy, ambassador", in later Arabic usage *safīr*, see ELČI and SAFĪR.

RASŪLIDS, name of a Sunnī dynasty of the Yemen. They took their name from a certain Muḥammad b. Hārūn who had earned for himself the nickname Rasūl ("messenger") under one of the ʿAbbāsid caliphs in the 6th/12th century because of his trustworthiness and efficiency as a confidential envoy. The family tree can be constructed as given below (the element *al-Malik* prefixed to the rulers' honorific titles is omitted here).

Muḥammad b. Hārūn (Rasūl)

        └── al-Muẓaffar Yūsuf (XIII)

By the time the last sultan appeared on the scene, Rasūlid history was marked by serious family squabbles over the leadership.

1. History. The Rasūlid historians and genealogists all claim an Arab pedigree for the family and call them Ghassānids, a branch of al-Azd [*q.v.*]. They further claim that a distant ancestor in the time of the caliph ʿUmar b. al-Khaṭṭāb became a Christian and went to live in Byzantine territory. His children migrated into the lands of the Turkomans and settled among what is described as being the noblest of their tribes, Mandjik. It is probable that the Mendjik of the Oghuz Turks is meant. There they lost their Arab identity entirely and intermarried with the Turkomans and spoke their language. It was only about the time of Muḥammad b. Hārūn himself that the family moved to ʿIrāḳ and from there to Syria and finally to Egypt. There they came to the notice of the ruling Ayyūbid dynasty [*q.v.*]. In all probability, however, the family was originally of Mendjik, Oghuz Turkish origin.

It was either in the train of Tūrānshāh [*q.v.*], the first Ayyūbid sultan in the Yemen and the brother of Ṣalāḥ al-Dīn [*q.v.*], when he conquered the country from Egypt in 567/1173, or in that of his successor and brother, Ṭughtakīn, in 579/1183 that a number of Rasūlid *amīrs* first entered the country. Nūr al-Dīn ʿUmar b. ʿAlī was a fief-holder (*muḳtaʿ*) during the period of Ayyūbid control of the Yemen, and when the last Ayyūbid, al-Malik al-Masʿūd, left the Yemen to travel north to take up the governorship of Damascus in 626/1228-9, he could find no one other than Nūr al-Dīn ʿUmar to act as his deputy there. Al-Masʿūd died in Mecca on his way north. Although Nūr al-Dīn ʿUmar had been instructed to hold the Yemen for the Ayyūbid house until the arrival of a new Ayyūbid ruler, no other member of the family was ever to set foot in the Yemen again. Nūr al-Dīn ʿUmar showed outward allegiance to his Ayyūbid masters in Egypt until 632/1235, when he received an official diploma of authority from the ʿAbbāsid caliph al-Mustanṣir [*q.v.*]. This marks the real beginning of the independent Rasūlid state in Southern Arabia.

The Ayyūbids had made a thorough job of conquering and controlling Tihāma [*q.v.*], the Red Sea coastal plain, and the southern highlands as far north as Ṣanʿāʾ [*q.v.*]. This was the territory the Rasūlids inherited. The Zaydī *imāms* [see ZAYDIYYA] continued to hold much of the land north of Ṣanʿāʾ and the city itself was frequently disputed between them and the Sunnī Rasūlids.

The period after 632/1235, during which the Rasūlids held control of Tihāma and southern Yemen, was without doubt the most brilliant in the mediaeval history of the country. All the hard, pioneering work had been done by their predecessors, the Ayyūbids, with their vast armies, including numerous cavalry. Their conquests had been thorough. In addition, their skilled administrators trained in Syria and Egypt had established an effective administration in the Yemen. The Rasūlids were able to build on to these achievements. They, too, had efficient local civil servants and, what is more, the royal house was blessed with a plethora of gifted intellectuals who brought great scholarly effort to an already highly educated country (see below, 3. Monuments, and 5. Literature).

It is not possible to chronicle in detail the events of more than two centuries of Rasūlid rule in the Yemen. Until his death in 647/1249, al-Manṣūr ʿUmar, the first sultan, was kept busy with the internal affairs of the city of Ṣanʿāʾ. He had signed a peace treaty with the Zaydīs in 628/1230 which included a clause declaring the intention of excluding the Ayyūbid house from the region. Ṣanʿāʾ was granted as a fief to his nephew, Asad al-Dīn Muḥammad b. Ḥasan. He was to prove unreliable, if not actually treacherous, and this is what involved al-Manṣūr so much in the affairs of the city. Al-Manṣūr ʿUmar was murdered in al-Djanad [*q.v.*] near Taʿizz [*q.v.*] in 647/1249 by a gang of *mamlūks*, and al-Khazradjī [*q.v.*], the Rasūlid court historian, has no hesitation in pointing the finger at Asad al-Dīn Muḥammad.

Al-Manṣūr ʿUmar's preoccupation with problems in Ṣanʿāʾ had brought about the neglect of Tihāma and the south of the Yemen. The new sultan, his son, al-Muẓaffar Yūsuf, spent the early years of his rule re-establishing Rasūlid control over these areas. It is surprising that he retained Asad al-Dīn Muḥammad in charge of Ṣanʿāʾ, but the latter was removed in 658/1260 and ʿAlam al-Dīn al-Shaʿbī appointed over Ṣanʿāʾ in his stead. With this new appointment we enter into the zenith of Rasūlid power and achievement in southern Arabia. ʿAlam al-Dīn was a loyal and gifted servant of the Rasūlid house and, with his team of effective troubleshooters, he did much to reassert control over Ṣanʿāʾ and the north of the country.

Thus from his capital city Taʿizz, al-Muẓaffar Yūsuf presided over a Yemen, with the exclusion of the northern highlands north of Ṣanʿāʾ, of unparalleled peace, stability and brilliance. It was during his reign, until 694/1295, that Rasūlid territory reached its most extensive, for, apart from Tihāma and the southern highlands, the northern highlands including Ṣanʿāʾ can be reckoned within Rasūlid control, and also vast territories in the east, Ḥaḍramawt [*q.v.*] and Southern Arabia as far as the maritime settlement of Ẓafār [*q.v.*], present-day al-Balīd, near Ṣalāla in Oman. Here a branch of the family ruled independently or semi-independently for some time (see *Bibl.*, Porter and Smith, in *JRAS*).

Al-Muẓaffar's death in 694/1295 heralded the rule of a long line of his direct descendants. A number of these were extremely able rulers and they promoted the interests of the Rasūlid extremely effectively. It is, however, of interest to note that after the death of ʿAlam al-Dīn al-Shaʿbī in 682/1283 Ṣanʿāʾ never again remained long in Rasūlid hands. One might say too that the dynasty never attained its former glory. Gifted as the successive Rasūlid rulers undoubtedly were, the house suffered greatly at the hands of unreliable and at times openly rebellious tribes and equally at the hands of envious and mutinous *mamlūks*.

When al-Nāṣir Aḥmad died in 827/1424, the Rasūlid dynasty crumbled fast. Al-Nāṣir had done much to revive the flagging fortunes of the house. He had made military gains within the Yemen and received rich gifts from as far away as China. Throughout the 830s and 840s/1420s and 1430s, sultans came and went, unable to hold the dynasty together. The *mamlūks* revolted time after time and, what is more, plague visited the land. The Rasūlid *amīrs* began to quarrel among themselves. With the fall of Aden [see ʿADAN] to the Ṭāhirids [*q.v.*] in 858/1454 and the surrender of the Rasūlid *amīr* there, the dynasty came to an end.

2. Coins and mints. A very large number of Rasūlid coins covering at least the period 634-*ca.* 842/1236-*ca.* 1438 minted by all the sultans from al-Manṣūr to al-Ẓāhir is extant. Their main mint towns were Aden, Taʿizz, Zabīd [*q.v.*] and al-Mahdjam, although coins are also known minted in al-Dumluwa, Ṣanʿāʾ, Ḥadjdja, al-Djāhilī, Ẓafār and Thaʿbāt (see below). An interesting feature of Rasūlid coins is the mint figure: for Aden, a fish; for Zabīd, a bird; for al-Mahdjam, a lion; and for Taʿizz and Thaʿbāt, a seated man. It is clear that between the years 735-*ca.* 777/1334-*ca.* 1376, during which coins were minted by the Rasūlids in their small mountain retreat, Thaʿbāt, very near Taʿizz, no coins during this period were minted in the latter place. Fairly recently Rasūlid coins minted in Mabyan have been published (see *Bibl.*, Porter).

3. Monuments. The Rasūlids were great builders also and the visitor today to the southern Yemeni city of Taʿizz can still see the remarkable design and craftsmanship of such buildings as the Djāmiʿ al-Muẓaffar, named after the second sultan, al-Malik al-Muẓaffar (647-94/1249-95) and the Ashrafiyya, named after al-Malik al-Ashraf II (764-78/1377-1401). Other monuments were built by the Rasūlid sultans in al-Djanad, Zabīd, Ibb and other parts of southern Yemen. The monuments show a clear dependence on outside influences, Egyptian, Syrian, etc., and mark an evident break with the early architectural tradition of the Yemen. This break should perhaps be more correctly assigned to the beginning of the Ayyūbid period (569-1173), but the number of Ayyūbid monuments still extant is small.

4. Trade and commerce. Political stability and an efficient administration provided an ideal background for thriving trade and commerce. With Aden as the main port, a remarkable range of goods flowed through, on their way to and from East Africa, Egypt and the Mediterranean, India, South-East Asia and China. Merchants were held in high esteem and were organised under a head of merchants, especially taken care of by the sultan himself. Usually the head of the merchants was in charge of the sultan's *matdjar al-sulṭānī*. Unfortunately, the two texts specifically providing details of this flourishing trade, *Mulakhkhaṣ al-fitan* (see *Bibl.*, Cahen and Serjeant, in *Arabica*) concerning Aden in 814/1411-12 and another from the time of al-Muẓaffar (647-94/1249-95), of which the correct title and author are unknown, remain un-

published. However, both are now providing information on Rasūlid trade and commerce which fully confirms how widespread, sophisticated and lucrative they were. Main imports coming into Aden were cloths, spices and perfumes from India, South-East Asia and China and slaves, ivory and pepper from East Africa. Main exports through Aden in Rasūlid times were textiles, lead and kohl going out to India from Egypt and North Africa. Although precise information is still scant, it can perhaps be noted that three main fees were payable on goods coming into, and going out from, the port of Aden in Rasūlid times. There were the *ʿus͟hūr*, customs dues only rarely in fact a "tenth", the *dilāla*, a commission fee, and the *s͟hawānī*, the latter literally meaning "galleys", a tax imposed from the time of the Ayyūbid al-Masʿūd (d. 626/1228) for the maintenance of the warships employed by the state in the protection of the merchant fleet.

5. Literature. Not surprisingly, the Rasūlid period saw a flowering of literature and a number of members of the royal house were themselves authors of some repute. Al-Muẓaffar Yūsuf (d. 694/1295) composed a selection of forty *ḥadīt͟hs*, a treatise on the movements of the heavenly bodies which is extant, a treatise on medicine (extant), a literary *Mufākahāt al-d̲j̲alīs* on entertainment and a volume in ten chapters on the pen, ink, gold and silver writing, etc. Al-As͟hraf ʿUmar (d. 696/1296) composed a treatise on astronomy entitled *al-Tabṣira fī ʿilm al-nud̲j̲ūm*, as well as another on veterinary science, *al-Mug͟hnī fi 'l-bayṭara*. Al-Afḍal ʿAbbās (d. 778/1377) produced a miscellany of writings of practical utility, intellectual interest and entertainment entitled *Fuṣūl mad̲j̲mūʿa fi 'l-anwāʾ wa 'l-zurūʿ wa 'l-ḥiṣād*. The contents include astronomical and astrological data, the astrolabe, agriculture, animals and animal husbandry, warfare, the mangonel, geographical information, a brief polyglot dictionary, etc. Al-As͟hraf Ismāʿīl (d. 803/1401) was the author of a general history of the Yemen entitled *Fākihat al-zaman wa-mufākahat al-ādāb wa 'l-fitan fī ak͟hbār man malaka 'l-Yaman*. The section of this work on the Rasūlids themselves which continues almost to al-As͟hraf's death is particularly useful. This list is by no means exhaustive, and is meant merely to indicate some of the remarkable achievements of the Rasūlid monarchs in the field of literature in its broadest sense.

RATAN, Bābā, Ḥād̲j̲d̲j̲ī, Abu 'l-Riḍā, a long-lived Indian saint, famous in almost all the lands of Islam, called Ratan b. Kirbāl b. Ratan al-Batrandī in the *Ḳāmūs* (Cairo 1330, iv, 226; see variants in *Iṣāba*, Calcutta, i, 1087; *Lisān al-mīzān*, ii, 450 ff.). The *nisba* (vocalised as al-Bitrandī in *Lisān al-mīzān*, and *Tād̲j̲ al-ʿarūs*, ix, 212) is derived, according to al-Zabīdī, from al-Bitranda, "a city in India", where, as we learn from the *Āʾīn-i Akbarī* (ed. Sayyid Aḥmad K͟hān, ii, 207 = tr. Jarrett, iii, 360), Ratan was born and where he died. This place is now called Bhatinda, lies in 30° 13′ N. and 75° E., and is the headquarters of the Govindgarh *taḥṣīl* (in Anāhadgaṛh Niẓāmat) of what was the Patiāla State, hence now in the East Pand̲j̲āb state of the Indian Union [see bhattinda]. It is an important railway junction and its old name was probably Tabarhind (see *Punjab States Gazetteers*, xvii, A; *Phulkian States*, Lahore 1909, 188 ff.). Three miles from this town, at a place called Ḥād̲j̲d̲j̲ī Ratan, exists the shrine of the saint, "a large building with a mosque and gateway, and surrounded by a wall on all sides" (*ibid.*, 80). The shrine, which seems to have been an important place of pilgrimage even in the 12th/18th century (see *Tād̲j̲ al-ʿarūs, loc. cit.*), is visited now mostly by Muslims, but Hindus also frequent it, particularly at the *ʿurs* (annual fair) of the Ḥād̲j̲d̲j̲ī, held from the 7th to the 10th D̲h̲u 'l-Ḥid̲j̲d̲j̲a, when a large number of Sādhūs also attend. For nearly five centuries the shrine has been held by Madārī *fakīrs*, whose ancestor S͟hāh Čānd came from Makanpur in Oudh. These *gaddīnashīrs* let their hair grow and do not marry.

Who was this Ḥād̲j̲d̲j̲ī Ratan? It appears from combining the extant narratives of over a dozen men who

had visited him in his native place from various parts of the Muslim world, that, in the 7th/13th century, there lived at Bhatinda a man, Ratan by name, about whom "it was said that he was a long-lived individual, who had met the Prophet, was present with him at the Ditch (at the siege of Medina in A.Ḥ. 6), when the Prophet prayed for his long life, that he was present when Fāṭima was conducted as a bride to ʿAlī, may God be pleased with both of them, and who transmitted *ḥadīth*" (*Tādj al-ʿarūs, loc. cit.*).

We get the following particulars also from some of these narratives about his mode of life, personal appearance, etc. A merchant of Khurāsān, who had interviewed him, tells us that Ratan was living under a *fūfal* tree (peepal?—for *fūfal* or *Areca catechu* does not fit in with the context), that his teeth were small like those of a serpent, that his beard, whose hairs were mostly white, was like thorns, that he lifted his eyebrows, which reached down to his cheeks, with a hook, that he said he had never been married, and the length of the space occupied by him, when sitting, was three cubits (al-Djanadī, quoted in *Iṣāba*, i, 1099). Another merchant, from the same land, found him laid like the young one of a bird, in a large basket, stuffed with cotton, which was hanging from a branch of a huge tree outside the village, and was worked by means of a pulley. He spoke in Persian, his voice being like the humming of a bee. He referred to all the inhabitants of the big village as his children or grandchildren (*Iṣāba*, i, 1094; *Lisān al-mīzān*, ii, 452, quoting the *Tadhkira* of al-Ṣafadī, who, in his turn, is quoting the *Tadhkira* of al-Wadāʿī (d. 726/1326), see Brockelmann, II², 10, S II; Ḥādjdjī Khalīfa, ii, 264). Contrary to the first narrative, which tells us that he was never married, the second makes him say that he had a large progeny, and, in fact, Ibn Ḥadjar includes two of Ratan's sons, Maḥmūd and ʿAbd Allāh, among the transmitters of *ḥadīth* from him.

Some of these narratives represent him as having been first converted to Christianity and then to Islam (*Iṣāba*, i, 1097-8).

The date of his death is given variously, as A.H. 596, 608, 612, 632 (*Iṣāba*), 700, and even 709 (*Āʾīn-i Akbarī*; *Fawāt al-wafayāt*).

The sayings of the Prophet, which Ratan transmitted from him directly, called *al-Rataniyyāt* (cf. *Tādj al-ʿarūs, loc. cit.*), were collected in book form and a copy, containing about 300 *ḥadīth*, and dated A.H. 710, was seen by Ibn Ḥadjar. These were handed down from Ratan by Abu 'l-Fatḥ Mūsā b. Mudjallī al-Ṣūfī, and al-Dhahabī suspected that either he had forged them or that they had been forged for Mūsā by someone who had invented for him the story of Ratan (*Iṣāba*, i, 1090). An earlier collection of forty sayings was made, out of Mūsā's stock, by Tādj al-Dīn Muḥammad b. Aḥmad al-Khurāsānī. Some of these sayings, of which about eighteen are quoted in the *Iṣāba*, are preserved in manuscripts in Leiden, Berlin and Lucknow, and show "traces of both Shīʿite (or perhaps better ʿAlide) and Ṣūfic tendencies" (*Journal of the Panjab Historical Society*, ii, 112). Al-Fīrūzābādī had heard them from the companions of Ratan's companions (*Ḳāmūs, loc. cit.*).

The claims of Ratan widely attracted the attention of Muslims in the 7th/13th century, and caused a lot of differences of opinion in Muslim circles in subsequent centuries, as would be indicated by the following list of some outstanding personalities, who expressed themselves for or against his main claim, viz. of being a long-lived Companion of the Prophet.

For: 1. Shaykh Raḍiyy al-Dīn ʿAlī-yi Lālā al-Ghaznawī (d. 642/1244), who associated with Ratan in India and received from him a comb, with the transmission of which the Prophet had entrusted Ratan; 2. Rukn al-Dīn ʿAlāʾ al-Dawla al-Simnānī (d. 736/1336), whom the above-mentioned comb ultimately reached, along with a *khirḳa* received by ʿAlī-yi Lālā from Ratan. Rukn al-Dīn attested this in writing (see *Nafaḥāt al-uns*, Calcutta 1858, 50, with notes of Lārī on the passage); 3. ʿAbd al-Ghaffār b. Nūḥ al-Ḳūṣī (d. 708/1309), the author of the *Kitāb al-Waḥīd fī sulūk ahl al-tawḥīd*, for which see Ḥādjdjī Khalīfa, vi, 432, cf. Brockelmann, II², 142 (see *Iṣāba*, i, 1096); 4. al-Djanadī (d. 732/1332), the author of the *Taʾrīkh al-Yaman*; cf. Brockelmann, II², 234 (in *Iṣāba*, i, 1096-7); 5. Ṣalāḥ al-Dīn al-Ṣafadī (d. 764/1363); see above (previous col.); 6. Shams al-Dīn Muḥammad b. Ibrāhīm al-Djazarī (d. 739/1338-9), the author of *Ḥawādith al-zamān wa-anbāʾihi* for which see Sarkīs, *Muʿdjam al-maṭbūʿāt*, col. 696, is also apparently to be added to this list; see *Iṣāba*, i, 1092; 7. Khʷādja Muḥammad Pārsā (d. 822/1419), see *Āʾīn-i Akbarī*, ii, 207 (= tr. Jarrett, iii, 360); 8. Nūr Allāh Shūshtarī (about 1010), who maintains that the Sunnī opposition to Ratan's claim was really due to (*a*) Ratan's being a Shīʿī, most of whose *ḥadīth* was in praise of the *Ahl al-Bayt* and their partisans, and to (*b*) the jealousy of the contemporary Sunnī *ʿulamāʾ*, who were thrown into shade by the *Ṣaḥābī*, who could transmit *ḥadīth* directly from the Prophet (*Madjālis al-muʾminīn*, Tehran 1299/1882, 309).

Against: 1. al-Dhahabī (673-748/1274-1348), who attacked Ratan violently in his *Tadjrīd* (quoted in *Iṣāba*, i, 1087), *Mīzān al-iʿtidāl*, i, 336, and *al-Mushtabih*, 215, and even wrote a monograph on the subject entitled *Kasr wathan Ratan* (quoted in *Iṣāba*, i, 1088-9), in which he insinuated that only those could admit his claim to Companionship of the Prophet who believed in the continued existence of Muḥammad (al-Muntaẓar) b. al-Ḥasan (the twelfth Imām), and the palingenesis (*radjʿa*) of ʿAlī (see *Iṣāba*, i, 1091; cf. *Lisān al-mīzān*, ii, 452); 2. ʿAlam al-Dīn al-Birzālī al-Shāfiʿī (d. 739/1339) (see *Fawāt al-wafayāt*, i, 163); 3. Burhān al-Dīn Ibn Djamāʿa (d. 790/1388, see Brockelmann, II², 136) (quoted in *Iṣāba*, i, 1101); 4. Madjd al-Dīn al-Fīrūzābādī, who was in India about A.H. 785-90 and had visited Bhatinda (in *Ḳāmūs, loc. cit.*; but cf. *Iṣāba*, i, 1102); 5. Ibn Ḥadjar al-ʿAsḳalānī (d. 852/1449), in *Iṣāba*, i, 1101-2, and in *Tabṣīr al-muntabih*, Rāmpūr ms., p. 79, also quoted in *Tādj al-ʿarūs*, ix, 212; 6. al-Zabīdī (d. 1205/1791), in *Tādj al-ʿarūs, loc. cit.*

Apart from the above literary tradition, the Muslims as well as the Hindus of Bhatinda, have preserved local versions of Ratan's story.

The earlier Muslim version represents him as the Minister of Vena Pāl, the Hindu Rādja of Bhatinda, at the time of Shihāb al-Dīn Muḥammad Ghūrī's invasion, when he betrayed the fortress to the Muslims. He was converted to Islam and performed the *ḥadjdj*. According to a fuller version, still current in Bhatinda, he was a Čawhān Rādjpūt, Ratanpāl by name. He knew by his knowledge of astrology that the Prophet would be born in Arabia and spread Islam. In order to be able to see him, he practiced restraining his breath. After the miracle of *shaḳḳ al-ḳamar* (splitting the moon into two), which he witnessed, Ratan set out for Mecca, was converted to Islam, and lived with the Prophet for thirty years. Then he returned to India and stayed where his shrine is now, continuing the practice of restraining his breath. Later, when Shihāb al-Dīn Ghūrī proceeded to Bhatinda to fight Prithi Rādj, the sultan visited the Ḥādjdjī, the saint per-

formed a miracle and became instrumental in the conquest of the fort, shortly after which event he died, at the age of 700 years (*Journal of the Panjab Historical Society*, ii, 98; *Glossary of the tribes and castes of the Panjab and N.W.F. Province*, i, 551).

The Hindu version, also still current at Bhatinda, asserts that he was a much-travelled, miracle-working Hindu Sādhū, of the Nāth clan, and that his name was Ratan Nāth. He won the confidence of the Muslims by manifesting his miraculous powers in Mecca, which he had visited in his wanderings. He then came to Bhatinda, and lived and died there. He was buried and his *samādh* was built, which the Muslim replaced by a *khānḳāh*, and called him Ḥādjdjī, on account of his visit to Mecca (see *JPHS*, ii, 100; it gives some other Hindu versions also).

For Ratan's connection with some versions of Gūga's legend, see *Glossary of the tribes and castes of the Panjab and N.W.F. Province*, i, 175, 179, 181.

Horovitz reconciled these divergent versions in a striking theory: "It may be that Ratan was originally a Yogī, who as such was believed to have been alive hundreds of years and who on becoming acquainted with the Muḥammadan aspects of longevity, used them to strengthen his position in the eyes of his Muḥammadan followers... The saint had two faces: he showed that of a long-lived Yogī to the Hindūs, that of a companion of the Prophet to the Muḥammadans" (*JPHS*, ii, 113-14).

Bibliography: J. Horovitz's article on *Bāba Ratan, the Saint of Bhatinda*, in *JPHS*, ii, 97 ff., gives the fullest information, with references, to which may be added: Ibn Ḥadjar, *Lisān al-mīzān*, Ḥaydarābād 1330, ii, 450 ff. (mostly repeats his own article in *Iṣāba*); Zabīdī, *Tādj al-ʿarūs*, ix, 212; H.A. Rose, *A glossary of the tribes and castes of the Punjab and North-West Frontier Province*, 1919, i, 152, 175, 179, 181. In an Arabic-Persian *Kitāb al-Arbaʿīn* (ms. in the Pandjāb University Library, defective at the beginning), a fuller version of the story given by Horovitz on p. 110 n. 1, occurs, with the name of Hārūn substituted for that of Sultan Maḥmūd.

(Mohammad Shafīʿ)

RĀTIB (A., pl. *rawātib*), a word meaning what is fixed and hence applied to certain non-obligatory *ṣalāts* or certain litanies. The term is not found in the Ḳurʾān nor as a technical term in *Ḥadīth*. On the first meaning, see NĀFILA. As to the second, it is applied to the *dhikr* [*q.v.*] which one recites alone, as well as to those which are recited in groups. We owe to Snouck Hurgronje a detailed description of the *rawātib* practised in Acheh [*q.v.*].

Bibliography: C. Snouck Hurgronje, *De Atjèhers*, Batavia-Leiden 1893-4, ii, 220. English tr. O'Sullivan, *The Achehnese*. Leiden 1906, ii, 216; Constance E. Padwick, *Muslim devotions*, London 1961, 22 (definition), 291 and 301 (lists of *rawātib* ascribed to well-known *shaykhs*).

(A.J. Wensinck)

RAṬL [see MAKĀYIL].

RAWĀḤA, Banū, a Shāfiʿī family originally from the town of Ḥamāt [*q.v.*], numerous members of which held public office in this town, as also in Damascus and Tripoli during the Ayyūbid period and in the early times of the Baḥriyya Mamlūks. The Banū Rawāḥa, of Medinan origin and belonging to the tribe of Khazradj, seem to have had an ancestor in the Companion of the Prophet ʿAbd Allāh b. Rawāḥa b. Imriʾ al-Ḳays, who distinguished himself in the majority of his military campaigns, became Muḥammad's accredited poet and died a martyr's death at Muʾta [*q.v.*] in 8/629; this would account for the fact that numerous members of this family are known to have born the name ʿAbd Allāh. (Ibn Saʿd, *Ṭabaḳāt*, ed. Sachau, iii/2, 79-82; al-Ṣafadī, *Wāfī*, xvii, 168-70; art. ʿABD ALLĀH B. RAWĀḤA).

Four members of a primary branch of the Banū Rawāḥa, linked by direct line of descent, are known to us:

(1) Abū Muḥammad ʿABD ALLĀH b. al-Ḥusayn, "*khaṭīb* Ḥamāt", died in 561/1166 (or 562/1167), aged 75. Official preacher of Ḥamāt and poet, he composed, while passing through Baghdād in the course of the Pilgrimage, numerous poems in praise of the caliph al-Muḳtafī (Sibṭ Ibn al-Djawzī, *Mirʾāt al-zamān*, viii/1, 263; *Wāfī*, xvii, 142-4).

(2) His son, Abū ʿAlī AL-ḤUSAYN (515-85/1121-89), *faḳīh* and poet; his surviving works include an ode honouring Ṣalāḥ al-Dīn and a few fragments of erotic poetry (al-ʿImād al-Iṣfahānī, *Kharīdat al-ḳaṣr (Shām)*, i, 484, and Yāḳūt, *Muʿdjam al-udabāʾ*, x, 46-56). His life was eventful; taken prisoner, he lived in Sicily, then on his release he spent some time in Alexandria, returned to Syria and died a martyr's death at the battle of Mardj ʿAkkā (*Wāfī*, xii, 413-14).

(3) The son of the above-named, ʿIzz al-Dīn Abu 'l-Ḳāsim ʿABD ALLĀH, born in Sicily in 560/1165, during the captivity of his father; in Alexandria, he had numerous audiences with the eminent traditionist al-Silafī, between 570/1175 and 575/1179, the date of the latter's death. A *muḥaddith* himself and a poet, he lived in Aleppo and in Ḥamāt, where he was buried in Djumādā II 646/July-August 1248 (al-Dhahabī, *Tārīkh*, ms. Bodl. Land 305, fol. 212; *Wāfī*, xvii, 144-5).

(4) His grandson, Nūr al-Dīn AḤMAD b. ʿAbd al-Raḥmān b. ʿAbd Allāh, known as "*al-khaṭīb*", held the post of *kātib al-inshāʾ* at Tripoli and in the occupied cities (*futūḥ*). He died in Ḥamāt in Shaʿbān 712/December 1312 (Ibn al-Ṣuḳāʿī, *Tālī al-wafayāt*, 45 (44 in the Arabic text) and 148; *Wāfī*, vi, 56-7).

From a collateral branch of the Banū Rawāḥa, another known individual is Zakī al-Dīn HIBAT ALLĀH b. Muḥammad b. ʿAbd al-Wāḥid b. Rawāḥa, apparently a first cousin to al-Ḥusayn (cf. no. 2, above), who lived in Damascus and died there in Radjab 623/June-July 1226. A wealthy merchant, poet and sworn witness (*muʿaddal*), enjoying much respect in Damascus, he founded two *madrasas* for the teaching of Shāfiʿī *fiḳh*, one at Aleppo, the other in Damascus, this being the Rawāḥiyya, founded in 622/1225. No longer in existence, it was situated in the interior of the Bāb al-Farādīs, to the north of the Great Mosque. Its founder lived there until his death in an apartment to the east of the *madrasa*, opposite the opulent library which he had also founded. He had richly endowed this *madrasa*, thus enabling students of humble means to lodge there, including the eminent *muḥaddith* and *faḳīh* al-Nawawī (d. 676/1277 [*q.v.*]). He had laid down the following conditions for admission to this *madrasa*: "Neither Jew nor Christian nor anthropomorphist Ḥanbalī (*ḥashwī*) shall enter here." Before his death he had designated as superintendent (*nāẓir*) of the *madrasa* the great *faḳīh* Taḳī al-Dīn Ibn Ṣalāḥ al-Shahrazūrī (d. 643/1245); but after his death two individuals, the Ṣūfī Ibn ʿArabī and a grammarian named Khazʿal, who both lived close to the *madrasa* in question, accused Ibn Rawāḥa of having dismissed him.

Serious disruption ensued in the functioning of the *madrasa*, at least until the time of the death in 665/1267 of Abū Shāma, our principal source of information.

Pouzet, *Damas au VII^e/XIII^e siècle*, Beirut 1988, 155, 157, 170. (L. Pouzet)

RĀWALPINDI, the name of a city, district and division of the northern Pand͟jāb in Pākistān. The city lies in lat. 33° 40′ N. and long. 73° 08′ E. at an altitude of 530 m/1,750 feet. In British Indian times, it was one of the most important military stations of northern India, and is now the headquarters of the Pākistān Army, with extensive cantonments, as well as being an important commercial and industrial centre and the starting-point of the route into Kas͟hmīr. From 1959 to 1969 it was the capital of Pākistān before the removal of this to the new city of Islāmābād 14 km/9 miles to its northeast. The population of the city and of the surrounding district and division is almost wholly Muslim. In 1972 the city had an estimated population of 615,000.

Since Rāwalpindi lies in the path of invaders from the north-west, much of its history resembles that of the Pand͟jāb [*q.v.*]. The district formed part of Gandhāra and was included in the Persian empire of the Achaemenids. About ten miles to the north-west of the town lie the ruins of the ancient city of Taks͟haçila (Taxila) which was an important seat of learning in the 4th century B.C. The Muslim invaders experienced much trouble from the turbulent Gakkhar tribes of this area who are still the most important tribe socially in the district. In the days of Akbar [*q.v.*], the territories included in the modern district of Rāwalpindi formed part of the *sarkar* of Sind Sāgar Dōāb in the *ṣūba* of Lahore (*Āʾīn-i Akbarī*, tr. Jarrett, ii, 324).

Rāwalpindi grew in importance when a Sikh adventurer, Sardār Milka Singh, occupied it in 1765 and brought in colonists to it, but after 1849 it passed, with the rest of the Pand͟jāb, under British control.

Marshall, *Archaeological discoveries at Taxila*, 1913; *Guide to Taxila*, 1918; *Rāwalpindi District Gazetteer*, 1907; H.A. Rose, *A glossary of the tribes and castes of the Punjab and North-West Frontier Province*, 1919, s.v. Gakkhars.

(C. Collin Davies-[C.E. Bosworth])

al-**RĀWANDĀN** (present-day [Turkish] Revanda Kalesi; Frankish Ravendel; Armenian Arevĕntan), a fortress of the north Syrian borderlands, situated south of Gaziantep (ʿAyn Tāb [see ʿAYNTĀB]), and about 16 km/10 miles west of Kilis on the Turkish side of the modern frontier with Syria. It occupies the top of a conical hill overlooking the upper ʿAfrīn River. We first hear of the place in 490-1/1097, at the start of the Crusades, when it was seized by Baldwin of le Bourg from the Turks, who had taken it from the Armenians, apparently the first occupants. Baldwin restored it to the Armenians, but later retrieved it from them, giving it, in 495-6/1102, to Joscelin I. After a brief period of Byzantine control following on the capture of its Frankish ruler Joscelin II, Count of Courtenay, it was secured in 546/1151-2 by Nūr al-Dīn Maḥmūd b. Zangī [*q.v.*], passing in due course from Zangid to Ayyūbid hands. Subsequent rulers included al-Malik al-Ẓāhir, ruler of Aleppo, and S͟hihāb al-Dīn Ṭog͟hril, regent for al-Ẓāhir's infant heir al-Malik al-ʿAzīz. In 624/1226-7, Ṭog͟hril gave it to al-Malik al-Ṣāliḥ Aḥmad of ʿAyn Tāb. On the latter's death, the fortress passed to al-Ṣāliḥ's nephew, al-Malik al-Nāṣir Yūsuf II, the ruler of Aleppo. Thereafter, al-Rāwandān's fortunes shared those of the rest of northern Syria: the onslaught of the Mongols, followed by their retreat, and the establishment of Mamlūk rule under Baybars. Little remains today of the fortress except the entrance arrangements, and the principal salients of the walls.

(D.W. Morray)

RĀWANDĪ, Muḥammad b. ʿAlī, Persian historian who flourished at the end of the Sald͟jūḳ period. Details of his life are known only from information in his sole surviving work, the *Rāḥat al-ṣudūr wa-āyat al-surūr*, a dynastic history of the Great Sald͟jūḳs [*q.v.*]. Rāwandī belonged to a scholarly family from Rāwand, near Kās͟hān. He studied Ḥanafī *fiḳh* in Hamad͟hān from 570/1174 to 580/1184 and became a skilled calligrapher and gilder. When sultan Ṭog͟hrīl III b. Arslan wanted a beautiful Ḳurʾān, Rāwandī, as a member of the team of craftsmen, gained favour at court. After Ṭog͟hrīl's imprisonment in 586/1190, Rāwandī found other patrons and one of them, a certain S͟hihāb al-Dīn al-Kās͟hānī, encouraged him to begin writing the *Rāḥat al-ṣudūr* in 599/1202.

Rāwandī would have doubtless liked to dedicate his work to a Sald͟jūḳ prince of Persia. After the dynasty's demise in Persia in 590/1194 and the advent of the K͟hwārazms͟hāh, whose rule Rāwandī deplores (30-2), he sought patronage from Ḳonya, wanting his book to be in the "name of a Sald͟jūḳ sultan" (62). Indeed, he went there personally to present his work (64). Originally, he had dedicated it to sultan Sulaymān II (d. 600/1204), but he was obliged to re-address his panegyrics to Kayk͟husraw I [*q.v.*] after his accession that year (19-38). The re-orientation of Rāwandī's work towards Rūm is a clear indication that early 7th/13th century Persian scholars viewed the Anatolian Sald͟jūḳ dynasty as the new champions of Sunnī Islam, and Ḳonya as the centre for the continuation of Persian scholarly traditions.

For its account of Sald͟jūḳ history until Ṭog͟hrīl III, the *Rāḥat al-ṣudūr* is one of several Persian historical sources dependent on the *Sald͟jūḳ-nāma* of Nīs͟hāpūrī (d. *ca.* 582/1182 [*q.v.*]). Rāwandī's history is, however, an invaluable first-hand source for Ṭog͟hrīl's reign. The work is deeply permeated with the *Fürstenspiegel* ethos. Far from being a detailed history, it is a didactic essay on exemplary kingship in which a skeletal narrative framework is fleshed out with illustrative anecdotes, Arabic aphorisms (with accompanying Persian translations) and poetic quotations (notably from Niẓāmī and the *S͟hāh-nāma*, as well as lesser-known poets, including Rāwandī himself). The last section of the book discusses courtly accomplishments and is drawn from Ḥanafī legal works (418). Generally, Rāwandī's approach resembles that of Muḥammad Malaṭyawī in his *Barīd al-saʿādat*, dedicated to Kayk͟husraw's successor in Ḳonya, Kaykāwūs (cf. Fouchécour, 430).

Rāwandī's history was often used by later Persian

historians (especially Yazdī) and was translated into Turkish in the reign of sultan Murād II (cf. Barthold, 116; Storey, i, 257). Rāwandī also wrote a polemical work against the Rāfiḍīs [see RĀFIḌIYYA] and another on calligraphy (*Rāḥat al-ṣudūr*, 394, 445), which have apparently not survived.

(CAROLE HILLENBRAND)

AL-**RĀWANDIYYA**, a term referring to an extremist Shīʿī group which originated within the ʿAbbāsid movement in Khurāsān. The term was subsequently expanded to include at times the entire ʿAbbāsid *shīʿa*, but unless otherwise stated it will be used in this article in its original sense. It is said in some sources to derive from al-Ḳāsim b. Rāwand or from Abu 'l-ʿAbbās al-Rāwandī, both of whom are otherwise unknown; other sources more plausibly derive it from ʿAbd Allāh al-Rāwandī, who appears in a list of propagandists (*duʿāt*) of Muḥammad b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās [*q.v.*] (see *Akhbār al-dawla al-ʿabbāsiyya*, ed. ʿAbd al-ʿAzīz al-Dūrī and ʿAbd al-Djabbār al-Muṭṭalibī, Beirut 1971, 222). Both ʿAbd Allāh's son Ḥarb (d. 147/764) and his grandson Naṣr b. Ḥarb were senior officers in the ʿAbbāsid army in ʿIrāḳ during al-Manṣūr's reign. Ḥarb who, like his son, is said to have been a member of the Rāwandiyya [see KAYSĀNIYYA], participated in the crushing of the revolt of the Ḥasanid Ibrāhīm b. ʿAbd Allāh [*q.v.*] before being killed in Armenia by Turkish rebels (al-Ṭabarī, iii, 296, 353); he was also given an estate in an area north of the Round City of Baghdād which became known after him as al-Ḥarbiyya (cf. *ibid.*, iii, 328).

Initially, the Rāwandiyya appear to have argued (in line with the bulk of the Hāshimiyya) that the imāmate had passed from ʿAlī via Muḥammad b. al-Ḥanafiyya to the latter's son Abū Hāshim ʿAbd Allāh and then, in accordance with Abū Hāshim's testament (*waṣiyya*), to Muḥammad b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās (al-Nawbakhtī, *Firaḳ*, 29-30; Saʿd b. ʿAbd Allāh, *Maḳālāt*, 39-40; al-Baghdādī, *Farḳ*, 40); they are therefore occasionally counted among the Kaysāniyya. Al-Nawbakhtī's source (evidently Hishām b. al-Ḥakam [*q.v.*]), referring to the group as *ghulāt al-rāwandiyya*, adds that the doctrines which they espoused included deification of the imāms, belief in their omniscience, and dispensation from the religious law for those who know the imāms; he notes that their strength increased when most of the followers of ʿAbd Allāh b. Muʿāwiya [*q.v.*] joined their ranks. Some further details are provided by al-Madāʾinī's [*q.v.*] father (as cited in al-Ṭabarī, iii, 418) when he describes the first recorded Rāwandī uprising, crushed by Asad b. ʿAbd Allāh al-Ḳasrī [*q.v.*] during his governorship of Khurāsān (116-19/734-7). A leper called al-Ablaḳ ("piebald"), who aspired to lead the Rāwandiyya at the time, upheld the doctrine of the periodic incarnation of the deity on earth by claiming that the spirit of Jesus had passed on to ʿAlī and then, successively, to each of the imāms up to Muḥammad b. ʿAlī's son Ibrāhīm [see IBRĀHĪM B. MUḤAMMAD]; he and his followers also sanctioned communal access to women.

Most sources agree that the Rāwandī doctrine of the imāmate underwent a significant shift after the ʿAbbāsid rise to power: the imāmate was no longer believed to have started with ʿAlī rather than with al-ʿAbbās, from whom it passed to his descendants. The Rāwandiyya based their belief in al-ʿAbbās's succession to the Prophet on the ancient inheritance laws whereby the paternal uncle excludes daughters, cousins and nephews; and they interpreted accordingly the Ḳurʾānic verse "Those related by blood are nearer to one another in the Book of God" (VIII, 75, XXXIII, 6). There are indications that this doctrine had its advocates in the ʿAbbāsid court some time before its emergence as an official tenet under al-Manṣūr and especially under al-Mahdī (cf. M. Sharon, *Black banners from the East*, Jerusalem and Leiden 1983, 82-99); it remains to be established whether it was first elaborated among the Rāwandiyya and was then adopted as the official ʿAbbāsid line or whether, in contrast, the Rāwandiyya mirrored the changing court ideology.

In a report from an unnamed source, Ibn al-Djawzī (viii, 29) describes the Rāwandiyya as a group (*ṭāʾifa*) of Bāṭinīs (i.e. Ismāʿīlīs) known as Sabʿiyya, who believed that the cycle (*dawr*) of the imāms which began with al-ʿAbbās ended with the seventh, al-Manṣūr. The reference to the Rāwandiyya as Bāṭinīs must be a back-projection; at the same time, if indeed they insisted on a line of seven imāms, this would make them the earliest "Sevener" Shīʿī group, predating the Wāḳifiyya who emerged after the death of Mūsā al-Kāẓim [*q.v.*].

The sources present a confused and sometimes contradictory picture of the relationship between the Rāwandiyya and other groups in the early ʿAbbāsid period. Some (such as Ps.-Nāshiʾ) identify them with the Hurayriyya (followers of Abū Hurayra al-Rāwandī or al-Dimashḳī), and regard the Rizāmiyya (followers of Rizām b. Sābiḳ) as an offshoot of the Rāwandiyya/Hurayriyya. Others (e.g. Abū Ḥātim al-Rāzī [*q.v.*]) maintain that both the Rāwandiyya and Hurayriyya upheld the pure ʿAbbāsid line, but that the Rāwandiyya also believed in the divinity of al-Manṣūr and the prophethood of Abū Muslim; the Rizāmiyya, in turn, held to the earlier line of imāms via Abū Hāshim, believing in addition that Abū Muslim had not died. In Abū Ḥātim al-Rāzī's *K. al-Zīna* these three groups are described as comprising the ʿAbbāsiyya (i.e. the ʿAbbāsid *shīʿa*). In contrast, al-Nawbakhtī's source identifies the Rāwandiyya with the ʿAbbāsid *shīʿa* as a whole and says that it consisted of three subgroups: the Abū Muslimiyya, for whom Abū Muslim was the living imām; the Rizāmiyya who, in addition to following the line of imāms via Abū Hāshim, secretly believed in Abū Muslim (presumably while acknowledging that he had died); and the Hurayriyya, described as "the pure ʿAbbāsids" (*al-ʿabbāsiyya al-khullaṣ*), who upheld the imāmate from al-ʿAbbās.

There are scattered references to disturbances involving Rāwandīs in the first ʿAbbāsid decade. In 135/752-3 a group from Ṭālaḳān, headed by Abū Isḥāḳ (perhaps Khālid b. ʿUthmān, an ʿAbbāsid *dāʿī*

who had been commander of Abū Muslim's guard), attacked and killed one of Abū Muslim's officers before they themselves were slain (al-Ṭabarī, iii, 82). After this incident they were no longer heard of in Khurāsān, but they reappeared a few years later in the West. Here the most widely reported event is the riot sometimes referred to as *yawm al-rāwandiyya*. Its date is variously given as 136 or 137 (al-Ṭabarī, citing an anonymous source), 139 or the beginning of 140 (al-Balādhurī), 140 (Ibn al-ʿIbrī), 141 (al-Ṭabarī and others) and 142 (al-Dīnawarī), and it is said to have taken place in al-Hāshimiyya [*q.v.*] (or in Baṣra, according to al-Dīnawarī, whose version also differs in other details). The accounts in al-Balādhurī (iii, 235-6) and al-Ṭabarī (iii, 129-33) speak of 600 Rāwandīs who took part, all of whom were Khurāsānī followers of Abū Muslim who believed that Ādam's soul resided in ʿUthmān b. Nahīk (one of al-Manṣūr's security officers who was killed in the ensuing combat) and that al-Haytham b. Muʿāwiya (like ʿUthmān, an ʿAbbāsid *dāʿī*) was the angel Gabriel. They began to circumambulate al-Manṣūr's palace, hailing him as their God (*rabb*) who provided them with food and drink. At this point al-Manṣūr, who seems at first to have tolerated (or even welcomed) their excesses, drew the line. He had 200 of their leaders incarcerated and forbade the others to congregate; disregarding his order, they stormed the prison and released their colleagues. When they headed back towards the palace al-Manṣūr left on foot and was provided with a saddled horse outside. The Shaybānī leader Maʿn b. Zāʾida [*q.v.*], an erstwhile Umayyad general who had been in hiding from the ʿAbbāsids, came to the rescue and, in a display of courage which won al-Manṣūr's admiration, managed to beat off the attackers, virtually all of whom were killed. According to other reports, Abū Naṣr Mālik b. al-Haytham (who had been among the original *nuḳabāʾ*) personally guarded the palace gates, while the military commander Khāzim b. Khuzayma, together with the local populace, was instrumental in overcoming the Rāwandīs. One of the attackers, Rizām (founder of the Rizāmiyya?), was granted amnesty after he sought refuge with the caliph's son Djaʿfar. The reason given in the sources for the attackers turning against al-Manṣūr is their anger at the arrest of their leaders; it would seem that they were also bitterly disappointed with the caliph's unwillingness to come up to their expectations of him. That al-Manṣūr was in serious danger is confirmed by reports that he was almost killed by the rioters (e.g. Ibn al-Athīr, v, 502: *kādū yaḳtulūnahu*). The incident dramatically pointed up the caliph's vulnerability and contributed to his decision to look for a capital elsewhere, a decision which eventually led to the beginning of work on Baghdād.

Two reports concerning the riot are especially noteworthy. The first (al-Ṭabarī, iii, 418-9) describes some Rāwandīs as jumping to their deaths from the green dome of the palace (referred to as al-Khaḍrāʾ, which was also the name of the green dome of the Baghdād palace; cf. J. Lassner, *The topography of Baghdad in the early Middle Ages*, Detroit 1970, 135-6). That such behaviour was not atypical is suggested by an account concerning another group of Rāwandīs. These men revolted in Aleppo and Ḥarrān in 141/758-9; believing themselves to be in the same rank (*manzila*) as angels, they mounted a hill in Aleppo, put on silk clothes, jumped off and perished (Ibn al-ʿAdīm, *Zubdat al-ḥalab min taʾrīkh Ḥalab*, ed. Sāmī al-Dahhān, i, Damascus 1370/1951, 59-60). In the second report (al-Balādhurī, iii, 235) the Rāwandiyya state that, if al-Manṣūr wished, he could make the mountains move, and if he were to order them to turn their backs to Mecca during prayer they would comply. This formulation also appears in Ibn al-Muḳaffaʿ's [*q.v.*] *Risāla fi 'l-ṣaḥāba* which he composed for al-Manṣūr (probably between 136/754 and 142/759), when he describes the views of some over-zealous Khurāsānian troops (ed. Muḥammad Kurd ʿAlī, Cairo 1946, 120; cf. S.D. Goitein, *A turning point in the history of the Muslim state*, in his *Studies in Islamic history and institutions*, Leiden 1966, 156). It is thus possible that the troops against whom he warned the caliph were the Rāwandiyya.

Hardly anything is heard of this group after the death of al-Manṣūr, though some of them were involved in the struggle over his succession. The more extreme elements merged into other sects known collectively as Khurramiyya [*q.v.*]. The number of those who upheld al-ʿAbbās's designation as Muḥammad's successor appears also to have diminished sharply. Marwān b. Abi 'l-Djanūb [*q.v.*] still wrote for al-Mutawakkil a poem about the hereditary rights of the ʿAbbāsids (al-Ṭabarī, iii, 1465-6, cited in Goldziher, *Muslim studies*, ed. S.M. Stern, ii, London 1971, 100-1); yet by the time of al-Sharīf al-Murtaḍā (d. 436/1044) the last adherents of this doctrine had apparently disappeared (cf. *al-Shāfī fi 'l-imāma*, Tehran 1301/1884, 99).

(E. Kohlberg)

RAWĀNDIZ, Ruwāndiz, a town of Kurdish ʿIrāḳ, the chef-lieu of a *ḳaḍāʾ* in the *liwāʾ* of Irbil. In *ca.* 1940 it had a population of 7,000. It lies in lat. 36° 37′ N. and long. 44° 33′ E. at an altitude of *ca.* 914 m/3,000 feet on a route which connects Mawṣil and Irbil [*q.vv.*] via the Garū Shinka pass (1,830 m/6,000 feet) with Mahābād/Sāwdj-Bulāḳ [*q.vv.*]. The route was described in early Islamic times only by Yāḳūt, enumerating seven stages from Mawṣil to Sāwdj-Bulāḳ.

History. It will be evident that Rawāndiz, situated at the intersection of the communications of Kurdistān as well as of roads leading farther afield, has always owed its importance to its position. It should also be remembered that in the period of prosperity of the Nestorian Church all this country played a great part, mainly on account of the influence of the Metropolitan see of Arbil. We may mention (cf. Hoffmann, *Auszüge*) the names of Dara, Hanitha, Shaḳlāwa (from which came one of the mss. which enabled the Abbé Chabot to establish the text of the *Synodicon orientale*, Paris 1902), as well as the fact that there were many monasteries in these parts. According to the late Metropolitan Mar Ḥanānīshōʿ, the *maḥall* of Barādost (not to be confused with the Barādost of the Shiḳāḳ Kurds to the north of Tergawar; see URMIYA) before the First World War had still a few Christian communities. From the point of view of Kurdish history, the destinies of Rawāndiz have been frequently those of Shahrizūr, of which it formed part at certain times. The Persian historian Aḥmad Kasrawī Tabrīzī (*Shahriyārān-i gum-nām*, ii, *Rawādiyān*, Tehran 1308/1929) gives us some notes (125, 133-6) on Rawāndiz in the time of the Aḥmadīlī [*q.v.*] Atābeks (501-624/1106-1227) the last representative of whom, a woman, became the wife of Djalāl al-Dīn Khwārazmshāh. A local history of the *wālīs* of Ardalān, a resumé of which was published by B. Nikitine, in *RMM*, xlix, 70 ff., also contains some information about the families ruling in Rawāndiz down to A.H. 1249.

In the early 19th century, one of these lords, the half-blind Muḥammad Khor ("the blind"), dominated the local tribes and established his power from 1826 onwards as far as the Little Zāb and Irbil and then in 1833 as far as ʿAmādiyya and Zakhō, and minted coins of his own as *al-Amīr al-Manṣūr Muḥammad Bīk*; but after his fall in 1836 and deportation by the Ottomans, Rawāndiz shrank once more to a place of minor significance only. During the First World War the Rawāndiz road was used in the winter of 1914-15 by Khalīl Bey's troops advancing on Urmiya (contrary to H. Grothe, *Die Türken und ihre Gegner*, Frankfurt a.M. 1915) and later in July 1916 by the Russian Rybalčenko. After the armistice and during the period till December 1925, when the League of Nations made its decision on the *wilāyat* of Mawṣil, Rawāndiz was the focus for attempts at some form of autonomy or independence under the Kurdish chief Shaykh Maḥmūd Barzāndjī, who in 1922 proclaimed himself in the *liwāʾ* of Sulaymāniyya "Pādishāh of Kurdistān", and also for Turkish attempts at this time to retain the region within Turkey, with a Turkish *ḳāʾim-maḳām*, ʿAlī Shefīḳ, appointed to Rawāndiz in 1922. The town was, however, recovered for the new Kingdom of ʿIrāḳ government in April 1923 by a combined operation of the ʿIrāḳī army and local Assyrian Christian levies, and an administration installed there under Sayyid Ṭāhā of Neri as *ḳāʾim-maḳām*. In 1925 a League of Nations commission awarded the *wilāyet* of Mawṣil, including Rawāndiz, to ʿIrāḳ.

Language. Kurdish is the language spoken in this region, except by the town dwellers (Irbil, Altūn Köprü, Kirkuk, etc.) of Turkish origin. According to O. Mann (*Die Mundart der Mukri Kurden*, ii, 205), the dialect of Rawāndiz is very like that of Shamdīnān, but E.B. Soane did not share this opinion (*Kurdish grammar*, London 1913). F. Jardine's manual, *Bahdinan Kurmanji, a grammar of the Kurmanji of the Kurds of Mosul division and surrounding districts of Kurdistan*, London 1922, is more particularly devoted to this dialect.

(B. Nikitine-[C.E. Bosworth])

RAWḌA (A.), literally "garden"; an island in the Nile in the southern part of Cairo about 3 km/2 miles long and with an average width of 500 m/1,640 ft. A narrow canal (al-Khalīdj or Sayyālat al-Rawḍa) divides the eastern bank of the river from the island. Before the regulation of the river in the 19th century, the canal often dried out. From the time of the establishment of Arab rule until the early 19th century, the island was mostly connected by pontoon bridges with both banks of the river (the Fusṭāṭ as well as the Djīza shore). The island has been the place of a Nilometer (*Miḳyās* [*q.v.*]) since the early 2nd/8th century. Concerning the historical topography of Rawḍa, see MIṢR. C. 2. ii.

As long as the annual rise of the Nile was celebrated, the island was of crucial importance in the social life of Cairo. Each year at this time, until the high crest was reached (*wafāʾ al-Nīl*), i.e. for about

two months, people gathered in tents and pavilions on the island celebrating, while expecting the opening of the Cairo canal in early August. Their unbridled behaviour often led to their removal from the island and the burning down of their tents (see Ibn Iyās, *Badāʾiʿ al-zuhūr*, Cairo 1960-92, who reports this fact for later mediaeval times). In mediaeval times, the island was used, for strategic reasons, for fortifications and the naval arsenal [see MIṢR, *loc. cit.*]. Two rulers, Aḥmad b. Ṭūlūn (254-70/868-84 [*q.v.*]) and the Ayyūbid al-Malik al-Ṣāliḥ (636-47/1240-9) thought it worthwhile to build fortresses on the island; neither of these, however, lasted for long. Ibn Ṭūlūn's fortress was built as a place of retreat when he was threatened by the caliphal power, but it was never used and soon decayed. Al-Malik al-Ṣāliḥ was equally led to take advantage of the island. In order to secure his position he had begun to import Turkish Mamlūks, and it was more convenient to have them reside outside al-Ḳāhira. He may also have intended securing a retreat for himself in case of an attack by the Crusaders, but it seems more plausible to assume that he wanted to be able to deploy instantaneously his warships anchoring there in case of a Frankish attack on Egypt's Mediterranean ports. After al-Ṣāliḥ's death, the vast fortress—half of the island was encircled by walls—was abandoned. The Mamlūk ruler al-Ẓāhir Baybars (658-76/1260-77 [*q.v.*]) rebuilt the *ḳalʿa*; apparently he intended to use this Rawḍa citadel as his stronghold, but the advantages were not sufficient to replace in the long run the Ḳalʿat al-Djabal (see *EI*[1] art. *Rawḍa*, where it is falsely stated that the Baḥrī line of the Mamlūks reigned there). Thereafter, the materials of the Ḳalʿat al-Rawḍa were re-used by succeeding sultans for their own buildings.

From the 4th/10th century, Rawḍa was a place of recreation, due to its clement climatic conditions. Gardens and palaces, and a residential area were built. Muḥammad b. Ṭughdj al-Ikhshīd (323-34/935-46 [*q.v.*]) built a garden called al-Mukhtār, and the Fāṭimid vizier al-Afḍal b. Badr al-Djamālī (d. 515/1121 [*q.v.*]) laid out the garden, *rawḍa*, whence the name of the island. In the time before this and afterwards, the island was called Djazīrat Miṣr or simply al-Djazīra. In *ca.* 519/1125, the Fāṭimid caliph al-Āmir [*q.v.*] built a palace called Hawdadj. During these times, Rawḍa is said to have been a town in itself, and several Friday mosques were built, pointing to the growing population density on the island. The oldest mosque, the Djāmiʿ Ghayn, is attributed to the black eunuch Ghayn (d. 404/1013), a high Fāṭimid official.

About a century later, the above-mentioned al-Afḍal built the Djāmiʿ al-Miḳyās, which was later rebuilt by al-Malik al-Ṣāliḥ, became part of his *ḳalʿa* and was called Djāmiʿ al-Rawḍa. This mosque was destroyed and rebuilt by al-Muʾayyad Shaykh al-Maḥmūdī in 824/1421 (Ibn Duḳmāḳ, *K. al-Intiṣār*, i, Cairo 1310/1893, 115-16) and finally destroyed in the 19th century (ʿAlī Mubārak Pasha, *al-Khiṭaṭ al-djadīda*, xviii, 13). The erection of the huge *ḳalʿa* temporarily put an end to that situation because al-Malik al-Ṣāliḥ evacuated the island and destroyed the greater part of the buildings. But after al-Ṣāliḥ's death, the island apparently became more populated because the number of buildings round the Djāmiʿ Ghayn increased and the *khuṭba* was pronounced there again. Parts of the decayed *ḳalʿa* were used for private buildings, and a new Friday mosque was built in the early 8th/14th century (the Djāmiʿ Fakhr). This mosque was renovated a few decades later by the vizier al-Maḳsī, hence was called the Djāmiʿ al-Maḳsī. In 886/1481 the dilapidated mosque was demolished by Sultan Ḳāyitbāy and again rebuilt. Thereafter, it was called Djāmiʿ al-Sulṭān (or Djāmiʿ Ḳāyitbāy). This mosque existed until the 19th century (*al-Khiṭaṭ al-djadīda*, xviii, 13-14). In 896/1491 the still extant *madrasa* of Ḳāyitbāy was completed as well. There also existed after 770/1368 a Friday mosque called the Djāmiʿ al-Raʾīs, Ibn Duḳmāḳ mentions about 20 *masdjids* and several *zāwiyas* on the island at the beginning of the 9th/15th century. According to Ibn Ẓahīra (= Abū Ḥāmid al-Ḳudsī), *al-Faḍāʾil al-bāhira*, Cairo 1969, 202, in the late 9th/15th century the eastern shore of the island was densely built up, and Felix Fabri, a European traveller who stayed there in 1483, even reports that the whole island was encircled by high buildings with people everywhere (*Le Voyage en Egypte de Félix Fabri 1483*, Cairo 1975, 3 vols., iii, 443-4); but he was also told that, just 15 years previously, no building was to be found there. His impression was that the arm of the Nile dividing Rawḍa and Cairo cut the town in half. Leo Africanus in 1517 confirmed the crowdedness of the island; he counted 1,500 hearths and mentions a palace which the reigning sultan had built at the northern end of the island (*Description de l'Afrique*, tr. A. Épaulard, Paris 1956, 511-12). The Sultan al-Ghawrī is said to have ordered the building of a new Friday mosque near the Nilometer in 917/1511 (Ibn Iyās, iv, 175).

Several statements of travellers in the 16th and 17th centuries suggest that Rawḍa was used as a place for recreation by the local inhabitants and as a residential area, contrary to the assumption, expressed in *EI*[1], art. *Rawḍa*, that the island was abandoned in Ottoman times up to the early 19th century. In 1598 Harant mentioned about 100 houses (*Le Voyage en Egypte de Christophe Harant*, Cairo 1972, 231). Half-a-century later, de Monconys reported that there were to be found buildings and an area with pavilions of the nobles which was like a town of its own (*Le Voyage en Egypte de Balthasar de Monconys*, Cairo 1973, 157-8). This is corroborated by Ewliyā Čelebi (1091/1680)—whose statements have to be taken critically—when he praises the island, mentioning numerous streets and buildings (*Seyāḥat-nāme*, Istanbul 1938, x, 321-2, 325-7). ʿAbd al-Ghanī al-Nābulusī spent some time on the island, and praised it for its beauty (*al-Ḥaḳīḳa wa 'l-madjāz*, Cairo 1986, 236-7). In 1806 ʿAlī Bey al-ʿAbbāsī found Rawḍa abandoned, having been formerly a little paradise; he praises the French for having formed the walk with rows of trees which traversed the island from south to north (*Travels*, London 1816, repr. 1970, ii, 22-3). In later Ottoman times, Rawḍa was likewise one of the favourite fields of military practice for the Mamlūks; in the fights between the rival Mamlūk groups, one of the factions used to resort to the island.

In the 19th century many gardens and palaces, and also mosques (sometimes used as funerary mosques), were built. A large garden (no longer extant), which is described as a kind of botanical and zoological garden, was founded in the northern part of the island (*al-Khiṭaṭ al-djadīda*, xviii, 11). In recent times, the island has become mainly a residential area.

It should be mentioned that poetry on Rawḍa is abundant, often as a part of anthologies on gardens (*rawḍiyyāt*); see e.g. Abū Djaʿfar al-Idrīsī, *Anwār ʿulwiyy al-adjrām*; al-Suyūṭī, *Kawkab al-Rawḍa* (Brockelmann, II[2], 202); Ibn Duḳmāḳ *op. cit.*, ch. on Rawḍa; and ʿAbd al-Ghanī al-Nābulusī, *op. cit.*

RAWḌA-K̲H̲ᵂĀNĪ, a S̲h̲īʿī Persian mourning ritual commemorating the suffering and martyrdom of Imām Ḥusayn, the grandson of the prophet Muḥammad and other S̲h̲īʿī martyrs. The name of this public lamentation is derived from the title of a literary masterpiece called *Rawḍat al-s̲h̲uhadāʾ* ("The Garden of the Martyrs"). This book, written in Persian but under an Arabic title, was composed by Ḥusayn Wāʿiẓ Kās̲h̲ifī [*q.v.*] in 908/1502-3 when S̲h̲īʿī Islam was being imposed as the state religion of Persia. *Rawḍa-k̲h̲ʷānī* literally means "recitation from the Garden [of the Martyrs]" and is popularly called just *rawḍa*. Originally, it was customary to recite or chant a chapter from *The Garden of the Martyrs* in public each day during the first ten days of the month of Muḥarram. Gradually, it was staged during the whole month of Muḥarram and the following month of Ṣafar, eventually to be performed all year round. Today, despite the fact that it is still called "the Garden Recitation", the original text has been almost abandoned as each *Rawḍa-k̲h̲ʷān* (person who does the recitation) tries his own creative skills in conjuring up the story.

All classes of society participate in the *Rawḍa-k̲h̲ʷānī*, which can be held anywhere from black tents set up for the occasion in the public square of a village or town, to a mosque or a courtyard of a private house, or even to special edifices built for the S̲h̲īʿī mourning rituals called *Ḥusayniyya* or *takiyya*. These buildings have been constructed in Persia from the end of the 18th century onwards.

Rawḍa-k̲h̲ʷānī belongs to the category of the stationary S̲h̲īʿī commemorative rituals which are collectively known at *mad̲j̲ālis al-ʿazāʾ*. It starts with the chants invoking the prophet Muḥammad and other saints and is followed by a *rawḍa-k̲h̲ʷān*, a master story-teller, who recites and sings the story of Ḥusayn and his family and followers at the bloody battle of Karbalāʾ while sitting on a *minbar* above the assembled crowd. His rapid chanting in a high-pitched voice alternates with sobbing and crying to arouse the audience to an intense state of emotion. The audience responds with weeping, chest beating, and body flagellation. The performance can last from a couple of hours to an entire day, well into the night as a succession of *rawḍa-k̲h̲ʷān*s are being used. The *rawḍa-k̲h̲ʷānī* ends with the congregational singing of *nawḥa* [see niyāḥa] (dirges).

The art of *rawḍa-k̲h̲ʷānī* depends on the ability of the *rawḍa-k̲h̲ʷān* to manipulate the assembled crowd, using his (or her, if the gathering is entirely female) choice of episodes of the tragedy as well as his or her use of body language and tonality. A successful *rawḍa-k̲h̲ʷān* is able to bring the audience to a state of frenzy in which the members of the audience identify with the suffering of Ḥusayn and other martyrs. According to popular belief, participation in *rawḍa-k̲h̲ʷānī* ensures participants of intercession by Ḥusayn on Judgement Day. Almost from its inception it has been a tradition that mixed the past with the contemporary, and *rawḍa-k̲h̲ʷān*s often make digressions into the political, social and moral issues of the day. This makes the *rawḍa-k̲h̲ʷānī* a very important political weapon.

Outside Persia, *rawḍa-k̲h̲ʷānī* had been used in India in its original form, but now exists in modified versions reflecting Indian cultural influences. In Baḥrayn, the Persian model is still followed. Other S̲h̲īʿa communities also observe this public lamentation for Ḥusayn and other martyrs according to local traditions. The intensity of feeling discharged in these rituals, no matter where, is universal.

RAWḤ b. ḤĀTIM b. Ḳabīṣa b. al-Muhallab b. Abī Ṣufra (d. 18 Ramaḍān 174/28 January 791) was the fourth governor from the Muhallabids [*q.v.*] of Ifrīḳiya, where there preceded him successively a distant cousin, ʿUmar b. Ḥafṣ b. ʿUt̲h̲mān b. Ḳabīṣa (151-4/768-71), his brother Yazīd (19 D̲j̲umādā II 155-18 Ramaḍān 170/27 May 772-13 March 787) and his nephew Dāwūd b. Yazīd who, on his father's death, took over in the interim until the arrival of his uncle Rawḥ on 1 Rad̲j̲ab 171/16 December 787.

Rawḥ had first served in the army before rejoining, in 159/776, the group of governors. He is mentioned for the first time in 132/749-50, at the siege of Wāsiṭ, in the army of Abu 'l-ʿAbbās al-Saffāḥ. Ten years later, in 142/759, he fought in Ṭabaristān in the service of al-Manṣūr, and is then found subsequently acting as chamberlain for the latter caliph.

In 159/776 he was made governor of Sind by al-Mahdī. From then onwards, with intervals of varying length when he was available for service, spent probably at court, he was appointed governor of Kūfa, Baṣra, Ṭabaristān, Armenia and Palestine, this being his last post in the east. In 166/782-3, when he was governor of Baṣra, his son Dāwūd was accused of *zandaḳa* and arrested, but freed once he had recanted. Recalled from Palestine, Rawḥ learnt in Bag̲h̲dād of the death of his brother Yazīd at Ḳayrawān. The new caliph Hārūn al-Ras̲h̲īd appointed him as Yazīd's successor.

He found a province left in a peaceful state by his brother, allowing him to govern there without incident. He had the good sense to make peace firm by establishing good relations with the Imām of Tāhart. By then he was very aged, and it often happened, we are told, that he went to sleep during meetings. The officer in charge of the *barīd* [*q.v.*] (postal and intelligence service) informed al-Ras̲h̲īd about this, who, in order to prepare for all eventualities, secretly appointed another Muhallabid, Naṣr b. Ḥabīb, to succeed Rawḥ on his death. Rawḥ, for his part, had left the power to his son Ḳabīṣa. In this way, probably with a deliberately theatrical gesture, during the investiture ceremony for Ḳabīṣa in the Great Mosque, the *ṣāḥib al-barīd* exhibited al-Ras̲h̲īd's diploma in favour of Naṣr. Those present acquiesced.

The evidence shows that the caliph was keeping a weather eye open, and did not want a dynastic tradition to become established in North Africa. After two years and three months, Naṣr was dismissed, and the interim authority entrusted to al-Muhallab b. Yazīd whilst the new governor, another son of Rawḥ, al-Faḍl, was awaited. Al-Faḍl entered Ḳayrawān in Muḥarram 177/April-May 793, the eighth and last Muhallabid governor in Ifrīḳiya. Trouble broke out immediately, and in S̲h̲aʿbān 178/November 794, al-Faḍl was killed in a revolt by the *d̲j̲und*.

With the Muhallabids, a dynastic tradition was appearing in the last province of the Mag̲h̲rib still in caliphal hands. It was, however, abortive. Another period of troubles had to arise in order to convince the caliphs to relax their control, and this was, in 184/800,

to the profit of Ibrāhīm b. al-Aghlab, founder of the Aghlabid [*q.v.*] dynasty of governors.

RAWḤ B. **ZINBĀʿ** AL-DJUDHĀMĪ, an Arab tribal leader, especially prominent in upholding the Umayyad cause against the Zubayrids in the second civil war (64-72/683-92).

Son of a notable from the Banū Djudhām [*q.v.*], which had been settled in Palestine from before the Arab conquest of the region, Rawḥ is said to have incurred Muʿāwiya's suspicion in circumstances which are obscure. Later, we find him named as one of a group of Syrian *ashrāf* whom Yazīd b. Muʿāwiya [*q.v.*] sent to ʿAbd Allāh b. al-Zubayr [*q.v.*] in an attempt to obtain the latter's *bayʿa*, and, shortly afterwards, as one of the commanders of the army sent to the Ḥidjāz by Yazīd under Muslim b. ʿUḳba al-Murrī [*q.v.*] in 63/682-3.

Following the death of Yazīd and that of his short-lived son and successor Muʿāwiya (II) [*q.v.*] in 64/683-4, Ḥassān b. Mālik b. Baḥdal al-Kalbī, who was governing the *djund* of Filasṭīn for the Umayyads, was unable to maintain his position and withdrew. He left Rawḥ behind as his representative, but Rawḥ too had to abandon his post in the face of opposition from his rival for the leadership of Djudhām, Nātil b. Ḳays. The latter, who seems to have enjoyed seniority, proclaimed his allegiance to Ibn al-Zubayr in an attempt to secure his own position, while Rawḥ may have alienated many of his tribe by a reported maladroit attempt to attach Djudhām to the "northern" (Maʿaddī) descent group (eventually they were generally accepted as belonging to the "southern", Ḳaḥṭānī, group). However, Rawḥ's continuing support for the Umayyads in the person of Marwān b. al-Ḥakam [*q.v.*] (he is credited with a speech eulogising Marwān and calling for his succession in preference to other candidates) proved well judged. Following the victory of the Kalb at Mardj Rāhiṭ [*q.v.*] and the consequent extension of Marwān's authority over Syria, it was the turn of Nātil b. Ḳays to flee and Rawḥ again became governor of Palestine. When ʿAbd al-Malik followed his father Marwān as caliph (Ramaḍān 65/April 685), Rawḥ became one of his influential confidantes and advisors. In some of the literature he appears as a prototype of the later viziers.

Rawḥ is said to have died in 84/703. He is known as a transmitter of *ḥadīth* and is even counted by some *ḥadīth* authorities as a Companion of the Prophet. His descendants are referred to in reports about the disturbances in Syria towards the end of the Umayyad period.

RĀWĪ (A.), pl. *ruwāt*, reciter and transmitter of poetry, as also of narrative traditions (*akhbār*) and *ḥadīth* [*q.v.*]. The term is derived from *rawā* "to bring, carry or convey water", and has been extended to "carrying" in a figurative sense, i.e. "to bear by memory, to transmit or recite" (cf. Lane, 1194). There is an intensive form *rāwiya*, explained as "copious transmitter" (*kathīr al-riwāya*), used in mediaeval sources as a synonym to *rāwī*. In modern research it is applied, as a rule, to the learned collectors of Bedouin poetry in the 8th century.

The institution of the *rāwī* is the main basis for the preservation of pre-Islamic poetry. In the *Djāhiliyya* [*q.v.*] poets used to have one or more *rāwīs*, who learned their verses by heart, recited them in public, especially at the annual fairs, where poetic contests took place, and transmitted them to the next generation. It often happened that a *rāwī* became a famous poet himself. Lists of poets and their *rāwīs* are known over several generations. A spectacular line, extending over two centuries, begins with Aws b. Ḥadjar [*q.v.*], the stepfather of Zuhayr b. Abī Sulmā [*q.v.*], who was his *rāwī* (Ibn Ḳutayba, *Shiʿr*, 57). Zuhayr, who also had his son Kaʿb [*q.v.*] for a *rāwī*, figures at the beginning of the following list (*Aghānī*¹, vii, 78): Zuhayr, al-Ḥuṭayʾa [*q.v.*], Hudba b. Khashram, Djamīl [*q.v.*], Kuthayyir ʿAzza [*q.v.*], who died in 105/723. He was "the last to combine the function of poet and *rāwī*" (*ākhir man idjtamaʿa lahu al-shiʿr wa 'l-riwāya, loc. cit.*). From the list and similar information, it appears that transmission of poetry often took place in the same family or clan, but not necessarily, which implies that *rāwī* was an accepted profession or semi-profession.

The question whether transmission in the *Djāhiliyya* was exclusively oral, or whether poets and transmitters assisted their memory by writing, remains controversial. Whereas Sezgin (*GAS*, ii, 22-33) maintains the early use of writing in the process of transmission, other scholars have emphasised the oral character of pre-Islamic texts (M. Zwettler, *The oral character of classical Arabic poetry*, Columbus 1978, cf. 85-8). Since there is no conclusive evidence, one can only attempt to evaluate the known facts. In the *Djāhiliyya*, the use

of writing, although well established for contracts, treaties or other official documents, could hardly have played a significant part in poetic transmission. It is possible that poets in contact with the courts of Ḥīra [*q.v.*] and G͟hassān [*q.v.*] were able to write, but among Bedouins that knowledge cannot have been common. Furthermore, the corpus of pre-Islamic verses presents characteristic features of oral literature, e.g. a high percentage of formulaic expressions, semantic repetition and independence of detail, which later gave way to other stylistic features and modes of composition. Thus it is to be assumed that during the 6th century A.D. composition and transmission of poetry took place orally, which does not exclude the possibility of a *rāwī* noting down verses as a mnemonic aid.

In the course of the first Islamic century, the use of writing increased in various fields (cf. G. Schoeler, *Schreiben und Veröffentlichen. Zur Verwendung und Funktion der Schrift in den ersten islamischen Jahrhunderten*, in *Isl.*, lxix [1992], 1-43). The first collections of poetry were made in the early Umayyad period, e.g. the *Muʿallaḳāt* [*q.v.*] (cf. M.J. Kister, *The Seven Odes*, in *RSO*, xliv (1979) 27-36). The poet al-Farazdaḳ [*q.v.*] mentions in some of his verses that he possessed "books" with collected poetry of other poets (*The Naḳāʾiḍ of Jarīr and al-Farazdaḳ*, ed. A.A. Bevan, i-iii, Leiden 1905-12, i, 201, v. 57, 61). It is further reported that D̲jarīr [*q.v.*] and al-Farazdaḳ used to dictate to their *rāwīs* (*Naḳāʾiḍ*, i, 430, 12; ii, 908, 2). It seems therefore, that oral transmission was at first aided, and then gradually replaced, by writing.

In the final stage of poetic transmission, the early ʿAbbāsid period, Bedouin poetry was systematically collected by learned *rāwīs* like K̲h̲alaf al-Aḥmar, Ḥammād al-Rāwiya and al-Mufaḍḍal al-Ḍabbī [*q.vv.*]. There is ample evidence that they had written collections of poetry at their disposal, but they were still expected to know the texts by heart, and to recite them when requested (*Ag̲h̲ānī*¹, v, 174). In addition, they used to collect information from Bedouins and to verify their knowledge by questioning them. These Bedouin informants, who were also called "*rāwī*", are in part known by name (cf. Ch. Pellat, *Le milieu baṣrien et la formation de Ǧāḥiẓ*, Paris 1953, 137-8). Thus presumably the term *rāwī/rāwiya* was applied, as long as learning by heart and reciting of verses still played a part, even if a marginal one, in poetic transmission.

Another aspect is the exact function of the *rāwī* and his relation to the poet who employed him. Since a *rāwī* often became a poet himself, it has been assumed that he also served an apprenticeship with his poet, receiving a thorough training in metrics and the art of composition. This would imply that the institution of the *rāwī* not only assured the preservation of poetry, but also the continuity of technical knowledge, and of the vocabulary, style, and thematic range of an individual poet. The first to consider the possibility of establishing "schools" of poetry was Ṭāhā Ḥusayn, who with regard to the list of *rāwīs* mentioned above speaks of the "poetic school" (*mad̲h̲hab s̲h̲iʿrī*) of Aws b. Ḥad̲j̲ar (*Fi 'l-adab al-d̲j̲āhilī*, Cairo 1927, ¹⁶1989, 270). The question has been studied with regard to the poetry of Hud̲h̲ayl [*q.v.*] by E. Bräunlich (*Versuch einer literargeschichtlichen Betrachtungsweise altarabischer Poesien*, in *Isl.*, xxiv [1937], 201-69; cf. 221 ff.), as also by G.E. von Grunebaum (*Zur Chronologie der früharabischen Dichtung*, in *Orientalia*, N.S. viii [1939], 328-45), who established six "schools" of poetry in the pre-Islamic period.

The assumption that *rāwīs* received a thorough education, and reached a competence equal to that of the poets they served, is further evidenced by reports that a *rāwī* was expected to correct, to polish up or even to embellish the verses of his master. This seems to have been a common practice in the *D̲j̲āhiliyya* (cf. Goldziher, *Muh. St.*, ii, 8²), as also in the Umayyad period. There is a story concerning D̲jarīr and al-Farazdaḳ, whose *rāwīs* were found to correct their metrical blunders (*Ag̲h̲ānī*¹, iv, 54). In view of this and similar reports, it is easy to appreciate the exclamation of al-Ḥuṭayʾa: "Woe to verses in the hand of a bad transmitter!" (*waylᵘⁿ li 'l-s̲h̲iʿri min rāwiyat al-sūʾ*; *Ag̲h̲ānī*¹, ii, 59). It also underlines the difficulty, and sometimes the impossibility, for historians of literature to clearly differentiate between the work of a poet and that of his *rāwī*.

(Renate Jacobi)

RAWK (Egyptian pronounciation: *rōk*), a word of non-Arabic origin, probably derived from Demotic *ruwk̲h̲*, "land distribution". From the noun is derived an Arabic verb *rāka, yarūku*.

In the language of Egyptian administration, *rawk* means a kind of cadastral survey which is followed by a redistribution of the arable land. The procedure comprises the surveying (*misāḥa* [*q.v.*]) of the fields, the ascertainment of their legal status (private property, endowment, crown land, grant, etc.), and the assessment of their prospective taxable capacity (*ʿibra*). Until the fall of the Fāṭimid dynasty the bulk of the arable land was bestowed on private tax farmers (*mutaḳabbil* or *ḍāmin*), whereas in the Ayyūbid and Mamlūk periods it was granted to officers and free soldiers as military grants (*iḳṭāʿ* [*q.v.*]).

Al-Maḳrīzī states that in early Islamic times a *rawk* had been carried out every thirty years, in order to synchronise the lunar (*hilālī*) and the fiscal (*k̲h̲arād̲j̲ī*) calendars (*K̲h̲iṭaṭ*, ed. Wiet, ii, 2), but this statement rather seems to reflect the ideal case. In fact, in the eight-and-a-half centuries between the Arabs' appearance and the Ottoman conquest, only six *rawks* are mentioned in the sources. The first is that which ʿUbayd Allāh b. al-Ḥabḥāb, director of the finances (*ʿāmil*) of Egypt, executed in the years 105-7/724-5 during the reign of the caliph His̲h̲ām. The result of the survey is said to have been an arable surface of 30,000,000 *faddān* (*ca.* 191,000 km²); the fiscal register established in 107/725-6 recorded a yield of *k̲h̲arād̲j̲* [*q.v.*] of 1,700,837 *dīnārs* for all Egypt, and that of 1,449,420.5 for Upper Egypt and 251, 416.5 for the Delta (al-Maḳrīzī, *op. cit.*, 62.)

The *rawk* of Aḥmad b. al-Mudabbir, *ʿāmil* of Egypt, accomplished around 253/867-8, just before the arrival of Aḥmad b. Ṭūlūn [*q.v.*], amounted to 24,000,000 *faddāns* or *ca.* 153,000 km² (al-Maḳrīzī, *op. cit.*, ii, 62-3, 69, 81).

The third *rawk*, called *al-Afḍalī*, was the only one carried out under Fāṭimid rule. His initiator was the general and future vizier Muḥammad b. Fātik "al-Maʾmūn" al-Baṭāʾiḥī, to whose son Mūsā we owe a detailed report (quoted by al-Maḳrīzī, *op. cit.*, ii, 5-6). At the suggestion of al-Baṭāʾiḥī, the vizier al-Afḍal b. Badr al-D̲jamālī in 501/1107-8 gave orders to perform a new survey in order to remedy grievances and to abolish unjustified privileges which had spread since the last *rawk*.

The *rawk al-Ṣalāḥī*, performed in the years 572-7/1176-81 by the eunuch Bahāʾ al-Dīn Ḳarāḳūs̲h̲ (the builder of the Cairo citadel) on the orders of Sultan Ṣalāḥ al-Dīn al-Ayyūbī, laid the foundation of a com-

pletely new military system; it was closely linked to the introduction of the *iḳṭāʿ* system. The assessed *kharādj* yield of 3,670,500 *dīnārs* was split into *iḳṭāʿ*s for 111 officers (*amīr*), 6976 heavily-armed horsemen (*ṭawāshī*) and 1,553 light cavalrymen (*ḳarā-ghulām*) (al-Maḳrīzī, *op. cit.*, ii, 16-17). Ibn Mammātī in his book on the rules of administration (*Kitāb Ḳawānīn al-dawāwīn*) has preserved the complete list of all places of Egypt surveyed in the Ṣalāḥī *rawk* (ed. A.S. Atiya, Cairo 1943, 84-200).

The *rawk al-Ḥusāmī* was initiated by the Mamlūk sultan Ḥusām al-Dīn Lādjīn in 697/1298 in order to curtail the power of the great *amīrs* and to strengthen that of the sultan, but it completely failed, and the sultan was murdered by his officers (al-Maḳrīzī, *op. cit.*, ii, 21; idem, *Sulūk*, ed. Ziyāda, Cairo 1934-58, i/3, 841-4; Ibn Taghrībirdī, *Nudjūm*, ed. Cairo, viii, 90-5; Ibn Iyās, *Badāʾiʿ*, ed. M. Moṣṭafā, Wiesbaden 1975, i/1, 396-7). The list of place names surveyed by the Ḥusāmī *rawk* seems to be preserved in the anonymous *Tuḥfat al-irshād*, discovered by M. Ramzī in the library of the Azhar in 1932.

The last *rawk* was carried out by order of sultan al-Nāṣir Muḥammad b. Ḳalāwūn during his third reign. The Nāṣirī *rawk*, which combined a survey of some regions of Syria in 713/1313-14 with one of all Egypt in 715/1315, was a repetition of the failed Ḥusāmī *rawk*, and this time the sultan was successful in depriving the great *amīrs* of their power. The Nāṣirī *rawk* can be considered as a kind of coup d'état: the crown land (*khāṣṣ al-sulṭān*) was considerably increased; the whole province of al-Djīza was transformed into *khāṣṣ* land (al-Maḳrīzī, *Khiṭaṭ*, ii, 22-32; idem, *Sulūk*, ii/1, 146-57; *Tübinger Atlas des Vorderen Orients*, map B VIII 13). The registers set up in the Nāṣirī *rawk* have been copied by Ibn Duḳmāḳ, *K. al-Intiṣār* (ed. Vollers, Cairo 1893) and Ibn al-Djīʿān, *al-Tuḥfa al-saniyya* (ed. B. Moritz, Cairo 1898, repr. Cairo 1974).

RAWSHANIYYA, a mystical and gnostic Islamic sect founded amongst the Afghāns of the North-West Frontier region, with centres at e.g. Kānīgurām and Tīrāh in Wazīristān, by Bāyazīd b. ʿAbd Allāh Anṣārī of Kānīgurām (*ca.* 931-80/*ca.* 1525-73). He claimed to be, if not actually a Mahdī, at least a *hādī* or guide towards *tawḥīd*, the Divine Unity, for his followers. He styled himself *pīr-i rawshan* "the divinely-illuminated *pīr* [*q.v.*]", although his orthodox enemies called him *pīr-i tārīkī* "the *pīr* of darkness" and his adherents *Tārīkiyān* "devotees of darkness". The movement had distinct elements of Afghān national consciousness within it, reacting against Mughal expansionism in the Frontier region and against Kābul, as well as a religious significance.

1. Bāyazīd Anṣārī's career. For this, the last years of which were spent in the warfare against the Mughals in which he eventually was killed, see the article s.v.

2. Later history of the movement. Bāyazīd's activities were resumed by the eldest of his five sons, ʿUmar, who attacked the Yūsufzāī, a tribe which had followed Bāyazīd but had reverted to orthodox Islam; in the battle which ensued ʿUmar was killed, as was also his brother Khayr al-Dīn; another brother, Nūr al-Dīn, was put to death by the Gudjars. The youngest son, Djalāl al-Dīn, was captured by the Yūsufzāī, who surrendered him to Akbar in 989/1581. Escaping from Akbar's court he returned to Tīrāh, where he assumed the role of sovereign of Afghānistān, and Akbar found it necessary to send an army against him in Ṣafar 994/January-February 1586. This army met with a serious defeat, which was repaired by a later expedition (995/1587). The numbers of the Rawshanīs are given on this occasion as 20,000 foot and 5,000 horse. A further expedition was sent in 1000/1591 (or 1001) which captured some 14,000 men (according to Badāʾūnī) with Djalāl al-Dīn's wives and children, but not apparently himself, since in 1007/1598-9 he took Ghaznī, but was unable to maintain himself there, and on retiring was attacked by the Hazāras [*q.v.* in Suppl.], wounded and put to death. This last affair is by some assigned to a son of his bearing the same name.

The next head of the community was Djalāl al-Dīn's son Iḥdād, who figures in the history of Djahāngīr. In 1020/1611 he surprised Kābul in the absence of its governor Khān Dawrān. The attack was beaten off with great loss to the raiders, yet in 1023/1614 Iḥdād was again in the field, but sustained a serious defeat at Pīsh Bulāgh. After a series of enterprises with varied success he was besieged in the fortress of Nuaghar, and killed by a musket-shot.

The historian of Shāh Djahān, Muḥammad Ṣāliḥ Kanbo, asserts that in the second year of his reign (1038/1628-9) that monarch took effective steps to suppress the heresy started by Bāyazīd; nevertheless, in the following year he records how the Afghān Kamāl al-Dīn was joined in the attack on Peshāwar by ʿAbd al-Ḳādir, son of Iḥdād, and Karīmdād, son of Djalāla (Djalāl al-Dīn). The place was relieved by Saʿīd Khān, and ʿAbd al-Ḳādir induced to submit; in 1043/1633-4 he was recommended by Ṣaʿīd Khān, "who had caused him to repent of his evil deeds" to Shāh Djahān, who gave him a command of 1,600 horse. Other members of Iḥdād's family received honours and rewards in 1047/1637-8. In the same year, Karīmdād, who had taken refuge in the Mohmand country, but had been recalled by the tribes of Bangash, was attacked, captured and executed by Ṣaʿīd Khān. It is asserted that some relics of the community still exist in this region. A branch of the sect, called ʿĪsawī, was founded at Swat by one Sayyid ʿĪsā of Peshāwar (T.C. Plowden, translation of the *Kālid-i Afghānī*, Lahore 1875).

3. Doctrines of the sect. According to the *Dabistān*, which is friendly to the sect, Bāyazīd's doctrine was extreme pantheism; "If I pray" he said, "I am a *mushrik*; if I pray not, I am a *kāfir*." He marked eight stages (*maḳām*) in religious progress: *sharīʿa, ṭarīḳa, ḥaḳīḳa, maʿrifa, ḳurba, wuṣla, waḥda, sukūn*; the four last are said to be technicalities of his system. The explanation of these stages, quoted from Bāyazīd's *Ḥāl-nāma*, inculcates lofty morality, e.g. to hurt no creature of God. The account which follows is inconsistent with this, as noxious persons were to be killed because they resembled wild creatures, and harmless persons who did not possess self-knowledge might be killed, because they resembled domestic animals. They might be regarded as dead, and their property might be seized by the "living". Further, he abrogated the direction of prayer and the preliminary ablution. Other details are furnished by a hostile writer, the historian of Shāh Djahān quoted above, copied in Khāfī Khān's *Muntakhab al-lubāb*. Marriage, he says, is without a contract, there being merely a feast at which a cow is slaughtered. Divorce is ratified by placing some pebbles in the wife's hand. The widow is deprived of inheritance, and indeed is at the disposal of the heirs, who may marry her themselves

or sell her to someone else. When a son is born to one of them, an incision is made in the ear of an ass, and the blood dripped on the infant's tongue. This is in order to ensure that the infant shall be bloodthirsty and have the mind of an ass. Any stranger who falls into their hands is enslaved and can be bought or sold. Daughters receive no share in the inheritance. They massacre whole tribes when they conquer them. Even on the Day of Judgment their victims, though martyrs, will not hold them to account. According to others, however, they recognised neither Paradise nor Hell.

4. Literature of the sect. Bāyazīd is said to have written much. For his own works, see BĀYAZĪD ANṢĀRĪ. Works composed by his opponents and in refutation of his doctrines include the orthodox Ākhūnd Darwīza's *Makhzan-i Afghānī* and *Tadhkirat al-abrār wa 'l-ashrār*. Such works composed at the Mughal court as Abu 'l-Faḍl ʿAllāmī's *Akbar-nāma* (detailed account of the warfare with the Rawshaniyya), Badāʾūnī's *Muntakhab al-tawārīkh*, Djahāngīr's *Tuzūk*, the *Taʾrīkh-i Firishta* and Muḥammad Ṣāliḥ Kanbo Lāhawrī's *ʿAmal-i Ṣāliḥ*, were necessarily hostile; but Farīd Bukhārī's *Dhakhīrat al-khawānīn* (biographical accounts of Mughal nobles) gives a more sympathetic view of them.

Bibliography: The account of the sect given by J. Leyden, in *Asiatic Researches*, xi, 363-428, London 1810, based on the *Dabistān al-madhāhib* (= 247-253 in ed. Bombay 1292) and the Pashto work *Makhzan al-Islām* of Ākhūnd Darwīza furnished the material for the account of the sect in Graf T.A. von Noer's *Kaiser Akbar*, Leiden 1885, ii, 179, and largely for that in *Glossary of the Punjab tribes and castes*, Lahore 1915, iii, 335 ff. Notices of the sect were also got from Indian historical works; from the *Akbar-nāma* (printed Calcutta 1881) in M. Elphinstone, *History of India*, London 1866, 517 etc.; from the *Ṭabaḳāt-i Akbarī* (lith., Lahore 1292), in H. Elliot, *History of India*, London 1873, v, 450; from the *Tuzūk-i Djahāngīrī*, tr. A. Rogers and H. Beveridge, London 1909, in Beni Prasad, *History of Jahangir*, Oxford 1922, who also used the *Iḳbāl-nāma-yi Djahāngīrī*, Calcutta 1865. For Shāh Djahān's time, the *Shāh Djahān-nāma*, called *ʿAmal-i Ṣāliḥ*, of Muḥammad Ṣāliḥ Kanbo, ed. Ghulam Yazdani, Calcutta 1923-7, is the chief authority. The printed text of ʿAbd al-Ḥamīd Lāhawrī's *Bādishāh-nāma* (Calcutta 1867-8) which, according to the *Muntakhab al-lubāb*, Calcutta 1869, should contain an exaggerated account of the atrocities of the sect, has very little about it.

Rizvi, *Rawshaniyya movement*, in *Abr-Nahrain*, vi (1965-6), 63-91, vii (1967-8), 62-98; Annemarie Schimmel, *Islam in the Indian subcontinent*, HO, II.4.3, Leiden-Köln 1984, 87-8.

(D.S. MARGOLIOUTH-[C.E. BOSWORTH])

RAWTHER (Tamil *irauttur* meaning "horseman" or "trooper", also known as Rowther, Ravuttan, Rayuttān), a community of Tamil-speaking Muslims located in the state of Tamilnadu, India, one of four sub-divisions of the Tamil-speaking Muslim community, the others being Marakkayar, Kayalar and Labbai [*q.v.*]. Like the Labbai, the Rawther follow the Shāfiʿī school, whilst the others are Ḥanafīs. Unlike the other sub-divisions, the Rawther and Labbai are found in greatest numbers in the interior, where they are mostly petty merchants and tradesmen.

Effectively endogamous like the other sub-divisions and historically located in particular districts (Madurai and Tiruchirapalli), there has nevertheless been a blurring of group boundaries. Migration to larger urban centres, some intermarriage and Islamic revival movements, have stressed their egalitarian outlook and weakened clan-based lineages with their focus on the shrines of particular saints.

The Rawther probably originated as cavalry militia, comprising indigenous converts to Islam, for Tamil Hindu rulers before pre-colonial Muslim rulers began similar recruitment in the late 17th century. During the 19th century Wahhābī missionaries began a process of Islamisation, attacking vestiges of Hindu ritual practices, stressing Sunnī orthodoxy and encouraging the use of Urdu as a symbol of "pure" Islam. Many Tamil Muslims were affected by this movement, and a considerable number of Labbai adopted the title of Rawther because they regarded any claim to martial ancestry as more orthodox and prestigious than simple Labbai status. Urdu, however, remained primarily the second language of a minority of Rawthers.

McPherson, *The political development of the Urdu- and Tamil-speaking Muslims of the Madras Presidency 1901 to 1937*, M.A. thesis, University of Western Australia 1968, unpubl. (K. MCPHERSON)

RAWWĀDIDS or BANŪ RAWWĀD, a minor dynasty of northwestern Persia which flourished during the period which Minorsky characterised as the "Iranian intermezzo" between the decline of Arab power there and the incoming of Turkish peoples like the Saldjūks, essentially during the 4th-5th/10th-11th centuries.

Although the Daylamīs [see DAYLAM] were the most prominent in this upsurge of northern Persian mountain peoples, the part of other races like the Kurds was not negligible. The Rawwādids (the form "Rawād" later becomes common in the sources) were originally of Azdī Arab stock, but gradually became assimilated to their environment in Ādharbaydjān (and especially, the area around Tabrīz) and became Kurdicised (cf. the similar process taking place in Shirwān [*q.v.*] or Sharwān, where the Yazīdī Shirwān-Shāhs became Iranised). In *ca.* 141/758-9 the caliph al-Manṣūr's governor of Ādharbaydjān, Yazīd b. Ḥātim al-Muhallabī appointed al-Rawwād b. al-Muthannā to secure the region between Tabrīz and al-Badhdh [*q.v.* in Suppl.]. Over the next two centuries, al-Rawwād's descendants became thoroughly Kurdicised, and Kurdish forms like "Mamlān" for Muḥammad and "Aḥmadīl" for Aḥmad begin to appear in their genealogy.

In the disturbed condition of Ādharbaydjān during the mid-4th/10th century, consequent on the disappearance of the Sādjids [*q.v.*] from there, the Rawwādid Abu 'l-Haydjāʾ Ḥusayn b. Muḥammad (344-78/955-88) succeeded to the heritage of the Kangarids or Musāfirids [*q.v.*]. During the next century, the outstanding member of the family was Abu

Manṣūr Wahsūdān b. Mamlān b. Abi 'l-Haydjā' (*ca.* 410-46/*ca.* 1019-54). He early faced the incursions of the so-called "ʿIrāḳī" Turkmens driven out of Khurāsān by Maḥmūd of Ghazna and of independently-operating Turkish bands, but it was not until 446/1054 that the Saldjūḳ leader Ṭoghrïl Beg [*q.v.*] resolved to bring Ādharbaydjān and Arrān under his control and to make the petty rulers of northwestern Persia and eastern Transcaucasia his vassals. Wahsūdān's eldest son Mamlān was confirmed in his father's territories by Ṭoghrïl in 450/1058, but the days of the dynasty as an autonomous power were numbered. The Ottoman historian Münedjdjim Bashï [*q.v.*], quoting earlier chronicles on the history of the region, states that, when the Saldjūḳ sultan Alp Arslan returned in 463/1071 from his Anatolian campaign against the Byzantines, he deposed Mamlān. But a later member of the family, Aḥmadīl b. Ibrāhīm b. Wahsūdān, held Marāgha [*q.v.*] and took part in warfare against the Crusaders in Syria, and his personal name was perpetuated by the line of his Turkish *ghulāms*, the Aḥmadīlīs [*q.v.*], who ruled in Marāgha as Atabegs during the 6th/13th century; survivors of the actual Rawwādid family can be traced up to Il-Khānid times in the early 8th/14th century.

(C.E. BOSWORTH)

RAʾY [see Suppl.].

RĀYČŪR, a town and district of South India, now in the Gulbargā division of the Indian Union state of Karnataka, before 1947 in the Ḥaydarābād princely state of British India (lat. 16° 15′ N., long. 77° 20′ E.).

An ancient Hindu town formerly part of the kingdom of Warangal, it passed to the Khaldjī Sultans of Dihlī in the 8th/14th century, then to the Bahmanīs and, after Awrangzīb's Deccan conquests, to the Mughals. Rāyčūr has interesting Islamic monuments. The Bahmanī Ek mīnār kī masdjid has its minaret in the corner of the courtyard [see MANĀRA. 2. In India]. The fortifications and gateway were built by Ibrāhīm I ʿĀdil Shāh in the mid-10th/16th century, and the Djāmiʿ masdjid or Friday mosque stems from 1022/1618.

Bibliography: *Imperial gazetteer of India*², xxi, 34-45; *Annual report, Arch. Dept. Hyderabad*, 1339F; Elisabeth S. Merklinger, *Indian Islamic architecture: the Deccan 1347-1686*, Warminster, Wilts. 1981, 48, 51 and plan 28. (C.E. BOSWORTH)

RAYDA (Rīda, Rēda) is the name of a number of places in ʿAsīr, in the Yemen and in Ḥaḍramawt. The word *rayd* (pl. *aryād/ruyūd*) means a ledge of a mountain, resembling a wall, or a resting upon ledges of mountains (Lane, *Lexicon*, *s.v.*). At least in Ḥaḍramawt, it is the term for the centre of the territory of a Bedouin tribe, which is generally a depression in the rocky plateau (D. van der Meulen and H. von Wissmann, *Hadramaut, some of its mysteries unveiled*, Leiden 1932, 22, n. 1). There are several places of this name (*Rēda*) in Hadramawt: Raydat al-Ṣayʿar, Raydat Arḍayn, Raydat al-ʿIbād, Raydat al-Ḥar(a)miyya. In ʿAsīr, Muḥammad b. ʿĀʾid of the Āl ʿĀʾid [see ʿASĪR; ʿARAB, DJAZĪRAT AL-] was defeated in 1872 by the Ottomans, under Muḥammad Redīf Pasha, at Raydat Banī Mufīd. The territory was annexed by King ʿAbd al-ʿAzīz after he had conquered al-Ḥidjāz. The best-known place of this name is Raydat al-Bawn (Raydat Shahīr) in the Yemen, a large village in the plain of Bawn (Hamdān), at lat. 15° 49′ N., long. 44° 2′ E. According to A. Sprenger, *Die alte Geographie Arabiens als Grundlage der Entwicklungsgeschichte des Semitismus*, repr. Amsterdam 1966, no. 293, its location corresponds with Μαγουλαυα of Ptolemy. Actually, Raydat al-Bawn is the chief place of the district (*nāḥiya*) of the same name, with a population (in 1979) of 1,637 inhabitants. The well-known Abū Muḥammad al-Ḥasan al-Hamdānī [*q.v.*] spent the greater part of his life in Raydat al-Bawn, where he probably died and was buried after 340/951-2. The place is also known for its pre-Islamic inscriptions.

Bibliography: Besides the works given in the text, see, for a full discussion of the sources for Raydat al-Bawn and its inscriptions (with photographs), Chr. Robin, *Les hautes-terres du Nord-Yemen avant l'Islam*. Leiden-Istanbul, 2 vols. 1982.

(ED.)

AL-**RAYDĀNIYYA** [see MAMLŪKS. i. e; SELIM I].

AL-**RAYḤĀNĪ**, AMĪN, Lebanese polygraph, of Maronite persuasion, born at Freika (al-Furayka) 24 November 1876 and died there 13 September 1940.

At twelve years old, he emigrated with his uncle to New York, where he dabbled in business, appeared on the stage and studied law for a while, but principally worked tirelessly to perfect his knowledge of English. Subsequently, he moved back and forth between the West and the East, studied Arabic authors and discovered al-Maʿarrī [*q.v.*], whose work he translated into English. Following the publication of an anti-clerical pamphlet, *al-Muḥālafa al-thulāthiyya fi 'l-mamlaka al-ḥayawāniyya*, New York 1903, 138 pp., he was excommunicated. His vision of life is expressed in *The Book of Khalid*, New York 1911, 349 pp. During the First World War, he was a newspaper correspondent in Europe. In 1922, he embarked on a tour of the Arabian Peninsula, a journey which lasted a year and was to be the subject of a remarkable account, *Mulūk al-ʿArab*, Beirut 1924, 925 pp. He lived alone for most of his life, and his marriage to Bertha Case (1879-1970) did not last long. He maintained a literary salon and diffused his energy in countless conferences and articles.

His corpus comprises some forty works, including ten in English and eight published posthumously (fifteen have been edited in the USA). It was republished by his brother Albert in Beirut between 1980 and 1983. However, this last is not an accurate and complete edition: in a political context, where the author uses the word Syria this is often replaced by Lebanon, and in a religious context, certain criticisms aimed at the Maronite community are mitigated. Finally, the text of his will in which he insisted on a secular burial has been censored. A new, complete edition has subsequently appeared, under the patronage of his nephew Amīn, also in Beirut, at Dār al-Djīl (with a large print-run).

Unlike many Arab writers of his generation who sought a haven in the West, Amīn al-Rayḥānī undertook a return to the East, under the influence of Emerson and Carlyle. He regarded himself as a philosopher, while as a poet, he was one of the first to compose texts in free verse. In prose, his style is strongly influenced by the Ḳurʾān. He believed in God, but his religion tended towards the kind of naturalism favoured by Rousseau. He was a supporter of Darwinian theories of evolution. Motivated by sentiments of revolt against institutions (sectarianism in particular) and intolerance, he defended

human liberty and fraternity with determination. A social reformer, he preached justice and the virtues of work. His political ideal was based on an Arab nationalism extending over an area considerably exceeding the boundaries of contemporary Lebanon; such an independent entity, he believed, would be capable of confronting the foreign intruder and guaranteeing the future of Palestine.

AL-**RAYY**, the ancient Raghā, a city in the old Persian region of Media, during Islamic times in the province of Djibāl [*q.v.*].

Its ruins may be seen about 5 miles south-south-east of Tehran [*q.v.*] to the south of a spur projecting from Elburz into the plain. The village and sanctuary of Shāh ʿAbd al-ʿAẓīm lie immediately south of the ruins. The geographical importance of the town lies in the fact that it was situated in the fertile zone which lies between the mountains and the desert, by which from time immemorial communication has taken place between the west and east of Persia. Several roads from Māzandarān [*q.v.*] converge on Rayy on the north side.

1. History.

In the Avesta, *Wīdēwdāt*, i, 15, Raghā is mentioned as the twelfth sacred place created by Ahura-Mazda. In the Old Persian inscriptions (Behistun 2, 10-18), Ragā appears as the province of Media in which in the autumn of 521 B.C. the false king of Media Frawartish sought refuge in vain; from Raghā also Darius sent reinforcements to his father Wishtāspa when the latter was putting down the rebellion in Parthia (Behistun 3, 1-10).

Raghā is also mentioned in the Apocrypha. Tobit sent his son Tobias from Niniveh to recover the silver deposited in Raghā with Gabael, brother of Gabrias (Tobit, i, 14). The book of Judith (i, 15) puts near Ragau (if indeed it was Raghā) the plain in which Nebuchadnezzar defeated the king of Media, Arphaxad (Phraortes?).

In the summer of 330 B.C., Alexander the Great, following Darius III took 11 days to go from Ecbatane to Rhagae (Arrian, 3, 20, 2). According to Strabo, xi, 9, 1 and xi, 13, 6, Seleucus Nicator (312-280) rebuilt Rhagae under the name of Eurōpos (in memory of his native town in Macedonia), and near Eurōpos the towns of Laodicea, Apamaea and Heraclea were peopled with Macedonians. After the coming of the Parthians the town was renamed Arsakia. It is, however, possible that all these towns, although situated in the same locality, occupied slightly different sites for they are mentioned side by side in the authorities. Rawlinson (*JGS*, x, 119) would put Eurōpos at Warāmīn [*q.v.*]. The Greek popular etymologies which explain the name Raghā as alluding to earthquakes seem to reflect the frequency of this phenomenon in this region so close to Damāwand.

In the Sāsānid period, Yazdagird III in 641 issued from Rayy his last appeal to the nation before fleeing to Khurāsān. The sanctuary of Bībī Shahr-Bānū situated on the south face of the already mentioned spur and accessible only to women is associated with the memory of the daughter of Yazdagird who, according to tradition, became the wife of al-Ḥusayn b. ʿAlī. In the years A.D. 486, 499, 553, Rayy is mentioned as the see of bishops of the Eastern Syrian church.

Arab conquest. The year of the conquest is variously given (18-24/639-44), and it is possible that the Arab power was consolidated gradually. As late as 25/646 a rebellion was suppressed in Rayy by Saʿd b. Abī Waḳḳāṣ. The Arabs seem to have profited by the dissensions among the noble Persian families. Rayy was the fief of the Mihrān family and, in consequence of the resistance of Siyāwakhsh b. Mihrān b. Bahrām Čūbīn, Nuʿaym b. Muḳarrin had the old town destroyed and ordered Farrukhān b. Zaynabī (Zaynadī?) b. Ḳūla [see MAṢMUGHĀN] to build a new town (al-Ṭabarī, i, 2655). In 71/690, again, a king of the family of Farrukhān is mentioned alongside of the Arab governor.

The passing of power from the Umayyads to the ʿAbbāsids took place at Rayy without incident but in 136/753 the "Khurramī" Sunbadh, one of Abū Muslim's stalwarts, seized the town for a short time. The new era for Rayy began with the appointment of the heir to the throne Muḥammad al-Mahdī to the governorship of the east (141-52/758-68). He rebuilt Rayy under the name of Muḥammadiyya and surrounded it by a ditch. The suburb of Mahdī-ābādh was built for those of the inhabitants who had to give up their property in the old town. Hārūn al-Rashīd, son of al-Mahdī, was born in Rayy and used often to recall with pleasure his native town and its principal street. In 195/810 al-Maʾmūn's general Ṭāhir b. Ḥusayn won a victory over al-Amīn's troops near Rayy. In 250/865 the struggle began in Rayy between the Zaydī ʿAlids of Ṭabaristān and first the Ṭāhirids and later the caliph's Turkish generals. It was not till 272/885 that Ädhgü-tegin of Ḳazwīn took the town from the ʿAlids. In 261/894 the caliph al-Muʿtamid, wishing to consolidate his position, appointed to Rayy his son, the future caliph al-Muktafī. Soon afterwards, the Sāmānids began to interfere in Rayy. Ismāʿīl b. Aḥmad seized Rayy in 289/912, and the fait accompli was confirmed by the caliph al-Muktafī. In 296/909 Aḥmad b. Ismāʿīl received investiture from al-Muḳtadir in Rayy (Gardīzī, ed. Nāẓim, 21-2).

In the 4th/10th century, Rayy is described in detail in the works of the contemporary Arab geographers. In spite of the interest which Baghdād displayed in Rayy, the number of Arabs there was insignificant, and the population consisted of Persians of all classes (*akhlāṭ*; al-Yaʿḳūbī, *Buldān*, Yaʿḳūbī, 276). Among the products of Rayy, Ibn al-Faḳīh, 253, mentions silks and other stuffs, articles of wood and "lustre dishes", an interesting detail in view of the celebrity enjoyed by the ceramics "of Rhages". All writers emphasise the very great importance of Rayy as a commercial centre. According to al-Iṣṭakhrī, 207, the town covered an area of 1½ by 1½ *farsakhs*, the buildings were of clay (*ṭīn*) but the use of bricks and plaster (*djiṣṣ* = *gač*) was also known. The town had five great gates and eight large bazaars. Al-Muḳaddasī, 391, calls Rayy one of the glories of the lands of Islam, and among other things mentions its library in the Rūdha quarter which was watered by the Sūrḳānī canal.

Daylamī period. In 304/916 the lord of Ādharbāydjān Yūsuf b. Abi 'l-Sādj [see SĀDJIDS] occupied

Rayy, out of which he drove the Daylamī Muḥammad b. ʿAlī Ṣuʿlūk who represented the Sāmānid Naṣr (Ibn al-Athīr, viii, 74). This occupation, commemorated in coins struck by Yūsuf at Muḥammadiyya (see Miles, *The numis-matic history of Rayy*, 140-2), was the beginning of a troubled period. Rayy passed successively into the hands of the Daylamī ʿAlī b. Wahsūdhān, Waṣīf Bektimūrī, the Daylamī Aḥmad b. ʿAlī and of Mufliḥ, slave of Yūsuf (in 313/925; cf. R. Vasmer, *O monetakh Sadjidov*, Baku 1927). Lastly, the Sāmānids, encouraged by the caliph, succeeded in bringing Rayy again within their sphere of influence but soon their general Asfār (a Daylamī) became independent in Rayy. In 318/930 Asfār was killed by his lieutenant Mardāwīdj [*q.v.*] (a native of Gīlān and one of the founders of the Ziyārid dynasty [see ZIYĀRIDS]) who took over his master's lands (Cl. Huart, *Les Ziyārides*, in *Mėms. Acad. Inscrs. et Belles-Lettres*, xlii (1922), 363 [= 11]).

After the assassination of Mardāwidj (323/925), the Būyids established themselves in Rayy, which became the fief of the branch of Rukn al-Dawla [*q.v.*] which held out there for about 100 years. In 390/1000 the last Sāmānid al-Muntaṣir made an attempt to seize Rayy but failed. In 420/1027 the Būyid Madjd al-Dawla [*q.v.*] was ill-advised enough to invoke against the Daylamīs the help of Maḥmūd of Ghazna, who seized his lands (cf. Muḥammad Nāẓim, *The life and times of Sulṭān Maḥmūd*, Cambridge 1931, 80-5; C.E. Bosworth, in *Camb. hist. of Iran*, iv, 176-7). The brief rule of the Ghaznawids was marked by acts of obscurantism, like the destruction of books on philosophy and astrology and the atrocious persecutions of the Ḳarmaṭians and Muʿtazilīs (Gardīzī, 91; Ibn al-Athīr, ix, 262).

The Saldjūḳs. The Ghuzz laid Rayy waste in 427/1035, and in 434/1042 the town, where Madjd al-Dawla still held out in the fort of Ṭabarak (Ibn al-Athīr, ix, 347), fell into the power of the Saldjūḳs and became one of their principal cities. The last Būyid, al-Malik al-Raḥīm, died a prisoner in Ṭabarak in 450/1058 (or in 455/1063; cf. H. Bowen, in *JRAS* [1929], 238) and the new lord Ṭoghrïl [*q.v.*] also died at Rayy in 455/1063. Henceforth, Rayy is constantly mentioned in connection with events relating to the Great Saldjūḳs and their branch in Persian ʿIrāḳ.

From the reign of Ghiyāth al-Dīn Masʿūd (529-547/1133-52 [*q.v.*]), Rayy was ruled by the *amīr* Inandj whose daughter Inandj Khātūn became the wife of Pahlawān, son of the famous atābeg of Ādharbāydjān, Ildegiz [*q.v.*]. When the latter put on the throne sultan Arslān Shāh (whose mother he had married), Inandj opposed this nomination but was defeated in 555/1160. Inandj withdrew to Bisṭām, but with the help of the Khʷārazmshāh Il Arslān reoccupied Rayy. He was finally murdered at the instigation of Ildegiz, who gave Rayy as a fief to Pahlawān. Later, the town passed to Ḳutlugh Inandj b. Pahlawān who, like his maternal grandfather, brought about the intervention of the Khʷārazmshāh Tekish in the affairs of Persia (588/1192). Two years later, in a battle near Rayy, the last Saldjūḳ Ṭoghrïl III was killed by Ḳutlugh Inandj but the country remained with the Khʷārazmians. In 614/1217 the atābeg of Fārs Saʿd b. Zangī [see SALGHURIDS] succeeded in occupying Rayy, but was almost immediately driven out by the Khʷārazmshāh Djalāl al-Dīn (cf. Nasawī, ed. Houdas).

Civil strife. Al-Muḳaddasī, 391, 395-6, mentions the dissensions (*ʿaṣabiyyāt*) among the people of Rayy in matters of religion. Under 582/1186-7, Ibn al-Athīr, xi, 237, records the damage done in Rayy in the civil war between Sunnīs and Shīʿīs; the inhabitants were killed or scattered and the town left in ruins. Yāḳūt, who, fleeing before the Mongols, went through Rayy in 617/1220, gives the results of his enquiry about the three parties, the Ḥanafīs, the Shāfiʿīs, and the Shīʿīs, of which the two first began by wiping out the Shīʿīs who formed half the population of the town and the majority in the country. Later, the Shāfiʿīs triumphed over the Ḥanafīs. The result was that there only survived in Rayy the Shāfiʿī quarter which was the smallest. Yāḳūt describes the underground houses at Rayy and the dark streets difficult of access which reflected the care of the inhabitants to protect themselves against enemies.

The Mongols. The Mongols who occupied Rayy after Yāḳūt's visit dealt it the final blow. Ibn al-Athīr (xii, 184) goes so far as to say that all the population was massacred by the Mongols in 617/1220 and the survivors put to death in 621/1224. It is, however, possible that the historian, echoing the panic which seized the Muslim world, exaggerates the extent of the destruction. Djuwaynī (ed. Ḳazwīnī, i, 115, tr. Boyle, i, 147) only says that the Mongol leaders put many people to death at Khʷār Rayy (in the country inhabited by Shīʿīs?) but in Rayy they were met by the (Shāfiʿī?) *ḳāḍī* who submitted to the invaders (*īl shud*), after which the latter went on. Rashīd al-Dīn (ed. Bérézine, in *Trudy VO*, xv, 135 [tr. 89]) admits that the Mongols under Djebe and Sübetey killed and plundered (*kushish wa-ghārat*) at "Rayy", but he seems to make a distinction between Rayy and Ḳum, in which the inhabitants were completely (*ba-kullī*) massacred.

The fact that life was not completely extinguished at Rayy is evident from the dates of pottery which apparently continued to be made in Rayy (cf. R. Guest, *A dated Rayy bowl*, in *Burlington Magazine* [1931], 134-5: the painted bowl bears the date 640/1243). The citadel of Ṭabarak was rebuilt under Ghazan Khān (1295-1304) but certain economic reasons (irrigation?) if not political and religious reasons, must have been against the restoration of Rayy, and the centre of the new administrative Mongol division (the *tumān* of Rayy) became Warāmīn [*q.v.*] (cf. *Nuzhat al-ḳulūb*, ed. Le Strange, 55). After the end of the Il-Khānids, Rayy fell to the sphere of influence of Tughā-Tīmūr [*q.v.*] of Astarābād. In 1384, Tīmūr's troops occupied Rayy without striking a blow but this must mean the district and not the town of Rayy, for Clavijo (ed. Sreznevsky, 187), who passed through this country in 1404, confirms that Rayy (*Xahariprey* = *Shahr-i Rayy*) was no longer inhabited (*agora deshabitada*). No importance is to be attached to the mention of "Rayy" in the time of Shāh Rukh (*Maṭlaʿ al-saʿdayn*, under the year 841/1437) or of Shāh Ismāʿīl, in *Ḥabīb al-siyar*.

Islamic history: A *Taʾrīkh al-Rayy* was written by Abū Saʿd Manṣūr b. Ḥusayn al-Ābī [= Āwaʾī]; the author was the vizier of the Būyid Madjd al-Dawla and had access to very good sources; Yāḳūt often cites this history (i, 57, s.v. *Āba*); another *Taʾrīkh al-Rayy* is attributed to the Persian scholar Muntadjab al-Dīn al-Ḳummī (d. 575/1179-8 [*q.v.*]), quoted in Ibn Hadjar al-ʿAsḳalānī's *Lisān al-mīzān*; Quatremère, *Histoire des Mongols*, 272-5

(many quotations from the *Mudjmal al-tawārīkh*); Barbier de Meynard, *Dict. géographique*, 1861 (quotations from the *Haft iḳlīm* of Aḥmad Rāzī); G. Le Strange, *The lands of the Eastern Caliphate*, 214-18; P. Schwarz, *Iran im Mittelalter*, 740-809 (very complete utilisation of the Arabic sources; complete list of the dependencies of Rayy); *Ḥudūd al-ʿālam*, tr. Minorsky, 132-3, comm. 384; G.C. Miles, *The numismatic history of Rayy*, New York 1938; Abū Dulaf, *Second Risāla*, ed. and tr. Minorsky, *Abū-Dulaf Misʿar ibn Muhalhil's travels in Iran (circa A.D. 950)*, Cairo 1955, text §§ 47-50, tr. 51-3; W. Barthold, *An historical geography of Iran*, Princeton 1984, 121-6. (V. MINORSKY)

2. Archaeology and monuments.

Olivier in 1797 sought the ruins of Rayy in vain and, it was Truilhier and Gardane who first discovered them. The earliest descriptions are by J. Morier, Ker Porter and Sir W. Ouseley. The first has preserved for us a sketch of a Sāsānid bas-relief which was later replaced by a sculpture of Fatḥ Alī Shāh. The description, and particularly the plan by Ker Porter (reproduced in Sarre and A.V.W. Jackson, *Persia*), are still of value because since his time the needs of agriculture and unsystematic digging have destroyed the walls and confused the strata. Large numbers of objects of archaeological interest, and particularly the celebrated pottery covered with paintings, have flooded the European and American markets as a result of the activity of the dealers. Scientific investigation was begun by the Joint Expedition to Rayy of the Museum of Fine Arts, Boston, and the Univ. of Pennsylvania, Philadelphia, in 1934 (cf. *The Illustrated London News* [22 June 1935], 1122-3; E.F. Schmidt, *The Persian expedition [Rayy]*, in *Bulletin of the University Museum*, Philadelphia, v [1935], 41-9, cf. 25-7), and was continued by Chahryar Adle from 1974 onwards. In the citadel hill, Dr. Erich Schmidt found a great variety of pottery and the remains of buildings among which the most interesting are the foundations of al-Mahdī's mosque (communication by A. Godard to the Congress of Persian Art at Leningrad in September 1935).

In an interesting passage, al-Muḳaddasī, 210, speaks of the high domes which the Būyids built over their tombs. The remains of three tomb towers are still visible at Rayy, including a twelve-sided one whose site accords with two buildings of the Būyid period mentioned in Niẓām al-Mulk's *Siyāsat-nāma*, ed. Darke, 211, tr. idem[2], 167, sc. a *dakhma* or Tower of Silence built by a Zoroastrian at Ṭabarak, later called the *dīda-yi sipāhsālārān* "vantage-point of the commanders", and the nearby "dome (*gunbadh*) of Fakhr al-Dawla", presumably the Būyid *amīr*'s tomb [see FAKHR AL-DAWLA], and also the so-called "Tomb of Ṭoghrïl", which had an iron plate on it with the date Radjab 534/March 1140 (see on this last, G.C. Miles, in *Ars Orientalis*, vi [1966], 45-6, and on the towers in general, R. Hillenbrand, *The tomb towers of Iran to 1550*, diss. Oxford University 1974, unpubl., ii, 68-9, 73-5, 82-8). A further tomb tower, circular in plan and probably originally having a conical cap like the Gunbadh-i Ḳābūs [*q.v.*] in Gurgān, was photographed by Curzon in 1890 (see his *Persia and the Persian question*, i, 351) but destroyed in *ca.* 1895 for use as building materials (the fate of so many of the buildings of Rayy in the 19th and early 20th centuries); its Kūfic inscription band probably bore the date 466/1073 or, less likely, 476/1083-4 (see Chahryar Adle, *Notes préliminaires sur la tour disparue de Ray (466/1073-74)*, in *Memorial vol. of the VIth Internat. Congress of Iranian Art and Archaeology, Oxford, September 11-16th 1972*, Tehran 1976, 1-12). The remains of several subterranean tombs and of what were above-ground tomb structures have also been discovered, see Adle, *Constructions funéraires à Ray circa Xe-XIIe siècle*, in *Archäologische Mitteilungen aus Iran, Ergänzungsband 6*, Berlin 1979 (= *Akten des VII. Internationalen Kongresses für Iranische Kunst und Archäologie, München 7.-10 September 1976*), 511-15.

The hill of Ṭabarak on which was the citadel (destroyed in 588/1192 by the Saldjūḳ sultan Ṭoghrïl III) was, according to Yāḳūt, situated to "the right" of the Khurāsān road, while the high mountain was to "the left" of this road. Ṭabarak therefore must have been on the top of the hill opposite the great spur (hill *G* in Ker Porter's plan: "fortress finely built of stone and on the summit of an immense rock which commands the open country to the south"); cf. the map in A.F. Stahl, *Die Umgegend von Teheran*, in *Pet. Mitt.* (1900).

Finally, one should note that a considerable number of silk fragments from the Būyid period, many of them with inscriptions on them, have ostensibly been found at Rayy, although not in a controlled archaeological context; their authenticity accordingly remains disputed, see Dorothy F. Shepherd, *Medieval Persian silks in fact and fancy*, in *Bull. de Liaison du Centre International d'Etude des textiles anciens*, no. 39-40, Lyons 1974.

Bibliography (in addition to references given in the article): Description of the ruins: J. Morier, *A Journey*, 1812, 232, 403; *Second Journey*, 1818, 190; Ker Porter, *Travels*, 1821, i, 357-64 (map); Ouseley, *Travels*, 1823, iii, 174-99, plate lxv; Ritter, *Erdkunde*, vi/1, 1838, 595-604; Curzon, *Persia*, i, 347-52; F. Sarre, *Denkmäler persischer Baukunst*, Berlin 1901, text, 55-58; A.V.W. Williams Jackson, *Persia past and present*, New York 1905, 428-41 (plan by Ker Porter).

Modern studies: Ḥusayn Karīmān, *Rayy-i bāstān*, Tehran 1345-9/1966-70, 2 vols., is the most detailed work here, but does not take account of the subsequent work by Adle, Y. Kossar and others; see, regarding this, Adle, *Notes sur les premièrе et seconde campagnes archéologiques à Rey. Automne-hiver 1354-55/1976-7*, in *Mélanges Jean Perrot*, Paris 1990, 295-307, providing a resume of a 6-vol. report on these investigations deposited at the Centre iranien pour les recherches archéologiques. See also Sylvia A. Matheson, *Persia: an archaeological guide*[2], London 1976, 46 ff., and the arts. ṬIHRĀN and WARĀMĪN.

(V. MINORSKY-[C.E. BOSWORTH])

RAYY [see MĀʾ].

RAYYA, modern Spanish rendering REYYO (RAYYO), the name given in Muslim Spain to the administrative circle (*kūra*) comprising the south of the Peninsula, the capital of which was successively Archidona (Arabic *Urdjudhūna*) and Málaga. The usual Arabic orthography is رَيَّة: in particular, this is the form found in the *Muʿdjam al-buldān* of Yāḳūt; but some Spanish mss. give the orthography رَيُّه, more in keeping with the local pronunciation Reyyo (Rayyu) attested by Ibn Ḥawḳal. It is probably, as Dozy thought, a transcription of the Latin *regio* (no doubt *Malacitana regio*); the suggestion put forward by Gayangos of a connection with the Persian townname al-Rayy is of course untenable.

When the fiefs in the south of Spain were assigned to the former companions of Baldj b. Bishr [*q.v.*], the district of Reyyo was alloted to the *djund* of Jordan (*al-Urdunn*). During the Umayyad caliphate of Cordova,

the *kūra* of Reyyo was bounded by those of Cabra and Algeciras in the west, by the Mediterranean in the south and by the *kūra* of Elvira in the east.

One should now add to the above a reference to J. Vallvé, *La división territorial de la España musulmana*, Madrid, Consejo Superior de Investigaciones Cientificas 1986, of which pp. 328-31 are devoted to "la cora de Rayya". According to this author, one should read Rayya and not Rayyo, basing himself on the sole topographical trace of this name, *Campo de Zafarraya*, interpreted as *Faḥṣ Rayya*, and, above all, on certain poems which require this reading for their end rhymes. An origin of the name has also been suggested in Phoenician via Latin.

The main problem regarding this *kūra* is the exact situation of the fortress of Bobastro (Bubas̲h̲tr, Bubas̲h̲tur), the main refuge of the rebel ʿUmar b. Ḥafṣūn, which we know was held by him and for which several localisations have been proposed. The traditional identification, with the place called Las Mesas de Villaverde, was defended by F.J. Simonet (earlier works cited in M. Riu Riu, *Aportación de la arqueología al estudio de los Mozárabes de al-Andalus*, in *Tres estudios de historia medieval andaluza*, Cordova 1977, 85-112), but Vallvé has proposed an identification with the high ground of Marmuyas in the district of Comares, where several seasons of excavations "with interesting results" have taken place. See for a full discussion, BUBAS̲H̲TRU in Suppl. Vallvé further cites, in regard to Rayya, the passage describing it by Ibn G̲h̲ālib, published by him and translated in the above-mentioned work; he also translates the passage of al-Nubāhī (*K. al-Markaba al-ʿulyā*, published by Lévi-Provençal), written in the 8th/14th century and giving the earlier borders of the *kūra*.

(E. Lévi-Provençal-[J.-P. Molénat])

AL-**RĀZĪ**, Abū Bakr Muḥammad b. Zakariyyāʾ, known to the Latins as Rhazes (*ca.* 250/854-313/925 or 323/935), physician, philosopher and alchemist.

The most free-thinking of the major philosophers of Islam, al-Rāzī was born in Rayy, where he was well trained in the Greek sciences. He was reputedly well versed in musical theory and performance before becoming a physician. His work in alchemy takes a new, more empirical and naturalistic approach than that of the Greeks or D̲j̲ābir, and he brought the same empirical spirit to medicine. Immersed in the Galenic tradition, and apparently even conversant with Greek (al-Bīrūnī ascribes to him translations and abridgements from the Greek and even a poem "in the Greek language"), al-Rāzī greatly profited from the Arabic translations of Greek medical and philosophical texts. He headed the hospital of Rayy before assuming the corresponding post in Bag̲h̲dād. His property in the vicinity seems to have brought him back often to Rayy, and he died there, somewhat embittered and alienated, partly by the loss of his eyesight. Like many of the great physicians of Islam, al-Rāzī was a courtier as well as a scholar, clinician and teacher. His medical handbook the *Manṣūrī*, translated into Latin by Gerard of Cremona in the 12th century, was dedicated to Manṣūr b. Isḥāḳ, the Sāmānid governor of Rayy; his *Mulūkī* or *Regius*, to ʿAlī b. Wāhsūd̲h̲ān of Ṭabaristān. The author of some two hundred books, al-Rāzī claims in his apologia, the *Sīra al-falsafiyya*, or "Philosophical Way of Life", that his has been a life of moderation, excessive only in his devotion to learning; he associated with princes never as a man at arms or an officer of state but always, and only, as a physician and a friend. He was constantly writing. In one year, he urges, he wrote over twenty thousand pages, "in a hand like an amulet maker's." Others remark on his generosity and compassion, seeing that the poor among his patients were properly fed and given adequate nursing care. Arriving patients first saw an outer circle of disciples, and then an inner circle, if these could not aid them, leaving al-Rāzī himself to treat the hardest cases. His medical research was similarly methodical, as revealed in his notebooks. These were edited, in some 25 volumes, as the *K. al-Ḥāwī fi 'l-ṭibb*, at the instance of Ibn al-ʿAmīd [*q.v.*], the vizier of Rukn al-Dawla [*q.v.*]. Translated as the *Continens* in 1279 by the Jewish physician Farad̲j̲ b. Sālim (known as Farraguth) for King Charles of Anjou, it was printed at Brescia in 1486 and repeatedly thereafter. The text (Ḥaydarābād 1955) contains al-Rāzī's extensive notes from a wide range of sources, organised anatomically, from head to toe. His own clinical observations, often at variance with received opinions, typically close the sections. Al-Rāzī mined these files for his numerous medical works, and several unfinished works can be discerned in the *Ḥāwī* in embryo. His magnum opus, the *Kitāb al-D̲j̲āmiʿ al-kabīr*, or "Great Medical Compendium", often confused with the *Ḥāwī*, was a work that al-Rāzī published, not the corpus of his private files. Among the most famous of his medical writings are those on *Stones in the kidney and bladder* (*K. al-Ḥaṣā fi 'l-kulā wa 'l-mat̲h̲āna*) and *Smallpox and measles* (*K. al-D̲j̲adarī wa 'l-ḥaṣba*). The latter was the first book on smallpox, and was translated over a dozen times into Latin and other European languages. Its lack of dogmatism and its Hippocratic reliance on clinical observation typify al-Rāzī's medical methods. His independent mind is strikingly revealed in his *S̲h̲ukūk ʿalā D̲j̲alīnūs* or "Doubts about Galen". Here al-Rāzī rejects claims of Galen's, from the alleged superiority of the Greek language to many of his cosmological and medical views. He places medicine within philosophy, inferring that sound practice demands independent thinking. His own clinical records, he reports, do not confirm Galen's descriptions of the course of a fever. And in some cases he finds that his clinical experience exceeds Galen's. He rejects the notion, central to the theory of humours, that the body is warmed or cooled only by warmer or cooler bodies; for a warm drink may heat the body to a degree much hotter than its own. Thus the drink must trigger a response rather than simply communicating its own warmth or coldness. This line of criticism has the potential, in time, to bring down the whole theory of humours and the scheme of the four elements, on which it was grounded. Al-Rāzī's alchemy, like his medical thinking, struggles within the cocoon of hylomorphism. It dismisses the idea of potions and dispenses with an appeal to magic, if magic means reliance on symbols as causes. But al-Rāzī does not reject the idea that there are wonders in the sense of unexplained phenomena in nature. His alchemical stockroom, accordingly, is enriched with the products of Persian mining and

manufacture, and the Chinese discovery, sal ammoniac. Still reliant on the idea of dominant forms or essences and thus on the Neoplatonic conception of causality as inherently intellectual rather than mechanical, al-Rāzī's alchemy nonetheless brings to the fore such empiric qualities as salinity and inflammability—the latter ascribed to "oiliness" and "sulphuriousness". Such properties are not readily explained by the traditional fire, water, earth and air schematism, as al-Ghazālī and other later comers, primed by thoughts like al-Rāzī's, were quick to note.

Like Galen, al-Rāzī was speculatively interested in the art and profession of medicine. He wrote essays on such subjects as "The reasons for people's preference of inferior physicians," "A mistaken view of the function of the physician," "Why some people leave a physician if he is intelligent," "That an intelligent physician cannot heal all diseases, since that is not possible," and "Why ignorant physicians, common folk, and women in the cities are more successful than scientists in treating certain diseases—and the physician's excuse for this." He also shared Galen's interest in philosophy and heeded his treatise, "That the outstanding physician must also be a philosopher." Al-Bīrūnī lists some eighty philosophical titles in his al-Rāzī bibliography, and al-Nadīm lists dozens of his works on logic, cosmology, theology, mathematics and alchemy. Given the general repugnance toward al-Rāzī's philosophical ideas among his contemporaries and medieval successors, few of these works were copied. But fragments survive in quotations by later authors, as do the *Sīra al-falsafiyya* and the *Ṭibb al-rūḥānī*, the "Spiritual physick" or "Psychological medicine," which embodies al-Rāzī's largely Epicurean ethical system. Among the writings of which we have mention are: a commentary on Plato's *Timaeus*, perhaps based on the epitome of Galen, a rebuttal of Iamblichus' response to Porphyry's *Letter to Anebos* (that is, the *De mysteriis*), an appraisal of the Ḳurʾān, a critique of Muʿtazilism, another on the infallible Ismāʿīlī Imām, a work on how to measure intelligence, an introduction to and vindication of algebra, a defence of the incorporeality of the soul, a debate with a Manichaean, and an explanation of the difficulty people have in accepting the sphericity of the earth when they are not trained in rigorous demonstration. Other works deal with eros, coitus, nudity and clothing, the fatal effects of the Simoom (or simply, of poisons, *sumūm*, cf. Sezgin, *GAS*, iii, 289 no. 32) on animal life, the seasons of autumn and spring, the wisdom of the Creator, and the reason for the creation of savage beasts and reptiles. One work defends the proposition that God does not interfere with the actions of other agents. Another rebuts the claim that the earth revolves. Al-Rāzī discussed the innate or intrinsic character of motion, a sensitive point at the juncture between Democritean and Aristotelian physics. He wrote several treatments of the nature of matter, and one on the unseen causes of motion. His exposé of the risks of ignoring the axioms of geometry may aim at *kalām* defenders of dimensionless atoms; and his book on the diagonal of the square may have defended his own atomism against the ancient charge, first levelled at Pythagoreanism, that atomism is refuted by the demonstrated incommensurability of a square's side with its diagonal; for al-Rāzī's acceptance of the void and rejection of Aristotle's doctrine of the relativity of space disarms that charge, since al-Rāzī's absolute space is a Euclidean continuum and need not, like his matter, be composed of discrete, indivisible quanta.

The *Ṭibb al-rūḥānī*, written for al-Manṣūr as a companion to the *Manṣūrī*, develops a moderately ascetic ideal of life from the premise that all pleasures presuppose a prior pain (or dislocation). This means that peace of mind or lack of perturbation is the optimum of pleasure, as al-Rāzī explains in his widely-cited lost work on pleasure. Pleasures cannot be amassed or hoarded, and what some hedonists might think of as "peak experiences" are reached only by traversing a corresponding valley. To feed an appetite, moreover, is only to enlarge it. So the attempt to maximise one's happiness by serving the appetites and passions is a self-defeating strategy, as Plato showed when he argued that such a life is comparable to trying to carry water in a sieve. Epicurus took that argument very much to heart when he sought to devise a hedonistic alternative to the sybaritic outlook of the Cyrenaic philosophers, and al-Rāzī does so as well. His ethical treatise follows al-Kindī's precedent in treating ethics as a kind of psychic medicine or clinical psychology, an approach later used by Ibn Gabirol and Maimonides. But the basis of the art in question, which is the Socratic tendance of the soul, is not primarily the Platonic "second voyage," the endeavour to flee to a higher world—although that theme is important to al-Rāzī. Expressing grave doubts about the demonstrability of immortality, he falls back on the less metaphysically demanding and more dialectically persuasive position that, if death is the ultimate end of our existence, it is nothing to be feared but only a surcease of our pains and troubles.

Wisdom, then, springs not from the thought of death, as many philosophers and pious teachers have supposed, but from overcoming that thought. For, even more than the appetites themselves, the fear of death is the goad of the passions that hamper human rationality and undermine human happiness. As al-Rāzī explains: "As long as the fear of death persists, one will incline away from reason and toward passion (*hawāʾ*)." The argument is Epicurean. The passions here, as in Epicurus, are thought of as neuroses, compulsions, pleasureless addictions, to use al-Rāzī's description (his word for an addict is *mudmin*). The glutton, the miser, even the sexual obsessive, are, by al-Rāzī's analysis, as much moved by the fear of death as by natural appetites. For natural needs, as Epicurus would explain, are always in measure. The unwholesome excess that makes vice a disease comes from the irrational and unselfconscious mental linking of natural pleasures and gratifications with security, that is, a sense of freedom from the fear of death. Ethics here becomes entirely prudential, as al-Rāzī's critics were not slow to note. If we knew that our ultimate state was immortality, and the return of the soul in us to her true home, our mad scrabbling after the surrogates of immortality would cease. But the fear of death "can never be banished altogether from the soul, unless one is certain that after death it shifts to a better state." And his conclusion is that it "would require very lengthy argumentation, if one sought proof rather than just allegations (*khabar*). There really is no method whatever for argument to adopt on this topic... The subject is too elevated and too broad as well as too long.... It would require examination of all faiths and rites that hold or imply beliefs about an afterlife and a verdict as to which are true and which are false"—a task al-Rāzī has no immediate or pressing intention of attempting. For practical purposes, then, he offers the Epicurean consolation that death is nothing to us, if the soul is really mortal. What scripture has to say on the subject is just another undemonstrated report, an unsubstantiated allegation.

In his debates with an Ismāʿīlī adversary, Abū Ḥātim al-Rāzī (d. 322/934 [*q.v.*]), chief lieutenant to the Ismāʿīlī *dāʿī* of Rayy, and later chief *dāʿī* himself, al-Rāzī faces a Muʿtazilī argument that harks back to Stoic sources: God's mercy would not deny humanity the guidance of leaders inspired with revealed knowledge of God's own will and His plan for human destiny. Al-Rāzī answers that God has provided what we need to know, not in the arbitrary and divisive gift of special revelation, which only foments bloodshed and contention, but in reason, which belongs equally to all. Prophets are impostors, at best misled by the demonic shades of restless and envious spirits. But ordinary men are fully capable of thinking for themselves and need no guidance from another. One can see their intelligence and ingenuity in the crafts and devices by which they get their living, for it is here that they apply their interest and their energy. Intellectuals who have not devoted their energies, say, to mechanical devices would be baffled by the skills and techniques of such men; but all human beings are capable of the independent thinking that is so critical to human destiny. It is only because the philosopher has applied himself to abstract speculations that he has attained some measure of understanding in intellectual matters.

Asked if a philosopher can follow a prophetically revealed religion, al-Rāzī openly retorts: "How can anyone think philosophically while committed to those old wives' tales, founded on contradictions, obdurate ignorance, and dogmatism (*muḳim ʿalā 'l-ikhtilāfat, muṣirr ʿalā 'l-djahl wa 'l-taḳlīd*)?" Al-Rāzī takes issue with ritualism for what he sees as its obsession with unseen and unseeable sources of impurity; but he also combats the natural tendency of his contemporaries to think of philosophy as a dogmatic school or even a sect, their expectation that a philosopher should believe and behave as Socrates or Plato did. Like many philosophers, he has difficulty explaining to others that philosophical disagreements and divergences of outlook are not a scandal but a source of vitality. A philosopher, he urges, does not slavishly follow the actions and ideas of some master. One learns from one's predecessors, to be sure, but the hope is to surpass them. Al-Rāzī admits that he will never be a Socrates, and cautions against anyone's expecting in short order to rival Socrates, Plato, Aristotle, Theophrastus, Eudemus, Chrysippus, Themistius or Alexander of Aphrodisias. But he also affirms a belief in progress, at least for individuals, and denies that one is trapped within the teachings of the great founders of traditions: "You must realise," he tells Abū Ḥātim, "that every later philosopher who commits himself creatively (*idjtahada*), diligently, and persistently to philosophical inquiry where subtle difficulties have led his predecessors to disagree, will understand what they understood and retain it, having a quick mind and much experience of thought and inquiry in other areas. Rapidly mastering what his predecessors knew and grasping the lessons they afford, he readily surpasses them. For inquiry, thought and originality make progress and improvement inevitable." The smallest measure of original thought, even if it does not reach unrevisable truth, al-Rāzī insists, helps to free the soul from its thrall in this world and secure for us that immortality which was so wrongly described and so vainly promised by the prophets.

The Soul, al-Rāzī argues in such works as his *Kitāb al-ʿIlm al-ilāhī* or "Theology", and *On the five eternals*, both now lost, but well represented by fragments, paraphrases, descriptions and refutations, was one of five eternal things that antedate the cosmos. The other four were God, matter, time and space. Space is the void. It may or may not have atoms in it. Time, like space, is absolute, not relative to bodies in motion, as in Aristotle. Being absolute, time is eternal. Motion is not. For matter, in itself, is inert; its motion stems from the activity of soul. Soul, the world soul, initially stood apart from matter, in a spiritual realm of her own. She yearned, however, to be embodied. And God, like a wise father, understanding that Soul learns only by experience, allowed her to embroil herself here, as a king might allow his headstrong son into a tempting but in many ways noxious garden, not out of ignorance, unconcern, or even powerlessness or spite, but out of understanding that only through experience will the boy's restlessness abate. In the case of Soul's entry into materiality, chaos was the first result, as she set matter stirring in wild and disordered motion. God, in His grace, intervened, imparting intelligence of His own to the world that Soul's impetuous desire had formed. As an immanent principle, intelligence gave order to the world, stabilising its motions and rendering them comprehensible. But it also gave understanding to the Soul itself, allowing her to recognise her estrangement in this world and seek a return from exile. It is this striving for return that gives meaning to all human strivings in the realm of life.

Only by such a theory, al-Rāzī insists, can creationists hope to overcome the elenchus of the eternalists, who deny creation altogether. A quasi-gnostic quasi-Platonic *formatio mundi*, then, not *creatio ex nihilo*, is the sole workable hypothesis which al-Rāzī can offer on behalf of the world's temporal origination, as opposed to its eternal, Plotinian emanation or its perpetual existence as a Democritean or Epicurean mechanism. Clearly the materialists, al-Rāzī reasons, improperly ignore the life and intelligence that course through nature, giving directed and stable movement to otherwise inert and passive matter. As for the Neoplatonic Aristotelians, their theory of emanation leads them to fudge (as Aristotle had done) on the inertness of matter. For, by treating the natural order as eternal, they seem to make motion and ordering form inherent properties of matter, rather than imparted acts and powers, as Neoplatonic principles should require. Only the affirmation of a temporal origin, which al-Rāzī unabashedly adopts from scripture and from the concurring authority of Plato's *Timaeus*, seems to do justice to the fact that nature's order is not intrinsic but imparted; and only a temporal creation does justice to the unimpeded operation of the forces of nature and the self-governing actions of human intelligence and will. For these gifts were given long ago and are not, as in Neoplatonism, timelessly imparted without ever really departing from their Source.

But although creation involves a kind of gift, al-Rāzī cannot treat the act of creation as a sheer act of grace, as many of his contemporaries might wish to do. His view that in this life evils outweigh goods, endorsed by Epicurean concerns over the problem of evil, and by physiological arguments about the ultimate prevalence of pain and suffering over peace and pleasure in all sensate beings, press him toward the gnostic conclusion that creation is a tragedy or mistake. Stopping short of such condemnation, al-Rāzī treats creation as a qualified evil: Life as a whole and bodily existence in general represent a fall for the life-giving principle, the Soul. But the fall is broken by the gift of intelligence. The crypt of the gnostic image has a skylight, through which streams the light of day. There is an avenue of escape. And the Soul's fall,

neither devised nor forced by God, is ascribed to her spontaneity, not to God's will or wisdom. It was neither coerced and destined nor mandated by the very nature of intelligence, as though it were (as in Neoplatonism) a demand of logic, but it was foreseen and tolerated by an all-seeing wisdom. And the loss it brought about will be overcome.

(L.E. GOODMAN)

AL-RĀZĪ, AḤMAD B. ʿABD ALLĀH, Yemenite historian whose full name is Abu 'l-ʿAbbās Aḥmad b. ʿAbd Allāh b. Muḥammad al-Rāzī. The date of his birth in Ṣanʿā' is unknown; he died there *ca.* 460/1068. The little that is known of this historian is owed to al-Djanadī (d. 732/1332) who, in his book *al-Sulūk* (ms.), indicates that he was a native of the capital of the Yemen, and that he was an *imām*, well-informed in matters of *fiḳh* and *ḥadīth*. Furthermore, it seems that he was a Sunnī, a fact to which his work alludes, and al-Djanadī attributes to him an "extensive tradition" and a "perfect spirit". The biographer believes that the author's family came originally from the town of Rayy (hence the *nisba*; on this point see Yāḳūt's list, *Muʿdjam*, iii, 120-2, in which his name does not however appear), but he gives no information as to when the family took up residence in the Yemen; it could have been with the Persian expedition of the 6th century A.D., in support of the Ḥimyarite dynasty, with Sayf b. Dhī Yazan (see R.G. Khoury, *Wahb b. Munabbih*, 189 ff.), or with the *Ṭabarāniyyūn*, who came from Ṭabaristān to the aid of the *imām* al-Hādī Yaḥyā b. al-Ḥusayn (220-98/835-911) (see e.g. *Sīrat al-Hādī*, ed. S. Zakkār, 116, 236; W. Madelung, *Der Imām al-Qāsim*, etc.), or later still, which seems less likely.

In his capacity as an author, al-Djanadī mentions his *Ta'rīkh Ṣanʿā'*, which he describes as having gained popular acclaim and which he must have used as a primary source in the writing of his own *al-Sulūk fī ṭabaḳāt al-ʿulamā' wa 'l-mulūk*. He gives no other information on this subject. Yet a version of the *Ta'rīkh* of al-Rāzī is currently available; it has been edited by Ḥusayn ʿAbd Allāh al-ʿAmrī and ʿAbd al-Djabbār Zakkār, under the title *Ta'rīkh madīnat Ṣanʿā'* (see *Bibl.*). The content of the book covers the period from the foundation of the city to the times in which the chronicler lived, i.e. the 5th/11th century; Brockelmann barely mentions this historian (*GAL*, SI, 570) and Sezgin not at all, although at least eight manuscript copies of the book existed in various libraries and were accessible to the editors.

The book comprises two major elements: a historical element which goes beyond the framework of history as such, and a bio-bibliographical element.

The historical section opens with general information concerning the Yemen, its capital and the villages surrounding it, the construction of this capital, the boundaries of which were established by Shem, under divine inspiration, and which attained its maximum level of development towards the end of the 3rd/9th century, a level which it had regained in the lifetime of the author, after its destruction. Details are also provided regarding the fortress of Ghumdān, the merits of the Yemen and of Ṣanʿā', formerly called Azāl, and the numerous mosques of the city, the first of which was planned by the first Muslim governor, Wabar b. Yuḥannis, and constructed and enlarged by his successors. This section, the shorter of the two, contains beyond any doubt the most detailed of information concerning the history of the city, providing data which are precise and useful, up to a point (for example, regarding the mosques, the valleys, the quarters, etc.). However, as a whole the work is un-

satisfactory, since it is rife with traditions traced back to various historical and religious sources and individuals, which have a single purpose: to promote the cause of the Yemen among the lands of God's Elect, and to extol the merits of the capital, as much in the Biblical tradition as in that of the Prophet Muḥammad. The conspicuous exaggerations are motivated by this purpose, as for example the claim that the first church of the town was built on the site where Jesus had prayed, or the latter's prophecy concerning the powerful individual who was to come forth from the town at the end of time; such items are to be found in all the chronicles of ancient Islamic cities.

The second elements of the book is bio-bibliographical. It begins with the Companions of the Prophet who came to the Yemen and some of whom were appointed governors of this land.

However the work becomes more systematic with its consideration of the élite of Yemenite scholars and ascetics, prominent among whom is the most illustrious figure of Ṣanʿāʾ, Wahb b. Munabbih (d. 110/728 or 114/732 [*q.v.*]), an ideal source of Biblical history for later Islamic historians, and thus for Ibn Isḥāḳ, whose universal Muslim history he had anticipated, and one of the principal sources of al-Rāzī. In the main his information is valuable, since many of these scholars are barely known or not at all. Details are provided here of their origin, their connections with the Yemen, the traditions attributed to them or concerning them, material such as is encountered in other Islamic books of the same genre. Unfortunately there are few dates, and, in the case of some of them, nothing more than one or a few trifling traditions. With the importance accorded to the bio-bibliographical element, it is evident that the interest in the work of al-Rāzī, as in that for example of the chroniclers al-Khaṭīb al-Baghdādī (392-463/1002-71) in his *Taʾrīkh Baghdād*, or Ibn ʿAsākir (499-571/1106-76), in *Taʾrīkh madīnat Dimashḳ*, can be explained by the fact that they were primarily historians and *muḥaddithūn*, for whom it was natural to employ the method of the *ahl al-ḥadīth*, albeit with particular nuances and the often considerable differences between these works (and others which are not mentioned here), to which the writer of this article has drawn attention elsewhere (see R.G. Khoury, *Zur Bedeutung des Aḥmad... al-Rāzī*, 93-6, 98, 100).

It is important to recognise that this book, in the terms of the literary production of its time, remains a relatively reliable and positive source, in particular for certain aspects of the history, geography and archaeology of the city and even of the country, not to mention his bio-bibliographical notices which supply the titles of a large number of books, most of them lost, which are the sources to which the author refers (see *ibid.*, 91 ff.).

Bibliography: Djanadī, *al-Sulūk fī ṭabaḳāt al-ʿulamāʾ wa l-mulūk* (ms., see Brockelmann, S II, 236); Yāḳūt, *Muʿdjam*, iii; al-Khaṭīb al-Baghdādī; Ibn ʿAsākir; W. Madelung, *Der Imām al-Qāsim ibn Ibrāhīm und die Glaubenslehre der Zaiditen*, Berlin 1965; R.G. Khoury, *Wahb b. Munabbih. Der Heidelberger Papyrus Heid. Arab. 23. Leben und Werk des Dichters*, Wiesbaden 1972; idem, *Zur Bedeuting des Aḥmad b. ʿAbdallah ar-Razi für die Geschichte des Jemen*, in *WI*, xx (1981), 87-103; *Sīrat al-Hādī ilā 'l-ḥaḳḳ Yaḥyā b. al-Ḥusayn*, ed. S. Zakkār, Beirut 1972; Rāzī, *Taʾrīkh madīnat Ṣanʿāʾ*, ed. H.ʿA.A. al-ʿAmrī and ʿA.Dj. Zakkār, Ṣanʿāʾ 1401/1981. (R.G. Khoury)

RĀZĪ, Amīn Aḥmad, a Persian biographer of the later 10th/16th and early 11th/17th centuries. Hardly anything is known of his life. He belonged to Rayy, where his father Khʷādja Mīrzā Aḥmad was celebrated for his wealth and benevolence. The latter was in high favour with Shāh Ṭahmāsp and was appointed by him *kalāntar* [*q.v.*] of his native town. His paternal uncle Khʷādja Muḥammad Sharīf was vizier of Khurāsān, Yazd and Iṣfahān, and his cousin Ghiyāth Beg a high official at the court of the Emperor Akbar. Amīn himself is said to have visited India. The work to which he owes his fame is the great collection of biographies *Haft iḳlīm* (finished in 1002/1594). For many years he collected information about famous men, until finally he yielded to the entreaties of one of his friends and arranged his material in book form. The final editing of it took six years. The biographies are arranged geographically according to the 7 climes. In each clime the biographical part is preceded by a short geographical and historical introduction which is followed by notes on poets *ʿulamāʾ*, famous *shaykh*s, etc. in chronological order. The work is of special importance for the history of Persian literature, as the biographies of poets contain numerous specimens of their works, some of which are very rare. It contains the following sections: Clime I: Yaman, Bilād al-Zandj, Nubia, China. Clime II: Mecca, Medina, Yamāma, Hurmuz, Dekkān, Aḥmadnagar, Dawlatābād, Golkonda, Aḥmadābād, Sūrat, Bengal, Orissa and Kūsh. Clime III: ʿIrāḳ, Baghdād, Kūfa, Nadjaf, Baṣra, Yazd, Fārs, Sīstān, Ḳandahār, Ghaznīn, Lahawr, Dihlī, India from the oldest times down to Akbar, Syria, Egypt. Clime IV: Khurāsān, Balkh, Harāt, Djām, Mashhad, Nīshāpūr, Sabzawār, Isfarāʾīn, Iṣfahān, Kāshān, Ḳum, Susa, Hamadhān, Rayy and Ṭihrān, Damāwand, Astarābād, Ṭabaristān, Māzandarān, Gīlān, Ḳazwīn, Ādharbāydjān, Tabrīz, Ardabīl, Marāgha. Clime V: Shīrwān, Gandja, Khʷārazm, Mā warāʾ al-Nahr, Samarḳand, Bukhārā, Farghāna. Clime VI: Turkistān, Fārāb, Yārkand, Rūs, Constantinople, Rūm. Clime VII: Bulghār, Ṣaḳlab, Yādjūdj, Mādjūdj.

The Calcutta 1918-72 edition of E. Denison Ross, ʿAbdul Muqtadir, A.H. Harley, etc., omits the fourth clime, over half the complete work; complete ed. (poor) by Djawād Fāḍil, 3 vols., Tehran 1340/1961.

al-**RĀZĪ**, Fakhr al-Dīn [see fakhr al-dīn al-rāzī].

RAZĪN, Banū, the dynasty which ruled the petty state [see mulūk al-ṭawāʾif] of al-Sahla [*q.v.*] (or Albarracín, derived from their name) in al-Andalus [*q.v.*] during the 5th/11th century.

Of Berber descent, but long settled in the peninsula, they remained loyal to the legitimist Umayyad regime of Hishām II al-Muʾayyad at the time of the collapse of the caliphate, but finally switched to support of Sulaymān al-Mustaʿīn, who recognised them as governors of their local territory. They survived as independent or semi-independent rulers from *ca.* 405/1014-15 (possibly as early as 403/1012-13) to Radjab 497/April 1104, when they were deposed by the Almoravids or al-Murābiṭūn [*q.v.*]. The list of their rulers is not entirely clear: the founder of the dynasty, Hudhayl b. Khalaf b. Lubb (the name may point to intermarriage with local Christian families) Ibn Razīn, seems to have ruled until 436/1044-5, and to have been succeeded by a son, Abū Marwān ʿAbd al-Malik, Djabr al-Dawla. The latter, who reigned for

a remarkable sixty years, until 496/1103, is usually identified as Ḥusām al-Dawla in the sources, but the fragmentary text edited by Lévi-Provençal as an appendix to Ibn ʿIdhārī, vol. iii, reports that he used the title Ḥusām al-Dawla only before his accession and gives that title as a throne-name to this ruler's successor, Yaḥyā, who reigned for the last year of the dynasty's existence. The founder of the dynasty is generally described with the superlatives characteristic of mediaeval sources on the taifa rulers, although he is also said to have been directly involved in the murder of his own mother; the sources seem more impressed with the amounts he spent on the acquisition of singing-girls. A few lines of poetry by members of the dynasty are preserved. The survival of the dynasty, and of the state which it ruled, for so long seems to be the product of a combination of geographical isolation, overall unimportance and luck rather than of any particular skills possessed by the members of this family.

A. Vives y Escudero, *Monedas de las dinastías arábigo-españolas*, Madrid 1893, 206, no. 1266, assigns one coin (surviving in only a single specimen) to this dynasty, but there seems to be a confusion here with the rulers of Alpuente (al-Bunt [*q.v.*]) (the coin itself presents other difficulties); A. Prieto y Vives, *Los Reyes de Taifas, estudio histórico-numismático de los musulmanes españoles en el siglo V de la hégira (XI de J. C.)*, Madrid 1926, 107, suggests that some other coins (a total of four specimens of two types recorded by Vives, nos. 799-800 = Prieto, nos. 29-30) of the year 405/1014-15, struck in the name of Sulaymān al-Mustaʿīn and naming his son Muḥammad as heir, which bear also the name Ibn Khalaf, may be issues of the first member of this dynasty. The suggestion seems plausible.

(D.J. Wasserstein)

RAZĪN B. MUʿĀWIYA, Abu 'l-Ḥasan b. ʿAmmār al-ʿAbdarī al-Sarakusṭī (d. 524/1129 or 535/1140), Andalusian traditionist. Of unknown date of birth, his *nisba* indicates that he probably was born in Saragossa. The biographical works do not record any data about his life in al-Andalus. If he did live in Saragossa, he may have left it when the Almoravids captured the town in 503/1110, in which case he must have belonged to those who did not welcome the new lords of the Peninsula. Otherwise, he may have left the town after the Christian conquest of 512/1118. The 6th/12th century marks the beginning of the wave of Andalusians emigrating to safer lands. It may also be that Razīn b. Muʿāwiya's travel to the East was not motivated by either political or military reasons, but simply by the desire to perform the *riḥla fī ṭalab al-ʿilm* and the pilgrimage. He settled in Mecca, where he died at an advanced age. Nothing is known about his Andalusian teachers, but his teachers in Mecca were Abū ʿAbd Allāh al-Ḥusayn al-Ṭabarī, with whom he studied Muslim's *Ṣaḥīḥ*, and Abū Maktūm ʿĪsā b. Abī Dharr al-Harawī, with whom he studied al-Bukhārī's work. Abū Maktūm was the son of one of the most influential transmitters of al-Bukhārī's *Ṣaḥīḥ*, whose *riwāya* was well known in al-Andalus. Razīn b. Muʿāwiya wrote his two known works in Mecca: a history of Mecca, which seems to have included also information on Medina (*Kitāb fī akhbār Makka*, also called *Akhbār Makka wa'l-Madīna wa-faḍlihimā*), and *al-Tadjrīd fī 'l-djamʿ bayn al-Ṣiḥāḥ al-sitta* or *Tadjrīd al-Ṣiḥāḥ*, a collection of the traditions common to the works of al-Bukhārī, Muslim, Abū Dāwūd, al-Tirmidhī, al-Nasāʾī and Mālik's *Muwaṭṭaʾ*. The inclusion of Mālik's work among the canonical collections of *ḥadīth* shows clearly the Western Islamic background of the author. The extant manuscripts (mentioned in *GAL*) remain unpublished. The *Tadjrīd* is one of the sources of Madjd al-Dīn Ibn al-Athīr's *Djāmiʿ al-uṣūl*, as Ibn al-Athīr himself (d. 606/1209) explains in his introduction. The interest of Razīn b. Muʿāwiya's work can be deduced from the following example. The controversial tradition which runs "whosoever spends liberally on his household on the day of ʿĀshūrāʾ, God will bestow plenty upon him throughout the remainder of the year" (*man wassaʿa ʿalā (nafsihi wa-)ahlihi/ʿiyālihi (fi 'l-nafaḳa) yawm ʿĀshūrāʾ wassaʿa Allāh ʿalayhi (wa-ʿalā ahlihi) sāʾir al-sana/ṭūla sanatihi*), mentioned among others by Sulaymān b. Aḥmad al-Ṭabarānī (d. 360/971) in his *al-Muʿdjam al-kabīr* (10 vols., Beirut 1983), x, 94, no. 10,007), is quoted by Ibn al-Athīr in his *Djāmiʿ al-uṣūl* in the chapter *fī faḍl al-nafaḳa* (ed. ʿAbd al-Ḳādir Arnāʾūṭ, 10 vols., n.p. 1969, ix, 527), stating that his source is Razīn b. Muʿāwiya's *Tadjrīd*. It would seem therefore that Razīn thought that the tradition was included either in the *Muwaṭṭaʾ* or in the other above-mentioned collections, but it is found in none of the extant versions of these works, according to the *Concordance*. Among others, al-Udjhūrī (d. 1066/1656) pointed out in his *Faḍāʾil yawm ʿĀshūrāʾ* (ms. B.N. Paris, no. 3244, fols. 153-75) that it was very strange that Ibn al-Athīr quotes the tradition on liberal spending on ʿĀshūrāʾ day in his *Djāmiʿ* and more strange still that Ibn al-Athīr's brother reiterates it in his *Ikhtiṣār Djāmiʿ al-uṣūl*, both stating that the tradition is to be found in al-Bukhārī's and Muslim's collections. It is in Razīn's work where an explanation for this "oddity" is to be found. Two possibilities can be taken into account. Either Razīn included it because he agreed with its contents, disregarding its absence in the canonical collections; or else he found the tradition in the version of one of those collections at his disposal. The latter possibility can be sustained by evidence on the circulation of different versions of al-Bukhārī's collection. Among Razīn b. Muʿāwiya's pupils the following are mentioned: the ascetic Aḥmad b. Muḥammad b. Ḳudāma (of the famous family of the Banū Ḳudāma), Ibn ʿAsākir and the judge of Mecca Abu 'l-Muẓaffar Muḥammad b. ʿAlī al-Ṭabarī, who wrote to Ibn Bashkuwāl informing him of Razīn's death.

REDJĀʾĪ-ZĀDE MEḤMED DJELĀL BEY (1254-1300/1838-82), Turkish writer and poet, and elder brother of Redjāʾī-zāde Maḥmūd Ekrem Bey [see EKREM BEY]. He had a moderately successful administrative career, entering the Translation Office (*Terdjüme Odasī*) of the Sublime Porte in 1270/1853-4, being appointed in 1279/1862-3 chief clerk to the embassy in St. Petersburg, becoming assistant secretary (*mektūbī muʿāwini*) under Aḥmed Djewdet Pasha [*q.v.*] in 1282-1865-6, when the latter became *wālī* of Aleppo, and finally chief secretary of the provinces of Kastamonu (in 1288/1871-2) and Aydın (in 1294/1877). In 1298/1881 he was dismissed from his last post.

His poetry has apparently never been published. Some specimens can be found in İnal (see Bibl.). He belonged for a while to the salon of ʿĀrif Ḥikmet Bey [*q.v.*], the last great representative of the classical *dīwān* school, and his poetry seems unaffected by the new trends personified by his brother. His forte appears to have been *hezliyyāt* "jesting poems." His pen-name for these is Dhewḳī, while his serious *ghazels* are signed Djelāl. He also composed some poetry in Persian (a *mukhammas* in İnal, 203).

Bibliography: Ibnülemin Mahmud Kemal [İnal], *Son asır türk şairleri*, Istanbul 1930, 200-4; Ibrahim Alâettin Gövsa, *Türk meşhurları ansiklopedisi*, [Istanbul] n.d. [*ca.* 1945], 80. (ED.)

REDJEB PASHA, TOPAL (d. 1041/1632), Ottoman Grand Vizier under Sultan Murād IV [*q.v.*]. Of Bosnian origin, he began his career in the *bostandjī* corps and attained the high office of *Bostandjī-bashī* [*q.v.*] in the reign of Aḥmed I [*q.v.*]. Although slightly invalid (a sufferer from gout, hence *topal*), he continued his career: a vizier since 1031/1622, he was appointed commander-in-chief in the Black Sea. With his squadron he defeated a Cossack fleet of 600 *shayḳas*. Redjeb Pasha was *Ḳapudān-pasha* 1032-5/1623-26. Commanding the fleet in Radjab-Ramaḍān 1033/May-July 1624 at the time of a revolt of the *Khān* of the Crimea Meḥmed Girāy III (second reign 1032-6/1623-7), he was able to hold Kefe [*q.v.*]. Next year, he again defeated a Cossack force of 350 *shayḳas* off Kara Harman (to the north of Köstendje/Constanṭa [*q.v.*]). In 1035/1626 he organised a revolt of Janissaries in the capital and gained the position of *ḳāʾim-maḳām* instead of Gürdjü Meḥmed Pasha [*q.v.*]. Provoked by the dismissal of the Grand Vizier Khosrew Pasha [*q.v.*], in 1041/1631 he incited another uprising of Janissaries and Sipāhīs of the Porte who were of Bosnian and Albanian origin (1042/1632). This violent episode led to the murder of Grand Vizier Ḥāfiẓ Aḥmed Pasha [*q.v.*] in front of Murād IV and the massacre of a number of the sultan's favourites, rivals to Redjeb's faction. In this way, he became Grand Vizier on 19 Radjab 1041/10 February 1632. Murād IV, however, soon made an end to this *zorba* régime and had Redjeb Pasha executed inside the seraglio on 28 Shawwāl 1041/18 May 1632 (von Hammer, following Pečewi, has 17 May); this execution meant the beginning of Murād IV's personal rule. Redjeb Pasha was married to Djewher Khān Sulṭān, a daughter of Aḥmed I and earlier the widow of Dāmād Meḥmed Pasha Öküz [*q.v.*] and Ḥāfiẓ Aḥmed Pasha. He had a daughter born in 1040/1630.

REFĪʿĪ, an Ottoman poet and Ḥurūfī [see ḤURŪFIYYA]. Of Refīʿī's life we only have a few hints from himself; the Ottoman biographers and historians do not seem to mention him at all. He himself describes how in his youth he studied many branches of knowledge but did not know what he should believe, and how sometimes he turned to the Sunna, sometimes to philosophy and sometimes to materialism. He often travelled a great distance to visit a particular scholar but always was disappointed. The poet Nesīmī [*q.v.*] was the first to teach him the grace of God and the truth, and ordered him to teach this truth in his turn to the people of Rūm, and for this purpose he had to speak in Turkish. He therefore wrote his *Beshāret-nāme*, "the message of joy", which he finished on the first Friday of Ramaḍān 811/18 January 1409. This work is not yet printed; it is quite short and written in the same metre as ʿĀshïḳ-pasha's *Gharīb-nāme*, a *remel* of six feet with irregular prosody. The Ḥurūfī teaching is expounded in a very prosaic style, the merits of the names and letters, the sacred number 32, the prophets, the throne of God, the human countenance, the splitting of the moon, Faḍl Allāh [*q.v.*], the founder of the Ḥurūfī sect—all this is dealt with from the usual Ḥurūfī point of view. As sources, an *ʿArsh-nāme*, a *Djāwidān-nāme*, and a *Maḥabbet-nāme* are quoted, all three probably the works of the same names by Faḍl Allāh.

Another of Refīʿī's works is the "Book of Treasure" (*Gendj-nāme*), facs. edn. Istanbul 1946. The *Gendj-nāme* is better as poetry and on the whole less Ḥurūfī than generally Ṣūfī in tone. Man from the Ḥurūfī and philosophic point of view, Faḍl Allāh and Aḥmad (= Muḥammad), the 72 sects, the greatest Name (*ism-i aʿẓam*), the water of life, etc., are discussed in it.

Nesīmī and his pupil Refīʿī seem to be the only Ottoman Ḥurūfī poets of importance, and while the sect, in spite of all persecutions, continued to exist long after and even had connections with the Bektāshiyya [*q.v.*], these two poets as such do not seem to have produced any school.

REFIḲ KHĀLID KARAY [see KARAY, REFĪḲ KHĀLID].

REG, a form generally retained in European languages for the Arabic *riḳḳ* "dessicated terrain", in its Bedouin realisation (Sahara of the Maghrib) *rĕgg*; cf. *LʿA. s.vv. riḳḳ, raḳḳ, raḳāḳ, ruḳāḳ*, with a common denominator meaning "terrain where water has disappeared, at least on the surface", and with varying connotations. See G. Boris, *Lexique du parler arabe des Marazig*, Paris 1958, 220: *rᵉgāg*, pl. *rᵉgāgāt*, "a wide expanse of desert terrain".

In French, the word has become a scientific term which may be used in reference to any part of the globe. As a stony flat or almost flat surface, commonly found in the deserts where deposits of sand are lacking, the reg corresponds to the removal of minute, fine materials by the winnowing effects of winds, which only leave a hard crust beneath which one may often find the finer material protected by the stones. A reg can be covered over: by shingle (alluvial and allochthonous, as in the regs of the ancient course of the Oued Ighagha to the south of the *ḥamāda* of Tinghert, towards 28° N, 6° E); by angular, autochthonous gravel (reg formed by the removal of the weathered surfaces of *ḥamādas*, such as those of the northern piedmont of the Saharan Atlas, forming a band running west-south-west to east-north-east some 100-150 km wide and 800 km long, from 31° N, 1° W to 33° N, 6° E); or by rounded material joined together and too large for the wind to move them (*sarīr* of the Libyan desert forming a paved-like or mosaic-like reg, like the Tibesti *sarīr* around 24° N, 17° E). The nomads sometimes use the term *mriyyé* "mirror" to describe certain regs which are particularly regular. The surfaces of regs are often very stable areas, where the fact that the elements composing them remain in the same place favours atmospheric actions, such as polishing by the wind, the formation of polished desert surfaces, and even of pebbles with wind-polished facets (dreikanters) in the regions characterised by continuous winds.

The regs cover extensive surfaces in the Saharan-Arabian and the Asiatic deserts of the Islamic world, whether on the plains or on the plateaux, since they form the surface pattern which is habitual in desert regions when the sand layer is insufficient to cover the soil. For example, in the central Sahara, the regs of the fringes of the Hoggar cover the greater part of the slopes and plains surrounding the mountain massifs. The regs constitute areas which are very unfavourable for the growth of vegetation, hence for human activity, except in times of rain. On the other hand, they are often, when the surface débris is not too large in size, stretches of terrain more easily adapted for moving about than the ergs (*ʿirḳ*), the mountain zones and the dissected plateaux of the *tassili* type, and they have been instrumental in siting the great caravan tracks in the desert regions and, later, roads for motor traffic.

REʾĪS ÜL-KÜTTĀB or Reʾīs Efendi (A., used in Turkey), properly "chief of the men of the pen", a high Ottoman dignitary, directly under the Grand Vizier, originally head of the chancery of the Imperial Dīwān (*dīwān-i hümāyūn*), later secretary of state or chancellor and Minister of Foreign Affairs. According to d'Herbelot, he was called also *reʾīs kitāb*.

This office, unlike many others, is purely Ottoman, at least as regards the particular line of development that it took. Establishing itself at the expense of the functions of the *nishāndjī* [*q.v.*], we may say that it owes nothing to the influence of the more or less Persianised Saldjūḳs nor to the Byzantines. In its origins it seems rather to be connected with a more general and more vague institution of the East, one which deserves more profound study: that of the secretaries of the *dīwān* or chiefs of the secretariat of the *dīwān*. This office is found in different Muslim countries under different names: *perwāne* among the Mongols of Persia, *dīwān begi* among the Tīmūrids and *munshī* in Persia (cf. Chardin, vi, 175; Ewliyā Čelebi, ii, 267). In the Ottoman provinces there was attached also to the *wālī* an important official known as the *dīwān efendi(si)*; in Egypt, under Muḥammad ʿAlī, the *dīwān efendi* became a kind of president of the council of ministers. The *reʾīs ül-küttāb* was in brief the *dīwān efendisi* of the capital. It is perhaps to this that we owe the use of the title *reʾīs efendi*, by which they were more commonly known. We know that the term *efendi* was generally applied to people of the pen. This connection seems to have already been noticed by E. Blochet (*Voyage en Orient de Carlier Pinon*, Paris 1920, 83).

Until the time of Süleymān the Magnificent, the title *reʾīs ül-küttāb* (or *reʾīs efendi*) was not used. At least, this is what we are told by Aḥmed Resmī, who quotes in this connection the *Bedāʾiʿ ül-weḳāʾiʿ* of the historian Ḳodja Ḥüseyn Efendi of Sarajevo (cf. Babinger, *GOW*, 186). The latter, who was himself *reʾīs ül-küttāb*, says that before Süleymān, the official correspondence was in the hands of the *emīn-i aḥkām* or "depository of the decisions (of the *Dīwān*)" along with the *nishāndjī*. This point of view has been adopted by other historians (von Hammer; cf. also the *Sālnāme-yi neẓāret-i khāridjiyye*).

There is, however, no agreement as to who was the first *reʾīs ül-küttāb*; it is usually said to have been Djalāl (Djelāl)-zāde Muṣṭafā Čelebi [*q.v.*] (see Babinger, *GOW*, 102). This well-known historian, whose genealogy is taken back to the legendary founder of Byzantium, Yanḳo b. Mādyān, was *reʾīs ül-küttāb* in 931/1524-5 before becoming *nishāndjī*, but the *Nukhbet ül-tewārīkh* of Meḥmed b. Meḥmed refers to the death in 930/1523-4 of a *reʾīs ül-küttāb* of the name of Ḥaydar Efendi. According to other indications, it would even appear that the office goes back to Meḥemmed II [see NISHĀNDJĪ].

The *riyāset* or office of *reʾīs efendi* lasted over three centuries, during which its holder changed 130 times, the average tenure of office being 2 years and 5 months, which reveals a remarkable lack of ministerial stability: some of the occupants held the office twice, thrice and even four times.

Duties of the *reʾīs efendi*. As secretary of state the *reʾīs* kept records of memoirs and reports (*telkhīṣ* and *taḳrīr*) presented to the sultan by the Grand Vizier acting as representative of the government and of the *Dīwān*. These documents which were prepared by the *āmedī-yi dīwān-i hümāyūn* or *āmeddji* (referendar or reporter of the Imperial *Dīwān*) were brought in a bag

(*kīse*) kept for the purpose to the ceremonial sittings of the *Dīwān* by the *re'īs* himself who handed them to the Grand Vizier. After being read, they were given to a special officer, the *telkhīṣdji*, whose duty it was to present them to the sultan.

As chancellor, the *re'īs* had a kind of jurisdiction over all the civil functionaries and was the immediate head of the department of the Imperial *Dīwān* (*dīwān-i hümāyūn ḳalemi*).

This chancellery was divided into three offices (*oda* or *ḳalem*):

1. the *beylik*, the most important, saw to the despatch of imperial rescripts (*firmān*), orders of the viziers, and in general all ordinances (*ewāmir*) other than those of the department of finance (*defterdār dā'iresi*). This office kept copies of them, as did the Grand Vizier also. Ordinances bearing on the back the signatures of the clerk, of the chief editor (*mümeyyiz*), and of the head of the office (*beylikdji*), were submitted by the latter to the *re'īs*, who placed his sign (*resīd*) upon them and, if it was a *firmān*, sent it to the *nishāndjī* for the *tughrā* [*q.v.*] to be placed upon it. The *beylik* in addition retained the originals of civil and military regulations (*ḳānūn* or *ḳānūn-nāme*) (usually elaborated by the *nishāndjī*), as well as of treaties and capitulations (*ʿahd-nāme*) with foreign powers. The *re'īs* had to consult these treaties, notably when certifying the *der-kenār* or "marginal" answers put by his subordinates on the requests or notes, known as verbal (*taḳrīr*), which the ambassadors addressed to the Grand Vizier. It is this side of his activity which, gradually becoming more and more important and absorbing, ended by making the *re'īs* a Minister of Foreign Affairs.

2. office of the *taḥwīl* or "annual renewal" of the diplomas of the governors of provinces (*berāt* [*q.v.*]), of the brevets of the *mollās* or judges in towns of the first class (*taḥwīl*), of the brevets of the timariots or holders of military fiefs (*ḍabṭ firmānī*).

3. office of the *ru'ūs* or "provisions" of different officials, as well as of the orders for pensions from the treasury (*sergi*) or from *waḳf*s (see for the details of the organisation of this office, Mouradgea d'Ohsson, vii, 161).

The *re'īs* accompanied the Grand Vizier to the audiences which the sultan gave him and to those which the Grand Vizier himself gave to ambassadors. He shared with his master the midday meal, as did the *čawush bashī* [see ČAWUSH] and the two *tezkeredjis*, except on Wednesdays when these two were replaced by the four judges of Istanbul.

In the official protocol, the *re'īs* had the same rank as the *čawush bashī*, with whom he walked in official processions, before the *defterdār*s (which showed he was of lower rank than the latter).

The *elḳāb* or epistolary formulae to which they were entitled are found in Ferīdūn, *Münshe'āt*, 10. They were the same as for the *agha*s of the stirrup [see RIKĀBDĀR] and the *defter emīni*. For the dress of the *re'īs*, see Brindesi, *Anciens costumes turcs*, pl. 2; Castellan, iv, 107.

According to Mouradgea d'Ohsson, the *re'īs* used to act as agent for the *khān*s of the Crimea.

Administrative career of the *re'īs*. The *re'īs*, like all Ottoman officials, were chosen by the sultan or Grand Vizier as they pleased, but, except in case of appointment by favour, they followed a fixed line of promotion (*ṭarīḳ*) in the administration. It was in the administrative offices, i.e. among the *khʷādjegān* (Persian pl. which was given as an honorific title to the principal clerks or *khʷadja*/*khodja* or *ḳalem ḍābiṭleri*), that this career was spent.

In examining the *Sefīnet ül-rü'esā'* of Aḥmed Resmī, we find that, up to the *re'īs* Boyalī Meḥmed Efendi (Pasha) (d. 977/1569-70), there is no information available about the career of the *re'īs*, but starting with him we find that the *re'īs* were regularly chosen from among the former *tedhkeredjis* of the *wezīrs* or of the Grand Vizier. From Sheykh-zāde ʿAbdī Efendi (d. 1014/1605-6) onwards, the *re'īs* were mainly taken from the *wezīr mektūbdjisis* or private secretaries of the Grand Vizier. These secretaries were themselves at the head of an office (*oda*) which contained a very small number of officials (*khalīfe* or *kalfa*, pl. *khulefā'*); there were only two between the years 1090/1679 and 1100/1689. When the number increased (at a later date there were about 30), the career of the future *re'īs* was as follows: *khalīfe* in the office in question, called also *mektūbī-yi ṣadr-i ʿālī odasī*, then *ser-khalīfe* or *bash-kalfa* "chief clerk", then *mektūbdji*. The post of *mektūbdji* was much sought after. It brought its holder into close contact with the Grand Vizier and it was then very easy to advance oneself. More rarely, the future *re'īs* rose through the similar but less important office of secretary to the lieutenant to the Grand Vizier or Kaḥya Bey (*ketkhüda kātibi odasī*).

The *riyāset* did not mark the end of a career, but gave access to still higher posts (see NISHĀNDJĪ for the old rules of promotion by which the *re'īs* became *nishāndjī*). It was one of what were known as the "six [principal] dignities", *menāṣib-i sitte*, namely, the *nishāndjī*, *defterdār*, *re'īs ül-küttāb*, *defter emīni*, *shiḳḳ-i thānī defterdārī*, *shiḳḳ-i thālith defterdārī* (Aḥmed Rāsim, *Ta'rīkh*, 756).

According to the *Naṣīḥat-nāme* (39-40 of the French translation), the *re'īs* was under the authority of the Grand Defterdār (for financial matters only?).

Increasing importance of the office of *re'īs*. The growing influence of the *re'īs* is explained by the increasing importance of foreign policy in Turkey (including the so-called "Eastern Question").

Down to the end of the 10th/16th century, the *nishāndjīs* were certainly superior to the *re'īs*; they controlled and even revised the orders and decisions of the *dīwān* (*aḥkām*), but from the 17th century onwards, *re'īs* like Oḳdju-zāde Meḥmed Shāh Efendi, Lām-ʿAlī Čelebi and Ḥükmī Efendi shed a certain lustre on their office. From 1060/1650 the incapacity of certain *nishāndjīs* precipitated the decline of their office in spite of the ephemeral efforts by Grand Viziers like Shehīd ʿAlī Pāshā and of the *nishāndjīs* appointed by him (Rāshid Efendi and Selīm Efendi). It was in this period that the office of *beylikdji* was created (see above).

The Ottoman protocol (*teshrīfāt*) was nevertheless still to retain for a long time traces of the originally rather subordinate position of the *re'īs*. For example, they did not sit in the office of the *Dīwān* itself, called *Dīwān-khāne* (in the Top Ḳapu Sarayī or "Old Serai"), but remained seated outside of the room in a place called *re'īs takhtasī*, "the bench of the *re'īs*", where there were also seats for certain other officials to wait upon. In the formal sittings, even in those like the distribution of pay (*ʿulūfe*) to the Janissaries which took place in the presence of foreign ambassadors, the part played by the *re'īs* was rather limited. He carried in, with slow step and the sleeves of his *üst* turned up, the bag containing the *telkhīṣ* (see above). He kissed the hem (*etek*) of the Grand Vizier's robe, placed the bag on his left, kissed the hem of his robe again and withdrew to his place. He came in again to open the bag, handed the documents to the Grand Vizier, took them back from him to fold them (*baghlamaḳ*), sealed them and gave them to the *telkhīṣdji*. If he was unable

to be present, the bag of the *telkhīṣ* was handed to the Grand Vizier by the *büyük tezkeredji* (*Ḳanūn-nāme* of ʿAbd ül-Raḥmān Pasha, 85, 123 etc.).

Lucas (*Second Voyage*, Paris 1712, 216) writes that during the audience given by the Grand Vizier to the French Ambassador "le Ray Affendy ou Grand Chancelier demeura debout et appuïé contre la muraille".

Things were changed at the reform of the *Dīwān* effected at the beginning of his reign (1792) by Selīm III, desirous of limiting the power of the Grand Vizier. The old *Dīwān* consisted of six *wazīrs* of the dome (having only one consultative voice; see ḲUBBE WEZĪRI), of the *Muftī* (*Sheykh ül-Islām*) and the two *ḳazaskers*. The new *Dīwān* was to consist of 10 members by right of office and others chosen in different ways (about 40 in all). The members by right of office were the Kahya Bey, the Re'īs Efendi, the Grand Defterdār, the Čelebi Efendi, the Tersāne Emīni, the Čawush Bashī, etc. (Zinkeisen, *Geschichte*, vii, 1863, 321).

The office of *re'īs* tended more and more to become the Ministry of Foreign Affairs of the Sublime Porte, parallel to the post of Kaḥya Bey (Interior).

Suppression of the dignity of *re'īs*. The title of *re'īs* was suppressed by the *khaṭṭ-i hümāyūn* of Sultan Maḥmūd II addressed on Friday 23 Dhu 'l-Ḳaʿda 1251/11 March 1836 to the Grand Vizier Meḥmed Emīn Pasha. The Turkish text will be found in the *Sālnāme* of the Turkish Ministry of Foreign Affairs; the French translation (or at least parts of it) was published in the *Moniteur Ottoman* of 23 April 1836 (according to A. Ubicini, *Lettres sur la Turquie*, 38, n. 1). This document at the same time created two new ministries (*neẓāret*), which in memory of their origin remained to the end in the same building as the grand vizierate [see BĀB-I ʿĀLĪ]: 1. the Ministry of the Interior (originally of civil affairs or *umūr-u mülkiyye*, later *dākhiliyye*) replacing the department of the Kaḥya Bey; and 2. the Ministry of Foreign Affairs (*khāridjiyye*) replacing that of the *re'īs*. The preamble said that, abandoning the old regulations of the service, the sultan had thought it advisable to create real posts of *wezīr* (*wizāret*) and not honorary ones, but without its being necessary to give the new *wezīr* of foreign affairs the title of *pasha* [*q.v.*], "which is mainly a military one".

Bibliography: By far the most important source is the work known as *Sefīnet ül-rü'esā'*, which consists of: 1. Aḥmad Resmī's work (Babinger, *GOR*, 309-10) which contains the biographies of 64 *re'īs* down to Rāghib Meḥmed Efendi (1157/1744), and 2. its continuation by Süleymān Fā'iḳ Efendi, which contains the biographies of 30 *re'īs* down to Aḥmed Wāṣif Efendi at the beginning of the 19th century. According to the preface to Süleymān Fā'iḳ's (not Fātik) continuation, Aḥmed Resmī had entitled his work *Ḥaḳīkat ül-rü'esā'*, in imitation of the *Ḥadīḳat ül-wüzerā'* of ʿOthmān-zāde Tā'ib, but changed it at the suggestion of Rāghib Pasha to *Sefīnet ül-rü'esā'* (the references in the Catalogue of Turkish mss. in the Bibliothèque Nationale by E. Blochet, ii, 158, should be corrected accordingly). The word *ḥalīḳat* apparently makes no sense; that of *khalīfat* which is usually found in other works (Flügel, *Cat.*, ii, 407, no. 1250; Babinger; Bursalī Meḥmed Ṭāhir, iii, 59 n.), does not seem correct either. One ought undoubtedly to read *khalīḳat* (which rhymes with the *ḥadīḳat* of the prototype). The *Sefīnet ül-rü'esā'* was published by the State Press in Istanbul in 1269/1853.

Köprülü (*MTM*, 508); Esʿad Efendi, *Teshrīfāt-ī Dewlet-i ʿAliyye*, 85, 123, etc.; *Sālnāme-i neẓāret-i khāridjiyye*, 1 year, 1301/1885, Ebüzziya Press, Istanbul (contains in addition a historical resumé and a chronological list of all the grand viziers and all the *re'īs*); C. Perry, *A View of the Levant, particularly of Constantinople*, etc., London 1743, 36; C.V. Findley, *Bureaucratic reform in the Ottoman empire: the Sublime Porte, 1789-1922*, Princeton 1980; idem, *Ottoman civil officialdom: a social history*, Princeton 1989; *İA*, art. s.v. (Halil İnalcık). On the *ṣāḥib al-dīwān* or *ra'īs* (!) *al-dīwān*, see Ḳalḳashandī, *Ṣubḥ al-aʿshā*, i, 101 ff.; vi, 14, 17-18, 50; H. Massé, *Code de la Chancellerie d'Etat... d'Ibn al-Ṣayrafī*, in *BIFC*, xi, 79 ff. Among the Saldjūḳs, the offices of *ṣāḥib al-dīwān* and *perwāne* were quite separate; cf. Ibn Bībī, in Houtsma, *Recueil d. textes .... Seldj.*, iii, 105.

(J. DENY)

REMBAU (Rumbow), a traditional district (*luak*) in Negri Sembilan, Malaysia. It is important in Islamic studies for two reasons.

First, the social structure of the Malay-Muslim population is based on matrilineal descent groups (*suku*), in which succession to office and inheritance of property descend in the female line. This has serious repercussions for Islam's rules of inheritance which are widely avoided, or at least compromised. The Malay population is otherwise devoutly Muslim. The obvious parallel is Minangkabau [*q.v.*] in Sumatra.

Second, while the Undang (*lawgiver*) of Rembau qualifies for his office by descent in the matrilineal line, he is also a component part of "The Ruler" of the State of Negri Sembilan along with three other "Ruling Chiefs" and the Yang di-Pentuan Besar. As such, he forms part of a single constitutional ruler for the State. One of the duties of the Ruler is to protect the religion of Islam, and this has difficult repercussions, given the realities of politics and the matrilineal element. Rembau is thus a classic case for the study of Islam and *adat* [see ʿĀDA], the social implications of religion in a peasant community and the politics of religion.

Mackray, *Rembau: its history, constitution and customs*, in *JRAS, Straits Branch*, lvi (1910), 1-157; P.E. de Josselin de Jong, *Islam versus adat in Negri Sembilan*, in *Bijdragen*, cxvi (1960), 158-203; M.B. Hooker, *Adat laws in modern Malaya*, Kuala Lumpur 1972, chs. 7 and 9. (M.B. HOOKER)

RESHĀD NŪRĪ (REŞAD NURİ GÜNTEKİN), late Ottoman and modern Turkish author, born in 1889 in Istanbul, died in 1956 in London. He was the son of a military doctor, Nūrī, and Luṭfiyye, the daughter of Yawer Pasha, governor of Erzurum. He attended Galatasaray Lycée in Istanbul and, later, the Frères High School in Izmir. After graduating from the Faculty of Letters of Istanbul University in 1912, he worked as a teacher and schoolmaster in Bursa and in several lycées in Istanbul (Vefa, Çamlıca, Kabataş, Galatasaray and Erenköy), teaching French, Turkish literature and philosophy. In 1927 he became an inspector for the Ministry of Education. In 1939 he was elected to the Parliament as Halk Partisi representative for Çanakkale. In 1943 he went back to the Civil Service, and in 1947 was promoted to Chief Inspector for schools in the Ministry for Education. He was sent to Paris to represent Turkey at UNESCO

and as the Turkish educational attaché in France. He retired in 1954, and died in London on 7 December 1956, where he was receiving treatment for cancer.

Re<u>sh</u>ād Nūrī started his literary career by publishing unsigned poems. He attracted attention during the First World War with his articles on Turkish literature in *La Pensée Turque* and the newspaper *Zamān*. These were followed by his story *Eski aḥbāb*, published in *Diken* (1917), and a novel *Kharābeleriñ čičeghi* (1918), in *Zamān*, and his first play, *Ḥaḳīḳī ḳahramān* (1919). When his play *Istanbul ḳizī* was not liked by the Istanbul theatres, Re<u>sh</u>ād Nūrī changed it into a novel and it was published as a serial with the title *Čalīkushu* in *Waḳit* newspaper (1922); in this form, it was read so widely that he became famous. In 1936, his travel experience in literary form were published with the title *Anadolu notları*. During 1942, he wrote satire, using the pseudonyms "Fire-Fly" and "Cicada" for the journal *Kelebek* which he published with Mahmut Yesari, Münif Fehim and İbnürrefik Ahmed Nuri. In 1947 he started to publish a daily newspaper *Memleket* which aimed to defend and express the views of the Turkish republican régime, but it did not last long. Between the years 1918 and 1955 he not only published books but also wrote articles in numerous literary journals. Reşad Nuri is the most popular author of modern Turkish literature; his novel *Çalıkuşu* is still read widely, and he is often known simply as "the author of *Çalıkuşu*". This popularity is due to the fact that he was able to combine the eastern and western traditions of fiction in his works. The clash between the individual and the society is the most recurrent theme of his works, but he treated even the villains of his novels as human beings who need love and pity and compassion, so that the reader is left with the feeling that there are only "good people" and "not so good people" on earth. His works are all set in the late 19th century and the early days of the Republic, and are characterised by detailed and precise descriptions of events and people. However, he reflects the problems, beliefs, ideas, dreams, feelings of individuals from different sections of society without imposing an ideological framework on the reader. From the linguistic point of view, he used Turkish in a masterful fashion, blending spoken and literary languages, and the simple, sincere and natural style of his prose is easily recognised. He has accordingly become the symbol of the "New language" and "National literature" movements.

Bibliography: 1. His works (first editions). (a) Novels—*Çalıkuşu*, Istanbul 1922 (German tr. M. Schultz, *Zaunkönig, der Roman eines türkischen Mädchens*, Leipzig 1942; Eng. tr. Sir Wyndham Deede, *The autobiography of a Turkish girl*, London 1949); *Gizli el*, Istanbul 1924; *Damga*, Istanbul 1924; *Dudaktan kalbe*, Istanbul 1924; *Akşam güneşi*, Istanbul 1926; *Bir kadın düşmanı*, Istanbul 1927; *Yeşil gece*, 1928; *Yaprak dökümü*, Istanbul 1930; *Kızılcık dalları*, Istanbul 1932; *Gökyüzü*, Istanbul 1935; *Eski hastalık*, Istanbul 1938; *Ateş gecesi*, Istanbul, 1942; *Değirmen*, Istanbul 1944; *Miskinler tekkesi*, Istanbul 1946; *Harabelerin çiçeği* (as an independent book), Istanbul 1953; *Kavak yelleri*, Istanbul 1961; *Son sığınak*, Istanbul 1961; *Kan davası*, Istanbul 1962. (b) Short stories—*Recm, gençlik ve güzellik*, Istanbul 1919; *Roçild Bey*, Istanbul 1919; *Eski ahbab*, Istanbul n.d.; *Tanrı misafiri*, Istanbul 1927; *Sönmüş yıldızlar*, Istanbul 1928; *Leyla ile Mecnun*, Istanbul 1928; *Olağan işler*, Istanbul 1930. (c) Plays—*Hançer*, Istanbul 1920; *Eski rüya*, Istanbul 1922; *Ümidin güneşi*, Istanbul 1924; *Gazeteci düşmanı, Şemsiye hırsızı, Ihtiyar sereri* (three plays), Istanbul 1925; *Taş parçası*, Istanbul 1926; *Bir köy hocası*, Istanbul 1928; *Babur Şah'ın seccadesi*, Istanbul 1931; *Bir kır eğlencesi*, Istanbul 1931; *Ümit mektebinde*, Istanbul 1931; *Felaket karşısında, Gözdağı, Eski borç*, Istanbul 1931; *İstiklal*, Ankara 1933; *Vergi hırsızı*, Istanbul 1933; *Hülleci*, Istanbul 1933; *Bir yağmur gecesi*, Ankara 1943; *Yaprak dökümü*, Istanbul 1971; *Eski şarkı*, Istanbul 1971; *Balıkkesir muhasebecisi*, Istanbul 1971; *Tanrıdağı ziyafeti*, Istanbul 1971. (d) Travel notes—*Anadolu notları*, 2 vols., Istanbul 1936. Numerous articles and several translations, e.g. from French, were published in journals and newspapers.

RE<u>SH</u>ĪD PA<u>SH</u>A, MUṢṬAFĀ (1800-1858), Ottoman diplomat, statesman and reformer.

Re<u>sh</u>īd was born, the son of a financial clerk in Istanbul, on 13 March 1800, but his family originally hailed from Kastamonu. His father died in 1810, after which he grew up under the protection of his uncle, Ispartalī Seyyid Pa<u>sh</u>a. He studied at a *medrese*, but did not graduate (i.e. he did not get an *id<u>j</u>āza* [*q.v.*]). Thereafter, he was trained within the scribal institution. Re<u>sh</u>īd took part in the campaign against the Greek insurgents in 1821, as seal-keeper of the commander-in-chief, Seyyid ʿAlī Pa<u>sh</u>a. During this campaign, he saw for himself the hopeless condition of the Ottoman army. When Seyyid ʿAlī Pa<u>sh</u>a was dismissed, his followers, among them Re<u>sh</u>īd, according to the Ottoman tradition of *intisāb*, were also forced out of office. Re<u>sh</u>īd had some trouble finding a new position, but after a while landed a job at the correspondence office of the Porte.

During the Ottoman-Russian war of 1828, Re<u>sh</u>īd served as army clerk. The reports he sent to the capital in this capacity drew the attention of the sultan, Maḥmūd II [*q.v.*], who was looking for capable and reform-minded servants to implement his reforms. Re<u>sh</u>īd was now taken into the *Āmedī Odasī*, the secretariat for incoming correspondence of the Porte. In 1829, he was attached as secretary to the Ottoman delegation to the peace negotiations with the Russians in Edirne. By now, he seems to have belonged to the circle of Pertew Pa<u>sh</u>a, the *Reʾīs ül-Küttāb* (Chief Scribe) and former *Āmedī* (Receiver, head of the incoming correspondence secretariat), whose pro-British policies and close relationship with the British ambassador Ponsonby may have influenced Re<u>sh</u>īd in the same direction. He joined Pertew Pa<u>sh</u>a in July 1830 on his mission to Egypt for negotiations with Muḥammad ʿAlī Pa<u>sh</u>a [*q.v.*] and from then on gained a reputation as an expert in Egyptian affairs during the years when Muḥammad ʿAlī constituted the greatest threat to the continued existence of the Ottoman Empire. In March 1833 he was sent to Kütahya to negotiate with Muḥammad ʿAlī's son Ibrāhīm Pa<u>sh</u>a [*q.v.*], who had conquered Syria and defeated the Ottoman army near Konya. His decision to grant Ibrāhīm Pa<u>sh</u>a the position of tax collector for the district of Adana (besides the governorship of the provinces of Damascus and Aleppo) was very un-

popular in Istanbul, but he managed to survive it both physically and politically.

In 1834 Reshīd was sent to Paris as special envoy with a mission to regain Algeria from the French. While he was bound to be unsuccessful in this, he did manage to loosen the ties between Paris and Muḥammad ʿAlī. He returned to Istanbul in March 1835, but was sent to Paris again three months later, now as a full ambassador. After a year in Paris he was transferred to London. There, his crucial achievement was to gain the unequivocal support of the British government in the conflict with Muḥammad ʿAlī Pasha. From now on, Reshīd would work closely with the British government almost continually for the rest of his life. In July 1837 he was made a marshal (*müshīr* [*q.v.*]) and given the position of Minister of Foreign Affairs. After a tour of factories in Britain, he returned to Istanbul to take up his new job. Early in 1838 he was made a Pasha. Foreign affairs remained his preoccupation, but we now see Reshīd Pasha initiating reforms in other spheres, too (such as the first attempts at a modern census). For the next thirty years, the Foreign Office would remain deeply involved in the wider programme of administrative, legal and educational reform in the Ottoman Empire. This reflected both the importance of European, notably British, diplomatic pressure in favour of reform and the fact that the Foreign Office was the greatest repository of knowledge about Europe and its ways.

In August 1838 Reshīd was sent to London once more, to try to conclude a defensive alliance with Britain against Egypt. The alliance did not materialise, but Reshīd did receive guarantees of British support. As part of the effort to gain British support, a commercial treaty opening the Ottoman market to British goods and promising the abolishing of state monopolies was concluded on 16 August 1838.

After the death of Sultan Maḥmūd II in the midst of the second Egyptian crisis on 1 July 1839, Reshīd returned to Istanbul. There he took a leading part in the promulgation of the Gülkhāne edict [see KHAṬṬ-Ī HUMĀYŪN], which promised the subjects of the Sultan security of life, honour and property; an orderly system of taxation and conscription; and—in somewhat ambiguous terms—equality before the law irrespective of their religion. Like the trade treaty of a year before, the edict was clearly meant as an attempt to gain foreign, and especially British, diplomatic support in the conflict with Egypt, but it also reflected the genuine concerns of the reformist circles around Reshīd. It is hard to say whether the edict was instrumental in convincing British policy makers, but the Egyptian crisis was solved in the Ottomans' favour when British military intervention forced the Egyptian troops to evacuate Syria in late 1840.

Muḥammad ʿAlī now clearly identified Reshīd as his main opponent, and he used bribes to have him removed from the post of Foreign Minister in March 1841. Reshīd was sent to Paris once more, but soon returned, ostensibly for health reasons. All his efforts to regain his position failed, however (he was only offered the post of governor of Edirne, which he refused), and he had to return to France in 1843. There he occupied himself primarily with negotiations on the Lebanon, where the situation had beome highly unstable after the retreat of the Egyptians and the attendant fall of the Druze Amīr Bashīr II.

In 1845 Reshīd was restored as Foreign Minister, and in September 1846 he was made Grand Vizier for the first time. With a short interruption of less than four months in 1848, he remained Grand Vizier for the unusually long period of six years. These years were his most productive ones in terms of the modernising reforms introduced in the legal system (founding of mixed commercial courts in 1847, adoption of a new commercial code (copied from France) in 1850, prohibition of torture and slavery); in education (founding of secular secondary schools for boys between 10 and 15, the *Rüshdiyyes*, of a separate Ministry of Education and, in 1851, of an Academy of Sciences, the *Endjümen-i Dānish*); and in the administration (including, in 1846, a first attempt to organise a modern archive, the *Khazīne-yi Ewrāḳ*). In the reforms, as in his foreign policy, Reshīd closely collaborated with the British ambassador, Stratford Canning (or Lord Stratford de Redcliffe, as he would later become). His intimate relationship with the British ambassador made him suspect in the eyes of representatives of other foreign powers, including the French. In January 1852 Reshīd was deposed, but barely two months later he was reappointed, only to be deposed a second time in August, after a row between him and the commander of the Imperial Arsenal.

The conflict between France and Russia over the Holy Places in Palestine, which was to result in the Crimean War, reached crisis proportions when the Russians demanded the right to protect the Orthodox population of the Ottoman Empire on 5 May 1853. This crisis brought about the return of Reshīd Pasha as Foreign Minister on 15 May. Closely collaborating with Stratford Canning once more, Reshīd played for time, while refusing the Russian demands. Once he knew that the Ottoman Empire was assured of a military alliance with Britain and France he supported the declaration of war (28 March 1854). During the war he was appointed Grand Vizier again (November 1854). During his six-month stay in office he instituted the *Medjlis-i ʿAlī-yi Tanẓīmat* (High Council for Reforms) which had the twin functions of preparing legislation and of keeping watch over the bureaucracy. His dismissal as Grand Vizier in May 1855 was due to his intriguing in order to prevent the granting of the concession for the Suez Canal. This upset the French, who saw Reshīd anyway as a British puppet and preferred to deal instead with his pupils ʿAlī Pasha and Fuʾād Pasha.

Reshīd's dismissal meant that he was left outside the work of the peace conference in Paris which ended the Crimean War and that he had no hand in the imperial reform edict (the *Iṣlāḥāt Fermānī*) of February 1856, which was drawn up by the British and French ambassadors together with ʿAlī Pasha in order to forestall Russian demands for reforms. By now, Reshīd's relations with his former pupils, now competitors, had turned sour. Reshīd had a good eye for talent, and in the best Ottoman *intisāb* tradition he had always actively sought to further the careers of the members of his circle, but he was also extremely jealous when they evolved from clients to colleagues and equals.

It took Reshīd a year and a half to topple his rivals and to return to power. In November 1856 he was restored to the Grand Vizierate under British pressure. His stubborn resistance to French demands for eventual unification of the Principalities into a new Rumanian state led to his dismissal under French pressure at the end of July 1857. Three months later, he was back again, being appointed Grand Vizier for a sixth and last time on 22 October. On 7 January 1858 Muṣṭafā Reshīd Pasha died of a heart attack. He was buried in a *türbe* on the Okčular Djaddesi in the Beyazīd area of Istanbul.

Reshīd Pasha was married twice and had five

children, one son by his first wife and four by his second.

His legacy was a lasting one, even if intra-élite factionalism, lack of funds and qualified personnel, and the non-existence of broadly-based support in society, meant that the results of his reform programme were very patchy. On the one hand, the Gülk͟hāne edict which he introduced and the reforms which he and his circle launched in the 1840s and 1850s formed a crucial phase in the transition from a traditional and patrimonial system of government to a legal-rational system. During Res͟hīd's lifetime, the clerks of the Porte evolved into a bureaucracy which formed the strongest force in the state. The edict and the reforms also marked the start of the legal emancipation of the non-Muslim communities of the Empire. At the same time, Res͟hīd and his colleagues often seemed to be reduced to the position of pawns in the games of the Great Powers, with Res͟hīd serving British policy objectives in particular. However, given the weakened state of the central Ottoman government, it is hard to see how that could have been otherwise.

Bibliography: The literature which appeared up to 1961 is both used and given in Ercüment Kuran's article *Mustafa Reşit Paşa* in *İA*, ix, 701-5, ²Istanbul 1971. Most important among the pre-1961 publications are Cavit Baysun's article *Mustafa Reşit Paşa*, in *Tanzimat*, Ankara 1940, 723-46, and Reşat Kaynar, *Mustafa Reşit Paşa ve Tanzimat*, Ankara 1954. In the last thirty years, no scholarly monographs on Res͟hīd have appeared, but quite a few important works have appeared on the *Tanẓīmāt* [*q.v.*], the reform programme with which Res͟hīd was so intimately associated. Among the ones that should be consulted are: C.V. Findley, *Bureaucratic reform in the Ottoman Empire. The Sublime Porte, 1789-1922*, Princeton 1980; idem, *Ottoman civil officialdom. A social history*, Princeton 1989; Şerif Mardın, *The genesis of Young Ottoman thought. A study in the modernization of Turkish political ideas*, Princeton 1962; İlber Ortaylı, *İmparatorluğun en uzun yüzyılı*, ²Istanbul 1987; R.H. Davison, *Reform in the Ottoman Empire 1856-1876*, New York 1973². Murat Belge (ed.), *Tanzimat'tan Cumhuriyet'e Türkiye Ansiklopedisi*, Istanbul 1986, 6 vols. represents the state of the art in Turkey at the time of writing, although the article on Muṣṭafā Res͟hīd Pas͟ha is an excerpt from Baysun's work. (E.J. Zürcher)

RESM. The Arabic word *rasm*, in Turkish *resm*, *resim*, means in Ottoman usage state practices and organisations as distinguished from those based on Islamic principles and traditions. Specifically, the word indicates taxes and dues introduced by the state called *rüsūm-i ʿurfiyye* [see ʿURF] as distinguished from the *s͟harʿī* taxes which are called *ḥuḳūḳ-i s͟herʿiyye*. In the Ottoman Empire, *resm* was sometimes called *ḥaḳḳ* in the sense of legal right, as in the term *ḥaḳḳ-i ḳarār*, a fee which *asipahī* or feudal cavalryman took when vacant *mīrī* [*q.v.*] land was assigned to a peasant.

The term *resm* is used synonymously with *ḳanūn* [*q.v.*], *teklīf* and *ʿādat*. A *resm* is usually called *ʿādat* whenever it originates from a locally-established custom, such as *ʿādat-i k͟harmān* (harvest custom). Also, pre-Ottoman state practices are occasionally called *ʿādat*, as in the example of *ʿādat-i Ḳāyitbāy*. Those *rüsūm* which were paid in cash were often called *aḳče*, as in the examples of *čift aḳčesi* and *bostān aḳčesi*. Most of the *rüsūm* originated from the tax system of the conquered lands.

Ottoman administration tried carefully to discover and incorporate into the Ottoman tax system the well-established pre-conquest taxes and dues under the term *rüsūm*. Even the pig tax, *resm-i k͟hinzīr*, was adopted in the Balkan provinces. Although they were often called *bidʿat*, innovations against the religious law, such taxes were distinguished into *bidʿat-i maʿrūfe*, those customarily recognised, or *bidʿat-i marfūʿe*, those abolished by the sultan's specific order. Exactions taken illegally by local authorities are called *tekālīf-i s͟hāḳḳa*, or onerous exactions and, when discovered, were prohibited by the sultan.

In adopting a local tax into the Ottoman system, the administration made inquiries as to whether or not it yielded a sufficient amount of revenue or whether it caused discontent in the newly-conquered areas. Then, the new tax with the estimated amount of yearly yield, was entered into the *muḳāṭaʿa* [*q.v.*] registers, thus becoming a regular state tax.

The commercial dues were variously called according to the regulations to which they are subject. Goods sold wholesale at the urban bazaars or fairs were liable to a *bād͟j* or *tamg͟hā* per unit, bale, sack, cask, or cart, whereas valuable goods were to be brought and weighed at the public scales and taxed by weight, paying *resm-i ḳapan* (*ḳabbān*), *resm-i ḳanṭar* or *resm-i mīzān*. Goods paid also a *bād͟j-i ʿubūr* at fixed points on a caravan route. Imported and exported goods paid *gümrük* [*q.v.*] (from Greek *kommerkion*) at various rates, according to the kind of the good or whether the importer or exporter was a *Muslim*, a *D͟himmī* or a *Ḥarbī*.

Bidʿats, particularly those affecting the well-being of the Muslims (such as *bād͟j* and *tamg͟hā* imposed upon necessities and causing prices to rise), were hated by the public and denounced by the *ʿulemāʾ* as contrary to the *S͟harīʿa*. At critical times, particularly at the time of accession to the throne, rulers abolished them and inscribed their orders on the gates of mosques or fortresses to show their concern for the public. However, in all of the Islamic states, *rusūm* and *bidʿats* were a significant source of revenue cash for the state treasury, and those which had been abolished once were reintroduced before long.

Although *ʿawāriḍ-i dīwāniyye* [see ʿAWĀRIḌ] or *salg͟hun*/*salg͟hin*, emergency levies, which were collected by the state in kind, cash or services rendered, were denounced as an unjust burden on the peasantry, they were frequently collected and over the course of time converted to a regular tax. In a crisis, such taxes were even legitimised by special *fatwās* [*q.v.*] as a *farḍ*, religious duty for the defence of Islam. *Salg͟huns* were introduced by a commander in an emergency situation, but were usually prohibited by the central government. A grain tax added to *aʿs͟hār*, called *sālārlıḳ* or *sālāriyye* (increasing the regular tithe to one-eighth of the produce) was introduced into the earlier tax systems prior to the Ottoman period. The Ottomans continued it, although the peasantry complained about this additional tithe. The *S͟hayk͟h al-Islām* Abu 'l-Suʿūd [*q.v.*] attempted to legitimise it by claiming that the lands conquered by the Ottomans were all of the *k͟harād͟jī* type and thus subject to *k͟harād͟j*, which could go up to one-fifth of the produce.

A widespread Byzantine/Balkan grain tax which survived into the Ottoman tax system was that of one or two measures of barley and wheat delivered to the feudal lord or the state. It corresponded to the Ottoman *ʿawāriḍ*.

A *resm* of particular importance was the *resm-i čift*, a one-gold coin tax per household or its equivalent in silver coins, imposed upon a peasant family in possession of a *čiftlik* [*q.v.*] and a pair of oxen. Traced back to the Roman *jugum-caput* and Byzantine *zeugaratikion*, this tax was probably the origin of the *čift-bā-k͟hāne*

system in the Ottoman empire. Its nature, combining a hearth-tax and land-tax, confused bureaucrats as well as scholars. It must be the origin of the *kharādj* and the *djizya* in the early Islamic tax system. *Zeugaratikion* and the *čift-resmi* [*q.v.*] system gave the whole of rural society in Anatolia and the Balkans its particular social-fiscal organisation under the Byzantine and Ottoman Empires. The *resm-i čift* was a compound tax which included cash equivalents of various feudal services (see İnalcık, *Osmanlilarda raiyyet rusûmu*, and idem, *Village, peasant and empire*).

The *resm-i čift* system included *resm-i čift, resm-i nīm-čift, resm-i bennāk, resm-i čiftlü bennāk, resm-i ekinlü bennāk, resm-i mudjarrad, resm-i kara, resm-i djabā, resm-i bīwa, resm-i dönüm, resm-i duhān, resm-i zamīn, resm-i čift-bozan, resm-i yaylak* and *resm-i kīshlak*.

Ispendje or *ispenče*, from Slavic *yupanitsa*, a feudal peasant household tax in the pre-Ottoman Balkans, was incorporated into the Ottoman tax system and extended into eastern Anatolia from 1540 onwards. Every non-Muslim peasant household or individual paid it at the rate of 25 *akčes*. Abu 'l-Suᶜūd interpreted it as *kharādj-i muwazzafa* or "fixed *kharādj*". In the 1540s, the Ottomans identified it with *resm-i kapu* or gate-tax in Hungary, raising its rate to fifty *akčes*, about the value of one gold piece in Ottoman silver coins in the period. Collection of *resm-i čift, ispendje* and *djizya* at the same time came to triple the original hearth-tax. Such double taxing, due to the confusion about the origin of the tax, often occured in the newly-established régimes.

The *resm-i filori* [*q.v.*], originally a one-gold piece tax applied to the Eflākṣ, non-Muslim nomads of the Balkans, was another composite tax paid by household.

The *resm-i bād-i hawā*, evidently from the Byzantine *aerikon*, also called *tayyārāt*, was another composite tax which included occasional taxes such as *djerāʾim* or fines, *resm-i ᶜarūsāne*, also called *resm-i cerdek*, marriage-tax, *resm-i dashtbāniyye*, field-guard fee, and *resm-i tapu* or fee on land transfers. The above-mentioned composit taxes of pre-Ottoman origin, namely *resm-i čift* and its derivatives, *ispendje* and *bād-i hawā*, were paid directly to the *sipahī* as part of his *timār* [*q.v.*].

The Ottoman tax system also allowed government agents to collect for themselves a small fee for their services. It was called *khidmet akčesi*, service-money or *maᶜīshet*, livelihood. In later periods many such fees were returned to the treasury. However, in the 17th century when *timār* revenues drastically lost their value, government agents in the provinces invented a host of service fees (see Inalcik, *Military and fiscal transformation*).

The sultan's favour, which established privileges and benefits for persons, was thought to be reciprocated by payments. So, an important category of *rüsūm*, including the *resm-i berāt*, diploma fee, or *resm-i tedhkire*, certificate fee, brought to the treasury quite a sizeable revenue.

The sale of offices which became widespread from the end of the 16th century onwards, must be interpreted in the same way.

In the courts, *Kādīs* took several *resms* for their services. Their abuses caused widespread complaints, and from time to time Ottoman rulers issued regulations fixing the rates of court fees.

REWĀN, Eriwan, the capital city of Armenia, possibly identical with the town called Arran by the Arab geographers Ibn Rusta and Ibn Faḳīh, which in Armenian is called Hrastan and Rewān in Ottoman sources.

In Islamic times, the town seems to have become important from the mid-10th/16th century onward. The city is located close to the Armenian patriarchal seat of Echmiadzin, often referred to as Üčkilise "Three Churches" in Ottoman and European sources, even though there are actually four churches. In the 10th/16th century, the town formed part of Ṣafawid Persia, but was raided several times by Ottoman forces. In 990/1582 Rewān was conquered by the Ottoman *serdār* Ferhād Pasha, who ordered the construction of new fortifications. In the reign of Shāh ᶜAbbās, Eriwan was taken back by the Ṣafawids and in 1025/1616 besieged by the Ottomans, who were however unable to take the city. In 1041-2/1632 the Ottoman Sultan Murād IV retook Rewān and had a famous *köšk*, the Rewān Köškü, added to the Topkapī Sarayī to commemorate the event. However Rewān was soon after reconquered by the Ṣafawids. According to the treaty of Kaṣr-i Shīrīn (1048-49/1639) the city thenceforth remained in Persian hands, apart

from a brief Ottoman interlude which ended in 1159/1746.

From the 11th/17th century date the first extensive descriptions of Eriwan. Ewliyā Čelebi visited the place in 1057/1647, and describes the sieges and counter-sieges of the reign of Murād IV, who had taken a liking to the former *khān* of Rewān, Emīrgūn. Ewliyā felt that the walls of Rewān, consisting of but a single ring, were in no condition to resist a serious siege. At the time of his visit, those parts of the walls erected by Ferhād Pasha could still be distinguished from the higher sections built by the Persian governor Toḳmaḳ Khān. The city was entered by three strong gates, and well-stocked with weaponry. Among the officials present in Rewān Ewliyā mentions the *ḳāḍī*, along with a full complement of civilian and military officials. At certain times the city was governed by a *khān* of *khāns*.

Another extensive description was provided by the French jeweller and merchant J.-B. Tavernier, who visited Rewān in 1065-6/1655. He notes that the province was one of the richest in the Ṣafawid empire, both on account of transit trade and the fertility of the area, which permitted the cultivation of rice. Raw silk was here collected for export, and merchants enjoyed the privilege of paying a flat rate, without opening their bales. Tavernier claims that the old city had been ruined during the Ottoman-Ṣafawid wars, and a new one built on the boards of the river Zengi Çayı; this may be compared to Ewliyā's statement that the town had only been founded in the reign of Tīmūr Lenk. Tavernier refers to an active commercial suburb equally mentioned by Ewliyā Čelebi, where merchants and artisans, particularly Armenians, resided. He also describes a stone bridge with chambers underneath, where the *khān* sometimes spent the hottest hours of summer.

About a decade later, Rewān was described by J. Chardin, as a large city with numerous gardens and vineyards. The citadel contained about 800 houses, inhabited only by Persians, while Armenian shopowners left the enclosure in the evenings. The garrison amounted to 2,000 men. There was a second fortress, by the name of "Quetchy-kala", with a double wall and cannons, suitable for another 200 men. The core of the city was located at a cannon shot's distance from the citadel. It contained a *maydān* surrounded by trees, where parades and games were held. The principal mosque was located in the market area, and there were also several Armenian churches, built partly underground. Chardin praises the city's public baths and caravanserais, the most recent of which had been built by a governor; the gallery was filled with shops selling a variety of textiles, and there were 63 apartments along with stables and storage spaces. This building is probably identical to the Gorji (Georgian) *khān* of later times, where goods from Russia and Georgia were usually stored. In spite of the cold climate in winter, the area was famous for its grapes and wine, the Armenian peasants burying their vines at the approach of winter. In the summer of 1113/1701, Joseph Pitton de Tournefort also visited Rewān; however, his account of the city only repeats those of his predecessors.

After his appointment to the Caucasus in 1217-18/1803, General Tsitsianov attempted to force the *khān* of Rewān to abandon his Persian allegiance and submit to Russia; however a siege in 1219/1804 ended in failure. Between 1225/1810 and 1233-4/1818, the diplomat J. Morier visited Rewān and recorded the post-war atmosphere in the city; the houses in the citadel for the most part lay in ruins, and the citadel mosque had been converted into a storehouse. According to a register prepared at this time by Ḥasan Khān, brother of the current *sardār*, Rewān and its villages contained a total of 18,700 males between the ages of 15 and 50, which according to Morier's assumption, corresponded to a population of 74,800. A separate register recorded 5,000 Kurdish families, which brought the total up to about 100,000. Official revenues collected in the area amounted to 168,000 *tūmāns*, and consisted mainly of rural dues, customs duties yielded 12,000 *tūmāns*, and dues from the salt mines of Kolpi 6,000. In certain areas, one-third of rural produce apparently was collected as taxes. The *sardār* monopolised the cotton crop and sold it to Georgia, importing Georgian fabrics in return.

During another Russo-Persian war (1241-3/1826-7) Rewān was again besieged, and local notables arranged for a surrender to the forces of General Paskevich; Russian domination was confirmed by the treaty of Turkmānčāy in February 1828/Shaʿbān 1243. Extensive data on the urban resources and population of Rewān date from 1244-8/1829-32, when the new Russian administration conducted a detailed survey. According to this document, the city had 7,331 Muslim inhabitants of both sexes, along with 3,937 Armenians. Among the latter, 1,715 were recent immigrants from Persia. The total urban population amounted to 11,463 persons in 2,751 households, distributed over three large quarters encompassing 1,736 houses. Apart from the Muslims who had left the khānate after the Russian conquest, the newly-acquired Russian province contained a population of 115,152 persons in 20,932 households, of which 61,018 were males. The Turkish nomad population before the Russian conquest had numbered more than 20,000; about 10% must have left the area immediately following the war, as the Russian survey counted only 18,287.

At the time of the Russian takeover, there were 851 stores in Eriwan; 543 formed part of the bazaar, while 252 were attached to the city's seven caravanserais and another 32 located in the fortress. The three quarters making up the remainder of the city must therefore have been all but exclusively residential. There were eight mosques with attached *madrasas* (one of them, the Shehir Djāmiʿ, with its Turkish inscription of 1098/1687), and seven Armenian churches, while the ten public baths were mostly part of mosque or caravanserai complexes. Imports from Persia included silk, coffee, sugar, indigo, cotton, wool, dried fruit, raisins and condiments; while from the Ottoman empire came wool, cloth, butter, coffee, wine, fruit, nuts, wood and tobacco. Exports to Persia were limited to cloth and grain, while the Ottoman Empire bought raisins, indigo, silk and cotton. From Georgia, cloth, wine, tea, fruit and nuts as well as wood were imported, while wood and salt were conveyed there. Russian and other European imports were usually luxury products. Merchants were numerous both among the Muslim and the Armenian population; among the Armenian immigrants from Persia, there were 105 weavers and 64 carpenters established in the city proper. In addition, women weavers worked at home; the survey records almost 3,000 looms for the khānate in its entirety.

An impressionistic account of Rewān in the 1240s-1250s/1830s was published by F. Dubois de Montpéreux. He described the reception hall of the last Persian *sardār*, decorated with mirrors and wall paintings of Shāh ʿAbbās, Nādir Shāh, Fatḥ ʿAlī Shāh, the heir-apparent ʿAbbās Mīrzā, the *sardār* himself and various mythological figures. Dubois also has published sketches of several of these paintings. The *sardār*'s *ḥaram* at

this time had been transformed into a barracks, but the traveller was able to see the canal providing water to this section of the palace as well as the four *ayvāns*, which at this time still retained their original decoration. One of the two mosques, with a façade richly decorated with tilework was still being used as an arsenal, while the other had been transformed into a Russian church. The business district was in poor condition, with many of the shops closed. This impression was confirmed by R. Wilbraham, who visited the city at about the same time and saw but a single public bath in working order; reportedly no repairs had been made as there were plans afoot to move the fortress to another, healthier site.

For 1310-16/1893-8 there exists an extensive description by H.F.B. Lynch, who records that the city now contained about 15,000 inhabitants, half of them Muslims and the other half Armenians. It was divided into two sections by the road to Tiflis and by a central park, the western part being inhabited by Armenians and the eastern part by Shīʿī Muslims speaking Ādherī Turkish. However, the Gök Djāmiʿ, the principal mosque, though located in the western section, was surrounded by a Muslim quarter; according to local informants, it had been built by Nādir Shāh. The mosque in the citadel, already in ruinous condition, was dated to the reign of Fatḥ ʿAlī Shāh and called the ʿAbbās Mīrzā Djāmiʿ; this was probably the structure seen by Morier and Dubois. Lynch briefly describes the churches, but considers that the most important monument in the city was the *köshk* of the Persian governors (*sardārs*) located close to the citadel at some distance from the city centre; from its decoration, it was probably built or at least restored in the 13th/19th century.

The extreme centralisation of the Russian Empire, along with policies probably intended to favour future Russian settlement, in Lynch's opinion inhibited the city's economic development. There was almost no transit trade with Persia, while raw cotton to the value of £400,000 was despatched to Russian manufactures by way of the Caspian Sea. While the cotton trade was monopolised by a few Russian firms, Armenians sold a limited quantity of local wine to Russia, while rice was exported to Erzurum. Well-to-do Armenian merchants invested in education, their schools competing with state-sponsored Russian establishments; Lynch comments on the small number of Muslim students in the latter. Wealthy Muslims were often landowners cultivating the fruit for which Rewān was locally famous; but Muslims were found also among the substantial shopkeepers, while the poor earned their livings as hucksters, irrigation workers and cart drivers.

After the fall of the Tsarist government (March 1917), Russian troops withdraw from the area, and in late November, an interim government was formed in Tiflis which attempted to negotiate on behalf of the entire region. This government dissolved after an Ottoman military advance in the Caucasus. A separate Republic of Armenia was formed, with its capital in Rewān/Yerevan, which the Ottoman Empire recognised by the Treaty of Batum (June 1918). In another war (September 1920), waged between the Republic of Armenia on one side and the Soviet Union and the Kemālist forces recently constituted in Anatolia on the other, the intervention of Red Army troops ensured the establishment of a Soviet Socialist Republic, again with its capital in Yerevan. By 1932, the city's population had grown to about 100,000. New town quarters had been built to accommodate a large number of new arrivals, many of them refugees from Anatolia. At this time, the city had acquired a university, a state library and other institutions of higher learning. Of the monuments from the Persian period, there remained the stone bridge over the river Zengi, the Gök Masdjid and the remains of the Sardār Mosque and Palace. After the dissolution of the Soviet Union at the end of 1991, Yerevan once more began to function as the capital of a state, now named the Republic of Armenia.

(Suraiya Faroqhi)

REWĀNĪ, an Ottoman poet. His real name was Ilyās Shudjāʿ Čelebī, his father's name was ʿAbd Allāh (ʿAbdullāh), and he was born *ca.* 1475 and educated in Edirne (Abdülkadir Karahan, art. *Revani İA*). Tradition has it that he took his pen-name of Rewānī from the river Tundja, which flowed (*rewān*) past his garden. He entered the service of Sultan Bāyezīd II (886-918/1481-1512) in Istanbul, and was sent by him as administrator of the *ṣurre* (the annual sum set aside for the poor of Mecca and Medina) to the Holy Cities in order to distribute the money. Accused by the Meccans of unjust distribution and/or embezzling a part of the money, however, he was dismissed (*ibid.*). A malady of the eyes, which affected Rewānī at this time, was described by a poet hostile to him as the just punishment of God, whereupon Rewānī answered him, also in verse, and calmly confessed: "He who has honey licks his fingers." He fled to the court of Prince Selīm, then governor of the province of Trabzon, and entered his service. Here too, however, he committed some indiscretion and his property was confiscated. Some sources put his appointment to the *ṣurre* at this date. Others say he determined to go to Egypt, but Selīm pardoned him and restored him to favour, Rewānī henceforth serving him all the more faithfully. Thus Rewānī was in Selīm's entourage when in 918/1512 the latter came to Istanbul to dethrone his father Bāyezīd, and is said at the last decisive council of war to have thrown his turban in the air with joy and to have praised the day. After Selīm's accession he was appointed superinten-

dent of the kitchen (*maṭbakh emīni*), then entrusted with the administration of Aya Sofya and of the hot baths (*ḳablīdja*) in Bursa. With the wealth he accumulated, he built a mosque complex (no longer standing) in the Ḳirḳ Česhme quarter of Istanbul. This mosque was named after him, and he was buried there on his death in 930/1524 during the reign of Süleymān the Magnificent. Rewānī left a *Dīwān*, dedicated to Selīm, and a *methnewī* entitled *ʿIshret-nāme* ("Book of the wine-feast"). There is an unpublished critical edition and transcription of the former (Samiye İnceoğlu, *Revani divanı edisyon kritik ve transkripsiyonu*, İstanbul Üniversitesi, Mezuniyet Tezi, 1961) and another study is in process (Ziya Avşar, *Revani divanı*, Ankara Üniversitesi, Yüksek Lisans Tezi). Critics consider that the real strength of Rewānī's *Dīwān* is in its *ghazels*, in which he sings in a lively and easily flowing manner of both human and mystic love; many of these were set to music and quickly became popular in the coffee and winehouses (Karahan, *op. cit.*; Nihad Sâmi Banarlı, *Resimli türk edebiyatı*, Istanbul 1989, 478).

The *ʿIshret-nāme*, a *methnewī* of 694 *beyts* (Rıdvan Çanım, art. *Sâkînâme*, in *Türk dili ve edebiyatı ansiklopedisi* [1990] vii, 433-7) is undated but may have been written towards the end of the poet's life since he refers to his white hair and to his being in the autumn of life. In it, Rewānī relates legends concerning the origin of viniculture and the discovery of wine, and describes in realistic detail the etiquette of the drinking bouts of his time, the meal served before them, the wine, wineglass, flagon, candle, musical instruments, cupbearers, etc. Towards the end he suggests that the poem may be given a mystical interpretation, but this is to be considered as a safety-net against attacks from the devout, the contents really reflecting the existence of such activities in his day, and his own penchant for them; and although he is said to have renounced this in his old age, in general he left behind him a reputation for dishonesty and libertinism (see A. Bombaci, *La letteratura turca*, Milan 1969, 334).

Poems containing bacchic themes have a long history in the literature of the Arabs and Persians (see KHAMRIYYA, and Çanım, art. *Sâkînâme*, 434), the metaphor of wine also becoming an all-important feature of mystical poetry. Bacchic elements are found in the literature of the Turks in the 14th and 15th centuries (*ibid.*, 435), but Rewānī's *ʿIshret-nāme* is the first poem of its kind in Ottoman Turkish literature, and the *sāḳī-nāme* genre only became popular a century later. His work is, therefore considered original and his own invention, and it has been praised for its wit and its language, which is graceful and elegant, but at the same time simple and clear (Karahan, *loc. cit.*). Sehī states that the *ʿIshret-nāme* is only one part of a *Khamse-yi Rūm*, which Ṭāhir says includes a poem entitled *Djāmiʿ al-nasāʾiḥ*. Nothing further, however, seems to be known of this.

(W. Björkman-[Kathleen Burrill])

RIAU (Dutch, Riouw), the name of the former Malay kingdom of Johore Riau-Lingga, which was regarded as the successor state to Melaka (Malacca [*q.v.*]) after it fell to the Portuguese in 1511. The rulers of the Melakan line re-established their authority on the island of Bintan (also known as Riau), south of Singapore, in the late 17th century, and after a period of instability, during which Bugis adventurers entered the scene, a new more prosperous era began. By the mid-18th century, an extensive trading network had developed around the main port of Riau which attracted merchants from the Middle East, China and Europe as well as neighbouring areas of Southeast Asia. The Bugis adventurers married into the Malay royal line and were granted the title of Yang Dipertuan Muda, or Junior Ruler. They amassed fortunes in the opium and tin trades and in 1784 laid siege to the Dutch garrison in Melaka. This led to a Dutch reprisal which resulted in a permanent Dutch presence on Riau. The Malay Sultan moved his court to the island of Lingga to the south, and the kingdom became divided into two centres, the Dutch and Bugis in control of Riau, and the Malay Sultan and his court on Lingga. In 1818 Sir Thomas Stamford Raffles leased the island of Singapore, a dependency of the kingdom of Johore Riau-Lingga, from one of the hereditary chiefs of the Malay court, and installed a member of the Malay royal family as Sultan. The economic decline of Riau began with the Anglo-Dutch Treaty of 1824, which demarcated British and Dutch areas of influence. Singapore became a free port and attracted Riau's former trade. In 1857 the Dutch demonstrated their political control of Riau-Lingga by deposing the reigning Malay Sultan, and in 1913 they formally abolished the historic kingdom.

Since Indonesian Independence in 1945, Riau has been a Sumatran Province, covering part of the central coast of East Sumatra and more than 3,200 islands between Sumatra and the South China Sea. The island of Bintan, Riau, remains the cultural heartland of the area and since the 1980s has experienced a cultural revival with renewed interest in all aspects of its past, including its status as an Islamic centre. Economic revival will probably follow, as Riau is closely linked to the new industrial and trade triangle of Johor-Singapore-Batam.

For the history of Islam in Southeast Asia, Riau is famous as a 19th century centre of Muslim scholarship and piety. European visitors of the time reported that the nobles vied to outdo each other in performing their religious obligations, and anything non-Islamic was regarded as anathema. A local text, *Tuḥfat al-nafīs*, composed in 1865 by Radjā ʿAlī Ḥādjdjī, one of the leading Muslim scholars, describes religious life in Riau. During the 19th century a series of Yang Dipertuan Mudas, inspired by the writings of al-Ghazālī [*q.v.*], especially his *Naṣīḥat al-mulūk*, strove to behave as ideal Muslim rulers and to establish conditions in Riau which would enable their subjects to fulfill all their religious obligations and lead a godly life. They invited religious scholars from the Middle East to stay on Riau and teach, and the *Tuḥfat al-nafīs* lists the works that were studied. They banned behaviour that was unseemly, enforced the daily prayers and sponsored the copying and composition of religious and

didactic treatises. In the late 1880s a study group, the *Persekutuan Rushdiyyah*, was formed to discuss religious and literary matters and to publish texts written by its members using their own printing press. These works were disseminated to Singapore and Peninsular Malaysia. Early in the 19th century the Naḳshabandī *Tarikat* [see NAḲSHBANDIYYA] was introduced to Riau and became very popular. The *Tuḥfa* records that all the Riau princes studied mysticism and copies of the texts are still kept in the area. One of the Riau rulers bought a wide selection of books, mainly Islamic texts from India and the Middle East, and established a library which is still maintained in the mosque on Penyengat island. Students (such as Sayyid Shaykh al-Hādī), who received their initial training in Riau, went on to found religious journals and schools in Singapore and Penang and to influence the course of modernist Islam in the Malay speaking world.

The tradition of religious teaching was continued in Riau until the 1930s, and scholars from the Middle East, including an expert in astronomy from al-Azhar, regularly visited Riau to advise the local religious teachers. The Second World War disrupted this pattern, and the local population has declined since the early years of the century. However, Riau has maintained its reputation as a religious and literary centre which is respected both in Malaysia and in Indonesia.

(VIRGINIA MATHESON HOOKER)

RIBĀ (A.), lit. increase, as a technical term, usury and interest, and in general any unjustified increase of capital for which no compensation is given. Derivatives from the same root are used in other Semitic languages to describe interest.

A. In classical Islamic law.

1. Transactions with a fixed time limit and payment of interest, as well as speculations of all kinds, formed an essential element in the highly developed trading system of Mecca (cf. Lammens, *La Mecque à la veille de l'hégire*, 139 ff., 155 ff., 213-14). Among the details given by the Muslim sources we may believe at least the statement that a debtor who could not repay the capital (money or goods) with the accumulated interest at the time it fell due, was given an extension of time in which to pay, but at the same time the sum due was doubled. This is clearly referred to in two passages in the Ḳurʾān (III, 130; XXX, 39) and is in keeping with a still usual practice. As early as sūra XXX, 39, of the third Meccan period (on the dating, cf. Nöldeke-Schwally, *Geschichte des Qorāns*, i), the Ḳurʾān contrasts *ribā* with the obligation to pay *zakāt* but without directly forbidding it: "Whatever ye give in usury to gain interest from men's substance shall not bear interest with Allāh, but what ye give as *zakāt* in seeking the face of Allāh, these shall gain double". The express prohibition follows in III, 130 (Medinan, obviously earlier than the following passage): "Believers, devour not the *ribā* with continual doubling; fear God, perhaps it will go with you". This prohibition had to be intensified in II, 275-80 (evidently of the earlier Medinan period, cf. the following passage): "Those who devour *ribā* shall only rise again as one whom Satan strikes with his touch; this because they say, 'selling is like usury'; but Allāh has permitted selling and forbidden usury. He therefore who receives a warning from his Lord and abstains shall have pardon for what is past and his affair is with Allāh; but they who relapse into usury are the people of Hell, and they shall remain in it for ever. Allāh abolishes usury and makes alms bring interest; Allāh loveth no sinful unbeliever... Believers, fear Allāh and remit the balance of the *ribā* if ye be believers. But if ye do not, be prepared for war from Allāh and his apostle. If ye repent, ye shall receive your capital without doing an injustice or suffering injustice. If any one is in difficulty, let there be a delay till he is able to pay, but it is better for you to remit if ye be wise". To evade the dogmatic difficulty of an eternal punishment for the sin of a believer, the passage in question (already presupposed in al-Ṭabarī) has been interpreted to mean that by relapse is meant the holding lawful and not the taking of interest; in any case the Ḳurʾān regards *ribā* as a practice of unbelievers and demands as a test of belief that it should be abandoned. It comes up again in sūra IV, 161 (of the period between the end of the year 3 and the end of the year 5; this also gives a clue to the date of the preceding passage), in a passage which sums up the reproaches levelled against the Jews: "and because they take *ribā*, while it was forbidden them, and devour uselessly the substance of the people". The fact that the principal passages against interest belong to the Medinan period and that the Jews are reproached with breaking the prohibition, suggests that the Muslim prohibition of *ribā* owes less to conditions in Mecca than to the Prophet's closer acquaintance with Jewish doctrine and practice in Medina. In the later development of the teaching on the subject as we find it in tradition, Jewish influence is in any case undeniable (cf. Juynboll, *Handleiding*, 286).

2. The traditions give varying answers to the question, what forms of business come under the Ḳurʾānic prohibition of *ribā*, none of which can be regarded as authentic. The ignorance of the correct interpretation is emphasised in a tendentious tradition, obviously put into circulation by interested individuals (the tradition is probably older than Lammens, *op. cit.*, 214, thinks); according to this view, the principal passage in sūra II is the latest in the whole Ḳurʾān, which the Prophet could not expound before his death. That the rigid prohibition of usury in Islamic law only developed gradually is clear from many traditions. Alongside of the view repeatedly expressed, but also challenged, that *ribā* consists only in (the increase of substance in) a business agreement with a fixed period (*nasīʾa, naẓīra, dayn*) we have the still more distinct statement that there is no *ribā* if the transfer of ownership takes place immediately (*yad^an bi-yad*). But even in arrangements with a time limit, a number of traditions pre-suppose a general ignorance of the later restrictions; for example, we are told that in Baṣra under Ziyād b. Abīhi [*q.v.*] gold was sold on credit for silver (this may have an anti-Umayyad bias—cf. below on Muʿāwiya—but it is illuminating); but at a later date such forms of the traditions against *ribā* were to some extent dropped. What was generally understood in the earliest period as the *ribā* forbidden in the Ḳurʾān, seems only to have been interest on loans

(chiefly of money and foodstuffs); anything that goes beyond this is to be regarded as a later development. The reason for such prohibitions is at different times said to be the fear of *ribā*, and sometimes we have underlying the recognition that there is no tradition of the Prophet relating to this. This is also expressed in the form that nine-tenths of the permitted amount is renounced or that *ribā* was conceived as going as far as ten times the capital. The view which later became authoritative is laid down in a group of traditions of which one characteristic example is as follows: "gold for gold, silver for silver, wheat for wheat, barley for barley, dates for dates, salt for salt, the same thing for the same thing, like for like, measure for measure; but if these things are different, sell them as you please if it is (only) done measure for measure". Another common tradition expressly forbids the exchange of different quantities of the same thing but of different quality (see below). Other traditions demand equality of quantity even in the sale of manufactured precious metals. This last case seems to have been especially discussed, and on more than one occasion Muʿāwiya appears as champion of the opposite view and practice (this again has a distinctly anti-Umayyad bias). Particularly conscientious people went even further in their limitation of *ribā* than the generality and would only exchange wheat for barley in equal quantities. Still stricter was the view that the exchange of even the same quantities of the same thing, especially of precious metals, was *ribā*. This view must be older than a difference from the usual opinion (e.g. Muslim, *Bāb bayʿ al-ṭaʿām mit̲h̲lan bi-mit̲h̲l*), which is based on the secondary interpretation of an already recognised tradition, which obviously only forbade the exchange of different quantities of the same thing but of different quality (cf. above). This same general prohibition of exchange is also given for dates. The question whether one party to an agreement can voluntarily give the other a bonus, is denied for an exchange, but affirmed for a loan. The reduction of the amount of the debt if the loan is voluntarily paid before it falls due, is sometimes approved as the opposite of *ribā*, sometimes disapproved, sometimes forbidden as being equivalent to *ribā*; in any case, it is clear that the practice existed. On the sale of an animal for an animal on credit, opinion is also not unanimous.

Numerous traditions forbid *ribā* without defining it more closely; the Prophet is said to have uttered this prohibition at his farewell pilgrimage (scarcely historical). *Ribā* is one of the gravest sins. Even the least of its many forms is as bad as incest and so on. All who take part in transactions involving *ribā* are cursed, the guilty are threatened with hell, various kind of punishment are described; in this world also, gains from *ribā* will bring no good. In spite of all this, tradition foresees that *ribā* will prevail.

In connection with *ribā*, tradition mentions various antiquated forms of sale of special kinds, like *muḥāḳala, muk̲h̲ābara, muzābana*, etc., which concern the exchange of different stages in the manufacture or development of the same thing, or of different qualities, and which are forbidden; an exception is made, obviously because of its undeniable practical and social necessity, of what is known as *ʿariyya* (plur. *ʿarāyā*), fresh dates on trees intended to be eaten, which it is permitted to exchange in small quantities for dried dates.

3. While the existence of the Ḳurʾānic prohibition of *ribā* has never been doubted, the difference of opinion that finds expression in tradition regarding the relevant facts is continued in the earliest stage of development of Islamic law. Unanimity prevails regarding the main lines of the limitations to be imposed upon the exchange of goods capable of *ribā* (*māl ribawī*); it is only permitted if transfer of ownership takes place at once and, so far as goods of the same kind are concerned, only in equal quantities. In the case of a loan, it is forbidden to make a condition that a larger quantity shall be returned without regard to the kind of article. Gold and silver are generally regarded as *māl ribawī* (only quite exceptionally are coins of small denomination included). All the greater are the differences of opinion as to what things outside of the precious metals are liable to the *ribā* ordinances. In isolated cases, one still finds views that show themselves uninfluenced in principle by the authoritative group of traditions (cf. above), e.g. when everything realisable is subjected to the *ribā* ordinances (Ibn Kaysān) or all business dealings in things of the same kind (Ibn Sīrīn, Ḥammād) or when everything liable to *zakāt* is considered capable of *ribā* (Rabīʿa b. ʿAbd al-Raḥmān). Other opinions differ in the treatment of property capable of *ribā* from that group of traditions, although it is not known what they understand by this; possibly, if at an exchange of the same kind of thing, not equality of quantity but equality of value in two quantities is demanded (al-Ḥasan al-Baṣrī), or equality of quantity also in the exchange of different kinds apparently within a limited circle of goods capable of *ribā* (Saʿīd b. D̲j̲ubayr). The old interpretation that there is no *ribā* if the transfer of possession takes place at once is ascribed to ʿAṭāʾ and the jurists of Medina. The views of most authorities, however, and in particular, those which survive later in the law schools, assume the literal acceptance of the text of that group of traditions and differ only in its interpretation. Thus there are mentioned as precursors of the later Ẓāhirī doctrine Ṭāwūs, Masrūḳ, al-S̲h̲aʿbī, Ḳatāda, ʿUt̲h̲mān al-Battī; as precursors of the Ḥanafī view, al-Zuhrī, al-Ḥakam, Ḥammād (cf., however, above), Sufyān al-T̲h̲awrī; as precursors of the earlier view of al-S̲h̲āfiʿī, Saʿīd b. al-Musayyib and others; and as precursors of his later view al-Zuhrī (cf., however, above) and Yaḥyā b. Saʿīd. On the question whether a loan can be repaid in another kind and what is to be done if defects are revealed in an exchange of *māl ribawī* after it has changed hands, there are ancient differences of opinion.

4. In the above-mentioned group of traditions, the following goods in addition to gold and silver are expressly mentioned as bearing the prohibition of *ribā* at their exchange: wheat, barley, dates and salt (sometimes also raisins, butter and oil). The Ẓāhirīs, as a result of their refusal on principle to accept analogy (*ḳiyās*), assume that the prohibition applies only to the six things especially named (the other kinds are rejected as not well attested). The other schools of law, on the other hand, consider the kinds mentioned in tradition only as examples of the variety of things that come under *māl ribawī*, but differ from one another in their lists of these things. According to the Ḥanafīs and Zaydīs (also al-Awzāʿī), gold and silver represent examples of the class of things defined by weight (*mawzūn*) and the four other things those sold by measure (*makīl*). The Imāmī teaching is practically the same. According to the Mālikīs and S̲h̲āfiʿīs, gold and silver represent the class of precious metals and the four other things the class of foodstuffs: the latter, in the Māliki view, including actual eatables so far as they can be preserved, according to the older view of al-S̲h̲āfiʿī, provisions which are sold by weight and measure; according to his later view, which is also that of his school, foodstuffs without any qualification. The teaching of the Ḥanbalīs corresponds to that of

the Ḥanafīs; as regards the "four kinds", two further opinions of Aḥmad b. Ḥanbal are handed down which correspond to the two views held by al-Shāfiʿī. In these, wheat and barley are regarded as two different kinds by the Ḥanafīs, the Shāfiʿīs and the better-known tradition of the Ḥanbalīs (as well as Ẓāhirīs, Zaydīs and Imāmīs); as one kind according to the Ḥanbalīs (also according to al-Layth b. Saʿd and al-Awzāʿī). The Ḥanafīs and the Imāmīs, in contrast to the other schools, are content, in so far as it is not a question of the exchange of precious metals, with fixing the quantities, and do not demand actual change of ownership during the negotiation (*madjlis*). The Ẓāhirīs, in the strict interpretation of the text of one tradition, in every case demand a change of ownership in the fullest sense at once. The sale of fresh dates for dried dates is forbidden by all schools except the Ḥanafīs on the authority of one tradition; the barter of *ʿarāyā*, on the other hand, is not permitted by the Ḥanafīs, but regulated by the other schools, without any uniformity; as regards exchange of the same material in different stages of manufacture there are many differences of opinion. As regards the exchange of goods of the same kind which are not *māl ribawī*, the difference of quantity is generally permitted, postponement (*nasīʾa, nasāʾ*) of the single payment is still forbidden by the Ḥanafīs and Zaydīs but permitted by the other schools (with differences in detail). At the sale of wares, even of those which are *māl ribawī*, for precious metal, the payment at later date (*salam*) and sale on credit (*bayʿ al-ʿīna*) with postponement of delivery or of payment is permitted. The apparent contradiction of analogy in the *salam*, which forms a type of transaction by itself, has given rise to discussions on principle. The postponement of both sides of the transaction is regarded on the authority of a tradition as entirely forbidden in all agreements regarding sale or exchange.

5. The prohibition of *ribā* plays a considerable part in the system of Islamic law. The structure of the greater part of the law of contract is explained by the endeavour to enforce prohibition of *ribā* and *maysir* [*q.v.*] (i.e. risk) to the last detail of the law (Bergsträsser, in *Isl.*, xiv, 79). *Ribā* in a loan exists not only when one insists upon the repayment of a larger quantity, but if any advantage at all is demanded. Therefore, even the bill of exchange (*suftadja*) is sometimes actually forbidden (as by the Shāfiʿīs) because the vendor, who is regarded as the creditor, reaps the advantage of avoiding cost of transport. This did not prevent the extensive spread of this arrangement in the Arabic Middle Ages and its influence upon European money-changing. But they were always conscious that a direct breach of the prohibition of *ribā* was a deadly sin. Pious Muslims to this day therefore not infrequently refuse to take bank interest. The importance of the prohibition of *ribā*, on the one hand deeply affecting everyday life, and the requirements of commerce on the other, have given rise to a number of methods of evasion. Against some of these there is nothing formally to object from the standpoint of the law; they are therefore given in many lawbooks and expressly said to be permitted. The Shāfiʿīs, the later Ḥanafīs and the Imāmīs have recognised such methods of evasion, while the Mālikīs, the Ḥanbalīs and the Zaydīs reject them. The recognition of these methods of evasion is not contrary to the strict enforcement of the prohibition in the *fiḳh*. The inner significance of decrees of the divine law naturally cannot be understood by the mind of man. This is shown in the case of *ribā* in the limitation to certain kinds of goods. The Ẓāhirīs are thus among the most energetic defenders of evasions of the prohibition of *ribā*. Their line of argument is based not only on their formal negative rejection of deduction by analogy but also upon their positive estimation of the intention underlying the evasions. One of the oldest transactions of the kind, against which several traditions are already directed, is the double contract of sale (from one of its elements it is called *bayʿ al-ʿīna*, credit sale *par excellence*): one sells to someone who wants to lend money at interest something against the total sum of capital and interest which are to be due at a fixed date, and at the same time buys the article back for the capital which is at once handed over. This transaction was taken over in mediaeval Europe under the name of *mohatra* (from the Ar. *mukhāṭara* [*q.v.*]; cf. Juynboll, *Handleiding*, 289, n. 1, and E. Bassi, in *Rivista di storia del diritto italiano*, v, part 2). Another method of evasion consists of handing over to the creditor the use of a thing as interest by a fictitious agreement to sell or to pledge.

Bibliography: On the traditions, cf. in addition to the references in Wensinck, *A Handbook of early Muhammadan tradition*, s.v. Usury, especially the collection of material in *Kanz al-ʿummāl*, ii, nos. 4623 ff., 4951 ff. (J. Schacht)

B. In modern commercial usage [see Suppl.].

RIBĀṬ (A.), a military-religious institution of mediaeval Islam.

1. History and development of the institution.

It is impossible to present an unequivocal definition of the term *ribāṭ*. The word needs to be constantly related to a context and a chronology since the sense has been very evolutive. The root *r-b-ṭ* is present in the Arabic of the 1st/7th century, in numerous derived forms. It is possible to identify a first stratum of usage, comprising Ḳurʾānic usages and those of the early caliphal period. Originally, these usages are linked to tribal warfare. They imply no type of construction, nor any fortification, but simply the preparations which are made with the mustering of cavalry

mounts, with a view to battle. In this case, the term *ribāṭ* is used as a verbal noun, a *maṣdar*, and not as a substantive. The period immediately following the great conquests, which saw the establishment of Muslim powers in new territories, was to change the modalities of war. This was to become a war of position, during the intervals between continuing offensives. Dispositions of defence were constructed (or re-used in cases where there were previous constructions), on the coasts and on the land frontiers. This was done progressively, during the time of the caliphate at Medina, most notably under the caliph ʿUthmān, and was continued under the Umayyads, according to local requirements and conditions, although no unified doctrine was obligatorily applied.

It may be supposed that it was from this time onward that the word *ribāṭ* and the terms associated with it came to be applied to new objects. The ancient connotations did not disappear entirely, although they did require adaptation. It is not known whether it was during this period, or rather later, under the earlier ʿAbbāsids, that the term began to be used to denote a fortified edifice (from the simple observation tower, to the small fort, to the fortress, and to the caravanserai). These very diverse establishments would normally be situated in hazardous regions, on frontiers, on coasts, or on difficult internal routes. But this mutation of sense does not seem to have been general. The only elements of localisation are supplied by relatively late sources, which usually mention the fact without any indication which could be used in establishing a chronology. It seems that what is involved is the simple imposition of a noun, probably denoting the existence of danger and the need to take precautions against it, upon various pre-existing constructions, without any suggestion that there is, at the outset, such a thing as a unique type of edifice which could be called *ribāṭ*. It can thus be stated with confidence that to define it a "Muslim military monastery" is evidence of extrapolation and misinterpretation, and this applies, whatever the period and the region. It cannot be denied that the urban residences of Ṣūfīs were subsequently known as *ribāṭ*. In the east of the empire and in Egypt, they were more commonly known as *khānḳāh* [*q.v.*]. ʿIrāḳ supplies a notable exception in this zone, since until the middle of the 7th/13th century these establishments were known there exclusively by the name *ribāṭ*, possibly in preference to the use of a word with such strong connotations of origin (a purely Persian word and the Iranian provenance of the establishment). But, with very few exceptions, constructions of this type did not truly begin to develop until after the 6th/12th century, at the time of the burgeoning of the mystical fraternities of the Muslim *ṭarīḳa*s (*q.v.* in *EI*[1]; on the other hand, the Karrāmī *khānḳāh*s [*q.v.*] are more ancient). These communal establishments for mystics (which often also accommodated travellers) had, in any case, nothing in common with the fortified constructions of the frontier which, in mediaeval Muslim representation, after a certain period, are reckoned to have welcomed "warriors of the faith". It will be observed that this last consideration, linked to a representation of *djihād* [*q.v.*]—often treated as evidence in itself—needs to be approached with caution. It could derive, to a great extent, from the ideology and imagery of belief, rather than from direct historical actuality (see the detailed examination by C.E. Bosworth of the term *ribāṭ* and its evolution, in *The city of Tarsus and the Arab-Byzantine frontiers*, in *Oriens*, xxxiii [1992], 284-6).

a. *Ribāṭ* as a verbal noun, from tribal Arabia to the frontiers of the empire.

The root *r-b-ṭ* gives the general sense of attaching or linking, in a concrete sense, and of strengthening (the heart), in a figurative sense (three Ḳurʾānic instances display this latter sense). The theme of linkage seems to have become specific in reference to the act of assembling and keeping together the horses which were to be used in the razzia. In tribal Arabia, according to traditional representation, horses were mounted when the attack was imminent, while camels were reserved for the advance to the site of the combat. Most of these horses would have been mares, which were considered, in tribal society, particularly valuable beasts (see the modern testimony of Ch. Doughty, *Travels in Arabia deserta*, 2nd ed. London 1921, and of A. Jaussen, *Les Arabes au pays de Moab*, Paris, new ed. 1948; for the use of the horse in pre-Islamic Arabia and subsequently, see FARAS; according to F. Viré, author of the article, this usage did not date back beyond the 4th century A.D.). The term *ribāṭ* is considered by mediaeval Arabic dictionaries as the plural of the singular *rabīṭ* (with a passive sense). The word is said to denote either "the group of horses which have been gathered together in anticipation of combat" (according to the *LʿA*, there should be at least five of them) or "the place where these mares were kept hobbled and where they were fed". In the desert, they were kept under the awnings of tents. But *ribāṭ* could, equally, perform the function of a *maṣdar* of the Form III verb *rābaṭa*. This supplies, in general, the notion of staying or of attachment to a place (or sometimes to a person). But it also applies very precisely to the act of "assembling horses with a view to preparing a razzia" or to the notion of "being ready for combat, having gathered the horses".

It is this specialised sense which seems appropriate to two of the five Ḳurʾānic instances where the root is employed. In both cases, the context is effectively that of preparation for war. In sūra VIII, 60, it is a matter of gathering "horses in sufficient number", *ribāṭ al-khayl*, to intimidate the adversary. The latter is called "enemy of God" and denoted by the periphrasis *alladhīna kafarū* "those who have been ungrateful", in other words—in the late Medinan context—those who have refused alliance with Medina and conversion. In III, 200, there is the final and isolated verse which closes the sūra with a triple exhortation: in order to prevail, there is a need to "show oneself personally resolute" (*aṣbirū*), to "confront the adversary" (not named in this instance) (*ṣabirū*) and to "make *ribāṭ*". The Ḳurʾānic text contains the imperative *rābiṭū*, which would signify, in the context, the act of taking measures consisting in "gathering the mares to show readiness for battle". In this passage, there is no suggestion of "going to the frontier". This meaning can only have emerged at a later stage, either in the period of conquests or in the period which followed it, that of the war of position, which was to see over several centuries the Muslim caliphate in confrontation with its Byzantine opponents, especially on the Cilician borders in the foothills of the Taurus mountains, in the region known as the *thughūr* [see *EI*[1], THAGHR, and also ʿAWĀṢIM and RŪM. 2. in *EI*[2]]. The Central Asian frontier, facing the Turkish world, was to be stabilised to a certain extent, in the mid-2nd/8th century. It was to be further pacified, from the 4th/10th century onward, by means of victorious Muslim incursions into Turkish territory, also by gradually becoming a zone of conversion, allowing a progressive infiltration of Turkish elements into the Muslim lands. However, the sources of the 4th/10th century continue to see it as a "region of *ribāṭ*s", which poses a historical problem.

The tribal sense does not seem to have evolved during the caliphate of Medina and the period of *futūḥ*, the great extra-peninsular conquests. There were certainly numerous opportunities for the practice of *ribāṭ* in the traditional sense. Significant numbers of cavalry mounts were supplied under the *ṣadaḳa*, the obligatory contribution of allegiance and solidarity which was levied each year, in kind (i.e. livestock), on the allied tribes. The animals were gathered in *ḥimās* [*q.v.*], special pastures under the control of the caliphate. The horses were pastured on a site known as *al-Naḳīʿ* (Yāḳūt, *Muʿdjam al-buldān*). But while the camels were subsequently distributed among those entitled to them, the caliph ʿUmar decided to keep all the horses for purposes of war, thus performing an act of *ribāṭ*. The term is not used, but the account is unequivocal and testifies to the persistence of the former situation (on this episode, see Abdallah Cheikh Moussa and Didier Gazagnadou, *Comment on écrit l'histoire ... de l'islam!*, in *Arabica*, xl [1993], 208).

In the 3rd/9th and 4th/10th centuries, in exegetical, historiographical, geographical or legal sources, there appear some important divergences from this first stratum of meaning and the ancient status of the word *ribāṭ* (the earliest sources date back to the mid-2nd/8th century; they are few in number and often are only preserved in later works). First to be noted is a divergence which is less of sense than of purpose. Increasingly often, the term comes to be associated with the ideology of *djihād* [*q.v.*] as it developed, probably only after the ʿAbbāsid period. It did so, apparently in uneven fashion, possibly first among the traditionists and historiographers, before passing into the realm of the jurists. The first post-Ḳurʾānic usages of the representation of *djihād*, as war to the death, are confused. They are sometimes taken to refer to sectarian exclusions of the *takfīr* type (descriptive of disbelief) practised by various ancient movements such as certain Khāridjite or Shīʿī tendencies against their own co-religionists rather than against the external enemy. In the Ḳurʾān, while often invoked on the subject, it is the term *ḳitāl* and not *djihād* (e.g. IX, 29-35) which refers to conflict with the *Ahl al-Kitāb*.

An interesting perspective, regarding the probable chronology of the change in meaning of a term such as *ribāṭ*, may be found in comparing the most ancient eastern edition of the *Muwaṭṭaʾ* of Mālik b. Anas (d. 179/795 [*q.v.*]) by the Baghdādi Muḥammad al-Shaybānī (d. 189/804, a disciple of Abū Ḥanīfa who was also familiar with the teaching of Mālik), with the major compilations of prophetic traditions of the 3rd/9th century which were soon to be taken for the canonical sum-total of Sunnī Islam. The edition of the easterner al-Shaybani is also opposed to that of the Cordovan Mālikī Yaḥyā al-Maṣmūdī (d. 234/848), in that the content of the two editions is not identical (on these divergences, see Sezgin, *GAS*, i, 458-60). The Cordovan version contains a *Kitāb al-djihād* which does not appear in the text transmitted by al-Shaybanī (opinion of Michael Bonner on the subject, in his *Some observations concerning the early development of Jihad on the Arab-Byzantine frontier*, in *SI*, lxxv [1992], 24-5).

The *Muwaṭṭaʾ* compiled by al-Shaybānī (ed. ʿAbd al-Wahhāb ʿAbd al-Laṭīf, Dār al-Taḥrīr, Cairo 1967) seems, curiously, to deny any endorsement of warfare on the frontier in a context of *djihād* (al-Shaybānī is, however, himself the author of a book of *Siyar*, Sezgin, i, 430; this text is preserved in the refutation of al-Shāfiʿī (d. 204/820), which is to be found in the *Kitāb al-Umm*, Beirut 1980, vii, 321-90; it deals with rules of conduct concerning war; this is the sense of the term *siyar* for jurists; it is neither an exhortative nor an apologetic treatise, and *djihād* is not evoked). A brief passage of the *Muwaṭṭaʾ*, *in the recension of al-*Shaybānī (included at the end of the chapters on prayer, *abwāb al-ṣalāt*) is incorrectly entitled by the editor *faḍl al-djihād* "the virtue attached to *djihād*", while all that appears, in the received tradition, is the Ḳurʾānic expression *al-mudjāhid fī sabīl Allāh*, which refers, probably, to a verse of the type of sūra IV, 95 (in this verse, the expression is in the plural; other Ḳurʾānic usages, II, 218, V, 54 etc., comprise a verbal periphrasis with *djāhada*). In this passage of the *Muwaṭṭaʾ*, there is a very brief mention of the Ḳurʾānic stereotype of "death in battle", *shahāda*, without which the word *djihād* is never used as a proper noun. This status of a proper noun is effectively non-Ḳurʾānic. It is thus possible to suppose that, in the mid-2nd/8th century, the Medinan scholar (or, at least, his Ḥanafī editor, a generation later) may have belonged to a tendency which was sceptical about warfare on the frontier, particular with regard to the purity of the intentions of the fighters (they were certainly not regarded as "warriors of faith"; certain traditions accuse them of having no object in mind but booty; see s.v. *maghnam* in Wensinck's *Les Concordances*). In the Cordovan recension (but not in that of al-Shaybānī) there is furthermore attributed to Mālik the transmission of a *ḥadīth*, according to which the most scrupulous piety (ablutions, attendance at the mosque, continual observance of prayer) would be "the true *ribāṭ*", *dhālikum al-ribāṭ* (in this text, the term *ribāṭ* evidently functions as a verbal noun; reference in Wensinck, *op. cit.*, under *ribāṭ*, ii, 212; re-examined, *in extenso*, by *LʿA*, under the root *r-b-ṭ*; also Ibn Ḥanbal's *Musnad*, ²Beirut 1398/1978, ii, 277). This does indeed seem to represent a position which would effectively have been professed by Mālik. It is further confirmed by another passage (included in the chapter on "the virtues of mosques", *faḍl al-masādjid*, 55-6, no. 95, in the recension of al-Shaybānī), according to which "he who goes morning and evening to the mosque", *ghadā aw rāḥa*, without ulterior motive, *lā yurīdu ghayra-hu* ("not wanting anything else"), has the same status as the *mudjāhid*. It should certainly be understood, in this case, that the comparison is made with the Ḳurʾānic *mudjāhid* and not with the contemporary soldiers of the *thughūr*.

It may be wondered whether these traditions do not allow the supposition of a conflict of representation between traditionists at the end of the 2nd/8th century. These indications could permit the fixing of the time when the ideology of *djihād*, professed by circles yet to be identified, began to stress the meritorious aspect of military service on the frontier, while in other circles there was manifest opposition to this new point of view (possibly from the peoples of Arabia, i.e. of ʿIrāḳ, against the Syrians, the Khurāsānians and the westerners, Maghribīs and Spaniards; thorough analysis by M. Bonner, *op. cit.*, but the problem of the opposition to this ideology is not addressed). If such was the case, it could be said that this conflict would, as if symbolically, have divided those who, of quietist tendency, aspired to make *mudjāwara* (the *mudjāwirūn* are "those who dwell close to the Kaʿba"; this is the ancient sense of the term, although subsequently the descriptive *mudjāwir* would be applied even to those dwelling in other places considered as sacred or as conferring blessing, including on the frontier), from those who aspired to make *ribāṭ* (the *murābiṭūn*, to be understood in the new sense would be "those who dwell on the frontier"). The latter would have professed a new type of activism. Confirmation for this

hypothesis could be found in the anecdote (true or fictitious, but significant as the expression of a point of view) which is put, by the *ʿUyūn al-akhbār* of the *adīb* Ibn Ḳutayba (d. 276/889 [*q.v.*]), into the mouth of a major quietist figure of Islamic tradition of the late 2nd/8th century, Fuḍayl b. ʿIyāḍ (he allegedly died as a *mudjāwir*, in Mecca, in 187/803). The story related is that of a man who made great efforts to make his way to Tarsus, on the frontier and with the intention of making *ribāṭ*. But, following his capture by the Christians, he abjured Islam (*ʿUyūn*, ed. A.Z. al-ʿAdawī, Cairo 1925-30, ii, 365). In another anecdote reported ironically by the *ʿUyūn* (i, 219), an ascetic of al-Maṣṣīṣa [*q.v.*] (Mopsuestis, a city of the Cilician frontier zone) fasted so rigorously that he was driven to the verge of insanity. It is true that in the *Ṣifat al-ṣafwa* of Ibn al-Djawzī (d. 597/1200), Fuḍayl is introduced as an admirer of Ibn al-Mubārak (ed. M. Fākhūrī, Aleppo 1393/1973-4, iv, 140-1); but it is his son, Muḥammad b. Fuḍayl, who deserves the credit for putting that person in a position of describing the merits "of *djihād* and of *ribāṭ*" (*op. cit.*, iv, 147). This type of anecdote, which produces a face-to-face encounter between figures of importance, is often of symbolic significance and has little to do with factual history. Whatever the motives behind the ideological exploitation of these figures, the text of Ibn Ḳutayba shows that the representation of the merits of *djihād* does not seem to have been evenly shared during the 3rd/9th century.

The contrast appears very striking, among traditionists, between the time of Mālik and that of the major figures of the following century: the Baghdādī Ibn Ḥanbal [*q.v.*] (d. 241/855, numerous passages of the *Musnad*, see *Concordances*, under *djihād* and *ribāṭ*); the Transoxianian al-Bukhārī (d. 256/870 [*q.v.*]), *Ṣaḥīḥ*; the work contains a *Bāb faḍl al-djihād wa 'l-siyar*, iv, 17-128, *Maṭābiʿ al-shaʿb*, n.p. 1378/1958-9, 51 (certain traditions relate battles against Constantinople, "the city of Caesar" and against the Turks); the Khurāsānians Muslim (d. 261/875 [*q.v.*]), *Ṣaḥīḥ*, Beirut n.d. (passages are to be found in the *K. al-djihād wa 'l-siyar*, v, 139-200, and in the *K. al-imāra*, vi, 2-55), Ibn Mādja (d. 273/886 [*q.v.*]), *Sunan*, ii, *K. al-djihād*, 920/61, ed. M.F. ʿAbd al-Bāḳī, Maṭbaʿat al-Ḥalabī, Cairo n.d.), Abū Dāwūd al-Sidjistānī (d. 275/888 [*q.v.*]), *Sunan*, iii, *K. al-djihād*, 3-93, ed. M.M. ʿAbd al-Ḥamīd, n.p. n.d. (a passage on the merits involved in waging war successfully against the Byzantines, *Rūm*, 5), al-Tirmidhī (d. 279/892 [*q.v.*]), *Sunan*, iii, *K. abwāb faḍāʾil al-djihād*, 88-131, ed. ʿA.R. Muḥammad ʿUthmān, Cairo 1384/1964) and al-Nasāʾī (d. 303/915 [*q.v.*]), *Sunan*, vi, *K. al-djihād*, 2-50, ed. Ḥ.M. al-Masʿūdī, Beirut n.d. All present special chapters, sometimes very long, in which the term *djihād* is employed, without ambiguity, as a proper noun. The traditions related in these chapters stress the need to conduct, "in the way of God", *fī sabīl Allāh*, warfare on the frontier, whether this is in the East, facing the Turkish steppes, or in the Cilician border zone, confronting Byzantium. These traditionists do not deal with the West, where, nevertheless, the same ideology seems to have been put into effect in various ways, in the action of the autonomous province of the Aghlabids, in Ifrīḳiya, or in that of the Umayyad caliphate of Spain (on the "existence of the *ribāṭ*" in al-Andalus, see references given by C.E. Bosworth, *art. cit.*, 276, 285; A. Castro, *The structure of Spanish history*, Princeton 1954, 88-9, 202). *Djihād* is presented as situated, in direct line, in the tradition of Muḥammad's conflict with the polytheists of Arabia. All these works include, in the context of *djihād*, traditions concerning *ribāṭ*. The term seems to have gone beyond the second level of "assembling of mounts", arriving at the sole meaning of "prolonged presence on the frontier" (*mulāzamat al-thaghr*, according to *LʿA*). The term nevertheless continues to imply a presence "under arms". Some special traditions dealt with *irtibāṭ*. This second term continues to apply to the mounts themselves and to the need to keep them in good condition (the combattants in frontier expeditions theoretically all being horsemen).

In all these texts of the 3rd/9th century, the term *ribāṭ* and its derivatives thus revive, with modifications, the ancient tribal sense. It should be noted that on the Byzantine frontier there is never any question of an edifice bearing the name *ribāṭ*. The fortifications have different names, according to their nature. The word *ḥiṣn* "fortress" seems to dominate. It is contained in a number of toponyms. Often these are constructions prior to Islam which have been restored (on this zone, see for example the references concerning Tarsus/Ṭarsūs and Mopsuestis/al-Maṣṣīṣa, which are ancient fortified towns; descriptions of the Cilician plain and its cities in Cl. Cahen, *La Syrie du Nord à l'époque des croisades*, Paris 1940, 148-52; on genuine and mythical history, C.E. Bosworth, *art. cit.*; on the absence of designation by the term *ribāṭ*, 285).

It should be noted, in particular, as regards this zone (the point of departure for caliphal summer expeditions, known as *ṣawāʾif* [see ṢĀʾIFA], description in the *K. al-Kharādj* of Ḳudāma b. Djaʿfar, 259, see below), that, from a historical viewpoint, the ideology of *djihād* seems to correspond poorly with the realities of frontier warfare, in the first and second Muslim centuries, and even later. The army consisted of professional soldiers, receiving pay, the *ʿaṭāʾ* [*q.v.*], and groups of mercenary irregulars, often drawn from tribal splinter-groups and led by their own chieftains. These last receivd the *djuʿl* (A. Cheikh Moussa and D. Gazagnadou, *op. cit.*, 224, nn. 153-4), a kind of contract, regarded as degrading (other forms with the same meaning, *djiʿāl*, *djaʿāla*, *djaʿīla*, etc.; the same term served to designate the sum, levied in advance, as insurance against failure to participate in an obligatory razzia). These quasi-autonomous troops pillaged on their own account and were excluded from official booty, the *maghnam*. They had their equivalent, on the Byzantine side of the frontier. Unequivocal confirmation of the presence on the frontier of these irregular troops (who seem to have nothing to do with "battle for the faith") is to be found in the seventh chapter of the *K. al-Kharādj*, which is devoted specifically to frontier zones, on the Muslim side as well as on that of its adversaries: *Dhikr thughūr al-Islām wa 'l-umam wa 'l-adjyāl al-muṭīfa bi-hā*, 252-66 (edition following the *Kitāb al-Masālik wa 'l-mamālik* of Ibn Khurradādhbih (d. 272/885 [*q.v.*], ed. De Goeje). The *K. al-Kharādj*, preserved only in part, ostensibly had for its author a Baghdādī secretary occupying a senior position in the caliphal administration, Ḳudāma b. Djaʿfar [*q.v.*], who died at the beginning of the 4th/10th century. In this text, the frontier garrisons are explicitly described as composed of "regular soldiers", *djund*, and of *ṣaʿālīk*. It is known that this term (sing. *ṣuʿlūk*), denoted, in Arabia, the tribal outcasts and brigands who often joined together in bands (Barbier de Meynard translated this as "irregular troops", *op. cit.*, 193, 194, see also MUTAṬAWWIʿA). It is worth noting the totally a-religious tone of this secretary of the caliphal administration, who deploys a varied vocabulary to speak of the different defensive works of the frontiers (the word *ribāṭ* is never used to denote a building of

any kind). There is an unexpected and very significant verbal use of *rābaṭa* which is taken in its strictly military sense when speaking of the frontier of Daylam on which there is said to have been "stationed", *yurābiṭūn*, garrisons of Persian horsemen, *asāwira*. It is crucial to note that this situation is given as describing affairs "before Islam" (*op. cit.*, Arabic text, 261, tr. 202). Finally, a tradition presented as Prophetal ostensibly discouraged attacks against the Turks, "who should be left alone as long as they leave you alone" (a play of words on the Arabic root *t-r-k*, Arabic text, 262, tr. 204). What is perhaps nothing more than a pleasantry on the part of a diplomatic secretary challenged the validity of the representation of a permanent *djihād* against the Turks of the steppes which is described by numerous authors of this period (it is true that Ḳudāma seems to be speaking of the caliphal period or that of the Ṭāhirid governorate, and probably not that of the Sāmānids; but as will be seen, below, their overall policy seems to have been of much the same nature). Another important passage regarding the composition of irregular troops is provided by the geographer Ibn Ḥawḳal (d. 367/977 [*q.v.*]), who compares with the new Sāmānid armies of the 4th/10th century, composed of loyal and disciplined "Turkish slaves" (*al-atrāk al-mamlūkūn*), the "dregs of the tribes" (*shudhdhādh al-ḳabāʾil*), lacking any sense of faith or law, who in former times fought on the frontier (they are also called *ṣaʿālīk al-ʿasākir*, *K. Ṣūrat al-arḍ*², 471, ch. on Transoxiana). Later, in the period of the Crusades, even if collective emotion sometimes inspired groups of volunteers nourished with the ideology of *djihād*, a long-standing component of belief, it was not the "warriors of faith" who were to recapture the cities and fortresses under Christian domination. Those who fought these battles were first the Saldjūḳ *amīrs* of Syria with their Turcoman contingents (N. Elisséeff, *Nūr al-dīn*, Damascus 1967, ii, 317; Sivan does not share this writer's reservations, see his *L'Islam et les Croisades. Idéologie et propagande dans les réactions musulmanes aux Croisades*, Paris 1968), and then the professional Ayyūbid armies, well-trained and equipped. These armies were composed essentially of Turko-Kurdish elements [see AYYŪBIDS and also ḤAṬṬĪN, ḤIṬṬĪN, Ṣalāḥ al-Dīn's great victory near Tiberias in 583/1187].

However, the assumptions of the ideology of *djihād* are entirely different. It is "the Muslims" (a vague and sociological expression without any real significance) who are supposed to commit themselves as "volunteers", *muṭṭawwiʿa*, to play the role of *mudjāhidūn*, "those who perform *djihād*" or *murābiṭūn*, "those who perform *ribāṭ*" on the frontier. They are also said to have born the name of *ghāzī* [*q.v.*], pl. *ghuzāt*, which seems to originate from the frontier of Khurāsān and Transoxiana, a symbolic name which recalls the warriors of the mythologised *ghazwa* [*q.v.*] of the Prophet (the term is, however, used by Ḳudāma in a neutral fashion). In the sources of the 4th/10th century, the representation of *djihād* seems to be promulgated in two major directions. On the one hand, there is Ṣūfism, which tends to lay claim to an irreproachable past (J. Chabbi, *Réflexions sur le soufisme iranien primitif*, in *JA*, cclxvi [1978]). But it seems that certain minorities within Sunnism professed parallel ideas, advocating exterior activism and inner moralisation. The movement appears to have expanded during the 5th/11th century. In the East, works of theoretical law, like those of applied law, henceforth deal with the question (on the *Wadjīz* of al-Ghazālī (d. 505/111), see H. Laoust, *La politique de Gazālī*, Paris 1970, 264, 342-3). The same applies to numerous works of theology: the Ashʿarī Abū Manṣūr ʿAbd al-Ḳāhir al-Baghdādī (d. 429/1037), the great scourge of the lukewarm or the deviant in matters of religion, gives in his *Uṣūl al-dīn* an overtly activist interpretation of *djihād* in giving it the basis of "commandment of good and prohibition of evil" (ed. Madrasat al-ilāhiyyāt, Istanbul 1928, 193-4). As for the West, the *Risāla* of the Mālikī Ibn Abī Zayd al-Ḳayrawānī (d. 386/996), contains, in ch. xxx, a *Bāb fi 'l-djihād* (ed. J. Carbonel, Algiers 1945, 63-7: mention of the merit attached to performance of *ribāṭ* in a *thaghr*, 165). H. Laoust, who published numerous Ḥanbalī *ʿaḳīdas*, declared that, in the most ancient ones, the term *ghazw* occurs more frequently than *djihād* (*La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 47, 127). This is the case with the *ʿAḳīda* of Ibn Baṭṭa (d. 387/997). This could indicate that the principle of *djihād* is no longer an issue for theoretical speculation on the part of the author concerned. On the other hand, in the work of the later Ḥanbalī Ibn Ḳudāma (d. 620/1223), *djihād* is the only issue (H. Laoust, *Le précis de droit d'Ibn Kudāma*, Damascus 1950, 271-81, tr. and annotation of the *ʿUmda*, which is a summary of the celebrated *Mughnī fi 'l-uṣūl*: a passage on the duration of residence of the *ribāṭ* type on the frontier, 272; *djihād* in the *Mughnī*, x, 364-97).

As a historical guide, it may be noted that the *Kitāb al-Umm* of al-Shāfiʿī (d. 204/820 [*q.v.*]), ed. Beirut 1980, followed by the *Mukhtaṣar* of al-Muzanī (d. 264/877), includes, on the one hand, traditional chapters of *siyar*, on the law of war, with a discussion, *radd*, on the ideas of Mālik (vii, 201-84) and of the treatise on *siyar* attributed to al-Awzāʿī (the text is given in the context of its refutation by the Ḥanbalī Abū Yūsuf (d. 182/798), vii, 352-89). The work contains, on the other hand, a theory of *djihād*, which is included in the *Kitāb al-djizya* (iv, 167-222, on *djihād*, esp. 170-80). In these passages, al-Shāfiʿī formulates, for the first time, the definition of *farḍ kifāya*, "collective obligation" in regard to external war (*K. al-Umm*, iv, 176, is opposed to individual duty, *farḍ ʿayn*, see DJIHĀD). He defines the obligations of the caliphate, as well as the precautions to be taken to ensure that the campaigns (at least annual, or biennial when this is possible) do not end in disaster, *mahlaka* (*K. al-Umm, tafrīʿ farḍ al-djihād*, iv, 177-8). The defensive situation of the frontier, *thughur* (or *aṭrāf*, "the extremities") is evoked (the presence of fortresses, *ḥuṣūn*, and ditches and ramparts, *khanādiḳ*, is assumed). The frontiers should be manned with soldiers. Their status as warriors of the faith is given no particular emphasis. They are under the command of trusted, wise and courageous men. When an attack, *ghazwa*, has been launched and there is a risk of it failing, the soldiers must withdraw to their camp and to the *ribāṭ al-djihād*. This expression does not seem to denote a type of building which could be called *ribāṭ*. It appears rather to refer to the operational base where defensive measures could be taken. The phrase would simply signify that there should be no hesitation in returning to the camp or the fortress which is the point of departure, when an operation has been begun but its continuation appears hazardous. This passage would indicate that, at the beginning of the 3rd/9th century, there seems to be no question of the presence of warrior-monks, volunteers of the faith, on the frontier, at least in regard to that of Byzantium, which seems to be the only one under consideration here. It is even less likely that they would be gathered together in buildings of their own. It may be supposed that this representation of a warlike monasticism reflects, in

fact, a state of belief to which certain reputedly Prophetal traditions could refer, although the dating of the latter, and the circles in which they were current, are not easily determined. The most significant is that which is mentioned only by Ibn Ḥanbal (at least as regards the canonical compilations of Sunnism; it does not seem to be invoked in the text of al-S̲h̲āfiʿī): "*d̲j̲ihād* is the monasticism, *rahbāniyya*, of Islam" (*Musnad*, iii, 82, 266).

Later, however, warriors of the frontier were to be seen, in a manner simultaneously unreal and symbolic, as varieties of saints, *ṣāliḥūn*. The term *ṣāliḥ* (both in the singular and the plural) is a Ḳurʾānic epithet which is applied to prophets, *anbiyāʾ* (e.g. XXXVII, 112) who are considered to be "men of goodness" who strive to keep their kinsfolk to the right path. There was even to be talk of the presence on the frontier of *abdāl* [*q.v.*] (not a Ḳurʾānic concept), ascetic or pietistic persons who are regarded as intercessors and dispensers of *baraka*. Certain figures were to be individualised in the same quasi-redemptive role, probably *a posteriori*. Among them there is found a summary of figures presented as being those of major *zuhhād* "ascetics who renounce" (sc. the temporal world) who characterise the 2nd/8th century. They are cited in the *Ṭabaḳāt* as self-styled mystics, from the 5th/11th century onward (after the example of the *Ḥilyat al-awliyāʾ* of Abū Nuʿaym al-Iṣfahānī (d. 430/1038), ed. Cairo 1932, i-x), and subsequently in the relevant works of other contemporaries, including the *Ṣifa* of the Ḥanbalī Ibn al-D̲j̲awzī (see above). Among these numerous figures, names which constantly recur are those of Ibrāhīm b. Adham [*q.v.*] (a native of Balk̲h̲, he is said to have died in 161/777-8; the representation of the miracles performed by him outside the framework of *g̲h̲azw* on the sea and in the snow-covered mountains, *Ḥilya*, viii, 7-8, in the company of ʿAlī b. Bakkār, who is said to have died *ca.* 207/823; this individual is also credited with comparable feats; his legendary biography is in *Ḥilya*, ix, 317; he is considered the typical *murābiṭ*) and of (ʿAbd Allāh) Ibn al-Mubārak [*q.v.*] (a native of Marw, he is said to have died in 181/797 at Hīt, on the Euphrates, while returning from the frontier; attributed to him is a *Kitāb al-D̲j̲ihād*, in addition to the compilation of traditions regarding *zuhd* which bears his name (see Bonner, *op. cit.*, 27; J. Van Ess, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, Berlin-New York 1992, ii, 552-3); an enigmatic aphorism concerning *ribāṭ* as the defence of *ḥaḳḳ*, the "true religion" (?) is attributed to him, *Ḥilya*, viii, 171).

From the time when the major provinces (in particular Persia) were extensively converted to Islam (the first ʿAbbāsid century is probably a key period in this respect), it is certainly impossible to ignore the movements which impelled individuals or groups, imbued with religious feeling and yearning for action, towards the most prestigious frontier, that of Byzantium. According to Bonner, in his important article on early *d̲j̲ihād* against Byzantium, the movement apparently did not really begin until the ʿAbbāsid period. However, at the beginning of the 3rd/9th century, the idealisation of figures of the frontier does not yet seem to have been greatly emphasised. Ibn Saʿd (d. 230/845), devotes in his *Ṭabaḳāt* an article comprising 18 names to the residents of the frontier, *al-ʿawāṣim wa 'l-t̲h̲ug̲h̲ūr* (ed. Beirut 1958, vii, 488-92). The notices are very short and not at all idealised. The first named is al-Azwāʿī, in his capacity as a resident of Beirut, which is considered a city of the maritime *t̲h̲ag̲h̲r*, as well as of the Palestinian coast. The list ends with an individual who died in 225/840 (Ibn Adham is not mentioned in the *Ṭabaḳāt*; Ibn al-Mubārak is listed among the people of K̲h̲urāsān, vii, 372; he is credited with having incited to *d̲j̲ihād*, *al-ḥat̲h̲t̲h̲ ʿalā 'l-d̲j̲ihād*). Twelve individuals are residents of al-Maṣṣīṣa (Tarsus is not mentioned). Not one is presented as performing *ribāṭ* or *d̲j̲ihād*. Only Abū Isḥāk al-Fazārī (d. 188/805) is presented as a man of virtue (who follows the good path, *sunna*) and of warfare, *g̲h̲azw*, as well as an inferior transmitter of *ḥadīt̲h̲*. The work of *siyar* which bears his name is of a quite anodyne content with regard to *d̲j̲ihād*; the term *ribāṭ* never occurs, and he seems mostly to be reflecting the judicial views of war professed by al-Awzāʿī, of whom he was a former disciple. They are presented in the form of *responsa*. It is this person, however, who, concurrently with Ibn al-Mubārak, apparently, according to Bonner, entered into legend in his lifetime (*op. cit.*, 7). It would be appropriate, in this writer's opinion, to defer the process to a somewhat later period (even in the *Ḥilya*, the biography of al-Fazārī is still rather laconic, viii, 253; he is above all presented as one who exercised on the frontier the role of scourge of *bidʿa* "blameworthy innovation").

Historically, this appears to be a typical case of the mythic return to the sources which is a feature of the emergence of different ideological movements developing in the course of the 3rd/9th centuries, in activist Sunnī circles as well as in mystical circles. All these themes were to become stereotypical in the literature of the frontier which subsequently appeared, in isolated passages or in chapters, in the work of numerous authors, irrespective of their specialities, in succeeding centuries. This literature has been scrupulously preserved, especially in the Syrian context. Thus the aristocratic historiographer of Aleppo, Ibn al-ʿAdīm (who died in Egypt in 660/1262, having fled to escape the Mongols; he was an Ayyūbid judge and vizier), included in his biographical history of Aleppo, the *Bug̲h̲yat al-ṭalab* (ed. Suhayl Zakkār, i-xi, Damascus 1991), long passages attributed to an individual, apparently a native of Tarsus, the *ḳāḍī* ʿUt̲h̲mān b. ʿAbd Allāh al-Ṭarsūsī, who lived in the 4th/10th century, shortly before the city fell, for three centuries, under Byzantine domination. This person, otherwise little known, was apparently the author of a text intitled *Siyar al-t̲h̲ug̲h̲ūr*, a compilation of traditions and anecdotes regarding the frontier city, the eminent figures who resided there and its fortified environment. It will be noted that the sense of the term *siyar* has evolved from the meaning which it had in the 2nd/8th century. It is no longer confined to points of law (the *Siyar* of ʿUt̲h̲mān Ṭarsūsī have been extracted by S̲h̲ākir Muṣṭafā from an Istanbul manuscript and published in the review of the Faculty of Letters and Education of Kuwait (*Mad̲j̲allat al-ādāb wa 'l-tarbiya*, viii [Kuwait 1975]; cf. also Bosworth's remarks on the author and his treatise, in *Oriens*, xxxiii [1992], 271, 280 and in his *Abū ʿAmr al-Ṭarsūsī's* Siyar al-thughūr *and the last years of Arab rule in Tarsus (fourth/tenth century)*, in *Greco-Arabica*, v [Athens 1993], 184-5).

These representations of *d̲j̲ihād* have little to do with history. They seem primarily to propose a rewriting, and even more so, a moralisation and an idealisation of the past, the necessity of which would not become evident until after the event (on the conditions of real war, the history of which is still largely unwritten, besides the conditioning of the ideology of *d̲j̲ihād*, see ḤARB and D̲J̲AYS̲H̲). It was inevitable, however, that when the representation of *d̲j̲ihād* became established, it could have effects on certain aspects of war itself and on those who took part in it, besides the fact that it

might be exploited in the caliphal policies of the frontier. It should nevertheless be noted that, in *adab* literature, the chapters intitled *kitāb al-ḥarb* seem to have escaped the influence of the new doctrine on frontier warfare, as seen by traditionist circles. These passages constitute a veritable treasure-store of ancient representation, from the *djāhiliyya* onwards, through the Prophetal phase of Islam, to the adventures and achievements of the great warriors of the Umayyad period (see, for example, one of the more voluminous works, the *ʿIḳd al-Farīd*, by the Andalusian Ibn ʿAbd Rabbih (d. 328/940 [*q.v.*]), accredited panegyrist to the Umayyad court of Cordova, who transferred to the West the oriental tradition, and also the so-called popular romances describing the epic adventures of great warriors of the Umayyad period who were real persons; see AL-BAṬṬĀL and DHU 'L-HIMMA).

In his major commentary on the Ḳurʾān, *Djāmiʿ al-bayān*, al-Ṭabarī (d. 320/923), presents exegetical readings which seem to accord with the ideology of *djihād*, such as it has been found expressed by means of the Prophetal traditions which are included in the compilations of the 3rd/9th century. But he also revives the contradictory ideology of quietism which makes *ribāṭ* simply a modality of devotion (it is not certain, however, that this is what served as a referential base for the latter usage of the term by mysticism). There is room for speculation regarding the future role of this latter tendency, which seems not to have disappeared entirely, despite the probable dominance of the ideology of *djihād*, throughout subsequent periods, apparently enjoying a powerful revival during the time of the Crusades. The two readings (pro- and anti-*djihād*) thus figure, concurrently, in the commentaries on the two Ḳurʾānic verses concerned (*Djāmiʿ al-bayān*, ed. M.M. Shākir, Cairo, vii, 501, on III, 200, and xiv, 31, on VIII, 60).

Finally, attention should be drawn to the use of a derivative of the root *r-b-ṭ* which figures in the Book of Conquests, *Kitāb al-Futūḥ*, of the Baghdādi historiographer al-Baladhūrī (d. 279/892) (ed. R.M. Raḍwān, Beirut 1978, 189, ch. on Malaṭiya). The fact that this work dates from the second ʿAbbāsid century is all the more interesting in that it seems to preserve an ancient usage of the term which hardly coincides with the representation in the ancient period of a *djihād* involving volunteers of the faith. The account concerns the war which the future caliph Muʿāwiya (he was still governor of Syria at the time) led on the frontier, recapturing Malaṭiya which had been lost after an earlier conquest. He "posted" there, *rattaba fīhā*, "a squadron of Muslims", *rābiṭa min al-muslimīn*, "under the leadership of their chief", *maʿa ʿāmili-hā* (during the caliphate of Medina and the Umayyad period, the *ʿāmil* denotes the governor as well as the military chieftain, responsible for a group of warriors, whatever its level and its number; D.M. Hill speaks of the "*ʿamil* of a small band of fighters" in reference to the reconquest of a town in the Djazīra, see his *The termination of hostilities in the early Arab conquests*, London 1971, 85). The term *rābiṭa*, used in this passage, is based on the theme of a name for a group. The latter, according to the ancient sense of the root, should be seen as being provided with horses and weapons and being ready for combat.

b. *Ribāṭ* as a building: look-out post, small fort, fortified city, caravanserai, staging-post and urban establishment for mystics.

Ribāṭ might seem to be easier to pin down in its role as a substantive denoting a building than in its usages as a verbal noun or a noun of action. However, except in the case of the urban establishments for mystics which do not appear in a definitive fashion until the Saldjūḳ period and are included in a well-defined general policy of the construction of specialised buildings on the part of sultans, their viziers or other dignitaries (*madrasas* [*q.v.*] for specialists in *fiḳh* and *khānḳāhs* [*q.v.*] for Ṣūfīs), there is a definite possibility that there has often been confusion and misunderstanding concerning the *ribāṭ* as an edifice. There may well be cases where a reference to a particular edifice has been understood, when in reality it is simply an extension of the sense of the verbal noun denoting an exposed place: an isolated stage on an inland route, a border-post or a fortified coastal city. It seems difficult to present a general opinion on the question, such being the variety, in nature and in purpose, of the built-up places and spaces to which the name of *ribāṭ* is given, in the sources of the 4th/10th century. The earliest information seems to emanate from geographical sources of the 3rd/9th and 4th/10th centuries. But, depending on the authors, the latter may already have been permeated by ideology. Since the historical problems have yet to be clarified and separated from phenomena of representation, it is not possible to identify and fix a historical starting-point. It is possible, however, to draw some conclusions from textual comparisons. Thus attention may be drawn to the very neutral terminological usages of the caliphal functionary Ḳudāma (see above), who seems to be opposed to certain "engaged" remarks of the geographers of the mid-4th/10th century which do not correspond strictly to historical reality. A. Miquel, in three of the volumes of his *Géographie humaine du monde musulman*, has made a systematic survey of uses of the term *ribāṭ* among early geographers, instances, which make it possibly, in his opinion, to indicate, directly or indirectly, the presence of an edifice named *ribāṭ* (4 vols., Paris 1967-88; on the *ribāṭ*, see index, at ii, 582, iii, at 529, iv, at 374). He has, in addition, devoted to this term part of a chapter (iv, 54-6, with numerous references to what are essentially geographical sources). He keeps, however, to the general definition of "fortified convent" as giving the basic sense (iii, 82, n. 1).

i. *The eastern frontier*

Of all the mediaeval authors in this field, Ibn Ḥawḳal in his *K. Ṣūrat al-arḍ* and al-Muḳaddasī (d. 378/988 [*q.v.*]) in his *Aḥsan al-taḳāsīm fī maʿrifat al-aḳālīm* are the ones who deal in the greatest detail with everything concerning *ribāṭ* (as a verbal noun or as a substantive with plural *ribāṭāt*). According to these authors, *ribāṭs* are divided among several major zones, Transoxiana and Khurāsān, provinces to the south of the Caucasus, the West Caspian zone and the Mediterranean coasts, from Palestine to the Maghrib and to Spain (Miquel, *op. cit.*, ii, "les marches", 536; the *thughūr* of the Arabo-Byzantine frontier have been omitted from this list because, as has been seen above, the usages of *ribāṭ* do not seem to denote there a specific building, but exclusively an action or a place of action). However, this terminology does not seem to be shared by all authors. Unlike the geographer-travellers of the mid-4th/10th century, Ḳudāma, writing two generations earlier, makes no mention of *ribāṭ* as a frontier edifice of *djihād*. The situation to which he refers allusively on the frontiers of the north is that of the Turkish "raid", verb *ghāra*, and not that of Muslim incursion (extract from the *K. al-Kharādj*, in *BGA*, vi, Leiden 1889, 208, 212, 262; this would seem to confirm the tradition related by the same Ḳudāma, according to which "the Turks should be left in peace", *op. cit.*, 262). Similarly, instead of the

term *ribāṭ* which was to be used in the 4th/10th century, he uses the term *khān* [*q.v.*] to denote the caravanserai and *sikka* for the "relay" of the postal service *barīd* [*q.v.*] (association of the *khān* and the *sikka*, in certain isolated "stages", *manzil*, 209, 210), and this over the whole extent of the empire (however, it is generally supposed that it was the relays of the eastern post which were called *ribāṭ* [see BARĪD].). Even if local powers from time to time conducted a more offensive policy (without disruption of commerce, and in particular, the very lucrative trade in slaves, some of whom were to become caliphal soldiers from the 3rd/9th century onward, see GHULĀM), it may be noted that the Muslim rulers of Persia finally found themselves in a situation similar to that of the empires which had preceded them, confronted by nomads from the north and the east (a legendary evocation of relations between the Sāsānid Anūshirwān and the king of the Khazars, which led the former to build a wall of bricks, *ḥāʾiṭ*, against the raids of the nomads, intractable subjects of the latter, Ḳudāma, 259-61).

A related question concerns, in particular, the representation of *djihād* on the eastern frontiers of Persia. It may be wondered whether what is presented, in the sources, as a generalised *djihād*, performed from the starting-point of thousands of *ribāṭs*, in fact reflects historical facts. Al-Muḳaddasī speaks of a thousand *ribāṭs* at Paykand, on the border of Bukhara (282). They are said to be "in ruins" or disused, *kharāb*, or "in active use", *ʿāmir*, although the respective proportion is not given. The same author states the presence (without specifying whether active or otherwise) of 1,700 *ribāṭs* at Isfīdjāb, on the right bank of the Syr Darya or Sayḥūn (273; Ibn Ḥawḳal also speaks of a thousand *ribāṭs* at Paykand, 489). These highly implausible figures are probably a reflection of hyperbole and mythic representation. In fact, the historical elements of the context (drawn from historiographical sources, as well as from certain passages of the geographers themselves), on the policy conducted by the local Muslim powers (the Ṭāhirid governors at first, later, the Sāmānid *amīrs*), during the 3rd/9th and 4th/10th centuries, confronted by the Turkish peoples of the steppe (Ghuzz, Ḳarluḳ [*q.vv.*], Arabic *Kharlūkh*), present a quite different picture. In both cases, it is a policy of defence (based on fortresses, *ḥiṣn* or *ḳuhandiz* (the Persian word), of towns encircled by walls, *muḥaṣṣana*, or by ditches and ramparts *khandaḳ*, especially in Khʷārazm, works of which many must have been pre-Islamic) and not of attack, which seems to have been practised once the conquests had reached the unclear, but traditional, frontier of the steppe. In response to raids by the Turkish nomads (who normally took the initiative), there appear to have been punitive Muslim expeditions, of which the best-known is that of the Sāmānid Ismāʿīl I (279-95/892-907 [*q.v.*]) against one of the Turkish centres of population, that of the Ḳarluḳ, the town of Ṭalas, in 280/893. This must have established calm on the frontier for most of the 4th/10th century. From this period, which is precisely contemporary with that of the geographer-travellers, the warfare would have been over. This was achieved, furthermore, by the progressive conversion of the Turkish border tribes. Information on these conversions is also found in the writings of the geographers themselves who, furthermore (without concern over contradictions or over anachronisms), continue to speak of the burgeoning activity of the *ribāṭs* and of the influx of volunteers. Al-Muḳaddasī tends to hark back to this theme, which had probably become, in part, mythic: on Ush in Farghāna, *muṭṭawwiʿa*, 272; the district of Paykand, to the west of Bukhārā, *ghuzāt*, 282. He mentions, however, some precise examples which seem more plausible. Such would be the case of the approaches to the mountain massif of the Ghūr [*q.v.*], between Harāt and Bāmiyān. This region was not, in fact, to be conquered and converted until the 5th/11th century, by Maḥmūd of Ghazna (cf. al-Muḳaddasī, 306). In this region, it is furthermore not so much a question of volunteers as of regular soldiers, "posted", *murattabūn*, there, and of "watchmen", *ḥurrās*. Similarly, in the description of a forward post in the district of Ustuwā, two places are mentioned which are called *ribāṭ*, or rather pertaining to *ribāṭ* (in the capacity of a verbal noun), where there are stationed "ardent and decisive men", *ridjāl shihām*, well-equiped with arms and with horses. It is impossible to tell whether this refers to volunteers. They are deployed, facing the sands, in three forts, *ḥiṣn*, "linked together", *muttaṣila*, one of them being defended by a ditch and rampart, *khandaḳ* (al-Muḳaddasī, 320). The mode of expression is lyrical; it could refer to the reality of the previous century. On the other hand, Ibn Ḥawḳal provides a significant extract on the converted tribes installed on the pasture-lands of Shāsh, the region of what is today Tashkent (511; al-Muḳaddasī is decidedly more discreet, 274). Furthermore, it was soon to be the Muslim irregulars of the frontier who were causing problems. In the article GHĀZĪ, Cl. Cahen defines them as companies of "mercenaries" and not as volunteers for the faith (it may be recalled that Ḳudāma and Ibn Ḥawḳal spole of *saʿālīk* to denote these irregulars, see above). For want of external action, they seem to have found a diversion in participating in various revolts, including one in Sāmānid Bukhara, in 318/930 [see GHĀZĪ]. Some reportedly sought in the mid-4th/10th century to leave for the West (*Camb. hist. Iran*, iv, *The Sāmānids*, ed. R.N. Frye, 155). Others were probably employed by Maḥmūd the Ghaznawid in his expeditions to the Pandjāb at the beginning of the 5th/11th century. It could almost be said that, it is only when the mercenaries of the frontier have left the scene, that the warriors of faith make their entrance, in an idealised representation of the past, in this region just as in the Syrian marches.

From these first elements it can be seen that it is no longer possible to subscribe, in a global manner, to the definition of G. Marçais, who presents *ribāṭ* (in his *EI*[1] article s.v.) as "a type of establishment, both religious and military, which seems quite specifically Muslim" and which would have appeared "at an early stage". It is no longer possible to retain as "current" the interpretation of "fortified convent" (see above). Before drawing hasty conclusions, the most prudent course is, without doubt, to analyse the sources and to identify the points where usage seems to indicate the presence of edifices called *ribāṭ*. This will not be sufficient to indicate whether it is the edifice itself which bears this name or it is the function assigned to it which accounts for the name. In the first case, there would effectively be a specific construction. In the second case, there would be a common name denoting various types of edifice, according to the function attributed to them. Thus the full range of evolutionary senses of the verbal noun would be encountered, from preparation for combat, to vigilance or to a protected halting-place (a use as verbal noun in the writings of al-Muḳaddasī, 303, with reference to Badakhshān, in the mountains of the upper Oxus basin).

Furthermore, a careful reading of the texts reveals

that it is probably a mistake to attribute a military function to certain *ribāṭs*; sometimes the reference seems to be to a simple hospice for travellers, especially in the case of an edifice situated at the gate of a city, founded by a specifically-named individual and maintained by the incomes of a *waḳf* or mortmain (see WAḲF, and Cahen, *Réflexions sur le waqf ancien*, in *Les peuples musulmans dans l'histoire médiévale*, Damascus 1977, 287-306). This would be the case of the four *ribāṭs* of Isfīdjāb, each situated at the gates of the town (and not in the vicinity of the great mosque, as suggested by the unclear text of al-Muḳaddasī, 272-3; cf. Ibn Ḥawḳal, 510, making possible a correction of Miquel, iv, 56), on an important route leading from the major regional metropolises. These hospice-*ribāṭs* seem to have been specifically for the accommodation of travellers who were natives of these cities (see the case of the *ribāṭ* probably founded by Ḳaratigin, a Sāmānid military dignitary, who is buried there and who converted into *waḳf* the revenues of a market; another possible case, in the writings of al-Muḳaddasī, is the *ribāṭ* of Mīrkī (?), the founder of which was a Sāmānid *amīr*; in this case, too, the establishment is in the environs of the town, 275). On the other hand, in the writings of Ibn Ḥawḳal passages are found which indicate more clearly the purpose of the edifice: *ribāṭs* for travellers on internal routes maintained by the *waḳfs*, *manāzil wa-ribāṭāt mawḳūfa ʿalā sābilat al-ṭarīḳ* (401). As for the *ribāṭ* situated on the plain to the north of Usrūshana, facing the steppe which borders on the left bank of the Sayḥūn, the foundation of which is attributed to the celebrated Afshīn [*q.v.*], the prince of this province who distinguished himself in far-flung campaigns (before ultimately being imprisoned as a rebel, in Sāmarrā, in 226/841), it seems to be of distinctly military purpose (Ibn Ḥawḳal, 504-5; this institution was supported by the revenues of lands which had been constituted as *waḳf*). The verb *banā* clearly denotes the effective construction of an edifice by this person. It is, however, not known whether it was originally intended as a *ribāṭ*. Clearly less ambiguous are the passages in the works of geographers concerning the halting-places on internal routes called *ribāṭ*. They are generally denoted by a composite expression, "the *ribāṭ* of...", followed by a place or the name of a founder (Miquel, iv, 55, n. 120, mentioning in particular Ibn Ḥawḳal, 454, with a commentary of the latter on the services provided by the *ribāṭ* as place of protection or accommodation; see also al-Mukaddasi, 291, a *ribāṭ* outside the town, near Bukhārā, founded and financed by a Sāmānid *amīr*). But these halting-places were also very often established in connection with the postal service, the *barīd* and its relays, especially in eastern and central Persia. The term *ribāṭ* is applied to them specifically by al-Muḳaddasī (thus differing from Ḳudāma, see above), in his lists of itineraries in the east (372, 493; in western Khurāsān, with a description of the *ribāṭ* founded by Ibn Sīmdjūr, the Sāmānid general.

It is, however, quite true that certain *ribāṭs* (which did not necessarily originate as military establishments; here too, each case must be analysed separately) seem to have been ultimately represented as *mashāhid* (mentioned by Miquel, iv, 51, n. 92), signifying both "[supposed] places of martyrdom" and "blessed places". A legendary tomb is often associated with them. It may appeal to a collective patronage, that of the "Companions of Muḥammad", on an itinerary of the region of Naysābūr, in Khurāsān (al-Muḳaddasī, 334). It may even claim identification with great mythical figures such as Dhu 'l-Ḳarnayn, the Ḳurʾānic Alexander and the mysterious prophet Dhu 'l-Kifl (Ḳurʾān, XXI, 85). These two figures are associated with two twin *ribāṭs*, each situated on a bank of the Oxus, one on the Hephthalite side, that of the *Hayṭal* [see HAYĀṬILA], and the other on the side of Khurāsān, downriver from Tirmidh (mentioned by Miquel, *loc. cit.*; list in al-Muḳaddasī, 291, 333). Also to be found (idem, 292), is the exceptional mention of *mudjāwirūn* in a *ribāṭ* (guard-post or halting-place?) which apparently served as a crossing-point of the Oxus. *Djiwār*, originally linked with residence in Mecca, is to be understood here in an extended sense, perhaps referring to non-combatant pietists, possibly preachers and evangelists. The movement of the Karrāmiyya [*q.v.*] could possibly have played a role of this type in the Turkish zone, under the Sāmānids and then under the Ghaznawids. This role is also attributed to the Ṣūfīs with whom the Karrāmiyya are often confused. It should be remembered, however, that Ṣūfīs did not appear in Persia until the mid-4th/10th century (see Chabbi, *op. cit.*, and eadem, *Remarques sur le développement historique des mouvements ascétiques et mystiques au Khurāsān* in *SI* [1977]). The facts of the sanctification of certain sites, called *ribāṭ* by certain authors, should, in this writer's opinion, be often considered (at least on the eastern border; the situation in the West is less clear, see below, in regard to Ifriḳiya), as phenomena adduced *a posteriori*, especially in the case of military posts which had lost their importance or fallen into disuse. It is clear that each passage needs to be examined in detail and compared with parallel sources, since each case seems to pose different questions, even when the same region is under discussion. In any case, the important question remains open: who is finally responsible for allocating the name *ribāṭ* to certain edifices—the founders, the actual users, or later authors describing events?

ii. *The central coastal zones and the western frontier*

According to Ḳudāma's formula, all the coasts from Syria to Egypt are *thaghrs* (253; details of the coastal cities, 255; a brief paragraph is devoted, at the end of the chapter, to the *thughūr al-gharb* which begin with Ifrīḳiya, 265-6). The geographers of the 4th/10th century are less synthetic in approach. They do not omit to mention all the fortified towns of the coast (*musawwara*, encircled by a *sūr*, wall, or *muḥaṣṣana*, defended like a *ḥiṣn*; these expressions are recurrent in their writings). It is therefore surprising, with regard to these coasts, that there are so few references to *ribāṭs*, except in the cases of Ifrīḳiya and of Sicily. Ibn Ḥawḳal confines himself to saying that Damascenes go to Beirut to perform *ribāṭ*, sc. *yurābiṭūn*, with the soldiers, when there is an appeal in case of danger (*istinfār* "call to arms, general mobilisation", 175; no site of the Near Eastern littoral is mentioned). Concerning the frontiers of the West, al-Muḳaddasī confines himself to very vague formulae: the Maghrib is in a state of permanent *djihād* (215, the same applying to Cordova, 233). The coasts of Sicily are "noble *thaghrs*" which contain "superb *ribāṭs*", *thughūr djalīla wa-ribāṭāt fāḍila* (or superb "places of *ribāṭ*"?) (15); as for Ibn Ḥawḳal, he goes into most detail when describing Ifrīḳiya and Sicily, see below. On the other hand, with regard to the coasts of the eastern Mediterranean, al-Muḳaddasī makes a double exception. This concerns, on the one hand, the whole of the coast-line controlled by Ramla, the "capital", *ḳaṣaba*, of the district of Palestine, a city some distance removed from the littoral, and on the other hand, the zone of Damietta, Dimyāṭ, in Egypt. There are said to have been, on the coast at Damietta, numerous *ribāṭ* (edifices or verbal noun denoting a place of *ribāṭ*?)

which are not otherwise adduced. They presumably had a "season" of activity, *mawsim*, during which there was an influx of *murābiṭūn*. The passage is fairly enigmatic (203). It is perhaps linked to maritime conditions, which rendered approach to the Egyptian coast extremely difficult for the greater part of the year. The *ribāṭs* dependent on Ramla are even more surprising (177; Miquel has partially translated the passage, in *La géographie humaine*, iv, 55). The points on the coast identified as *ribāṭ* represent the totality of maritime cities of the Palestinian coast or their ports. The city itself may be somewhat removed from the coast, as is the case of G͟hazza in relation to Mīmās in the south and of Azdūd and Yubnā in the central zone. The port of these two small cities is called *māḥūz* (a word normally meaning "space between two armies", which could be applied to a maritime forward post in relation to the city by which it is controlled). The other *ribāṭs* are fortified cities situated directly on the seaboard, Ascalon or ʿAsḳalān (between Mīmās and Azdūd), Jaffa or Yāfā (considered to be the port of Ramla) and finally Arsūf, a fortified port situated further to the north (description of the defensive works of these cities, 174, with the exception of Azdūd and Yubnā, which are mentioned only in the above-mentioned passage, 177). Given this context, it is reasonable to assume that it is a question of places where *ribāṭ* was practised, rather than of edifices of a particular type. The latter are described, furthermore, by their customary names, whether it is a case of "fortresses", *ḥiṣn*, small forts with "observation towers", *maḥāris* (sing. *maḥras*; these were apparently especially numerous in the zone of Ascalon. The town is described as *kat͟hīrat al-maḥāris*, 174). The *ribāṭ* which, according to al-Muḳaddasī, is practised in this zone is of a very particular type. It is not a question of combat but of *fidāʾ* [*q.v.* in Suppl.], "the ransoming of prisoners" (the principal source on this subject is al-Masʿūdī, *Tanbīh*, 189-96, who deals with official "campaigns" of ransom conducted by caliphal representatives; there is no mention of ransoms effected on the Palestinian coast). Miquel has good reason for wondering whether, in fact, it was not rather a matter of exchange (ii, 471). According to the procedure described by al-Muḳaddasī as regards the Palestinian coasts, as soon as the galleys and barques arriving from the Christian shores (their provenance is not specified) are sighted, the alarm is raised throughout the region. The inhabitants come to negotiate in the above-mentioned ports. Such activities are highly plausible, especially as it is unclear who, in the event, represented the Christian side (legitimate traders or pirates?) Besides, it would not be unreasonable to wonder whether, from a historical point of view, all actions on these coasts were motivated purely by faith, as the sources would have us piously believe.

Ifrīḳiya is reputed to have supplied the most ancient evidence of the existence of an establishment known as *ribāṭ*. The earliest foundations reportedly date back to the first half-century of the ʿAbbāsid period, shortly before the appearance of the hereditary Ag͟hlabid governorate (established from 184/800 onward). The purpose would have been to reinforce the coastal defences against raids launched from the Christian shores of the north. The Ag͟hlabids [*q.v.*] continued this policy, erecting numerous walls and fortresses. The first expeditions against Sicily were mounted in 211/187 and its capital, Palermo or Bālarm, was taken in 216/831. There is doubt as to which is the more ancient, the *ribāṭ* of Monastir or that of Sousse (see MONASTIR for this city and constructions in other nearby towns, Sousse and the region of Mahdiyya). Ibn Ḥawḳal gives the most detailed account concerning the whole of this region, including Sicily. He seems to have been present in the area in 361/972. Concerning the fortress which is today considered as the *ribāṭ* of Monastir (which is a fortress, *ḳaṣr*, to which similar works were to be added, at a later stage, by various local powers, from the Fāṭimids to the Zīrīds, the whole constituting *ḳuṣūr*), the question is the same as that posed in the East, whether the edifice was really called, from the outset, a *ribāṭ* or is it a case of simple extension of the verbal noun, denoting the "place of *ribāṭ*"? Perusal of the text devoted to the city by Ibn Ḥawḳal suggests that the second hypothesis is valid, at least for the ancient period. The few lines dealing with the shores of central Tunisia (73) include three uses of the term. The first could indicate either an edifice, or a place of residence, *ribāṭ yaskunu-hu umma min al-nās*, "a *ribāṭ* (a place of *ribāṭ*), where a significant number of people reside", *ʿalā ʾl-ayyām wa ʾl-sāʿāt*, "according to days and periods", *yuʿrafu bi-Munastīr*, "(place) which is known by the name of Munastīr". The second use appears in an expression which makes *ribāṭ* a functional epithet (*ḳaṣr ribāṭ*, "a fortress having the function of *ribāṭ*"). The third use is a verbal noun: "there are at the edge of the sea two large fortresses", *ḳaṣrān ʿaẓīmān, li ʾl-ribāṭ wa ʾl-ʿibāda*, "for *ribāṭ* and religious observance", *ʿalay-himā awḳāf kat͟hīra bi-Ifrīḳiya*, "which are maintained by the benefits of numerous *waḳfs* situated in Ifrīḳiya", *wa ʾl-ṣadaḳāt taʾtī-hā min kulli arḍ* "and by alms which come from everywhere".

There is no doubt that, at a later stage, when their military role had perhaps become less important, the fortresses of Monastir were considered as sanctified sites, favoured by the nobility as places of interment (see MONASTIR: the acts of piety related by the sources are, however, perhaps interpreted a little too literally here). It could be considered that the text of Ibn Ḥawḳal tends to idealise the situation on the coast of Africa (as also the case of Salé in Morocco, confronting the Barg͟hwāṭa Berbers, considered at the time to be unconverted, 81-2), while he castigates the vice prevalent in the Sicilian places of *ribāṭ* (121; partial tr. A. Miquel, in *La géographie humaine*, iv, 55). Historical reality probably lies between the two extremes. However, there may well have been periods during which zealous Muslims (or simply citizens anxious to participate in the defence and security of their homes) could have succeeded in transforming these fortresses into convents, as is postulated by numerous modern studies. If mystical movements were able at a later stage partially to occupy this type of edifice, they seem absolutely unrepresentative of the situations which could have arisen in more ancient times.

In Andalusia, three marches confronted the Christian kingdoms, including the famous Galician march, *t͟hag͟hr al-d͟jalāliḳa*. The war which was waged against the local Christians, "of quarrelsome and obstinate temperament", was, according to Ibn Ḥawḳal (who is manifestly prejudiced), a war characterised by trickery and ambushes which have little to do with the rules of chivalry, *furūsiyya*. No mention of *ribāṭ* is to be found in his text (111, 114; but the province of Spain appears to be little known; only a few pages deal with it). In this respect, al-Muḳaddasī is equally vague; on the difficulties of documentation regarding Muslim Spain in the early period, see AL-ANDALUS. (iii) "Outline of the historical geography of al-Andalus"; on military history, very rich in varied vicissitudes (vi) "General survey of the history of al-Andalus". It may, however, be wondered whether the lands of the

Muslim West genuinely link, to a greater extent than in the east, military action and guarding of the frontier to a sustained devotional practice (which is not to be confused with a mystical practice!) A critical study of the sources on this subject would unquestionably be a worthwhile project. The Sicilian counter-example which Ibn Ḥawḳal gives, with a view to denouncing it, and which describes the undesirable elements of the frontier, is very significant in this respect. On the other hand, it is no doubt necessary to take account, as in continuity with ancient usages and not as a novelty, of the fact noted by G. Marçais [see RIBĀṬ in *EI*[1]], concerning the existence, in Spanish, of the word *rebato* to denote "an action performed by a troop of horsemen in conformity with Muslim tactics". Encountered in this definition is the precise basic sense of the verbal noun of the early caliphal period. It does not go as far as the original *ribāṭ*, on the banks of the Senegal river, which has long been reckoned the point of departure of the Almoravid Berbers, a fact which is not today held in doubt [see H.T. Norris, AL-MURĀBIṬŪN]. The Almoravid movement, which began in the Maghrib at the beginning of the 5th/11th century, passed into Spain during the final quarter of the same century (479/1086, victory of Yūsuf b. Tāshfīn at Zallāḳa, see P. Chalmeta, AL-MURĀBIṬŪN. iv. "The Almoravids in Spain") and dominates it politically, while unleashing war on the frontier, using both regular troops and mercenaries, exactly as in the East. In this context, there seems however to appear, as a specific case, the activity of certain splinter-groups of Mālikism from the Maghrib which preached an activist application of religious observance. This would be the case of the founder of the *Dār al-murābiṭīn* (mentioned by Norris, in *art. cit.*, and located in the Moroccan Sous) which apparently professed a blend of pietism and warfare. This movement could first have inspired the faith of the Saharan Almoravids, then that of the ideologues who followed them, and who were to be recruited into circles of jurists of the Mālikī persuasion. It is nevertheless important not to continue to confuse these modalities of active observance, perfectly identified (which could, in certain aspects, be compared, in the East, to Ḥanbalī activism and, much later, to Wahhābism) with the use which the Ṣūfīs and the mystical brotherhoods were to make of the institution of *ribāṭ*. On the contrary, the Almohad *ribāṭs* of the 6th/12th century, mentioned by G. Marçais in his *EI*[1] article, seem, at first sight, to be of a far more classical nature, since their role is that of *ribāṭ Tāzā* [*q.v.* in *EI*[1]], the base of operations for anti-Almoravid action. As for the *ribāṭ al-fatḥ* [*q.v.*], it was the mustering point for men and materials awaiting transfer to Spain. Before becoming the site of the future city of Rabat, this area of coastal *ribāṭ* apparently served as a necropolis for the Marīnids (after the example of certain *ribāṭs* of Ifrīḳiya, for the local dynasties: see RIBĀṬ in *EI*[1]). It should probably be born in mind that it would be impossible to continue to deal with the problem of *ribāṭ*, in general and without reference to the precise contexts in which the usages of this term have been forged and have evolved. The permanent confrontation which, from the moment of the launching of the *Reconquista*, opposed the lands of the Muslim West to the Christian kingdoms, makes it reasonable to suppose that very particular cases of utilisation of the ancient terminology are to be encountered. These specific usages probably involved not only the ideology of *djihād* and its associated terms, including the verbal noun *ribāṭ*, but also the emergence of practices of magical mysticism, thaumaturgy, and the liturgy of intercession which were to be a fundamental element of maraboutism (with various usages of the root *r-b-ṭ*; "marabout" evidently emanates from one of the late usages of the Arabic *murābiṭ*). G. Marçais noted, moreover, the multiplication of usage, in Muslim Spain, in a fairly late period (which he did not, however, specify), of the term *rābiṭa* to denote certain innovations which he supposes to be of a mystical nature (by analogy with the Maghribī usage defined by G. Colin in his translation of the *Maḳṣad... fī dhikr ṣulaḥā' al-Rīf*, of Abū Muḥammad ʿAbd al-Ḥaḳḳ al-Bādīsī, d. 711/1312, in *Arch. Maroc.*, xxvii, Paris 1926, 240: "a hermitage which is the retreat of a saint and where he lived surrounded by his disciples and his religious servitors"; see also *EI*[1] art. ZĀWIYA; it would also definitely be useful to refer to the volumes of the *Nafḥ al-ṭīb* of al-Maḳḳarī [*q.v.*], which deal with al-Andalus). G. Marçais also claimed to have found a direct echo of the term *rābiṭa* in a number of Spanish toponyms such as *Rápita, Rávita* and *Rábida*.

iii. Ribāṭ, *as an establishment for mystics (relations with establishments of similar type*—khanḳāh, zāwiya, tekke)

It is not known at exactly which point in history the term *ribāṭ* and parallel terms, in particular *khanḳāh* in the East, *zāwiya* in the West, were first effectively and regularly applied to groups of mystics devoting themselves to practices of piety, *ʿibāda*, in a building to which they had rights of ownership. It can only be asserted that the phenomenon became established—at the earliest, but still in a very uneven manner—from the second half of the 5th/11th century, in the Saldjūḳ lands of Persia. Similar structures were apparently also in evidence among the Ghaznawids of north-eastern Persia, as far as the approaches to the Pandjāb. It subsequently spread very widely over the newly-conquered territories, arriving, from the 7th/13th century onward, in the Dihlī Sultanate [*q.v.*], when this region was settled by Persian élites fleeing from Mongol domination, henceforward established throughout Persia (K.A. Nizami, *Some aspects of khānqah life in medieval India*, in *SI*, viii [1957], 51-69). In the same manner, the progress of these establishments seems to have followed, in the West, the advance of the Saldjūḳs and their successors, first in Zangid Syria and then in Ayyūbid Egypt, as well as in Anatolia (which passed definitively under Muslim control after the victory won at Manzikert or Malāzgird [*q.v.*] by the second Great Saldjūḳ sultan, Alp Arslan [*q.v.*], in 463/1071). Subsequently the movement of founding these institutions continued to spread, in particular, as the result of the development of the mystical brotherhoods, *ṭuruḳ* (sing. *ṭarīḳa*, *q.v.* in *EI*[1]). The entire Muslim world was thus affected. Local particularities and significant disparities between establishments are to be noted, however, resulting from the circumstances of foundation (whether or not the initiative was sponsored by a dynasty or a powerful individual, and the level and permanence of the *waḳfs* intended for their support).

It should be noted, for example, that the genesis and evolution of mysticism in the Muslim West, Maghrib and Spain, seem to have been quite different from what took place in the East, possibly as a result of the quasi-exclusive domination of the Mālikī school of law, which was able to impose certain obstacles in matters of the spiritualisation and the practice of faith. In these regions, as was later to be the case in sub-Saharan Africa, the overwhelming mystical phenomenon was maraboutism (elements in E. Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers 1908, repr. Paris 1983; G. Drague, *Esquisse d'histoire religieuse du Maroc: confréries et zaouias*, Paris 1951; E.

Dermenghem, *Le culte des Saints dans l'Islam maghrébin*, Paris 1954). However, the Ṣūfī brotherhood movement was ultimately to be established in the West also. There it took on some quite specific traits (on the mystical brotherhoods in general, see J.S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, on the establishments and the phenomenon of *ziyāra*, "pious visiting [of a shrine or tomb]" see ch. vi, esp. 166-80). The thesis which continues to be propounded, in regard to the Muslim West, consists in saying, following E. Lévi-Provençal [see ZĀWIYA in *EI*[1]] that the ancient local term was probably *rābiṭa* (see above), which applied to a "hermitage", while *zāwiya* was later to be systematically employed in the same sense, but only from the 7th/13th century onward. This thesis seems to require renewed discussion.

In the central and eastern regions (from the time of their submission to Saldjūḳ domination), the establishments for mystics (these latter being henceforward all denoted as Ṣūfīs, with the exception of the remnants of the Karrāmiyya, surviving in the Ghūrid domain, see GHŪRIDS), took either the name *khanḳāh* [*q.v.*], which was the dominant usage in numerous regions, or *ribāṭ*. There is sometimes concurrence of the two terms in the same zone (Syria and Egypt). In lists of establishments compiled in a later period and applying to Egypt as well as Syria (see below), the appellation *zāwiya* is also found referring to urban establishments which seem to be of the same nature as *ribāṭs* or *khanḳāhs*. It is not known in what circumstances this third term (which is supposed, *a priori*, to be of western origin) is applied in these central regions. As for designation by the word *ribāṭ*, it is seldom an exclusive usage, except in ʿIrāḳ, in the region of Baghdād (but only until the Mongol period). It is, in fact, this declining caliphal metropolis which seems to have provided, for some time, the most important and probably the most ancient stratum of urban *ribāṭs* (cf. the present writer's article on the pre-Mongol period of foundation of the Baghdādī *ribāṭs*, see below). Elsewhere, it is the appellation of *khanḳāh* which seems to have originally been prevalent, this applying to all the lands of the Muslim East or lands of the Levant, controlled, directly or indirectly, by powers of Saldjūḳ origin (Syria and Egypt). It is this, moreover, which seems to have impressed western travellers like Ibn Djubayr in the 6th/12th century and Ibn Baṭṭūṭa in the 8th/14th century (see below). The names given to these establishments, most of them founded between the 6th/12th and the 7th/13th centuries, were not subsequently to change, though the foundations could be of very different nature, in terms of their dimensions, their importance, their financial means, even their users, whether or not under the control of successive powers. The most important foundations often accommodated the tomb of the founder, even if the latter had no connection with mysticism (see ḲUBBA, where the primary concern is with tombs in *madrasas*; see also the term *turba/türbe*). This was to be the case especially in Mamlūk Egypt (see KHANḲĀH). Lists of establishments are to be found in certain relatively late sources. For Egypt, they feature in the *Khiṭaṭ* of al-Maḳrīzī (d. 845/1442 [*q.v.*]). According to this author, the city of Cairo is said to have contained 23 *khanḳāhs*, 12 *ribāṭs* and 26 *zāwiyas* (*op. cit.*, Būlāḳ 1270/1853, repr. offset, Baghdād n.d., ii, 414-36). These establishments evidently do not all belong to the same period. The chronology here is defective, needing to be restored before any analysis is attempted. Thus it is possible that the *khanḳāhs* could be the most ancient, which would explain the astonishment of the Maghribī travellers who passed through Cairo, between the 6th/12th and 8th/14th centuries (if the lists supplied in the sources are to be believed, there had, however, been *zāwiyas* since the 7th/13th century, in Syria and in Egypt). For Damascus, there is a list comparable to that of Cairo, but of even later date. It is owed to ʿAbd al-Ḳādir al-Nuʿaymī (d. 927/1521, see Brockelmann, S II, 164) and feature in the *Tanbīh al-ṭālib wa-irshād al-dāris* (2 vols., Damascus 1948; al-Nuʿaymī makes frequent references to Yūsuf Ibn Shaddād, d. 632/1235, for the more ancient establishments). The figures were reportedly as follows: 29 *khanḳāhs*, 26 *zāwiyas* and 21 *ribāṭs* (to this list should be added an indeterminate number of *tekkes*, from the Ottoman period [see DIMASHḲ]. This Turkicised word denotes an establishment of the same type as those already mentioned, its Arabic form being *takkiya*). Here, too, the chronology is defective, and the dates of foundation of the establishments are not given systematically. Historical exploitation of these lists has yet to be undertaken.

In the Maghrib, it was to be the appellation *zāwiya* which was prevalent before the Ottomans. The latter were to build a certain number of *tekkes*, alongside older establishments, except in Morocco, which escaped their domination (given the conditions of local mysticism, the Maghribī *zāwiyas* are not necessarily urban establishments, see Trimingham, *op. cit.*, index, 314). The observation of Ibn Djubayr (who was in the East at the end of the 6th/12th century, see below, *Riḥla*, 330) suggests that while *khanḳāh* was probably unknown in the West, there were nevertheless usages of the term *ribāṭ*, taken in the sense of a generic term. It should be noted that, in another *Riḥla*, of two centuries later, Ibn Baṭṭūṭa, the great traveller and a native of Tangier (*q.v.*; he is said to have died in 779/1377 or a little earlier), for his part uses *zāwiya* as a term of reference to denote all kinds of establishments, from institutions for mystical brotherhoods to simple wayside hostelries. This uniformity of nomenclature does not seem to correspond to reality. It could be the product of extrapolation, deriving from a typically Maghribī usage. In his accounts, often lively and spiced with anecdotes, this traveller-narrator would be unlikely to mention the terminology actually used in the regions of which he speaks. Furthermore, he abandons his procedure, at least once, in reference to Cairo when he declares, "as for *zāwiyas*, which are here called *khanḳāhs*". The passage is included in a chapter devoted to the various establishments of Cairo (the mosque of ʿAmr, the *madrasas*, the *māristāns* and the *zāwiyas*), see his *Riḥla*, Beirut 1967, 37). In pre-Ottoman Turkey, it is also *zāwiyas* which are attributed by him to the Turkoman organisations of the *akhīs* [*q.v.*], who were to revive, in Anatolia, the most ancient tradition of the *futuwwa* (*q.v.*; see also Cl. Cahen, *Pre-ottoman Turkey*, London 1968, 196-200). The word *ribāṭ* seems to be completely absent in the *Riḥla* of Ibn Baṭṭūta. There is a single isolated use of the term *rābiṭa*, apparently denoting an oratory regarded as a sacred site (placed under the mythic patronage of the prophet Ilyās and of Khaḍir [*q.v.*], in the region of Sinope or Ṣinūb (*op. cit.*, 319-26).

Returning to the genesis of the process, it will be noted that the most distinguishing feature of these new kinds of establishment is that they are situated, in principle, in cities (except in the case of marabout edifices, many of which reflect the local configuration of places collectively recognised as "sacred") and not on a frontier or in an exposed place. Just like the *madrasas* or colleges of law [*q.v.*], which also appear in towns, in the same places and during the same

periods, the urban establishments for Ṣūfīs were to be almost exclusively financed by the system of *waḳfs* (see above). These enabled them to continue in existence and to survive, without too much damage, some particularly turbulent political phases. These were sometimes private *waḳfs* (especially as regards small and ancient foundations, for the use of a single master and his disciples). Later, in establishments of importance, these were to be public or semi-public foundations, initiated by persons belonging to the higher echelons of the state or of the court. There are cases, for example, of foundations created by princesses and by the wives of caliphs and sultans (the position in Baghdād from the 5th/11th century to the 7th/13th century is well-known through local chronicles such as the *Muntaẓam* of Ibn al-Djawzī [*q.v.*]; see J. Chabbi, *La fonction du ribat à Bagdad du V^e siècle au début du VII^e siècle*, in *REI*, xlii/1 [1974]).

But this phase of official foundations, which began in Persia with the first Saldjūḳs of the 5th/11th century, seems to have been preceded by a much more obscure period during which the transition was made from the very overt tradition of the diffusion of knowledge, *ʿilm* (religious knowledge, in this case), which was normally dispensed in the mosques, *masdjid* [*q.v.*], or the great-mosques, *djāmiʿ* [see MASDJID], to instruction conveyed in the enclosed space of the new institutions. The latter did not, however, cause the disappearance of the former. It is, yet again, in Persia that the process seems to have begun, probably on the basis of previous local models. The invention of the Muslim *khanḳāh* (a word in Persian undifferentiated in gender which has evolved into a feminine in Arabic) is probably the most ancient. It may be attributed to the ascetic preachers of the movement of the Karrāmiyya, on the basis of a model which is possibly Manichaean. The earliest foundations seem to have been established, in north-eastern Persia, between Transoxiana and Khurāsān, during the Sāmānid period, probably from the end of the 3rd/9th century onwards. Until around the middle of the following century, the *khanḳāh* seems to belong specifically to the movement represented by those whom al-Muḳaddasī calls *khānḳāʾī*, "man of the *khānḳāh*" (44; *khawāniḳ* is the Arabised plural of this word). It seems that the use of this kind of institution by Ṣūfism (established in Persia in the mid-4th/10th century, see above) came about in a later period and in conditions which have yet to be elucidated, from a historical point of view. There are pieces of evidence concerning Naysabūr [see NĪSHĀPŪR], the great metropolis of knowledge in Khurāsān, during the 4th/10th century. But these apply primarily to the foundation of *madrasas*, assigned to the various juristic rites. This seems, furthermore, to be a question of small institutions, of a private type, reserved for the teaching of a single master, for whom the establishment doubtless also served as a residence (R.W. Bulliet, *The patricians of Nishapur*, Cambridge, Mass. 1972, 249-55, gives a complete list of these pieces of evidence). Bulliet also speaks of the *khānḳāh*. But he does not seem to assess correctly its exclusive ancient relationship to the movement of the Karrāmiyya (for example, an erroneous substitution of terms, 229, n. 5). On the other hand, it is important to note that he makes no mention of the urban *ribāṭ* for Ṣūfīs in the sources that he has studied. For his part, F. Meier devotes an entire section of ch. 13 of his study of the (Persian-speaking) Khurāsānian Ṣūfī, Abū Saʿīd b. Abi 'l-Khayr (d. 440/1049), a native of Mayhana [*q.v.*] near Sarakhs; this Ṣūfī apparently maintained a personal *khānḳāh* in his town), to what he calls "convents", *Konvente*. He attempts to discover the most ancient attestations of the *ribāṭ* for Ṣūfīs as well as of *khānḳāh*. But his study lacks a thorough placing in the context of the citations (*Abū Saʿīd-i-Abū l-Ḫayr, Wirklichkeit und Legende*, in Acta Iranica, Ser. 3, vol. iv, Leiden 1976). It may, however, be supposed that the process probably developed during the 4th/10th century, at least in reference to Persia, and that it was definitively established in the following century. With the exception of one case, presented in a fairly obscure fashion, at Dabīl or Dvīn in Armenia, at 379, it should be noted that al-Muḳaddasī never links the *khānḳāh* to Ṣūfism. On the other hand, the association which he seems to establish, in several passages (412, 414, 415), between *ribāṭs* and Ṣūfism has been interpreted as suggesting that "convents" are to be envisaged. But an anecdote which he locates in Susiana and in which he is personally involved (he is mistaken for a Ṣūfī on account of the woollen gown which he wears), seems to show that this is not the case, 415; the Ṣūfīs have their circle, *madjlis* or "meeting place", in the great mosque of Susa; they seem to have an inclination to travel, they are considered as bearers of sanctity and they receive donations; the *ribāṭs* which they frequent are not their own property, but the small forts on the nearby coast in the region of Abbādān which, at the time, must still have been in a reasonable state of repair). The equivalence between the two terms *ribāṭ* and *khānḳāh*, which for Syria, and in the context of Ṣūfism, was to be established two centuries later by the traveller-pilgrim Ibn Djubayr [*q.v.*], seems to be far removed from current opinions (his *Riḥla* ed. Wright and De Goeje, *Travels of Ibn Jubayr*, GMS, V, 1907, tr. M. Gaudefroy-Demombynes, *Ibn Jobair, Voyages*, Paris 1949-65). This text is extremely valuable because it offers testimony *de visu*. The passages on the Ṣūfīs and their recognised establishments, all situated in urban surroundings, are exclusively concerned with the Syria of Ṣalāḥ al-Dīn (Ibn Djubayr was residing there in 580/1184). It is the terminology of the *khānḳāh* which seems to be asserted here first, in a spectacular fashion (see Cahen's remarks on the utilisation of Persian terminology in Ayyūbid Syria: *L'émigration persane des origines de l'Islam aux Mongols*, Communication, Rome 1970, repr., *Les peuples musulmans dans l'histoire médiévale*, Damascus 1977, on *khānḳāhs*, 448; on the pre-Ayyūbid period, see N. Elisséef, *Nur ad-Din, un grand prince musulman de Syrie au temps des croisades (511-569H/1118-1174)*, Damascus 1967, index). The very expression used by Ibn Djubayr suggests that he knew elsewhere of the *ribāṭ* for Ṣūfīs ("the *ribāṭs* which are here called *khānḳāh*", see below, tr. 330). The conditions of foundation, maintenance, as well as the magnificence of certain establishments, are the object of precise observations (the seminal passage with the exclamation, "the Ṣūfīs are the kings of this land!" (text 284, tr. 330-1; foundations by princesses, text 275, tr. 318; a case of double appellation, *khānḳāh* and *ribāṭ*, text 243, tr. 279-80).

It is for the moment impossible to detail the successive stages of evolution which led to the situation described, from the 6th/12th century onward, by concordant sources. Thus it is not known why it is the term *ribāṭ*, long associated—in the ambiguous conditions which have been described—with the history of the frontier, which comes to be established (in the Arabic version) as the designation of establishments *intra muros*, dedicated to the shelter of mystics. It could evidently be supposed that, by this means, the mystic establishment reverts to the old sense proposed by the contemporary traditionist who held that religious ob-

servance constituted the true *ribāṭ*. But it may further be supposed that the word is linked to the symbolic representation of *d̲j̲ihād*, which becomes the mystic *mud̲j̲āhada*, the *d̲j̲ihād* against oneself. It is this interpretation which is proposed, in ʿIrāḳ towards the end of the ʿAbbāsid caliphate, at the beginning of the 7th/13th century, by a major connoisseur of Bag̲h̲dādī establishments, the Ṣūfī author Abū Ḥafṣ ʿUmar al-Suhrawardī (d. 632/1234) in his compendium of Ṣūfism, the *Kitāb ʿAwārif al-maʿārif* (publ. as a supplement to the *Iḥyāʾ ʿulūm al-dīn* of al-G̲h̲azālī, Maktaba Tid̲j̲āriyya, Cairo n.d., chs. 13-18 of which are devoted to what could be called "the rules of *ribāṭ*"; the rules of *ribāṭ* are said to have been defined in Persian by the Ṣūfī Abū Saʿīd, at the beginning of the 5th/11th century). The proposed interpretation has the merit of coherence, but it supplies no historical justification. It has to be recognised that, for the moment, no explanation is available which could be supported by admissible historical evidence. Furthermore, there are certainly considerable differences, according to periods, regions, types of foundation, between the establishments which are quite simply called *ribāṭ, k̲h̲ānḳāh, zāwiya* or, later, *tekke*. Ibn D̲j̲ubayr seems most astonished at finding in Syria establishments which resemble, according to him, palaces, *ḳuṣūr*. This indicates that the entire history of the word, in its mystical sense, remains to be written. All that is certain is that, once launched, in very disputable conditions, the movement was to be irreversible. It was all the more so in that it was soon to be supported by the mystical brotherhoods. But it could be that an even greater contribution was made by the untiring activities of the founders. It may be supposed that, over and above the pious work with which they associated their name (such establishments usually bore the name of their founder), aristocratic persons soon came to regard the establishments which they had initiated and financed as a not inconsiderable perquisite of power, albeit symbolic.

With more precise regard to *ribāṭ*, and as a way of concluding the account of the adventures of this word, it may be noted that it is the final evolution of the term which tends to cover, with its sense, all the ancient and intermediate stages of its itinerary, through the successive contexts of Muslim societies. It is no doubt as a result of this that there is regularly encountered, in translation, a misinterpretation which could be described as functional, that which, in defiance of all the ancient usages, makes of *ribāṭ* a "military convent"—one thing which it never was.

2. Architecture.

Ribāṭ architecture developed from notions of preparedness and defensibility and from models in conquered lands that could be appropriated for these purposes. Early *ribāṭs* varied in size and complexity from isolated watchtowers to fortresses with cells for the *murābiṭūn*, a mosque, storehouses, stables, and towers. Examples of the former cannot be identified with any certainty, and only two verified examples of the latter survive in Tunisia. The first, heavily renovated and remodeled, is in Monastir [*q.v.*]. The second, the Ribāṭ of Sūsā on the Gulf of Gabès, is a fine representative of the full-fledged fortress-*ribāṭ*. Its core dates to the period 154-80/770-96, and its last stage of construction is attributed to the Ag̲h̲labid *amīr* Ziyādat Allāh (201-23/817-38). It consists of a fortified, square enclosure (approximately 39 m to the side) with a single, central, projecting entrance in the southern wall, four attached, round towers in the four corners, and three semi-round towers in the middle of the three other sides. The southeastern tower, much higher than the others and encased in a square base, doubles as a *manār*, both for the call to prayer and for watching and signaling. The courtyard is surrounded by vaulted porticoes, behind which run windowless cells on the east, north, and west sides. The second story contains similar cells, for which the porticoes serve as a continuous gallery. The southern side of the second floor is occupied by an arcaded mosque with a concave *miḥrāb* in its centre (for both *ribāṭs*, see K.A.C. Creswell, *A short account of early Muslim architecture*, ed. J.W. Allan, Cairo 1989, 286-90, and A. Lézine, *Deux villes d'Ifriqiya*, Paris 1971, 82-8 for Sūsa, and idem, *Architecture de l'Ifriqiya*, Paris 1966, 122-6, for Monastir).

This prototypical *ribāṭ* layout was adopted for a non-military building type that existed from the earliest Islamic period, sc. the *k̲h̲ān* [*q.v.*] or caravanserai. *K̲h̲āns*, too, were fortified, well-guarded enclosures with a single entrance to a court surrounded by cells for travellers, stables for their mounts, a mosque, and in many instances a watchtower. Perhaps this is why many mediaeval caravanserais in Persia are called *ribāṭ*, as they all exhibit the same basic scheme as the one encountered in authentic *ribāṭs* (see, for example, B. O'Kane, *Timurid architecture in Khorassan*. Malibu, Calif. 1987, 287-97 and figs. 40-1; and cf. RIBĀṬ-I S̲H̲ARAF). But post-Sald̲j̲ūḳ sources use the term *ribāṭ* to designate quite another type of building, sc. houses for Ṣūfīs. This is probably a development out of the initial function of *ribāṭ*, where pious *murābiṭūn* spent their time in devotional exercises during peaceful periods and it does not reflect a continuation of the original layout. *Waḳf* descriptions of Mamlūk *ribāṭs*, for example, show that they were a variation on *k̲h̲ānḳāhs* [*q.v.*] except perhaps that some of them accommodated non-Ṣūfīs (Laila Ibrahim and M.M. Amin, *Architectural terms in Mamluks documents*, Cairo 1990, 52; Leonor Fernandes, *The evolution of a Sufi institution in Mamluk Egypt; the* Khanqah, Berlin 1988, 10-13.

(NASSER RABBAT)

RIBĀṬ AL-FATḤ, RABAT, colloquially *er-Rbāṭ* (ethnic *Ribāṭī*, colloqu. *Rbāṭī*), a town in Morocco, situated on the south bank at the mouth of the Wādī Abū Raḳrāḳ (Wed Bou Regreg) opposite the town of Salé [see SALĀ]. After the establishment of the French Protectorate, it became the administrative capital of the S̲h̲arīfian empire, the usual residence of the sultan of Morroco and the headquarters of the *mak̲h̲zen* [see MAK̲H̲ZAN] and of the French authorities. The choice of Rabat as the administrative centre of Morroco brought to this town considerable development in place of its earlier somnolence.

When Morroco regained its independence (1956), Rabat became the official capital of the land, and the seat of political (Royal Palace, Parliament), administrative (government ministers, services of the state) and military power. All the diplomatic representatives were concentrated there. But the economic and commercial capital remained Casablanca (headquarters of large businesses, banks, export and import agencies, etc.). Morroco is thus the only North African state which has two capitals with specialised functions, 56 miles/90 km from each other, a fact which avoids, to some extent, too great a concentration of powers and functions in one dominating metropolis.

The foundation of Ribāṭ al-Fatḥ was the work of the Almohads [see AL-MUWAḤḤIDŪN]. The site of the "Two Banks" (*al-ʿIdwatān*) of the estuary of the Bou

Regreg had previously been the scene of Roman and pre-Roman settlements: the Punic, later Roman Sala was built on the left bank of the river higher up at the site of the royal Marīnid necropolis of Chella (Shālla [*q.v.*]). The Muslim town of Salā on the right bank, from the beginning of the 4th/10th century, in order to protect it against the inroads of the Barghawāṭa [*q.v.*] heretics at the time when it was the capital of a little Ifrānid kingdom, had fortified on the other side of the Bou Regreg a *ribāṭ* [*q.v.*], which was permanently manned by devout volunteers, who in this way desired to carry out their vow of *djihād* [*q.v.*]; the geographer Ibn Ḥawḳal is authority for its existence at this date (ed. de Goeje, 56). But we know very little of the part played by this *ribāṭ* in the course of the sanguinary wars later fought between the Barghawāṭa and the Almoravids [see AL-MURĀBIṬŪN]. It is not even possible to point out its exact situation. It was perhaps the same fortified spot that is mentioned in the middle of the 6th/12th century under the name of Ḳaṣr Banī Targh by the geographer al-Fazārī.

The final and complete subjugation of the Barghawāṭa meant that a different part was to be played by the *ribāṭ* on the estuary of the Bou Regreg. In 545/1150, the founder of the dynasty of the Muʾminid Almohads, ʿAbd al-Muʾmin, chose the fort and its vicinity as the place of mobilisation for the troops intended to carry the holy war into Spain. A permanent camp was established there and he provided for a supply of fresh water by bringing a conduit from a neighbouring source, ʿAyn Ghabūla. The permanent establishments,—mosque, royal residence—formed a little town which received the name of al-Mahdiyya [*q.v.*] as a souvenir of the Mahdī Ibn Tūmart [*q.v.*]. On several occasions, very large bodies of men were concentrated around the *ribāṭ*, and it was there that ʿAbd al-Muʾmin died on the eve of his departure for Spain in 558/1163.

The development of the camp went on under ʿAbd al-Muʾmin's successor, Abū Yaʿḳūb Yūsuf (558-80/1163-84), but it was the following prince of the Muʾminid dynasty, Abū Yūsuf Yaʿḳūb al-Manṣūr, who at the beginning of his reign gave the orders and opened the treasuries necessary for its completion. In memory of the victory gained in 591/1195 by the Almohads over Alfonso VIII of Castile at Alarcos [see AL-ARAK], it was given the name of Ribāṭ al-Fatḥ. The camp was surrounded by a wall of earth flanked with square towers enclosing with the sea and the river an area of 450 ha. The wall is still standing for the most part, and is nearly four miles in length; two monumental gates, one now known as Bāb al-Ruwāḥ, the other which gives access to the *ḳaṣaba* (Kasba of the Ūdāya), date from this period. It was also Yaʿḳūb al-Manṣūr who ordered the building inside Ribāṭ al-Fatḥ of a colossal mosque which was never finished; rectangular in plan it measured 183 m/610 feet long by 139 m/470 feet broad; the only mosque in the Muslim world of greater area was that of Sāmarrā [*q.v.*]. It was entered by 16 doors and in addition to three courts had a hall of prayer, supported by over 200 columns. In spite of recent excavations more or less successfully conducted, this mosque still remains very much a puzzle from the architectural point of view. But the minaret, which also remained unfinished and was never given its upper lantern, still surprises the traveller by its unusual dimensions. It is now called the Tower of Ḥassān (*burdj Ḥassān*). Built entirely of stones of uniform shape it is 44 m/160 feet high on a square base 16 m/55 feet square. Its walls are 2.5 m/8 feet thick. The upper platform is reached by a ramp 2 m/6 feet 8 ins. broad with a gentle slope. This tower in its proportions, its arrangement and decoration, is closely related to two Almohad minarets of the same period: that of the mosque of the Kutubiyya at Marrākush [*q.v.*] and that of the great mosque of Seville, the Giralda [see ISHBĪLIYYA].

Yaʿḳūb al-Manṣūr's great foundation never received the population which its area might have held and the town opposite, Salé, retained under the last Almohads and in the 7th-8th/13th-14th centuries all its political and commercial importance. Rabat and Salé in 1248 passed under the rule of the Marīnids, and it seems that Rabat in those days was simply a military station of no great importance, sharing the fortunes of its neighbour, which had gradually become a considerable port having busy commercial relations with the principal trading centres of the Mediterranean. But a chance circumstance was suddenly to give the town of the "Two Banks" a new aspect. The expulsion from Spain of the last Moriscos [*q.v.*] decided upon in 1610 by Philip III brought to Rabat and Salé an important colony of Andalusian refugees, who increased to a marked degree the number of their compatriots in these towns who had previously left Spain of their own free-will after the reconquest. While the population of the other Moroccan cities, Fās and Tetouan principally, in which the exiles took refuge, very quickly absorbed the new arrivals whom they had welcomed without distrust, the people of Rabat and Salé could not see without misgivings this colony from Spain settle beside them, for they lived apart, never mingled with the older inhabitants and devoted themselves to piracy and soon completely dominated the two towns and their hinterland. Rabat, known in Europe as "New Salé" in contrast to Salé ("Old Salé"), soon became the centre of a regular little maritime republic in the hands of the Spanish Moors who had either left of their own accord before 1610, the so-called "Hornachuelas", or had been expelled in 1610, the so-called "Moriscos", the former, however, being clearly in the majority. This republic, on the origin and life of which the documents from European archives published by H. de Castries and P. de Cenival threw new light, hardly recognised the suzerainty of the *sharīf* who ruled over the rest of Morocco. While boasting of their *djihād* against the Christians, the Andalusians of the "Two Banks" really found their activity at sea a considerable source of revenue. They had retained the use of the Spanish language and the mode of life they had been used to in Spain. They thus raised Rabat from its decadence. Their descendants still form the essential part of the Muslim population of the town and they have Spanish patronymics like Bargāsh (Vargas), Palāmīno, Morēno, Lōpēz, Pērēz, Chiquīto, Dinya (Span. Dénia), Runda (Span. Ronda), Mūlīn (Molina), etc.

The spirit of independence and the wealth of the Spanish Moors in Rabat soon made the town a most desirable object in the eyes of the sultans of Morocco. Nevertheless, the little republic with periods of more or less unreal independence, was able to survive until the accession of the ʿAlawī sultan Sīdī Muḥammad b. ʿAbd Allāh in 1171/1757. This prince now endeavoured to organise for his own behalf the piracy hitherto practised by the sailors of the republic of the "Two Banks". He even ordered several ships of the line to be built. But the official character thus given to the pirates of Salé very soon resulted in the bombardment of Salé and Larache [see AL-ʿARĀʾISH] by a French fleet in 1765. The successors of Muḥammad b. ʿAbd Allāh had very soon to renounce any further attempt to wage the "holy war" by sea. The result was

a long period of decline for Salé which found expression not only in the gradual diminution of its trade but also in a very marked hatred of each town for the other. At the beginning of the 20th century, Rabat, like Salé, had completely lost its old importance. They were both occupied by French troops on 19 July 1911.

After the installation of the Protectorate, the demographical and spatial growth of Rabat was intensified. The population in 1912 was estimated at 24,283 (comprising 23,000 Moroccans and 1,283 Europeans), adjacent to Salé with 17,000 inhabitants, all Moroccans. In 1952, a few years before independence, the census of population gave 156,209 inhabitants for Rabat (114,709 Moroccans and 41,500 Europeans). In 1982, the date of the latest official census, valid until the present time, Rabat had a total of 526,100. But one should take into account not only the residents of the capital city but also those of Salé, closely linked with Rabat (316,700 inhabitants) and *ca.* 150,000 in the surrounding suburbs. Hence the whole agglomeration of Rabat-Salé has more than a million people, forming the second largest urban grouping of Morocco, after Casablanca, and spreading its buildings over more than 130 km^2.

The "bipartite urban settlement" which as grown out of the "Republic of the Two Banks" has thus become strongly dissymetrical, from all points of view. Together with its suburbs, Rabat holds three-fifths of the population of the agglomeration, the essential part of the tertiary sector jobs and even the industrial ones. The industrial concerns, estimated at 8,000 in 1986, make the capital the sixth of the industrial centres of Morocco, which hardly allows one to visualise it as a residential and official city. Rabat provides numerous jobs, distributes the resources to a multitude of officials but also to modest households existing in the shadow of the propertied classes (informal employment). As for Salé, it provides housing for employees and workers and appears as a "dormitory town" narrowly dependent on its powerful neighbour.

The urban structure of the two cities also differs. It is true that the two *madīna*s have always faced the mouth of the Bou Regreg and contain the historic memorials of the two cities (gate of Bab el-Alou and the ancient *mellāḥ* and Kasba of the Ūdāya at Rabat; and the gate of Bab Sabta, and the Marīnid Great Mosque and Medersa at Salé). But the Rabat *madīna* has been less densely packed than the Salé one, and its role in the agglomeration is secondary. On the other hand, the Salé *madīna* is overpopulated but in other respects is more attractive to the population on the right bank of the river.

The extensions *extra muros*, in effect the 20th century quarters, are of a very different nature on each side of the river.

In Rabat, these are large, well-spaced blocks, with wide roads and numerous green spaces, which have brought about, since the beginning of the "colonial city"—where the town planners Prost and Ecochard distinguished themselves—a relatively harmonious city (quarters of the Centre, the Residence, Tour Ḥassān, Orangers and Āgadāl). The sites laid out after independence (Amal Fath, university campus, enlargement of the quarter of the luxurious villas of Souissi and the spacious plots of Ryad) have perpetuated this tendency, even if some poverty belts have grown up in the southern suburbs. The expanse of these suburbs, which are either "spontaneous" or have been remodelled by the state, is incontestably more limited there than on the Salé bank of the river.

In Salé, beyond the *madīna*, there is a rabbit's warren of "refuge quarters" which have gradually grown up, biting into the old market gardens and throwing into relief the lower-class and dependent nature of this city, which is neither a rival nor a twin of Rabat but which has become simply an annexe of the capital city.

Strangely enough, although Rabat is the undisputed national capital, it is not a regional centre. Its hinterland is limited to the Zaër country to the south, an important region for stock-rearing, and to a string of bathing resorts along the Atlantic coast. Contrariwise, the economic hinterland of Salé is much more extensive and clearly dominated by the city of Salé itself, and comprises the regions of the Sehoul and the Zemmour. Thus Salé has retained an active role within the adjoining rural world, which is characteristic of traditional Islamic towns, whereas Rabat seems to have turned its back on the countryside, as befits a relatively new and probably still to some extent artificial town.

Bibliography: In the *Archives Marocaines* and in the periodical *Hespéris* there are many articles on Rabat, its monuments, its industries and dialectical topography. See also the important monograph *Villes et tribus du Maroc*, publication de la Mission scientifique du Maroc, *Rabat et sa région*, 3 vols., Paris 1918-20. (E. Lévi-Provençal-[J.F. Troin])

RIBĀṬ-I SHARAF, a building in mediaeval Islamic Khurāsān, situated on the Nīshāpūr-Sarakhs

caravan route, two stages from Sara<u>kh</u>s. It consists of two four-*īwān* courtyards, each containing a mosque. The larger inner court is surrounded by extensive suites of rooms; the outer court served mainly for stabling.

On the *pī<u>sh</u>ṭāḳ* [*q.v.*] at the rear of the inner court is an inscription with a date in which the units ended in 8. The *īwān* behind it has a stucco inscription dated 549/1154-5 in the name of the Sal<u>dj</u>ūḳ sultan San<u>dj</u>ar [*q.v.*], crediting the work to his wife Turkān <u>Kh</u>ātūn. At this date, San<u>dj</u>ar was being held captive by the <u>Gh</u>uzz; A. Godard (*<u>Kh</u>orāsān*, in *Ā<u>th</u>ār-i Īrān*, iv [1949], 7-68) suggested that Turkān <u>Kh</u>ātūn's work involved mostly decorative repairs, and that on stylistic grounds 508/1114-15 was the date of the original foundation.

Although the building was restored in the 1970s, leading to the find of a cache of 11-14th century metalware and pottery, a lacquer box and a Ṣafawid *firmān* under one of the floors (M.Y. Kiani, *Robat-e Sharaf*, Tehran 1981), there has been no systematic study of the building to confirm Godard's sometimes problematic hypotheses regarding attribution of the work to the original building period or to restoration. For instance, the stucco revetment of the squinch of the mosque, ascribed by Godard to 1154-5, is almost identical to that of the Yarti Gunbad in Turkmenistan dated 491/1098 (S. Blair, *The monumental inscriptions from early Islamic Iran and Transoxiana*, Leiden 1992, 180).

The stucco is extraordinarily varied, ranging from the multi-layered arabesques of the soffit of the axial *īwān* to archaic work (best published in A. Hutt, *Iran 1*, London 1977, Pl. 65) suggesting the involvement of the same team responsible for the stucco of the tomb of San<u>dj</u>ar at Marw. The range of brick decoration and vaulting techniques, as yet inadequately published, is equally impressive.

This sumptuousness, together with the royal restoration inscription, make it likely, as J.M. Rogers has pointed out (in J. Sourdel-Thomine and B. Spuler (eds.), *Die Kunst des Islam*, Berlin 1973, no. 242), that the building was as much a palace as a caravansaray. A monumental gateway with the fragmentary remains of a royal inscription at nearby Du Barār (W.M. Clevenger, *Some minor monuments in Khurāsān*, in *Iran*, vi [1968], 58) may have been the gateway to the caravansaray/palace or a surrounding *ḥayr*.

Bibliography: Given in the text.

(B. O'Kane)

RIḌĀ (A.), literally "the fact of being pleased or contented; contentment, approval" (see Lane, 1100), a term found in Ṣūfī mysticism and also in early Islamic history.

1. In mystical vocabulary. In the Ḳurʾān, the root *raḍiya* and its derivatives occur frequently in the general sense of "to be content", with nominal forms like *riḍwān* "God's grace, acceptance of man's submission" (e.g. III, 156/61, 168/174; IV, 13/12; IX, 73/72; LVII, 20, 27), although the actual form *riḍā* does not occur. In the writings of the proto-Ṣūfī al-Ḥasan al-Baṣrī [*q.v.*], it is a moral state, contentment with the divine precepts and decrees, and the reciprocal contentment of the soul and God (see L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1954, index).

2. In early Islamic history. The term has a special role in the events leading up to the ʿAbbāsid Revolution of 128-32/746-50, when the anti-Umayyad *duʿāt* made their propaganda in the name of *al-riḍā* (? *al-raḍī*) *min āl Muḥammad* "a member of the House of the Prophet who shall be acceptable to everybody". This conveniently vague term enabled both the partisans of ʿAlī's family, the <u>Sh</u>īʿa, and those of the Prophet's paternal uncle, al-ʿAbbās, to claim that they were the intended new leaders of the *umma* (see M. Sharon, *Black banners from the East. The establishment of the ʿAbbāsid state—incubation of a revolt*, Jerusalem 1983, 146-7, 158-9 n. 14, 172).

Subsequently, the term tended to be particularly identified with the <u>Sh</u>īʿa; it was, for instance, the *laḳab* [*q.v.*] of the Eighth Imām, ʿAlī al-Riḍā b. Mūsā al-Kāẓim [*q.v.*].

Bibliography: Given in the article. (Ed.)

RIḌĀ, an Ottoman biographer of poets. Meḥmed Riḍā b. Meḥmed, called Zehir Mār-zāde, was born into a family living in Edirne. Of his life we know only that he was for a time, respectively, *müderris* with a salary of 40 *aḳčes*, *nāʾib* and *müftī*—he held this latter function at Uzun Köprü near Edirne—and that he died in his native town in 1082/1671-2. Besides a collection of poems (*Dīwān*) and a work with the title *Ḳawāʿid-i fārisiyye* (no manuscript of these works has yet been found), Riḍā wrote a *Ta<u>dh</u>kirat al-<u>sh</u>uʿarāʾ*, a biographical collection in which he dealt in alphabetical order with the poets who lived in the first half of the 9th century A.H., i.e. 1591-2 to 1640-1. In the introduction he discussed eleven sultans who wrote poetry. The book was completed in 1050/1640-1 as the *taʾrī<u>kh</u>* or chronogram shows. The few manuscripts which do exist (in libraries in Istanbul and Vienna) contain, apart from the introduction, sometimes 165 and sometimes as many as 260 short biographies illustrated with quotations in verse. The printed edition (by Aḥmed <u>D</u>jewdet, *Te<u>dh</u>kire-yi Riḍā*, Istanbul 1316/1900-1) has 173 biographies.

Bibliography: J. von Hammer, *GOD*, iii, 486; *Si<u>dj</u>ill-i ʿO<u>th</u>mānī*, ii, 397; *ʿO<u>th</u>mānlī müʾellifleri*, ii, 185-6; Babinger, *GOW*, 215-16; Ismāʿīl Pa<u>sh</u>a, *Īḍāḥ al-maknūn fī 'l-<u>dh</u>ayl ʿalā Ka<u>sh</u>f al-ẓunūn*, i, 274; Günay Alpay, *İA* art. *Rizâ*.

(F. Babinger-[J. Schmidt])

RIḌĀ ʿABBĀSĪ, leading artist at the court of the Ṣafawid <u>Sh</u>āh ʿAbbās I [*q.v.*]. In addition to 29 works dated between 1001/1591-2 and 1044/1634, the four main sources for Riḍā ʿAbbāsī's life are: (1) Ḳāḍī Aḥmad b. Mīr Mun<u>sh</u>ī, *Gulistān-i hunar* (1005/1596 and 1015/1606), *Calligraphers and painters...*, tr. V. Minorsky, Washington, D.C. 1959, 192-3; (2) Iskandar Mun<u>sh</u>ī, *Taʾrīkh-i ʿālam-ārā-yi ʿAbbāsī* (*ca.* 1025/1616 and 1038/1629), *History of Shah ʿAbbās*, i, tr. R.M. Savory, Boulder, Colo. 1978, 273, and T.W. Arnold, *Painting in Islam*, Oxford 1928, 143-4; (3) "The Robber, the poet and the dogs" (Keir Coll., Richmond, Surrey), a drawing which Riḍā began in 1028/1619 and his son <u>Sh</u>afīʿ ʿAbbāsī completed in 1064/1654; and (4) Portrait of Riḍā ʿAbbāsī, by Muʿīn Muṣawwir (Princeton University Library, 96G), begun in 1045/1635, completed in 1087/1673.

Riḍā, the son of the Ṣafawid court artist ʿAlī Aṣ<u>gh</u>ar, served <u>Sh</u>āh ʿAbbās. Scholars have questioned whether "Riḍā" and "Āḳā Riḍā" were identical to "Riḍā ʿAbbāsī". "The Robber, the poet and the dogs" contains one inscription by Riḍā referring to himself as "Riḍā Muṣawwir [ʿAbbā]sī" and another by <u>Sh</u>afīʿ ʿAbbāsī, calling him "Āḳā Riḍā". Likewise, Muʿīn Muṣawwir calls him "Riḍā-yi Muṣawwir ʿAbbāsī... also known as Riḍā-yi ʿAlī Aṣ<u>gh</u>ar".

Riḍā's career consists of three periods. (1) *Ca.* 995-1013/1587-1604 his style developed away from the attenuated forms of the Ḳazwīn school of 1560-80. Extremely delicate brushwork characterises his paintings; his drawings introduce a calligraphic line of variable thickness used to define form and suggest

movement. (2) *Ca.* 1013-1019/1604-10. After the move to the new capital, Iṣfahān, in 1006-7/1598 and the addition of the honorific "ʿAbbāsī" to his name *ca.* 1011-12/1603, Riḍā rebelled, ceasing to portray courtly figures. His staccato style of draughtmanship fits the subject-matter of the period—lone, anguished men in the wilderness. (3) *Ca.* 1019-44/1610-35. Resuming court employment, Riḍā introduced a ponderous figural style, a palette of half-tones, and multi-figure compositions to his oeuvre. The single-page subjects include portraits of *s̲h̲ayk̲h̲s*, courtiers, Europeans, and drawings after originals by Bihzād [*q.v.*]. Riḍā's work strongly influenced contemporaries and followers throughout the 11th/17th century.

(SHEILA R. CANBY)

RIḌĀ ḲULĪ K̲H̲ĀN B. MUḤAMMAD HĀDĪ B. ISMĀʿĪL KAMĀL, Persian scholar and man of letters, "l'un des hommes les plus spirituels et les plus aimables que j'aie rencontrés dans aucune partie du monde" (Gobineau). A descendant of the poet Kamāl K̲h̲ud̲j̲andī [*q.v.*], the grandfather of Riḍā Ḳulī, chief of the notables of Čarda Kilāta (district of Dāmg̲h̲ān), was put to death by the partisans of Karīm K̲h̲ān Zand against whom he supported the Ḳād̲j̲ārs (cf. *Relation de l'ambassade au Kharezm*, tr. Schefer, 203). His father became one of the dignitaries of the court of the Ḳād̲j̲ārs; in 1215/1800, while on a pilgrimage to Mas̲h̲had, he heard of the birth of a son in Tehran to whom he gave the name of the *imām*. Becoming an orphan in 1802, Riḍā Ḳulī spent his early years in Fārs; he was brought back from Fārs to Tehran, lived some time with relatives at Barfurus̲h̲ (Māzandarān), then returned to Fārs where he received his education; he then entered the service of the state under the patronage of the governor-general of Fārs. His earliest efforts in poetry were published under pseudonym of Čākir, which he soon changed to that of Hidāyat. In 1829, on the occasion of Fatḥ ʿAlī S̲h̲āh's stay in S̲h̲īrāz, he composed a panegyric and other poems which gained him the royal favour; but a serious illness prevented him from leaving S̲h̲īrāz. In 1838 Muḥammad S̲h̲āh showed such esteem for him that he entrusted his son ʿAbbās Mīrzā's education to him. The political troubles that followed the S̲h̲āh's death in 1848 sent Riḍā Ḳulī into retirement. In 1851 Nāṣir al-Dīn S̲h̲āh recalled him and sent him on an embassy to K̲h̲īwa. He was next appointed to the Ministry of Education, became Director of the Royal College (*dār al-funūn*), then fifteen years later, tutor (*lālā-bās̲h̲ī*) to the crown prince Muẓaffar al-Dīn, whom he followed to Tarīz, where he spent several years. He returned to Tehran where he died in 1288/1871.

His very numerous works include e.g. some treatises on theology and letters (one may mention only the *Miftāḥ al-kunūz*, a commentary on difficult verses in K̲h̲āḳānī, and the *Nižād-nāme-yi salāṭīn-i ʿad̲j̲am-nižād*, on early Persian dynasties: analysed in *JRAS* [1886], 198). His lyrical poetry (*Dīwān*) totals about 30,000 lines. Of his six *mat̲h̲nawīs* (enumerated by himself, *Mad̲j̲maʿ al-fuṣaḥāʾ*, ii, 582) only the epic entitled *Bektās̲h̲-nāme* (or *Gulistān-i Iram*, lith. Tabrīz, 1270/1853) is published: it celebrates the tragic loves of the hero and the Persian poetess of Arab origin Rabīʿa Ḳizdārī Balk̲h̲ī, known as Zayn al-ʿArab. His other works which are published are mainly of a documentary nature and therefore very important. The *Fihris al-tawārīk̲h̲* ("Repertory of chronicles", chronology, lith. in part at Tabrīz) was presented to Nāsir al-Dīn S̲h̲āh before the author's departure to K̲h̲ʷārazm (1851); the *Ad̲j̲mal al-tawarīk̲h̲* (lith. Tabrīz 1283) is a short précis of the history of Persia composed for the crown prince Muẓaffar al-Dīn; the *Rawḍat al-ṣafā-yi Nāṣirī*, continuation of the *Rawḍat al-ṣafā* of Mīr K̲h̲ʷānd [*q.v.*] down to 1270/1853 (Tehran 1270, 3 vols. fol., also Tehran 1338-9/1959-60, 10 vols.), is a work of considerable size, based on eastern sources (of which several are still unpublished) and on official documents, most of which are reproduced in full; in addition to the record of political events the work contains much geographical, literary and artistic information. The *Riyāḍ al-ʿārifīn* ("Gardens of the initiated"), biographies of mystical poets, with an excellent introduction on Ṣūfism, was prepared for Muḥammad S̲h̲āh (lith. 1305, Tehran, printed Tehran 1336-40/1957-61, 2 vols. in 6). It is closely connected with the *Mad̲j̲maʿ al-fuṣaḥāʾ* ("Assembly of eloquent individuals"), of first importance for the history of Persian poetry (lith. Tehran 1294, 2 vols. fol.); this last work, the author's best, contains after a general introduction on the history of Persian poetry, biographies and select pieces from all the poets (the poet laureates form the first section); at the end is an autobiography and an anthology of the poems of Hidāyat (ii, 581-678; autobiography and a number of the verses reproduced by the author of the *Fārs-nāma-yi Nāṣirī*, ii, 125). The researches necessary for these last two works showed Hidāyat the inadequacy of the dictionaries at his disposal; he intended to remedy this by his *Farhang-i and̲j̲uman-ārā-yi Nāṣirī* (lith. Tehran 1288) which, preceded by a remarkable introduction, gives the different meanings of each Persian word, with quotations from the classical poets. The work entitled *Madārid̲j̲ al-balāg̲h̲a* (lith. 1331) is a glossary of rhetorical and poetical terms with many examples taken from different poets. Lastly, we owe to Hidāyat the first editions of the *Dīwān* of Manūčihrī (lith. Tehran 1297), of the *Ḳābūs-nāma* (*ibid.* 1275) and of the *Naft̲h̲at al-maṣdūr* (history of the fall of the K̲h̲ʷārazmian empire) of Muḥammad Zaydarī (publ. posthumously, Tehran 1308). Its autobiographical character gives the attractive "Narrative of a Journey to K̲h̲ʷārazm" (*Safar-nāma-yi K̲h̲ʷārazm*, ed. and tr. Schefer, in *PEIOV*, Paris 1879) a special place among his works; he undertook this journey in 1851 as ambassador sent to settle the differences between the courts of Tehran and K̲h̲īwa. This journal is a valuable document for the history of the k̲h̲ānates and has been utilised by later Persian historians (notably Muḥammad Ḥasan K̲h̲ān [*q.v.*]); besides valuable historical, archaeological and geographical matter, the book, which is written in a simple and natural style, is a contribution to the study of the manners and customs of the period (notably, conditions of travel); we find in it pretty pictures of native life and charming landscapes. Several of Hidāyat's descendants have taken a prominent part in literature, politics and administration.

(H. Massé*)

RĪḌĀ NŪR, Rizâ Nur (1879-8 September 1942), Turkish medical doctor, politician, diplomat, man of letters and nationalist ideologue, born in the Black Sea town of Sinop in 1879. After graduating from the military medical college he taught at the Faculty of Medicine, but abandoned medicine for politics after the constitution was restored in July 1908. Elected to the parliament from Sinop, Rīḍā Nūr joined the opposition Liberal party (*Aḥrār Fîrḳasî*) against the *Ittiḥād ve Teraḳḳī Djemʿiyyeti* [*q.v.*], the CUP. Suspected of playing a role in the abortive counter-revolution of April 1909, he fled to Egypt but returned to continue his oppositional role against the CUP. On 19 July 1910 he was arrested for conspiring against the government but was acquitted for lack of evidence. He became a founding member of the *Ḥürriyyet ve Iʾtilāf Fîrḳasî* [*q.v.*] in November 1911, which attempted to unite all the opponents of the CUP. After the assassination of Maḥmūd Shewḳat Pasha [*q.v.*] in June 1913 he was exiled to Europe.

Rīḍā Nūr returned to Istanbul after the armistice of October 1918 and was elected to the last Ottoman Parliament, where he allied with the Islamists and Ottoman patriots. But in April 1920 he joined the Nationalists in Ankara, serving the movement in various capacities: as Minister of Education (May 1920); in the delegation to Moscow (January 1921); Minister of Health (December 1921-September 1922); and delegate to the Lausanne Conference (1922-23). As a supporter of the caliphate, he sided with the conservatives against Muṣṭafā Kemāl and was again forced to go into exile. He published the *Revue de Turcologie* in Paris and Alexandria between 1931 and 1937 and left behind a number of manuscripts, including his memoirs, in the British Library, London. Rīḍā Nūr was allowed to return to Turkey in December 1938 after Kemal Atatürk's death and again became active in politics and the pan-Turkist press, writing in journals like *Kopuz*. He founded *Tanrıdağ* in May 1942 and died soon after in September, having led an adventurous and colourful life.

RIḌĀ SHĀH (1295-1365/1878-1944), founder and first ruler of the Pahlavī dynasty of Persia (1344-99/1925-79). Riḍā Shāh replaced the deposed Aḥmad Shāh Ḳādjār in 1925, having previously participated in the *coup d'état* of 1921, which eventually led to the ousting of the Ḳādjār dynasty. Between 1925 and 1941, he was the catalyst for the modernisation programme which gave Iran the infrastructure of a 20th-century nation-state. In 1941, he was forced to abdicate by the British and Soviets on account of his pro-Nazi leanings. He died in exile outside Johannesburg in 1944.

Riḍā Shāh's career falls into two distinct phases: his first forty-five years as a commoner, and the fifteen years of his rule as Shāh. As with other founders of dynasties, Riḍā Shāh's origins are comparatively obscure. The official date of his birth was 16 March 1878 and he was born in the village of Alasht in the Sawad Kūh of Māzandarān. His father, ʿAbbās ʿAlī Khān, who was an officer in the Ḳādjār army, died in the same year. His mother, from an emigrant family from Erivan, then took him to Tehran where, around 1893, he joined the Shāh's Cossack Brigade. This unit, established by Nāṣir al-Dīn Shāh in 1879 and officered by Russians, was at that time the most effective unit in the Iranian army. Riḍā enlisted as a common soldier, but was soon promoted successively to corporal, sergeant, and sergeant-major, and in 1911, having seen active service in the turbulent period which followed the constitutional movement of 1905-6, was commissioned as a second lieutenant, and a year later, promoted to lieutenant. After further experience campaigning against recalcitrant tribes, in 1915 he was promoted to the rank of major. He was regarded as a model officer, with a reputation for both bravery and conscientiousness. He also seems to have become politically *engagé* about this time as the result of neutral Iran's occupation by British, Russian, and Ottoman forces during the course of the First World War.

In 1916, he became a lieutenant-colonel, and a year later was appointed to command one of the Cossack regiments. It seems that Riḍā Khān felt increasingly bitter that the force in which he served, although regarded as the "crack" unit of the Iranian army, was an instrument of Russian influence in Persia. The outbreak of the Russian Revolution in 1917 shattered the Russian command-structure in the Cossack Brigade and in the course of the machinations which followed, Riḍā Khān was promoted rapidly to the rank of general officer. The First World War had now ended, the Anglo-Persian Agreement of 1919 had been drawn up, virtually reducing the country to the status of a British protectorate, and a British military mission, under Major-General W.E.R. Dickson, had arrived in Tehran. In May 1920, Bolshevik forces bombarded Enzelī, and the Djangalī movement under Kūčak Khān [*q.v.*] in Gīlān forced a response from the feeble central government, resulting in Riḍā Khān's participation in the fighting in Gīlān, in which, despite militarily inconclusive results, he returned to Tehran with an enhanced reputation for courage and resourcefulness.

Promoted to the rank of full general, he was now appointed to command the Cossack regiments stationed in Ḳazwīn, and it was probably here that he first made contact with the British. In October 1920, the British forces stationed in northwestern Persia (a holdover from the First World War) were placed under the command of General Edmund Ironside, who, along with other British officers, came to respect the morose giant as the outstanding figure among the Cossack officers of the Ḳazwīn garrison. Only a few months later, there occurred the *coup d'état* of February 1921, involving *inter alios* the pro-British journalist, Sayyid Ḍiyāʾ al-Dīn Ṭabāṭabāʾī, which provided the opportunity for Riḍā Khān's rise to power. For the

Sayyid needed military force to carry through his *coup*, and Riḍā Khān was the man to provide it, when his Cossacks advanced on Tehran from Ḳazwīn (18-21 February 1921). At the time, public opinion in Tehran assumed that the British must have been behind these events, a viewpoint later frowned upon during the Pahlavī period, when the coup was represented to have been a spontaneous act in which Riḍā Khān played the leading part. Recent publications (e.g. Zirinsky, *Imperial power and dictatorship*) point to local British military and diplomatic involvement, but not British government sponsorship.

Ḍiyā᾽, who became Prime Minister following the coup, sought to initiate a coherent programme of internal reform and to end the threat of further national disintegration and fragmentation, working within the framework of the Constitution of 1906-7, and with Aḥmad Shāh Ḳādjār (1327-42/1909-24) as a constitutional monarch. Although lacking political acumen, Ḍiyā᾽ was a high-minded patriot of considerable ability and from the outset understood that reform had to include military reform. In the first proclamation of his new government (24 February 1921), he declared himself in favour of "An army before and above everything. Everything first for the army, and again for the army ... until our armed forces reach the highest stage of development" (Wilber, *Riza Shah Pahlavi*, 49). This was, no doubt, the *quid pro quo* between Ḍiyā᾽ and Riḍā Khān which had led to their collaboration, for Riḍā Khān had long deplored the supine state of the country and its helplessness in the face of foreign aggression, which was the direct consequence of its military backwardness. Riḍā Khān was now appointed *Sardār-i Sipah* (Army Commander), subordinate to the Minister of War, a post which he was also to assume within a matter of months. He now undertook what was to be his most concrete achievement, the modernisation of Persia's armed forces, which coincided with the effective suppression of insurgency in Ādharbaydjān, Gīlān and Khurāsān, and among the Kurds, Lurs, Bakhtiyārīs and Ḳashḳā᾽īs, a process which was to continue in the years following his accession to the throne. The two processes complemented each other. The army, reorganised, well-disciplined and equipped with modern weapons, became the agent for the forceful reassertion of the authority of the central government throughout the provinces, while its successes in the field reinforced its prestige and self-confidence, making the man who had willed it into existence—Riḍā Khān—indispensable to the politicians.

As *Sardār-i Sipah*, Riḍā Khān, semi-literate and unpolished compared with the old-style Persian aristocracy, found himself "odd man out" in a government in which his colleagues were mostly, and inevitably, scions of the old Ḳādjār ruling élite. Ḍiyā᾽ himself did not last long—by May, he had resigned and gone into exile—and his replacement as prime minister was Ḳawām al-Salṭana, a former governor-general of Khurāsān recently imprisoned by Ḍiyā᾽, the brother of the former premier, Wuthūḳ al-Dawla (1918-20), and one of the greatest Persian statesmen of the 20th century. As Minister of War, Riḍā Khān's name continued to be in the forefront of affairs. In October 1921, the Djangalī revolt in Gīlān collapsed and Kūčak Khān died in that same month, and by the middle of the following year, the Kurdish rebels had been defeated and their leader, Ismā῾īl Khān "Simko", had fled into exile. These successes convinced the Madjlis (Parliament) of the value of Riḍā Khān's army reforms, and even if it did not trust him, it was prevailed upon to grant him additional revenues with which to provide for the further expansion of the army. With regard to funds for the latter, his appetite was insatiable. Meanwhile, the army was emerging as a new and, ultimately, the dominant factor in the Persian equation. In Avery's words, "uniforms and extortion, heavy boots and the rifle butt came to symbolise a new form of tyranny. In old forms there were always detachable elements and a certain sense of community had existed between tyrants and the people. ... The nobility and the clergy, for all their faults and shortcomings, had social virtues which from time to time were exercised for the benefit of the society of which they formed a recognised and integrated part. They had nothing to do with the horrors of the guardroom and military prison" (Avery, *Modern Iran*, 259).

During the 1920s, the two great powers long accustomed to deciding the fate of Persia, Russia and Great Britain, were both preoccupied elsewhere. Britain was war-weary and distracted by world-wide responsibilities, while the new Soviet Union was locked in civil strife, massive social dislocation, and economic experimentation. Under Diyā᾽, a Russo-Persian treaty, which had been under negotiation since the previous year, was signed on 26 February 1921, which, for the time being, satisfactorily redefined relations between the two countries. On the same day, the Sayyid repudiated the hated Anglo-Persian Agreement, leaving British policy in Persia in temporary limbo. Thus, the British would be forced to acquiesce in Riḍā Khān's pacification of the Bakhtiyārī, and his overthrow of Shaykh Khaz῾al [*q.v.*] of Muḥammara in Khūzistān (November 1924-January 1925), both erstwhile clients of the Anglo-Persian Oil Company. As Minister of War, his authority grew as that of his colleagues declined, and on 28 October 1923 the Shāh grudgingly appointed him Prime Minister prior to his own departure for Europe on health grounds. He never returned to Persia, dying in France four years later. On 13 March 1924, the Madjlis met and appointed a committee to consider the question of Persia becoming a republic, a move which Riḍā Khān initially seemed to favour, and a bill was submitted to the Madjlis on 15 March. But in that same month, the Turkish Grand National Assembly abolished the caliphate, confiscated *awḳāf* (religious endowments) and brought religious education under the jurisdiction of the Ministry of Education. The Shī῾ī *῾ulamā᾽* in Persia were naturally apprehensive at these developments, which seemed to equate republicanism with secularism and sacrilege, and Riḍā Khān heeded their fears and played on them, proclaiming on 1 April 1925, following a visit to Ḳum, that a republic would be better for the welfare of the country. On 31 October 1925, the Madjlis formally deposed Aḥmād Shāh and ended the rule of the Ḳādjār dynasty, although in a long dissentient speech, Dr. Muḥammad Muṣaddiḳ [*q.v.*] (formerly, Muṣaddiḳ al-Salṭana), anticipating Riḍā Khān's imminent elevation to the throne, pointed out that, whatever the good qualities of the Prime Minister had been, as Shāh he would wield a power contrary to the Constitution. Finally, on 12 December 1925, the Madjlis voted for Riḍā Khān to become Shāh. There were some abstentions, but only four publicly opposed the vote: the veteran Constitutionalist Sayyid Ḥasan Taḳīzāda, Ḥusayn ῾Alā, Yaḥyā Dawlatābādī and Dr. Muṣaddiḳ. Riḍā Khān had already assumed the family name of Pahlavī, redolent of ancient pre-Islamic Iranian glories, and so the Pahlavī dynasty was duly established by law.

Crowned Shāh in the old Gulistān Palace on 25

April 1926, Riḍā Shāh now embarked upon a brutal but effective programme of modernisation which left untouched almost no area of Iranian life. The overall social structure remained superficially the same, but military officers, bureaucrats, and well-connected entrepreneurs and contractors came into prominence, often becoming richer and certainly more influential than the former court nobility, landlords, clerics, and *bāzārīs*. Now, cronyism became the most direct road to wealth and power, and vast fortunes were dubiously acquired, that of Riḍā Shāh himself being of spectacular extent. The predominant characteristics of the new régime were centralisation and regulation, a despotism of licenses and permits, enforced by a horde of officials, police and, ultimately, the army. Most manifestations of free speech or opposition were ruthlessly stamped out, and the fiscal rapacity of the régime probably exceeded that of any of its predecessors. In this sense, Riḍā Shāh's rule strongly resembled the governing style of the other dictatorships which emerged during the 1920s and 1930s.

At the same time, enormous changes took place in the material life of the Iranian people. Roads were built (generally, with strategic considerations to the fore, especially in tribal territory), a Trans-Iranian railway linked the Persian Gulf to the Caspian Sea, and Iran was integrated with the rest of the world by air- and steamship-links. New industries were set up—textile mills, sugar refineries, cement works. There was an emphasis on the pre-Islamic components of Persian culture; language reform to eliminate Arabic elements; and a downplaying of Iran's historic links with the Arab lands of the Middle East. At the level of scholarship and archaeology, there was a remarkable revival of knowledge of Iran's early history, much of it due to European savants.

Yet despite the achievements of these fifteen years, Riḍā Shāh remained the quintessential dictator, suspicious of those around him, fearful lest anyone other than himself should earn public respect or admiration, and malignant toward those who opposed his will or offered alternative solutions. His vindictiveness was proverbial and his prisons were kept full. Former collaborators and helpmates such as Tīmūrtāsh, the Minister of Court, and Sardār Asʿad Bakhtiyārī, the Minister of War, died in prison under mysterious circumstances, as did his critic in the Madjlis, Sayyid Ḥasan Mudarris. ʿAlī Akbar Dāwar, the Minister of Justice, committed suicide. Writers and journalists were no less subject to persecution. The poet ʿIshḳī was murdered; the novelist Buzurg ʿAlawī was imprisoned, and there were others.

The style of Riḍā Shāh's government was despotic and militaristic, with the Shāh taking the important decisions, which were then carried out by his ministers, most of whom (Dāwar was an exception) were ciphers. In foreign policy, Riḍā Shāh's achievements were more positive in that, conscious of the past diplomatic history of his country, he was able to diminish the role of both Great Britain and the Soviet Union in its internal affairs, establishing an international persona for a country which had for so long seemed to be an Anglo-Russian protectorate. Iran (he had abandoned the Eurocentric name of Persia) was an early signatory of the League of Nations, thereafter widening its diplomatic representation overseas. Of particular significance were Riḍā Shāh's diplomatic forays into the Middle East. In 1934, he paid a state visit to Turkey, becoming personally acquainted with Atatürk, and in 1937, he engineered the regional Saʿdābād Pact with Afghānistān, ʿIrāḳ and Turkey. In that same year, Iran signed a treaty with ʿIrāḳ over the Shaṭṭ al-ʿArab. An Egyptian marriage for the Crown Prince, Muḥammad Riḍā [*q.v.*], established links with Egypt's ruling élite and did something to open up a court which had hitherto been drab and provincial. Riḍā Shāh had four wives: the first, Hamdām, had a daughter of the same name; the second, Tādj-i Malik, gave him Shams, the twins Muḥammad Riḍā and Ashraf, and ʿAlī Riḍā; the third, Turān, a Ḳādjār, gave him one son, Ghulām Riḍā; and by ʿIṣmat, also a Ḳādjār, he had four sons—ʿAbd al-Riḍā, Maḥmūd Riḍā, Aḥmad Riḍā and Ḥamīd Riḍā—and a daughter, Fāṭima.

In the years prior to the Second World War, Riḍā Shāh rashly assumed a pro-German stance, intended to reduce Iran's dependence on Great Britain and the Soviet Union, while the Nazis assiduously wooed and flattered him. With the outbreak of war, both Great Britain and the Soviet Union demanded that these German connections be severed. The Shāh, however, prevaricated, and he was forced to witness the invasion of his country by British and Soviet units, which began on 25 August 1941. Against these, his prized and pampered army performed abysmally. He abdicated on 16 September 1941, in order to ensure his son's succession, and was taken by the British first to Mauritius and then to the Transvaal in South Africa, where he died on 26 July 1944.

There is little disagreement about Riḍā Shāh's character and temperament. He had developed at an early age the soldierly virtues of personal courage, self-discipline and concentrated application, and these qualities were to stand him in good stead throughout his life. A man of limited formal education and little imagination, he seems to have been a remarkable example of the self-taught man of action who utilised his limited experience to maximum advantage as a head of state who was both usurper and revolutionary. In this sense, he was more reminiscent of Peter I of Russia or Muḥammad ʿAlī of Egypt than of Atatürk, the man with whom he is usually compared, who was at once a more complicated and a more cosmopolitan personality.

With his great height, commanding bearing, and raptorial glare, Riḍā Shāh's awe-inspiring presence reinforced an impression of ruthlessness and brutal strength. His son would write: "Those eyes could make a strong man shrivel up inside" (Mohammad Reza Pahlavi, *Mission for my country*, London 1961, 36). General Ḥasan Arfa, encountering him soon after his promotion to *Sardār-i Sipah*, noted: "His complexion was rather dark and his eyes of a strange golden hue were large with a searching look which it took courage to meet. He had a small black moustache slightly turned up at the ends, and altogether his appearance was extremely virile and soldierly" (*Under five Shahs*, 115-16). At his coronation, four years later, Vita Sackville-West described him as "... an alarming man, six feet three in height, with a sullen manner, a huge nose, grizzled hair, and a brutal jowl" (V. Sackville-West, *Passenger to Tehran*, London 1926, 103-4). Decades after his death, his principal wife, Tādj-i Malik, confessed that "she did her best to keep out of his way" (A. Alam, *The Shah and I*, New York 1992, 447), and his daughter Ashraf wrote that "Even as an adult I would weigh my words carefully before I brought up any subject that might provoke or displease him", while at the same time she admired "his stubbornness, his fierce pride, and his iron will" (Ashraf Pahlavi, *Faces in a mirror*, Englewood Cliffs 1980, 13-14). These were no doubt the qualities needed at that time to impose by sheer will-power from above the radical reorganisation of a profoundly con-

servative society, and it was just that which was to prove Riḍā Shāh's lasting achievement.

RIḌĀ TEWFĪḲ [see bölükbashî, riḍā tewfīḳ, in Suppl.].

RIḌĀʿ [see raḍāʿ].

RIḌĀʾĪ, Āḳā, Muḥammad Djahāngīrī or Harāwī, Persian painter in the service of the Mughal prince Salīm or Djahāngīr in the late 10th-early 11th/late 16th-early 17th century. Mentioned in Djahāngīr's memoirs, Āḳā Riḍāʾī of Harāt or Marw joined Salīm's service before 997/1588-9, the year in which his son Abu 'l-Ḥasan was born at Salīm's court. On a portrait of Shāh Djahān of *ca.* 1050/1640, Abu 'l-Ḥasan refers to himself as "al-Mashhadī", a *nisba* repeated on a painting by his brother ʿĀbid. However, no direct connection between Āḳā Riḍāʾī and Mashhad can be established. He may have emigrated to India as a result of the Uzbek invasion of Harāt and massacre of its inhabitants in 996/1587.

Āḳā Riḍāʾī's known work ranges in date between *ca.* 996-1018/1587-1609 and includes manuscript illustrations, album margins and single-page portraits. Stylistically, his oeuvre adheres closely to Persian models; his manuscript illustrations reflect a familiarity with the court painting of Shāh Ṭahmāsp (*r.* 931-84/1524-76 [*q.v.*]), while his single-figure portraits rely on the Khurāsān style of Muḥammadī Harawī (*fl.* 968-99/1560-90). Although Āḳā Riḍāʾī consistently preferred the two-dimensionality and decorative surface treatment of Persian painting, he did employ shading, especially on faces, a concession to Mughal naturalism. Having worked for Salīm at Lahore, he continued in the service of the prince during his rebellion at Allāhābād from 1008/1599 to 1013/1604. As the leading artist at Salīm's Allāhābād court, Āḳā Riḍāʾī exerted a strong Persianate influence on the art of his fellow painters. Yet he also absorbed some elements of late Akbarī painting, enlarging the scale and reducing the number of figures in his manuscript illustrations. When Salīm acceded to the throne in 1014/1605 and took charge of the imperial artists' atelier, Āḳā Riḍāʾī was rapidly eclipsed by painters working in the fully synthesised Mughal style.

His major works include: 1-4. Marginal illustrations of four folios of the *Muraḳḳaʿ-i Gulshan*, Gulistan Library, Tehran, fols. 29, 105, 145, 152. One, with vignettes based on European prints, is dated 28 Ramaḍān 1008/12 April 1600. 5-7. Two manuscript illustrations and one portrait of a prince kneeling before Shaykh Salīm Čishtī, from the *Muraḳḳaʿ-i Gulshan*. The manuscript illustrations rely closely on Ṣafawid prototypes and may date from the late 990s/1580s. 8-12. Five illustrations to the *Anwār-i Suhaylī*, British Library, Add. 18,579, fols. 21a, 36a, 40b, 54b, and 331b, dated 1013-19/1604-10; 13. Seated Musician, late 990s/1580s, Museum of Fine Arts, Boston, 14.609; 14. *Bustān* of Saʿdī, dated 1014/1605-6, Agra, fol. 147a, Art and History Trust Collection, Houston; 15. *Kulliyyāt* of Saʿdī, Prince Sadruddin Aga Khan Collection, fol. 91a. Other attributed works are listed in Beach, *The Grand Mogul*, 94-5. Āḳā Riḍāʾī signed his paintings on rocks or near the main figures, referring to himself as *murīd*, *ghulām* or *banda* ("disciple", "servant" or "slave") *bā-ikhlāṣ* (sincere) of Shāh, Sultan or Pādishāh Salīm or Djahāngīr, depending on the date. Attributions are written near or in the margins.

(R. Ettinghausen-[Sheila R. Canby])

al-**RIDDA** [see Suppl.].

RIḌIYYA [see raḍiyya].

RIDJĀL (a.), pl. of *radjul*, a common Arabic word for "man", used specifically in Arabic literature for transmitters of *ḥadīth* [*q.v.*], i.e. Muslim tradition. When in the course of the second half of the 1st century of the *hidjra* (the 690s) the *isnād* [*q.v.*], i.e. the chain of transmitters of a tradition, had been introduced as the semi-official authentification device for it to be accepted or rejected, rather than that authentification was achieved by weighing the *matn*, i.e. its actual contents, the need to identify *ḥadīth* transmitters and to obtain detailed information on them, gave rise to the so-called *ridjāl* books which, beginning with the late 2nd/8th century, eventually acquired gigantic proportions. Islam's multi-volume biographical dictionaries may be thought of as having grown out of the *ridjāl* lexicons. During the first three centuries of Islam, giving information on someone was tantamount to supplying details about his study and handling of *ḥadīth*s. Only in a later stage did biographical dictionaries (e.g. those of Yāḳūt (d. 626/1229 [*q.v.*]) and Ibn Khallikān (d. 681/1282 [*q.v.*]) gradually develop their own characteristics, being no longer confined within strictly *ḥadīth*-determined dimensions.

With the introduction under ʿUmar b. al-Khaṭṭāb [*q.v.*] of the *dīwān* [*q.v.* at II, 323b], listing those entitled to an annual stipend from the treasury, the ancient Arab interest in tribal genealogy received a new impulse; with the emergence of *isnād*s half a century later this interest was deepened even more. The *isnād* requirement stipulated that, apart from simple identification of a transmitter within his lineage, information on his lifetime as well as that of his alleged *ḥadīth* masters and pupils be gathered, which was meant to facilitate the drawing of conclusions as to the feasibility of his actual having met with either. The science of *ḥadīth* criticism became inextricably intertwined with

ridjāl expertise, which formed its major constituent. This science also goes by the name of *al-djarh wa 'l-ta'dīl* [*q.v.*] (i.e. the science of disparaging and declaring trustworthy, sc. *hadīth* transmitters). For a survey of the mediaeval Muslim *hadīth* scholar's wielding of the technical terms and criteria used in *ridjāl* criticism, see AL-DJARḤ WA 'L-TAʿDĪL; for a modern appraisal of the same, see what follows, and also G.H.A. Juynboll, *Muslim tradition* etc., Cambridge 1983, chs. 4-5.

The classical period

The first *hadīth* expert whose name is linked to the science of "men" was Shuʿba b. al-Ḥadjdjādj (d. 160/776 [*q.v.*]) from Baṣra. He was soon followed in this by a string of other *hadīth* experts, e.g. Yaḥyā b. Saʿīd al-Ḳaṭṭān (d. 198/813), allegedly the first whose judgements were compiled in a book (cf. Ibn Ḥadjar, *Lisān al-mīzān*, i, 5), ʿAbd al-Raḥmān b. Mahdī (d. 198/813), Muḥammad b. ʿUmar al-Wāḳidī, the author of the *Maghāzī* (d. 207/822) and Abū Nuʿaym al-Faḍl b. Dukayn (d. 219/834) [*q.v.*]), but their collections of data have not been preserved except for occasional quotations in biographical lexicons compiled later. The oldest extant printed collection deserving the qualification *ridjāl* lexicon is the *Kitāb al-Ṭabaḳāt al-kabīr* by Ibn Saʿd [*q.v.*] (ed. E. Sachau *et alii*, Leiden 1905-17, 9 vols., with some 4250 entries), who died in 230/845. Muḥammad b. Saʿd used to be al-Wāḳidī's secretary, which permits the assumption that the data we find in his work may be at least partly al-Wāḳidī's. As its title indicates, Ibn Saʿd's *ṭabaḳāt* work is built upon the successive "generations" (literally: "layers") of *hadīth* transmitters from each major urban centre in the early Islamic domain. Ibn Saʿd preceded his *ridjāl* information by an extensive biography of the Prophet. Large numbers of the *ridjāl* dealt with are only mentioned by name, and their historicity—if any—is well-nigh impossible to establish.

From the beginning, *isnād* criticism comprised two main approaches, knowledge of *ridjāl* and that of *ʿilal* (the plural of *ʿilla*, usually rendered "hidden defects", sc. mostly in *isnāds*, highlighting links between certain pairs of transmitters which are subject to dispute). *Ridjāl* studies contain of necessity numerous references to *ʿilal*, while *ʿilal* studies are in fact *ridjāl* works analysing (the absence of) certain links among them. The earliest works after Ibn Saʿd's *Ṭabaḳāt* still reflect both approaches in their titles, such as the *Kitāb al-ʿIlal wa-maʿrifat al-ridjāl* of Aḥmad Ibn Ḥanbal (d. 241/855 [*q.v.*]), in which there is not yet discernible an alphabetical arrangement of the *ridjāl* treated (cf. the edition by T. Koçyiğit and İ. Cerrahoğlu, Ankara 1963, i). Later *ridjāl*-cum-*ʿilal* works often have the title *ta'rīkh*. In its earliest usage this term does not necessarily mean historiography *per se*, since the "men" surveyed in such works are not described in their political roles but are mostly assessed exclusively as to their merits or demerits in the transmission of *hadīth*. On the whole, the genres of *ṭabaḳāt, ʿilal* and *ta'rīkh* (the last-mentioned in the *hadīth*-technical sense of the term) show in many early works a considerable, if not total, overlap.

Khalīfa b. Khayyāṭ (d. 240/854 [see IBN KHAYYĀṬ AL-ʿUṢFURĪ]) separated his *ridjāl* material from his other information by producing a *ṭabaḳāt* work proper (cf. the edition of A.Ḍ. al-ʿUmarī, Baghdād 1967, with some 3,300 entries), next to a *Ta'rīkh*, the earliest published annalistic chronicle of Islam (cf. the editions of A.Ḍ. al-ʿUmarī, 2nd impr., Damascus-Beirut 1977, and Suhayl Zakkār, Damascus 1967, 2 vols.). Al-Ṭabarī's *Ta'rīkh*, Islam's best-known annalistic history compiled a little more than half a century later, is arranged like Khalīfa's, but is concluded by a *ridjāl* section entitled *Dhayl al-mudhayyal min ta'rīkh al-ṣaḥāba wa 'l-tābiʿīn* (ed. De Goeje, iii, 2296-2561). Furthermore, the title *ta'rīkh* was given to works of even more varied, almost encyclopaedic, contents: the *Ta'rīkh* of the Andalusian author ʿAbd al-Malik b. Ḥabīb (d. 238/853) contains only a relatively brief section on *ṭabaḳāt*, cf. the edition of J. Aguadé, Madrid 1991, 156-78. Many 3rd/9th century *ʿilal, ṭabaḳāt* and *ta'rīkh* works by authors contemporaneous with, and somewhat later than, Ibn Saʿd have not been preserved, but references to these can be found in *GAS*, i, title index, and Juynboll, *Muslim tradition*, 238-41. In the following, only some of those works that are presently extant in printed editions will be surveyed in roughly chronological order, together with their respective salient features and innovative approach (if any). In order to illustrate the ongoing updating at the hands of later compilers, resulting in constantly swelling numbers of transmitters described (for this phenomenon, see Juynboll, *Muslim tradition*, 23-30, 137-46), the number of entries will be included where that could be obtained from the editions or otherwise approximated.

Among the most critical early *isnād* experts is Yaḥyā b. Maʿīn (d. 233/847). Several of his *ridjāl* works in different redactions of pupils bearing various titles (cf. *GAS*, i, 107) have recently become available in print (editions by Aḥmad M. Nūr Sayf, Damascus-Beirut 1980). Quotations from his works in later collections are mostly introduced by *ḳāla* ... *ʿan Yaḥyā* ..., or *ḳāla Yaḥyā*....

Allegedly less severe, but as frequently quoted, is ʿAlī b. ʿAbd Allāh Ibn al-Madīnī (d. 234/849). His works acquired such fame that references to them mostly begin with the words: *ḳāla ʿAlī*... His *ʿIlal* (*al-hadīth wa-maʿrifat al-ridjāl*) was printed in Beirut, 1972 (ed. M.M. al-Aʿẓamī), and Aleppo 1980 (ed. ʿAbd al-Muʿṭī Amīn Ḳalʿadjī).

After Ibn Saʿd's *Ṭabaḳāt*, the first similarly extensive *ridjāl* lexicon is that of al-Bukhārī (d. 256/870 [*q.v.*]). As was the case with Ibn Saʿd, information on a great many individual transmitters in al-Bukhārī's *Ta'rīkh kabīr* (ed. Ḥaydarābād 1361-5, 8 vols.) is lacking or very brief and constitutes evidence of the as yet overall scantiness of biographical data in circulation. But the proliferation of single strand *isnāds* had become so widespread, also because of wide-scale imitation of Ibn Ḥanbal's skill in devising them, that many hundreds of transmitters populating these strands had to be accounted for in al-Bukhārī's lexicon, with its 12,791 entries. After all the persons called Muḥammad have been enumerated, a still loosely applied alphabetical order of names is observed: *isms*, and within each *ism* the patronymics, are arranged only on the basis of the first letter; within each new entry the frequency of *isms* is mostly the determining factor in the order observed, not the alphabet. Shortened versions of al-Bukhārī's *Ta'rīkh* are his *Ta'rīkh awsaṭ* and *T. ṣaghīr* (cf. the latter's edition by M.I. Zāyid, Aleppo 1976-7, 2 vols.). Al-Bukhārī has brought those, in his opinion, especially questionable transmitters together in a separate collection, the first of its kind, called *K. al-ḍuʿafā' al-ṣaghīr* with 418 entries (edited together with a similar work by al-Nasā'ī (d. 303/915) with 675 entries by M.I. Zāyid, Aleppo 1396).

The Syrian tradition scholar Ibrāhīm b. Yaʿḳūb al-Djūzadjānī (d. 259/873) compiled a very critical *ridjāl* lexicon with 388 entries entitled (*Shadjara fī*) *aḥwāl al-ridjāl*, ed. Ṣubḥī al-Badrī al-Sāmarrā'ī, Beirut 1985, in which he especially criticised ʿIrāḳī transmitters.

The compiler of Islam's second most revered canonical tradition collection, Muslim b. al-Ḥadjdjādj (d. 261/875 [*q.v.*]), devoted the middle part of the introduction to his *Ṣaḥīḥ* to *ridjāl*-critical remarks (cf. the Eng. tr. of this introduction in *JSAI*, v, 273-92). Difficulties in the identification of persons only known by their *kunyas* gave rise to the *kunya* genre, in which Muslim, following the example of Ibn Ḥanbal's *al-Asāmī wa 'l-kunā*, collected his *al-Kunā wa 'l-asmā'*, cf. the facs. edition of Damascus 1984; a similar work was compiled by M. b. A. al-Dūlābī (d. 310/923), cf. the edition of Ḥaydarābād 1904, 2 vols. For other *ridjāl*-related works of Muslim, cf. *GAS*, i, 143.

Aḥmad b. ʿAbd Allāh al-ʿIdjlī (d. 261/875) compiled a work called *Ta'rīkh al-Thiḳāt* which is, like its predecessors, remarkable for its ultra-brief information on most of the transmitters dealt with; the majority of *tardjamas* consists only of the qualification *thiḳa* accompanied by a *nisba* indicating his provenance or his generation. However, it is the most extensive early record of those transmitters defined as *ṣāḥib sunna* (for this technical term, cf. *JSAI*, x [1987], 112-6; moreover, it often indicates that the transmitter thus qualified was considered to have been responsible for certain *sunnas*—to be interpreted in this context as legal or ritual prescriptions—to have come into existence, an allegation confirmed by their frequently-observed position as "common link" in the *isnād* bundles of said *sunnas*). The work was edited in a strictly alphabetical arrangement of its 2,116 entries by ʿAbd al-Muʿṭī Ḳalʿadjī, Beirut 1984.

Abū Zurʿa ʿUbayd Allāh b. ʿAbd al-Karīm al-Rāzī (d. 264/878) compiled a collection of weak transmitters, *K. al-Ḍuʿafā'*, edited together with a similar work of Saʿīd b. ʿAmr al-Bardhaʿī (d. 292/905) by Saʿdī al-Hāshimī, Medina 1982, 3 vols.

Yaʿḳūb b. Sufyān al-Fasawī (d. 277/890) wrote a *K. al-Maʿrifa wa 'l-ta'rīkh* of which the first part is an annalistic history comprising early Islamic history up to the year 240/854, the second and third parts constituting a *ridjāl* lexicon, partly based upon *ṭabaḳāt*, with a host of original data not found in other such works. The annals covering the first 134 years are now lost; for the rest of the work, see the edition of A.Ḍ. al-ʿUmarī, Baghdād 1974, 3 vols.

Abū ʿĪsā Muḥammad b. ʿĪsā al-Tirmidhī (d. 279/892 [*q.v.*]), compiler of one of the six canonical collections, added to his *Djāmiʿ* a final chapter on *ʿilal*; this important *ʿilal* collection was rearranged by one Abū Ṭālib al-Ḳāḍī (d. ?) and edited by Ṣubḥī al-Sāmarrā'ī *et alii*, Beirut 1989. The Ḥanbalī Ibn Radjab (d. 795/1393) wrote an extensive commentary on this *ʿilal* chapter called *Sharḥ ʿilal al-Tirmidhī* (cf. the edition of Ṣubḥī Djāsim al-Ḥumaydī, Baghdād 1396). Beside being a *ridjāl*-cum-*ʿilal* book, Ibn Radjab's study is now recognised as one of the most important *ḥadīth*-theoretical monographs of the Middle Ages.

Abū Dāwūd (d. 275/889), the compiler of one of the canonical collections, had a pupil, Abū ʿUbayd al-Ādjurrī (*fl. ca.* 300/913) who collected his master's pronouncements on *ridjāl* entitled *Su'ālāt adjāba ʿanhā Abū Dāwūd* etc., see the edition of M.ʿA.Ḳ. al-ʿUmarī, Medina 1983.

Aḥmad b. Hārūn al-Bardīdjī (d. 301/914) compiled a *K. al-Ṭabaḳāt fī 'l-asmā' al-mufrada min asmā' al-ʿulamā' wa-aṣḥāb al-ḥadīth* which is available in two editions by S. Shihābī, Damascus 1987, and ʿAbduh ʿA. Kūshk, Damascus 1990.

Muḥammad b. ʿAmr al-ʿUḳaylī (d. 322/934) compiled a *K. al-Ḍuʿafā' wa 'l-matrūkīn*, ed. ʿAbd al-Muʿṭī A. Ḳalʿadjī in 4 vols. with 2,101 entries, Beirut 1984. Apart from the data which are also found in its predecessors in this genre, the book constitutes a major enlargement in that it contains numerous examples of prophetic traditions which the weak and rejected transmitters described are supposed to have brought into circulation.

ʿAbd al-Raḥmān b. Abī Ḥātim al-Rāzī (d. 327/938) produced a massive *ridjāl* lexicon entitled *K. al-Djarḥ wa 'l-taʿdīl*, which is almost wholly based on the data provided by his father, Abū Ḥātim Muḥammad b. Idrīs al-Rāzī (d. 277/890) and the latter's lifelong friend and fellow-tradition expert Abū Zurʿa al-Rāzī. For the transmission paths along which this *ridjāl* information reached Ibn Abī Ḥātim, see Juynboll, *Muslim tradition*, 243 f. In this lexicon, Ibn Abī Ḥātim applied a similar, loosely alphabetical, order in listing names as did al-Bukhārī in his *Ta'rīkh*, with which work it differs in that, with its 18,040 entries (over 5,000 more than al-Bukhārī's) it lists an even greater number of strictly unknown transmitters, the so-called *madjhūlūn*. He also wrote a separate study on *ʿilal*, see the edition (entitled *K. al-ʿilal*) of Cairo 1343-4, 2 vols. It is the first such work in which the traditions with their respective *ʿilal* are primarily arranged according to the order of chapters observed in tradition collections. To Ibn Abī Ḥatim we also owe a brief *ridjāl* work on the shortcomings of al-Bukhārī's *Ta'rīkh*, entitled *Bayān khaṭa' al-Bukhārī fī ta'rīkhihi*, Ḥaydarābād 1961.

Muḥammad b. Ḥibbān al-Bustī (d. 354/965 [see IBN ḤIBBĀN]) was the author of a large tradition collection but he also produced several major *ridjāl* works. One, his *K. al-Thiḳāt* (ed. Ḥaydarābād 1973-83, 9 vols.) is, like Ibn Saʿd's *Ṭabaḳāt*, preceded by an extensive biography of the Prophet. It is further organised on the basis of three *ṭabaḳāt*: that of the Successors and those of the following two generations. The technical term *thiḳāt* from the title is not to be taken in its literal sense of "reliable persons"; a sizeable percentage of *ridjāl* dealt with are *madjhūlūn*. For lack of more precise characteristics, they were labelled *thiḳa*. This term was often used especially in order to classify transmitters about whom little, if anything, was known. The traditions in whose *isnāds* they occurred, however, had a certain appeal, which prevented *ridjāl* experts from rejecting them altogether. While describing someone about whom (next to) nothing is known, later *ridjāl* experts frequently refer to Ibn Ḥibbān's lexicon using the term *wath̲th̲aḳahu Ibn Ḥibbān*, or *dhakarahu Ibn Ḥibbān fī 'l-thiḳāt* ... or similar expressions, thereby indicating that that transmitter, as well as the mostly innocuous tradition(s) he is reported to have transmitted, may be preserved, be it merely for the sake of comparison. Furthermore, there is Ibn Ḥibbān's *Kitāb al-Madjrūḥīn* (*wa 'l-ḍuʿafā'*) *min al-muḥaddithīn*, ed. ʿAzīz Bey al-Ḳādirī, Ḥaydarābād 1970, 2 vols., also listing often the traditions in whose proliferation the weak transmitters dealt with in the lexicon are alleged to have had a hand. Ibn Ḥibbān's *Mashāhīr ʿulamā' al-amṣār*, a lexicon with 1,602 entries built upon the *ṭabaḳāt* principle, was edited by M. Fleischhammer, Wiesbaden 1959.

By general agreement, the most extensive early lexicon of doubtful transmitters was that of ʿAbd Allāh b. ʿAdī (d. 365/976). What was said for al-ʿUḳaylī's lexicon is equally true for Ibn ʿAdī's *K. al-Kāmil fī* (*maʿrifat*) *ḍuʿafā' al-ridjāl* (*al-muḥaddithīn wa-ʿilal al-ḥadīth*) with approximately the same number of entries (more than 2,000). However, it surpasses al-ʿUḳaylī's in size, especially in numbers of doubtful traditions quoted in connection with their alleged originators. This lexicon is, furthermore, the first in which the Arabic term *madār* is occasionally used to indicate that

certain *matns*, or *matn* clusters, are due to one particular transmitter who is held responsible for disseminating these to a number of pupils. The term *madār*, first used in ʿAlī Ibn al-Madīnī's *ʿIlal*, is in Ibn ʿAdī's usage a genuine technical term which comes closest to the term "common link" coined by Schacht (cf. *The origins of Muhammadan jurisprudence*, Oxford 1950, 171 ff.) and further elaborated in Juynboll, *Muslim tradition*, 206-17.

ʿUmar b. Aḥmad Ibn S̲h̲āhīn (d. 385/995) wrote a *Taʾrīk̲h̲ Asmāʾ al-t̲h̲iḳāt mimman nuḳila ʿanhum al-ʿilm*, cf. the edition of ʿAbd al-Muʿṭī A. Ḳalʿad̲j̲ī, Beirut 1986, with 1,569 entries. Like the *t̲h̲iḳa* collections of ʿId̲j̲lī and Ibn Ḥibbān mentioned above, the transmitters are arranged in loosely alphabetical order and are not, contrary to what its title suggests, universally considered reliable.

ʿAlī b. ʿUmar al-Dāraḳuṭnī (d. 385/995) compiled a *Kitāb al-Ḍuʿafāʾ wa 'l-matrūkīn*, ed. Ṣubḥī al-Badrī al-Sāmarrāʾī, Beirut 1986, with 632 entries.

The post-classical period

With the 4th/10th century, there begins, as Brockelmann defined it, the post-classical period, with initially relatively little activity in the compilation of *rid̲j̲āl* works. On the basis of a remark of ʿAbd al-Raḥmān b. ʿAlī Ibn al-D̲j̲awzī (d. 597/1200 [*q.v.*]), one could almost infer that, during the two centuries after al-Dāraḳuṭnī's lexicon, there do not seem to have been any basically new additions to the genre, for Ibn al-D̲j̲awzī enumerates in the introduction to his *Kitāb al-Ḍuʿafāʾ wa 'l-matrūkīn* (see the edition with 4,018 alphabetical entries of Abu 'l-Fidāʾ ʿAbd Allāh al-Ḳāḍī, Beirut 1986, i, 7) the sources from which he compiled his work: they are the same as all those listed hitherto, the last being the al-Dāraḳutnī work. After Ibn al-D̲j̲awzī, however, various major, and increasingly more-embracing, *rid̲j̲āl* lexicons did see the light which were constantly subject to expansion as well as abridgements at the hands of subsequent compilers.

At the centre of these activities stands Yūsuf b. al-Zakī ʿAbd al-Raḥmān al-Mizzī (d. 742/1341 [*q.v.*]), the author of a colossal biographical dictionary of transmitters occurring in the Six Books and a few minor collections entitled *Tahd̲h̲īb al-kamāl fī asmāʾ al-rid̲j̲āl*, which grew out of a work by ʿAbd al-G̲h̲anī b. ʿAbd al-Wāḥid al-D̲j̲ammāʿīlī (d. 600/1203, cf. Brockelmann, S I, 606). It is presently only partly available in the edition of Bas̲h̲s̲h̲ār ʿAwwād Maʿrūf (Beirut 1980–, 15 vols. with, at the time of writing, some 20 more to follow). Al-Mizzī's work, together with some lexicons of his pupil al-D̲h̲ahabī (cf. below), lie then again at the basis of arguably the most famous *rid̲j̲āl* work of all: the *Tahd̲h̲īb al-tahd̲h̲īb* of Ibn Ḥad̲j̲ar al-ʿAskalānī (d. 852/1448 [*q.v.*]), with its *ca.* 7,300 *tard̲j̲amas* being a compendium of al-Mizzī's work but, because of its smaller size, less unwieldy. (For more on this lexicon, see Juynboll, *Muslim tradition*, 134-7, 238-41.) What makes al-Mizzī's original, however, even more useful than Ibn Ḥad̲j̲ar's abridgement is that in each transmitter's *tard̲j̲ama*, at the mention of each of his masters as well as of each of his pupils, symbols of tradition collections are sometimes inserted indicating in which of the Six Books material of the described transmitter can be found, whereas in Ibn Ḥad̲j̲ar's lexicon—at least in the only available edition, that of Ḥaydarābād 1325-7— these symbols are solely listed preceding the name of each *muḥaddit̲h̲* treated. Al-Mizzī's arrangement of his material thus allows the drawing of inferences as to either the origins of certain transmitters' fictitiousness or doubtful personae, as well as other conclusions.

Beside al-Mizzī, his pupil al-D̲h̲ahabī (d. 748/1348) deserves separate mention. For a survey of his contributions to *taʾrīk̲h̲* and *rid̲j̲āl* works and how these are interdependent, see AL-D̲H̲AHABĪ. Moreover, mention should be made of a few major new editions of his specific *rid̲j̲āl* works: *al-Mug̲h̲nī fi 'l-ḍuʿafāʾ*, ed. Nūr al-Dīn ʿItr, Aleppo 1971, 2 vols.; *Siyar aʿlām al-nubalāʾ*, ed. S̲h̲uʿayb al-Arnaʾūṭ, Ḥusayn al-Asad *et alii*, Beirut 1981-4, 23 vols.; *Tad̲h̲kirat al-ḥuffāẓ*, several impr., Haydarābād 1955-70, 4 vols. (with *d̲h̲ayl*s by M. b. ʿA. al-Ḥusaynī, M. b. M. Ibn Fahd and al-Suyūṭī); *al-Kās̲h̲if fī maʿrifat man lahu riwāya fi 'l-kutub al-sitta*, ed. ʿIzzat ʿAlī ʿĪd ʿAṭiyya and Mūsā M.ʿA. al-Maws̲h̲ī, Cairo 1972, 3 vols, with more than 7,000 entries; and *Mīzān al-iʿtidāl*, ed. ʿA.M. al-Bad̲j̲āwī, Cairo 1963, 4 vols., with 11,053 entries. In this last work he assembled not only all the weak transmitters he could find but also scores of at first sight blameless ones. This lexicon was revised and enlarged by Ibn Ḥad̲j̲ar al-ʿAṣkalānī (d. 852/1449 [*q.v.*]), resulting in his *Lisān al-mīzān*, Haydarābād 1329, 6 or 7 vols., with *ca.* 15,000 entries. A large number of data concerning political, cultural and literary history as well as theological discussion can be gleaned from both lexicons. The *Lisān* is especially rich in examples of traditions which are deemed fabricated by the man in whose biography they are cited, allegations that could often be confirmed by modern *isnād* analysis, as was the case with the *ḍuʿafāʾ* lexicons of al-ʿUḳaylī and Ibn ʿAdī described above.

All the time, other types of *rid̲j̲āl* lexicons, too numerous to list all, had made their appearance. Some of these are described here by genre.

(1) The generation of Companions received special attention, something which was probably also stimulated by the establishment of their collective *taʿdīl*, a dogma that seems to have found its first formulation sometime in the course of the final decades of the 2nd/8th and the first decades of the 3rd/9th centuries (cf. Juynboll, *Muslim tradition*, 190-206). The earliest author credited with a lexicon exclusively devoted to Companions and their alleged roles in the transmission of prophetic traditions was Muḥammad b. ʿAbd Allāh b. Sulaymān al-Ḥaḍramī Muṭayyan (d. 297/909). No mss. of it are listed in *GAS*, i. Ibn Ḥibbān compiled a *Taʾrīk̲h̲ al-Ṣaḥāba alladh̲īna ruwiya ʿanhum al-ak̲h̲bār* (ed. Būrān al-Ḍannāwī, Beirut 1988, with 1,608 entries). This work is the first lexicon solely devoted to the subject and available in a printed edition. It was improved upon by, among others, the following: Ibn ʿAbd al-Barr (d. 463/1071 [*q.v.*]), *K. al-Istīʿāb fī asmāʾ al-aṣḥāb*, ed. ʿA.M. al-Bad̲j̲āwī, Cairo 1960, 4 vols. with 4,225 entries; ʿIzz al-Dīn Ibn al-At̲h̲īr (d. 630/1233), *Usd al-g̲h̲āba fī maʿrifat al-ṣaḥāba*, ed. Cairo 1970, 7 vols. with 7,703 entries; al-D̲h̲ahabī, *Tad̲j̲rīd asmāʾ al-ṣaḥāba*, ed. ʿAbd al-Ḥakīm S̲h̲araf al-Dīn, Bombay 1969-70, 2 vols. with 8,859 entries, and finally Ibn Ḥad̲j̲ar, *K. al-Iṣāba fī tamyīz al-ṣaḥāba*, ed. ʿA.M. al-Bad̲j̲āwī, Cairo 1970-2, 8 vols. with 12,290 entries. To be sure, in this last source not all persons paraded were Companions in the technical sense of the word; Ibn Ḥad̲j̲ar added scores of borderline cases in his so-called second, third and fourth *ḳisms*.

(2) A specifically Muʿtazilī-influenced *rid̲j̲āl* work is *K. Ḳabūl al-ak̲h̲bār wa-maʿrifat al-rid̲j̲āl* by Abu 'l-Ḳāsim al-Kaʿbī al-Balk̲h̲ī (d. 319/931 [*q.v.*], and Juynboll, *Muslim tradition*, index s.n.). An edition is in preparation in Leiden University Library.

(3) The first S̲h̲īʿī *rid̲j̲āl* work is that of Muḥammad b. ʿUmar al-Kas̲h̲s̲h̲ī (d. *ca.* 340/951 [*q.v.*]), see the corrected redaction with 520 entries of Muḥammad b. al-Ḥasan al-Ṭūsī (d. 460/1068) in the edition of

Aḥmad al-Ḥusaynī, Karbalā 1963. The work is based on the *ṭabaḳāt* principle, describing the persons in the entourage of the respective *imāms*. The majority of people enumerated are assessed as to their political position in society, but the lexicon does give extensive *ḥadīth*-technical information. The other Shīʿī lexicons are perfectly ordinary *ḥadīth*-related, alphabetically arranged dictionaries of transmitters closely resembling their Sunnī counterparts. To the same al-Ṭūsī we owe a work called *Ridjāl al-Ṭūsī*, ed. M. Ṣādiḳ Āl Baḥr al-ʿUlūm, Nadjaf 1961, comprising some 8,900 transmitters. Al-Nadjāshī (d. 450/1058) wrote a *K. al-ridjāl*, ed. Djalāl al-Dīn al-ʿĀmilī, Tehran 1958. ʿInāyat al-Dīn ʿAlī al-Ḳuhpāʾī (*fl. ca.* 1016/1607) compiled a lexicon in which he incorporated five earlier major *ridjāl* lexicons, including the three just mentioned, entitled *Madjmaʿ al-ridjāl*, ed. Ḍiyāʾ al-Dīn al-Iṣfahānī, Iṣfahān 1384, 7 vols. Muḥammad b. ʿAlī al-Ardabīlī (*fl. ca.* 1100/1689, cf. Ziriklī, 4th impr., vi, 294-5) produced a *Djāmiʿ al-ruwāt*, Ḳumm *ca.* 1967, 2 vols. See further, ʿILM AL-RIDJĀL.

(4) Al-Bukhārī's and Muslim's collections were especially subjected to a sort of *isnād* scrutiny, resulting in *ridjāl* lexicons too numerous and too varied to enumerate all of them, in which in one way or another transmitters occurring in one collection are compared with those occurring in the other. Information on these *kutub ridjāliyya* can be found among the secondary works listed in *GAS*, i, derived from (commentaries on) the two *Ṣaḥīḥs*. But there is also a small and useful transmitters' lexicon on those of Mālik's *Muwaṭṭaʾ* by al-Suyūṭī (d. 911/1505 [*q.v.*]), *Isʿāf al-mubaṭṭaʾ bi-ridjāl al-Muwaṭṭaʾ*, ed. with the *Muwaṭṭaʾ* by Fārūḳ Saʿd, Beirut 1979.

(5) Another genre of *ridjāl* works is that of regional or city histories. Whereas Abū Zakariyyāʾ al-Azdī (d. 334/946) only occasionally touches on *ḥadīth* transmission in his *Taʾrīkh Mawṣil*, ed. ʿAlī Ḥabība, Cairo 1387, as does Aḥmad b. ʿAbd Allāh al-Rāzī (ed. 460/1068 [*q.v.*]) in his *Taʾrīkh Madīnat Ṣanʿāʾ*, ed. Ḥ.ʿA. al-ʿAmrī and ʿA.Dj. Zakkār, Ṣanʿāʾ 1401/1981, other works in this genre contain only very few purely historical data on the regions or cities dealt with and are in reality *ṭabaḳāt*-arranged or alphabetically ordered works, with all the trimmings of other *ridjāl* lexicons on *muḥaddithūn*, from all those who once lived in a particular region or city to those who merely passed through it. Some examples: Aslam b. Sahl Baḥshal (d. 292/905), *Taʾrīkh Wāsiṭ*, ed. Kūrkīs ʿAwwād, Baghdād 1967, a strictly *ḥadīth*-critical *ridjāl* work; Ḥamza b. Yūsuf al-Sahmī (d. 427/1036 [*q.v.*]), *Taʾrīkh Djurdjān aw kitāb maʿrifat ʿulamāʾ ahl Djurdjān*, ed. M. ʿAbd al-Muʿīd Khān, Haydarābād 1950; Abū Nuʿaym al-Iṣbahānī (d. 430/1038 [*q.v.*]), *K. Dhikr akhbār Iṣbahān*, ed. S. Dedering, Leiden 1931-4, 2 vols.; the great tradition scholar al-Khaṭīb al-Baghdādī (d. 463/1071 [*q.v.*]) devoted his large *Taʾrīkh Baghdād*, cf. ed. Cairo 1931 + reprints, 14 vols., following a topographical introduction, almost wholly to *ḥadīth*-related characteristics of the 7,831 persons described in, again, a loosely alphabetical order; modelled on this lexicon but even more massive is the *Taʾrīkh Madīnat Dimashḳ* of ʿAlī b. al-Ḥasan Ibn ʿAsākir (d. 571/1176 [*q.v.*]), which is well on its way of being edited in complete form under the auspices of the Arab Academy of Damascus; for Spain we have Muḥammad b. Ḥārith al-Khushanī (d. 361/971 [*q.v.*]), *Akhbār al-fuḳahāʾ wa 'l-muḥaddithīn*, a specifically Andalusian lexicon with 527 entries, ed. Maria Luisa Ávila and Luis Molina, Madrid 1992. The *nisba* [*q.v.*] genre may be considered as an offshoot of city lexicons as well as genealogical works; under each *nisba* all the tradition experts and, occasionally, other religious scholars, are enumerated who were best known—or sometimes only known—by that *nisba*. The most famous compilation is the *K. al-Ansāb* of ʿAbd al-Karīm b. M. al-Samʿānī (d. 562/1166 [*q.v.*]), cf. the facs. ed. of Leiden-London 1912, and that of ʿAbd al-Raḥmān b. Y. al-Muʿallimī, Ḥaydarābād 1962-82, 13 vols.

(6) A special type is furthermore the so-called *aṭrāf* compilation, that is an alphabetically-arranged collection of the Companions' *musnads*, with every tradition ascribed to each of them shortened to its *ṭaraf* (i.e. gist or salient feature), accompanied by *all* the *isnād* strands supporting it which occur in the Six Books and a few other revered collections. The most famous representative of this type is the *Tuḥfat al-ashrāf bi-maʿrifat al-aṭrāf* by al-Mizzī; for a more detailed description, see AL-MIZZĪ. The work was imitated but never improved upon.

(7) In an attempt to solve onomastic difficulties around transmitters' identities, several lexicons were compiled listing ambiguous names with accompanying solutions as to their proper vocalisation and attribution. The best-known examples are the works entitled *Mūḍiḥ awhām al-djamʿ wa 'l-tafrīḳ*, Ḥaydarābād 1959-60, by al-Khaṭīb al-Baghdādī; *al-Ikmāl fī rafʿ al-irtiyāb ʿan al-muʾtalif wa 'l-mukhtalif min al-asmāʾ wa 'l-kunā wa 'l-ansāb* by ʿAlī b. Hibat Allāh Ibn Mākūlā (d. between 475/1082 and 487/1094), see the edition of ʿAbd al-Raḥmān b. Y. al-Muʿallimī and Nāyif al-ʿAbbās, Beirut 1962-7, 7 vols.; and al-Dhahabī's *K. al-Mushtabih* (*fī 'l-ridjāl*), ed. P. de Jong, Leiden 1881, and ʿA.M. al-Badjāwī, Cairo 1962, 2 vols. See also IBN MĀKŪLĀ.

(8) Women *ḥadīth* transmitters are usually treated in the *ridjāl* lexicons at the very end after all the men have been dealt with, but one *nisāʾ* lexicon was made into a separate publication: ʿU.R. Kaḥḥāla, *Aʿlām al-nisāʾ fī ʿālamay al-ʿarab wa 'l-islām*, Damascus 1959-77, 5 vols. Its contents are exclusively based upon mediaeval sources. A large percentage of the women are described only as to their *ḥadīth* activities, but for the rest it is an ordinary biographical dictionary arranged in alphabetical order.

(9) There are quite a few lexicons arranged by year in which the *muḥaddithūn* and other religious scholars who died that year are enumerated, eventually with an admixture of purely historical data thrown in. Best-known in this genre is the *Shadharāt al-dhahab* of Ibn al-ʿImād (d. 1089/1678 [*q.v.*]), Beirut n.d., 8 vols.

(10) For the rich genre of lexicons in which lists of someone's *ḥadīth* masters are compiled, i.e. the so-called *mashyakha* works, see the comprehensive introduction of H. Schützinger's *Das Kitāb al-muʿǧam des Abū Bakr al-Ismāʿīlī* (= Abhandlungen für die Kunde des Morgenlandes, XLIII, 3), Wiesbaden 1978; and FAHRASA.

Biographical lexicons of Ḳurʾān reciters and exegetes, judges, governors, jurists, theologians, mystics, poets, grammarians, scientists and a host of other professions and shared characteristics (e.g. the blind and the longeval), although often containing *ḥadīth*-related data, do not really fall within the scope of the *ridjāl* genre in that they do not deal specifically with these categories' (de)merits in *ḥadīth* transmission. But they were doubtless modelled on the genuine *ridjāl* works.

Bibliography: Given in the article. Several recently published editions of the *ridjāl* lexicons mentioned contain in their introductions more or less adequate surveys of the genres on *thiḳāt* and *ḍuʿafāʾ*, especially the edition of Bashshār ʿAwwād

Ma^crūf of Mizzī's *Tahdhīb*. For a general approach to the *ṭabaḳāt* genre, see I. Hafsi, *Recherches sur le genre Ṭabaqāt dans la littérature arabe*, in *Arabica*, xxiii (1976), 227-65, xxiv (1977), 1-41, 150-86; P. Auchterlonie, *Arabic biographical dictionaries: a summary guide and bibliography*, Durham 1987 (Middle East Libraries Committee research guides 2); for Shī^cī *ridjāl* works, see the papers of B. Scarcia-Amoretti, A. Arioli and D. Amaldi in *Cahiers d'onomastique arabe*, i, Paris 1979, and ^cILM AL-RIDJĀL. See further, Jacqueline Sublet, *Le voile du nom. Essai sur le nom propre arabe*, Paris 1991.

(G.H.A. JUYNBOLL)

RIḌWĀN, the guardian (*khāzin*) of Paradise, is absent from the Ḳur'ān, early *tafsīr*, *ḥadīth* and descriptions of Paradise. In Ibn Hishām, 268, this angel is still called Ismā^cīl. The proper name Riḍwān may result from a personifying exegesis of the *riḍwān* (= Allāh's favour) which believers will meet in the hereafter (Ḳur'ān, III, 15, etc.). In the anonymous 4th/10th century *Kitāb al-^cAẓama* (e.g. ms. Paris 4605, Vatican 1480; ed. Raven, forthcoming) Riḍwān opens the gates of Paradise, dresses and serves the believers, draws away the veils from the face of Allāh, etc. Slightly later he appears in the Shī^cī legend about ^cAlī and Fāṭima [*q.vv.*] and in Ismā^cīlī cosmogony (H. Halm, *Kosmologie und Heilslehre der frühen Ismā^cīlīya*, Wiesbaden 1978). He is an accepted figure in Arabic belles-lettres, at least from al-Ma^carrī (*R. al-Ghufrān*) onwards, and in later Islamic literatures throughout.

(W. RAVEN)

RIḌWĀN or RUḌWĀN B. TUTUSH b. Alp Arslan, Fakhr al-Mulk (d. 507/1113), Saldjūḳ prince in Aleppo after the death of his father Tutush [*q.v.*] in Ṣafar 488/February 1095.

After assuming power in Aleppo, Riḍwān and his stepfather, the Atabeg Djanāḥ al-Dawla Ḥusayn, aimed at taking over Tutush's former capital Damascus and thus at controlling the whole of Syria and Palestine not still in Fāṭimid hands. However, Riḍwān's brother Duḳāḳ and his Atabeg Ṭughtigin held on to Damascus, and after Riḍwān broke with Djanāḥ al-Dawla, the latter established himself in Ḥimṣ. For one month, in Ramaḍān-Shawwāl/August-September 1097, Riḍwān acknowledged the Fāṭimid caliph al-Musta^clī [*q.v.*] in the *khuṭba* at Aleppo, but reverted to Sunnī allegiance and acknowledgement of the ^cAbbāsid al-Mustaẓhir and the sultan Berk-yaruḳ [*q.vv.*] when it became apparent that the Fāṭimids could not deliver any material help to him.

From Radjab 491/June 1098, Riḍwān had the Crusader leader Bohemund, now Prince of Antioch, as his neighbour, and the ensuing years were filled with warfare with Bohemund (and then with Tancred of Antioch and Edessa, Bohemund's successor) and also with his Muslim rivals such as Djanāḥ al-Dawla (until the latter's death at the hands of the Assassins in Radjab 496/May 1103). It was around this time that Riḍwān allied with the strong Ismā^cīlī faction within Aleppo and used them as part of his tortuous policies (which in 502/1108-9, e.g., allied him with Tancred against the Muslim Čawli Saḳāw of Mawṣil), and although he was unable to take Damascus, he had his name recognised in the *khuṭba* and *sikka* there by the young Tutush b. Duḳāḳ. When a Muslim army aimed at the Crusaders appeared from Mawṣil before Aleppo, Riḍwān refused to admit it and defended his city with Ismā^cīlī help (Ṣafar 505/August-September 1111). His standing with what was probably the majority Sunnī population of Aleppo was now understandably impaired. He allied with Ṭughtigin of Damascus but secured peace in northern Syria by making payments to Tancred and (after November 1112) his son Roger. He substantially avoided taking part in a *djihād* against the Crusaders led by Ṭughtigin and Mawdūd b. Altuntash of Mawṣil, sending only a tiny token force, but died on 1 Rabī^c I 507/16 August 1113, to be succeeded briefly by his son Tādj al-Dawla Alp Arslan [see ḤALAB].

The Sunnī sources regard Riḍwān, from his use of the Syrian Ismā^cīlīs, with disfavour, stigmatising him as *al-mal^cūn, sayyi' al-sīra*, etc. They even accuse him of having been converted to Ismā^cīlism by the local leader in Aleppo, al-Ḥakīm al-Munadjdjim; it seems impossible to discern the truth here. He is further condemned for his miserliness, since he left a large treasury at his death. His diplomatic and political skills were, however, considerable, and within what was at that time a highly complex situation in Syria, he successfully maintained his power between the Crusaders and various Muslim rivals for nearly nineteen years.

(C.E. BOSWORTH)

RIḌWĀN BEGOVIĆ ^cAlī Pasha (in Serbo-Croat RIZVANBEGOVIĆ Ali-paša; *ca.* ?1783-1851), *wezīr* of Herzegovina from 1833 until his death by assassination in March 1851. He was an interesting individual, whose biography well illustrates the complex circumstances affecting this region of the Balkans in the closing stages of Ottoman domination.

He was descended from an old Muslim family. Towards the end of the 18th century his father, Dhu 'l-Fiḳār (Zulfikar), was governor (with the title of *mīr-i mīrān* (?), i.e. "provincial governor", or that of *kapudan* (?), a term rendered in Serbo-Croat by "kapetan") of the town of Stolac (in southern Herzegovina, to the south of Mostar [*q.v.*]) and its environs, hence his name of Stočević (or Rizvanbegović-Stočević) which is also encountered in the texts. ^cAlī Pasha is said to have been born in this town *ca.* 1783 (considerably earlier, according to V. Ćorović, *ca.* 1761). Following a dispute with his father (over a trivial issue, according to S. Bašagić), he parted from his family while still a young man, only returning (and bringing with him a considerable sum of money, so it is alleged) after the death of his father, whereupon he engaged in conflict with his brothers, Muṣṭafā (Mustaj-Beg) and Hadžun (Ḥādjdjī Beg: some sources mention also the name of ^cÖmer), for several months during the year 1222/1807, over the succession to the post of governor of Stolac and possession of the rich *aghalïk* of the village of Hutovo. This dispute was temporarily resolved the following

year by a special envoy from Istanbul, in the course of negotiations which took place in Sarajevo, but it was subsequently revived, lasting many years and coming to an end only in 1229/1813-14, when ʿAlī Pas̲h̲a finally succeeded his father in the capacity of governor of Stolac and the surrounding area, while Ḥād̲j̲d̲j̲ī Beg obtained the *ag̲h̲alïk* of Hutovo. With regard to these appointments, Ćorović comments, "ʿAlī Pas̲h̲a and his brother Ḥād̲j̲d̲j̲ī Beg were neither of them good masters or congenial neighbours, but Ḥād̲j̲d̲j̲ī Beg was by far the worse". The relations maintained by ʿAlī Pas̲h̲a with the powerful Muslim families of Bosnia-Herzegovina were variable; he was very close to the eminent Ismāʿīl Ag̲h̲a Čengić (an individual immortalised by the Croatian poet Ivan Mažuranić, 1814-90), but was in open conflict with his other neighbours, such as the Kapetanovićs of the town of Počitelj. It was in the course of a skirmish with Ismāʿīl Kapetanović and his supporters, during the siege of Počitelj in 1813, that he was wounded in the leg; as a result of this he was to be lame for the remainder of his life. By 1820 he was the most widely-known governor (*ḳapudan*) in the whole of Herzegovina, and an implacable foe of the *wezīrs* of Bosnia, based at Travnik. However, in 1831, at the time of the uprising of the Bosnian aristocracy, led by Ḥüseyn Beg Gradaščević (known as *Zmaj od Bosne*, "the dragon of Bosnia"), ʿAlī Pas̲h̲a Rizvanbegović and Ismāʿīl Ag̲h̲a Čengić did not associate themselves with the rebels and sided ostensibly with the Ottoman sultan and the central authority. ʿAlī Pas̲h̲a then took under his protection the ousted *wezīr* of Travnik, while his brother Ḥād̲j̲d̲j̲ī Beg allied himself with the insurgents and met his death (27 February 1832) fighting alongside the troops of Gradaščević as the latter were laying siege to the town of Stolac. This fratricidal war claimed many other victims, on both sides; thus Ismāʿīl Ag̲h̲a Čengić ordered the assassination of one of his own relatives, Fejz Alaj-Beg Čengić. Following the failure of the rebel attacks on Nevesinje and Stolac, ʿAlī Pas̲h̲a Rizvanbegović lent powerful support (with Ismāʿīl Ag̲h̲a Čengić and Bas̲h̲ Ag̲h̲a Redžepašić, ancestor of the eminent family of the Bašagić) to the troops of the *wezīr* Ḳara Maḥmūd Pas̲h̲a in the course of the decisive battle which took place on the plain before Sarajevo on 17 May 1832, and which resulted in the total defeat of the supporters of Gradaščević.

ʿAlī Pas̲h̲a subsequently participated, with an army raised in Bosnia-Herzegovina, in the expedition mounted by the Porte against Muḥammad ʿAlī [*q.v.*] of Egypt, during which he and his troops performed sterling service. He was rewarded in 1832 by the sultan Maḥmūd II [*q.v.*], who appointed him first *beylerbeyi*, then, in 1833, *wezīr* and *wālī* of Herzegovina, although this region was detached from the *wilāyet* of Bosnia.

He thus governed this region, in a quasi-independent fashion, for almost twenty years (living either at Mostar, or in his country residence on the river Buna), according to one of his celebrated maxims, *Evo vam Stanbul, Mostar; evo vam cara i u Mostaru* (according to another version, *Evo vam i cara u Mostaru*), which may be loosely translated as "Here you have an Istanbul, Mostar, and here you have an emperor, also at Mostar" (or, "and here you have also an emperor at Mostar"). He succeeded, in fact, at a very early stage in concentrating all power within his family and his circle of supporters, entrusting internal security to "gendarmes" commanded by *bölük bas̲h̲ïs* who were in his pay. He paid to the Porte an annual tribute of 87,000 florins, retaining the remainder of the funds raised by taxation, and took certain steps to improve agriculture and the economy. Thus he encouraged, for example, the populace to plant vegetables and fruits emanating from lands of the south, introducing the cultivation of olives, pomegranates, almonds, jasmine, tobacco, rice and even silk-worms.

His relations with the diverse populations of the region varied considerably, according to time and circumstances. Hence in the early stages he showed his gratitude to the local Serbs (who had given him strong support during the conflicts of 1831-2), authorising them in 1833 to rebuild the ancient Orthodox church of Mostar, and supporting the Serbian Orthodox clergy in its opposition to the appointment of Greek bishops to positions of authority in the church. Furthermore, he helped the Franciscans of Bosnia to acquire their own vicariate in 1846, and obtained for them in the same year a *firmān* permitting the foundation of a Catholic monastery at a place called Široki Brijeg. As for the Muslim community, he contributed substantial donations to various religious associations and had a number of building constructed at Mostar and elsewhere, including a mosque at Buna.

Regarding "external affairs", these were confined, as will be seen, to relations with Montenegro [see ḲARA DAG̲H̲] and with the Porte. This process began in 1836 with the battle of Grahovo, in the course of which Herzegovinan troops, commanded by ʿAlī Pas̲h̲a and Ismāʿīl Ag̲h̲a Čengić, inflicted a heavy defeat on Montenegrin units, with the result that Grahovo became (temporarily) Ottoman territory. This defeat outraged the Montenegrins, who ultimately assassinated Ismāʿīl Ag̲h̲a Čengić in 1840. But in the meantime, the internal situation had changed considerably, and the rumour circulated among the Muslim circles of Herzegovina that the death of the aged Ismāʿīl Ag̲h̲a had been welcomed by Rizvanbegović, since for a considerable time previously Ismāʿīl Ag̲h̲a had been the leader of a party opposing Rizvanbegović, accusing him, on the one hand, of imposing increasingly draconian taxes on the population, and on the other, of brutally and shamelessly advancing the material interests of his own family. He had in fact undertaken a methodical redistribution of the former "capitanates" (rights of authority which had become hereditary within certain leading local families) into larger administrative units, which he then allocated to his sons and relatives. In spite of all this, to avenge the death of Ismāʿīl Ag̲h̲a and to silence the afore-mentioned rumours, Rizvanbegović in 1841 attacked the region of Drobnjak, slaughtering a number of its male inhabitants, while in 1842 rivalry over Grahovo resumed. With the aim of putting an end to the war, a meeting took place the same year at Dubrovnik between Rizvanbegović and the bishop of Montenegro, Peter II (the illustrious poet Petar II Petrović Njegoš), in the course of which the frontiers between the two countries were fixed. But the Porte was unwilling to recognise this accord, and negotiations continued for some time longer, until 28 October 1843, the date of the final signing at Kotor of a new accord which broadly stipulated a return to the frontiers as they had stood before the conflicts of 1836.

However, resentment against Rizvanbegović and his sons increased, to such an extent that even in Mostar an overt coalition against him was formed. Furthermore, ʿAlī Pas̲h̲a had finally sided with the leading "feudal" Muslims of Bosnia, who were opposing, with weapons at the ready, the implementation of reforms introduced in Turkey by Maḥmūd II.

When, in 1850, the renowned "executioner" of the Bosnian Muslim nobility, ʿÖmer Pasha Latas, sent by the Porte to suppress the rebellion, set about methodically mopping up the pockets of resistance, his troops decisively defeated those of Rizvanbegović in a battle which took place near the town of Konjic. ʿAlī Pasha himself was taken prisoner on 5 February 1851, then displayed in Mostar, his capital, in a humiliating fashion (seated back to front on an ass, holding the animal's tail in his hands), then sent to the camp of ʿÖmer Pasha, who was based at this time near Banja Luka [see BANJALUKA]. But in the course of this transfer, on or about 20 March 1851, not far from this town, the elderly ʿAlī Pasha Rizvanbegović was "accidentally" killed by one of the soldiers escorting him. He left four sons: Ḥāfiẓ Pasha, Nāfidh Pasha, Rüstem Beg and Meḥmed ʿAlī Pasha. His daughter Ḥabība (1845-90) was a renowned poetess, a profession also followed by his grandson Ḥikmet (ʿĀrif Beg Rizvanbegović, 1839-1903).

RIḌWĀN PASHA, a 10th/16th-century Ottoman *beylerbeyi* (governor) of Yemen largely responsible for the collapse of Ottoman authority there during 974-6/1566-8. He was the son of Muṣṭafā Pasha Ḳara Shāhīn [*q.v.*], a previous governor of Yemen (963-7/1556-60), and the brother of Bahrām Pasha, a later one (977-83/1570-5). When appointed to Yemen in Rabīʿ II 972/November 1564, he was *sandjak beyi* of Ghazza.

Riḍwān, who reached Yemen in Ṣafar 973/September 1565, served only briefly before, on the recommendation of Maḥmūd Pasha [*q.v.*], his predecessor and the governor of Egypt after Radjab 973/February 1566, Yemen was divided, in Djumādā II 973/December 1565, into two provinces. Awarded the poorer and more demanding *beylerbeyilik* of Ṣanʿāʾ in the highlands, Riḍwān became resentful. His determination to widen his jurisdiction's sources of revenue and to amass personal wealth led him to violate the peace accord concluded with the Zaydīs in 959/1552 [see ÖZDEMIR PASHA]. The Zaydī leader al-Muṭahhar [*q.v.*] took the offensive and quickly succeeded in confining Riḍwān and his troops to the city of Ṣanʿāʾ (Radjab 974/January-February 1567).

Learning in Shawwāl 974/April 1567 of his dismissal, Riḍwān departed for Istanbul where, despite earlier efforts to defend his actions through dispatches, he was censured and imprisoned. His exoneration followed the assassination in Cairo during Djumādā I 975/November 1567 of Maḥmūd Pasha who, it was discovered, had concealed Riḍwān's alarming reports from Yemen. Riḍwān again became *sandjak beyi* of Ghazza in 978/1570-1, and in Shawwāl 980/March 1573 was named *beylerbeyi* of Abyssinia (Ḥabesh [*q.v.*]), which appointment he held until after Rabīʿ II 982/July-August 1574. He is next mentioned only in 987/1579, serving in the Persian campaign. In late 990/1582 or early 991/1583 he was made *beylerbeyi* of Anadolu, in which office he died on 1 Rabīʿ II 993/2 April 1585.

RĪF (A.), "countryside".

I. As a geographical and territorial term.

1. One sense of this term early emerged from the Egyptian context, where an arid country is traversed by a river with food-producing fringes: the image is that of the fertile (and cultivated) banks of the Nile [see NĪL]. It includes two ideas, that of "fringe" (bank, littoral and, by extension, flank, limit) and that of "fertile countryside", "abundance" (as opposed to the desert; and, by extension, "countryside" as opposed to the town) (see the lexicon of Lane and Kazimirski).

2. In Morocco, where the natural environment is different, the sense of "fringe" is further found:

(a) Amongst certain groups of transhumant pastoralists, partly Arabophone, who call *rīf*, in the circle of tents, those which are on the periphery (Querleux, *Les Zemmour*, in *Archives Berbères*, ii [Rabat 1915-16], 127). By extension (?), certain Berberophone groups of the Middle Atlas use it to define a group of tents held together by a close relationship in the male line (the equivalent of the *ikhs* of other Berber speakers) (R. Montagne, *Les Berbères et le Makhzen dans le Sud du Maroc*, Paris 1930, 181 n. 1).

(b) In reference to the coastal chain, the Rīf, which extends from the Straits of Gibraltar to the approaches of Moulouya. Its presence here as a toponym, with a varying definition of extent, is probably due to the configuration of the geographical relief along the Mediterranean coast (however, this etymological version could be moderated by the fact that, in the western, Arabophone part of the Rīf, the villages sometimes call certain of their quarters *Rīf*).

The term appears as a neologism at the beginning

of the 7th/13th century to designate the ancient Mauretania Tingitana (H. Ferhat, *Sabta des origines jusqu'à 1306*, diss. Paris I, forthcoming). Ibn Saʿīd [*q.v.*] defines it as "littoral", known under the name of the "*Rīf* of the Ghumāra"; Ibn al-Abbār [*q.v.*], somewhat differently, describes it as "adjoining the Ghumāra"; and al-Bādisī, in the 8th/14th century, extends it from Sabta to Tlemcen.

History very early touched the Mediterranean shores of Morocco. The principality of Nakūr [*q.v.*], in the plain behind the bay of al-Ḥusayma [*q.v.* in Suppl.], was founded in 90/709 by a commander of the caliph in Damascus, Ṣāliḥ b. Manṣūr al-Ḥimyarī (the town was built some time around 143/761), thus preceeding the foundation of Fās. The town seems to have been subject to the same sort of hazards as the Idrīsid kingdom, squeezed between the Umayyads of Cordova and the Fāṭimids. It hardly survived, and was razed by the Almoravids (473-4/1080-1). The Idrīsids (and, in the first place, ʿUmar b. Idrīs, to whom the region fell) played a major role in the integration of the Rīf chain to the emergent nation. With Ḳalʿat Ḥadjar al-Nasr (within the tribe of the Sumāta), they even had an ephemeral capital there (4th/10th century), where they left behind a line which was rendered famous, in the 7th-8th/13th-14th centuries, in his hermitage on the Djabal al-ʿAlam (amongst the tribe of the Banī ʿArūṣ), by the *ḳuṭb* Mawlāy ʿAbd al-Salām Ibn Mashīsh, considered to have been the master of al-Shādhilī. It was the Almohads, masters of both shores, who really brought about the development of the littoral, with Sabta [*q.v.*], Bādis and a series of petty maritime settlements. The loss of al-Andalus, however, ruined it, and the consequent pressure was unceasing: the fall of its main ports (Sabta/Ceuta in 818/1415), the establishment of the Spanish *presidios* at several points on the coast, the "guerra de Africa" with the seizure of Tetouan (1859-60), and finally, the establishment of the Spanish Protectorate (1912). The disorders which accompanied or preceeded it (al-Raysūnī, Bū Ḥamāra) had hardly any long term effects, but it was a different matter with the resistance led by Bin ʿAbd al-Krīm al-Khaṭṭābī (1921-6), the first war of liberation in the 20th century; the victory of Anwāl (1921) had a deep effect on colonial peoples (see further, II. below).

Thus there are, in Morocco, three senses of the toponym Rīf:

(a) The Rīf of the chroniclers is a mountainous region bordering on the Mediterranean;

(b) The Rīf of the geologists is a region of folded strata from the Alpine period, about 360 km long and 80 km at its maximum width, laid down at a late date up against the Atlas region. Its altitude is not so great (Tidighine: 2,450 m), since it is deeply entrenched and forms a juxtaposition of mountainous compartments rather than a homogenous mountain chain (G. Maurer, *Les montagnes du Rif central. Etude géomorphologique*, Tangiers 1968); and

(c) The Rīf as understood by the population is exclusively formed from this eastern half of the chain together with the hills which prolong it as far as the mouth of the Moulouya, where the language spoken is *dhamazighth* (wrongly still called *dharifith*, Arabised into *tarifit*), belonging to the Zanātiya variety of the Berber tongues of Morocco. Its inhabitants are the only one bearing the name of Riyāfa (Rwāfa, Rīfiyyīn).

In their turn, the geographers distinguish a Rīf influenced by the Atlantic, humid and with good vegetation, and a sub-arid Rīf. The division is one of relief (the boundary passes where the limestone spine culminates, then through the central ridge of the Ṣanhādja Srayr, a little to the west of the meridian al-Ḥusayma-Taza); one of climate (it follows an isohyetal curve which begins at Djabha on the coast, bends eastwards, passes to the south of the Targuist basin and turns back southwards at the level of the above-mentioned meridian; see Maurer, *op. cit.*); and one of humans, since a series of linguistic and cultural pockets (Arabophone "Rīfī" round the Banī Fraḥ; Ghmāra further to the west; Ṣanhādja further to the south, each with Berber islets of speech) extend along this fringe separating the Rīf, in the east, from the Djbāla, in the west.

In effect, although one cannot date its appearance, the word Djabal only later replaced, in the western part, the term Rīf and its inhabitants are called Djbāla (sing. Djablī). They form an arc which connects the Tingitana peninsula with the valley of the Wargha. They are the heirs of the ancient Ghumāra [*q.v.*] (an ethonym which has persisted only for the nine tribes, called Ghmāra, forming an enclave between the highest crest of the mountains and the sea). Ibn Khaldūn classed this group amongst the Maṣmūda family. Several traits remind one of the other great sub-group of the Maṣmūda, the mountain peoples of the Sūs (Swāsa). Thus we have a great number of learned men (*fuḳahāʾ*, *ʿulamāʾ* and *ṭulba*); the deserted settlements of the Rīf are traditionally attached to the Swāsa; and finally, although Arabised for many centuries, the speech of the Djbāla retains Berber intonations which connect it with *tashelḥit* rather than other varieties of Berber. On the other hand, certain traits connect the Djbāla territory with certain massifs of the Algerian and Tunisian Tells: an important vegetation cover, a great density of population, intensive labour and a great variety of production, large villages with thatched roofs, etc. One last peculiarity is the intensity of the urbanisation phenomenon; there is a real urbanisation belt around the Tingitana peninsula, often going back to Antiquity and in any case to the time when there were close communications with al-Andalus.

The Rīf and its maritime façade are probably the last great challenge which must face Morocco in order for its development to succeed: it is endeavouring to leave behind the accumulated backwardness (illustrated by the fragility of an over-exploited region, the monoculture of Indian hemp over a large area of the Rīf and the poverty of its infrastructures) and to close the dossier of the colonial period. Sabta/Ceuta, Melilla and a few islets remain occupied; the commercial domination of these two towns in respect of smuggling activities affects, notably, the regional structure of small and medium enterprises (see G.E.R.M., *Le Maroc méditerranéen. La troisième dimension*, Casablanca 1992).

Assets are not lacking: water, halieutic resources, sites for beaches and mountain resorts (cedar and pine plantations), banking facilities (Nador is the second most important financial centre after Casablanca) and, finally, the closeness of a key crossroads of the Mediterranean. From being on the periphery (more as a result of modern history than from geography, however), the Rīf—in its regional setting—is able to renew its age-old vocation of being a focus for economic activities and a bond of union between continents.

(J. VIGNET-ZUNZ)

II. The Rīf War of the 1920s.

This frontier region of the Moroccan empire, protected by its geographical configuration, has always remained more or less rebellious against the central authority, e.g. since the time of the principality of Nakūr [*q.v.*], but especially, in recent times, against the authority of the *makhzan*. The rivalries which appeared amongst the European powers (above all, between Germany, France and Spain) from the 19th century soon precipitated disorders. The imprudent activities of sultan ʿAbd al-ʿAzīz led to the appearance in 1901 of a pretender, the *rūgi* Bū Ḥmāra, who from a base at Taza led a fierce rebellion during 1907-8. Agreements reached after great effort favoured the intervention as a pacifying influence, but one which was sometimes hazardous if not contradictory, of France and Spain. A chieftain of the Rīf rose to power thanks to German intrigues under cover of the First World War, Muḥammad b. ʿAbd al-Karīm, called Bin ʿAbd al-Krīm, and he managed to hold back the power of Spain thanks to the exactions of his rival Aḥmad b. Muḥammad al-Raysūlī/Raysūnī and to gain the resounding victory of Anwāl over the Spanish forces (1921). He came back again in 1925 against the forces of France under the Marshals Lyautey and then Pétain, and threatened Fās. The Rīf forces' offensive was definitively broken at the beginning of 1926 thanks to a combined offensive of the French and Spanish forces, and Bin ʿAbd al-Krīm was deported to the Isle de Réunion. Nevertheless, the last pockets of resistance did not surrender until the 1930s. Al-Raysūlī, the unfortunate rival of Bin ʿAbd al-Krīm, disappeared in 1925, after having, according to the flow of circumstances, at times assisted and at others hindered the efforts of Bin ʿAbd al-Krīm.

RIFĀʿA BEY AL-ṬAHṬĀWĪ (1801-73), Egyptian educationist and author, who can, more than anyone else, be recognised as the initiator and symbol of the Egyptian "Awakening" (*nahḍa* [*q.v.*]) and considered the leading intellectual figure of his generation.

Abu 'l-ʿAzm Rifāʿa Rāfiʿ b. Badawī was born into a family of prominent *ʿulamāʾ* in the Upper Egyptian town of Ṭahṭā. In 1817 he came to Cairo and enrolled in al-Azhar. Of the professors there it was Ḥasan al-ʿAṭṭār (1766-1834) who had the greatest and most lasting influence on him. Al-ʿAṭṭār had come into contact with the French during their occupation of Egypt and become interested in Europe, its thought and sciences. Through the friendship with his teacher, Rifāʿa became acquainted with secular subjects not yet taught at al-Azhar as well as with some aspects of European thought while still studying at the university. Between 1822 and 1824 *shaykh* Rifāʿa occupied a teaching position at al-Azhar.

In 1824 al-ʿAṭṭār secured Rifāʿa's appointment as *wāʿiẓ* and *imām* of a regiment in the new Egyptian army, and when Muḥammad ʿAlī Pasha [*q.v.*] sent a mission of 44 students to France in 1826, *shaykh* Rifāʿa was chosen as one of the four *imāms* accompanying the mission, also on the recommendation of al-ʿAṭṭār.

In Paris, Rifāʿa, on his own initiative, studied French in order to be able to read works in that language, beginning with history and geography, later taking up philosophy and literature. His object was to translate the books he read into Arabic. During his stay he made friends with leading French orientalists, such as A.I. Silvestre de Sacy (1758-1838) and E.-F. Jomard (1777-1862), who also appreciated him as a learned Muslim scholar. Under their benevolent supervision, he became aware of the new discoveries of Egyptology and of western values and culture in general. On his return to Egypt at Muḥammad ʿAlī's request, he published his observations and impressions *Takhlīṣ al-ibrīz ilā talkhīṣ Bārīz* in 1834, a work which he had already written in Paris. This *riḥla* description became very well known and until the 1850s it remained the sole work in which Arabic-speaking readers were offered a description of a European country. J. Heyworth-Dunne has called it the only human document of the age by the only writer of this period to have produced anything readable.

After his return from Paris in 1831 and more especially after the death of al-ʿAṭṭār, Rifāʿa became Muḥammad ʿAlī's right-hand man among the *ʿulamāʾ*. Rifāʿa was an intellectual-cum-public servant acting as the main ideologue of the ruling family, a position of unquestioning adherence to the policy of the powers to be. Even when expressing his own opinions in writing, the limits were defined by others. Therefore, the final assessment of his contributions must also be an assessment of the endeavours of his patrons.

Between 1831 and 1834 Rifāʿa was employed as a translator first at the School of Medicine and then at the Artillery School. The real breakthrough came in 1836 in connection with the reorganisation of the Schools Administration when he was chosen as one of the permanent members—and the only Egyptian—of the Council. In 1837 Rifāʿa was made head of the newly-created School of Languages, where the European system was successfully adapted to the method employed by the *ʿulamāʾ*, and, in 1842, even entrusted with the editorship of the official newspaper *al-Waḳāʾiʿ al-Miṣriyya* for a time. But without question, his most important work was as a translator and supervisor of translators. He was rewarded in 1846 with the honorific title Bey.

All this came to an abrupt end with the death of Muḥammad ʿAlī; he was succeeded by his grandson ʿAbbās I [*q.v.*] who had Rifāʿa Bey sent to Khartūm in 1850 to what was, in fact, virtual exile. The translation movement came to an end, and the School of Languages was closed the following year. Only when Saʿīd [*q.v.*] succeeded ʿAbbās, who was assassinated, did Rifāʿa regain favour and was allowed to return to Cairo in 1854. He became head of a military school but when it was closed in 1861 he remained unemployed until the reign of Ismāʿīl [*q.v.*]. Ismāʿīl reopened the School of Languages in 1863 and appointed Rifāʿa as director; he was also one of the group that planned the new educational system. In 1870 Rifāʿa became the editor of *Rawḍat al-madāris*, a periodical for the Ministry of Education; he occupied this position until his death.

It is a moot question whether Rifāʿa owed most of what is regarded as European influence on him to his teacher at al-Azhar, Ḥasan al-ʿAṭṭār, or if he was a real innovator bringing back ideas from France. The main problem which he had to face as the ideologue of Muḥammad ʿAlī's innovations was how to have his countrymen partake in the modern world while remaining Muslim. In his writings he tried to answer this question. Though a prolific author, nothing Rifāʿa wrote after *Takhlīṣ* equalled it either in style or in significance. This is not to say that his writings were without impact; quite the contrary.

Although Rifāʿa himself was not a first-rate historian, it was he who laid the groundwork for later Egyptian achievements in historiography. A turning-point in the writing of history in Egypt as well as a turning-point in Egyptians' self-awareness as a nation occurred in 1868 when he published his *Anwār tawfīḳ al-djalīl fī akhbār Miṣr wa-tawthīḳ banī Ismāʿīl*. It was the first part of a history of Egypt planned to cover the period from the Deluge to his own time, although together with the posthumously (1874) published *sīra* of the Prophet *Nihāyat al-īdjāz fī sīrat sākin al-Ḥidjāz*, it was all that was published. *Anwār* included the ages of the ancient Egyptians, Alexander the Great, the Romans and the Byzantines, and it ended where Egyptian history written by Arabs had usually begun—the Arab conquest. Rifāʿa was the first writer who saw Egypt as something historically continuous, a distinct geographical unit, and he tried to explain this vision of an Egyptian nation in terms of Islamic thought.

Two other publications of Rifāʿa have to be mentioned here. They are a general book on Egyptian society *Manāhidj al-albāb al-miṣriyya fī mabāhidj al-ādāb al-ʿaṣriyya* (1869), and a book on education *al-Murshid al-amīn li'l-banāt wa'l-banīn* (1872). In the latter he advocated—albeit timidly—the necessity of extending general education to girls.

The pre-eminence which Rifāʿa Bey has come to hold, and deservedly so, reflects the intellectual mediocrity of the Muḥammad ʿAlī era.

Bibliography: Rifāʿa Bey's most important publications are mentioned in the article (1st editions); they have all gone through several editions often with alterations and omissions. Muḥammad ʿAmmāra (ed.), *al-Aʿmāl al-kāmila li-Rifāʿa Rāfiʿ al-Ṭahṭāwī*, i-iii, Beirut 1973; *Takhlīṣ al-ibrīz ilā talkhīṣ Bārīz* has been translated into German by K. Stowasser as *Ein Muslim entdeckt Europa*, Leipzig-Weimar 1988, and into French by A. Louca as *L'Or de Paris*, Paris 1988; Ṣāliḥ Madjdī, *Ḥilyat al-zaman bi-manāḳib khādim al-waṭan, Rifāʿa Bey Rāfiʿ al-Ṭahṭāwī*, Cairo 1958 (the author was a pupil and friend of Rifāʿa); J. Heyworth-Dunne, *Rifāʿah Badawī Rāfiʿ aṭ-Ṭahṭāwī: the Egyptian revivalist*, in *BSOS*, ix (1937-9), 961-7; x (1940), 399-415; Aḥmad Aḥmad Badawī, *Rifāʿa Rāfiʿ al-Ṭahṭāwī*, ²Cairo 1959; A. Hourani, *Arabic thought in the liberal age 1798-1939*, London 1962, ²1983, index; I. Abu-Lughod, *The Arab rediscovery of Europe*, Princeton 1963, 50-3 (partial listing of literary works translated into Arabic); A. Abdel-Malek, *Idéologie et renaissance nationale. L'Égypte moderne*, Paris 1969, *passim*; A. Louca, *Voyageurs et écrivains égyptiens en France au XIXe siècle*, Paris 1970, 55-74; P. Gran, *Islamic roots of capitalism. Egypt, 1760-1840*, Austin-London 1979, index; G. Delanoue, *Moralistes et politiques musulmans dans l'Égypte du XIXe siècle (1798-1882)*, Cairo 1982, *passim*; B. Lewis, *The Muslim discovery of Europe*, London 1982, 133, 219-20, 281-2, 191-3; J.A. Crabbs, Jr., *The writing of history in nineteenth-century Egypt*, Detroit 1984, 67-86; Y.M. Choueiri, *Arab history and the nation-state. A study in modern Arabic historiography 1820-1980*, London-New York 1989, 3-24, 197 f., 206; R.A. Hamed, *The Japanese and Egyptian enlightenment*, Tokyo 1990, *passim*; Lewis, *Islam and the West*, New York and Oxford 1993, 171-2. (K. ÖHRNBERG)

AL-**RIFĀʿĪ**, AḤMAD B. ʿALI, Abu 'l-ʿAbbas, Shāfiʿī *faḳīh* by training and founder of the Rifāʿiyya [*q.v.*] dervish order.

He was born in Muḥarram 500/September 1106 (or, according to other authorities, in Radjab 512/October-November 1118) at Ḳaryat Ḥasan, a village of the Baṭāʾiḥ or marshlands of lower ʿIrāḳ [see AL-BAṬĪḤA] between Baṣra and Wāsiṭ, whence the *nisba* sometimes given to him of al-Baṭāʾiḥī, and he died at Umm ʿUbayda in the same region on 22 Djumādā I 578/23 October 1182 (see Ibn Khallikān, ed. ʿAbbās, i, 171-2, tr. de Slane, i, 152-3). The *nisba* al-Rifāʿī is usually explained as referring to an ancestor Rifāʿa, but by some is supposed to be a tribal name. This ancestor Rifāʿa is said to have migrated from Mecca to Seville in Spain in 317/929, whence Aḥmad's grandfather came to Baṣra in 450/1058. Hence he is also called al-Maghribī.

Ibn Khallikān's notice of him is meagre; more is given in al-Dhahabī's *Taʾrīkh al-Islām*, taken from a collection of his *Manāḳib* by Muḥyī 'l-Dīn Aḥmad b. Sulaymān al-Ḥammāmī recited by him to a disciple in 680/1281. This work does not appear in the lists of treatises on the same subject furnished by Abu 'l-Hudā Efendi al-Rāfiʿī al-Khālidī al-Ṣayyādī in his works *Tanwīr al-abṣār* (Cairo 1306) and *Ḳilādat al-djawāhir* (Beirut 1301), the latter of which is a copious biography, frequently citing *Tiryāḳ al-muḥibbīn* by Taḳī al-Dīn al-Wāsiṭī (see below), *Umm al-barāhīn* by Ḳāsim b. al-Ḥādjdj, *al-Nafḥa al-miskiyya* by ʿIzz al-Dīn al-Fārūthī (d. 694/1295), and others. Al-Ḥammāmī's statements are cited from one Yaʿḳūb b. Kurāz, who acted as *muʾadhdhin* for al-Rifāʿī. Great caution is required in the use of such materials.

Whereas according to some accounts he was a posthumous child, the majority date his father's death to 519/1125 in Baghdād, when Aḥmad was seven years old. He was then brought up by his maternal uncle Manṣūr al-Baṭāʾiḥī, resident at Nahr Daḳlā in the neighbourhood of Baṣra. This Manṣūr (of whom there is a notice in al-Shaʿrānī's *Lawāḳiḥ al-anwār*, i, 178) is represented as the head of a religious community, called by Aḥmad (if he is correctly reported by his grandson, *Ḳilāda*, 88) al-Rifāʿiyya; he sent his nephew to Wāsiṭ to study under a Shāfiʿī doctor Abu 'l-Faḍl ʿAlī al-Wāsiṭī and a maternal uncle Abū Bakr al-Wāsiṭī. His studies lasted till his twenty-seventh year, when he received an *idjāza* [*q.v.*] from Abu 'l-

Faḍl, and the *khirka* from his uncle Manṣūr, who bade him establish himself in Umm ʿUbayda, where (it would seem) his mother's family had property, and where her father Yaḥyā al-Nadjdjārī al-Anṣārī was buried. In the following year, 540/1145-6, Manṣūr died and bequeathed the headship of his community (*mashyakha*) to Aḥmad to the exclusion of his own son.

His activities appears to have been confined to Umm ʿUbayda and neighbouring villages, whose names are unknown to the geographers; even Umm ʿUbayda is not mentioned by Yāḳūt, though found in one copy of the *Marāṣid al-iṭṭilāʿ*. This fact renders incredible the huge figures cited by Abu 'l-Hudā for the number of his disciples (*murīdīn*) and even deputies (*khulafāʾ*), the princely style and the colossal buildings in which he entertained them. Sibṭ Ibn al-Djauzī in his *Mirʾāt al-zamān*, ed. Ḥaydarābād, viii, 370, says that one of their *shaykhs* told him he had seen some 100,000 persons with al-Rifāʿī on a night of Shaʿbān. In Ibn al-ʿImād's *Shadharāt al-dhahab* the experience is said to have been Sibṭ Ibn al-Djauzī's own, though this person was born in 581/1185, three years after al-Rifāʿī's death. In the *Tanwīr al-abṣār* (7, 8) his grandfather as well as himself is credited with the assertion.

His followers do not attribute to him any treatises, but Abu 'l-Hudā produces 1. two discourses (*madjlis*) delivered by him in 577/1181 and 578/1182-3 respectively; 2. a whole *dīwān* of odes; 3. a collection of prayers (*adʿiya*), devotional exercises (*awrād*), and incantations (*aḥzāb*); 4. a great number of casual utterances, sometimes nearly of the length of sermons, swollen by frequent repetitions. Since in 1, 2 and 4 he claims descent from ʿAlī and Fāṭima, and to be the substitute (*nāʾib*) for the Prophet on earth, whereas his biographers insist on his humility, and disclaiming such titles as *kuṭb*, *ghawth*, or even *shaykh*, the genuineness of these documents is questionable.

Various books were written on him by his followers and by subsequent members of the Rifāʿī *ṭarīka*, such as the *Tiryāḳ al-muḥibbīn fī sīrat sulṭān al-ʿārifīn Aḥmad Ibn al-Rifāʿī* of Taḳī 'l-Dīn ʿAbd al-Raḥmān al-Wāsiṭī (d. 744/1343-4; see Brockelmann, S I, 781, S II, 214).

In Ibn al-ʿImād, *op. cit.*, iv, 260, it is asserted that the marvellous performances associated with the Rifāʿīs, such as sitting in heated ovens, riding lions, etc. [see RIFĀʿIYYA] were unknown to the founder, and introduced after the Mongol invasion; in any case, they were no invention of his, since the like are recorded by al-Tanūkhī in the 4th/10th century. The anecdotes produced by al-Dhahabī (repeated by al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya al-kubrā*, iv, 40) imply a doctrine similar to the Buddhist and Indian *ahimsā*, unwillingness to kill or give pain to living creatures, even lice and locusts. He is also said to have inculcated poverty, abstinence and non-resistance to injury. Thus Sibṭ Ibn al-Djawzī records how he allowed his wife to belabour him with a poker, though his friends collected 500 dīnārs to enable him to divorce her by returning her marriage gift. (The sum mentioned is inconsistent with his supposed poverty.)

Inconsistent accounts are given of his relations with his contemporary ʿAbd al-Ḳādir al-Djīlānī [*q.v.*]. In the *Bahdjat al-asrār* of Nūr al-Dīn al-Shaṭṭanawfī it is recorded by apparently faultless *isnāds* on the authority of two nephews of al-Rifāʿī, and a man who visited him at Umm ʿUbayda in 576/1180-1, that when ʿAbd al-Ḳādir in Baghdād declared that his foot was on the neck of every saint, al-Rifāʿī was heard to say at Umm ʿUbayda "and on mine". Hence some make him a disciple of ʿAbd al-Ḳādir. On the other hand, Abu 'l-Hudā's authorities make ʿAbd al-Ḳādir one of those who witnessed in Medina in the year 555/1160 the unique miracle of the Prophet holding out his hand from the tomb for al-Rifāʿī to kiss; further, in the list of his predecessors in the discourse of 578/1182-3, al-Rifāʿī mentions Manṣūr but not ʿAbd al-Ḳādir. It is probable, therefore, that the two worked independently.

Details of his family are quoted from the work of al-Fārūthī, grandson of a disciple named ʿUmar. According to him, al-Rifāʿī married first Manṣūr's niece Khadīdja; after her death, her sister Rabīʿa; after her death Nafīsa, daughter of Muḥammad b. al-Ḳāsimiyya. There were many daughters; also three sons, who all died before their father. He was succeeded in the headship of his order by a sister's son, ʿAlī b. ʿUthmān.

Trimingham, *The Sufi orders in Islam*, Oxford 1971, 37 ff. and index; Brockelmann, S II, 780-1.

(D.S. MARGOLIOUTH*)

RIFĀʿIYYA, the name of one of the most prominent Ṣūfī orders from the period of the institutionalisation of the *ṭarīḳas* [*q.v.*], and one which came to be noted in pre-modern times for the extravagance of some of its practices.

It is unclear whether the founder, Aḥmad al-Rifāʿī [*q.v.*], was a mystic of the thaumaturgic, miracle-mongering type, but the order which he founded and which was developed by his kinsmen certainly acquired its extravagant reputation during the course of the 6th/12th century; it may not be without significance that the order grew up in the Lower ʿIrāḳ marshlands between Wāsiṭ and Baṣra where there was a mélange of faiths and beliefs, Muslim, Christian, Mandaean, etc., with many older survivals. Already, Ibn Khallikān [*q.v.*] (wrote *ca.* 654/1256) reported that the Rifāʿī dervishes rode on lions in the Baṭāʾiḥ and that eating live snakes and walking on hot coals were amongst their practices (ed. Iḥsān ʿAbbās, i, 172, tr. de Slane, i, 153).

Al-Rifāʿī's retreat in the marshlands was a focus for visiting dervishes, some of whom founded their own orders, such as the Badawiyya, Dasūḳiyya and Shādhiliyya, and it was the prototype for many *zāwiyas* which sprang up. Ibn Baṭṭūṭa [*q.v.*] frequently mentions the strange practices of their devotees. Thus when in Wāsiṭ in 727/1327, he visited Aḥmad al-Rifāʿī's shrine at Umm ʿUbayda, where he saw throngs of people and witnessed fire-walking and fire-swallowing (*Riḥla*, ii, 4-5, tr. Gibb, ii, 273-4); an eastern counterpart of these practices were those of the Ḳalandars [see ḲALANDARIYYA], dervishes of the Ḥaydariyya order, which he witnessed in India (*Riḥla*, ii, 6-7, iii, 79-9, tr. ii, 274-5, iii, 583).

The Rifāʿiyya spread rapidly into Egypt and Syria, possibly under the patronage of the Ayyūbids. In Syria, a key figure was Abū Muḥammad ʿAlī al-Ḥarīrī (d. 645/1268), so that this branch became known as the Ḥarīriyya; another Syrian branch which was later to become notorious for its extravagant practices, including that of the *dawsa* [*q.v.*] or trampling of adherents by the mounted *shaykh* of the order, was that of the Saʿdiyya [*q.v.*] or Djibāwiyya founded by Aḥmad al-Rifāʿī's grandson, ʿIzz al-Dīn Aḥmad al-Ṣayyād (d. 670/1271-2). In Egypt, the order became especially strong. ʿIzz al-Dīn al-Ṣayyād was teaching in Cairo in 638/1236 and married there an Ayyūbid descendant, the grand-daughter of Nūr al-Dīn al-Malik al-Afḍal. However, the great mosque of al-

Rifāʿī, near the Cairo Citadel, was not begun till the later 19th century, and the tomb which it contains was thought by ʿAlī Pas̲h̲a Mubārak more likely to be that of one of Aḥmad al-Rifāʿī's descendants or *k̲h̲ulafāʾ*.

The Rifāʿiyya order further became popular amongst the Turks in the course of the 7th-8th/13th-14th centuries, continuing so in Turkey up to the 20th century. Ibn Baṭṭūṭa, again, visited what he calls "Aḥmadī" *zāwiya*s in Anatolia, including at Amasya, Izmir and Bergama (*Riḥla*, ii, 292-3, 310, 315-16, tr. ii, 436, 445, 449); whilst at this same period, the Mewlewī Aflākī [*q.v.*] describes, with disapproval, the extravagances of fire-walking, snake-biting, etc., which could be seen at the *zāwiya* of "Sayyid Tād̲j̲ al-Dīn Aḥmad al-Rifāʿī" in Konya (*Manāḳib al-ʿārifīn*, ed. and tr. Cl. Huart, Paris 1918-22, tr. ii, 203-4). From Anatolia, the order spread into the Balkans as far as Bosnia and across the Black Sea to the lands of the Golden Horde; Fuad Köprülü thought that the Rifāʿiyya of the Turkish lands might have been additionally influenced by the semi-magical practices surviving from old Turkish shamanism (see Köprülüzade M. Fuad, *Influence du chamanisme turco-mongol sur les ordres mystiques musulmanes*, Istanbul 1929, 12-13; Gibb and Bowen, *Islamic society and the West*, i/2, 196-7).

In the Mag̲h̲rib, the ecstatic practices of the Rifāʿiyya or one of its offshoots were adopted by the ʿĪsāwiyya or Isāwā [*q.v.*] founded by Muḥammad b. ʿĪsā (d. 930/1524) after his travels in the central Islamic lands. Perhaps most distantly of all, Ibn Baṭṭūṭa even mentions Rifāʿīs in the Maldive Islands [*q.v.*] (*Riḥla*, text, iv, 141).

The Rifāʿiyya was thus the most widespread of all the *ṭuruḳ* until the 9th/15th century, when it was overtaken in popularity by the Ḳādiriyya [*q.v.*]. After this time, its greatest appeal was to be in the Arab lands, and especially in Egypt. In 18th century Cairo, the *mawlid* [*q.v.*] or birthday celebration of Aḥmad al-Rifāʿī was celebrated on 12 D̲j̲umādā II at Rumayla. This order, and the associated one of the Badawiyya [see AḤMAD AL-BADAWĪ] were at this time widely recruited from the lower strata of society, compared with e.g. the Ḳādiriyya and K̲h̲alwatiyya [*q.v.*]; al-Djabartī stigmatises the Aḥmadiyya and Saʿdiyya as popular amongst the *awbās̲h̲* or lowest classes (see A. Raymond, *Artisans et commerçants au Caire au XVIII^e^ siècle*, Damascus 1973-4, ii, 435-6).

In the early 19th century, E.W. Lane gave a classic account of the grotesque practices of the Rifāʿiyya "howling dervishes" and their offshoots the Saʿdiyya and ʿIlwāniyya, which included snake charming and the thrusting of iron spikes, glass, etc. into their bodies (*The manners and customs of the modern Egyptians*, chs. x, xx, xxv). By the middle years of the century, however, such popular excesses began to be deprecated by the Ottoman and Egyptian authorities, when the more progressive-minded of the ruling classes began to regard the *ṭuruḳ* as brakes on progress and as associations which were bringing the image of Islam into disrepute, in Western eyes. Hence in Egypt, the *dawsa* ceremony was prohibited by the Khedive Tawfīḳ on the basis of a *fatwā* from the Chief Muftī of Egypt, that it was a *bidʿa ḳabīḥa* or reprehensible innovation. It continued, however, for some decades afterwards in Ottoman Syria, for the sultan ʿAbd al-Ḥamīd II [*q.v.*] strongly favoured the dervish orders as part of his Pan-Islamic and pro-Islamic policies. The influence of the Rifāʿī *s̲h̲ayk̲h̲* Abu 'l-Hudā Muḥammad al-Ṣayyād (1850-1909), of the Ṣayyādiyya branch of the Rifāʿiyya in Aleppo, was particularly great at the Ottoman court, and this influence was much disapproved of by Islamic modernists and reformers of the stamp of Muḥammad ʿAbduh.

During the 20th century the Rifāʿiyya have continued to be influential in Cairene life. A good picture of it as it was in the 1940s to 1960s, including the form of its *d̲h̲ikr* [*q.v.*], is given by E. Bannerth in his *La Rifaʿiyya en Egypte*, in *MIDEO*, x (1970), 1-35. Bannerth noted that, at that time, the supreme head of the order in Egypt was a descendant of the founder and that the members of one section at least, the ʿAmriyya, included a good number of persons with secondary education and belonging to the middle classes. The charismatic activities by members of the order were played down, but in 1969 the author personally witnessed in the al-Rifāʿī Mosque the piercing of cheeks with sharpened iron skewers without any resultant bleeding or visible wounds.

(C.E. BOSWORTH)

RĪḤ (A.), wind. Arabic traditional knowledge of the winds is gathered in ethno-astronomical and meteorological treatises such as the *kutub al-anwāʾ* [see ANWĀʾ] and other lexicographical treatises written by Arabic philologists from the early 3rd/9th centuries onwards. In these treatises, nearly one hundred words depict different kinds of winds according to their effects, qualities and direction. Very little information is given about their geographical location in the Arabian peninsula or the nature of the wind, if we except the fact that, in the *anwāʾ* system, the wind, especially hot ones (*bawāriḥ*), is seen as an effect of the star that rises. In that tradition the compass rose is based on four cardinal winds, the centre of which is the Kaʿba. The wind's direction is determined by the rising and setting of the Sun and of certain stars [see MAṬLAʿ and KAʿBA]. Al-Aṣmaʿī and Abū ʿUbayd say that the *Dabūr* (west wind) comes from the back of the Kaʿba, the *Ḳabūl* (east wind) from its front; the *S̲h̲amāl* (north wind) from the Black Stone; the *D̲j̲anūb* from the opposite direction. According to Ibn al-Aʿrābī, the *Dabūr* blows between the *maṭlaʿ* (rising-point) of Canopus and the *maṭlaʿ* of the Pleiades; the *Ḳabūl* from the *maṭlaʿ* of the Pleiades to the *maṭlaʿ* of the Great (?) Bear (*Banāt Naʿs̲h̲*); the *S̲h̲amāl* from the *maṭlaʿ* of the Great (?) Bear (*Banāt Naʿs̲h̲*) to the *mag̲h̲rib* (setting point) of Altair: *D̲j̲anūb* from the *mag̲h̲rib* of Altair to the *maṭlaʿ* of Canopus [see the graphics in MAṬLAʿ]. The winds which blow between the cardinal ones are called *nakbāʾ*. Other compass roses with six winds, as well as synonyms of cardinal winds can be found in those sources. Information about local winds is contained in geographical treatises and calendars.

In the 3rd/9th century, an important development in meteorology took place. It followed the classical tradition of Aristotle's *Meteorology*, translated into Arabic by Yaḥyā al-Biṭrīḳ (*Kitāb al-Āt̲h̲ār al-ʿulwiyya*). Other classical sources were introduced, and among the Arabic authors on this subject we can mention al-Kindī, Ḥunayn b. Isḥāḳ, Ibn al-Hayt̲h̲am, al-Bīrūnī and the Ik̲h̲wān al-Ṣafāʾ [*q.vv.*]. Aristotle conceived the wind as an effect of dry and hot exhalations produced by the Sun in the sphere of the air, but a more accurate explanation was furnished by al-Kindī, who stated that the wind is due to the movement of the air expanded by the heat of Sun towards colder places where the air is more contracted. Practical informa-

tion about Greek winds is acquired by the translation of calendars such as Aratus of Soloi's *Phaenomena* or Ptolemy's *Phaseis* (translated by Sinān b. Thābit b. Ḳurra and summarised by al-Bīrūnī in his *Kitāb al-Āthār al-bāḳiya*).

Winds are particularly important in navigation treatises [see MILĀḤA and IBN MĀDJID], in which we can find fairly detailed explanations about their causes, directions, effects in navigation, the monsoons and their seasons [see MAWSIM], coastal breezes and their causes, and the vocabulary of the sailors. The works of Ibn Mādjid (*fl.* 866-905/1462-1500) and Sulaymān al-Mahrī (*fl.* 917-60/1511-53) show that the sailors of the Indian Ocean also took into account the four cardinal winds. The most important were the *Ḳabūl*, called *Azyab* by the sailors, and the *Dabūr* or *Kaws*, because they were the prevailing winds of the three periods in which navigation was possible during the monsoons. The direction of the *Kaws* was determined by the setting of Sirius (*maghīb al-Tīr*), while the direction of eastern winds was marked by the rising of a Boötis (*Simāk Rāmiḥ*).

RĪḤĀ, the name of two towns in the Levant.

1. The Arabs called the Jericho of the Bible Rīḥā or Arīḥā (Clermont-Ganneau, in *JA* [1877], i, 498). The town, which was 12 *mīls* east of Jerusalem, was reckoned sometimes to the *Djund* of Filasṭīn (e.g. Yāḳūt, *Muʿdjam*, iii, 913 and sometimes to the district of al-Balḳāʾ (al-Yaʿḳūbī, *Buldān*, 113); sometimes, however, it was called the capital of the province of Jordan (al-Urdunn) or of Ghawr, the broad low-lying valley of the Jordan (Nahr al-Urdunn) from which it was 10 *mīl* distant (Yāḳūt, i, 227). As a result of its warm moist climate and the rich irrigation of its fields the country round the town produced a subtropical vegetation; among its products are mentioned, some already known in ancient times, dates and bananas, fragrant flowers, indigo (prepared from the *wasma* plant), sugar-cane, which yielded the best Ghawr sugar. Not far from the town were the only sulphur mines in Palestine (Abu 'l-Fidāʾ, ed. Reinaud, 236). There were however many snakes and scorpions there and large numbers of fleas. From the flesh of the snakes called *tiryāḳiya* found there was made the antidote called "Jerusalem *tiryāḳ*" (θηριακὰ φάρμακα).

In the Ḳurʾān, Arīḥā is the town of the giants captured by Joshua; there was shown the tomb of Moses and the place where, according to the Christians, their Saviour was baptised. The eponymous founder of the town (Arīḥā) was said to have been a grandson of Arfakhshad/dh, grandson of Noah. The town was particularly prosperous during the Crusades but then began to decline and was in ruins in the 12th century. The modern Jericho in the Wādī el-Ḳelt (lat. 31° 52′ N., long. 35° 27′ E.) occupies the site of the town of the Crusaders; it is 250 m/820 feet below the level of the Mediterranean. Travellers of the 19th century expatiated on the squalor of Jericho, by then little more than a large village. It revived under the British Mandate of Palestine and after the West Bank's incorporation into Jordan in 1948, with a population of 6,830 in 1967; in that year, it passed under Israeli control.

Bibliography: On the Biblical Jericho, see Sir George Adam Smith, *Historical geography of the Holy Land*,[4] London 1897, 266 ff. On its archaeology (begun in the early 20th century by Sellin and then Garstang), see K.M. Kenyon and T.A. Holland, *Excavations at Jericho*, 5 vols., London 1960-83. On early Islamic Jericho, see Iṣṭakhrī, 56, 58; Ibn Ḥawḳal, 1st ed., 111, 113; Maḳdisī, 179-80; Yaʿḳūbī, *Taʾrīkh*, ed. Houtsma, 113; Yāḳūt, *Muʿdjam*, i, 200, 227, ii, 884, iii, 823, 913; Ṣafī al-Dīn, *Marāṣid al-iṭṭilāʿ*, ed. Juynboll, i, 52, 496, ii, 322, 362; Idrīsī, ed. Gildemeister, in *ZDPV*, viii, 3; Abu 'l-Fidāʾ, ed. Reinaud, 48, 236; G. Le Strange, *Palestine under the Moslems*, London 1890, 15, 18, 28-32, 53, 288, 381, 396-7; S. Marmardji, *Textes géographiques arabes sur la Palestine*, Paris 1951, 8-9. On the modern town, see Murray's handbooks, *Syria and Palestine*, new ed. London 1903, 163; Baedeker's *Palestine and Syria*[5], Leipzig 1912, 128-9; H.C. Luke and E. Keith-Roach, *The handbook of Palestine and Trans-Jordan*, London 1930, 127-9; Admiralty handbooks, *Palestine and Transjordan*, London 1943, 322-3 and index.

2. A little town in the district of Aleppo. According to Yāḳūt, it stood in a wooded, well watered area "on the slopes of the Djabal Lubnān". By this term the Arabs meant not only the Lebanon but also its northern continuation as far as the Orontes (Lammens, *Notes sur le Liban*, ii, 6; *MFOB*, i [1906], 271). But in the present case, the heights to the east of the Orontes are certainly wrongly included in the term. Rīḥā on the contrary is on the northern edge of the Djabal Banī ʿUlaym (Ibn al-Shiḥna, 102, 130), the modern Djebel Arbaʿīn, a part of the Djebel Rīḥā or Djebel al-Zāwiyye (cf. the map Djebel Rîḥâ or Djebel iz-Zâwiyeh by R. Garrett and F.A. Norris, in *Publics. of the Princeton Univ. Arch. Exp. to Syria*, div. ii, sect. B, part iii, Princeton 1909). The identification of Rīḥā with the *Rugia* or *Chastel Rouge* of the Franks is untenable, as Dussaud (*Topogr. de la Syrie*, 167, 174, 176, 213) rightly pointed out that this should rather be identified with al-Rūdj of the Arabs.

There is a place noted for its ruins of antiquity called Ruwayḥa ("little Rīḥā") about 13 km/8 miles south-east of Rīḥā.

Rīḥā is very frequently mentioned in modern travel literature, as it was on the main road from Ḥalab to Ḥamā (Ritter, *Erdkunde*, xvii, 1502; Dussaud, *Topogr. de la Syrie*, 183), over which Nāṣir-i Khusraw (before 1047) and Ibn Baṭṭūṭa (1326) travelled in their day. The town is therefore mentioned by Belon du Mans (1548), Pietro Della Valle (1616), Wansleb (1671), Pococke (1737), Drummond (1754), C. Niebuhr (1778), Seetzen (1806-7), Burckhardt (1810-12) and many others.

(E. Honigmann*)

RIḤLA (A.), a journey, voyage, travel; also a travelogue.

It is clear from the lexicons that the root *raḥala*, from which this word derives, was originally associated with camel husbandry. A *raḥl* is a camel saddle and thus we find such phrases as *raḥala al-baʿīr* (he saddled the camel) (Lane, s.v. *raḥala*). The word *riḥla* thus connoted the act of saddling one or more camels and, by extension, a journey or voyage. The person endowed with skill in the saddling of a camel, or one who travelled much, was called a *raḥḥāl* in Arabic or, even more emphatically, a *raḥḥāla*, which neatly translates as "globetrotter" (see *ibid.*, s.vv. *riḥla, raḥḥāl*). A distinction can be made between *riḥla* and the further form *ruḥla*: the former indicates a (single) journey; the latter implies the actual destination and also has the rarer meaning of a noble or learned man to whom one may travel (see *ibid.*, s.v. *ruḥla*). Derivatives of the root *raḥala* appear four times in the Ḳurʾān: three times indicating "a saddle-bag" or "saddle-bags" (XII, 62, 70, 75), and once indicating actual journeys, employing the form *riḥla* (CVI, 2). In the *ḥadīth* [*q.v.*] literature, a famous example canonises the travel impetus, indeed wanderlust, often implicit in the word *riḥla* and presents the Prophet Muḥammad as urging believers to seek knowledge even as far as China (see also Wensinck, *Concordance*, ii, 232-5 esp. s.vv. *raḥala, riḥla*).

This injunction, coupled with an increasing desire for knowledge, especially of *ʿilm* in the sense of tradition, gave rise to the concept of *al-riḥla fī ṭalab al-ʿilm* ("travel in search of knowledge") in mediaeval Islam. A genre of *riḥla* literature later developed whose primary impulse, or excuse, was the Pilgrimage [see ḤADJDJ]. The archetypical exponents of this flowering of the genre were Ibn Djubayr (540-614/1145-1217 [*q.v.*]) and Ibn Baṭṭūṭa (703-70/1304-68 or to 779/1377 [*q.v.*]). The first undertook his documented *Riḥla*, often regarded as a prototype, from 578/1183 to 581/1185 with the *Ḥadjdj* as a principal focus, to make amends for an act of wine drinking into which he had been forced by the Almohad governor of Granada; the second made the *Ḥadjdj* the initial excuse for what proved to be a virtual lifetime of globetrotting. With the *Riḥla* of Ibn Baṭṭūṭa we reach the peak in the articulation of a genre which should be perceived much more in terms of a literary art form than a formal geography. It is an art form which encapsulates the believable and the incredible, embraces the niceties of everyday life as well as the *ʿAdjāʾib* [*q.v.*] or marvels, and whose value as a geographical and historical source must, in consequence, be treated with caution. Thus, while the historian and History of Art scholar may relish the description of Mecca and Medina in the *Riḥla* of Ibn Baṭṭūṭa (partially plagiarised from the earlier *Riḥla* of Ibn Djubayr), they must treat with extreme caution the former's description of his visit to China in view of the controversy over whether he actually visited that area in person. To conclude, the *Riḥla* in mediaeval Islam must be conceived of, and appreciated as, a literary genre beside such other genres as the *Awāʾil* [*q.v.*], the *ʿAdjāʾib* and the *Nawādir* [see NĀDIRA]. It is a species of *Adab* [*q.v.*] rather than *Taʾrīkh* [*q.v.*] or *Djughrāfiyā* [*q.v.*]. As such it was appreciated by the Nobel Prize-winning Egyptian novelist Nadjīb Maḥfūẓ (born 1329/1911), who consciously based his *Riḥlat Ibn Faṭṭūma* ("Voyage of Ibn Faṭṭūma") (Cairo 1983; tr. D. Johnson-Davies under the title *The Journey of Ibn Fattouma*, New York and London 1992) on the famous *Riḥla* of Ibn Baṭṭūṭa, producing not a parody but a Bunyanesque, allegorical and picaresque narrative of Everyman's *Riḥla* through life itself.

Finally, one should note that not all travelogues were necessarily called *riḥla*; cf. the *Seyāḥat-nama* of the Ottoman Turkish traveller Ewliyāʾ Čelebi [*q.v.*].

Bibliography: For individual notable examples of the *Riḥla* genre, see Tidjānī, *Riḥla*, ed. H.H. ʿAbd al-Wahhāb, Tunis 1377/1958; ʿAbdarī, *al-Riḥla al-Maghribiyya*, ed. Aḥmad b. Djadū, Algiers 1965, also ed. Muḥammad al-Fāsī, Rabat 1968; Ibn Baṭṭūṭa, *Riḥla*, ed. Karam al-Bustānī, Beirut 1964; Ibn Djubayr, *Riḥla*, Beirut 1964; and the index s.v. *Riḥla* in Brockelmann, S III, 1050. See also C.F. Beckingham, *The Riḥla: fact or fiction?* in I.R. (I.R. Netton)

RIḲʿA [see KHAṬṬ].

RIKĀB (A., "stirrup"), in Persian and Turkish usage at Muslim courts, "the sovereign himself or his presence, the foot of the throne" (metonymy, like those of *khidmet* in Saldjūḳ usage; *hazret* or *ḥaḍret*; *khāk-i pay*; etc.).

The figurative expression *rikāb-i humāyūn* (Turk. pronunciation: *rikʹāb-ĭ hümāyūn*), or (more rarely) *rikāb-i s̲h̲āhāne* or simply *rikāb* is already found in Persian of the Sald̲j̲ūḳid period applied to the sultan himself or his entourage in the field or travelling. For example one said that so-and-so was "in the service of the imperial stirrup" (Ibn Bībī, in Houtsma, *Recueil ... seld̲j̲oucides*, iv, 37; iii, 18) or "in the service of the parasol (*čatr*) of the imperial stirrup" (*ibid.*, iv, 7). In modern Persian one says "to be at the stirrup of a prince" for "to be attached to his court" (Kazimirski, *Dialogues*, 493 and 482-3).

In Turkish usage, the same expressions were applied to:

1. The imperial cavalcade and the procession formed on this occasion. However, in order to avoid confusion with other uses of the word *rikāb*, there was also used, especially in the reigns of Maḥmūd II and ʿAbd al-Med̲j̲īd, the Turkish word *binis̲h̲* which was applied to all public appearances of the sultan, whether on horseback or in a boat (Mouradgea d'Ohsson, vii, 141, 144; Jouanin and van Gaver, *Turquie*, 377 n.; Andreossy, *Constantinople et le Bosphore*, 33, 494). The prince's procession was also called *mawkib* (*mewkib-i hümāyūn*) (Ibn Bībī, in Houtsma, iii, 18; on these words in Ottoman and Egyptian usage, cf. J. Deny, *Sommaire des Archives du Caire*, 104, 564). Cf. also the name of *rikāb solag̲h̲ĭ* given to the eight *solaḳ* lieutenants who walked by the sultan's stirrup in the great procession (Mouradgea d'Ohsson, vii, 25, 317).

2. The audience given by the sultan (*resm-i rikāb* or simply *rikāb*), whether or not he was in procession. The Grand Vizier himself could only be introduced to the sultan's presence by the latter's formal order and his admission was called *rikāb*. There were ordinary *rikābs* and ceremonial *rikābs* (Mouradgea d'Ohsson, vii, 133 ff.). Cf. details of the *bayram rikābĭ tes̲h̲rifatĭ* in *ʿAṭā tārīk̲h̲i*, i, 23; cf. Zenker, *Dict.*, i, 468; Aḥmed Rāsim, *Tārīk̲h̲*, iv, 1014.

3. The service of the sultan or simply his presence (Sekowski, *Collectanea*, Warsaw 1824, ii, 24). The presence was not necessarily immediate. Thus the expression *rikāb-ĭ hümāyūnde* (in the locative) "with the sultan" was used in speaking of the troops (*ḳapu ḳulu*) of the capital (ʿAbd al-Raḥmān S̲h̲eref, *Tārīk̲h̲*, 292) or of the Grand Vizier in so far as he was endowed with the full powers of the sultan (*MTM*, 528). Similarly, the words *rikāb-ĭ hümāyūne* (in the dative) were used for petitions (*ʿarżuḥāl*, Ar.-Pers. *ʿarḍ-i ḥāl*) addressed to the sultan (Meninski, *Thesaurus*; *Ḳānūn-nāme* of Süleymān or *Naṣīḥat-nāme*, 151), whence the expression *maʿrūḍāt-ĭ rikābiyye* applied to these petitions.

It is from this connection that we have the use of the words *rikāb-ĭ hümāyūn* or *rikāb* in the sense of *interim* or substitute. When the Grand Vizier moved from place to place, the government was thought to go with him and there was appointed "to the sovereign a substitute for the Grand Vizier who was called *rikāb ḳāʾimmaḳāmĭ*" (Bianchi, *Dict.*, 1 ed.; Perry, *A view of the Levant*, London 1743, 37). The other chief dignitaries of the Sublime Porte had also their substitutes "of the imperial stirrup".

Rikāb ag̲h̲alarĭ or *ag̲h̲ayān-ĭ rikāb-ĭ hümāyūn* or *üzengi ag̲h̲alarĭ*.—These names were applied to a certain number of important officers or dignitaries of the palace (from 4 to 11, according to the different sources). They were the *mīr-ʿalem* or "standard-bearer", the two *mīr-āk̲h̲ur* (*imbrohor*) or "squires", the *ḳapud̲j̲ular kaḥyasĭ* or "chief usher" and other dignitaries with different offices (cf. Luṭfī Pas̲h̲a, *Āṣaf-nāme*, in *Türk. Bibliothek*, xii, 18, 21 of the Turkish text ed. Tschudi; Beauvoisins, *Notice sur la Cour du Grand Seigneur*, 1809, 54; Mouradgea d'Ohsson, vii, 14; von Hammer, *Staatsverf.*, ii, 61, with references to Castellan and ʿAlī; esp. *MTM*, 526, for the *ḳānūn* or "usages" regarding the *ag̲h̲as* of the stirrup; Ferīdūn, *Müns̲h̲eʾāt*, 10, for the *elḳāb* or protocol relating to them). The following is a translation of the passage in the *Āṣaf-nāme* which is a comparatively old text (Luṭfī Pas̲h̲a [*q.v.*], died probably in 970/1562-3): "The *defterdārs* of the finances have precedence (*taṣaddur*) over the *sand̲j̲aḳ beyi* and the *üzengi ag̲h̲alarĭ*. The principal (*bas̲h̲ olan*) of these is the *ag̲h̲a* of the Janissaries, next comes the *mīr-ʿalem*, then the *ḳapud̲j̲u bas̲h̲ĭ*, after him the *mīr-āk̲h̲ur*, then the *čaḳĭrd̲j̲ĭ-bas̲h̲ĭ*, the *čes̲h̲negīr-bas̲h̲ĭ* and the *bölük ag̲h̲alarĭ*" (starting with the *ag̲h̲a* of the Janissaries, we have here then an enumeration of the *üzengi ag̲h̲alarĭ*).

Considering the authority of these sources, we must conclude that the variations are the results of changes which actually took place, which leads us to conclude that the tradition of the palace left the sultan a certain freedom in this respect. We know, moreover, that admission to the *rikāb* was in general subject to the *istīd̲h̲ān* or "approval, pleasure" of the sultan.

The most important function, at least in principle, of the *ag̲h̲as* of the stirrup was exercised when the sultan mounted his horse: the grand *mīr-āk̲h̲ur* held the inner stirrup (*ič rikāb*), the *bas̲h̲-ḳapud̲j̲u-bas̲h̲ĭ ag̲h̲a*, the outer stirrup (*dĭs̲h̲ rikāb*); the *mīr-ʿalem* held the bridle and the *čes̲h̲negīr-bas̲h̲ĭ* assisted the sultan by holding him under the arm or "under the armpit" (*ḳoltug̲h̲a girmek*). The *ḳapud̲j̲ubas̲h̲ĭ* or "chamberlains" stood all around and the *āk̲h̲ur k̲h̲alīfesi* (*ḳalfasĭ*) held the horse's head (*MTM*, 526).

On the functions of the chamberlains, who, to the number of 150, headed by the *bas̲h̲-ḳapud̲j̲u-bas̲h̲ĭ*, already mentioned, were in the service of the stirrup, and for other details, see Mouradgea d'Ohsson, vii, 18, and especially *MTM*, *loc. cit.* Their duties were to take to the province important *firmāns* and to carry out various confidential missions.

Sometimes epithets rhyming in *-āb* were added to the word *rikāb* in the language of the court: e.g. *rikāb-ĭ ḳamertāb* "stirrup shining like the moon" (*Tārīk̲h̲-i Wāṣif*, i, 105); cf. also the epithets *kāmyāb*, *gerdūn d̲j̲enāb*, *dewlet-intisāb* (Meninski, *Thesaurus*).

The tribute which the Voyvodes of Wallachia and Moldavia sent to the sultan in their own name, supplementary to that (*d̲j̲izye*) paid by their subjects, was known as *rikābiyye* and *ʿīdiyye* (Aḥmed Rāsim, i, 380; cf. Saineanu, *Influenţa orientala*, Bucarest 1900, i, 249).

Bibliography: Given in the text. (J. Deny)

RIKĀBDĀR or Rikībdār, a Persian derivative from the preceding, properly "one put in charge of the stirrup, one who holds the stirrup, when his master mounts" (cf. French *estafier*, Ital. *staffiere*, Russ. *stremennoy*, English *groom of stirrup*, words formed from *staffa*, *stremya*, *stirrup* = French *estrieu*, mod. *étrier*). In fact, remembering that the word *rikāb* has been given or has assumed a wider meaning [see rikāb], *rikābdār* meant "a kind of squire, groom or riding attendant who had charge of the care and maintenance of harness and saddlery and of everything required for mounting on horseback". The pronunciation with an *i* in the second syllable (*rikibdar* or *rekibdar*) used alike in Egypt (Dozy; Spiro, 198) and in Turkey (Moldavian-Wallachian *rechiptar* or *richiaptar* in Saineanu, ii, 99) is due to a (Persian) corruption analogous to that found in the words *silīḥdār* for *silāḥdār* and *iʿtimīd* for *iʿtimād* (cf. the Turkish translation of the *Burhān-i ḳāṭiʿ*, 405). In Arabic we find the forms *rikābī* and *ṣāḥib al-rikāb*.

Al-Maḳḳarī mentions a personage who was *ṣāḥib al-*

rikāb already to the first Umayyad caliph of Spain (138-72/756-88; cf. *Analectes*, i, 605, reference given by Dozy). In Egypt at the court of the Fāṭimids, there were over 2,000 *rikābī* or *ṣibyān al-rikāb al-khāṣṣ*, so called "on account of their costume (*ziayy*)", whose duties were the same as those of the *silāḥdār* and *tabardār* of the time of al-Ḳalḳashandī (*Ṣubḥ*, iii, 482).

As to the Persian form *rikābdār*, it must have been in use among the Saldjūḳs for we have to admit by analogy that it was from them that the Ayyūbids and later the Mamlūks borrowed the term, like many others of the same kind.

In Persia itself, the term *rikābdār* was replaced by its (Turkish) synonym *üzengi* (or *zengü*) *ḳurčisi* (cf. Chardin, 1711 ed., vi, 112; Père Raph. du Mans, *Estat de la Perse*, 24). According to the *Burhān-i ḳāṭiʿ*, the *rikābdār* were replaced by the *djilawdār* (from *djilaw*, bridle), but it should be noted that the office of the latter was contemporary with and independent of that of *üzengi ḳurčisi*.

In Egypt, the *rikābdār*s of the Mamlūks, also called *rikābī*, were members of the *rikāb-khāna*, like the other "men of the sword" (*arbāb al-suyūf*), such as the *sandjaḳdār, mahmizdār, ḳara-ghulām* and *ghulām-mamlūk*. The *rikāb-khāna* (the *khizānat al-surūdj* of the Fāṭimids) was the depot for harness and in general for all the material required for horses and stables. The heads of this service were called *mihtar* (cf. the Ottoman *mehter* whose duties were different and humbler). The *rikābdār*s were under the command of the *amīr djāndār*, "Marshal of the Court" (cf. the *ḳapudjular kahyasi* of the Ottoman court). See al-Ḳalḳashandī, iv, 12, 20; Khalīl al-Ẓāhirī, 124; Gaudefroy-Demombynes, *Syrie*, pp. liii, lix.

The word *rikābdār* is found in the *1001 Nights*, where it is translated "palefrenier" by E. Gauttier, vi, 168, and "groom" by Burton, x, 365, n. 2. From the context we might also suggest "riding attendant". Bocthor gives (for Syria?) *r-k-bdār* under the French "écuyer (qui enseigne à monter à cheval)" and *r-kkīb al-khayl* under "groom (celui qui monte à cheval)". The synonymous expression *ṣāḥib al-rikāb*, in the sense of "good squire, one who mounts a horse well", is found in the romance of ʿAntara. In 19th and early 20th century Egyptian usage *rikib-dār* or *rakbdār* means "jockey, groom" (Spiro, Habeiche). (According to the *Burhān-i ḳāṭiʿ* [Turk. tr.], the *rikābdār* of Egypt was replaced by the *sarrādj* "saddler" mentioned by Volney and others.)

Turkish usage. In Turkey the office of *rikābdār* must have been taken over directly from the Saldjūḳs, but instead of becoming assimilated to that of humble grooms or *rikābī*s, as in Egypt, it became an important dignity at the sultan's court reserved for a single officer. It is in the reign of Orkhan (*ca*. 1324-62) that we find the first Ottoman *rikābdār*: he was called Ḳodja Ilyās Agha (*ʿAṭā tārīkhi*, i, 94). It was, however, only under Selīm I (1512-20) that the duties of the *rikābdār* were defined. According to the organisation at this time, the *rikābdār agha* was a *khāṣṣ odalî*, i.e. he was one of the *khāṣṣ oda* (and not *odasî*) or "company of the corps (Mouradgea d'Ohsson): chambrée suprême (Castillan); innerste Kammer (von Hammer)" which was the first of the six groups of officers of the household (*ič* or *enderūn*) of the Palace and consisted of the fixed number of 40 officers or pages, including in theory the sultan himself. It had been formed by Sultan Selīm to guard the relic of the Prophet's mantle (*khîrḳa-yî seʿādet*) brought back after the conquest of Egypt (ʿAṭā, i, 208; for details of the organisation, see *ibid.*, and Mouradgea d'Ohsson, vii, 34 ff.). The *rikābdār* was the third of these officers in order of precedence (following the *siliḥdār* and the *čohadār* and preceding the *dülbend aghasî*) and an officer passed in this order from one office to another. The four officers just mentioned were the only *khāṣṣ odalî* who had the right to wear the turban.

According to the usual definition repeated everywhere, the chief duty of the *rikābdār agha* was to hold the sultan's stirrup. It may have been so at first, but none of the documents available show the *rikābdār* performing this duty in practice. Indeed, we have seen [s.v. RIKĀB] who actually were the "*agha*s of the stirrup" entrusted with this duty. Now in spite of his name, the *rikābdār* was not one of these. The Arabic version of the *Āṣaf-nāme* (ed. Beirut, 9, n. 7) and the German translation (in *Türk. Bibl.*, no. 12, 1910, 17, n. 1) have therefore confused *rikābdār agha* and *rikāb aghasî*, which has given rise to an erroneous interpretation of the whole passage (see the corrected translation in RIKĀB).

On the other hand, Western writers of the 16th century mention as the third officer of the household (*ič oghlan*) after the *siliḥdār* and *čohadār* a "cup-bearer"! Theodore Spandone (Spandouyn Cantacazin) calls him *sharābdār* (cf. Garzoni, 1573) and Leunclavius *küpdār* "bearer of the (water)-jar", a name also found in Lonicer (69). This water-carrier was given other names later. D'Ohsson (pl. 158) and the *ʿAṭā tārīkhi* (i, 282) speak of a *ḳoz-bekči* or "keeper of the *ḳoz*, probably for the Arabic-Persian *kūz*(*e*) or water-jar". Wearing a *berata*, he carried a ewer (*mashrapa*) of warm water at the end of a stick. Von Hammer calls this official *mataradji* or bearer of the gourd (*matara* for *maṭhara*). The use of warm water is easily explained by the fact that, as an author writing in 1631 tells us, the third gentleman of the sultan's chamber "carried him 'sherbet' to drink, and water to wash with" (de Stochove, *Voyage du Levant*, Brussels 1662, 84: *Ischioptar*, for *rikābdār*?; cf. Baudier who writes *rechioptar*).

On the other hand, there was an officer whose duty it was to carry a stool (*iskemle*) plated with silver which the sultan used in mounting his horse, when he did not prefer the assistance of a mute who went on his hands and knees on the ground (Castellan, *Mœurs*...., iii, 139; ʿAṭā, *loc. cit.*; d'Ohsson, pl. 157). He was the *iskemle aghasî* or *iskemledjiler bashi*, chosen from among the oldest grooms (*ḳapudju eskisi*). Wearing a *dolama* and a *keče*, he rode like the water-carrier on horseback in processions (*rikāb*). Probably through some confusion, Castellan calls him *rikābdār*, but adds that in his time the *rikābdār* was chosen not from among the *khāṣṣ odalî*, but from the *čawush* (mistake for *ḳapudju*?). Nor must we confuse, as Saineanu (*Influenṭa orientala*, ii, 104, s.v. *schemniaga*) does, the *iskemle* (or *iskemni*) *aghasî* with the special commissioner of this name who was charged, along with the *sandjaḳ aghasî*, to install on the throne (*scamn*) the new *hospodar*s of Moldavia and Wallachia (cf. *Mélanges Iorga*, Paris 1933, 202). There were also *iskemle aghasî* similar to those of the sultan in certain provinces ([Rousseau], *Description du pachalik de Bagdad*, Paris 1809, 27).

Among the special duties of the *rikābdār*, one need only mention the custody and care of the harness, etc. of the sultan (as among the Mamlūks) and his *pabuč* or shoes and *čizme* or boots (*Ḳānūn-nāme* of Süleymān or *Naṣīḥat-nāme*, 132).

It should be noted that, according to the *ʿAṭā tārīkhi* (i, 208), the services of the *rikābdār*, like those of the *čohadār*s, were only required on gala days (*eiyyām-î resmiyye*). This practice is said to have been introduced under Muṣṭafā III (1757-74) out of consideration for the age of these concerned, for they were generally

over 60 and had spent 40 years in the service of the court (*odjak yolu*). According to the same source, these duties were reduced to very little. During the ceremonies (*selāmlik*) of the Prophet's birthday (*mewlid* or *mewlūd*), the two *bayrams* and at the *binish* or ceremonial appearances of the sultan, the *rikābdār* sat opposite the sultan in the imperial barge with the *silihdār, khāṣṣ oda bashi̊* and the two *čohadārs*.

From all this we may conclude that, if there really was a *rikābdār* in the time of Orkhan, he performed not only the duties of a squire but also those of a "cup-bearer", and we know that in Persian *rikābdār* means "cup-bearer" and *rikāb* means also "cup". In time, with the *rikābdār* becoming a more and more important personage, these duties were divided between two special officers: on the one hand, the *koz-bekči* and similar officers, and on the other, the *iskemle aghasi̊*.

The *rikābdār agha*, like the *čohadārs*, received a daily salary or *ʿulūfe* of 35 aspers (*akče*), while the *silihdār* drew 45 (Hezārfenn, ms. Bibliothèque Nationale, ancien fonds turc, fol. 18b). Like the *čohadārs*, they had in their service two *lalas* of the *khāṣṣ oda*, a *karakollukču*, a *baltadji̊* with tasselled caps (*zülüflü*), two *ṣofali̊s*, a *heybedji* and two *yedekčis*. The *rikābdārs* who did not attain the rank of *silihdār* were put on the retired list (became *či̊rak*) with a pension of 60-100,000 piastres. In the absence of the *čohadār*, the *rikābdār* performed the duties of the *silihdār*. On the quarters in the palace occupied by the *rikābdār*, see ʿAṭā, i, 312, 20.

The four chief officers of the *khāṣṣ oda*, including the *rikābdār*, were often called by the name—not official, however—of *koltuk wezīrleri* or "viziers of the armpit" because they had the privilege of touching the sultan, particularly of giving him their hand or taking him by the arm during a walk and they frequently attained the rank of *wezīr* (Cantemir, *Hist. Emp. Ott.*, Paris 1743, iv, 119-21). The *rikāb aghalari̊* [see RIKĀB] were also *koltuk wezīrleri*.

The same four officers were also called *ʿarḍ aghalari̊* because they had the right to present (*ʿarḍ*) to the sultan any petition which reached them, like the master of petitions (Rycaut, Bk. i, p. 97 of the French tr.; Castellan, iii, 185). According to Aḥmed Rāsim (ii, 639), in processions, the *iskemle aghasi̊* had the task of returning to those concerned petitions which were not granted.

The *rikābdārs* were abolished by Maḥmūd II, probably about the same time as the *koz bekči* (in 1248/1832-3; cf. Luṭfī, iv, 68) and the *silāhdār* (in 1246; cf. Luṭfī, iv, 61); see von Hammer, *Hist.*, xvii, 191.

Bibliography: See the works already quoted above, of which the most important is the *ʿAṭā tārīkhi*. See also Aḥmed Rāsim, *Tārīkh*, i, 186, 479, ii, 526; von Hammer, *Hist.*, vii, 15, for references not used here; İ.H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, index.

(J. Deny)

RIKK [see RAKK].

RIND (P.), a word applied in Persian with a contemptuous connotation to "a knave, a rogue, a drunkard" or "a debauchee"; in the terminology of poets and mystics it acquired the positive meaning of "one whose exterior is liable to censure, but who at heart is sound" (Steingass, s.v., after the *Burhān-i kāṭiʿ*). The etymology of *rind* is unclear. It is not an Arabic loanword, in spite of the existence of the broken plural *runūd*, a learned form used next to the regular Persian plural *rindān*. The abstract noun *rindī* denotes the characteristic behaviour of a person thus qualified.

Mediaeval historians refer to *rinds* collectively as freebooters associated with the *ʿayyārūn* [*q.v.*] and the *awbāsh*. Locally they could be a political factor of some importance, as it appears from phrases like "the *rinds* of Baghdād" or "the *rinds* of Khʷārazm". Mention is also made of rural groups (*rindān-i rūstā*). They were further characters in popular literature. Bawdy tales about the *rinds* were considered to be unsuitable for a royal banquet (Ibn Isfandiyār, *Taʾrīkh-i Ṭabaristān*; see for these and other examples from historical sources, Dihkhudā, *Lughat-nāma* s.v. *rind*).

In the 5th/11th century, the Ismāʿīlī poet Nāṣir-i Khusraw [*q.v.*] still condemned their behaviour outright when he rebuked the world for "approving in its many children only that which results in bad behaviour and debauchery (*badfiʿlī-u rindī*)" (*Dīwān*, 493,-3). Even two centuries later, Saʿdī [*q.v.*] looked unfavourably upon their violent attacks on the Ṣūfīs and upon their sensuality (*Gulistān*, 107, 140).

Already at the beginning of the 6th/12th century, however, Sanāʾī [*q.v.*] gave ample evidence of a reversed appreciation. In his poetry, the word belongs to a cluster of terms and motifs peculiar to the *kalandariyyāt* [see KALANDARIYYA]. In this mystical genre, it came to denote the type of the antinomian mystic, like the cognate terms *kalandar* and *kallāsh*. The abandonment of all self-interest by the *rinds* is contrasted to the insincerity of ascetics (*zāhid*) and devout believers (*ʿābid*) whose piety is merely a mask for their selfishness.

After Sanāʾī, Farīd al-Dīn ʿAṭṭār [*q.v.*] further developed the genre in his *ghazals* and quatrains. The *rinds* are also frequently mentioned by Ḥāfiẓ [*q.v.*]. The "vices" he ascribes to them are being frantic lovers, ogling beautiful boys (*naẓarbāzī*), excessive drinking and gambling. They are beggars who have squandered all their earthly possessions (*muflis, pākbāz*) and have "set the world to fire" (*ʿālamsūz*). Willingly they destroy their good reputation, drinking the dregs of wine and suffering for the sake of love.

The reversal of terms like *rind* in the usage of the poets is related to the attitude of the *malāmatiyya* [*q.v.*], who from the 4th/10th century onwards dominated the spiritual atmosphere of Khurāsān. In a telling anecdote about Abū Saʿīd Mayhanī [*q.v.*] it is related that he learned the true meaning of *pākbāzī* from the *rindān* who honoured him as the "*amīr* of the gamblers" (Ritter, *Das Meer der Seele*, 202). Eventually, the term was adopted into standard mystical terminology. Shams al-Dīn Lāhidjī (d. 912/1506 [*q.v.*]), commenting on Maḥmūd Shabistarī's [*q.v.*] *Gulshan-i rāz*, defined the *rind* as someone who is completely detached from all qualities and conditions of the multitude of created being "having removed everything with the rasp (*randa*) of obliteration and effacement". Such a person would no longer be bound to anything, not even to the discipline of a spiritual teacher (*Mafātīḥ al-iʿdjāz*, 636).

The force of this imagery is not yet quite exhausted, though it has been used over and again by countless poets and mystics. In the present century, it could still serve Sir Muḥammad Iḳbāl [*q.v.*] as an item of his poetry which aimed at the revitalisation of Islam.

RISĀLA [see rasūl].

RISĀLA (a.), an Arabic term attested at a very early stage, in the ancient inscriptions of Arabia, with the meaning of message or of mission (G. Lankester Harding, *An index and concordance of pre-Islamic names and inscriptions*, Toronto 1971, 277).

In fact, *risāla* has many meanings; it has signified message, missive, letter, epistle and monograph; from the 5th/11th century onwards it could also be a synonym of maḳāma (see below, section on *Risāla* and *maḳāma*). The synonyms recorded are *kitāb* [*q.v.*], *khiṭāb* (for Ps.-Ibn al-Mudabbir in the 3rd/9th century, *risāla* and *khiṭāb* were synonyms, *Ṣafwat*, iv, 224; on numerous occasions, the Ṣāḥib Ibn ʿAbbād had recourse to the same term when speaking of his letters, *Dīwān rasāʾil al-Ṣāḥib Ibn ʿAbbād*, ms. B.N. arabe, 3411, fols. 152a, 176b, 186a, 189a, 194b; Saʿd b. Ḥaddād al-Munadjdjim, 3rd/9th century, did likewise, Yāḳūt, *Irshād*, iv, 231, v, 381); *mīmar* (from Aramaic, attested in philosophy); *maḳāla* (Ḥādjdji Khalīfa, ii, 1781, l. 22; 1783, ll. 2, 7; the *risāla* of Ibn Sīnā, *Risālat al-Ḳuwā al-insāniyya wa-idrākātihā*, was also entitled by him *al-Maḳāla fī ʾl-ḳuwā al-insāniyya*, see *ibid.*, 1783, l. 27); *lisān* (al-Ḥuṭayʾa, *Dīwān*, Beirut 1967, 71; al-Mufaḍḍaliyyāt, Oxford 1918, 482, l. 7; Aʿshā Bāhila, *Gedichte von Abū Baṣīr Maimūn b. Ḳais al-Aʿshā*, London 1928, 266, iv, v. 4); *maʾluka* (al-Khansāʾ, *Dīwān*, ed. Cheikho, 188, l. 17; Suḥaym ʿAbd Banī al-Ḥashās, *Dīwān*, Cairo 1950, 19); *ṣaḥīfa* (al-Djāḥiẓ, *Ḥayawān*, iii, 48, l. 4; al-Akhṭal, *Dīwān*, 387, l. 22); and *kalima* (*Aghānī*³, xii, 246, l. 9; xiii, 345, l. 6).

1. In Arabic.

Maḳāla, lisān, kalima and *maʾluka* denoted an oral message. With the exception of the first, which was subsequently to denote a text (al-Djāḥiẓ, *Ḥayawān*, i, 12), the other terms retained their initial meaning. The etymology of these terms played a decisive role in this respect. The case of *kalima* and *lisān* requires no further explanation. For *maʾluka*, it is appropriate to note that, according to the lexicographers, the root *aluka* signifies "to champ the bit" when it is used in reference to a horse; it is thus closely related to speech (*al-Aghānī*³, x, 222, l. 19, the poet ʿAlī b. al-Djahm; Abū Firās al-Ḥamdānī, *Dīwān*, Beirut 1944-5, iii, 354, v. 42). According to the lexicographer al-Layth, "*alūk* is *risāla*; it is denoted thus because words are chewed by the mouth" (*LʿA*, s.v. *alaka*, ed. Ṣādir, Beirut, x, 292, ll. 7-8; *K. al-ʿAyn*, s.v.). (In reality, *maʾluka*, etc., is a metathesis of the root *l-ʾ-k*).

I. Evolution of the term

Risāla (pl. *rasāʾil, risālāt* being essentially Ḳurʾānic), denoted originally the oral transmission of a message. In pre-Islamic times, in the Ḳurʾān and throughout the Umayyad period, the term demonstrated a remarkable stability and remained closely linked to speech. It is the spoken message. In a tradition relating to al-Ḥārith b. Djabala, it is stated specifically (*fa-akhbarahu bi-risālati al-Ḥārithi bni Djabalata fa-rakana ilā ḳawlihi*), sc. he reported to him (communicated to him orally) the message of al-Ḥārith b. Djabala, he relied entirely on his words (Ibn al-Anbārī, *Sharḥ al-ḳaṣāʾid al-sabʿ al-ṭiwāl al-djāhiliyyāt*, Cairo 1969, 480). Poetry confirms this state of affairs beyond all expectation. The following structure is attested there: "*abligh* (followed by a name) *risālatan* (communicated to (a certain person) the content of the following message"; the text of the message follows, this clearly showing that it is a case of oral communication (*Ḥamāsa*, Bonn 1828, 186, l. 6, Riyāḥ b. Ẓālim al-Murrī; Zuhayr b. Abī Sulmā. ed. Ahlwardt, xvi, v. 25; for the Umayyad period, al-Farazdaḳ, *Dīwān*, Paris 1870, 68, v. 12; ʿUmar b. Abī Rabīʿa,. *Dīwān*, Leipzig 1901-9, 117, v. 12). Furthermore, al-Kāsānī (d. 587/1191), a highly original personality, has described this situation well: *al-risālatu hiya an yursila rasūlan ilā radjulin ... fa dhahaba ʾl-rasūlu wa-ballagha ʾl-risālata li-anna ʾl-rasūla safīrun wa muʿabbirun ʿan kalāmi ʾl-mursili nāḳilun kalāmahu ilā ʾl-mursali ilayhi* ("*risāla* consists in sending a messenger to a person... The messenger goes and conveys the message, since the bearer is an envoy who expresses (through direct speech) and conveys the speech of the sender to the addressee" (al-Kāsānī, *K. Badāʾiʿ al-ṣanāʾi fī tartīb al-sharāʾiʿ*, Cairo 1328/1910, v. 138).

The transference to written text takes place under the reign of Hishām b. ʿAbd al-Malik (105-23/724-43). It is associated with Sālim Abu ʾl-ʿAlāʾ. His translation of the written correspondence between Alexander and his teacher includes in its title the term *risāla: Risālat Arisṭāṭālīs ilā ʾl-Iskandar fī siyāsat al-mudun* (M. Grignaschi, *Le roman épistolaire classique conservé dans la version arabe de Sālim Abū l-ʿAlāʾ*, in *Le Muséon*, lxxx [1967], 219, 223). In a eulogy addressed to al-Saffāḥ, the first ʿAbbāsid caliph, the poet Abū Dulāma, for his part, evokes a *risāla* of the chieftain of the Banū Asad written (*takhuṭṭuhā*) by a female scribe (*Aghānī*³, x, 266, ll. 12-13). Thus a significant mutation is introduced into the genre; the former meaning disappears almost completely, except for a few isolated vestiges encountered from time to time in the course of the texts (al-Ṣūlī, *K. al-Awrāḳ*, Cairo 1936, 208; *Aghānī*³, xx, 56; Yāḳūt, *Irshād*, ii, 4-5, vi, 106, 166).

It is not unusual for the *risāla*, a written message, to adopt the form of a rhymed poem. It is attested throughout the ʿAbbāsid period. Here however, unlike in the *Djāhiliyya*, these notes are written. The Arabic holdings of the Bibliothèque Nationale include a manuscript intitled *Madjmūʿ murāsalāt wa-tahānī* (arabe, 3431); all the texts included are letters in poetic form. Furthermore, numerous stylists had recourse to this process, notably Ibrāhīm b. Hilāl al-Ṣābī and al-Sharīf al-Raḍī, following the well-known pattern of poems adopting identical metres and rhymes (*Rasāʾil al-Ṣābī wa ʾl-Sharīf al-Raḍī*, Kuwait 1961, 7-62, section *al-mukātabāt bi ʾl-shiʿr*, comprising eleven *ḳaṣīdas*).

This process of transference from oral usage to the written letter is, after all, quite natural. Constable and Hunger observe in this context that all ancient civilisations used the oral message exclusively at the outset (G. Constable, *Letters and letter-collection*, in *Typologie des sources du Moyen Age*, fasc. 17, Turnhout 1976, 48; H. Hunger, *Die hochsprachliche Literature der Byzantiner*, i, *Philosophie, Rhetorik, Epistolographie*, Munich 1978, 199).

II. The poetry of the *Risāla*

In order to understand the transformation of this structure, it is essential to take account of the crucial role of Greek letters. The scribes of Damascus were familiar with the epistles of the Greeks, by way of

Hellenistic and Persian culture. As a result of the works of Mario Grignaschi, this influence has been established beyond doubt. In fact, one of the most illustrious representatives of this circle, Sālim Abu 'l-ʿAlāʾ (see above), the *mawlā* of Saʿīd b. ʿAbd al-Malik, in his translation of the letters of Aristotle to Alexander, included two chapters of great interest, *al-Siyāsa al-ʿāmma* and *al-Siyāsa fī tadbīr al-riʾāsa*: they contain, in effect, quotations and indications proving that he has followed "the outline of the Greek letter more closely than has sometimes been admitted" (*Les "Rasāʾil Arisṭāṭālīsa ilā l-Iskandar" de Salim Abu l-ʿAlāʾ et l'activité culturelle à l'époque umayyade*, in *BEO*, xix [1965-6], 9). Furthermore, ch. x, of classical origin, which has been published in an abridged version by Lippert under the title *Peri Basileas*, is identical in all respects to the Arabic ms. of Sālim (Köprülü 1608) except in one detail. The Arabic translation has added here two extracts from the *Testament d'Ardashīr*; Sālim has thus proceeded to an integration of the Greek foundation to the Sāsānid foundation (*ibid.*, 14).

Now, according to Ibn K͟hallikān, Sālim was the protector of ʿAbd al-Ḥamīd b. Yaḥyā al-Kātib and his master in the art of writing (*Wafayāt al-aʿyān*, Beirut 1397/1977, iii, 230), in other words the founder of the ʿAbbāsid *risāla* in all its variety (J.D. Latham, *The beginnings of Arabic prose: the epistolary genre*, in *The Cambridge history of Arabic literature*, Cambridge 1983, 155-79; Hannelore Schönig, *Das Sendschreiben des ʿAbd al-Ḥamīd b. Yaḥyā an den Kronprinzen ʿAbdallāh b. Marwān II*, Stuttgart 1985, introd. to the translation, 3-27).

The risāla *as monograph*

The transmission of knowledge under the first caliphs of the Marwānid branch was accomplished in the form of *risālas*. ʿAbd al-Malik b. Marwān, wishing to know more of the events which had accompanied the beginnings of Islam, addressed himself to ʿUrwa b. al-Zubayr, who replied to him with a written missive containing the information requested. These missives were preserved by al-Ṭabarī to constitute the basis of his documentation for the event in question (*Annales*, i, 1180-1, 1634-6, 1770, 1284-6). This framework offered numerous facilities and allowed the writer to lend to his work the tone of a direct conversation. As time passed, the addressee of the *risāla* was solicited and even invented by the writer himself with a view to exposing his ideas on a question which interested him particularly (A.F.L. Beeston, *The epistle on singing girls by Jāḥiẓ*, London 1980, § 3, 2-3; G. Lanson, *Choix de lettres du XVII*ᵉ *siècle*, Paris 1913, p. xxv). This sub-genre was to enjoy lasting popularity. Numerous authors, from the time of ʿAbd al-Ḥamīd al-Kātib to the present day, have made frequent use of it.

Moreover, there was the opportunity of filling the letter-missive with personal ideas and nonconformist concepts which *adab* could not or would not accommodate, it being regulated by very strict rules. Knowledge (*ʿilm*), like literature, was considered the ultimate canonical genre; for the same reason, it was doomed to cantonisation in compilation; otherwise, there was the risk of impairment. Every *k͟habar* mentioned, real or fictitious, was endowed with an *isnād* which accentuated its status as a received text, rather than the product of independent thought. The *risāla*, the only remaining framework in prose, lent itself perfectly to the role of receptacle for personal thoughts, nonconformist ideas and texts based on analysis and not on quotation. This is why the most original texts were conceived as *risālas*. In politics, one of the most thorough analyses of religious, political and military institutions under the early ʿAbbāsids is supplied by the *Risāla fī 'l-ṣaḥāba* of Ibn al-Muḳaffaʿ (Ch. Pellat, *Ibn al-Muḳaffaʿ conseilleur du calife*, Paris 1976, 1, 4, 12). In literature, the *Risālat al-tarbīʿ wa 'l-tadwīr* by al-D̲j̲āḥiẓ and the *Risāla al-hazliyya* of Ibn Zaydūn presented the most successful examples of humorous texts (O. Rescher, *Excerpte und Übersetzungen aus der Schriften des... Jāḥiẓ*, Stuttgart 1931, 212-25; *al-Fikr*, xii/3, 54-60; T. Ḥusayn, *Min ḥadīt̲h̲ al-s̲h̲iʿr wa 'l-nat̲h̲r*, 88-99; H. D̲j̲ād Ḥasan, *Ibn Zaydūn*, Cairo 1375/1955, 266-9, 274-5). More generally, *Risālat al-g̲h̲ufrān* by Abu 'l-ʿAlāʾ al-Maʿarrī and *Risālat al-tawābiʿ wa 'l-zawābiʿ* by Ibn S̲h̲uhayd [*q.v.*] may be considered triumphs of classical Arabic literature. In poetry, the most penetrating analysis of the aesthetic rules governing poetry and the epistolary art, and also the most systematic, borrowed the same formal framework (A. Arazi, *Une épître d'Ibrāhīm b. Hilāl al-Ṣābī sur les genres littéraires*, in *Studies in Islamic history and civilization in honour of Professor David Ayalon*, Jerusalem and Leiden 1986, 473-505).

Indisputably, the *risāla* comprises, here, all the aspects which constitute the monograph or the essay. Henceforward, this framework was to play a role in all sectors of Arab culture: philosophy, grammar, lexicography and *fikh*—they all adopted it as a means of producing their finest achievements. The *Rasāʾil* of D̲j̲āḥiẓ dealt with a broad spectrum of theological, social, political and literary problems and count among the most profound analyses of the Baṣran thinker, perhaps of the whole of ʿAbbāsid literature. The format itself is a major contributor to this success: each title studies a single problem, which encourages reflection (Ch. Pellat, *The life and works of Jāḥiẓ*, London 1967, 14-26). It has even been written of some of them that they are psychological and moral studies in which the author is aware of producing original work; this is not a regular occurrence in the works of the 3rd/9th century (Ch. Vial, *Al-Djāḥiẓ, quatre essais*, IFAO, Cairo 1976, 3). The same phenomenon is attested in the work of a polygraph of the Mamlūk period, D̲j̲alal al-Dīn al-Suyūṭī (d. 911/1505 [*q.v.*]), whose principal claim to fame was his faculty for compilation. In his epistles, he attacked the abuses with which the society of his time was confronted, refraining from compiling for the pleasure of compiling.

However, it is in theology, in philosophy and in the domain of the sciences that this phenomenon seems to have taken on the broadest role. The translation, or perhaps the paraphrase, in Arabic, of the correspondence between Alexander and Aristotle, seems to have had an immediate impact on the framework and the format of Arabic religious writings relating to faith. Written texts were seen as indispensable for the formulation of all things concerning religious belief. Another external source, which was apparently to have a very profound influence on the *risāla*, was the translation into Arabic of the New Testament, which includes a very extensive section of epistles attributed to St. Paul and St. Peter. Systematically, they include in their titles the name of the region destined to receive them. It is interesting to note a similarity with the letters of certain *mutakallimūn* (see below).

Among the most ancient, a significant number of theological treatises are *risālas* attributed to historical figures (al-Ḥasan al-Baṣrī) and addressed to no less historical figures (the Umayyad caliphs). All these epistles have recently been the object of philological analysis by Michael Cook, *Early Muslim dogma*, Cambridge 1981 (with very comprehensive bibliography). The dating of these documents continues to be problematical, and expert opinion is divided as to their paternity; this last is accepted by van Ess, whilst

others have not hesitated to draw attention to certain anachronisms featuring in these documents. Whatever the case, it seems very reasonable to place them at the end of the Umayyad dynasty or under the first ʿAbbāsids. The authors, most of them *Tābiʿūn* or Successors, chose this framework on account of its similarity to the letter, in other words, as a concrete message which would make their theological statements more easily understood. Later, numerous theologians made use of the epistle to propound their doctrines. Al-As̲h̲ʿarī had recourse to it in two instances: the first in the well-known *Vindication of the engagement in speculative theology* (R. MacCarthy, *The theology of al-Ash*ʿ*arī*, Beirut 1953) and the second in *Risāla ilā ahl al-t̲h̲ag̲h̲r*. The second in fact constitutes a brief exposition of the theology of the author (publ. in *Ilahiyat Fakültesi Mecmuası* (Istanbul), viii [1928]; on the two epistles, see D. Gimaret, *La doctrine d'al-As̲h̲ʿarī*, Paris 1990, 13-16). The *responsa* (*fatāwā, d̲j̲awābāt, ad̲j̲wiba, masāʾil*) constitute an ancient ramification of theological epistles. Numerous works belonging to this category have been attributed to Abū Hās̲h̲im al-D̲j̲ubbāʾī (d. 321/933), one of the most eminent Baṣran Muʿtazilī thinkers; these also followed the previously-mentioned pattern, with a title bearing the name of the addressee and his country of residence. Worth mentioning, by way of example, are the *Bag̲h̲dādiyyāt* and the *ʿAskariyyāt* (Gimaret, *Matériaux pour une bibliographie des D̲j̲ubbāʾī*, in *JA*, cclxiv [1976], 308, 321, and 286, a reply from his father Abū ʿAlī to the inhabitants of K̲h̲urāsān). Numerous collections, identical in every respect, were mentioned by the Muʿtazilī *ḳāḍī* ʿAbd al-D̲j̲abbār (d. 416/1025), such as *al-Rāziyyāt, al-K̲h̲ʷārazmiyyāt*, etc. (*al-Uṣūl al-k̲h̲amsa*, ed. ʿA. Ut̲h̲mān, Cairo 1967, 21-3).

A similar process is in evidence in the epistles of Ibn Taymiyya (*Mad̲j̲mūʿat al-rasāʾil al-kubrā*, Beirut 1980, i-ii, repr. of the original edition). In addition to the usual framework, the introduction includes here the name of the questioner, the heading of the question and the mention of other circumstances which contribute to fix his *risāla* more firmly in reality. Thus the differences between *fatāwā* and epistles tend to become blurred. Another characteristic of theological *risāla*s, which could prove to be of great importance, since it is capable, possibly, of determining the character of the discussion, is the opportunity given to the author of providing a detailed account of his position on a point of doctrine. Such an opportunity was readily seized upon by the author, who expounded at length the subject which was being debated. These theological responses, thus enlarged, were transformed into veritable monographs; the question which is the point of departure then appears to arise from the incident (see below, on Judaeo-Arabic). The exposition of theological ideas, in the form of a monograph, in response to questions posed to an author, is known in Syriac sources (for example, in the work of Jacob of Edessa, late 7th-early 8th century), taking its inspiration, perhaps, from the Greek tradition through the intermediary of the Byzantines (Cook, *op. cit.*, 145-6). The most ancient manifestations of this framework in Christian theological literature written in Arabic are attested in the collection of *Mayāmir* attributed to the "Melkite" bishop Theodore Abū Ḳurra (d. 820, see G. Graf, *GCAL*, ii, 7-26; I. Dick, *Théodore Abū Ḳurra*, in *Proche-Orient Chrétien*, xii [1962], 209-23, xiii [1963], 114-29). It is appropriate to observe that the Aramaic *mīmar* (< *mīmrō* = *mēmrā*) might well have constituted the antecedent of the Arabic term *maḳāla* (J. Wansbrough, *The sectarian milieu*, Oxford 1978, 104-5, where he expresses the hypothesis of the existence of Christian theological treatises in Arabic in an earlier period).

Although numerous questions and uncertainties have been presented, with good reason, in the epistolary framework, many people have sought, and have succeeded, through its intermediacy, in preserving prolonged theological discussions owed to those who were unanimously recognised as authorities on the subject.

It should be noted that, at a very early stage, in various domains of the religious sciences, the term *risāla* was applied to numerous works, lists of which are to be found in various histories of Arabic literature. It is worth mentioning, for the sake of example, two of the most characteristic examples, these being the *Risāla* of al-S̲h̲āfiʿī (ed. A.M. S̲h̲ākir, Cairo 1940) and the *Risāla* of Ibn Abī Zayd (d. 386/996), a compendium of Mālikī *fiḳh* (Sezgin, *GAS*, i, 478). In philosophy, the *risāla* dates back to an early stage of the discipline. Al-Kindī, *faylasūf al-ʿArab*, revealed the best aspects of his system (and of his scientific work) in the *Rasāʾil al-Kindī al-falsafiyya* (ed. M.ʿA. Abū Rīda, Cairo 1950-3, i-ii). In any event, the resemblance of this work to the epistolary genre goes beyond the use of the epistolary formula attested in the introduction and the recourse to formal dedications (see e.g. the first lines of the epistle/article on metaphysics dedicated to the son of al-Muʿtaṣim, tr. A. Ivry, *Al-Kindi's Metaphysics*, Albany 1974, 55, and notes to p. 115). The same applies to the philosophical works of Abū Bakr al-Rāzī (d. *ca.* 318/930 [*q.v.*]), wo used the *risāla* as a vehicle for his ideas.

During the 3rd/9th century, in philosophy as in other branches of learning, the epistle became the format habitually chosen by the authors of monographs. In fact, from the last quarter of the 3rd/9th century onwards, the equivalent terms *risāla* and *maḳāla* ("discourse, article") signify treatise or monograph. Hundreds, if not thousands of treatises on the different branches of science (medicine, mathematics, pharmacology, etc.) opt for this structure. Special mention should be made of a collection of epistle-monographs, on account of its scale but also on account of its importance, the *Rasāʾil Ik̲h̲wān al-Ṣafāʾ* (numerous editions, e.g. 4 vols., Beirut 1957) which dealt with human knowledge classified into four major groups (mathematics, logic, natural sciences and metaphysics) and discussed these systematically in 52 letters. Adopting the form of letters written in the first person plural, they are addressed to a single addressee, to a single "brother". The format is that of a personal correspondence maintained with the addressee; also included, especially in the closing paragraphs, are various kinds of good wishes, advice regarding morals and other matters. This may be seen as an attempt to give a personal flavour to these theoretical discussions.

In this area, a special place belongs to the Andalusian philosopher Ibn Bād̲j̲d̲j̲a (d. 579/1183 [*q.v.*]), who seems to have displayed a marked predilection for the genre. His principal treatises are epistles (see *Rasāʾil Ibn Bād̲j̲d̲j̲a al-ilāhiyya*, Beirut 1968). The abridged commentaries of Ibn Rus̲h̲d on the works of Aristotle (the *Epitomes*, Ar. *D̲j̲awāmiʿ*), in most cases bear in the manuscripts the title *rasāʾil* and the printed compilation of these extracts is intitled *Rasāʾil Ibn Rus̲h̲d* (Ḥaydarābād 1947). On the other hand, this philosopher wrote numerous treatises which he called *maḳālat* (*Talk̲h̲īṣ al-samāʿ wa 'l-ʿalāmāt*, Fez 1984, 32-4).

The term monograph should not mislead. It has not always denoted a short work; a *risāla* can extend over

several volumes (cf. the *Risāla* of Ibn Abī Zayd on Mālikī *fiḳh*; the *Risālat al-ṣadāḳa wa 'l-ṣadīḳ* covers more than 400 pages; etc.).

Writers of *risālas*, not being obliged to observe constraining conventions for fear of being considered at fault, as was the case with *adab*, were permitted to give free rein to their creative spirit and express themselves with total liberty. Furthermore, a cultural phenomenon comes into being: with the creation of new genres, in the absence of appropriate terminology, the work receives the title of *risāla*. Thus the original title of the *riḥla* of Ibn Faḍlān is nothing other than *Risālat Ibn Faḍlān* (ed. Sāmī Dahān, Damascus 1379/1959), no doubt on account of its unedited nature and the impossibility of integrating it into one of the conventional literary categories.

Risāla *and autobiography*

A vital aspect of the literary *risāla* and of the personal letter, namely, its confessional nature, confers on this type of writing an autobiographical character which is unusual in classical Arabic texts. Ch. Vial has rightly stressed this aspect in the four epistles of al-Djāḥiẓ which he has studied (*Quatre essais*, 7). Abū Ḥayyan al-Tawḥīdī seems to have had a marked predilection for this genre of personal revelation. His *Risālat al-ṣadāḳa* contain numerous very intimate passages, of disconcerting candour. To an even greater extent, in his *Risāla fi 'l-ʿulūm*, which sets out a classification of sciences, the author unburdens himself, recounts intimate events, reveals his most secret thoughts, informs the reader of his beliefs and takes the reader into his confidence in describing his states of mind and justifying his behaviour (M. Bergé, *Risāla fi 'l-ʿulūm*, in *BEO*, xviii, 244-6; he does the same thing at the beginning of the *Risālat al-ḥayāt*, Damascus 1951, 52-4). Any study of ancient autobiography must take into account the contribution of this thinker. In personal letters, this aspect has sometimes taken on a surprising intensity. The library of the University of Leiden possesses the third volume of the *Correspondence* of Abū Hilāl al-Ṣābī (ms. Or., 766, fols. 115a-118b). In a letter addressed to his son, al-Ṣābī, written at the age of 42, he feels that he is old and believes that he can detect in his dreams and in the incidents of daily life premonitions of death. Accordingly, he reviews the balance-sheet of his life, informs his son of the love that he holds for his wives, his fondness for animals and the bribes that he has handled; he declares his weariness and gives advice to his son.

Style

This type of correspondence and exchange of ideas greatly interested literary circles, stylists and amateur scholars among the aristocracy, and this led to the emergence of texts of a high literary standard. In fact, the very choice style verges on the precocious. The distilled language, laden with tropes, fine allusions, plays on words, verbal tricks and metalepses (*tawriya*), and is constantly rebarbative and not easily understood. Rhymed prose, almost of necessity, obliges the stylists to practise what are virtually verbal acrobatics. In a letter opposing the principle of fasting, al-ʿAmīd Abū Abd Allāh b. al-Ḥusayn b. Muḥammad employs rhymed periods of such precise equality that the editor of the *Yatīma* mistakes them for poetry and sets out the lines accordingly (al-Thaʿālibī, *Yatīmat al-dahr*, ed. Cairo, iii, 8). A similar process is evident in Byzantine culture (Hunger, 206). Such style, described by Karlsson as "ceremonial", can appear irritating. This cult of the form can only be understood in the light of the triumph of *badīʿ*; in the cultural environment, this means accepting the notion that educated literature submits of its own accord to a form of expression considered noble.

Undoubtedly, alongside such literary letters, there always existed letters of no literary pretension. These functional missives paid little regard to form; they were written in every-day language and discarded by the addressee once they have been read and their contents noted. In the opinion of scholars, such letters were not worth preserving. Having no literary merit, they were not considered "true" letters. Only a few score of them, written on papyrus, have survived, and these have been published by Y. Ragheb (*Marchands d'étoffes du Fayyoum d'après leurs archives* (*Actes et lettres*), i-iii, Cairo 1982-92). A vast gulf separates these brief texts, adopting the language of the vernacular, from the letters of scholars written in the purest literary Arabic.

III. The stylists

The extravagant elegance of style demands an unsurpassed mastery of the language. Gaining the status of an accredited epistolographer was the outcome of a long apprenticeship. The aspirant was obliged as a first step to familiarise himself with the most successful compositions of his predecessors (*rasāʾil al-mutaḳaddimīn*), with archaic poems, chronicles, biographies of eminent persons and amusing anecdotes, all of this leading to an enrichment and diversification of language. It was also necessary to study the *maḳāmāt*, the discourses and debates of the Ancients, the *maʿānī* of the *ʿadjam*, the maxims of the Persians (Ḍiyāʾ al-Dīn Ibn al-Athīr, *al-Mathal al-sāʾir fī adab al-kātib wa 'l-shāʿir*, Beirut 1411/1990, i, 87-148). Furthermore, the fact that their writings were read in public and their letters passed from hand to hand to be copied and annotated (Yāḳūt, *Irshād*, v, 329, 351, vi, 67-8), gave them a prominent position in society. It may be supposed that whole generations of preparation and training were required to produce the most illustrious of the stylists. The epistolary art underwent a process identical to that of poetry in the training of artists. The *dīwāns* of poets are matched by the *dīwāns* of *mutarassils* (Ibn al-Nadīm, *Fihrist*, Cairo n.d., 244, gives a list of 70 collections of letters attributed to epistolographers of the 2nd-3rd/8th-9th centuries. Through the good offices of Ibn al-Nadīm and his systematic approach, it is possible to trace the various stages, often spread over many decades, necessary to train a major stylist.

A good example is the family of the Banū Wahb, a veritable dynasty of *mutarassils*; its members were the descendents of Ḳanān b. Mattā, the eponymous ancestor. Immediately after the conquest of Syria, he held the post of *kātib* in the service of Yazīd b. Abī Sufyān; when he was appointed governor of Syria, Muʿāwiya retained him in the same post. He was "inherited" by Yazid b. Muʿawiya, and died during the latter's caliphate. His son Ḳays replaced him in his post, which he retained under ʿAbd al-Malik and Hishām. His grandson, al-Ḥuṣayn b. Ḳays b. Ḳanān b. Mattā, kept the same functions. He seems to have led an eventful life; after the assassination of Marwān II, he found a patron in Ibn Hubayra, then entered the service of al-Manṣūr and of his son al-Mahdī. The great-grandson, ʿAmr b. al-Ḥuṣayn b. Ḳays, followed the same course, subsequently serving Khālid b. Barmak. The fifth and sixth representatives, Saʿīd b. ʿAmr b. al-Ḥuṣayn and Wahb b. Saʿīd b. ʿAmr b. al-Ḥuṣayn served the Barmakids until their disgrace, subsequently supervising the correspondence of Ḥasan b. Sahl. The seventh link in the chain, Sulaymān b. Wahb b. Saʿīd b. ʿAmr b. al-Ḥuṣayn, enjoyed the status of a great stylist; in turn, starting

at the age of 14 years, he supervised the correspondence of al-Maʾmūn, of Aytākh and of Ashnās before becoming the vizier of al-Muʿtamid. His letters were compiled in a *dīwān*. His brother, al-Ḥasan b. Wahb b. Saʿīd b. ʿAmr b. al-Ḥuṣayn b. Ḳays b. Ḳanān b. Mattā, voluntarily chose a literary career; in addition to his merit as *mutarassil*, he was considered an excellent poet. In addition, his letters were judged to be of superior quality and worthy of compilation in a *dīwān* (*Fihrist*, 177). This text provides a fascinating slice of history; veritable dynasties of stylists, experienced in the affairs of state, retaining their posts in spite of major changes and vicissitudes affecting the world of Islam. On the strictly literary level, this continuity encouraged the development of stable literary forms in the composition of letters. Furthermore, seven generations had to elapse before members of these families were enabled to compose collections of *risālas*. At the same time, it is possible to sense the genuine appreciation and respect felt by society towards the *risāla*.

IV. The *Risāla* and society

In ʿAbbāsid society, just as in ancient society (Constable, 11), letters were intended to be read by more than one person. The stylist was aware of this even before writing, and it was for this reason that he aspired to elegance rather than spontaneity and drew both the basis and the form of his letters from established formulae. Even an administrative letter should be composed according to artistic and literary criteria; in society's view, it belonged to the domain of the fine arts, and accordingly, the *kātib* was considered above all an artist (al-ʿAskarī, *K. al-Ṣināʿatayn*, Cairo 1372/1952, 69; al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, ii, 327).

At the same time, the people of that period tended to confuse the *risāla* genre with its practical and utilitarian functions. In their view, the epistolary art was a means of addressing the most important aspects of mediaeval Islamic society, such as the levying of land tax (*kharādj*), the fortification of frontier zones and the colonisation of distant regions; the *kātib* was called upon to soothe discord, to exhort to *djihād*, to engage in controversy with a particular sect and to congratulate the recipient of an honour or to offer condolences in the event of misfortune (Arazi, *Une épître sur les genres littéraires*, 490 and n. 64, 503).

Moreover, this was an idle and frequently bored society which looked to the letter as a means of distraction. Once a letter was received, and after numerous readings, the addressee invited his friends to a session at which the letter was read and re-read (*Madjmūʿ rasāʾil wa-maḳāmāt*, ms. B.N. Paris, arabe 3923, fols. 60b-61a; al-Thaʿālibī, *Yatīma*, iii, 312), and especially eloquent passages were admired (Yāḳūt, *Irshād*, v, 351; on reception of a letter from Ibn al-ʿAmīd, the meeting held to hear it resembled a veritable *madjlis*, complete with drinks and selected delicacies).

Such public reading was closely matched by the ceremonial of Byzantine letters. In fact, in Islamic territory, the practice was treated with rather less intensity. The Byzantine stylists of the middle and late period, such as Libanius, Synesius, Psellus and Nicephorus Gregorias, regarded the spectacle as a *theatron*, and the listeners as an audience (H. Hunger, *Die Hochsprachliche profane Literatur der Byzantiner. I. Philosophie, Rhetorik, Epistolographie, Geschichtsschreibung, Geographie*, Munich 1978, 210-11).

V. The letters

Various classifications have been suggested by modern theorists of the letter. Hunger proposes a distinction between the private letter; the literary letter (Hunger, 204); the didactic letter (Hunger, 205); the cliché letter (*Klischeebrief*), where all the correspondence is constructed according to accepted models dealing with immutable subjects; literary private letters (*literarischer Privatbriefe*), a median way between private and literary letters; and, finally, letters without any literary pretension (Hunger, 206, 212).

Constable, after discussing various methods of classification, suggests the adoption of that of the Ancients, to avoid the risks of casting aspersions on the ancient letter in all its variety (G. Constable, *Letters and letter-collections*, in *Typologie des sources du Moyen-Age occidental*, fasc. 17, Turnhout 1976, 25). This is a suitable method. For the classical Arabic *risāla*, there is a need to distinguish between *ikhwāniyya* and *dīwāniyya* in accordance with the ancient treatises; it is also necessary to study the monograph-*risāla*, which has not been studied by the above-mentioned critics, not being correspondence in the strict sense of the word.

The Risāla ikhwāniyya

The term derives from *ikhwān* "friends" and is correspondence between two friends. The exclusive subject of these letters is deep affection. It is a substitute for the absent friend; a friend who is in fact far away is evoked with nostalgia and the writer pines for him (*Ṣafwat*, iii, 114-5, a letter of Ghassān b. Ḥamīd, the *kātib* of Djaʿfar b. Sulaymān, period of al-Manṣūr; *Rasāʾil al-Ṣābī wa ʾl-Sharīf al-Raḍī*, 104, 108-9, 112; Abū Bakr al-Khʷārazmī, *Rasāʾil*, 26, 39, 42, 70, 81-2). The number of such notes written in this period is quite considerable. These protestations of friendship constitute the basis of the ceremonial of the letter, the conventional obstacle which needs to be overcome for the interpretation of the majority of these texts. These *risālas* evoke the minor events of daily life: congratulations on the birth of a son (Ṣafwat, iii, 57, Ibn al-Muḳaffaʿ; *Yatīma*, iv, 190, Badīʿ al-Zamān al-Hamadhānī), on the occasion of a marriage (Ṣafwat, iii, 120-1), accompanying a gift (al-Khʷārazmī, *Rasāʾil*, 51-2), declarations of welcome (*Yatīma*, iv, 192), an invitation (*istizāra*, *Yatīma*, iii, 80-3) and condolences (*Yatīma*, iv, 191; Ṣafwat, iii, 122-4, numerous cases).

The most important question involves the precise meaning of *ikhwāniyya*. Abū Ḥayyān al-Tawḥīdī deserves the credit for providing a contemplation in depth of the issue, the *Risālat al-ṣadāḳa wa ʾl-ṣadīḳ* (ed. Ibrāhīm Kaylānī, Damascus 1964). As in the majority of *risālas*, the analysis is systematic and the treatment of the subject carefully constructed. The concept of friendship seems to have been directly influenced by numerous factors, such as Greek thought, ambient cultures, Bedouin qualities, Islam and the current social situation. The *leitmotif* of the *ikhwāniyyat* may be defined by means of the following phrase: the attitude towards a friend is like the attitude towards oneself, the friend being an alternative self. The stylists proclaimed this in their letters, as did al-Tawḥīdī in his treatise (he said that he was quoting the opinions of the Greeks). No doubt he was referring to the translation of Aristotle's *Nichomachaean ethics* (in which books viii and ix deal with friendship) by Isḥaḳ b. Ḥunayn, the *K. al-Akhlāḳ*, which was universally known (M. Bergé, *Une anthologie sur l'amitié d'Abu Ḥayyan al-Tawḥīdī*, in *BEO*, xvi [1961], 15-59).

However, all these prolific letter-writers were obliged to face a contradiction inherent in the letter considered as an illustration of friendship. According to Aristotle, the vital first condition of friendship is the fact of living in close proximity: "if distance does not destroy friendship utterly, it puts an end to its free

exercise. If an absence is prolonged, it makes a man forget his friendships" (tr. G. Karlsson, *Cérémonial et idéologie dans l'épistolographie byzantine*, Uppsala 1962, 22). In such a situation, according to the Arab letter-writers, the letter can represent the absent friend, giving the illusion of presence and preserving friendship, on condition that the memory of the friend is kept constantly alive; it is the *s̲h̲āhid al-ik̲h̲āʾ* (testimony of friendship) in the words of a stylist of the early ʿAbbāsid period (Ṣafwat, iii, 136; al-K̲h̲ʷārazmī, *Rasāʾil*, 39, 42, 63, 67, 81; *Mad̲j̲mūʿ rasāʾil wa-maḳāmāt*, B.N., arabe 3923, fol. 55b; the letter replaces the absent friend and the reading of it, his conversation).

Obviously, it is necessary to treat with caution this idealised conception of friendship. Cicero's *De amicitia*, the most wide-ranging treatise on friendship written in the Roman world (Constable, 32), elevates friendship to the status of a cult; however, it is based on mutual aid. P.A. Brunt has shown that sincere belief in this sentiment was accompanied by a cliquish spirit, with friends exchanging political, economic and personal services (*Amicitia in the Late Roman Republic*, in *Proceedings of the Cambridge Philological Society*, clxxxvi [1965], 4-6). This self-serving aspect constitutes an integral part of the *ik̲h̲wāniyya*; requests are made for help, money, a title, etc. The stylist appears in this context in the guise of a shameless petitioner (Ṣafwat, iii, 61, Ibn al-Muḳaffaʿ; *Kas̲h̲f al-maʿānī wa 'l-bayān ʿan rasāʾil Badīʿ al-Zamān*, Beirut 1890, 372-3, 431-2, 511).

The Arab *ars dictaminis* are not concerned with providing a list of the themes most frequently addressed by the *ik̲h̲wāniyyāt*; they confine themselves to mentioning *tahānī* (felicitations), *taʿāzī* (condolences) and *tahādī wa-mulāṭafāt* (mutual exchange of gifts and acts of benevolence). It is not until the time of al-Ḳalḳas̲h̲andī (d. 821/1418) that a detailed list of themes is obtained. Those mentioned are: *al-s̲h̲afāʿāt* (intercessions), *al-ʿināyāt* (expressions of solicitude), *al-tas̲h̲awwuḳ* (nostalgia), *al-istizāra* (invitation), *al-mawadda* (friendship), *iftitāḥ al-mukātaba* (the beginnings of intercourse conducted by correspondence), *K̲h̲iṭbat al-nisāʾ* (request for marriage), *al-istirḍāʾ wa 'l-istiʿṭāf* (efforts to please and to arouse goodwill), *al-iʿtizār* (excuses), *al-s̲h̲akwā* (complaint), *istimāḥat al-ḥawāʾid̲j̲* (request for the fulfilment of one's needs), *al-s̲h̲ukr* (gratitude), *al-ʿitāb* (disapproval), *al-ʿiyāda* (visiting the sick), *al-suʾāl ʿan ḥāl al-marīḍ* (request for news of a sick person), *al-d̲h̲amm* (lecturing), *al-ik̲h̲bār* (announcement) and *mudāʿaba* (pleasantry) (*Subḥ*, viii, 126).

The risāla dīwāniyya

This owes its name to the term *dīwān al-ins̲h̲āʾ* (Correspondence Bureau). Later, it was called *al-risāla al-ins̲h̲āʾiyya*, Evidently, this applies to official prose. It should be stressed that this correspondence differs fundamentally from the modern administrative letter, a very carefully considered text, documents in which every term is weighed and pondered. The *dīwāniyyas* belonged as much to the tradition of eloquent discourse as to that of administrative prose. In this respect, the works—and works is indeed the correct term—of Aḥmad b. Yūsūf al-Kātib, of Ibrahim b. Hilāl al-Ṣābī, of Ibn al-ʿAmīd, of al-Ṣāḥib b. ʿAbbād, and to a lesser degree, those of Ibn Nubāta and al-Ḳāḍī al-Fāḍil, attained and continued to attain the status of texts belonging to the domain of the fine arts, much appreciated by scholars (*Yatīma*, iii, 10-12; Ṣafwat, iv, 262, 364-5). Two lists citing the themes addressed by these letters are currently extant, that of Ibn al-Nadīm (*Fihrist*, 183) which includes 30 titles and that of al-Ḳalḳas̲h̲andī (*Ṣubḥ*, i, 244-356), which comprises 22 titles, giving an impression of the wide variety of subjects. On the other hand, the existence of these lists threatened to classify the stylists in these categories and thus to constitute a classicism in the *dīwāniyyas*. Finally, the best specimens were preserved in the *dīwān* to serve as normative models. The stylist acted in the capacity of a memorialist, evoking, in his *risālas*, events and dealing with subjects neglected by ancient historiography. Furthermore, letters written in the name of the sovereign were intended to be read in public, and to be discussed and debated by a knowledgeable public. An enormous range of knowledge was required. At a very early stage, from the 3rd/9th century onward, voices were heard to lament the ignorance of these "pillars of the state" (G. Lecomte, *L'introduction au Kitāb adab al-kātib*, in *Mélanges Louis Massignon*, Damascus 1957, iii, 45-63).

In order to remedy this state of affairs and to put suitable tools at the disposal of stylists, *ars dictaminis* were compiled for their use, treatises in which advice was accompanied by model letters. These were essentially manuals, which never aspired to poetry. The authors confined themselves to mentioning formulas for opening and closing, some general advice regarding the necessity of brevity, of adapting the style to the nature of the addressee, the use of poetry and the need to abstain from poetry in letters addressed to princes. Another section included practical advise concerning ink, pens, dimensions of the page, etc. The manual concluded with the mention of the most characteristic *fuṣūl* (or sections) of the official letter, such as *ṣudūr* (openings), *taḥmīdāt* (doxology), etc.; model letters are cited in the collections.

In fact, this situation persisted until the 5th/11th century: anthologies, such as *al-manẓūm wa 'l-mant̲h̲ūr* of Ibn Abī Ṭāhir Ṭayfūr (d. 280/893), constitute the best proof of this. The theoretical section is somewhat thin in his work, but he cites *fuṣūl* and model letters; this was undeniably a major asset for a *kātib* in search of a *taḥmīd*, for example. In a later period, from the mid-5th/11th century, with ʿAlī b. K̲h̲alaf (d. 455/1063), the author of the *Mawadd al-bayān* (analysis of this work has been undertaken by S. al-Droubi, *A Critical edition of and study on Ibn Fadl Allāh's manual of secretaryship*..., Muʾta 1413/1992, 64-5), a degree of specialisation emerges. Collections of stylised pieces offer models drafted by functionaries of the past or of the present regarded as consumate specialists or stylists. On the other hand, manuals of formularies and instructions came into being (R. Vesely, in the introduction to Ibn Nāẓir al-D̲j̲ays̲h̲, *Tat̲h̲ḳif al-taʿrīf*, Cairo 1987, pp. i-iv). An exhaustive list of the *ars dictaminis* has been established, with a brief summary, by al-Droubi (*ibid.*, 60-79, section on *The genre of secretarial manuals down to al-ʿUmarī's time*).

The formulae employed are very old and date back, for the most part, to the second half of the 1st/7th century, since they are attested in the papyri of Ḳurra b. S̲h̲arīk [*q.v.*], governor of Egypt in 90/709; people used, in effect, as 31 formulas, expressions which were dignified by usage, which means that they were well-respected in an even earlier period. The opening comprises the *basmala*, a very brief *taḥmīd* (*fa-innī aḥmadu Allāha 'l-lad̲h̲ī lā ilāh illā huwa* "I praise God, there is no other god but He"), a formula of transition *ammā baʿdu* ("this is the gist of the subject"). The formula of salutation (*wa 'l-salāmu ʿalā man ittabaʿa 'l-hudā* "and greetings to those who follow the way of truth") closes the letter. The two last lines bear the name of the scribe and the date (C.H. Becker, *Papyri Schott Reinhardt*, i, Heidelberg 1906, 92-4, letter 10).

VI. *Risāla and Maḳāma*

From the second half of the 5th/11th century, after

the publication of the *Maḳāmāt* of al-Hariri, numerous sources of the time confuse *risāla* and *maḳāma*, Ibn Ḥamdūn (d. 495/1102), in vol. vi of the *Tadhkira*, that devoted to the epistolary genre (*al-mukātabāt wa 'l-rasā'il*), entitles a section of the book *Min rasā'il Abi 'l-Faḍl Aḥmad b. al-Ḥusayn al-Hamadhānī 'l-ma'rūf b. Badī' al-Zamān al-Hamadhānī 'l-musammāt bi 'l-maḳāmāt* "(Choice) of the letters of Abū Faḍl Aḥmad b. al-Ḥusayn al-Hamadhānī, known by the name of Badī' al-Zamān al-Hamadhānī, which are called *al-maḳāmāt*" (ms. Reisülküttab Mustafa Efendi, no. 770, fol. 101b, ll. 10-12). In the 6th/12th century, this equivalence between the genres is attested on numerous occasions in the texts (numerous attestations have been gathered together by H. 'Abbās, *Fann al-maḳāma fi 'l-ḳarn al-sādis*, Cairo 1986, 86, 97, 98-9, 120, 249, 320). Al-Zamakhsharī confuses *maḳāla* and *maḳāma* (Murtaḍā al-Shīrāzī, *al-Zamakhsharī lughawiyy*[an] *wa-mufassir*[an], Cairo 1977, 251). This tendency persisted in the manuscript of seven *risālas* of al-Suyūṭī copied in the 18th century; *al-Risāla al-sundusiyya* bears the following title, *Risālat al-maḳāma al-sundusiyya fi 'l-nisba al-muṣṭafawiyya* (cf. Ḥādjdjī Khalīfa, 1875, *maḳāmāt al-Suyūṭī wa-hiya tis'ūn wa-ishrūn risālat*[an]).

It is evident that what is encountered here is a cultural process which deserves study. As a result of the work of De la Granja (*Maḳāma y risālas andaluzas*, Madrid 1976, pp. xi-xiii), the various stages of this evolution can be traced. At the outset, the *risāla*, written in an artistic prose which had no well-established canons in the early stages, supplied the precious primal material from which the first writers of the *maḳama* derived their ideas. Here, as in the *risāla*, rhetoric and lexicography were pressed into the service of this original and entertaining creation. In the second half of the 5th/11th century, al-Ḥarīrī contributed to the launching of the *maḳāma* in new directions, with the appearance of the didactic *maḳāma*. The ingenious and eloquent beggar leaves the stage, to be replaced by medical, geographical, mystical and linguistic opuscules, in other words, *risālas*. The distinction between the two genres no longer had any reason to exist, and this is why they were assimilated to each other.

However, a converse process seems to have come into play here. Certain *risālas*, on account of their lofty literary qualities, were considered to be *maḳāmas*. Thus Ibn Sīnā, who seems to have shown an inclination towards artistic and rhythmic prose, composed numerous *rasā'il* and poems (see *Tis' rasā'il fi 'l-ḥikma wa 'l-ṭabī'iyyāt*, Cairo 1908). The most interesting is that which borrows the methods of allegory, sc. *Ḥayy b. Yaḳẓān*. Rather than a *risāla*, as is specified by the title, this is in fact a *maḳāma*. A century later, the Andalusian philosopher Abū Bakr b. al-Ṭufayl [*q.v.*] composed a philosophical novel bearing the same title, even though the objects of the two works are different. Abraham b. 'Ezra (mid-12th century) composed an imitation of the allegory of Ibn Sīnā. In the introduction, written in Judaeo-Arabic, the mediaeval editor of the *Dīwān* (ms. Berlin, 186, section intitled *al-nathr al-masdjū'*) describes the letter as *risāla*, whereas the fragment of the same work preserved in the Geniza is intitled *maḳāma* (Cambridge T-S K. 16-70; see also the critical edition of Israel Levin, Tel Aviv 1983).

VII. The *Risāla* in Judaeo-Arabic

Quite naturally, letters in Judaeo-Arabic are similar in all respects to those composed in the mother culture. The Geniza of Cairo has preserved a large number of letters, differing considerably in style and in content. Qualitatively and quantitatively, these documents constitute a unique phenomenon in the annals of mediaeval Arab culture. However, on account of their Jewish provenance, they contained a considerable number of Hebrew terms, formulas and phrases. This applies principally to the polite formulae of opening the letter, to the glorification of God, to eulogies (*taḥmīdāt*) reserved for the addressee. Sometimes they adopt a precious style, an artistic Hebraic prose, often rhymed. Evidently, here also a close relationship existed between the style of the letter and the status of the writer and of the addressee, in the family and in society. In Judaeo-Arabic, the correspondence between local dignitaries and the communal functionaries belonging to institutions enjoying an "ecumenical" status has been preserved (M. Cohen, *Correspondence and social control in the Jewish communities of the Islamic world: a letter of the Nagid Joshua Maimonides*, in *Jewish History Quarterly*, i/2 [1986], 39-48; S.D. Goitein, *A Mediterranean society*, Berkeley and Los Angeles 1988, v, 422-4, see also i, 1967, 11-12). The development of artistic style in letters written in Judaeo-Arabic directly influenced the development of Hebraic prose among the Jewish writers of Christian Europe. Some highly significant examples are to be found in the letters written in Hebrew by Judah Ha-Levi (early decades of the 12th century, letters written from Lucena and from Narbonne published in his *Dīwān*, ed. H. Brody, Berlin 1893, i, letter 4; see also Goitein, *op. cit.*, v, 463-6, on the Arabic letters of Ha-Levi). The letters, emanating from the offices of certain senior rabbinical authorities, identical to the *dīwāniyyas*, reflect a little the personal style of the scribes, but to a greater extent the style of the *dīwāns* of correspondence, the fruit of numerous decades of maturation; a good example is provided by the letters featuring in the edition of S. Assaf, *A collection of letters by Samuel b. 'Elī*, Jerusalem 1930 (in Hebrew). These pieces, emanating from the offices of the Gaon (the Talmudic Academy) of Baghdād, are written in a very precious and ornate Judaeo-Arabic and are in no respect inferior to the letters of the 'Abbāsid chancellery. Some, those addressed to East Kurdistan and to Persia, are written exclusively in Hebrew.

The poetry of the Judaeo-Arabic *risāla* does not differ in any respect from that of its Arabic parent; furthermore, the evolution of the two followed an identical course. It is thus that monograph-letters are attested in various branches of the culture of the Jews of the East; religious and scientific disciplines tally for the most part (M. Steinschneider, *Arabische Literatur der Juden*, index of Arabic titles, s.v. *maḳāla, risāla*). In the following lines, the principal aspects will be reviewed but only the cases which present special interest being examined.

One of the most ancient examples of the Judaeo-Arabic *risāla* is a treatise comparing Hebrew, Aramaic and Arabic attributed to Judah b. Ḳuraysh of Tāhart (Morocco, d. *ca.* 900; ed. D. Becker, Tel Aviv 1984). This work was addressed to the community of Fez, which had abandoned the custom of reciting the Aramaic translation of the Pentateuch (*Targum*). Still in the linguistic context, another monograph was intitled *risāla* by its author; this is the *Risālat al-Tanbīh* by Ibn Djanāḥ (Spain, first half of the 11th century, ed. J. and H. Derenbourg, Paris 1880).

Maimonides (1138-1205) composed numerous *risālas* and *maḳālas* in response to the questions and requests of the faithful. A large proportion of his work reflects the pre-occupations of an extremely gifted stylist, who was also an original thinker. This eminent authority on matters of religious law revealed his opinions on the problems and precepts of faith in

meticulously-crafted *risālas*. Thus his philosophical work, *Dalālat al-ḥāʾirīn*, the well-known *Guide to the perplexed*, is described, in numerous passages of the book, as a *maḳāla*, in other words, as a letter. Furthermore, the prologue contains a personal letter addressed to his favourite disciple Joseph b. Judah (ed. Joel, 1931, 1; see also *The guide of the perplexed*, tr. S. Pines, 1963, 3-4). Some of these letters were written in Arabic, others in Judeao-Arabic, in accordance with the language of the addressee. The majority represent the type of enlarged *responsa* in which the author deals with problems in depth and beyond immediate circumstances. The best illustration of the profundity of his essays is supplied by *The Yemenite epistle* (ed. A.S. Halkin, the text of the medieval Hebrew tr.; English tr. B. Cohen, New York 1952), which was addressed to the Jews of the Yemen; it seems to have been motivated by serious incidents which had afflicted the community, in particular the appearance of a false Messiah; he deals in it with a number of problems, including that of prophecy and that of the status of the prophet Muḥammad in particular. The *risāla* contains a long prologue written in very ornate Hebrew rhymed prose. There is no doubt that, deriving from the genre, it conforms to the pattern of the Arabic epistle; on the other hand, it maintains in a direct line the traditional attitude of Jewish letters, stipulating that Hebrew alone is the language of poetry.

(A. Arazi and H. Ben-Shammay)

2. In Persian.

Risālas, or short treatises, composed in Persian, are numerous and varied. The majority of them may be classified under the following headings.

Religion. Among these, epistles connected with Ṣūfism are perhaps the most numerous. One of the earliest authors of such writings was Khʷādja ʿAbd Allāh Anṣārī (396-481/1006-89 [*q.v.*]), said to have composed the first *risālas* of their kind in rhymed prose. His treatises with a Ṣūfī message include *Dil u djān* "Heart and soul", *Kanz al-sālikīn* "Provisions of the travellers", *Ḳalandar-nāma* "Book of the mendicant" and *Maḥabbat-nāma* "Book of love". These writings, partly ethical, partly mystical, are distinguished by a mingling of prose and verse—a feature in which the author's pioneering efforts influenced many later writers.

A well-known treatise belonging to the early 6th/12th century is Aḥmad al-Ghazālī's [*q.v.*] *Risālat al-sawāniḥ fi ʾl-ʿishḳ* "Treatise on ideas of love". The author was the younger brother of the famous ethical theologian Abū Ḥāmid Muḥammad Ghazālī (d. 505/1111 [*q.v.*]). His work comprises 75 short chapters and seeks to give a Ṣūfī interpretation of the concept of love, lover and beloved. Its philosophical meaning is couched in a metaphorical language, and, like the works of ʿAbd Allāh Anṣārī cited above, it also uses the device of inserting short poems in its prose narrative. He was also the author of a *R. al-ṭuyūr* "T. on the birds", the theme of which constitutes a probable source of Farīd al-Dīn ʿAṭṭār's (d. 627/1299 [*q.v.*]) allegorical poem *Manṭiḳ al-ṭayr*.

A number of *risālas* were produced by individuals who were prominent in the Ṣūfī orders which emerged in Islam after the 6th-7th/12th-13th century. The founder of the Kubrāwī order, Shaykh Nadjm al-Dīn Kubrā (540-618/1145-1221 [*q.v.*]), was a prolific writer whose output included both Arabic and Persian works. In his epistle *al-Sāʾir al-ḥāʾir* "The bewildered traveller", the author outlines ten conditions for the novice to reach his goal. Nadjm al-Dīn Kubrā wrote this Persian treatise in response to a request by those of his disciples who were unacquainted with Arabic.

A disciple of Nadjm al-Dīn Kubrā was the noted Ṣūfī mystic and writer Nadjm al-Dīn Rāzī "Dāya" (d. 654/1256). His famous *R.-yi ʿishḳ u ʿaḳl* "T. on love and intellect", also named as *R.-yi miʿyār al-ṣidḳ fī miṣdāḳ al-ʿishḳ* "T. on the touchstone of truth to verify love", was written in answer to a question by one of the author's friends; it attempts to enquire into the relationship between love and reason, and shows a tendency towards philosophising.

Another prominent disciple of Nadjm al-Dīn Kubrā was Sayf al-Dīn Bākharzī (d. 659/1261), who continued to teach his master's way in Transoxiana after the latter's violent death at the hands of the Mongols. Primarily a poet known for his *rubāʿīs*, he was also the author of a prose *R.-yi ʿishḳ* "T. on love", which deals with an idealised view of human emotion and its psychological significance.

There are many *risālas* ascribed to Mīr Sayyid ʿAlī Hamadānī (713-86/1314-85), through whom the Kubrāwī order gained a foothold in Kashmīr. Included in his works are the *R.-yi manāmiyya* "T. on dreams", *R.-yi wudjūdiyya* "T. on existence", *R.-yi dhikriyya* "T. on *dhikr*", *R.-yi ʿaḳabāt* "T. on difficult paths" and *R.-yi darwīshiyya* "T. on poverty".

Among the leaders of the Naḳshbandī order, ʿAbd al-Khāliḳ Ghudjdawānī (d. 617/1220) was the author of the *R.-yi ṣāḥibiyya* "T. of the master", a manual describing the Ṣūfī stages advocated by his spiritual guide, Abū Yaʿḳūb Yūsuf b. Ayyūb Hamadānī (d. 535/1140). An important member of ʿAbd al-Khāliḳ Ghudjdawānī's chain of succession (*silsila*) was Bahāʾ al-Dīn Naḳshband (d. 791/1389 [*q.v.*]), whose disciple, Khʷādja Abū Naṣr Pārsā (756-822/1355-1420), composed two major treatises on Ṣūfism, *R.-yi ḳudsiyya* "T. on sanctity" and *R.-yi kashfiyya* "T. on revelation", both works presenting a Naḳshbandī view of Ṣūfī thought. The first, based upon Bahāʾ al-Dīn Naḳshband's lecture sessions, discusses twelve topics concerning Ṣūfī theory and practice; the second tries to explore the mystical states of inspiration, intuition and illumination.

The founder of the Niʿmat Allāhī order, Shāh

Ni^cmat Allāh Walī (730-834/1330-1431 [see NI^cMAT-ALLĀHIYYA]), was a prolific writer who contributed greatly to the exposition of Ṣūfism through his commentaries and interpretations. He is said to have produced over 500 works, of which an important number have survived. Some of his treatises are: the *R.-yi sulūk* "T. on the Ṣūfī pilgrimage", *R.-yi tawḥīd* "T. on the unity of God", *Naṣīḥat-nāma* "The book of counsels", *R.-yi nūriyya* "T. on light", *R.-yi ma^cārif* "T. on knowledge", *R.-yi tawwakkul* "T. on the trust in God", *R.-yi rūḥiyya* "T. on the soul", *R.-yi khalwat* "T. on retreat", *R.-yi ilhāmāt* "T. on divine revelations" and *R.-yi rumūz* "T. on mysteries".

An extreme offshoot of Ṣūfism was the Ḥurūfī or "Literalist" school which emerged in Persia in the 8th/14th century [see ḤURŪFIYYA]. Its founder was Faḍl Allāh Astarābādī (martyred in ? 796/1394), to whom Sa^cīd Nafīsī ascribed the work named *R. dar uṣūl-i Ḥurūfiyya* "T. on the Ḥurūfī doctrine" (*Tārīkh-i naẓm u nathr dar Īrān*, ii, 791-2).

Ṣūfī literature was enriched by the *risālas* of some well-known literary figures such as the 7th/13th-century poet and mystic, Fakhr al-Dīn ^cIrāḳī (d. 688/1289 [*q.v.*]), famed for his major work on Ṣūfism, the *Lama^cāt* "Flashes". Apart from this work, he wrote a small *risāla* concerning Ṣūfī terminology and its symbolical meaning. The terms are arranged in three sections according to their association: the first section comprises the terms connected either with the beloved or the lover; the second contains names common to both the lover and the beloved; and the third consists of words identified more specifically with the lover and his mental states.

To ^cIrāḳī's illustrious contemporary Sa^cdī (d. 695/1295-6 [*q.v.*]) belong six *risālas*, two of which bear the impress of Ṣūfī thought. The first, entitled *^cAḳl u ^cishḳ* "Intellect and love", was written in response to a question asked by a certain Sa^cd al-Dīn, and deals with the concept of attaining mystical knowledge of the Divine through emotion rather than by reason. It resembles the *Gulistān* in its style, and is written in a simple language. The second is named *Madjālis-i pandjgāna* "Five sessions"; it contains five sermons modelled after the discourses delivered by religious preachers and Ṣūfī divines in their services.

Maḥmūd Shabistarī (d. 720/1320-1 [*q.v.*]), the author of the famous *mathnawī* on Ṣūfī doctrine *Gulshan-i rāz* "Rose-garden of secrets", is credited with three prose writings, one of which is the *R.-yi ḥaḳḳ al-yaḳīn* "T. on certain truth", dealing with Ṣūfī theosophy. It contains eight chapters whose headings are mentioned by E.G. Browne in his account of the author (*LHP*, iii, 149-50). The work has been likened to ^cIrāḳī's *Lama^cāt*, but is inferior in merit (see Arberry, *Classical Persian literature*, 303).

The poet Ḳāsim Anwār (d. 837/1433-4), who was a major influence on the Ṣūfī movement of his time, was the author of two *risālas* reflecting his mystical leanings, the *R.-yi su[>]āl u djawāb* "T. with questions and answers", an exchange on the topic of good and evil, and *R. dar bayān-i ^cilm* "T. explaining knowledge". Serious questions have been raised regarding the views of the author. He was suspected, during his lifetime, of complicity in the attempted assassination of Tīmūr's son, Shāh Rukh [*q.v.*], by a Ḥurūfī fanatic. More recently, it has been suggested that his poetry betrays Ḥurūfī tendencies although his writings show that he belonged to the mainstream of Ṣūfī thought.

The philosophical aspect of Sufism finds a vivid evidence in the *risālas* of Ṣā[>]in al-Dīn Turka (d. *ca.* 836/1432), in whom the roles of the mystic and philosopher tend to coalesce. Like Ḳāsim Anwār, who was his contemporary, he was subjected to the allegation of being indirectly involved in the murder attempt on Shāh Rukh. His numerous writings in Arabic and Persian embrace a variety of mystical, theological and philosophical subjects, and include *R.-yi asrār-i ṣalāt* "T. on the secrets of prayer", a work interpreting the fundamentals of Muslim worship from a Ṣūfī perspective; *R.-yi shaḳḳ al-ḳamar wa sā^cat* "T. on the splitting of the moon and the hour", on the Ḳur[>]ānic verse "The hour drew nigh and the moon was rent in two" (LIV, 1); *R.-yi ḍaw[>] al-Lama^cāt* "T. on the lustre of the Flashes", a commentary on ^cIrāḳī's work *Lama^cāt; R. dar bayān-i ma^cnī-yi ^cirfānī-yi ^cilm-i ṣarf* "T. explaining the gnostic meanings in morphology", on the relationship between mysticism and language; and *R.-yi ḥarf* (BL. Add. 23,983) "T. on the letters", sc. on the letters of the Arabic alphabet and their esoteric meanings.

Among the Persian treatises on Ṣūfism composed in India, mention may be made of the *R.-yi ḥaḳḳ-numā* "T. on the guide to truth", by Dārā Shikūh (1024-68/1615-58 [*q.v.*]), the eldest son of Emperor Shāh Djahān (*r.* 1037-70/1627-59 [*q.v.*]). Dārā Shikūh was the author of several works devoted to a synthesis of Hindu and Muslim thought, a movement initiated by his great-grandfather Akbar (*r.* 963-1014/1556-1605 [*q.v.*]). The *R.-yi ḥaḳḳ-numā*, completed in 1055/1645-6, comprises six parts dealing with the following topics: (1) world of humanity; (2) world of intelligible substances; (3) world of power; (4) world of divinity; (5) identification of the Lord of lords; and (6) unicity of being.

In addition to Ṣūfism, orthodox theology forms the subject-matter of various *risālas*. The poet Djāmī (817-98/1414-92 [*q.v.*]), whose large output extended over many topics, wrote on various theological and mystical matters which included the exegesis of the Ḳur[>]ān, traditions of the Prophet and biographies of Muslim saints. His theological work *R.-yi arkān-i ḥadjdj* "T. on the pillars of the pilgrimage" describes the rules and ceremonies prescribed for the *ḥadjdj* and *^cumra*.

One of the well-known theological treatises of the 9th/15th century is *al-R. al-^cAliyya fi 'l-aḥādīth al-nabawiyya* "The ^cAlīd treatise on the traditions of the Prophet", by Ḥusayn b. ^cAlī Wā^ciẓ Kāshifī (d. 910/1504-5 [*q.v.*]), who is famous for his work on ethics the *Akhlāḳ-i Muḥsinī* as well as for his collection of fables the *Anwār-i Suhaylī* "The lights of Canopus". His theological *risāla*, mentioned above, contains forty traditions arranged in eight groups according to their themes.

Conspicuous among the theological writings dealing with the Ismā^cīlī sect are two treatises by Naṣīr al-Dīn Ṭūsī (d. 672/1274 [*q.v.*]) namely *R. dar tawallā wa tabarrā* "T. on friendship and exoneration", and *R.-yi sayr u sulūk* "T. on travel and pilgrimage". The author was in the service of the Ismā^cīlīs for a long time, and it is probably during this period that he wrote his two theological treatises in support of their doctrine.

From the 10th/16th century, theological works on Shī^cism found increasing currency in Persian. An interesting example of this type is the *R.-yi Ḥasaniyya* (BL. Egerton 1020) or *R.-yi Ḥusniyya* by Ibrāhīm b. Walī Allāh Astarābādī, a writer of the 10th/16th century. It deals with Shī^cī doctrines, especially those relating to the prerogatives of ^cAlī and his descendants. The treatise derives its title from the name of a slave-girl who is represented as debating the infallibility of the Shī^cī faith with learned scholars in the

presence of the caliph Hārūn al-Rashīd. The author claims that his work was a translation from an Arabic original, supposedly composed by the 6th/12th-century commentator on the Ḳur'ān, Djamāl al-Dīn Abu 'l-Futūḥ Khuzā'ī Rāzī. He further states that the manuscript of the Arabic original came in his possession in Damascus, while he was on a Pilgrimage to Mecca, and that he translated it for the Ṣafawid monarch Shāh Ṭahmāsp I (*r.* 930-84/1524-76 [*q.v.*]).

Shī'ism found a vocal spokesman in the person of Nūr Allāh Shūshtarī (d. 1019/1610 [*q.v.*]), who went to India during Akbar's reign, and was appointed *ḳāḍī* of Lāhawr. During Djahāngīr's régime (1023-37/1605-27 [*q.v.*]), however, he became the target of Sunnī hostility and was executed by the orders of the Emperor. He is known primarily for his work *Madjālis al-mu'minīn* "Assemblies of believers", which contains the biographies of Shī'ī divines. He also composed the *R. dar taḥḳīḳ-i āya-yi Nūr* "T. containing an enquiry into the Light Verse" (Ḳur'ān, XXIV, 35), and *R. dar ḥurmat-i namāz-i djum'a dar ayyām-i ghaybat* "T. on the sanctity of Friday prayer during the occultation of the Imām".

With the rise of the Ṣafawids in the 10th/16th century, there was an upsurge of hostile feeling towards the Ṣūfīs, encouraging the production of theological works concerned exclusively with the denunciation of Ṣūfī ideas and practices. One of these works was the *R.-yi khayrātiyya* (BL. Add. 24,411) "T. on charity", composed by Āḳā Muḥammad 'Alī Bihbihānī (d. 1216/1801-2 [*q.v.* in Suppl.]) in 1211/1796-7; its appearance resulted in provoking violence against the Ṣūfīs that led to the murder of some of their leaders.

Philosophy. Early Persian treatises in philosophy are represented by some *risālas* attributed to Ibn Sīnā (d. 428/1037 [*q.v.*]). Among others, they include the *R.-yi 'ishḳ* "T. on love", and the manual on psychology *R.-yi nafs* "T. on the soul". However, frequent doubts have been expressed regarding the authenticity of their authorship, and it is only from a much later date that *risālas* of definite provenance become available.

The list of writers on philosophy after Ibn Sīnā is headed by Fakhr al-Dīn Rāzī (d. Harāt, 606/1209 [*q.v.*]) and Naṣīr al-Dīn Ṭūsī. Among the former's *risālas* is *al-R. al-kamāliyya fi 'l-ḥaḳā'iḳ-i Ilāhiyya* "The perfect treatise on Divine truths", which comprises ten discourses concerning logic, divine philosophy and natural sciences.

Naṣīr al-Dīn Ṭūsī may be regarded as only second in importance to Ibn Sīnā for the influence which he exercised over philosophical trends in Persia. In his writings such as *R.-yi ithbāt-i wādjib al-wudjūd* "T. on proving the existence of the necessarily existing (i.e. God)", *R.-yi djabr u ḳadr* "T. on necessity and freewill" and *R. dar ḳismat-i mawdjūdāt u aḳsām-i ān* "T. on the division of created things and their varieties", he displays a keen intellectual insight in discussing some of the debatable religio-philosophical issues of his time.

One of his contemporaries, and reportedly his nephew, was Afḍal al-Dīn Kāshānī (d. 667/1268-9), author of several philosophical studies and a scholar influenced by Ibn Sīnā. He also translated some originally Greek works, obviously from Arabic. His *R.-yi nafs* "T. on the soul", is a Persian rendering of Aristotle's work on psychology. Another of his translations is the *R.-yi tuffāḥa* "The apple treatise", a pseudo-Aristotelian work called *De pomo et morte inclyte principis philosophorum Aristotelis*, which has been printed several times in Europe.

In logic, the writings of Athīr al-Dīn Mufaḍḍal Abharī (d. 663/1264-5) and Ḳuṭb al-Dīn Rāzī (d. 766/1364) have an important place; the former was a disciple of Fakhr al-Dīn Rāzī, and his *R. dar manṭiḳ* describes in brief some of the basic points of logic.

Among the learned men of the late Mongol period was Ḳuṭb al-Dīn Rāzī (d. 766/1364-5), a protégé of Ghiyāth al-Dīn Muḥammad (d. 736/1336), who was chief minister to the Īlkhānid ruler Abū Sa'īd (*r.* 716-36/1317-35 [*q.v.*]). Ḳuṭb al-Dīn Rāzī belonged to the group of writers who engaged themselves in preparing commentaries and textbooks for educational use, involving the writing of small treatises for the convenience of the students. His *risālas*, which were probably written with this purpose in mind, include *R. fī taḥḳīḳ al-kulliyyāt* "T. on the verification of universals", *R.-yi taḥḳīḳ-i taṣawwur u taṣdīḳ* "T. on the inquiry into concept and assent" and *R.-yi taḥḳīḳ-i maḥṣūrāt* "T. on the investigation into finitudes". It is most likely that Ḳuṭb al-Dīn Rāzī's approximate contemporary, Mīr Sayyid Sharīf Djurdjānī (d. 816/1413-14), also had an educational motive before him for writing some of his works; his writings on logic comprise the *R.-yi kubrā* "The major treatise", and the *R.-yi ṣughrā* "The minor treatise".

The Ṣafawid period witnessed some distinguished personalities in philosophy, the major exponents in this field being Ṣadr al-Dīn Muḥammad Shīrāzī (d. 1050/1640-1), popularly known as Mullā Ṣadra [*q.v.*], and Muḥammad Bāḳir of Astarābād (d. 1041/1631), commonly called Mīr Dāmād [see DĀMĀD]; but their contribution falls more appropriately within the realm of Arabic literature, since almost all their output is in Arabic. It is, therefore, difficult to find significant philosophical studies in Persian produced during the Ṣafawid period.

Science. Early scientific literature by Persian writers was produced mainly in Arabic, the language of learning and scholarship in Islam. However, from the 7th/13th century, works written in Persian became more frequent, and Naṣīr al-Dīn Ṭūsī wrote several *risālas* on astronomy, a field in which he was highly regarded for he was chosen by Hülegü to supervise the observatory established by the Mongol ruler at Marāgha. Probably his finest treatise on astronomy is the *R.-yi Mu'īniyya*, named after Mu'īn al-Dīn Abu 'l-Shams, son of the author's former patron, Nāṣir al-Dīn b. Abī Manṣūr (d. 655/1257-8), governor of Ḳuhistān.

In 824/1421 Ulugh Beg (d. 853/1449 [*q.v.*]), the talented son of Tīmūr, built an observatory at Samarḳand, and there brought together some of the leading scientific figures of his time, among whom was 'Alā' al-Dīn 'Alī b. Muḥammad Ḳūshdjī (d. 879/1474-5), commonly called 'Alī Ḳūshdjī [*q.v.*]. Some time after the death of Ulugh Beg, the latter joined the service of the Ottoman sultan Meḥemmed II the Conqueror [*q.v.*], under whom he composed the *R. dar hay'at* "T. on astronomy", otherwise known as *Fārsī hay'at* "Persian astronomy", which enjoyed much popularity, and was used as a textbook for teaching astronomy in schools.

Among later works on astronomy is the *R. dar rub'-i mudjayyib* "T. on the astronomical quadrant", by Mīrem Čelebi (d. 931/1525), whose real name was Maḥmūd b. Muḥammad. A writer of the same period, Niẓām al-Dīn b. Muḥammad Ḥusayn Bīrdjandī (d. 934/1527), composed in 930/1523-4 the *R.-yi ab'ād u adjrām* "T. on distances and bodies", which discusses, among other things, the measurements of the earth's surface and of the heavens and stars.

Interest in astronomical instruments gave rise to a number of treatises relating, more particularly, to the astrolabe. One of the best known is Naṣīr al-Dīn

Ṭūsī's *R.-yi bīst bāb dar maʿrifat-i asṭurlāb* "T. in twenty sections concerning the knowledge of the astrolabe", which found a host of commentators; this may have been an abridged version made by the author from one of his larger works on the subject.

Ghiyāth al-Dīn Djamshīd Kāshī (d. 832/1428-9 or 840/1436-7) worked on the staff of Ulugh Beg's observatory, and is the author of the *R. dar sākht-i asṭurlāb* "T. on the construction of the astrolabe", and the *R. dar sharḥ-i ālāt-i raṣad* "T. explaining astronomical instruments", the latter completed in 818/1416. Some other works which have a similar content include the *R. dar ṣifat-i kura-yi djadīd,* "T. on the characteristic of a new sphere"; the *R.-yi asṭurlāb* "T. on the astrolabe"; and the *R. dar ālāt-i raṣadiyya* "T. on astronomical instruments". The first, which was written by ʿAlāʾ al-Dīn Kirmānī, was dedicated to the Ottoman sultan Bāyezīd I (*r.* 792-805/1389-1402) or to Bāyezīd II (*r.* 886-918/1481-1512), and deals with the construction and uses of a new armillary sphere; the second was completed in the 10th/16th century by Abu 'l-Khayr Fārsī; and the third was composed by ʿAbd al-Munʿim Āmulī in approximately 970/1562-3 on the orders of Shāh Ṭahmāsp I.

Hand in hand with the cultivation of astronomy went the study of meteorology. One of the earliest works dealing with this branch of knowledge is the *R.-yi āthār-i ʿulwī* "T. on the celestial phenomena", by Abū Ḥātim Muẓaffar Isfizārī. Very little is known about the author except that he belonged to the town of Isfizār [*q.v.*], in present-day Afghanistān. He dedicated his treatise to Fakhr al-Mulk, son of Malik Shāh's minister Niẓām al-Mulk. Since Fakhr al-Mulk met his death at the hands of the Assassins in 500/1106-7, the work may be dated to before that event. From the time of its composition, it continued to remain an important source utilised by other writers for their works.

Among the contributions on meteorology inspired by Isfizārī was the *R.-yi Sandjariyya fī 'l-kāʾināt al-ʿunṣuriyya* "T. for Sandjar [*q.v.*] concerning the world of elements", written for the Saldjūk ruler (*r.* 511-52/1118-57) by Zayn al-Dīn ʿUmar b. Sahlān Sāwī (Sāwadjī) who, as far as internal evidence is concerned, knew about Isfizārī's treatise. A more direct influence may be observed in Sharaf al-Dīn Masʿūdī Marwazī's *R. dar bāra-yi āthār-i ʿulwī* "T. concerning the celestial phenomena", which was completed in the middle of the 7th/13th century. Meteorology is also the subject of the *R.-yi kāʾināt-i djaww* "T. on meteorology" by Muḥammad ʿAlī b. Abī Ṭālib Gīlānī, better known as Muḥammad ʿAlī Ḥazīn, who was born in Persia but spent a considerable portion of his life in India where he died in 1180/1766.

In the mathematical sciences, the first important epistle that may be mentioned is the *R. dar handasa* "T. on geometry", by Abū ʿUbayd ʿAbd al-Waḥīd b. Muḥammad Djūzdjānī, a pupil of Ibn Sīnā; his work represents a collection of his master's notes on geometry.

An early 7th/13th-century work is the *R. fī ṭarīḳ al-masāʾil al-ʿadadiyya* "T. on the handling of arithmetical problems", written by Sharaf al-Dīn Ḥusayn b. Ḥasan Samarḳandī and completed in 632/1235. Contributions to mathematical studies were also made by certain scholars who had been active primarily in the field of astronomy. For instance, Naṣīr al-Dīn Ṭūsī wrote a *R. dar ḥisāb* "Treatise on arithmetic". This name also belongs to the work produced by Ṣalāḥ al-Dīn Mūsā, commonly known as Ḳāḍī-zāda Rūmī, who was attached to Ulugh Beg's observatory. His colleague, ʿAlī Ḳūshdjī, mentioned earlier for his work on astronomy, was the author of a *R. dar ʿilm-i ḥisāb* "T. on the science of arithmetic", known alternatively as *Fārsī ḥisāb* "Persian arithmetic". The Tīmūrid historian Sharaf al-Dīn Yazdī (d. 858/1454 [*q.v.*]), whose various learned activities included scientific work as well, has been credited with the authorship of a *R.-yi ḥisāb-i ʿiḳd-i anāmil* "T. on finger reckoning".

Medicine. The earliest Persian treatise in medicine is probably the so-called *R. dar nabḍ* "Treatise on the pulse", or *Rag-shināsī* "Angiology", attributed to Ibn Sīnā. The number of medical *risālas* encountered after the 9th/15th century is comparatively large. Included among these is the *R. dar ʿilm-i ṭibb* "T. on medicine", by Uways al-Laṭīfī al-Ardabīlī (? *flor.* in the second half of the 9th/15th century). Another is the *R. dar muʿāladjāt-i badan* "T. on the treatments of the body", also known as *Ḳawānīn al-ʿilādj* "Canons of treatment" and *Shifāʾ al-amrāḍ* "Treatment of diseases", completed in 871/1466 by Muḥammad ʿAlāʾ al-Dīn Sabzawārī, popularly known as Ghiyāth Mutaṭabbib; it comprises fourteen sections dealing with cures (BL. Add. 23, 557).

The Ṣafawid period produced some noted physicians, one of whom was ʿImād al-Dīn Maḥmūd b. Masʿūd al-Ṭabīb, who lived towards the end of Shāh Ṭahmāsp I's reign. Besides his main contribution, *Yanbūʿ fī ʿilm al-ṭibb* (BL. Add. 23, 560) "The sources of medical science", he left several other *risālas*, such as *R.-yi afyūn* (BL. Add. 19, 619), "T. on opium", *R. dar bayān-i khawāṣṣ u manfiʿat-i čūb-i čīnī* "T. on the properties and benefits of the Chinese root", and *R.-yi ātishak* "Treatise on syphilis".

Among the distinguished writers on medicine who flourished in India under the Mughals was Masīḥ al-Dīn Abu 'l-Fatḥ Gīlānī (d. 997/1589), Akbar's court physician and author of a *R.-yi ṭibb al-mudjarrabāt* "T. on tested remedies", a collection of cures tried by the author during the course of his profession.

Other specialised writings in this field include the *R. dar tashrīḥ-i badan-i insān wa kayfiyyat-i awḍāʿ-i ān* "T. on the human anatomy and the nature of its bases", by Manṣūr b. Muḥammad, also called *Tashrīḥ-i Manṣūrī* "Manṣūr's anatomy" and published under this title at Lucknow in 1264/1847-8. It gives a description of the limbs, organs, and other elements of the human body, and has been illustrated with anatomical diagrams. It was dedicated to Mīrzā Ḍiyāʾ al-Dīn Pīr Muḥammad Bahādur (d. 809/1406-7), a grandson of Tīmūr.

Studies on preventive medicine are represented by several works on hygiene such as the *R. dar ḥifẓ al-ṣiḥḥa* "T. on hygiene" and *R. dar tadbīr-i ḥifẓ-i ṣiḥḥat* "T. on the planning of hygiene" written respectively by two of Shāh Ṭahmāsp I's physicians, Sharaf al-Dīn Bāfaḳī (d. 978/1570-1) and Kamāl al-Dīn Ḥusaynī Shīrāzī. In addition, manuals which dealt with poisons and provided means to dispel their effects are also common, e.g. ʿImād al-Dīn Maḥmūd's handbooks *R.-yi sumūm* "T. on poisons", and *R.-yi pāzahr* "T. on antidotes". Works on veterinary science include a *R. dar khawāṣṣ al-ḥayawān* "T. on the characteristics of animals", by Muḥammad ʿAlī Ḥazīn. Most writings in this category deal with horses and were written in India. An example of this type of literature is the *risāla* entitled *Faras-nāma* "Book of horses" by this same author, who had been resident in India.

Poetics. Many authors wrote at length on prosody, rhetoric and rhyme. An early work in this field, whose authorship is attributed, in some manuscripts, to the poet Adīb Ṣābir (d. between 538-42/1143-8 [*q.v.*])

and, in others, to Rashīd al-Dīn Waṭwāṭ (d. 578/1182-3 [q.v.]) is a small treatise on metres. It has been published under the title *R.-yi dar bāb-i awzān-i shiʿr-i Arabī wa Fārsī* "T. concerning poetic metres in Arabic and Persian". The author of the *R.-yi ʿarūḍ-i Sayfī* "T. on prosody by Sayfī", Mullā Sayfī Bukhārī (d. probably 909/1503-4), served at the courts of sultan Abū Saʿīd and his successor in Harāt Ḥusayn Mīrzā; his work, completed in 896/1490-1, enjoys a respectable position among writings on Persian prosody. The contemporary Djāmī also composed a *risāla* on Persian prosody, but his better-known work is his treatise on rhyme named variously as *R.-yi ḳawāfī* and *R. dar fann-i ḳāfiya*, still a useful reference work for students of the technical aspects of Persian poetry.

During the 9th/15th and early 10th/16th centuries the acrostic verse (*muʿammā* [q.v.]) acquired much popularity, and was elevated to a respectable form of poetry. Prompted by its appeal, many works were written on composing the *muʿammā*, including three *risālas* by Djāmī. Similar treatises were produced by the historian Sharaf al-Dīn Yazdī and by Fuḍūlī (d. 963/1556 or after 988/1580 [q.v.]), the Turkish poet who also wrote in Persian, but the most distinguished work here was perhaps the *R. fi 'l-muʿammā* by Mīr Ḥusayn al-Ḥusaynī (d. 904/1499), called Muʿammāʾī, which gained an authoritative status, attracting commentaries in Persian and Turkish.

Miscellaneous. Mention may be made here of a few important *risālas* on miscellaneous topics, such as that of Farīdun b. Aḥmad Sipah-sālār, a biographical account of the leaders of the Mevlewī order and an important aid to the study of the history of Ṣūfism; its author was a high military commander who spent forty years as a disciple of Djalāl al-Dīn Rūmī (d. 672/1273 [q.v.]), and undertook the writing of his work soon after the death of his spiritual mentor.

In the field of music, Djamī's name is cited, as also that of Ṣadr al-Dīn Muḥammad (d. 903/1498), son of the astronomer Ghiyāth al-Dīn Manṣūr, who is said to have dedicated his *risāla* to the Tīmūrid prince Ḥusayn Mīrzā. Two other writers on music were Nadjm al-Dīn Kawākibī and Darwīsh ʿAlī, called Čangī-yi Khāḳānī; the former dedicated his *risāla* to the Shībānid ruler ʿAbd Allāh Khān (d. 1005/1597) and the latter to the Astrakhānid monarch Imām-ḳulī Khān (d. 1050/1640).

A work suggestive of social geography is the *R.-yi Rūḥī Anārdjānī*, named after an author who flourished in the second half of the 10th/16th century; composed probably in 992/1585 or 993/1586, it describes the beliefs and customs of the people of Tabrīz recorded by the author from personal observation.
